computed radiography (CR) a form of digital, filmless radiology. A photostimulable storage phosphor (barium fluorohalide) plate is exposed to X-rays in a cassette as for film radiography. The plate is then scanned to produce a computer graphic file of the X-ray intensity absorbed by the plate.

c. r. plate a barium fluorohalide phosphor layer is mounted on a sheet of plastic to absorb energy from X-ray photons. Subsequently, photostimuable light is released when the plate is scanned by a laser beam. Residual effects of absorbed X-rays are erased by exposing the plate to fluorescent light thereby allowing it to be reused repeatedly to record X-ray images.

c. r. scanner scans a computed radiography plate with a laser, releasing photostimulated light into a photomultiplier tube. The electrical output is digitized and mapped into the computer image file, thereby creating a radiographic-like image.

computed tomography (CT) a radiological imaging technique that produces images of 'slices' through a patient's body. See also computed **tomography**.

Con A concancavalin A.

conacaste tree ***Enterolobium*** *cyclocarpum*.

conarium see **pineal** body.

concanavalin [*kon"kə-nav'ə-lin*] either of two phytohemagglutinins isolated along with canavalin from the meal of the jack bean (*Canavalia ensiformis* and other species of *Canavalia*), which agglutinate the blood of mammals as a result of reaction with polyglucosans.

c. A (Con A) binds to sugar residues on cell surfaces and stimulates T lymphocytes to proliferate.

concancavalin toxic amino acid (lectin) found in *Canavalia* spp.

concatemers tandemly repeated identical DNA sequences; intermediate structures formed during the replication of some DNA molecules which are subsequently cleaved to form unit-length molecules.

concaveation the induction of maternal behavior in virgin females or males when exposed to neonates.

concavity [*kon-kav'i-te*] a depression or hollowed surface.

conceive [*kən-sēv'*] to become pregnant.

f. to conceive (FTC) said of cows which return to estrus after mating.

concentrate [*kon'sən-trāt*] 1. to bring to a common center; to gather at one point. 2. to increase the strength by diminishing the bulk of, as of a liquid; to condense. 3. a drug or other preparation that has been strengthened by evaporation of its nonactive parts. 4. any food that contains low fiber and high TDN, for example grains. 5. a carefully compounded mixture of micro- and macronutrients, largely vitamins and minerals, suitable for adding to a herbivore's meal and roughage diet which is probably lacking the supplements contained in the concentrate.

concentration [*kon"sən-tra'shən*] 1. increase in strength by evaporation. 2. the ratio of the mass or volume of a solute to the mass or volume of the solution or solvent.
hydrogen ion c. an expression of the degree of acidity or alkalinity (pH) of a solution. See also **acid–base balance**.
mass c. the mass of a constituent substance divided by the volume of the mixture, as milligrams per liter (mg/L).
minimum effective c. (MEC) the threshold concentration of a drug in plasma below which the efficiency of the drug as a treatment drops off sharply.
minimal inhibitory c. (MIC) the lowest concentration of an antimicrobial that inhibits the growth of a bacterium; usually in reference to an antimicrobial sensitivity test.
minimal lethal c. (MLC) the lowest concentration of antimicrobial that kills a particular bacterium; usually in reference to an antimicrobial sensitivity test.
molar c. (c) the amount of a constituent in moles (millimoles or micromoles) divided by the volume of the mixture, as millimoles per liter (mmol/L). See also **molar**[1].
mutant prevention c. (MPC) the blood concentration of antibiotic that minimizes or limits the development of resistant organisms.
c. test a test of renal function based on the patient's ability to concentrate urine. See **water** deprivation test.
conception [*kən-sep'shən*] fertilization or fusion of gametes to produce a zygote. The term may also signify the onset of pregnancy. See also **reproduction**.
c. efficiency see conception rate (below).
early c. factor (ECF) see early **pregnancy** hormone (factor).
c. failure a lack of fertilization or failure of fertilization.
c. prevention prevention of the establishment of pregnancy by the use of teaser males in commercial herds or flocks, or progestagen implants in the control of female wild animals. Methods include surgical alteration or homonal maniupulations to disturb sperm transport, ovulation or fertilization. See also **contraception**.
c. rate percentage of matings that result in conception.
Conception Vessel [*kən-sep'shən*] in acupuncture one of the two major extra meridians, besides the 12 regular meridians. Along with the **Governing Vessel**, its function is seen as absorbing excess Qi from the major meridians (vessels) and returning it when it becomes deficient. Called also Ren Mai.
conceptus [*kən-sep'təs*] the whole product of conception at any stage of development, from fertilization of the ovum to birth, including extraembryonic membranes as well as the embryo or fetus.
c. dropsy see fetal **ascites**, **hydramnios**, **hydrallantois**.
concha [*kong'kə*] pl. *conchae* [L.] a shell-shaped structure.
c. of auricle the base of the auricle of the external ear, bounded anteriorly by the tragus and posteriorly by the antihelix.
ethmoidal c. a series of scroll-like bones which arise from the ethmoid bone, project into the nasal chambers and support the olfactory mucous membrane.
nasal c. one of two or three delicate, mucosa-covered turbinate bones occupying a large part of each half of the nasal cavity. See also Table 10.
conchitis [*kong-ki'tis*] inflammation of a concha.
conchotomy [*kong-kot'ə-me*] incision of a nasal concha.
Concinnum a genus of flukes of the family Dicrocoeliidae.
conclination [*kon"klĭ-na'shən*] inward rotation of the upper pole of the vertical meridian of each eye.
concomitant variable [*kən-kom'ĭ-tənt*] see concomitant **variable**.
concordance [*kən-kor'dəns*] in genetics, the occurrence of a given trait in both members of a twin pair.
concrescence [*kən-kres'əns*] a growing together of parts originally separate.
concrete mixture of cement and reinforcing gravel or stones used in the surfacing of yards, passageways, milking parlors and the like; critical to the good condition of feet and hooves of farm livestock. Excessive wear due to a too-abrasive surface causes **footrot** of pigs and epidemic lameness in dairy herds.
concretio [*kən-kre'she-o*] [L.] *concretion*.
c. cordis adhesive pericarditis in which the pericardial cavity is obliterated.
concretion [*kən-kre'shən*] 1. a calculus or inorganic mass in a natural cavity or in tissue. 2. abnormal union of adjacent parts. 3. a process of becoming harder or more solid.
concurrent [*kon-kur'ənt*] simultaneous as in disease, infection, infestation.
concussion [*kən-kush'ən*] a violent jar or shock, or the condition that results from such an injury.
brain c. loss of consciousness, transient or prolonged, due to a blow to the head; breathing often is unusually rapid or slow. Outward evidence of the injury may include bleeding, sometimes from the nose, and contusions (bruises). There may be residual signs such as local paralysis on recovery.
spinal cord c. may lead to temporary paresis or spinal shock, with possible local paralysis continuing after partial recovery.
c. stunner a sharp blow to the head sufficient to cause stunning may be used as a prelude to euthanasia or, in laboratory animals, as a means of euthanasia on its own.
condemned meat meat classified at inspection as unfit for human consumption.
c. m. room the room in an abattoir allocated to the temporary storage, prior to disposal, of condemned meat and offal.
condensation [*kon"dən-sa'shən*] 1. the act of rendering, or the process of becoming, more compact. 2. the process of passing from a gaseous to a liquid or solid phase. In animal housing this is a matter of great importance because of the need for a dry environment as a prevention against the spread of infection, especially those spread by inhalation.
condenser [*kən-den'sər*] 1. a vessel or apparatus for condensing gases or vapors. 2. a device for illuminating microscopic objects. 3. a device for boosting the voltage in an electrical circuit.
c. discharge unit used to generate high voltages needed for diagnostic X-rays using standard 110/220 volt input. An advantage for mobile units. It discharges over a short period, which helps prevent movement blur.
condition [*kən-dish'ən*] 1. to train; to subject to conditioning. 2. state of the body in terms of amount of tissue carried. Spoken of as obese, fat, thin, emaciated. See also **body condition score**. 3. of wool; a qualitative assessment of the degree of waste included in the fleece, including yolk, plant fiber, dust.
body c. scale see **body condition score**.
light c. see **thinness**.
c. scoring the allocation of a score to indicate an animal's body condition. See also **body condition score**.
conditioned educated by a conditioning process. See **conditioning**.
c. reinforcer the pairing of a neutral stimulus with a primary, or natural, reinforcer.
c. response a response that does not occur naturally in the animal but that may be developed by regular association of some physiological function with an unrelated outside event, such as ringing of a bell or flashing of a light. Soon the physiological function starts whenever the outside event occurs. Called also conditioned reflex. See also **conditioning**.
c. good aversion behavioral tool used to train horses and ruminant livestock to avoid some poisonous plants. Aversion is produced by administering lithium chloride orally in temporal association with feeding the plant of interest. Repetitive administrations can result in long-term aversion of grazing animals to natural selection of the plant in range systems. Averted animals must be run as a separate group from non-averted animals as social conditioning may reverse the aversion.
conditioner involved in improving physical condition.
livestock c. a person involved in special feeding programs for heavy producing dairy cows or animals being prepared for shows, exhibitions, fairs and sale. Usually done at the conditioner's premises because of the secret nature of the materials and procedures. Represents a potential health threat from infectious disease.
soil c. agents such as gypsum added to clay soil to improve its physical state.
conditioning [*kən-dish'ən-ing*] 1. learning; behavior modification in animals. 2. preparation of young cattle for shipment and entry into a feedlot. The procedure varies but usually includes vaccination against potential pathogens, prophylactic treatment for worms and lice, administration of vitamins and when necessary feeding of antibiotics and introduction to the kind of diet likely to be fed. 3. tenderizing of meat by careful storage at an appropriate temperature for a sufficiently long period.
aversive c. behavior modification using an adverse stimulus in response to the inappropriate or undesirable behavior. Called also avoidance.

VetBooks.ir

VetBooks.ir

classical c. a form of learning in which a response is elicited by a neutral stimulus which previously had been repeatedly presented in conjunction with the stimulus that originally elicited the response. Called also respondent conditioning, Pavlovian conditioning. The concept had its beginnings in experimental techniques for the study of reflexes. The traditional procedure is based on the work of Ivan P. Pavlov, a Russian physiologist. In this technique the experimental subject is a dog that is harnessed in a sound-shielded room. The neutral stimulus is the sound of a metronome or bell which occurs each time the dog is presented with food, and the response is the production of saliva by the dog. Eventually the sound of the bell or metronome produces salivation, even though the stimulus that originally elicited the response (the food) is no longer presented.

instrumental c. takes place only after the subject performs a specific act that has been previously designated. The most common form of this conditioning uses an instrument such as a bar that must be pressed by the subject to achieve the delivery of food or other reward.

odor c. classical conditioning to odors of essential oils is an element in aromatherapy.

operant c. behavior that is modifiable by its consequences where the probabiloity of that behavior occurring again may either increase if there is reinforcement or decrease if there is punishment.

Pavlovian c. see classical conditioning (above).

respondent c. see classical conditioning (above).

conditions of employment [*kən-dish'ənz*] that part of an employment that sets out the duties, responsibilities, hours of work, salary, leave and other privileges to be enjoyed by persons employed, for example a veterinary nurse, in private practice. Most professional organizations provide a pro forma of such an agreement.

condominium a centrally owned, usually cooperative, facility of feed mill, feed trucks, feed purchasing and health services but separate individual ownership of livestock, and usually the feedlot yards.

condor a voiceless, New World vulture; a diurnal bird of prey noted for its large size. Includes *Vultur gryphus* (Andean condor) and *Gymnogyps californianus* (California condor).

conduct behavior as a professional. Behavior relative to a code of ethics agreed to by members of a professional organization.

c. conducive to unfairly attracting business see **touting**.

unprofessional c. see **misconduct**.

conductance [*kən-duk'təns*] ability to conduct or transmit, as electricity or other energy or material; in studies of respiration, an expression of the amount of air reaching the alveoli per unit of time per unit of pressure, the reciprocal of resistance.

conduction [*kən-duk'shən*] conveyance of energy, as of heat, sound or electricity.

accessory tract atrioventricular c. permits a sinus impulse from the atria to ventricles to precede that carried by the normal atrioventricular conduction system. Arrhythmia results, the particular electrocardiographic characteristics depending on the pathway(s) involved. See also **Wolff–Parkinson–White syndrome**.

aerial c., air c. conduction of sound waves to the organ of hearing through the air.

bone c. conduction of sound waves to the inner ear through the bones of the skull.

c. disorder abnormalities in the conduction pathways of the heart.

James accessory c. see **James fibers**.

c. system the system comprises the sinoatrial and atrioventricular nodes, atrioventricular bundle and Purkinje fibers.

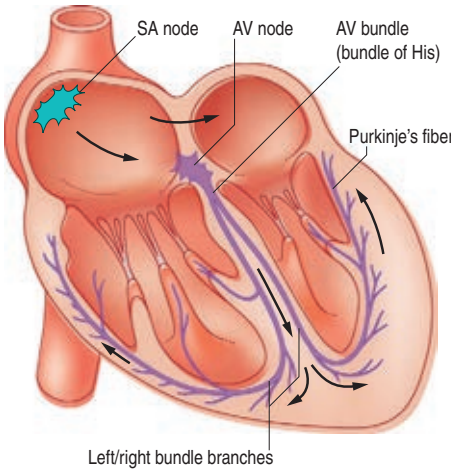
c. time an indicator of a peripheral nerve's ability to carry an impulse; measured during electromyography. A nerve that has undergone Wallerian degeneration is unable to carry an impulse. Severe loss of myelin results in a prolonged conduction time.

conductive having the quality of readily conducting electric current.

c. flooring flooring or floor covering made specially conductive to electrical current, usually by the inclusion of copper wiring that is earthed externally.

conductivity [*kon"dək-tivĭ-te*] capacity for conduction.

electrical c. in milk increases with an increase in the severity of inflammation of the mammary tissue. Used as a mastitis detection device.



C-72: Conduction system of the heart. From Cunningham JG, Textbook of Veterinary Physiology, 3rd Edition. Saunders, 2002.

conduit [*kon'doo-it*] a channel for the passage of fluids or air.

ileal c. the surgical anastomosis of the ureters or a bowel segment to one end of a detached segment of ileum, the other end being used to form a stoma on the abdominal wall.

vascular c. artificial blood vessel; used in repair of pulmonic stenosis by providing a bypass of the obstruction and in correction of arteriovenous fistulae.

condylarthrosis [*kon"dəl-ahr-thro'sis*] a modification of the spheroidal form of synovial joint, in which the articular surfaces are ellipsoidal rather than spheroid.

condyle [*kon'dĭl*] a rounded projection on a bone, usually for articulation with another bone; a knuckle.

c. fracture one involving a condyle, most commonly distal humerus or femur in small animals and distal cannon bone in horses.

occipital c. either one of a pair of articular prominences that flank the foramen magnum and form synovial joints with the atlas.

condylectomy [*kon"dəl-ek'tə-me*] excision of a condyle.

condylion [*kon-dil'e-ən*] the most lateral point on the surface of the head of the mandible.

condyloid [*kon'də-loid*] resembling a condyle.

condyloma [*kon"də-lo'mə*] an elevated wartlike lesion of the skin.

c. acuminatum a small, pointed papilloma of viral origin.

canine c. see canine transmissible **venereal** tumor.

condylotomy [*kon"də-lot'ə-me*] transection of a condyle.

condylus [*kon'də-ləs*] pl. *condyli* [L.] see **condyle**.

Condy's crystals see **permanganate**.

cone [*kōn*] 1. a solid figure or body having a circular base and tapering to a point. 2. in radiology, a conical or open-ended cylindrical structure used as an aid in producing high detail X-rays. 3. surgical cone. 4. one of two photoreceptor cell types found in the retina. Important for color perception, fine visual acuity and vision in relatively bright ambient light. Found in highest number in the central area of the retina. See also **rod**.

c. down (2) in radiology, to restrict the X-ray beam. See also **collimation**.

c. dysplasia (4) progressive degeneration of retinal cones; the rods are normal. Seen especially in Alaskan malamute and German short-haired pointer dogs; causes impaired day vision from an early age with normal night vision and a normal funduscopic appearance.

ether c. a cone-shaped device used over the face in administration of ether for anesthesia.

growth c. bulbous enlargement at the tip of every growing axonal fiber in the fetus, from which many long filapodia extend.

c. of light the triangular reflection of light seen on the tympanic membrane.

pressure c. the area of compression exerted by a mass in the brain, as in transtentorial herniation.

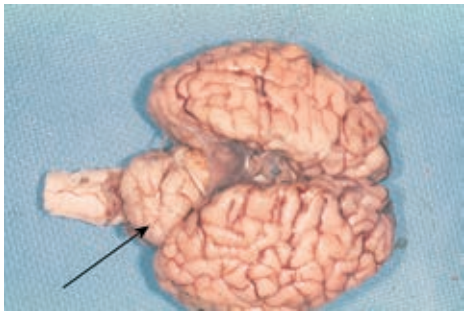
cone-nose bug [*kōn'nōs"*] see **reduviid bug**.

coneflower [*kōn'flou"ər*] common name for plants in several genera, including ***Rudbeckia***, ***Echinacea***.

conexus [*ko-nek'səs*] a connecting structure.

confidence degree of assurance.

c. interval a range of values about a sample statistic that has a specified probability of including the true value of the statistic.
c. level 1 minus the type 1 **error**; the probability that the trial under consideration will show no significant difference when there is in fact no significant difference between the treatments.
c. limits the highest and lowest values in a confidence interval.
confidentiality [*kon"fi-den"she-al'i-te*] secrecy relating to information. All clinical data have a degree of confidentiality, the level varying with the information and the circumstances.
configuration [*kən-fig"u-ra'shən*] 1. in anatomical terms the general form of a body. 2. in chemistry, the arrangement in space of the atoms of a molecule.
confinement restriction of animals' movements so that they are not allowed to range freely and graze pasture but are confined either outdoors or indoors, with food brought to them. The degree of confinement varies from tie-stalls for cows and farrowing crates for sows, to lounging barns and feedlots for cattle.
total c. animals housed at all times; a common practice in some tropical countries where protection from the heat and humidity may be essential for high-producing livestock; labor and engineering services are costly production items.
conflicts of interest [*kon'flikts*] the ethical situation that arises when, for example, a veterinarian who practices and also conducts a pharmacy finds that his/her enthusiasm for merchandising is competing with his/her professional interest in being as accurate as possible diagnostically.
confluence a running together; a meeting of streams.
c. of sinuses the dilated point of confluence of the superior sagittal, straight, occipital and two transverse sinuses of the dura mater.
confocal [*kon-fo'kəl*] see confocal **microscopy**.
conformation [*kon"for-ma'shən*] symmetry, size and shape of the various body regions relative to each other or the general appearance of the animal in terms of satisfying the observer's appreciation of what is a desirable appearance. Most breed societies issue lists of desirable and undesirable points of conformation. Most of them are desirable. Some are not and react adversely on the animals' well-being. Desirable conformation may also be indicated by diagrams or photographs. Also may refer to the spatial arrangement of atoms in a molecule.
mitochondrial c. mitochondria may be in an abnormal state of condensed conformation, detected by comparison with mitochondria of orthodox status; orthodox conformation is linked to inactive oxidase phosphorylation, condensed to active phosphorylation.
confounding [*kon-foun'ding*] when the effects of two, or more, processes on results cannot be separated, the results are said to be confounded, a cause of bias in disease studies.
c. factor one which is distributed non-randomly with respect to the independent (exposure) or dependent (outcome) variable which is the subject of an enquiry.
congener [*kon'jə-nər*] something closely related to another thing, as a member of the same genus, a muscle having the same function as another, or a chemical compound closely related to another in composition and exerting similar or antagonistic effects, or something derived from the same source or stock.
congenic [*kən-jen'ik*] a genetic term usually used to refer to specially inbred strains of mice that differ only in restricted regions of the genome; used particularly in mapping major histocompatibility complex antigens.
congenital [*kən-jen'i-təl*] present at and existing from the time of birth.
c. defects abnormalities of structure or function which are present at birth. They may or may not be inherited. There are a number of diseases, for example the **lysosomal** storage diseases, which may be inherited or environmental in causation, in which the insult is supplied while the fetus is in utero, but the defect does not become apparent until some time after birth. By definition these are not congenital defects although the animal is born with the metabolic lesion in place. See also individual defects listed by organ or system.
c. erythropoietic porphyria see **porphyria**.
infectious c. tremor see **congenital tremor syndrome** of piglets.
c. loco a congenital, inherited disease of domestic chickens characterized by opisthotonos, orthotonos, inability to stand, violent somersaulting. Affected birds die of starvation and dehydration.
congenital tremor syndrome [*kən-jen'i-təl*] a benign, congenital disease of piglets manifested by severe muscle tremor, especially when standing, and absent when asleep. There is no muscle weakness, the only deaths are due to crushing due to impairment of evasive actions. Causes include: transplacental classical swine fever (hog cholera) virus infection, fetal infection with pseudorabies virus, Japanese encephalitis virus, possibly fetal porcine circovirus 2 infection, inherited sex-linked recessive gene in Landrace, inherited autosomal recessive gene in Wessex Saddleback, exposure of sow to trichlorfon (Teguvon) 45–79 days of pregnancy. The histological proof is a dysmyelinogenesis. Called also myoclonia congenita, trembles.
congestion [*kən-jes'chən*] abnormal accumulation of blood in a part as a result of restriction of venous drainage.
hypostatic c. post mortem gravitational pooling of blood in the body. Called also livor mortis. See also **lividity**.
pulmonary c. see **pulmonary** congestion.
udder c. see **udder** edema.
congestive [*kən-jes'tiv*] pertaining to or associated with congestion. See also congestive **heart failure**.
conglobation [*kon"glo-ba'shən*] the act of forming, or the state of being formed, into a rounded mass.
conglutinant [*kən-gloo'ti-nənt*] promoting union, as of the lips of a wound.
conglutination [*kən-gloo"ti-na'shən*] 1. the adherence of tissues to each other. 2. agglutination and lysis of antibody-coated erythrocytes produced by addition of whole bovine serum.
conglutinin [*kən-gloo'ti-nin*] a serum protein found in Bovidae which can bind to fixed C3b and cause C3b-coated particles to clump.
Congo dog see **Basenji**.
Congo floor maggot see ***Auchmeromyia luteola***.
Congo red a synthetic dye, a derivative of benzidine and naphthionic acid. It is used for differential staining of elastic fibers for microscopic examination. Amyloid is stained a light orange-red with Congo red and exhibits apple green birefringence under polarized light. Amyloid in cats stains poorly. Congo red undergoes a change in hue with acidity and thus can be used as an indicator of pH, turning red in the presence of alkalis (bases) and blue when exposed to acids.
C. r. test a laboratory test used in the diagnosis of **amyloidosis**, based on measuring the amount of injected dye that is removed by amyloid in the tissues of the human patient. Not now commonly used.
Congo virus disease a transient fever of cattle and goats caused by a not well characterized arbovirus transmitted by *Hyalomma* spp. ticks. The virus is similar to Crimean hemorrhagic fever virus of humans.
conhydrine one of the piperidine alkaloids in *Conium maculatum*. A highly fatal toxin causing paralysis of the skeletal musculature.
conical flukes [*kon'i-kəl*] see **paramphistomes**.
coniceine one of the toxic piperidine alkaloids in ***Conium maculatum***.
conidiobolomycosis infection by fungi of the genus *Conidiobolus*.
Conidiobolus [*ko-nid"e-ob'o-ləs*] a genus of soil-borne fungi.
***C. coronatus* (syn. *Entomophthora coronata*)** causes granuloma, which may ulcerate, on the nasal mucosa and skin. See also **swamp cancer**, **phycomycosis**.
C. incongruus has caused an epidemic form of nasal granuloma in sheep characterized by disfiguring swellings of the nose, invasion



C-73: Cerebellar hypoplasia in piglet with congenital tremor syndrome due to congenital classical swine fever virus infection. This is a pathognomonic postmortem finding for this cause of congenital tremor syndrome. Courtesy of JT Done.

VetBooks.ir

of the local lymph nodes and involvement of the lungs causing death.

conidiophore [*ko-nid'e-o-for*] a specialized hypha upon which conidia are formed.

conidium [*kə-nid'e-əm*] pl. *conidia;* an asexual spore of fungi borne on hyphae. There are many types of conidia, **blastoconidia**, **arthroconidium**, **annelloconidium**, **phialoconidium**, **poroconidia** and **aleurioconidia**.

coniine [*co'ne-ēn*] one of the toxic piperidine alkaloids in ***Conium maculatum***.

coniofibrosis [*ko"ne-o-fi-bro'sis*] **pneumoconiosis** with exuberant growth of connective tissue in the lungs.

coniosis [*ko"ne-o'sis*] see **pneumoconiosis**.

coniotoxicosis [*ko"ne-o-tok"sĭ-ko'sis*] **pneumoconiosis** in which the irritant affects the tissues directly.

Conium maculatum [*ko-ni'əm*] a toxic plant in the Apiaceae family; this weed may affect animals which eat it while grazing or in hay. Principal signs are increased frequency of defecation and urination, muscular weakness, tremor, ataxia, respiratory failure and death. Congenital arthrogryposis and spinal curvature can occur in piglets and calves whose dams have eaten the plant in early pregnancy. Called also poison hemlock.

conjoined [*kən-joind'*] joined together. See also conjoined **twins**.

conjugata [*kon"jŏŏ-ga'tə*] conjugate diameter (diameter of space encircled by items joined together, e.g. pelvic diameter—the diameter of the pelvic inlet from the sacral promontory to the pelvic brim).

conjugate [*kon'jŏŏ-gāt*] 1. paired, or equally coupled; working in union. 2. conjugated compound formed by linkage of two compounds from which the original compounds can be re-formed easily. 3. to link marker protein such as fluorescein or enzyme to an antibody molecule to detect antigen, as by **immunofluorescence** or immunoperoxidase staining. 4. a conjugate diameter of the pelvic inlet; used alone usually to denote the true conjugate diameter. See also pelvic **diameter**.

c. acid conjugate pair of strong bases.

conjugation [*kon"jŏŏ-ga'shən*] a joining. In unicellular organisms, a form of sexual reproduction in which two individuals join in temporary union to transfer genetic material. In biochemistry, the joining of two compounds, often a toxic substance with some natural substance of the body to form a detoxified product for elimination from the body.

conjunct rotation the complicated movement whereby alternate flexion, adduction, extension and abduction brings about rotation.

conjunctiva [*kən-jank'ti-və*] pl. *conjunctivae* [L.] the delicate membrane lining the eyelids and covering the non-corneal parts of the eye; its several parts, (bulbar, fornical, marginal, nictital, palpebral and tarsal), are named according to the anatomical structure invested.

conjunctival [*kən-junk'tĭ-vəl*] pertaining to or emanating from conjunctiva.

c. flap see conjunctival graft (below).

c. grafts surgical movement and fixation of bulbar or palpebral conjunctiva to cover corneal defects due to lacerations or non-healing, progressive or deep ulceration. The flaps provide a blood supply, tectonic support, physical protection, and a source of subconjunctival fibroblasts to reform corneal stroma. There are many techniques. Called also conjunctival flap.

c. sac the tear-filled space, lined by conjunctiva, between the eyelids and the globe. Called also the conjunctival fornix or cul-de-sac.

C-74: *Conium maculatum* (poison hemlock) showing the umbellifera flower head and red spotting on stalk.

conjunctivitis [*kən-junk"tĭ-vi'tis*] inflammation of the conjunctiva. Extension of the inflammation to or from the cornea is common; hence **keratoconjunctivitis**. May be due to trauma, frictional irritation due to entropion, distichia, ectopic cilia, and grass seed or other foreign body intrusion, infectious organisms, desiccation due to altered tear quality or quantity, ectropion, or facial or trigeminal nerve dysfunction, allergy, and other immune-mediated conditions. Sometimes seen as part of a systemic disease syndrome, e.g. rinderpest, **malignant catarrhal fever**, canine distemper, or infectious bovine rhinotracheitis. The common species-specific conjunctivitides are *Moraxella bovis* infection in cattle, *Mycoplasma conjunctivae* and *Chlamydophilia pecorum* in sheep and goats, feline herpesvirus and *Chlamydophila felis* in cats, *Habronema* spp. in horses and *Thelazia* spp. in all species. Classical signs (but non-specific with respect to cause) include mucoid ocular discharge, mild blepharospasm, and ocular irritation/pruritus.

equine seasonal c. see equine recurrent **uveitis**.

fetal c. present in many cases of intrauterine infection and the causative organism can be cultured from the site.

follicular c. proliferation of lymphoid tissue normally present within the conjunctiva, especially the third eyelid; occurs in response to any chronic inflammation or stimulation such as dust, entropion, ectropion, distichiasis or microbial infection.

ligneous c. a chronic, membranous conjunctivitis characterized by deposition of amorphous eosinophilic hyaline material in the subconjunctival tissues. Young female Doberman pinschers may be predisposed. Sometimes associated with systemic (respiratory or renal) disease.

c. neonatorum conjunctivitis of neonatal animals prior to eyelid opening. Common in kittens infected by feline herpesvirus. May also involve the cornea with perforation and panophthalmitis possible. Called also ophthalmia neonatorum.

primary c. caused by an inflammatory agent that affects the conjunctiva in the first instance.

secondary c. conjunctivitis secondary to inflammation of neighboring or systemic tissues, typically secondary to keratitis, uveitis, blepharitis, orbital cellulitis, dacryocystitis, or generalizede vasculitis.

summer c. an incorrect name for equine recurrent **uveitis**.

conjunctivobuccostomy, conjunctivoralostomy [*kən-junk"tĭ-vo-buk-os'tə-me*] a surgical technique for treatment of obstruction of the nasolacrimal apparatus in which a new drainage track is created from the conjunctival sac to the oral cavity opening between the upper lip and dental arcade. See also **conjunctivorhinostomy**.

conjunctivoplasty [*kən-junk' tĭ-vo-plas"te*] plastic repair of the conjunctiva.

conjunctivoralostomy [*kən-junk"tĭ-vo-ri-nos'tə-me*] conjunctivobuccostomy.

conjunctivorhinostomy a surgical technique for the treatment of obstruction of the nasolacrimal apparatus in which a new drainage track is created from the conjunctival sac to the maxillary sinus or nasal cavity. See also **conjunctivobuccostomy**.

connecting tubules one of the collecting ductal systems in the kidney permitting nephrons to connect directly with cortical collecting ducts.

connection points [*kə-nek'shən*] see **luo points**.

connective tissue [*kə-nek'tiv*] a fibrous type of body tissue with varied functions. The connective tissue system supports and connects internal organs, forms bones and the walls of blood vessels, attaches muscles to bones, and replaces tissues of other types following injury. Connective tissue consists mainly of long fibers embedded in noncellular matter, the ground substance. The density of these fibers and the presence or absence of certain chemicals make some connective tissues soft and rubbery and others hard and rigid. Compared with most other kinds of tissue, connective tissue has few cells. The fibers contain one or more of a variety of collagen proteins. Connective tissue can develop in any part of the body, and the body uses this ability to help repair or replace damaged areas. Scar tissue is the most common form of this substitute. See also **collagen** diseases.

elastic c. t. found especially in supportive tissues, e.g. some ligaments, and tendons, e.g. nuchal ligament or tunica flava.

reticular c. t. a type of connective tissue found principally in myeloid and lymphatic organs; they account for reticular meshwork.

Connell suture pattern [*kon'əl*] a technique for suture of the gut wall which resembles the **Cushing suture pattern** except that the

C-75: Connemara pony. From Sambraus HH, Livestock Breeds. Mosby, 1992.

suture goes through all layers of the gut wall. The suture goes through the wall from the serosa to the mucosa, then back from the mucosa to the serosa on the same side. The stitch then crosses the incision to the serosa on the other side and then repeats.

Connemara pony Irish riding pony, usually dun, or gray, black, bay or brown, 13–14 hands high.

connexons [*kə-nek'son*] components of the gap junction spaces between nerve cells; metabolic substances pass between nerve cells via these links.

Connochaetes the genus of **wildebeests** in the family Bovidae; includes *C. gnou* (black wildebeest) and *C. taurinus* (blue wildebeest).

Conn's syndrome primary **hyperaldosteronism**.

Conocephalus grasshoppers, an intermediate host for the flukes in the genus *Eurytrema*.

conotruncal abnormalities [*ko"no-trun'kəl*] congenital anomalies in the conotruncal septum in the developing embryo; **tetralogy** of Fallot (a combination of three such defects) is the only one recorded in animals.

consanguinity [*kon"sang-gwin'ĭ-te*] blood relationship; kinship.

conscious [*kon'shəs*] capable of responding to sensory stimuli; awake; aware.

consciousness [*kon'shəs-nis*] the state of being conscious; responsiveness of the brain to impressions made by the senses. Altered states range from the normal, complete alertness to depression, confusion, delirium and finally loss of consciousness.

consensual [*kən-sen'shoo-əl*] of or relating to a reflexive response of one body structure following stimulation of another.

c. pupillary light reflex the reflex constriction of the pupil of a non-illuminated eye when light is directed into the fellow eye.

consent [*kən-sent'*] by an owner, means the veterinarian has informed the client fully of the diagnosis, prognosis and treatment options, of any risks or untoward consequences of the treatments being offered, and an estimate of the costs involved, all in a way that any reasonable person would understand. Called also informed consent.

conserved DNA sequences nucleotide sequences that occur more often than would be predicted by random chance; include a number of transcription start regions called **promoters** and many others.

consignment sale auction sales of consignments of breeding cattle which are excess to the owner's requirements.

Consolida larkspur. See ***Delphinium***.

consolidation [*kən-sol"ĭ-da'shən*] solidification; the process of becoming solidified or the condition of being solid; said especially of the lung as it fills with fibrinous exudate in pneumonia or with new tissues as in metastatic neoplasia.

CONSORT statement a research tool that uses an evidence-based approach to improve the quality of reports of randomized trials.

constant [*kon'stənt*] a datum, fact or principle that is not subject to change.

Michaelis c. (K_m) a dissociation constant for the substrate concentration in an enzymatic reaction.

c. (C) region see **constant domains**.

constant domains [*kon'stənt*] the C-terminal regions of heavy and light chains of immunoglobulins; they contain the amino acid sequences that are similar in different antibodies of the same class. See also **C_H domains**; **C_L domain**.

constipation [*kon"stĭ-pa'shən*] a condition in which the alimentary transit time is prolonged in view of the amount and type of food being ingested in the preceding day or two. This means usually that the feces are hard, dry and of small bulk and are passed less frequently than expected. They may also be difficult to pass and this may cause some straining; on digital or rectal examination and in X-rays the rectum will be full of hard, dry feces. In some cases a small amount of very thin, soupy feces will be passed even though there is a sizable mass in the rectum; this is soft contents being passed around an impacted fecal mass, and **obstipation** is said to be present. See also **megacolon** in cats.

dietary c. caused by ingestion of large amounts of foreign material such as bones, hair or fiber that mixes with feces to form hard, dry masses which are difficult or impossible to pass.

drug-induced c. may result from treatment with antimotility drugs.

endocrine c. may accompany some disorders of endocrine glands causing reduced gastrointestinal motility, e.g. hypothyroidism and hypercalcemia of hyperparathyroidism.

environmental c. conditions of management, particularly in dogs and cats, that inhibit freedom for defecation or present unsuitable conditions, such as soiled litter trays or restriction of a house-trained animal to a cage, may cause retention of feces with eventual drying and increased size of the fecal mass.

neurogenic c. disorders of innervation to the colon or hindquarters may cause an atonic colon or prevent an animal from assuming normal posture for defecation, thereby inhibiting the desire to defecate. This is seen particularly in painful intervertebral disk lesions or musculoskeletal injuries or lesions.

obstructive c. any impediment to the passage of feces, either within the colon, rectum or anus, or from compression by surrounding tissues can cause drying and enlargement of the fecal mass.

spastic c. see irritable **colon** syndrome.

constitution [*kon"stĭ-too'shən*] 1. the makeup or functional habit of the body. 2. the order in which the atoms of a molecule are joined together.

constitutional [*kon"stĭ-too'shən-əl*] 1. affecting the whole constitution of the body; not local. 2. pertaining to the constitution.

constitutive [*kon-stich'u-tiv*] produced at a steady rate, independent of internal or external stimuli. Said of enzymes, RNA or protein by an organism.

constriction [*kən-strik'shən*] a narrowing or compression of a part; a stricture.

constrictive [*kən-strik'tiv*] restricting movement or dilatation of an organ.

constrictor muscle [*kən-strik'tər*] muscle surrounding cylindrical organs at orifices.

c. pupillae muscle muscle constricting the pupil.

c. vestibuli muscle muscles constricting the vagina.

c. vulvae muscle muscle constricting the vulva.

constructive occupation [*kən-struk'tiv*] activities provided for caged or confined animals to prevent them developing vices.

consult [*kən-sult'*] to give or seek advice. The client may consult the advice of the practitioner who may then consult a specialist or consultant.

consultant [*kən-sul'tənt*] a physician or surgeon whose opinion on diagnosis or treatment is sought by the physician originally attending a patient.

c. practice to be in practice as a consultant and give specialist advice to other veterinarians. In many instances the consultant is also in practice as a general practitioner, something that is not allowed in human medicine.

CONSULTANT an on-line diagnostic support system for veterinary medicine supported by the College of Veterinary Medicine, Cornell University.

consultation [*kon"səl-ta'shən*] 1. the seeing of a patient by a general practitioner. 2. a deliberation of two or more physicians about diagnosis or treatment in a particular case.

Consultative Group on International Agricultural Research (CGIAR) promotes sustainable food security in developing countries through scientific research and research-related activities. It distributes several hundred million dollars annually to International Research Centers.

consulting rooms the place of work of a private practitioner. They may be attached to a clinic or a hospital.

consumption [*kən-sump'shən*] the act of consuming, or the process of being consumed, as in consumption coagulopathy where a failure to clot has been caused by a consumption of platelets. See also disseminated intravascular **coagulation**.

VetBooks.ir

VetBooks.ir

contact [*kon'takt*] 1. a mutual touching of two bodies or animals. 2. an animal known to have been sufficiently near an infected animal to have been exposed to the transfer of infectious material.

c. activation the initiation of the intrinsic pathway of coagulation that occurs when whole blood contacts glass or similar surfaces; involves the conversion of factor XII into its active form, factor XIIa. This subsequently converts factor XI to XIa and so the **coagulation** cascade begins.

c. allergy see contact dermatitis (below).

bone c. repair repair of a fracture by contact apposition of the two fracture surfaces.

c. dermatitis is caused by direct contact between the skin and a substance which is irritating or to which the animal is allergic or sensitive. The reaction usually occurs only on that area of the body that has come into contact with the substance. See also **allergic** contact dermatitis.

direct c., immediate c. the contact, by sharing the same accommodation or pasture or group, of a healthy animal with an animal having a communicable disease, the disease being transmitted as a result. See also contact **transmission**.

c. healing a form of primary bone healing at a fracture site where there is cortical bone in contact.

c. hypersensitivity see **allergic** contact dermatitis.

indirect c. that achieved through some intervening medium, as propagation of a communicable disease through the air or by means of fomites or another animal, e.g. an infection may be passed to animal A from animal B via animal C; animal C is an indirect contact.

c. irritant dermatitis skin disease produced by contact with an irritating substance; in contrast with allergic contact dermatitis, an immune reaction is not involved.

mediate c. indirect contact.

contactant [*kən-tak'tənt*] an allergen capable of inducing delayed contact-type hypersensitivity of the epidermis after one or more episodes of contact.

contagion [*kən-ta'jən*] 1. the spread of disease from one animal to another. 2. a contagious disease.

contagious [*kən-ta'jəs*] capable of being transmitted from animal to animal.

c. abortion see **brucellosis**.

c. agalactia acute mastitis, arthritis and ophthalmitis with painful joint swelling in goats and sheep caused by *Mycoplasma agalactiae*. Occurs on every continent but outbreaks and severe disease occur particularly in the Mediterranean area and Africa. A triad of mastitis, arthritis and ocular disease sometimes accompanied with respiratory disease, abortion and diarrhea. *Mycoplasma agalactiae* is the main causal agent in sheep and goats, but *M. agalactiae, M. mycoides* subsp. *mycoides* large colony type and *M. capricolum* subsp. *capricolum* produce a similar if not identical clinical presentation. The udder is permanently damaged and many animals die. A disease notifiable to the OIE (see Table 22).

c. aphtha see **foot-and-mouth disease**.

c. avian epithelioma see **fowlpox**.

c. bovine pleuropneumonia a highly infectious septicemia with a principal localization in the lungs, caused by *Mycoplasma mycoides* var. *mycoides*. It occurs only in cattle. The cardinal signs are cough, fever, dyspnea, pleuritic friction sounds and gurgling breath sounds on auscultation of the lungs. The case fatality rate is high. An important epidemiological characteristic is the common occurrence of carrier animals with sequestra of infected material in the lungs.

c. bovine pyelonephritis infection of the urinary tract of cattle by *Corynebacterium cystitidis* with lesions in the kidney, ureters and bladder. Diagnostic signs are the passage of urine containing blood or discrete red cells and pus, dysuria and palpable abnormalities per rectum of affected organs. Culture of urine confirms the diagnosis.

c. caprine/ovine pleuropneumonia highly infectious and fatal pleuropneumonia of goats and sheep caused by *Mycoplasma capricolum* subsp. *capripneumoniae* previously known as mycoplasma strain F38. The clinical picture includes a short course with cough, dyspnea, and abnormal lung and pleural sounds on auscultation. A disease notifiable to the OIE (see Table 22).

c. ecthyma see contagious **ecthyma**.

c. epididymitis and vaginitis see **epivag**.

equine c. acne see **Canadian horsepox**.

c. equine metritis a highly contagious venereal disease resident in mares and transmitted by the stallion, which shows no clinical signs. It is caused by *Taylorella equigenitalis*. Clinically there is a profuse purulent discharge from the vulva about a week after service, endometritis and cervicitis. Also associated with infertility and abortion. So highly contagious that most countries have strict control procedures to prevent entry or spread when detected. A disease notifiable to the OIE (see Table 22).

c. equine pustular dermatitis see **Canadian horsepox**.

c. mastitis see **mastitis**.

c. ophthalmia see contagious **ophthalmia**.

c. ovine foot rot see ovine **footrot**.

c. ovine/caprine ophthalmia see contagious **ophthalmia**.

c. ovine pustular dermatitis see contagious **ecthyma**.

c. porcine pyoderma an infectious disease of young sucking pigs characterized by pustules on the face and neck from which streptococci and staphylococci are isolatable. The disease develops from infection of bite wounds inflicted by piglets whose needle teeth have not been removed.

c. pustular stomatitis see **horsepox**.

c. pyoderma see **exudative** epidermitis.

c. skin necrosis necrosis and abscessation of the skin of the shoulder and neck of camelids; etiology is unknown.

c. venereal infection of sheep see **ulcerative** dermatosis.

c. venereal tumor see canine transmissible **venereal** tumor.

contaminant [*kən-tam'ĭ-nənt*] something that causes contamination.

contaminated waste milk milk kept from the milk vat because the cow or a quarter has been treated with an antibiotic and the withholding period has not expired.

contamination [*kən-tam''ĭ-na'shən*] the soiling or making inferior by contact or mixture, as by introduction of infectious organisms into a wound, into water, milk, food or onto the external surface of the body or on bandages and other dressings.

context sensitive half-time ($t_{1/2\ context}$) the time for plasma concentration to decrease by 50% after an intravenous infusion has stopped..

contig [*kon-tig'*] a relatively long DNA sequence determined by the aligned sequences of a number of overlapping shorter DNA sequences.

continence [*kon'tĭ-nəns*] the ability to exercise voluntary control over natural impulses, such as the urge to defecate or urinate.

Continental toy spaniel the European name for dogs recognized elsewhere as two varieties of the **Papillon**.

contingency 1. a critical event such as birth or death or affliction with a particular disease. 2. a description of the functional relationship between a behavior and the environment that includes a description of the ABCs of the behavior.

c. coefficient see contingency **coefficient**.

c. table tabular classification of epidemiological data in horizontal lines and vertical rows, e.g. cause of death vertically and age horizontally, so that each patient appears only once.

three-term c's stimulus-response-outcome. The construct that each behavioral act can be broken down into three key parts: a discriminative stimulus, an operant response, and an outcome that can reinforce or punish. The three-term contingency is fundamental to the study of operant conditioning.

continual throughput housing drafts of finished fattening or growing animals are moved out for sale or to other accommodation as they reach their target weight or age so that animals are leaving all the time and their replacements arrive at the same irregular intervals. Compare with all-in-all-out housing.

continuing care a professional convention that a veterinarian who is treating an animal is obliged to continue treating that case unless an arrangement is made with its custodian to transfer the care to another practitioner or to a specialist.

continuing education educational courses relating to veterinary science, provided by an institution or recognized organization which supplements, brings up to date and refreshes the information that the graduate veterinarian already has. In some countries and professions a specified amount of such education is required to be completed each year by each veterinarian who wishes to continue his/her registration.

continuous [*kən-tin'u-əs*] continuing indefinitely without the need for renewal.

VetBooks.ir

c. clinical service veterinarians are required by convention to provide a service to their clients at all times, either directly or by referral to a comparable practice.

c. health assessment provided by a herd health program in which monthly visits to the farm by a veterinarian are a feature.

continuous positive airway pressure (CPAP) [*kən-tin'u-əs*] a method of medical gas administration in which gas is delivered to the patient at positive pressure in order to hold open alveoli that would normally close at the end of expiration and thereby increase oxygenation, preventing atelectasis, and reduce the work of breathing. It is used with patients who are breathing spontaneously. When the same principle is used in mechanical ventilation, it is called positive end-expiratory pressure.

continuous power system [*kən-tin'u-əs*] the dressing system in an abattoir in which the line is moving continuously. Suitable only for large abattoirs with a high kill rate.

contra- word element. [L.] *against, opposed*.

contra-aperture [*kon"trə-ap'ər-chər*] a second opening made in an abscess to facilitate the discharge of its contents. Called also counteropening.

Contracaecum a genus of roundworms in the family Anisakidae. Includes *Contracaecum microcephalum*, *C. spiculigerum* (wild birds) and *C. osculatum* (in seals and other fish eaters).

contraception [*kon"trə-sep'shən*] prevention of conception or impregnation. Little practiced in domestic animals, except in dogs and cats, population control being effected by other means. Is used in some less-developed communities where cattle are used as draft animals. More commonly used for the control of feral populations of horses as well as some wildlife.

immunological c. involves immune-mediated control of hormone or degeneration of reproductive tissues. Some methods investigated in dogs include immunization with bovine or ovine luteinizing hormone (LH) or gonadotropin so that cross-reacting antibodies neutralize the animal's own hormone. Antibodies to porcine zona pellucida antigens inhibit fertilization and implantation. More recent immunological contraception methods include immunization against GnRH in males and females.

contraceptive [*kon"trə-sep'tiv*] 1. diminishing the likelihood of or preventing conception. 2. an agent that diminishes the likelihood of or prevents conception. See also **contraception**.

oral c. contraceptive agent taken by mouth.

contracted having undergone contraction, especially in length.

c. foal syndrome a congenital disease of unknown origin in foals characterized by contractural deformities of axial and appendicular joints. Asymmetry of the skull, eventration of viscera, torticollis and scoliosis may also be present.

C-76: Contracted foal syndrome.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

c. foot see contracted heels (see below).

c. heels the heels of affected horses are drawn in, the bars are almost parallel and the frog is much reduced in size. Lameness is a common accompaniment. Called also contracted hoof, contracted foot.

c. hooves see contracted heels (above).

c. tendon see **tendon** contracture.

contractile [*kən-trak'tīl*] having the power or tendency to contract in response to a suitable stimulus.

c. proteins myosin, the main constituent of thick filaments of muscle, and actin, main constituent of thin muscle filaments.

contractility [*kon"trak-til'ĭ-te*] a capacity for becoming short in response to suitable stimulus.

cardiac c. the inotropic state of the myocardium; a major determinant of cardiac output and an important factor in cardiac compensation.

contraction [*kən-trak'shən*] a drawing together; a shortening or shrinkage.

isovolumetric c. ventricular muscle contraction during early systole after closure of the atrioventricular valves and before the semilunar valves open; the muscle continues to contract, forcing up the ventricular pressure without any change in the ventricular volume.

muscle c. see **muscle**.

myocardial c. individual myocardial cells transmit motor impulses across cell boundaries and act as a syncytium.

c. phase the stage in wound healing when there is centripetal movement of surrounding tissues and the area of the wound decreases. This is believed to be a cell-mediated phenomenon, involving myofibroblasts.

postural c. the state of muscular tension and contraction that just suffices to maintain the posture of the body.

striated muscle c. see **muscle**.

tetanic c., tonic c. sustained muscular contraction with alternating relaxation.

contractor the role adopted by a veterinarian who employs others, especially technicians, to carry out specific tasks, e.g. mulesing of sheep, without being financially liable for the quality of their work.

contracture [*kən-trak'chər*] abnormal shortening of muscle tissue, rendering the muscle highly resistant to stretching. A contracture can lead to permanent disability. It can be caused by fibrosis of the tissues supporting the muscle or the joint, or by disorders of the muscle fibers themselves.

cauliflower c. a disfiguring result due to scarring after an aural hematoma.

flexor c. joint fixed in flexion.

tendon c. see **tendon** contracture.

contrafissure [*kon"trə-fish'ər*] a fracture in a part opposite the site of the blow.

contraindication [*kon"trə-in"dĭ-ka'shən*] any condition that renders a particular line of treatment improper or undesirable.

contralateral [*kon"trə-lat'ər-əl*] pertaining to, situated on, or affecting the opposite side.

contrast [*kon'trast*] radiographically the degree of perceptible difference between two color tones. Black and white images on the one film is said to be high contrast; an all gray film has low or nil contrast.

c. agents contrast agents are used for injection into the vascular system for either a local visualization of a system or organ or for outlining an excretory system. Radiolucent (negative) contrast media are gases such as air, oxygen or carbon dioxide. The radiopaque (positive) contrast media include the insoluble salt barium sulfate and a variety of organic iodine compounds. Barium is used for gastrointestinal studies. Water-soluble, iodinated contrast media excreted by the kidneys are used for many procedures, including all types of angiography and for intravenous and retrograde urography. Those excreted by the liver are used for oral or intravenous cholangiography or cholecystography. New, nonirritant iodine compounds have been developed for myelography. Oily iodinated media are used for lymphangiography and bronchography.

c. computer display 1. contrast is limited by the contrast ratio of the display monitor. 2. contrast is dependent on the number of bits per pixel. 3. contrast enhancement is made using translation lookup tables to map the image grayscale to a non-linear output.

4. windowing; operator selectes to display less than full number of great values to preferentially enhance the contrast of a portion of a computer graphic image. 5. determines the range of pixel values displayed; reducing the number of pixel values in the display increases the contrast of a computer graphic image.

double c. the use of two contrast agents or two routes of administration in the one patient. For example, radiopaque dye and then air in the urinary bladder.

low c. an X-ray film with a poorly defined image because of insufficient contrast between light and dark shadows.

c. medium a substance used in radiography to permit visualization of internal body structures. Called also contrast agent, contrast material.

c. pattern the pattern made by the contrast agent. Includes confined extension patterns in diverticula and similar confined spaces, and unconfined extensions, e.g. in bladder rupture.

triple c. the use of three contrast media or routes in the one patient at the one time.

contrecoup [kōn″trə-koo′] [Fr.] denoting an injury, as to the brain, occurring at a site opposite to the point of impact as a result of abrupt acceleration and deceleration of the brain within the calvarium. See also **coup**.

contributory negligence a common countersuit to a charge of negligence. For example, it could be alleged that a fatal outcome to a surgical operation on an animal, the basis for a suit alleging negligence, has been contributed to by the owners because they did not seek further assistance until it was too late.

control [kən-trōl′] 1. the governing or limitation of certain objects or events. 2. a standard against which experimental observations may be evaluated, as a procedure identical to the experimental procedure except for the one factor being studied; a requirement of any planned experimental study. Also, any individual of the group exhibiting the standard characteristics.

disease c. restraining or reducing the prevalence of individual disease. Includes the range of strategies from limitation of occurrence to eradication. Implies legislative control of notifiable disease.

c. elements nucleotide sequences on DNA that usually precede (upstream) the sequences coding for the structural gene at which regulator proteins act.

c. factor in a comparison between diseases caused by a number of contributing factors it may be necessary to supply controls for one or more of these factors.

c. group the group of animals with which the experimental group is to be matched; the group which has not had its variables manipulated experimentally. The selection of the animals to be included in the two groups may be based on matching them with respect to age, to their history of nutrition or inheritance, or vaccination or prophylactic treatment. Called also controls.

ovulation c. prevention of ovulation by administration of progesterone or stimulation of ovulation by injection of luteinizing hormone are examples.

paired c. comparison between the experimental and control groups is most accurate if the control animal for each experimental animal is selected to be as similar as possible, i.e. a paired control.

c. pole a pole with a noose at the end used to catch and restrain small animals.

c. population a large control group.

population c. a variety of techniques are used with **contraception** being least used. Permanent surgical interference is common in food, racing and companion animal groups, and termination of pregnancy and estrus synchronization, both by hormonal means, are also extensively practiced. Increasing the culling rate is the standard procedure for dealing with a feed shortage.

X-ray c. unit the controlling mechanisms in an X-ray machine. Include the voltmeter and voltage compensator control, the kilovoltage, milliameter and milliamperage selectors and the timer and exposure control button.

controlled subjected to control.

c. environment buildings in which all food and drinking water are supplied and ambient temperature, humidity, air movement and light provision are controlled.

c. release glass bolus see soluble **glass**.

c. vocabulary a database in which the names of diagnoses or medicines, etc. are limited to avoid a continual expansion of the titles, making comparisons between groups difficult.

Controlled Substances Act the US federal law that regulates the prescribing and dispensing of dangerous substances, especially psychoactive drugs, including narcotics, hallucinogens, depressants and stimulants.

contuse [kən- tooz′] to bruise; to injure without breaking the skin.

contusion [kən-too′zhən] injury to tissues without breakage of skin; a bruise. In a contusion, blood from the broken vessels accumulates in surrounding tissues, producing pain, swelling and tenderness. In light-colored animals a discoloration may appear as a result of blood seepage under the surface of the skin. Serious complications may develop in some cases of contusion. Normally blood is drawn off from the bruised area in a few days, but there is a possibility that blood clotted in the area will form a cyst or calcify and require surgical treatment. The contusion may also be complicated by infection.

cerebral c. contusion of the brain following trauma. It may occur with extradural or subdural collections of blood, in which case the patient may be left with neurological defects or **epilepsy**. See also **brain** trauma.

conus [ko′nəs] pl. *coni* [L.] 1. a cone or cone-shaped structure. 2. posterior staphyloma of the myopic eye.

c. arteriosus the funnel-shaped portion of the right ventricle of the heart at the entrance to the pulmonary trunk.

c. medullaris the cone-shaped caudal end of the spinal cord; found at the level of the upper lumbar vertebrae in the human spine, but more caudally in domestic animals.

c. papillaris a cone-shaped vascular and melanotic structure protruding off the optic nerve head into the vitreous of many reptiles and amphibians; likely responsible for retinal nutrition.

peripapillary c. small hyper-reflective ring immediately adjacent to the margin of the optic disc; normal finding in animals in which the optic nerve head lies within the tapetal fundus.

convalescence [kon″və-les′əns] the stage of recovery from an illness, operation or injury.

convalescent [kon″və-les′ənt] 1. pertaining to or characterized by convalescence. 2. a patient who is recovering from a disease, operation or injury.

convallamarin one of the toxic cardiac glycosides in the plant ***Convallaria majalis***.

Convallaria majalis a toxic plant of the family Liliaceae; contains cardiac glycosides; causes cardiomyopathy, sudden death, diarrhea. Called also lily-of-the-valley.

convallarin one of the cardiac glycosides in ***Convallaria majalis***.

convalloside one of the cardiac glycosides ***Convallaria majalis***.

convection [kən-vek′shən] the act of conveying or transmission; specifically, transmission of heat in a liquid or gas by circulation of heated particles.

circulatory c. the distribution of heat from some parts of the body to cooler parts, sometimes involving blood redistribution.

convention nonlegal rules of conduct with respect to other persons generally. In a professional sense means rules of conduct in relation to clients.

convergence [kən-vur′jəns] 1. a moving together, or inclination toward a common point; the coordinated movement of the two eyes toward fixation of the same near point. 2. the point of meeting of convergent lines.

conversion [kən-vur′zhən] 1. the act of changing into something of different form or properties. 2. manipulative correction of malposition of a fetal part during labor. In veterinary medicine, the term most commonly used is mutation.

c. formulae formulae for conversion of one numerical mode of expression into a different mode, e.g. avoirdupois to metric weight.

c. ratio a measure of activity of the thyroid gland; it expresses the proportion of the total radioactivity of the plasma, subsequent to the injection of radioactive iodine, which is bound to protein (**protein-bound** iodine test).

convertase [kən-vur′tās] an enzyme that converts a substance to its active state.

converter plants plants which convert an element such as selenium from a source from which it is usually unavailable to a soluble form that other plants can use.

convex having a rounded, somewhat elevated surface.

c. face see **cis face**.

c. sole see **dropped** sole.

convolution a tortuous irregularity or elevation caused by the infolding of a structure upon itself.

C-77: The leveling of the dead pasture and the disturbance of the soil around the feet of this dead ewe are strong indications that she died having terminal convulsions. The froth at the nose indicates terminal pulmonary edema. Such observations can help form a tentative diagnosis list for further examination at postmortem.

Convolvulus a genus in the plant family Convolvulaceae; some species contain calystegines.
C. arvensis contain tropane alkaloids; suspected of causing chronic colic and weight loss in horses; called also field bindweed.
C. purpureus see ***Ipomoea purpurea***.
convulsant a drug which causes convulsions.
convulsion a series of involuntary contractions of the voluntary muscles. Convulsive seizures are symptomatic of some neurological disorder; they are not in themselves a disease entity. In animals, they are most often caused by idiopathic epilepsy, inflammatory conditions or primary brain tumors. Convulsions are also produced by any of a number of metabolic disorders, such as hypoglycemia, hypocalcemia and hormonal imbalances; brain cell injury from head trauma, tumors and degenerative neural disease; anoxia and hemorrhage which deprive brain cells of vital substances; and acute cerebral edema which interferes with normal brain cell function. Recurrent seizures are known as epilepsy which may be divided into primary, secondary and reactive forms. Called also fit, ictus. See also **epilepsy**, **seizure**.
central c. convulsions arising from stimulation of the central nervous system, as distinct from those caused by lesions elsewhere.
extracranial c. when the cause of the convulsions is external to the brain, e.g. hypocalcemic tetanic convulsions. Called also reactive epilepsy.
inherited c. and ataxia of cattle see **familial** convulsions and ataxia of cattle.
convulsive pertaining to, characterized by, or of the nature of a convulsion.
c. ergotism see **ergot**[1].
c. foal syndrome see **neonatal** maladjustment syndrome.
c. seizure see **convulsion**.
cooba, cooby see ***Acacia salicina***.
cook tree ***Cascabela thevetia*** (*Thevetia peruviana*).
Cooktown ironwood ***Erythrophleum chlorostachys***.
COOL Country of Origin Labeling Law.
Coolah grass see ***Panicum coloratum***.
Cooley forceps a type of surgical thumb forceps with longitudinal ribs.
cooling systems [*kool'ing*] for housed animals include spraying of roofs with water, evaporative pads with fans, foggers and misters; for pastured animals shelter from the sun by trees or artificial shade devices and cooling ponds are used.
Coombs' test [*koomz*] laboratory test that detects erythrocyte surface antigen-associated antibody and/or complement; particularly used in the diagnosis of immune mediated hemolytic anemia. A species-specific antiglobulin is added to washed erythrocytes. A positive reaction is agglutination, which indicates the presence of erythrocyte surface antibody. Called also direct antiglobulin test.
indirect C. t. detects antierythrocyte antibodies in the serum. Test serum is incubated with red blood cells. The cells are then washed and mixed with antiglobulin serum. Agglutination indicates the presence of antibody in test serum. Supernatant from colostrum may be used instead of serum.
coon see **raccoon**.
c. foot conformation defect in a horse in which the pastern is too long and sloping.
Coonabarabran ataxia see ***Tribulus terrestris***.
coonhound a general term for a number of varieties of hunting dogs in the southern United States, not all of which are recognized as specific breeds. See **American English coonhound**, **Black and tan coonhound**, **Bluetick coonhound**, **Redbone coonhound**, **Treeing Walker coonhound**.
c. paralysis see **polyradiculoneuritis**.
coonties ***Zamia integrifolia***.
cooperative breeding schemes see **group** breeding schemes.
cooperativity [*ko-op"ər-ə-tiv'i-te*] interaction between some proteins in which the binding of one may increase or decrease binding of the other.
Cooperia [*koo-pe're-ə*] a genus of intestinal nematodes in the family Trichostrongylidae. Principal infestations in sheep and goats, *C. punctata*, *C. oncophora*, *C. curticei*; in cattle, *C. oncophora*, *C. pectinata* and *C. punctata*; miscellaneous infections with other species in ruminants generally are *C. bisonis*, *C. spatulata* and *C. surnabada* (syn. *C. mcmasteri*). The worms inhabit the small intestine. See also **cooperiasis**.
Cooperia pedunculata North American plant in the Liliaceae family; contains furocoumarin causing primary photosensitization. Both dead and green leaves are toxic. Called also giant prairie lily, thunder lily, *Zephranthes*.
cooperiasis [*koo-pə-ri'ə-sis*] infestation of sheep and cattle with *Cooperia* spp.; causes diarrhea and wasting. The mortality rate without treatment can be serious but the most important losses are caused by poor weight gains in the survivors. See also ***Cooperia pedunculata***.
Cooper's worm *Cooperia* spp.
Coopworth New Zealand bred low-care sheep with medium wool, used principally as a meat sheep; originated by crossbreeding of Romney Marsh and Border Leicester breeds.
coordinates [*ko-or'di-nəts*] of a point on a graph that represents the distance from an origin along two axes, a horizontal axis (x) and a vertical axis (y).
geographic c. measurement expressed in degrees latitude and degree longitude of a location on the earth's surface.
coordination [*ko-or"di-na'shən*] the harmonious functioning of interrelated organs and parts. Applied especially to the process of the motor apparatus of the brain which provides for the coworking of particular groups of muscles for the performance of definite adaptive useful responses.
c. defect lack of refinement in the coordination of complex movements such as walking or trotting.
COP 1. colloid osmotic pressure. 2. a combination cancer chemotherapy protocol that uses cyclophosphamide, vincristine (Oncovin) and prednisone. Used in the treatment of lymphoma in dogs and cats.
COPD chronic obstructive pulmonary disease.
copepod [*ko'pə-pod*] a member of the subclass Copepoda of marine invertebrate parasites. There are more than 4500 species. Includes *Cyclops* spp. intermediate host for *Spirometra erinacei* and *Diphyllobothrium latum*.
COPLA a cancer chemotherapy protocol using cyclophosphamide, vincristine (Oncovin®), prednisone, L-asparaginase, and doxorubicin (Adriamycin®).
Coplin jars wide-mouthed glass jars, usually with vertically grooved interior walls, used for the storage or staining of slides containing blood smears or tissue sections.
copper (Cu) [*kop'ər*] a chemical element, atomic number 29, atomic weight 63.54. See Table 4. It is necessary for bone formation and for the formation of blood because it occurs in several oxidative enzymes including one involved in the transformation of inorganic iron into hemoglobin.
c. acetoarsenite an oldfashioned green pigment used in plaster, wallpaper, etc. A possible cause of chronic arsenic poisoning in very old houses. Called also Paris green.
c.-associated hepatopathy see copper-associated **hepatitis**
c. calcium edetate used as a prophylactic in lambs and calves against swayback and hypocuprosis. Overdosing causes liver damage and severe subcutaneous edema and ascites.
c. to molybdenum ratio used as a guide to predict risk of secondary copper deficiency. If the ratio in a composite sample of pasture species is greater than 5:1, the risk is very low; if less than 2:1 then the risk is high.
copper–molybdenum–sulfate relationship molybdenum combines with sulfur in the rumen to form Cu–Mo–S complexes (copper–thiomolybdates) which reduce the availability of copper in the ingesta.

VetBooks.ir

VetBooks.ir

C

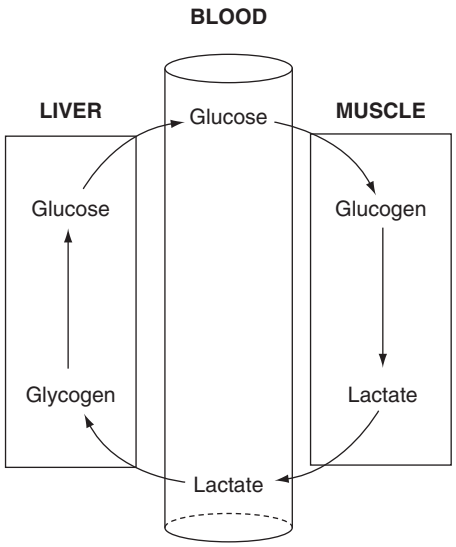
c. naphthenate a complex of copper and naphthenic acid, used as a fungicide and insecticide. A treatment for footrot in cattle and sheep, and for thrush in horses.
c. nutritional deficiency in ruminants this causes anemia, coat color change, depression of growth rate and congenital demyelination in the central nervous system. The deficiency may be primary or may be secondary due to intervention of high dietary intakes of iron or of sulfate and molybdenum, which interfere with the uptake of copper. Secondary deficiency is also called a conditioned copper deficiency. Diarrhea is commonly present with secondary copper deficiency. In pigs incoordination and anemia have been recorded. Horses appear unaffected. Called also enzootic ataxia, swayback, coast disease, pine, peat scours, teart, falling disease, hypocuprosis, licking sickness, and liksucht. Copper deficiency is rare in dogs and cats and is most likely to occur from excessive supplementation with calcium, which reduces absorption of many minerals, including copper or zinc.
c. oxide needles short lengths of fine copper wire given orally to cattle to prevent or control copper deficiency. They lodge in papillae of the rumen and over several months pass to the abomasum where acid digestion makes copper available. They are effective in the control of secondary copper deficiency associated with high molybdenum concentrations in the diet by avoiding the binding of copper in thiomolybdenates which occurs in the rumen.
phytogenous chronic c. poisoning see **toxemic** jaundice.
c. poisoning may be acute because of accidental administration of inorganic preparations of copper, usually as a worm drench, causing gastroenteritis. Chronic poisoning can be due to grazing on pasture growing on soils naturally rich in copper. The prevalence may be increased by the presence of converter plants, especially subterranean clover, which have a high uptake of copper, or of plants which cause chronic liver damage through pyrrolizidine alkaloids. Such plants are *Heliotropium, Senecio* and *Echium* spp. The syndrome terminates fatally when there is a sudden discharge of the large amounts of copper that then cause massive hemolysis, jaundice, hemoglobinuria and pallor of mucosae. Called also toxemic jaundice. Copper compounds reported to have caused poisoning in animals include the subacetate, oxychloride, chloride, oxide, naphthenate, carbonate, arsenite and sulfate. Chronic poisoning can also occur in more susceptible species (like sheep and goats) when fed mineral supplements or complete feeds containing high copper concentrations (formulated for cattle, swine or poultry). Poisoning by organic copper preparations administered therapeutically causes nephrosis and death due to uremia. See also **Bedlington terrier** copper-associated hepatopathy.
c. storage disease see **Bedlington terrier** copper-associated hepatopathy.
c. sulfate used as a parasiticide in aquariums and in the treatment of foot rot in cattle and in the treatment of cyanobacteria in water.
copper nose photosensitive dermatitis affecting the muzzle of cattle.
copperbottle see ***Lucilia*** *cuprina*.
copperweed see ***Oxytenia acerosa***.
copra meal see **coconut** meal.
copracrasia fecal incontinence.
copremesis [*kop-rem'ə-sis*] the vomiting of fecal matter.

C-78: Coat color change in molybdenum-induced secondary copper deficiency. This Angus heifer shows a coat that has lost its luster and whose individual hair fibers have changed in color from black to red and gray.

C-79: *Agkistrodon contortrix* (Southern copperhead). Courtesy of CDC/James Gathany.

coproantibody [*kop"ro-an'tĭ-bod"e*] an antibody (chiefly IgA) present in the intestinal tract or feces, associated with immunity to enteric infection.
coproculture [*kop"ro-kul'chər*] culture of the feces for the purpose of hatching parasite eggs and obtaining larvae for morphological identification and differentiation.
coprodeum [*kop"ro-de'əm*] the cranial or deepest compartment of the **cloaca** of birds. Called also coprodaeum.
COPROgen see **coproporphyrinogen**.
coprolith [*kop'ro-lith*] a hard fecal concretion in the intestine.
coprology [*kop-rol'ə-je*] scatology.
coprophagia [*kop"ro-fa'jə*] see **coprophagy**.
coprophagy [*kop-rof'ə-je*] the ingestion of dung or feces; a vice in dogs, normal in rabbits. Called also cecotrophy.
coproporphyria [*kop"ro-por-fir'e-ə*] porphyria marked by excessive excretion of coproporphyrin, chiefly in the feces.
coproporphyrin [*kop"ro-por'fə-rin*] a porphyrin formed in the blood-forming organs and intestine and found in the urine and feces. There are two chemically distinct substances, coproporphyrins I and III.
coproporphyrinogen [*kop"ro-por"fə-rin'o-jən*] the fully reduced, colorless compound giving rise to coproporphyrin by oxidation.
coproporphyrinuria [*kop"ro-por"fə-rin-u're-ə*] the presence of excess coproporphyrin in the urine.
coprostasis [*kop-ros'tə-sis*] fecal impaction.
coprozoic [*kop"ro-zo'ik*] living in fecal matter.
copula [*kop'u-lə*] any bond, connecting part or structure.
copulation [*kop"u-la'shən*] sexual union or coitus; usually applied to animals other than humans.
c. behavior see **mating** behavior.
c. tie applies primarily to the second stage of copulation in dogs. See **copulatory** lock.
copulatory pertaining to or emanating from copulation.
c. apparatus those parts of the genital organs involved in copulation; the penis, vulva and vagina. Term used in relation to birds and reptiles where genitalia are concealed.
c. inability the male is able to maintain an erection but unable to penetrate the female.
c. tie during the second stage of coitus the male dog dismounts and faces the opposite way to the bitch but they remain locked together by their genitals for some minutes. Called also **genital** lock.
copy number the number of plasmid or other DNA molecules in a cell.
CoQ coenzyme Q (ubiquinone).
coquera local name in Peru for the hydrocyanic acid poisoning in cattle caused by ingestion of the pods of ***Prosopis*** *julifloria*.
cor [*kor*] [L.] *cordis*. See also **heart**.
c. adiposum a heart that has undergone fatty degeneration or that has an accumulation of fat around it.
c. biloculare congenital defect with only two chambers in the heart.
c. bovinum a greatly enlarged heart due to a hypertrophied left ventricle, an inappropriate term when said of cattle.
c. pulmonale right ventricular heart failure due to pulmonary hypertension secondary to disease of blood vessels of the lung; usually chronic and due to COPD or heartworm disease; in cattle, as a response to high altitude. Clinical signs are those of right-sided congestive heart failure.
c. rugosum see cor villosum (below).

c. triatriatum dexter a rare congenital anomaly in which the right atrium is divided into two chambers by a persistence of the right sinus venosus valve resulting in obstruction of venous return.
c. triatriatum sinister a rare congenital heart defect in which the left atrium is divided into two distinct chambers by a fibromuscular membrane.
c. triloculare a congenital defect of a heart with three chambers, which may be one atrium or one ventricle.
c. villosum means hairy heart; when the epicardium is covered with shaggy fibrinous tags as a result of chronic pericarditis.
coracidium [kor"ə-sid'e-əm] first larval stage of a diphyllobothriidean cestode; this motile stage consists of a ciliated embryophore containing the oncosphere.
coracoid [kor'ə-koid] 1. like a crow's beak. 2. the stout bone of the avian shoulder that is braced against the sternum. 3. the coracoid process, a projection from the rim of the glenoid of the mammalian scapula.
Coragyps atratus see **vulture**.
coral berry see ***Rivina humilis***.
coral bush ***Jatropha*** *multifida*.
coral fungus see ***Ramaria***.
coral plant ***Jatropha*** *multifida*.
coral tree *Erythrina* spp.
Corallocytostroma ornicopreoides a gall-forming Ascomycete fungus that infects Mitchell grasses (*Astrebla* spp.) in northwestern Australia; contains an unidentified nephrotoxin that causes blacksoil blindness syndrome in cattle - blindness, ruminoreticulitis, liver and kidney damage.
Corchorus olitorius tropical plant in family Tiliaceae; its seeds contaminate cereal grain; contain a cardiac glycoside; cause diarrhea and sudden death. Called also jute.
cord [kord] any long, cylindrical, flexible structure.
angioblastic c. the embryonic beginnings in the lateral mesenchyme of the dorsal aortae and aortic arches; at first solid they later become patent. Called also angiogenic cords.
cord factor [kord] a cell surface glycolipid, trehalose 6,6' dimycolate, of *Mycobacterium* spp. that causes them to grow as cords, or strings, *in vitro*. Promotes a granulomatous response and neovascularization through recruitment of cytokines.
cordal [kor'dəl] pertaining to a cord; the vocal cords.
cordate [kor'dāt] heart-shaped.
cordectomy [kor-dek'tə-me] excision of a cord, as of a vocal cord.
cording-up [kor"ding-up'] see **tying-up syndrome**.
corditis [kor-di'tis] inflammation of the spermatic cord. Called also funiculitis.
cordopexy [kor'do-pek"se] surgical fixation of a vocal cord.
Cordophilus see ***Elaeophora***.
cordotomy [kor-dot'ə-me] 1. section of a vocal cord. 2. surgical division of the anterolateral tracts of the spinal cord. Not usually carried out in veterinary surgery.
Cordylobia [kor"də-lo'be-ə] a genus of blowflies of the family Calliphoridae.
C. anthropophaga the maggots parasitize humans, rodents, monkeys and dogs, causing cutaneous lumps. Called also tumbu or skin-maggot fly.
C. rodhaini the maggot causes skin lesions in antelope, rodents and humans. Called also Lund's fly.
core-elective educational programs [kor] core subjects are taken by all students in the class, being considered to be essential to all studies in the curriculum; other subjects are thought to be not essential to all students and therefore offered for special interest selection (elective).
core sample [kor] sample of wool collected by passing a sharp hollow instrument through the bale; the sample is examined for color, contaminants and fiber diameter and the bale is sold on the basis of the sample and the weight of the bale.
corectasis [kor-ek'tə-sis] pathological dilation of the pupil of the eye.
corectopia [kor"ek-to'pe-ə] abnormal or eccentric location of the pupil within the iris.
coredialysis [kor"ə-di-al'ə-sis] iridodialysis.
corediastasis [kor"ə-di-as'tə-sis] dilation of the pupil.
corelysis [ko-rəl'ə-sis] surgical breakdown of posterior synechiae (adhesions between the pupillary margin of the iris and the anterior lens capsule).
coremorphosis [kor"ə-mor-fo'sis] surgical formation of an artificial pupil.
corenclisis [kor"en-kli'sis] see **iridencleisis**.
core(o)- word element. [Gr.] *pupil of the eye*.
coreometer [kor"e-om'ə-tər] see **pupillometer**.
corepressor [ko"re-pres'ər] a substance (e.g. the product of a metabolic pathway) that activates a repressor by combining with it.
coretomy [kor-et'ə-me] see **iridotomy**.
Corgi see **Welsh corgi**.
Cori cycle [ko're] pathway by which muscle lactate contributes to blood glucose. Lactate formed in muscle by glycolysis is transported to the liver and resynthesized to glucose there. Called also lactic acid cycle.
Cori's disease [ko're] see **glycogenosis** type III.
Coriaria [kor"e-ar'e-ə] plant genus of the plant family, Coriaraceae; the plants are poisonous through the sesquiterpenoid lactone toxin, tutin, causing vomiting, convulsions, exhaustion and death. Includes *C. angustissima*, *C. arborea*, *C. kingiana*, *C. lurida*, *C. myrtifolia*, *C. plumosa*, *C. pottsiana*, *C. pteroides*, *C. ruscifolia*, *C. sarmentosa*, *C. sinica*. Called also tutu, sumach.
coriitis inflammation of the corium of the hoof; see **laminitis**.
coriosis degeneration of the corium of the hoof; see **laminitis**.
corium [kor'e-əm] the dermis; true skin; the fibrous inner layer of the skin just beneath the epidermis, derived from the embryonic mesoderm, well supplied with nerves and blood vessels and containing hair roots and sebaceous and sweat glands. See also **dermis**.
coronary c. specialized corium at the coronary band of ungulates providing nourishment via papillae which extend into the hoof. Separated from the skin by the perioplic corium.
cuneal c. corium of the frog of the equine hoof.
hoof c. the corium of all of the structures of the hoof including the frog (cuneal corium), sole (solear corium), hoof wall (laminar corium), coronet (coronary corium) and perioplic (perioplic corium).
laminar c. corium of the sensitive laminae of the hoof wall. It bears laminae which interdigitate with lamellae of the hoof wall and bind the hoof securely to the distal limb. It also supplies nutrition to the horn and via its terminal papillae to the white zone of interlamellar horn.
papillary c. see coronary corium (above).
perioplic c. continuous with the corium of the skin, forming a narrow band between the skin and the coronary corium.
solear c. the corium of the sole of the foot, supporting the horn of the sole.
corkscrew a deformity in which the affected part is spiraled like a corkscrew.
c. claw a probably heritable defect of the lateral claw, usually of the front feet, of cattle causing serious lameness. The third phalanx is small and the claw is long, thin and curls over the medial claw. It takes very little weight. Called also curved claw, curled toe.



C-80: Cori cycle.
From Kaneko JJ, Harvey JW, Bruss ML, Clinical Biochemistry of Domestic Animals, 5th Edition. Academic Press, 1997.

VetBooks.ir

C-81: Corkscrew claws in a Hereford cow.

c. penis a corkscrew twist of the anterior, free part of the penis occurs normally in the vagina when a bull makes an ejaculatory thrust. Premature corkscrew penis is an abnormality which prevents intromission. It is caused by insufficiency of the dorsal apical ligament of the penis, very rarely by trauma. Most common in polled beef breed bulls.

c. tail a short curled tail, sometimes with an abnormal setting at the butt, occurs in calves and dogs of the breeds with naturally short tails. In dogs it often leads to skin irritation with secondary pyoderma in the surrounding, deep fold of skin.

corkwood see ***Duboisia***.

Cormo sheep bred in Tasmania, Australia by crossing fine-wool merinos with Corriedale or Polwarth sheep. Easy-care, plain-body, open-face sheep, with wool 21–23 microns.

corn [*korn*] 1. a circumscribed hyperkeratosis of the footpad of dogs, particularly Greyhounds; sensitive to pressure and a cause of lameness. The cause is unknown. 2. a hematoma between the sensitive laminae and horn of the sole, usually between the frog and bar, in the hoof of the horse. It is painful on pressure and a cause of lameness. 3. in USA and elsewhere *Zea mays*, a member of the plant family Poaceae, grown as a cereal crop bearing seeds and used as a grain feed, green chop and ensilage. Used also for human consumption as meal or flour. The grain is deficient in most essential amino acids, especially lysine and tryptophan (high-lysine varieties are available), and in calcium and cannot be used as a complete ration in pigs. It may be fed whole, cracked, flaked, roasted, as dried or as high moisture corn (contains 22–28% moisture). Overeating of the grain by ruminants causes carbohydrate engorgement, and of moldy standing corn causes moldy corn poisoning. Called also maize. 4. in UK ***Triticum*** *aestivum* is also called corn. 5. the name corn is also used with other cereals such as rye corn, barley corn.

c. cob see **cob** (2). Ground into a meal it is used as a roughage of very low nutritive value in ruminant diets. Of some value as a diluent in high grain diets. In domestic settings, discarded cobs in kitchen refuse are attractive to dogs and are a cause of esophageal or intestinal obstruction if swallowed.

c. crop poisoning along with corn stalk poisoning, ill-defined names for more than one disease. 1. Cattle gaining access to a young growing corn crop may be subject to nitrate poisoning. 2. Corn crop poisoning can also refer to carbohydrate engorgement caused when cattle accidentally gain access to a standing crop, when confined animals are fed too much of it or when cattle are grazed on harvested corn stalks that still contain a large amount of grain; acidosis and laminitis result. See also **carbohydrate engorgement**. 3. A disease of ruminants grazing corn infested with *Diplodia maydis*; see **diplodiosis**

c. oil rich source of unsaturated fatty acids, particularly linoleic acid.

squirrel c. ***Dicentra*** *canadensis*.

wild c. see ***Veratrum*** *californicum*.

corn gromwell [*korn*] see ***Lithospermum arvense***.

cornbind see ***Fallopia convolvulus***.

corne- prefix meaning cornea.

cornea [*kor'ne-ə*] the clear, transparent anterior portion of the fibrous tunic of the **eye**. Composed of an outer epithelium, a collagenous stroma, and inner endothelium with its basement (Descemet's) membrane. See also **corneal**, **keratitis**, **keratopathy**.

c. nigrum see **corneal** sequestrum.

corneal [*kor'ne-əl*] pertaining to the cornea. See also **keratitis**, **keratopathy**.

c. anomaly includes **microcornea**, **megalocornea**, **dermoid**, congenital opacity.

c. black body see corneal sequestrum (below).

c. dystrophy a developmental condition, inherited in some breeds of dogs and cats. Can involve the endothelium and cause corneal edema; or the subepithelial stroma, in which case lipid/mineral is deposited. See also **keratopathy**.

c. ectasia see **kerectasia**.

c. edema occurs when fluid accumulates in the corneal stroma, disrupting the normal lamellar structure and causing a loss of transparency with a characteristic blue appearance (commonly called **blue eye**).

c. erosion syndrome see refractory **ulcer**.

feline focal c. necrosis see corneal sequestrum (below).

c. inflammation **keratitis**.

c. limbus see **limbus**.

c. lipidosis cholesterol or other lipid accumulation in the anterior (subepithelial) stroma; may occur as a result of hypercholesterolemia and/or chronic keratitis (the latter is called corneal degeneration).

c. melanosis melanin within the cornea. Typically occurs either in the anterior (subepithelial) stroma and epithelium as a result of chronic superifical keratitis or on the corneal endothelium where it is often associated with persistent pupillary membranes or other less common congenital ocular anomalies. Common in dogs, less common in cats and horses, rare in primates and birds. See also corneal pigmentation (below) and pigmentary **keratitis**; since there are numerous pigments other than melanin, melanosis is a more specific (and preferred) term.

melting c. region of cornea in which the stromal collagen becomes malacic due to collagenase production. See **collagenase**.

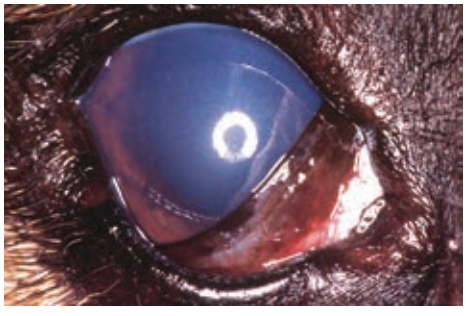
c. mummification see corneal sequestrum (below).

c. pigmentation literally discoloration of the cornea due to accumulation of a 'pigment', the most common of which is melanin. Therefore, this term is often (erroneously) used as a synonym for corneal pigmentation. See also superficial pigmentary **keratitis** and corneal melanosis (above).

c. reflex a reflex closing of the eyelids in response to stimulation of trigeminal nerve endings in the cornea. The corneal reflex can be elicited in a normal animal by gently touching the cornea with a wisp of cotton. Absence of the corneal reflex indicates deep coma or dysfunction of cranial nerve V or VII.

c. scar corneal fibrosis due to remodeling of the collagenous corneal stroma.

c. sequestrum a focal, dark, typically central region of dehydration necrosis of the corneal stroma of cats, especially Persians,



C-82: Diffuse corneal edema in a dog with glaucoma.
From Maggs D, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2007.

C-83: Corneal ulcer in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

Himalayans, and Birmans. Sometimes associated with overt chronic ulcerative or inflammatory disease of the cornea. Called also focal superficial necrosis, corneal mummification, keratitis nigrum.

spontaneous chronic c. epithelial defects (SCCED) see refractory **ulcer**.

superficial c. erosion see refractory **ulcer**.

c. transplantation see **keratoplasty**.

c. ulcer a defect in the corneal epithelium (and sometimes the underlying stroma); may be caused by exogenous trauma, chronic irritation as from distichiasis, entropion, ectopic cilia, or trichiasis, keratoconjunctivis sicca, or very rare infectious agents (the herpesviruses and *Moraxella bovis*). Deep ulcers can lead to rupture of the cornea, the escape of aqueous humor and prolapse of the iris with secondary uveitis and sometimes endophthalmitis. See also **ulcer**.

c. vascularization extension of blood vessels into the cornea from the corneoscleral limbus; results from chronic keratitis and is often necessary for repair but reduces visual acuity.

corneitis [*kor"ne-i'tis*] keratitis.

Cornell named after New York State Veterinary College at Cornell University, NY, USA.

C. alternative-month accelerated lambing system enables each ewe to lamb three times in every 2 years. Called also CAMAL scheme; superseded by the STAR system (see below).

C. semen tests in vivo and in vitro tests to detect IBR virus contaminated semen samples.

C. STAR accelerated lambing system an advanced development of the alternative-month accelerated lambing system; the ewes in this scheme are encouraged to lamb five times in 3 years.

C. teat curette has a long thin neck and a flat blade with a blunt-ended turned around tip with a straight cutting edge. Designed for curetting back towards the operator.

C. technique see paravertebral **block**.

corneoconjunctival [*kor"ne-o-kən-junk'tī-vəl*] pertaining to the cornea and conjunctiva.

c. graft a graft of corneal and conjunctival tissue that is transposed axially to repair a corneal defect. Called also corneoconjunctival flap or transposition.

corneoiridal pertaining to the cornea and the iris.

corneoiritis [*kor"ne-o-i-rī'tis*] inflammation of the cornea and iris; keratoiritis, keratouveitis.

corneosclera [*kor"ne-o-skler'ə*] the cornea and sclera regarded jointly. See also **corneoscleral**.

corneoscleral [*kor"ne-o-skler'əl*] pertaining to or emanating from the **corneosclera**.

c. junction see corneoscleral limbus (below).

C-84: Corneal vascularization in a heifer with infectious bovine keratoconjunctivitis.

c. limbus the point at which the sclera's opaque, wavy fibers join the more regularly arranged and transparent corneal fibers. Called also corneoscleral junction.

c. shell an ocular prosthesis, molded to fit over a phthisical or enucleated globe for cosmesis.

c. transposition axial movement of sections of the cornea and sclera to repair an adjacent corneal defect; a keratoplasty technique. See also **corneoconjunctival** graft/flap/transposition.

corneoscleroconjunctival [*kor"ne-o-skler"o-kən-junk'tī-vəl*] pertaining to the conjunctiva, cornea and sclera.

corneous [*kor'ne-əs*] hornlike or horny; consisting of keratin.

corniculate process [*kor-nik'u-lāt*] hornlike process such as the process of the arytenoid cartilage.

cornification [*kor"nī-fī-ka'shən*] 1. conversion into keratin, or horn. 2. conversion of epithelium to the stratified squamous type.

cornified [*kor'nī-fīd*] converted into horny tissue (keratin); keratinized.

Cornish a compact-bodied meat breed of poultry used extensively in crossbreeding for production of commercial meat strains. Dark, white, white-laced or red color, yellow skin and legs, brown eggs. Poor layers.

Cornish rex see **Rex**.

cornu [*kor'noo*] pl. *cornua* [L.] horn; a hornlike excrescence or projection; a structure that appears horn-shaped, especially in section. See also **cornual**.

c. ammonis shaped like a ram's horn; sometimes applied to the curved cornua of the ruminant uterus. Also applied to the infolding of gray and white matter in the **hippocampus**.

dorsal c. the dorsal protuberance of gray matter in the spinal cord. Called also dorsal horn.

lateral c. the lateral projection from the lateral intermediate substance of the spinal cord. It is prominent only in the thoracolumbar parts of the cord.

nasal c. the slender, ventral part of the comma-shaped alar cartilages that make up the support for the rim of the nostril.

thyroid cartilage c. there are rostral and caudal cornua borne on the thyroid cartilage.

uterine c. the horns of the uterus.

ventral c. the ventral horn of gray matter in the spinal cord. Contains the motor horn cells for the neurons of the peripheral nerves.

cornual, cornuate [*kor'noo-əl, kor'nu-āt*] pertaining to a horn: (1) to the horns of the spinal cord, (2) to the horns of a cow, bull, buck or ram.

c. nerve block cornual **block**.

cornuectomy dehorning.

Corona [*kə-ro'nə*] a type of canary, which can be any breed; distinguished by a cap of feathers like an inverted saucer or a Beatles haircut. Called also Crested.

corona [*kə-ro'nə*] pl. *coronae* [L.] a crown; a crownlike eminence or encircling structure.

glans c. the prominent, denticulated margin of the glans penis in the stallion. Usually called *corona glandis*.

c. radiata 1. the radiating crown of projection fibers passing from the internal capsule to every part of the cerebral cortex. 2. an investing layer of radially elongated follicle cells surrounding the zona pellucida of the ovum.

coronary [*kor'ə-nar"e*] encircling in the manner of a crown. 1. a term applied to vessels, ligaments, nerves, the band at the skin–hoof junction. 2. blood vessels partially encircling the heart.

c. arteries two large arteries that branch from the ascending aorta and supply all of the heart muscle with blood. See also Table 9.

c. artery anomaly one or both arteries originate from the pulmonary artery instead of the aorta; anoxia of the myocardium leads to congestive heart failure.

c. artery laceration in foals during a difficult parturition and in cattle due to penetration by a reticular foreign body; sudden death due to cardiac tamponade.

c. artery rupture can result from perforation by a foreign body from the reticulum as part of the syndrome of traumatic reticular pericarditis. Cardiac tamponade results, causing acute or congestive heart failure.

c. band the junction of the skin and the horn of the hoof.

c. chemoreflex intravenous injection of chemicals such as veratridine causes cardiac slowing, hypotension and apnea due to reflex response by the myocardium. Called also Bezold–Jarisch reflex.

c. cushion the spongy, resilient hypodermis beneath the coronary corium of the hoof.

VetBooks.ir

VetBooks.ir

c. emboli lodgment of an embolus in a coronary artery is a rare occurrence in animals. Myocardial ischemia and asthenia result, the effect on the animal varying with the amount of muscle compromised.

c. occlusion the occlusion, or closing off, of a coronary artery. The occlusion may result from formation of a clot (thrombosis). Narrowing of the lumen of the blood vessels by the plaques of **atherosclerosis**, as occurs in humans, does not occur in animals. If there is adequate collateral circulation to the heart muscle at the time of the occlusion, there may be little or no damage to the myocardial cells. When occlusion is complete, however, with no blood being supplied to an area of the myocardium, **myocardial** infarction results.

c. perfusion pressure the difference between aortic diastolic and right atrial diastolic pressure; a determinant of the blood flow to cardiac muscle.

c. thrombosis formation of a clot in a coronary artery. See also **myocardial** infarction.

Coronaviridae [kə-ro"nə-vir'ĭ-de] a family in the order *Nidovirales* of enveloped, single-stranded, plus sense RNA viruses about 100 nm in diameter. The envelope has prominent droplet-shaped spikes which resemble a solar corona. The two genera are *Coronavirus* which includes viruses that cause avian infectious bronchitis, hepatitis in mice, transmissible gastroenteritis in swine, canine coronavirus gastroenteritis, bovine coronavirus enteritis in neonatal calves, hemagglutinating encephalitis of pigs, feline infectious peritonitis, turkey coronaviral enteritis (bluecomb disease) and severe acute respiratory syndrome (SARS) in humans; and *Torovirus* which includes Breda virus and Berne virus which cause enteric infections in cattle and horses.

coronavirus [kə-ro'nə-vi"rəs] a virus in the family ***Coronaviridae***.

canine c. (CCoV) a cause of acute, usually mild and self-limiting enteritis in dogs, but a more virulent strain has caused fatal disease in puppies.

canine respiratory c. (CRCoV) isolated from respiratory samples of dogs and a probable species in the genus; similar to bovine and human coronaviruses.

feline c. see **feline** enteric virus, **feline** infectious peritonitis.

porcine respiratory c. see **porcine** respiratory coronavirus.

turkey c. see **turkey** coronaviral enteritis.

coronet [kor'ə-net] the fringe of hair that overlies the proximal border of the hoof, often regarded as synonymous with the **coronary** band.

coronitis [kor-ə-ni'tis] dermatitis of the skin at the coronet of the hooves; a cause of lameness. Because of the implications of vesicular disease any animal with coronitis must receive an oral examination. The lesions may be vesicles, erosions or granuloma.

coronoid process [kor'ə-noid] 1. a part of the mandible that projects into the temporal fossa and provides attachment for the temporal muscle. 2. the medial and lateral prominences located on either side of the trochlear notch of the ulna, forming part of the articular surface with the radius and humerus.

fragmented c. p. a developmental lesion of young, large breed dogs. Causes a weight-bearing lameness. May occur in association with osteochondritis dissecans of the medial humeral condyle. Called also ununited coronoid process, elbow dysplasia, jump-down syndrome.

ununited c. p. see fragmented coronoid process (above).

coronoidectomy [kor"ə-noi-dek'tə-me] surgical removal of the coronoid process of the mandible.

coroscopy [kə-ros'kə-pe] retinoscopy, or skiametry.

corpora [kor'pə-rə] plural form of **corpus**.

c. albicantia see **corpus** albicans.

c. arenacea sandy or gritty bodies, found in the pineal body; appear to be of glial or stromal origin; have the structure of hydroxyapatite crystals. Called also brain sand, acervuli, psammomas.

c. cavernosa penis see **corpus** cavernosum penis.

c. lutea see **corpus** luteum.

c. nigra normal cystic dilation of the posterior iris epithelium at the pupillary margn especially dorsally; less so ventrally. Present in most large herbivores. Particularly notable in the horse. Called also iridal granule, granular iridica.

c. quadrigemina four rounded eminences on the dorsal surface of the mesencephalon. See also **colliculus**.

corpus [kor'pəs] pl. *corpora* [L.] body.

accessory c. lutea the corpora lutea which develop during early pregnancy in the mare in addition to the primary corpus luteum. They are, in fact, follicles that undergo luteinization under the effect eCG. With the primary corpus luteum, they insure maintenance of pregnancy in the first 100 to 120 days.

c. albicans, corpora albicantia white fibrous tissue that replaces the regressing corpus luteum in the ovary in the latter half of pregnancy in the cow.

c. amygdaloideum a small mass of subcortical gray matter within the tip of the temporal lobe, anterior to the temporal horn of the lateral ventricle of the brain; it is part of the limbic system.

c. amylacea small hyaline masses of degenerate cells found in the prostate, thyroid, neuroglia and milk where they may be sufficient in a cow to block the papillary duct of the teat sinus. They are formed by stasis of milk flow in a duct and inspissation of the fluids. Subsequently they may become detached and find their way to the teat.

c. atreticum scar in the ovary produced by atresia of a follicle when late in its development.

c. callosum an arched mass of white matter in the depths of the longitudinal fissure of the brain, and made up of transverse fibers connecting the cerebral hemispheres.

c. callosum agenesis all or part of the corpus may be absent and there may be additional associated defects.

c. cavernosum clitoridis one of the pair of erectile bodies of the clitoris.

c. cavernosum penis either of the two columns of erectile tissue forming the body of the penis. See also corpus cavernosum **penis**.

c. cavernosum penis rupture common in bulls occurring during mating; commonly at the distal bend of the sigmoid flexure; result in hematoma and subsequent adhesions with inability to protrude the penis properly or angulation of the penis.

c. cavernosum urethrae see corpus spongiosum **penis**.

c. fimbriatum a band of white matter bordering the lateral edge of the temporal cornu of the lateral ventricle of the brain.

c. geniculatum see geniculate **body** lateral, and geniculate **body** medial.

c. hemorrhagicum 1. an ovarian follicle, especially one freshly ruptured, containing blood. 2. a blood-filled temporary structure formed immediately after ovulation and before complete luteinization.

c. luteum a progesterone-secreting yellow glandular mass in the ovary formed from the wall of an ovarian follicle that has matured and discharged its ovum. See also **ovulation**. In most animals that do not conceive the corpus luteum regresses quickly and a new follicle develops. The corpus luteum may be retained when there is uterine pathology which mimics pregnancy; no new follicle develops and the cow fails to come into heat. Called also retained corpus luteum. A similar clinical picture is observed with cystic corpora lutea.

c. spongiosum penis see corpus spongiosum **penis**.

c. striatum a subcortical mass of gray and white substance in front of and lateral to the thalamus in each cerebral hemisphere.

corpuscle [kor'pəs-əl] any small mass or body.

blood c's formed elements in the **blood**, i.e. erythrocytes and leukocytes.

bulbous c. temperature-sensitive nerve endorgan.

colostrum c's large rounded bodies in colostrum, containing droplets of fat and sometimes a nucleus.

compound granular c. see **gitter cells**.

genital c. pressure receptor nerve-endings in the penis and clitoris.

Golgi–Mazzoni c. probably a pressure receptor; occur in hairless skin and associated mucosae, glans penis, foot pad of carnivores, hoof connective tissue.

c. of Grandry in the dermis of a duck's bill. See also corpuscle of Herbst (below).

c. of Herbst located in the dermis of the duck's bill these corpuscles are extremely sensitive to vibration.

lamellar c. pressure-sensitive nerve-endings. Called also Ruffini corpuscle.

malpighian c. see renal corpuscle (below).

Meissner c. touch-sensitive nerve receptors.

meniscoid c. touch-sensitive nerve endorgan.

pacinian c's see **pacinian corpuscle**.

Purkinje's c's large, branched nerve cells composing the middle layer of the cortex of the cerebellum.

red blood c. erythrocyte.

renal c. a tuft of capillaries enveloped by the dilated end of a renal tubule. Constitutes the beginning of the structural unit of the kidney (nephron). Called also malpighian corpuscle.
Ruffini c. see lamellar corpuscle (above).
tactile c's medium-sized encapsulated nerve endings in the skin; called also tactile papillae.
white blood c. leukocyte.

corral a small fenced-in enclosure with high, wooden fences, suitable for holding cattle or horses.
c. system a management system in which range cattle are put into corrals and fed hay for a period when the environment is most inhospitable or at other times of stress, e.g. calving.

corrective pertaining to or emanating from the correction of a fault.
c. mating an approach to selection of dams and sires in which an undesirable trait in one parent is 'corrected' in the offspring by mating to a parent with an opposing or improved value for the characteristic.

correlated response change in an unselected character resulting from genetic selection of another character.

correlation [kor"ə-la'shən] 1. in neurology, the union of afferent impulses within a nerve center to bring about an appropriate response. 2. the degree to which statistical variables vary together.
c. coefficient see correlation **coefficient**.

corridor disease [kor'ĭ-dor] a disease of cattle caused by *Theileria lawrenci*; clinically resembles **East Coast fever**.

Corriedale medium wool, meat sheep originated in New Zealand and Australia by crossbreeding Lincoln or Leicester with Merino; wool 25–30 microns.

Corriente originally a small frame, Mexican breed of cattle of Spanish origin; more commonly the term is for cattle of nondescript breeding, usually from Mexico. Often used in the USA as recreational-roping and rodeo cattle.

Corrigan's pulse [kor'ĭ-gən] a jerky pulse with full expansion and full collapse.

corrosive [kə-ro'siv] having a caustic and locally destructive effect; an agent having such effects.
c. sublimate mercuric chloride; oldfashioned use as caustic, disinfectant, antiseptic. Called also mercury bichloride.

Cortaderia selloana a perennial reed-like plant with a large, silvery inflorescence, up to 10 ft high; used mainly as an ornamental but also as supplement to pasture; grows best in warm climates. Very palatable. Called also pampas grass.

cortex [kor'teks] pl. *cortices* [L.] an outer layer, as the bark of the trunk or root of a tree, or the outer layer of an organ or other structure, as distinguished from its inner substance.
adrenal c. the outer, firm layer comprising the larger part of the **adrenal** gland; it secretes a number of hormones. See **corticosteroid**, **aldosterone**, **mineralocorticoid**, **glucocorticoid**.
cerebellar c. the superficial gray matter of the cerebellum.
cerebral c., c. cerebri the convoluted layer of gray matter covering each cerebral hemisphere. See also **cerebral** cortex.
renal c. the smooth-textured outer layer of the kidney, composed mainly of renal corpuscles and convoluted tubules, extending in columns between the pyramids.

Corti's canal [kor'te] a space between the outer and inner rods of Corti.

Corti's ganglion [kor'te] the ganglion of the cochlear nerve, located within the modiolus, sending fibers peripherally to the organ of Corti and centrally to the cochlear nuclei of the brainstem. Called also spiral ganglion.

Corti's organ [kor'te] see **organ** of Corti.

Corti's rods [kor'te] rodlike bodies in the inner ear, having their heads joined and their bases on the basilar membrane widely separated so as to form a spiral tunnel.

cortical [kor'ti-kəl] pertaining to or emanating from a cortex, usually bone, cerebral or adrenal.
c. hyperplasia caused by chronic stimulation of the adrenal cortex by ACTH.
c. necrosis see **polioencephalomalacia**.
c. sinus vascular sinuses in the cortex of a lymph node.

corticate [kor'ti-kāt] having a cortex or bark.

corticectomy [kor"ti-sek'tə-me] excision of an area of cerebral cortex, as of a scar or microgyrus in the treatment of focal epilepsy. Not a procedure used in veterinary surgery.

corticifugal [kor"ti-sif'ə-gəl] proceeding, conducting, or moving away from the cortex.

corticipetal [kor"ti-sip'ə-təl] proceeding, conducting, or moving toward the cortex.

corticoadrenal, adrenocortical [kor"ti-ko-ə-dre'nəl] pertaining to the adrenal cortex.

corticobulbar [kor"ti-ko-bul'bər] pertaining to or connecting the cerebral cortex and the medulla oblongata or brainstem.

corticoid [kor'ti-koid] corticosteroid; a hormone of the adrenal cortex, or other natural or synthetic compound with similar activity.

corticolytic drugs [kor"ti-ko-lit'ik] see **adrenolytic**.

corticopontine [kor"ti-ko-pon'tīn] pertaining to or connecting the cerebral cortex and the pons.

corticoreticular tract [kor"ti-ko-rə-tik'u-lər] part of the reticular formation and therefore a participant in the modulation of the integration systems in the brain.

corticospinal [kor"ti-ko-spi'nəl] pertaining to or connecting the cerebral cortex and spinal cord.
c. tracts nerve fibers in these spinal cord motor tracts have their cell bodies in the cerebral cortex. Some have crossed to the opposite side of the cord from their side of origin, some are direct.

corticosteroid [kor"ti-ko-ster'oid] any of the hormones produced by the **adrenal** cortex; also, their synthetic equivalents. Called also adrenocortical hormone and adrenocorticosteroid. All the hormones are steroids having similar chemical structures, but quite different physiological effects. Generally they are divided into **glucocorticoids** (cortisol, or hydrocortisone, and corticosterone), **mineralocorticoids** (aldosterone and desoxycorticosterone, and also corticosterone) and androgens.
c.-binding globulin α-globulin that binds unconjugated corticosteroid and transports it in the plasma; called also transcortin.

corticosteroid-induced joint disease degenerative joint disease caused by repeated injections of corticosteroid into joint cavities to control lameness.

corticosteroid-induced photosensitization photosensitive dermatitis of the teats in cows injected with corticosteroids to terminate pregnancy.

corticosterone [kor"ti-kos'tər-ōn] a steroid hormone of the adrenal cortex; it is usually classified as a **glucocorticoid**, but it also has slight **mineralocorticoid** activity.

corticotomy removal of a piece of bone cortex, leaving the intramedullary blood supply intact.

corticotrop one of the types of secretory cells in the adrenohypophysis; secrete ACTH and beta-lipoprotein.

corticotrope [kor'ti-ko-trōp] a cell of the anterior pituitary gland that secretes ACTH.

corticotroph adenoma [kor'ti-ko-trōf"] functional tumors of the pars intermedia or the pars distalis of the pituitary gland which cause a syndrome of cortisol excess in dogs. See **Cushing's disease**, **chromophobe** adenoma.

corticotrophic [kor"ti-ko-tro'fik] see **corticotropic**.

corticotrophin [kor'ti-ko-tro"fin] see **corticotropin**.

corticotropic [kor"ti-ko-tro'pik] having a stimulating effect on the adrenal cortex; pertaining to corticotropin; adrenocorticotropic.

corticotropin [kor'ti-ko-tro"pin] 1. adrenocorticotropic hormone. See also **ACTH**. 2. a pharmaceutical preparation derived from the anterior pituitary of mammals and used to stimulate adrenal cortical activity in various conditions, such as allergy, hypersensitivity and rheumatoid arthritis. It has also been used experimentally in a large number of disorders.
c.-like intermediary peptide a polypeptide hormone of the intermediate pituitary; stimulates insulin release from the pancreas.
c.-releasing factor secreted by the hypothalamus and conveyed by local circulation to the corticotrophs in the pituitary which are then stimulated to produce ACTH. Called also corticotropin-releasing hormone (CRF).

cortilymph [kor'ti-limf"] the fluid filling the intercellular spaces of the organ of Corti.

Cortinarius [kor"ti-nar'e-əs] a genus of the Basidiomycetes fungi; contains a cyclic peptide, cortinarin, which causes kidney damage, uremia. Includes *C. orellanoides* (*C. speciocissimus*), *C. orellanus*, *C. splendens*.

cortisol [kor'ti-sol] a hormone from the adrenal cortex; the principal **glucocorticoid**. Called also 17-hydroxycorticosterone and,

VetBooks.ir

pharmaceutically, hydrocortisone. A synthetic preparation is used for its anti-inflammatory actions.

c.-binding globulin much plasma cortisol is bound to a α-globulin—transcortin, some to albumin. Much is free and in the form of a glycuronide or sulfate.

c.:corticosterone ratio the ratio between the two hormones is different between species and even between individual animals. There is also a circadian rhythm in the ratio which must therefore be interpreted with caution.

c.:creatinine (C/C) ratio measured in the urine as a sensitive screening test for hyperadrenocorticism. Comparing the measured concentration of urinary cortisol with that of creatinine, which is excreted at a relatively constant rate, will detect increased daily excretion of cortisol, which parallels cortisol concentration in the blood.

c. hemisuccinate see **hydrocortisone**.

c. response test see **ACTH** response test; **dexamethasone** suppression test.

cortisone [*kor'tĭ-sōn*] a **glucocorticoid** with significant **mineralocorticoid** activity, isolated from the adrenal cortex; used as an anti-inflammatory agent and for adrenal replacement therapy.

Corvus a genus of large, perching birds of the family Corvidae which includes jays, magpies, crows. They are omnivorous and may act as physical carriers of contagious disease because they will on occasion eat carrion.

Corydalis [*ko-rid'ə-lis*] a genus of American plants in the family Fumariaceae; contains isoquinoline alkaloids which cause convulsions, vomiting and diarrhea. Includes *C. aurea*, *C. caseana*, *C. flavula*. Called also fitweed, fumatory.

corymbiform [*ko-rim'bĭ-form*] clustered; said of lesions grouped around a single, usually larger, lesion.

Corynebacteriaceae [*ko-ri"ne-bak-tēr"e-a'se-e*] a family of pleomorphic gram-positive bacteria,sometimes containing metachromatic granules. Contains the genus *Corynebacterium*.

corynebacterial [*ko-ri"ne-bak-tēr'e-əl*] pertaining to or emanating from bacteria of the genus *Corynebacterium*.

c. lymphadenitis see **caseous lymphadenitis**.

c. mastitis a severe, acute mastitis in cows causing much suppuration, mammary abscessation and loss of the affected quarter. See also summer **mastitis**.

c. pneumonia old name for *Rhodococcus equi* pneumonia.

c. pyelonephritis see **contagious** bovine pyelonephritis.

Corynebacterium [*ko-ri"ne-bak-tēr'e-əm*] a genus of bacteria of the family ***Corynebacteriaceae***. They are gram-positive and pleomorphic. They are short, slightly curved rods, sometimes club-shaped. Likely to be grouped into angled and palisade arrays of cells. The type species is *Corynebacterium diphtheriae*, the cause of diphtheria in humans.

C. bovis a common inhabitant of the bovine udder but not considered to be a pathogen. May have importance in protecting the udder from more damaging pathogens.

C. cystitidis causes **contagious** bovine pyelonephritis.

C. equi now called ***Rhodococcus equi***.

C. kutscheri causes systemic abscessation in rodents similar to caseous lymphadenitis in sheep. Previously called *C. murium*.

C. minutissimum found in wound infections in lambs.

C. parvum now called *Propionibacterium acnes*.

C. pseudotuberculosis cause of **caseous lymphadenitis** of sheep and goats, ulcerative **lymphangitis**, and **Canadian horsepox** and **pectoral** abscesses of horses. Previously called *C. ovis*.

C. pyogenes now called *Arcanobacterium pyogenes*; previously *Actinomyces pyogenes*.

C. rathayi now called *Rathayibacter rathayi*.

C. renale previously classified as types I, II and III, but now allocated to the species *C. renale*, *C. pilosum* and *C. cystitidis*, respectively. Causes bovine pyelonephritis and **enzootic** balanoposthitis in sheep.

C. suis previously called *Eubacterium suis*; now called ***Actinobaculum suis***.

C. ulcerans a rare cause of subacute bovine mastitis, but a recognized risk for people who drink raw milk.

coryneform [*ko-ri'nə-form*] organisms resembling those the family *Corynebacteriaceae*. Includes a number of actinomycetes. See also **diphtheroid**.

corynetoxicosis [*ko-ri'nə-tok"sĭ-ko'sis*] poisoning of grazing livestock by corynetoxins (tunicaminyluracils) produced by *Rathayibacter toxicus* in nematode-induced seedhead galls on pasture grasses - *Lolium rigidum* in Australia and South Africa, *Lachnagrostis filiformis* and *Polypogon monspeliensis* in Australia and *Festuca nigrescens* in North America. Causes high case fatality ratio syndrome of tremors, ataxia and intermittent cerebral convulsions. Called also annual ryegrass toxicity, floodplain staggers, Stewart's Range syndrome. See also **tunicaminyluracils**.

corynetoxins tunicaminyluracil toxins produced by *Rathayibacter* spp. in seedhead galls of pasture grasses; cause corynetoxicosis. See also **tunicamycin**, ***Lolium rigidum***, ***Lachnagrostis***, ***Polypogon***, ***Festuca***, ***Rathayibacter***.

Corynocarpus laevigatus New Zealand plant in family Corynocarpaceae; contains karakin, a nitrocompound, which causes incoordination and paralysis. Called also karaka tree.

Corynosoma a genus of acanthocephalan parasites of the family Polymorphidae. Called also thorny-headed worm.

C. semerme* and *C. strumosum non-pathogenic parasites in the intestines of dogs and foxes. Cause enteritis in mink. Many species in cetaceans and pinnipeds.

Corythaeola cristata great blue turaco.

coryza [*ko-ri'zə*] profuse discharge from the mucous membrane of the nose.

infectious c. see **fowl** coryza.

pigeon c. see **pigeon** herpesvirus.

turkey c. an upper respiratory tract disease, probably caused by *Bordetella avium*, occurring in turkey poults under conditions of stress, particularly poor ventilation. There is sneezing, a mucoid rhinotracheitis and collapse of the trachea. Secondary airsacculitis and pericarditis are common. Mortality is often as high as 25%. Called also rhinotracheitis.

coryzavirus see ***Rhinovirus***.

cosmesis [*koz-me'sis*] cosmetic therapy or procedures, such as tattooing. Also sometimes applied to such procedures when used for therapeutic purposes.

cosmetic [*koz-met'ik*] 1. beautifying; tending to preserve, restore, or confer comeliness. 2. a beautifying substance or preparation.

c. surgery surgery carried out purely to enhance the appearance of the animal. When it is for the purpose of enhancing or disguising its appearance in the show ring, this is considered unethical. The animal is not in a position to judge or to express an opinion and the question of beauty is adjudicated by the owner. Because animal fashions have sometimes tended to the bizarre there has been a marked turn in public opinion against cosmetic operations which are seen by some as unwarranted mutilations.

cosmid [*koz'mid*] a class of plasmid-based vectors carrying bacteriophage λ cos sequences required for packaging DNA into phage particles. Used for cloning large DNA fragments (up to 45 kilobases). Recombinant molecules constructed using cosmids are incorporated into bacteriophages using *in vitro* packaging extracts and introduced with high efficiency into *Escherichia coli*.

Cosmocephalus obvelatus nematode found in the esophagus of newly captured rockhopper penguins.

COST European Cooperation in Science and Technology.

cost function a mathematical formula created for the purpose of estimating a cost, e.g. the cost of making an observation when it varies from stratum to stratum of a collection of data.

costa [*kos'tə*] pl. *costae* [L.] a rib.

costalgia [*kos-tal'jə*] pain in the ribs.

costectomy [*kos-tek'tə-me*] excision of a rib.

Costia a genus of flagellated protozoa in the family Tetramitidae. Called also *Ichthyoboda*.

C. necatrix* and *C. pyriformis parasites on the skin of freshwater fish.

costive 1. pertaining to, characterized by, or producing constipation. 2. an agent that depresses intestinal motility.

costiveness see **constipation**.

cost(o)- word element. [L.] *rib*.

costocervical [*kos"to-sur'vĭ-kəl*] pertaining to the ribs and neck.

costochondral [*kos"to-kon'drəl*] pertaining to a rib and its cartilage.

enlarged c. joints visible in thin animals, palpable in fat ones; symptomatic of rickets when it is called a rachitic rosary.

costophrenic [*kos"to-fren'ik*] pertaining to the ribs and diaphragm.

c. angle in radiographs, the angle between the ribs and the diaphragm. Details may be blurred by the presence of fluid in the pleural cavity.
costosternal [kos"to-stur'nəl] pertaining to the ribs and sternum.
costotomy [kos-tot'ə-me] incision or division of a rib or costal cartilage.
costotransverse [kos"to-trans-vərs'] pertaining to the ribs and the transverse processes of the vertebrae.
costovertebral [kos"to-vur'tə-brəl] pertaining to a rib and a vertebra.
costoxiphoid [kos"to-zi'foid] pertaining to the ribs and xiphoid cartilage or process.
cosyntropin [ko-sin-tro'pin] a synthetic corticotropin used in the screening of adrenal functional capacity on the basis of plasma cortisol response after intramuscular or intravenous injection. Called also tetracosactrin.
Coton de Tulear a small white dog from Madagascar with a long, fine white coat that has the texture of cotton.
cotransport [ko-trans'port] the simultaneous movement of two substances across a membrane. See also **antiport**, **symport**.
co-trimoxazole [ko"tri-moks'ə-zol] an antibiotic preparation made up of a mixture of **trimethoprim** and sulfamethoxazole.
cottage cheese a soft, uncured cheese made from soured skim milk; most of the lactose is removed with the whey. Used in low-residue diets for dogs and cats.
cotted said of wool which has become matted or felted while on the sheep, due usually to continuous wetting.
cotton [kot'ən] 1. see **suture** (3, 4). 2. plants in the genus *Gossypium*.
c. ball test a test of vision in animals; a piece of cotton is dropped within the field of vision. A dog or cat with normal vision will follow or 'track' the cotton as it descends.
balloon c. (2) *Gomphocarpus physocarpus*.
c. bush (commercial cotton) plant *Gossypium* spp. in the family Malvaceae; seeds contain gossypol, a toxic phenol which causes cardiomyopathy, hepatopathy and edema in all organs.
red c. bush ***Asclepias*** *curassavica*.
c. seed meal meal or cake residue after extrusion of oil; used as livestock feed but toxic because of presence of gossypol.
wild c. see ***Asclepias***.
cotton fur the normally fine, dense fur of a chinchilla becomes wavy and cotton-like; caused by excessive protein in the diet.
cotton-leaf physic nut ***Jatropha*** *gossypifolia*.
cotton underfur a condition of the coat of mink caused by feeding on particular fish, e.g. Pacific hake, whiting, which encourages the development of anemia.
cotton wool disease see **columnaris disease**.
cotton-wool spot funduscopically visible white or gray, 'fluffy' opacities in the retinal nerve fiber layer due to reduced axonal transport. In veterinary patients, most commonly indicate early systemic hypertension.
cottonseed [kot'ən-sēd] seed of the cotton plant. Made into cake after oil extraction and used as feed for livestock.
c. cake or meal contains **gossypol** and causes hepatitis and degeneration of cardiac muscle. The clinical syndrome includes dullness, weakness, dyspnea and edema. Usually fed as decorticated cake because of the high fiber content of the raw product.
c. hulls winnowed from the cotton seeds and used as roughage for ruminants. Have negligible feed value but are an effective diluent for grain because of the ease with which they can be handled by mechanical equipment.
c. oil used topically as an emollient.
cottontail [kot'ən-tāl'] see cottontail **rabbit**.
Cotugnia a genus of tapeworms of the family Davaineidae. Includes *C. cuneata*, *C. digonopora* and *C. fastigata*. Found in the intestines of birds.
Cotula radiata see ***Matricaria nigellifolia***.
Coturnix coturnix [kə- 'niks] see **quail**.
Cotyledon [kot"ə-le'dən] African genus of the plant family Crassulaceae; contains bufadienolide cardiac glycosides; causes krimpsiekte (cotyledonosis). Includes *C. orbiculata* (*C. decusata*, *C. leucophylla*), *C. umbilicus* (*Umbilicus rupestris*, navelwort, pennywort). Many species have been reclassified as *Tylecodon* spp.
cotyledon [kot"ə-le'don] 1. any subdivision of the uterine surface of the human placenta. 2. discrete elevations of chorioallantoic tissue of the ruminant fetal membranes that adhere intimately with the maternal caruncles to form placentomes. See also **caruncle**.
cotyledonary pertaining to or emanating from cotyledons.
c. placentation see **placentation**.
cotyledonosis [kot"i-le"də-no'sis] poisoning of livestock in southern Africa by plants in the genera *Tylecodon* and *Cotyledon* containing cumulative **bufadienolide** cardiac glycosides. Clinical signs include exercise intolerance, paresis, paralysis, torticollis, paralysis of the lower jaw and tongue, dysphagia, drooling of saliva, abdominal pain, convulsions and death within a few hours. No significant necropsy lesions. Secondary poisoning occurs in dogs and humans who eat meat from diseased animals. Called also **krimpsiekte**.
Cotylophoron cotylophoron [kot"ə-lof'ə-ron] see **paramphistomiasis**.
Cotylurus a genus of digenetic trematodes in the family Strigeidae; includes *C. cornutus*, *C. flabelliformis*, *C. platycephalus* and *C. variegatus*; parasitic in the intestines of wild birds.
couch see **kush**.
couch grass ***Cynodon*** *dactylon*.
couch grass + *Balansia*spp. grazing fungally infested grass causes staggers syndrome.
blue c. g. ***Cynodon*** *incompletus*.
kimberly c. g. ***Brachyachne*** *convergens*.
slender native c. g. ***Brachyachne*** *tenella*.
couching luxation of the lens of the eye due to chemical zonulolysis. Historically used for the restoration of vision in an eye with cataract.
cougar (*Puma concolor*) a large, solid fawn-colored cat in the subfamily Felinae native to North and South America; resembles a short-legged maneless lion. Called also puma, mountain lion.
cough [kawf] 1. a sudden noisy expulsion of air from the lungs. 2. to produce such an expulsion of air.
dry c. cough without expectoration.
canine c. see **kennel cough**.
goose honk c. a chronic, harsh, dry cough characteristic of collapsed trachea.
Newmarket c. see **equine** influenza.
nocturnal c. in dogs associated with heart disease, psychogenic coughing or collapsed trachea.
productive c. cough attended with expectoration of material from the bronchi.
psychogenic c. dogs sometimes associate coughing with the attention received and develop it as a habit.
c. reflex 1. the sequence of events initiated by the sensitivity of the lining of the passageways of the lung and mediated by the medulla as a consequence of impulses transmitted by the vagus nerve, resulting in coughing, i.e. the clearing of the passageways of foreign matter. 2. the response elicited by applying pressure on a trachea. Increased with inflammation of the respiratory epithelium; decreased by cough suppressants and pain.
coughing [kawf'ing] pertaining to **cough**.
coughing up feed indicates a problem with the swallowing mechanism, either functional, e.g. pharyngeal paralysis, or physical, e.g. foreign body lodged in pharynx.
coulomb (C) [koo'lom] 1. the unit of electrical charge, defined as the quantity of electrical charge transferred by 1 ampere in 1 second. 2. the SI unit of exposure to radiation. 1 coulomb per kilogram = 3876 roentgen; abbreviated C/kg.
Coulter counter [kōl'tər] an electronic cell counter for particles in a fluid medium by electronic means. Can be calibrated to count cells in milk or a blood sample.
coumachlor a coumarin derivative used as a rodenticide; can cause poisoning in domestic animals which are likely to be exposed to it. Causes internal and external hemorrhages and the animal dies of anemia.
coumafuryl see **fumarin**.
coumaphos an organophosphorus insecticide and anthelmintic, effective against nematodes, including *Haemonchus*, *Trichostrongylus*, *Ostertagia*, *Cooperia* and *Trichuris* spp. in cattle and sheep.
coumarin [koo'mə-rin] 1. a principle extracted from the tonka bean, from which several anticoagulants are derived, that inhibits hepatic synthesis of vitamin K-dependent coagulation factors. See also **dicoumarol**. 2. any of these derivatives.
coumarinic acid a substance whose lactone is coumarin, the anticoagulant.
coumarol see **dicoumarol**.
coumatetralyl a derivative of warfarin and used as a rodenticide. As a poison in domestic animals it causes the same disease as

VetBooks.ir

warfarin but is more dangerous because of its use in concentrated form. See also **warfarin**.

coumestans estrogenic substances found in *Medicago* spp., e.g. lucerne/alfalfa and barrel medic.

coumestrol an estrogenic substance occurring naturally in *Trifolium repens*, *T. fragiferum* and *Medicago sativa*. See **estrogen**.

Council for Agricultural Science and Technology (CAST) a group of scientific societies, foundations and corporations with interests in the science and technology of food production and agriculture. Publishes the journal, *Science of Food and Agriculture*.

Councilman body [*koun'səl-man*] see **cytosegresome formations**.

count [*kount*] a numerical computation or indication.

differential c. a count, on a stained blood smear, of the proportion of different types of leukocytes (or other cells), sometimes expressed in percentages but more often reported in absolute numbers (10^9/L) for a better indication of abnormalities that may exist.

somatic cell c. see **somatic** cell counts.

sperm c. see **semen** concentration.

total bacterial c. determination of the concentration of bacteria by examination of a sample microscopically or by flow cytometer. These methods do not distinguish between viable and non-viable organisms. See also **Breed's direct smear method**. For milk samples a total bacterial count may also be measured by determining the number of colony forming units by culture on agar plates. This is compared to the thermoduric bacterial count to assess milk quality.

viable bacterial cell c. enumerating the number of viable bacteria present in a sample based on counting the number of colonies produced by culture of a given dilution.

wool c. an arbitrary number given to wool to indicate its fiber diameter, e.g. 60s, based on an eyeball assessment of the number of hanks of yarn that could be spun from one pound of wool. Now superseded by measurement of the diameter, e.g. 20 microns.

worm c. a total worm count requires a freshly slaughtered cadaver, collection of intestinal or other fluid in an aliquot sample; in the case of lungs it is often necessary to digest the tissue; worms in a sample are counted and the total worm burden is then determined by considering the dilution factor and/or sample size.

counter [*koun'tər*] an instrument or apparatus by which numerical value is computed; in radiology, a device for enumerating ionizing events.

Coulter c. see **Coulter counter**.

Geiger c., Geiger–Müller c. a radiation counter using a gas-filled tube that indicates the presence of ionizing particles.

scintillation c. a device for detecting beta and gamma rays, permitting determination of the concentration of radioisotopes in the body or other substance. It is more important for gamma rays, which are poorly measured by a Geiger counter.

counterconditioning a technique of changing an undesirable response of an animal to a stimulus by engaging the animal in another response that is incompatible with the first.

countercurrent [*koun"tər-kur"ənt*] flowing in an opposite direction.

c. exchanger a countercurrent system in which transport between the inflow and the outflow is passive.

c. multiplier a mechanism that enables a membrane to absorb much more solute than water so that the residual fluid has a lower osmotic pressure. The classical example of this phenomenon is the loop of Henle in the kidney. Called also countercurrent multiplier mechanism or system.

counterelectrophoresis [*koun"tər-e-lek"tro-fə-re'sis*] see **counter immunoelectrophoresis**.

counterextension [*koun"tər-eks-ten'shən*] traction in a proximal direction coincident with traction in opposition to it.

counter immunoelectrophoresis (CIE) [*koun"tər-im"u-no-e-lek"tro-fə-re'sis*] a laboratory technique in which an electric current is used to accelerate the migration of antibody and antigen through a buffered gel diffusion medium. Antigens in a gel medium in which the pH is controlled are strongly negatively charged and will migrate rapidly across the electric field toward the anode. The antibody in such a medium is less negatively charged and will migrate in an opposite or 'counter' direction toward the cathode. If the antigen and antibody are specific for each other, they combine and form a distinct precipitin line. Was historically used for the rapid diagnosis of some bacterial, mycoplasma and viral infections.

counterincision [*koun"tər-in-sĭ'zhən*] a second incision made to promote drainage or to relieve tension on the edges of a wound.

counterirritant [*koun"tər-ir'ĭ-tənt*] 1. producing counterirritation. 2. an agent that produces counterirritation. Blistering by application of a paste or liquid containing rubefacient agents such as cantharides or mercuric iodide, and firing, by burning the skin and superficial tissues with a hot iron, were used as counterirritants on the lower limbs of lame horses. Less traumatic measures are more commonly used nowadays.

counterirritation [*koun"tər-ir"ĭ-ta'shən*] superficial irritation intended to relieve some other irritation.

counteropening [*koun"tər-o'pən-ing*] a second incision made across from an earlier one to promote drainage. Called also contra-aperture.

counterpressure [*koun"tər-presh'ər*] externally applied pressure used to control internal hemorrhage and in the treatment of shock. See also **antishock pneumatic garment**.

counterpulsation [*koun"tər-pəl-sa'shən*] technique for assisting the circulation by the use of an external pumping device synchronized with cardiac systole.

counterpuncture [*koun"tər-punk'chər*] a second opening made opposite another.

countershock [*koun'tər-shok"*] see **cardioversion**.

counterstain [*koun'tər-stān*] a stain applied to render the effects of another stain more discernible.

countertraction [*koun"tər-trak'shən*] traction opposed to traction; used in reduction of fractures.

counting-out pen [*kount'ing*] the pen in which each shearer's sheep are collected after shearing and then counted as a basis for payment of the shearer.

Country of Origin Labeling Law (COOL) requires retailers to identify the country of origin of muscle cut and ground meats, including beef, veal, lamb, pork, chicken, and goat meat; wild and farm-raised fish and shellfish; and plant agricultural commodities. Administered by the USDA Agricultural Marketing Service.

coup [*koo*] [Fr.] denoting an injury, as to the brain, occurring at the point of impact. See also **contrecoup**.

coupage percussion of the thorax to aid in the removal of secretions. Called also percussion therapy.

coupling [*kup'ling*] 1. in an animal's conformation, the distance between the top of the scapulae to the hip joints. 2. in ultrasonography, the transmission of sounds from the transducer into the tissues being examined. A medium such as a gel or mineral oil is used to exclude air from between the two surfaces.

course 1. the series of events in a disease incident in a patient. It may be peracute, acute, subacute, chronic or intermittent. 2. to course a rabbit, hare or fox is to run it in view, the opposite of conventional hunting by scent. Is prevented by legislation in most countries.

acute c. 1 or 2 days.

chronic c. more than 1 week.

intermittent c. periods of normality of a few minutes or hours.

peracute c. a few hours.

recurrent c. periods of normality of weeks to months.

subacute c. up to a week.

course-work said of a postgraduate degree based on lectures and practical work in courses rather than research.

coursing the sport of chasing live prey with sighthounds.

courtesy title title used by the community to identify a member of a professional group, e.g. Doctor; not titles legally bestowed by organizations and institutions with legal authority to do so.

courtship paying attention to a member of the opposite sex with a view to mating; occurs in farm animals but is not highly developed other than estral display by the female and seeking by the male, activities that are rather more pragmatic than implied in the definition. In the much smaller mating groups that prevail in wild animals, fish and birds in the wild, courtship is often a very ritualistic and prolonged activity including changes in behavior and coloring aided by physical contact, and sometimes the preparation and use of a courtship pad, as in peafowls (peacocks) and Argus pheasants.

c. feeding see neurotic **regurgitation**.

Coutoubea ramosa South American plant in the family Gentianaceae poisonous to cattle causing tachycardia, tachypnea and death; toxin unidentified.

covalence [*ko-va'ləns*] a chemical bond between two atoms in which electrons are shared between the two nuclei.

covariance [*ko-vār'e-əns*] the expected value of the product of the deviations of corresponding values of two random variables from their respective means.
c. method used for the calculation of relationship and inbreeding in large populations.
covariate [*ko-var'e-ət*] predictors during the allocation of experimental units in a randomized design.
Covault spay hook a long, thin, probelike instrument with a curved end and a buttoned tip, used to hook around the uterus of a companion animal and to bring it into the incision where an ovariohysterectomy can be performed.
cover [*kuv'ər*] see **mating**.
coverage an ArcGIS file-based vector data storage format for storing the location, shape, and attributes of geographic features for a single theme such as soils, streams, roads, or land use. Associated feature attribute tables describe and store attributes of the geographic features.
coveralls overalls with full cover for the arms, trunk and legs; popular protective clothing for veterinarians working on farms.
coverglass [*kuv'ər-glas*] a thin glass that covers a mounted microscopical object or a culture. Called also coverslip.
covering [*kuv'ər-ing*] 1. the illegal practice of using an unqualified employee to work in the guise of a qualified one. This is with particular reference to practicing medicine and surgery and administering anesthetics and making diagnoses. The employing veterinarian is guilty of covering, the employed person is guilty of practicing illegally. 2. mating. 3. the legal practice of providing relief services for a veterinarian who is absent from his or her practice.
coverslip [*kuv'ər-slip*] see **coverglass**.
coverts an assembly of contour feathers that form a type of cowlling over the flight feathers of the wings (the remiges) or the tail (the rectrices); see feather **remex**.
cow bovine female after having had one calf. See also **cattle**. The term is also used to describe mature females of some other species, e.g. elk, moose, reindeer, wapiti, elephants, whales.
brood c. used for breeding.
c. bush see ***Leucaena leucocephala***.
c.-calf operation North American term for a farm that maintains a breeding herd of beef cattle and produces weaned calves. In the commercial cow-calf feeder system, animals are sold at weaning or may be kept as stockers.
c.–calf pair a breeding beef cow with calf at foot.
c. cockle see ***Saponaria***.
dry c. 1. a cow in the 2–3 month period between the end of lactation and the subsequent calving. Cows in which calving is imminent are close-up dry cows, or are freshening. 2. a mature cow which is not lactating whatever the reason.
dry c. therapy see **dry** period treatment.
empty c. cow not in calf when she should be. Called also barren cow.
foundation c. one from which many of the animals in a herd or breed have originated.
fresh c. a cow recently calved.
c. index an estimate of the genetic ability of the cow to transmit to her offspring her capacity to produce milk and butterfat. The index is calculated on the basis of the cow's record of production, especially her deviation from herd mates, the herd's productivity status and the productivity proof of her sire.
c.-kick a forward kick with a hindlimb, dangerous to the mounting rider of a horse, or to the clinician examining a cow.
open c. cow not in calf, usually said of cows still to be bred.
c.-pony American stock horse, used for working cattle on the range.
c. pool a cooperative arrangement for milking cows in which a central unit cares for and milks cows or herds which belong to different owners.
c. wheat ***Melampyrum arvense***.
cow-associated mastitis see contagious **mastitis**.
cow-day for one cow for one day. Used as a measure of pasture, the amount required to fully feed a cow for peak lactation for one day (approximately 30 lb dry matter of grass).
cowbane ***Cicuta*** spp.
Cowdria ruminantium [*kou'dre-ə*] see ***Ehrlichia ruminantium***.
cowdriosis [*kou"dre-o'sis*] see **heartwater**.
cow-hocked a conformation defect in a horse. The points of the hock are close together, the fetlocks wider apart than normal.
cowmen men, although the term usually includes women, who work physically with cattle. Includes herdsmen, grooms, milkers.
cowpea see ***Vigna unguiculata***.
cowperitis [*kou"pər-i'tis*] inflammation of the bulbourethral (Cowper's) glands.
Cowper's glands [*kou'pər*] see **bulbourethral** glands.
cowpox [*kou'poks*] a contagious disease of cows characterized by the appearance of pox lesions on the teat and udder skin. The causative virus is in the genus *Orthopoxvirus*. Typical lesions are a patch of erythema, then a papule, followed by a vesicle, then a pustule and finally a scab. The disease is transmissible to humans and is now rare.
c. virus a poxvirus which is antigenically distinct from vaccinia virus and pseudocowpox virus. The characteristics of the virus are otherwise identical with the vaccinia virus. See also **vaccinia**.
cowside the bovine equivalent of bedside, e.g. said of manner.
c. mastitis tests test carried out in the milking parlor, not back in the laboratory, e.g. California Mastitis Test.
cowslip 1. see ***Caltha palustris***. 2. see **hoof** block.
water c. *Caltha palustris*.
cox- prefix meaning hip.
COX cyclo-oxygenase.
coxa [*kok'sə*] pl. *coxae* [L.] the hip, loosely, the hip joint.
c. plana flattening of the head of the femur resulting from osteochondrosis of its epiphysis.
c. valga deformity of the hip joint with increase in the angle of inclination between the neck and shaft of the femur, producing a straighter bone.
c. vara deformity of the hip joint with decrease in the angle of inclination between the neck and shaft of the femur.
coxal tuber see **tuber** coxae.
coxalgia 1. hip joint disease. 2. pain in the hip.
coxcomb ***Amaranthus*** *deflexus*, *A. hybridus*.
coxib [*kok'sib*] a subclass of nonsteroidal anti-inflammatory drugs that selectively inhibit cyclo-oxygenase-2 (COX-2), thereby minimizing the gastrointestinal toxicity; includes **deracoxib**, **firocoxib**.
Coxiella [*kok"se-el'ə*] a genus of obligately intracellular bacteria in the order *Legionellales*, previously classified among the *Rickettsiales* but now recognized to be most closely related to *Legionella pneumonophila*. It contains a single species, *C. burnetii*, the causative agent of the zoonotic diseasae **Q fever**. It also infects the trophoblast cells of sheep and cattle without causing disease.
coxiellosis infection by members of the genus *Coxiella*.
coxitis [*kok-si'tis*] inflammation of the hip joint.
coxodynia [*kok"so-din'e-ə*] pain in the hip.
coxofemoral [*kok"so-fem'o-rəl*] pertaining to the hip and thigh.
c. arthropathy high prevalence in pen-fed young bulls which is characterized by the sudden onset of lameness in a hindlimb, with pain and crepitus in the hip joint and rapid wasting of the muscles of the croup and thigh. There is a family predisposition to this degenerative arthropathy; it is exacerbated by a diet high in phosphorus and low in calcium and dense in energy so that the bull has a high body weight and is growing fast. The onset is acute and often precipitated by fighting or mating. The disease may not develop until 3 or 4 years of age in bulls that are reared at pasture.
c. joint a long-winded and pretentious term for the **hip** joint.
coxsackievirus [*kok-sak'e-vi"rəs*] one of a heterogeneous group of enteroviruses of humans; recovered from dogs with mild diarrhea. Called also Coxsackie virus. Coxsackievirus B7 is related antigenically to swine vesicular disease virus.
coyote (*Canis latrans*) a North American predatory wild dog. Called also prairie wolf.
coyotillo [*koi-o-te'yo*] see ***Karwinskia humboldtiana***.
coypu see **nutria**.
CPA cardiopulmonary arrest.
CPAP continuous positive airway pressure.
CP:ATP ratio creatine phosphate:adenotriphosphate ratio.
CPB see cardiopulmonary **bypass**.
CPBA competitive protein-binding assay.
CPCR cardiopulmonary cerebrovascular resuscitation.
CPD citrate-phosphate-dextrosel an anticoagulant solution used for the collection of blood for purposes of storage and transfusion. See also **ACD** solution.
CPDA-1 citrate-phosphate-dextrose-adenine; an anticoagulant used in blood collection bags.

VetBooks.ir

VetBooks.ir

CPE cytopathic effect.
CPG central pattern generators.
CpHV-1 caprine herpesvirus-1.
CPiV canine parainfluenza virus.
CPK creatine phosphokinase.
cPL canine pancreas-specific lipase.
cpm counts per minute.
CPR cardiopulmonary resuscitation.
CPRA see central progressive **retinal** atrophy.
CPRP cardiopulmonary cerebral resuscitation.
cps cycles per second.
CPT 3-chloro-*p*-toluidine, an avicide.
CPV canine parvovirus.
CR computed radiography.
Cr chemical symbol, *chromium.*
Cr^{51} EDTA a compound used to assess permeability of intestinal mucosa; 24-hour excretion is measured following oral administration.
crabbing [*krab'ing*] the pattern of movement when a dog's body is at an angle to the line of travel.
crab grass [*krab*] ***Digitaria*** spp., ***Eleusine*** *indica*.
crabs eye see ***Abrus*** *precatorius*.
Crabtree effect the inhibition of oxygen consumption on the addition of glucose to tissues or microorganisms having a high rate of aerobic glycolysis; the converse of the Pasteur effect.
crack [*krak*] a discontinuity in a hard, brittle surface such as horn, hoof.
toe c. see **sandcrack**.
cracked said of grain; indicates grain that has been exposed to a combined breaking and crushing action.
cracked heels dermatitis in the hollow between the heels occurring most commonly in the hindlimbs. Causes quite severe lameness as the horse is first moved but improves quickly. Site is smelly, wet and tender. Caused by constant wetness and dirty stables. May be infected with *Fusobacterium necrophorum.* See also **greasy heel**.
cracked pot sound the sharp, nonresonant note, like the noise made by striking a cracked pot, made by percussion of subcutaneous emphysema or an air-filled cavity in the lungs.
cracker term used to describe old sheep in poor condition and with no teeth; of little worth.
crackles [*krak'əlz*] a small, sharp sound heard on auscultation. Caused by dry, bristly hair and insufficient pressure on the stethoscope head. Also characteristic of emphysema, especially when it is subcutaneous. An early observation in pleurisy but disappears as exudate separates pleural surfaces. See also **rale**.
cracklings proteinaceous residues after fat is melted and run off during offal processing. Called also greaves.
cradle [*kra'dəl*] a barred restraining device.
calf c. is interposed in a chute in a vertical position. The calf is driven in. It may be anything up to 6 months of age. One side of the cradle is movable and the calf is clamped in tightly. The cradle is then swiveled on its bottom hinge and the calf is upended so that it can be castrated, branded, dehorned.
neck c. a series of bars tied together like a nonrigid fence. Tied round the neck of a horse like a loose splint, it prevents the horse from biting or licking itself.
lamb c. the lamb is laid on its back in the device, its legs are clamped in position exposing scrotum and tail for castration and tail docking, and the perineal area to expose skin folds for mulesing.
Crambe abyssinica plant in the family Brassicaceae; contains a glucosinolate which causes weight loss in poultry when seed meal made from this plant is fed.
cramp [*kramp*] a painful spasmodic muscular contraction.
Greyhound c. muscle spasms, particularly in the hindlegs, usually in unfit dogs, with excessive excitement, or high environmental temperatures.
heat c. a form of equine colic after vigorous exercise with heavy sweating. Caused by electrolyte loss. Signs include muscle tremor and rigidity.
raptor c. hypocalcemic, tetanic convulsions in raptor birds caused by a dietary deficiency of calcium.
Scottie c., Scotch c. an inherited defect in Scottish terriers that occurs as hyperkinetic episodes from an early age, but may only be precipitated by exercise or excitement. Some dogs show the disorder only infrequently during their otherwise normal lives. Affected dogs become stiff with hyperextension of the limbs which may prevent walking or cause brief cessation of respiratory movements. Pharmacologic studies suggest the condition is caused by a deficiency of serotonin, although brain concentrations of serotonin are normal in affected dogs.

C-85: Neck cradle on a horse.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

crampiness see inherited periodic **spasticity**.
cramping [*kramp'ing*] see **cramp**.
crampy spasticity see inherited periodic **spasticity**.
craniad [*kra'ne-ad*] in a cranial direction; toward the head end of the body.
cranial [*kra'ne-əl*] pertaining to the cranium or to the head end of the body. See also **anterior**, **cranium**.
c. intestinal portal the entrance into the embryonic foregut from the expanded midgut.
c. nerve reflexes see specific nerves.
c. nerves nerves which are attached to the brain and pass through the openings of the skull. There are 12 pairs of cranial nerves, symmetrically arranged so that they are distributed mainly to the structures of the head and neck. See also specific nerves and Table 14.
c. tibial reflex percussing just below the lateral tibial condyle (cranial tibial muscle) normally causes a slight flexion of the tibiotarsal joint. A test of the integrity of spinal cord segments L6 to S2, sciatic and peroneal nerves. Exaggerated in spinal cord lesions above L6.
c. tumor see **brain** tumors.
c. vena cava see Table 15.
Craniata [*kra"ne-a'tə*] a subphylum of the phylum Chordata. Includes vertebrates with a distinct brain and brain box.
craniectomy [*kra"ne-ek'tə-me*] excision of a segment of the skull.
suboccipital c. the surgical approach is to the caudal cerebellum.
crani(o)- word element. [L.] *skull*.
craniocaudal [*kra"ne-o-kaw'dal*] in the nomenclature of radiographic positioning, the direction of entry of an X-ray beam that enters at the cranial plane or aspect of the part being examined and exits at the caudal plane or aspect. In animals, this is usually a limb. See also **dorsopalmer** and **dorsoplantar**.
craniocele [*kra'ne-o-sēl"*] protrusion of part of the brain through the skull.
craniocerebral [*kra"ne-o-ser'ə-brəl*] pertaining to the skull and cerebrum.
cranioclasis see **craniotomy** (2).
cranioclast an instrument for performing **craniotomy** (2).
craniodidymus [*kra"ne-o-did'ĭ-məs*] a fetus with two heads.
craniofacial [*kra"ne-o-fa'shəl*] of or pertaining to the cranium and face.
c. dysplasia inherited in cattle; characterized by convex nasal profile, shortened mandible, macroglossia.
c. index an indication of the shape of the skull. The formula is cranium length/facial length.
c. malformations any congenital deformity of the cranium or face including cyclopia, cebocephaly, cheiloschisis.
craniomalacia [*kra"ne-o-mə-la'shə*] abnormal softness of the bones of the skull.

craniomandibular [*kra"ne-o-man-dib'u-lər*] pertaining to or emanating from the cranium and face.
c. osteopathy see craniomandibular **osteopathy**.
craniometer [*kra"ne-om'ə-tər*] an instrument for measuring the skull in craniometry.
craniometry [*kra"ne-om'ə-tre*] a branch of morphometry, being the measurement of the dimensions and angles of a bony skull.
craniopagus [*kra"ne-op'ə-gəs*] conjoined twins joined at the head; called also cephalopagus.
craniopharyngeal [*kra"ne-o-fə-rin'je-əl*] pertaining to the cranium and pharynx.
c. duct the primordial outgrowth from the roof of the pharynx from which the posterior lobe of the pituitary gland is formed; a vestigial structure in most species; see also **Rathke's pouch**.
c. duct cyst cysts from remnants of the distal craniopharyngeal duct are found close to the pituitary gland. Pressure on the gland and inflammation and subsequent fibrosis of it can cause a syndrome of adenohypophyseal hypofunction. There may be blindness, obesity and diabetes insipidus. Brachyocephalic breeds of dogs are predisposed.
craniopharyngioma [*kra"ne-o-fə-rin"je-o'mə*] a benign tumor arising from the cell rests derived from the infundibulum of the hypophysis or Rathke's pouch. Usually seen in young animals, they grow slowly. Their effects may be seen as a hypopituitarism, cranial nerve deficits or central nervous system dysfunction.
cranioplasty [*kra'ne-o-plas"te*] any plastic operation on the skull.
craniopuncture [*kra'ne-o-punk"chər*] exploratory puncture of the brain.
craniorachischisis [*kra"ne-o-rə-kis'kĭ-sis*] congenital fissure of the skull and vertebral column.
c. totalis failure of fusion of the entire neural tube.
craniosacral [*kra"ne-o-sa'krəl*] pertaining to the skull and sacrum.
c. outflow the parasympathetic outflow.
cranioschisis [*kra"ne-os'kĭ-sis*] congenital fissure of the cranium due to sagittal failure of fusion of the cranial bones; see also inherited **cranium** bifidum.
craniosclerosis [*kra"ne-o-sklə-ro'sis*] abnormal calcification and thickening of the cranial bones.
cranioscopy [*kra"ne-os'kə-pe*] diagnostic examination of the head.
craniospinal [*kra"ne-o-spi'nəl*] pertaining to the skull and spine.
craniotome [*kra'ne-o-tōm"*] a cutting instrument used in craniotomy.
craniotomy [*kra"ne-ot'ə-me*] 1. any operation on the cranium. 2. puncture of the skull and removal of its contents to decrease the size of the head of a dead fetus and facilitate delivery.
craniotympanic [*kra"ne-o-tim-pan'ik*] pertaining to the skull and tympanum.
cranium [*kra'ne-əm*] pl. *crania* [L.] the skeleton of the head, variously construed as including all of the bones of the head, all except the mandible, or the eight bones forming the vault lodging the brain. See also **head**, **skull**, **cranial**.
inherited c. bifidum a defect in the closure of the bones of the cranial vault causes exposure of the brain. Meningocele or encephalocele may be present. Affected animals do not survive. Called also cranioschisis.
crankcase oil see **sump**.
crash cart a portable trolley containing all equipment and drugs required for cardiopulmonary resuscitation and emergency care.

C-86: Inherited cranium bifidum with meningocele.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

Craspedia chrysantha Australian plant in the Asteraceae family; unidentified toxin causes abdominal pain, diarrhea and incoordination. Called also golden billy buttons.
Crassostrea genus of farmed oysters in subclass Lamellibranchia; includes *C. angulata* (Portuguese oyster), *C. gigas* (Pacific cupped oyster), *C. virginica* (American cupped oyster).
crater [*kra'tər*] an excavated area surrounded by an elevated margin, as caused by ulceration.
crateriform [*kra-ter'ĭ-form*] bowl-shaped, like a crater.
craterization [*kra"tər-ĭ-za'shən*] excision of bone tissue to create a crater-like depression.
Craterostomum a genus of nematode worms of the family Strongylidae. Includes *Craterostomum acuticaudatum* and *C. tenuicauda* (in equine large intestine).
craw [*kraw*] see **crop** (2).
crayfish freshwater crustaceans. Includes many genera and species, many of them farmed and occasionally kept as aquarium pets. The predominant species in North America are *Procambarus* and *Pacifastacus*; in Australia many are in the genus *Cherax* (see also **yabby**). In some American dialects, called crawfish or crawdad.
European c. *Astacus astacus*.
freshwater c. see crayfish (above).
Louisiana c. *Procambarus clarkii*.
c. plague epizootic disease of crayfish, but particularly the European crayfish (*Astacus astacus*), caused by the oomycete fungus *Aphanomyces astaci*. It causes fungal growth on the shell, white necrotic musculature, a loss of coordination and a high mortality rate.
red swamp c. *Procambarus clarkii*.
signal c. *Pacifastacus leniusculus*.
crayon a soft color-marking material used in identification especially in sheep.
c.-marking marking of ewes by rams wearing crayons on their chests and held there by a harness. By changing the color of the crayon it is possible to date the reproductive events of the flock. See also **tupping** crayon.
crazy chick disease a disease of young (2–4 weeks old) chickens caused by vitamin E nutritional deficiency. Signs include incoordination, orthotonos, opisthotonos, clonic convulsions, death.
crazy cow syndrome a North American disease, caused by ***Solanum dimidiatum***.
CRCoV canine respiratory coronavirus.
CRD 1. chronic respiratory disease. See **chronic** respiratory disease of chickens, **murine** respiratory mycoplasmosis. 2. chronic renal disease.
cream [*krēm*] 1. an oil and water emulsion used topically in the treatment of skin disease. 2. the natural rising of butterfat on stored cow's milk; also obtained by mechanical centrifugation. 3. an uncommon coat color in a horse, although some very light palominos would qualify. The horse is cream all over, including the **muzzle** (1), **mane** and tail; the skin is unpigmented and the haircoat is cream. There is often a deficiency of pigment in the iris.
cold c. useful as an emollient to soften and hydrate the skin.
c. rinse hair conditioners that make the coat lie flat and comb easily.
creatinase [*kre-at'ĭ-nās*] an enzyme that catalyzes the decomposition of creatine into urea and ammonia.
creatine [*kre'ə-tin*] a nonprotein nitrogen substance synthesized in the body from three amino acids: arginine, glycine (aminoacetic acid) and methionine. Creatine readily combines with phosphate to form phosphocreatine, or creatine phosphate, which is present in muscle, where it serves as the storage form of high-energy phosphate necessary for intense muscle contraction.
c. kinase (CK) an organ-specific enzyme catalyzing the transfer of a phosphate group from phosphocreatine to ATP. It has three isoenzymes: CK_1, found primarily in the brain; CK_2, found in the myocardium; and CK_3, found in both skeletal muscle and the myocardium. In humans, the presence of CK_2 in the blood is useful in diagnosing a recent myocardial infarction, but in animals CK_3 is most commonly increased related to muscle damage. Called also creatine phosphokinase, Lohmann's enzyme.
c. phosphate see creatine (above).
c. phosphokinase called also CPK; see creatine kinase (above).
creatinemia [*kre"ə-tĭ-ne'me-ə*] excessive creatine in the blood.

VetBooks.ir

creatinine [*kre-at′ĭ-nin*] a nitrogenous compound formed as the irreversible end product of creatine metabolism. It is formed in the muscle in relatively small amounts, passes into the blood and is excreted in the urine. The excretion of creatinine over 24 hours is proportional to the muscle mass. A laboratory test for the creatinine concentration in the blood is used as a measurement of kidney function or severity of renal insufficiency. Since creatinine is normally produced in fairly constant amounts as a result of the breakdown of phosphocreatine and is excreted in the urine, an elevation in the creatinine concentration in the blood indicates a disturbance in kidney function.

c.:blood urea nitrogen ratio determination of blood creatinine and blood urea nitrogen (BUN) and the relationship between them is an additional assessment of renal function. It may be useful in the differential diagnosis of azotemia and in monitoring renal disease when protein-restricted diets are being given.

c. clearance test a measure of glomerular filtration rate based on the rate at which creatinine is filtered through the renal glomeruli. Endogenous creatinine is measured in a 24-hour urine sample; exogenous creatinine involves injection into the patient and a shorter period of urine collection.

c.:cortisol ratio see **cortisol**:creatinine ratio.

c.–protein ratio **protein**–creatinine ratio.

urine c./serum c. ratio used to distinguish between prerenal and renal azotemia.

creatinuria [*kre″ah-tĭ-nu′reə*] an increased concentration of creatine in the urine. An excessive endogenous breakdown of muscle can cause this.

creatorrhea [*kre″ə-to-re′ə*] undigested muscle fibers in the feces; occurs with deficiency of trypsin in chronic exocrine pancreatic disease.

creep [*krēp*] a barrier containing small apertures. Only the young animals of the group can penetrate the barrier. The optimal ambient temperature for young piglets is above 80°F while that for the sow is 65°F. The heated creep area attracts the piglets and reduces the risk for hypothermia and crushing injuries. Creep feed may also be available in this area of the farrowing pen. See also **creeping**.

c. barrier a barred barrier permitting maximum auditory, olfactory, visual and palpatory contact without domination. A useful technique in a primate colony.

c. feeding feed is placed on one side of the barrier and only the young can get access to it.

c. grazing a creep is placed across the entrance to the pasture and only animals small enough to penetrate the creep get access to the pasture.

c. ration a weaning diet, suitable for weaning the young, which are the only animals able to penetrate the creep.

creeper cows cow with hypocalcemic parturient paresis that is alert and struggles; usually over 5 years of age and in good to excellent condition. May respond to treatment with potassium acetate in addition to normal calcium therapy. See also **downer cow syndrome**.

creeper pigs see **Pietrain** creeper pigs.

creeping [*krēp′ing*] 1. gradual progression of a lesion or tissue growth. 2. prostrate growth pattern of a plant, e.g. c. buttercup (*Ranunculus repens*), c. caustic (*Euphorbia drummondii*), c. charlie (*Glechoma hederacea*), c. Crofton weed (*Eupatorium riparium*), c. indigo (*Indigofera spicata*), c. knapweed (*Acroptilon repens*), c. lantana (*Lantana montevidensis*), c. mallow (*Modiola carolinianum*), c. millotia (*Millotia greevesii*), c. oxalis (*Oxalis corniculata*), c. saltbush (*Atriplex semibaccata*).

C-87: Piglet creep area.

c. substitution gradual penetration across a fracture site by osteogenic tissue followed by bone formation.

creeping Charlie see ***Glechoma hederacea***.

creeps [*krēps*] see **osteomalacia**.

cremaster muscle [*kre-mas′tər*] a slip of muscle detached from the internal oblique muscle that passes through the inguinal canal and is attached to the outer vaginal tunic of the spermatic cord; the muscles serve to draw up the testes when cold or injury threatens. See Table 13.

cremasteric [*krem″as-ter′ik*] pertaining to the cremaster muscle.

cremation [*kre-ma′shən*] disposal of a cadaver by total burning.

cremello creamy white coat color in horses; result of dilution of a yellow color. Like chestnuts cremellos are homozygous; heterozygotes are palominos.

crena [*kre′nə*] a shallow notch in the mid-dorsal aspect the sole border of the distal phalanx of the horse. Called also crena marginis solearis.

crenate, crenated [*kre′nāt, kre′nāt-əd*] scalloped or notched.

crenation [*kre-na′shən*] the formation of abnormal notching around the edge of an erythrocyte; the notched appearance of an erythrocyte due to its shrinkage after suspension in a hypertonic solution. See also **echinocyte**.

crenocyte [*kre′no-sīt*] a crenated erythrocyte.

Crenosoma [*kre″no-so′mə*] a genus of lungworms of the family Crenosomatidae. Includes *Crenosoma mephiditis*, *C. petrowi*, *C. striatum* (wild animals) and *C. vulpis* (in dogs, wild carnivores).

crenulation [*kren″u-la′shən*] crenation.

creosol [*kre′o-sol*] one of the active constituents of creosote.

creosote [*kre′o-sōt*] a mixture of phenols from wood tar; used externally as an antiseptic and internally in chronic bronchitis as an expectorant. A mixture of the carbonates of various constituents of creosote (creosote carbonate) is used the same as the base.

c.-treated timber treating timber with creosote is a common method of preservation. Use of the timber for housing while it is still wet may cause poisoning especially in young pigs. There may be local burning of the skin, oral, esophageal and gastric erosion, or degeneration of parenchymatous organs.

crepenynic acid fatty acid myotoxin found in *Leiocarpa brevicompta*.

Crepidostomum digenetic trematode parasite of salmonid and other fish. The genus is a member of the family Allocreadiidae.

crepitant [*krep′ĭ-tənt*] having a dry, crackling sound.

crepitation [*krep″ĭ-ta′shən*] a dry, crackling sound or sensation, such as that produced by the grating of the ends of a fractured bone.

respiratory c. a dry, crackling sound.

crepitus [*krep′ĭ-təs*] 1. the grating of fractured bone fragments against each other. 2. the crackling of joints. 3. the noise produced by pressure on tissues containing an abnormal amount of air or gas, as in cellular emphysema. 4. the discharge of flatus from the bowels. 5. crepitation. 6. a crepitant rale.

crepuscular active at twilight or just before dawn; said of animals or birds.

crescent [*kres′ənt*] shaped like a new moon.

glomerular c. proliferation of parietal epithelial cells lining Bowman's capsule in the kidney; may protrude into Bowman's space and eventually lead to destruction of the glomerulus.

cresols [*kre′solz*] 1. a group of phenols from coal or wood tar; includes *p*-cresol, *o*-cresol (2-methylphenol), *m*-phenol (3-methylphenol), *p*-phenol (4-methylphenol). 2. a preparation consisting of a mixture of isomeric cresol from coal tar or petroleum is used as a disinfectant.

c. poisoning the form of poisoning depends on the route of entry and the dose. There may be local corrosion, or cardiac depression, or liver damage with signs of jaundice, weakness, coma and death.

cress see ***Lepidium sativum***.

cow c. ***Sium*** *angustifolium*.

winter c. see ***Barbarea vulgaris***.

crest [*krest*] 1. a projecting structure or ridge, especially one surmounting a bone or its border. 2. a term describing the upper margin of the neck; root of the mane in a horse. 3. in canaries, a crown of long feathers on the head, all radiating out from a central point; inherited as a dominant trait. 4. a tuft or growth of feathers, fur or skin along the top of the heads of some birds, reptiles and other animals.

ampullary c. linear thickenings of the walls of the ampullae of the semicircular canals.
dental c. the maxillary ridge passing along the alveolar processes of the fetal maxillary bones.
epicondylar c. ridges which extend from the epicondyles of the humerus to the shaft.
ethmoid c. located on the inside surface of the nasal bones of the pig and dog.
external occipital c. an extension of the external occipital protuberance to which the ligamentum nuchae is attached.
facial c. the prominent palpable crest on the external aspect of the maxilla of horses stretching from beneath the orbit to the middle of the molar teeth. The masseter muscle is attached to its ventral surface.
c. hair see **mane**.
iliac c. the thickened cranial border of the ilium of dogs and cats.
neck c. the fatty, fibrous tissue above the nuchal ligament which gives the stallion's neck its characteristic elevated contour.
neural c. cords of nervous tissue which detaches from the developing spinal cord in the embryo; contribute tissue to the somatic and autonomic ganglia, and many other structures.
nuchal c. the thick, transverse crest on the occipital bone.
palatine c. a low transverse ridge on the palatine bones.
petrosal c. divides the cranial cavity into cerebellar and cerebral compartments.
renal c. the median ridge in the pelvis of many kidneys onto which papillary ducts open.
reticular c's the mucosal folds in the ruminant reticulum that form the cells of the honeycomb compartments of the walls.
sacral c's the median crest is the fused dorsal spines of the sacral vertebrae; the lateral sacral crest is the fused articular processes.
sagittal c. the ridge in the middle of the skull which extends forwards from the occipital protuberance; more pronounced in some species, breeds and individuals.
trochanteric c. a ridge which runs between the greater and lesser trochanters and forms the caudal wall of the trochanteric fossa.
urethral c. a longitudinal ridge in the roof of the pelvic urethra formed from two folds of urinary bladder mucosa which fuse after separate origins at the ureteric orifices.
vestibular c. divides the vestibule of the inner ear into the spherical and elliptical recesses.
Crested canary a breed developed from the Norwich canary, characterized by a narrow head and a very large crest.
crested dog's tail see ***Cynosurus cristatus***.
cresyl tolyl.
***m*-cresyl acetate** a topical antiseptic and antifungal effective against superficial yeast infections.
cresylic acid [*kre-sil'ik*] see **cresols**.
cretin [*kre'tin*] an animal exhibiting cretinism.
cretinism [*kre'tin-iz-əm*] arrested physical and mental development with dystrophy of bones and soft tissues, resulting in disproportionate dwarfism. Due to congenital or early-onset hypothyroidism. Seen in foals and possibly is an unrecognized cause of neonatal deaths in other species.
cretinoid [*kre'tin-oid*] resembling a cretin, or suggestive of cretinism.
cretinous [*kre'tin-əs*] affected with cretinism.
Creutzfeldt–Jakob disease (CJD) [*kroits'felt yah'kōb*] a rare, fatal spongiform encephalopathy of humans caused by a prion. The most common form is sporadic, occurring in older humans with no known risk factors, but a small percentage of cases are familial and a further small percentage are iatrogenic, acquired through exposure to infected nervous system tissue through medical procedures.
variant C.-J. d. (vCJD) a fatal spongiform encephalopathy of humans infected through consumption of cattle products contaminated with the agent of bovine spongiform encephalopathy (BSE). Because of the geographic distribution of BSE, vCJD has occurred predominantly in the UK and Europe. It has affected younger people than classic CJD and has a longer clinical course. There is evidence for genetic susceptibility.
crevice [*krev'is*] a fissure.
gingival c. the space between the cervical enamel of a tooth and the overlying unattached gingiva.
crevicular fluid [*krə-vik'u-lər*] produced by epithelium of the gingival crevice, it contains immunoglobulins and has antimicrobial properties.

C-88: Incisor teeth of a crib biting horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

CRH corticotropin releasing hormone.
CRI constant-rate infusion.
cria young offspring of camelids.
cria-ation cute lay-term for parturition in llamas and alpacas.
crib [*krib*] a rack or manger in a stable.
c.-biting a neurosis or acquired habit in stabled horses characterized by stereotypic behavior. The horse grasps a solid object with its incisor teeth, arches the neck, pulls upwards and backwards and swallows air. The consequences are eroded teeth, hypertrophy of the sternothyrohyoid muscle, occasionally gastric distention and severe weight loss. Called also wind-sucking, cribbing.
c.-biting operation partial myectomy of the sternohyoideus muscle prevents ventral flexion of the head; not commonly performed. An alternative procedure involves neurectomy of the spinal accessory nerve.
cribber a horse with the vice of **crib**-biting.
cribbing [*krib'ing*] see **crib**-biting.
cribriform [*krib'rĭ-form*] perforated like a sieve.
c. plate see cribriform **plate**.
cricetine members of the subfamily Cricetinae, the New World rats and mice.
Cricetus [*kri-se'təs*] see **hamster**.
cricoarytenoid [*kri"ko-ahr"ĭ-te'noid*] pertaining to the cricoid and arytenoid cartilages.
c. muscle see Table 13.1E.
cricoesophageal pertaining to the cricoid cartilage and the esophagus.
cricoid [*kri'koid*] 1. ring-shaped. 2. the cricoid cartilage.
c. cartilage a ringlike cartilage at the caudal part of the larynx.
cricoidectomy [*kri"koi-dek'tə-me*] excision of the cricoid cartilage.
cricolaryngotomy [*kri"ko-lar"ing-got'ə-me*] a surgical procedure for reconstruction of the larynx in subglottic stenosis.
cricopharyngeal [*kri"ko-fə-rin'je-əl*] pertaining to the cricoid cartilage and pharynx.
c. dysphagia see cricopharyngeal **achalasia**.
c. myotomy a surgical procedure for the treatment of cricopharyngeal achalasia; involves severance of the median raphe between cricopharyngeus muscles on the dorsal aspect of the larynx.
cricopharyngeus muscle [*kri"ko-far"in-je'əs*] see Table 13.1C.
cricothyreotomy incision through the cricoid and thyroid cartilages.
cricothyroid [*kri-ko-thi'roid*] pertaining to the cricoid and thyroid cartilages.
c. ligament attaches the cricoid to the thyroid cartilage.
cricothyrotomy [*kri"ko-thi-rot'ə-me*] incision through the skin and cricothyroid membrane to secure a patent airway for emergency relief of upper airway obstruction.
cricotomy [*kri-kot'ə-me*] incision of the cricoid cartilage.
cricotracheal membrane [*kri"ko-tra'ke-əl*] the mucosal lining of the cricotracheal ligament.
cricotracheotomy [*kri"ko-tra"ke-ot'ə-me*] incision of the trachea through the cricoid cartilage.
Crile hemostatic forceps standard type of hemostats with box joint, ratchet catch, long blades with cross ridging on the blade face.
Crimean-Congo hemorrhagic fever a zoonotic disease of humans, in central Asia through to eastern Europe, who are in contact with livestock. Caused by a nairovirus in the bunyavirus family, it is transmitted by ticks. The principal signs are fever, widespread hemorrhages and necrotizing hepatitis. A disease notifiable to the OIE (see Table 22).

VetBooks.ir

crimidine a rapidly acting convulsant used as a rodenticide. Attacks all species similarly except for poultry which simply become somnolent. Pyridoxine is a complete antidote. Called also castrix.

crimp 1. a regular wave formation of small dimensions, e.g. the crimp of wool fibers epitomized in the Merino breed and its derivatives. A desirable character in Huacaya alpaca fleece, but considered by some as a fault in the fleece of Suri alpacas. 2. wave formation seen in histologic sections of tendonous tissue.

c. marks marks made by wrinkling the X-ray film while holding it between the fingers.

crimped said of grain that has been passed through corrugated rollers after previous exposure to moist heat so that the grain is fractured but there is a minimum of dust. Pasture species for hay, particularly alfalfa, may be crimped at the time of cutting to facilitate rapid drying.

crin- prefix meaning secrete.

crinogenic causing secretion in a gland.

crinophagy [krin-of'ə-je] a process in which excessive amounts of hormone are fused with lysozymes to degrade the hormone.

Crinum [kri'nəm] a genus of cultivated ornamental plants of the family Liliaceae (Amaryllidaceae), some of which are known to cause collapse and death in sheep and goats. Called also spider lily.

Criollo native Spanish-American light horse or riding pony. Includes a number of ethnic varieties, e.g. Argentine Criollo. Any color, 13.3–15 hands high. Originated from a mixture of Arab, Barb and Andalusian.

cripples see **osteomalacia**.

crisis [kri'sis] pl. *crises* [L.] 1. the turning point of a disease for better or worse; especially a sudden change, usually for the better, in the course of an acute disease. 2. a sudden paroxysmal intensification of signs in the course of a disease.

addisonian c. signs of severe depression, muscle weakness, vomiting and diarrhea accompanying an acute attack of adrenocortical insufficiency (Addison's disease). Called also adrenal crisis.

adrenal c. see addisonian crisis (above).

crispatine a hepatoxic pyrrolizidine alkaloid present in the plant ***Crotalaria*** *crispata*.

crista [kris'tə] see **crest** (1).

c. ampullare see ampullary **crest**.

c. dividens a prominence in the septum secundum which, in fetal circulation, directs blood from the posterior vena cava through the foramen ovale to the left atrium.

cristobalite [kris-to'bə-līt] the form of silicate which is found in the granulomatous lesions in silicate pneumoconiosis in horses.

Critesion see ***Hordeum***.

Crithidia [krĭ-thid'e-ə] a genus in the family Trypanosomatidae (trypanosomes) found in arthropods and other invertebrates.

C. luciliae commercial preparations of this organism are used as substrate in assays for serum antibodies against native DNA.

crithidial stage [krĭ-thid'e-əl] see **epimastigote**.

critical [krit'ĭ-kəl] 1. a point at which one property or state changes to another property or state. 2. pertaining to a crisis in a disease.

embryological c. period the period during the life of the embryo, specific for each body system, during which organ genesis takes place.

c. distance see flight **distance**.

c. point drying the technique used in preparing tissues for electron microscopy; to eliminate distortion due to surface tension.

c. temperature the body temperature above which the animal is said to be fevered. See body **temperature**.

critical care [krit'ĭ-kəl] patient care pertaining to a crisis in a disease.

c. c. medicine emergency care for victims of trauma or disease.

c. c. unit a unit in a hospital in which special patient care staff and units, including ECG, blood gas analysis apparatus, resuscitation and life support equipment are available and used.

critter cowboy term for an animal; may refer to any animal once identified. Derived from an early American dialect pronunciation of creature.

Crivellia see ***Przevalskiana***.

crock cull ewe; called also crone.

crocodile large aquatic reptile, member of the family Crocodylidae. Includes the Nile (*Crocodylus niloticus*), the Marsh or Mugger (*C. palustris*), the Estuarine or Saltwater (*C. porosus*), the American (*C. acutus*), New Guinea (*C. novaeguineae*) and the West African (*Osteolaemus tetraspis*) crocodile. Crocodile and alligator farms are now an established means of producing hides for commerce.

Crocodilia see **crocodile**.

crocodylia reptile member of the order Crocodilia. Includes the alligators, caimans, crocodiles and gavials.

Crofton weed ***Ageratina*** *adenophora*.

Crohn's disease [krōn] a regional, granulomatous enteritis of humans; equine granulomatous **enteritis**, histiocytic ulcerative **colitis** of Boxer dogs, **Johne's disease** of cattle, and regional or terminal **ileitis** of pigs are similar diseases and all have been proposed as possible animal models.

cromoglycate [kro"mo-gli'kāt] see **cromolyn**.

cromolyn [kro'mə-lin] a mast cell stabilizer which, if administered prior to exposure to allergens, prevents degranulation and release of histamine in a hypersensitivity reaction. Administered as an aerosol for prophylaxis of bronchial asthma and allergic rhinitis. Investigated for use in the treatment of chronic obstructive pulmonary disease in horses. Called also cromoglycate.

crone see **crock**.

crooked calf a syndrome of arthrogryposis and/or cleft palate occurring in regions of western USA, Alaska and Canada. Arthrogryposis varies in severity from calves that are ambulatory and may achieve market status to those that are severely deformed, requiring cesarian section or destruction. Cleft palate is usually fatal. In endemic areas, it has constant but low prevalence with higher incidence and severity periodically. See also lupine-induced **arthrogryposis**.

crooked neck a disease of turkeys thought to be due to airsacculitis caused by *Mycoplasma meleagridis*. A similar syndrome in Brown Leghorn chickens is due to an inherited defect.

crooked toe disease a disease of young chickens and turkeys of unknown etiology. Only a few birds are affected. The phalanges are twisted so that the toes are bent laterally or medially and the birds have difficulty in walking. Must be differentiated from **curled toe paralysis**.

Crookes' tube the original X-ray tube; worked on the principle of ionization of gas within the tube.

crop [krop] 1. a saccular diverticulum of the esophagus just anterior to the entrance to the thorax. Present in all domestic birds. 2. domesticated plants sown and harvested for use by humans. 3. a cosmetic surgical procedure carried out on the ears of dogs of certain breeds. See **ear cropping**.

c.-bound impaction of the crop in a bird.

c.-eared small eared.

c. flush 1. treatment of a sick bird by a flushing out, with normal saline via an esophageal tube, of food and debris from the crop. 2. see also crop wash (below).

impacted c. distention of the crop with undigested food.

c. milk crumbly material, composed of lipid-laden, desquamated epithelial cells mixed with food, elaborated by both male and female pigeons in the crop and regurgitated to feed the nestlings.

pendulous c. a condition of domesticated birds in which the crop becomes very distended and full of feed. Sporadic cases only, but there is an inherited predisposition to gross distention in turkeys. Called also impacted crop or crop bound.

c. residues the remains of a crop after the commercially sought part of it has been harvested, e.g. wheat stubble, pea haulms, oaten straw.

sour c. crop stasis in young birds with bacterial or yeast overgrowth.

c. stasis food distends the crop, which may fail to empty or do so only slowly. Weight loss, vomiting or regurgitation, and weakness may occur. There may be discoloration or necrosis of skin over the crop.

c. wash used in the differential diagnosis of trichomoniasis and candidiasis and to assess crop flora in birds with regurgitation and other signs referable to upper alimentary tract disease.

cropout a horse with body spots; see cropout **Quarter horse**.

cropworms see ***Capillaria***, ***Gongylonema***.

crosier, crozier unfolding (uncurling) new leaf on bracken and most ferns; inspiration for the tip of ecclesiastical staffs.

cross [*kros*] 1. a cross-shaped figure or structure. 2. any organism produced by mating genetically distinct individuals. See also **crossbreeding**, **cruciate**.

c.-cut grid see **cross-hatch grid**.

c. pregnancy the fetus is in the horn on the side opposite to the corpus luteum.

c. table see horizontal **beam**.

c. tie a common method of restraining a horse for simple procedures such as grooming. The horse is tied to a pillar on either side, the shorter and tighter the better and preferably from the cheek dees of a hackamore. The head should be kept high to avoid the horse lashing out with both feet at once.

cross bite [*kros'bīt*] crossbite.

cross country races races which feature jumps, water hazards and which test the horses' speed and stamina.

cross-eyed deviation of the visual axis of one eye toward that of the other eye, resulting in diplopia. Called also esotropia or convergent **strabismus**.

cross-firing see **forging**.

cross-fostering the transfer of young from one dam to another, usually to equalize numbers in litters of approximately the same age. Commonly practiced in rearing piglets.

cross-immunity [*kros-ĭ-mu'nĭ-te*] a form of immunity in which immunity to one bacteria or virus is effective in protecting the animal against an antigenically similar but different organism, e.g. protection of cattle against bacillary hemoglobinuria (*Clostridium haemolyticum*) by vaccination against black disease (*C. novyi*) and measles virus vaccine used to immunize dogs against canine distemper. See also heterotypic **vaccine**.

cross-over groups [*kros'o-vər*] groups of animals which are being compared with respect to certain variables and in which the difference in variables can be transposed from one group to the other so that a cross-over experiment is conducted.

cross ratio see **odds** ratio. Called also approximate relative risk.

cross-reaction see cross **reaction**.

cross-reactivity [*kros"re-ak-tiv'ĭ-te*] the degree to which an antibody participates in cross-reactions.

cross-regulation in the regulation of enzyme activity, the product of one pathway serves as an inhibitor or activator of an enzyme in another pathway.

cross-sectional study a study in which a statistically significant sample of a population is used to estimate the relationship between an outcome of interest and population variables as they exist at one particular time. Since both the outcome and the variables are measured at the one time these studies are not strong at showing cause–effect relationships.

crossbite [*kros'bīt*] malocclusion.

anterior c. one or more of the mandibular incisors are anterior to the maxillary incisors; a Class 1 dental malocclusion.

posterior c. mandibular premolars or molars are buccal to their opposing teeth; a Class 1 dental malocclusion. Called also caudal crossbite.

crossbow a weapon used to fire darts filled with immobilizing agent at otherwise uncontrollable animals. Less dangerous than cordite guns and does not scare other animals because there is no noise.

crossbred progeny of a mating between two animals which are purebreds of different breeds, e.g. crossbred sheep are usually offspring of matings between merinos and British breeds.

crossbreeding [*kros'brēd-ing*] hybridization; the mating of organisms of different strains or species, e.g. when animals of different breeds are mated. Practiced extensively in farm animals to capitalize on advantages conferred by **hybrid** vigor.

rotational c. system a program in which the sire for the terminal cross of lamb or calf is changed each year so that the state of heterosis is maintained at a high level.

crossed extensor reflex a reflex movement which occurs in response to a test of a flexor reflex, extension is elicited in the opposite limb. Seen in upper motor neuron disease.

crossed legs while standing or walking is a sign of paresis.

Crossiella equi a gram-positive, branching micro-organism associated with placentitis and abortion in mares. See also nocardioform **placentitis**.

crossing [*kros'ing*] see **crossbreeding**.

crossing over [*kros'ing o'vər*] the exchanging of material between homologous chromosomes, during the first meiotic division, resulting in new combinations of genes.

crossmatch [*kros'mach*] a procedure that tests compatability between the donor and recipient of a blood transfusion by detecting the presence of antibodies in plasma in the recipient (major crossmatch) or donor (minor crossmatch). The recipient's erythrocytes or leukocytes are mixed with the donor's serum and vice versa. Absence of agglutination, hemolysis and cytotoxicity indicates that the donor and recipient are compatible.

Crossoptilon auritum blue-eared **pheasant**.

crossover [*kros'o-vər*] an exchange of material between two homologous chromosomes.

Crotalaria [*kro"tə-lar'e-ə*] a plant genus of the legume family Fabaceae. There are many species and many are poisonous. Many contain pyrrolizidine alkaloids which cause damage in liver, lungs and in pigs in the kidney. Called also rattlepods. The diseases caused have many names including **walkabout**, Kimberley horse disease, stywesiekte and jaagsiekte. Includes as causes of liver damage and dummy syndrome in horses and cattle: *C. anagyroides*, *C. barkae* (*C. geminiflora*), *C. burkeana*, *C. crispata*, *C. dissitiflora* (gray rattlepod), *C. lachnocarpoides*, *C. mauensis*, *C. mesopontica*, *C. mitchellii*, *C. mucronata*, *C. novae-hollandiae*, *C. pallida* (*C. mucronata*), *C. polysperma* (*C. saltiana*, *C. striata*), *C. ramosissima*, *C. retusa* (wedge-leafed rattlepod), *C. rhodesiae*, *C. rotundifolia*, *C. sagittalis*, *C. spectabilis* (*C. retzii*, *C. sericea*), *C. steudneri* (*C. hispida*), *C. zimmermannii*. Includes as causes of esophageal ulceration in horses: *C. aridicola* (Chillagoe horse poison), *C. medicaginea* (*C. trifoliastrum*). Includes as a cause of pulmonary edema: *C. eremaea*, *C. spartioides*, *C. pallida*. Includes as a cause of lung damage in horses (jaagsiekte, crotalariosis equorum): *C. dura* (wild lucerne), *C. globifera* (wild lucerne), *C. juncea* (sunn hemp), *C. mitchellii*, *C. spartioides* (dune bush).

Crotalidae [*kro-tal'ĭ-de*] a family of snakes with movable fangs (Solenoglypha). Includes pit vipers (*Bothrops* spp.) and rattlesnakes (*Crotalus* spp.).

Crotalus [*kro'tə-ləs*] see **rattlesnake**.

crotalus [*kro'tə-ləs*] a fibrinogen-clotting enzyme found in the venom of *Crotalus adamanteus* (rattlesnake).

crotamiton [*kro"tə-mi'ton*] an acaricide used in the topical treatment of scabies in dogs and **cnemidocoptic mange** in budgerigars.

Croton [*kro'tən*] a genus of the plant family Euphorbiaceae. Contains croton oil, a violent and lethal purgative. Cake made from the seeds after extraction of the oil may also cause severe gastroenteritis. Includes *C. capitatus*, *C. texensis*, *C. tiglium*.

croton oil [*kro'tən*] extracted from the plant ***Croton***; formerly used as an emetic and cathartic.

crotonyl isothiocyanate a highly poisonous substance found in the seeds of swedes and turnips. Causes severe gastroenteritis.

crotoxyphos an insecticide used for fly control and externally on livestock; a cholinesterase inhibitor. See **organophosphorus compound**.

croup 1. the muscular area around and above the base of the tail in the horse. 2. acute obstruction of the larynx caused usually by allergy or respiratory infection. Used with reference to children and chickens.

point of c. highest point of the croup, corresponding to the sacral tuberosity.

crow a bird in the genus ***Corvus***.

c. pick predatory gouging of eyes and other soft tissues from sick or weak lambs by crows. Wounds often infected with gas gangrene organisms.

crow poison see ***Amianthium muscitoxicum***.

crowding [*kroud'ing*] panic state developed by chickens, adult birds, sheep in response to perceived attack; group piles up in a corner and many die of suffocation; in horses takes the form of squeezing an attendant against another horse or a stable wall, a common vice in horses which are permanently stabled.

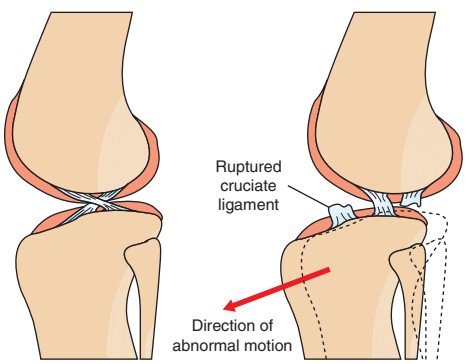
c. stress constant low level stress due to insufficient accommodation space per animal.

crowfoot common name for plants in several genera, particularly ***Ranunculus***, which include *R. sceleratus* (celery leaved, cursed), *R. acris* (meadow).

c. grass ***Eleusine*** *indica*.

VetBooks.ir

crown [*kroun*] 1. the topmost part of an organ or structure, e.g. the top of the head. 2. artificial crown on a tooth.
anatomical c. the enamel-covered part of a tooth.
clinical c. the exposed part of a tooth within the mouth.
c. height reduction a dental procedure sometimes done on canine teeth in dogs for the treatment of malocclusion or to prevent injury from biting.
reserve c. in a hypsodont tooth, that part of the crown located in the alveolus.
crown beard [*kroun*] see ***Verbesina encelioides***.
crown-of-thorns see ***Euphorbia***.
crozier see **crosier**.
CRP C-reactive protein; cyclic AMP-receptor protein.
CRT capillary refill time.
CRTZ chemoreceptor trigger zone.
cruciate [*kroo'she-āt*] shaped like a cross.
caudal (posterior) c. ligament complements the cranial cruciate ligament in providing a major part of the stability of the stifle joint. It originates from the lateral aspect of the medial femoral condyle in the depths of the intercondylar fossa, passes caudally and distally to insert on the medial side of the popliteal notch (tibia). Rupture is rare, except in association with cranial cruciate rupture, and results from severe injuries to the joint.
cranial (anterior) c. ligament part of the stifle joint, originates from the intercondylar fossa on the caudal aspect of the medial side of the lateral femoral condyle. It runs cranially, medially and distally between the condyles of the femur to insert on the cranial intercondyloid area of the tibia. The ligament acts to limit cranial movement of the tibia relative to the femur, and when the joint is flexed to limit internal axial movement. Rupture of this ligament is common in dogs, causing lameness, often with joint effusion, and chronic arthritis. Surgical reconstruction or stabilization of the joint is recommended.
c. suture pattern an interrupted cross mattress suture to close wounds that are under a lot of tension. The needle is inserted through the tissue, across the wound, then back through the tissue on the other side, across the wound on the outside and advancing the needle to the next suture site where a second stitch is made in the same manner as the first. The two ends are then tied across the wound so as to create the cross shape.
crucible [*kroo'sĭ-bəl*] a vessel for melting refractory substances.
cruciform [*kroo'sĭ-form*] cross-shaped.
crude fat [*krood*] see crude **fat**.
crude fiber [*krood*] see **fiber**[2].
crude oil [*krood*] fossil oil as it is retrieved from its natural location.
c. o. poisoning crude oil is usually too unpalatable for livestock but cattle will drink it if they are salt hungry. The effects of ingesting large amounts are severe depression, incoordination and vomiting, leading to development of aspiration pneumonia and death.
crude protein [*krood*] see crude **protein**.
crude rate [*krood*] a measure of overall frequency which has not been adjusted for significant factors which might have influenced the rate.



C-89: Cranial cruciate ligament rupture. From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

cruel vine see ***Araujia sericifera***.
cruelty the infliction of pain or distress unnecessarily.
c. to animals an offence under the Protection of Animals Act or similar legislation. The definition of *unnecessary* varies between countries and from time to time in the one country. Under the impetus of a great body of community compassion the threshold has been greatly lowered in recent times. Determination of the prevailing standard of cruelty can only be decided by the courts. It is now taken to include, besides physical assault and surgery without anesthesia, deprival of food, water and shelter, and failure to seek veterinary care when an animal needs medical attention. The worst kinds of cruelty are susceptible to the heaviest penalty, under the classification of aggravated cruelty.
crufomate [*kroo'fo-māt*] an organophosphorus compound used as an anthelmintic and in the control of warble fly in cattle. Called also Montrel, Ruelene.
crumbs small particle feed especially formulated for very young poultry and piglets. Produced by a roller mill called a crumbler with rolls specially designed for breaking up pellets into smaller particles.
crumbweed common name used for plants in the genus ***Chenopodium*** and the related ***Dysphania***. Includes black crumbweed (*Chenopodium melanocarpum*), green crumbweed (*C. carinatum*), red crumbweed (*Dysphania rhadinostachya*).
cruor [*kroo'or*] a blood clot.
crupper the part of the harness of a horse which encircles the tail and prevents the harness from slipping forward.
crural [*krood'əl*] pertaining to or emanating from a leg or crus.
c. hernia see **femoral** hernia.
crus [*krus*] pl. *crura* [L.] 1. shaped like the human leg. 2. a leglike part. Called also branch, e.g. the branches or crura of the atrioventricular bundle.
c. cerebri the ventral part of the cerebral peduncles comprising fiber tracts descending from the cerebral cortex to form the longitudinal fascicles of the pons.
clitoridal c. the continuation of the corpora cavernosa of the clitoris, diverging posteriorly to be attached to the sciatic arch.
diaphragmatic c. two fibromuscular bands that arise from the lumbar vertebrae and insert into the central tendon of the diaphragm.
fornical c. two flattened bands of white matter that unite to form the body of the fornix of the cerebrum.
penile c. the continuation of each corpus cavernosum of the penis, diverging caudally to be attached to the sciatic arch.
crush 1. a restraining device for large animals. See also **chute**. 2. application of pressure so as to destroy the natural condition, shape or integrity of the parts. 3. see **crushing**.
multiple-c. surgical instruments, e.g. heavy duty emasculators, ecraseurs in which each jaw has more than one crushing surface, mounted one behind the other, each successive surface coming into contact with its counterpart as increasing pressure is applied to the handles of the instrument.
crush syndrome the edema, oliguria and other clinical signs of renal failure that follow crushing of a part, especially a large muscle mass, causing the release of myoglobin. See also lower nephron **nephrosis**.
crushing deaths of newborn animals, especially those in litters, caused by the mother lying on them accidentally. Contributed to by weakness of the neonate or awkward accommodation. A problem in piglets and puppies. Called also overlying.
crust [*krust*] a formed outer layer, especially an outer layer of solid matter formed by drying of a bodily exudate or secretion. It may be serocellular or hemorrhagic.
palisading c. there are alternating layers of cellular debris and exudate; typical of fungal infections of the skin and dermatophilosis.
waxy c. typical of exudative epidermitis.
crusta [*krus'tah*] pl. *crustae* [L.] a crust.
Crustacea [*krəs-ta'she-ə*] a class of arthropods including the lobsters, crabs, shrimps, wood lice, water fleas and barnacles.
crustaceans members of the class Crustacea. Includes amongst the aquatic crustaceans, shrimp, prawn, yabby, crab, lobster. Many of them are now farmed commercially in enclosed waters.
parasitic c. small crustaceans or copepods are common parasites on the gills of aquarium and pond fish where they appear as white spots. The gills become obstructed and the fish die of anoxia.

crutch [*kruch*] 1. the area of the skin from the anus ventrally to the scrotum in the male and to a comparable position in the female. 2. an instrument consisting of a long handle with a U shape at one end.
Kühn's c. see **Kühn's crutch**.
repulsion c. used in obstetrics to repel a calf or foal fetus to enable malpositioned limbs to be repositioned.
Williams c. a repulsion crutch in which the U-shaped end has a screw-in sharp spike at the bottom of the U to prevent the crutch slipping off the calf while repelling it.
crutching shearing of the wool from the perineal region of the sheep as a protection against blowfly strike. Wool contaminated by dags of manure and by urine is a major attractant for blowflies. See also **dagging**.
crutchings the wool obtained by crutching.
cryalgesia [*kri"al-je'ze-ə*] pain on application of cold.
cry(o)- word element. [Gr.] *cold*.
cryoadhesion in contact freezing, the bond between a cryoprobe and the tissue being treated; facilitated by moisture on the tissue.
cryoanalgesia [*kri"o-an"əl-je'ze-ə*] the relief of pain by the application of cold by cryoprobe to peripheral nerves.
cryobank [*kri'o-bank"*] a facility for freezing and preserving semen, embryos and other cells at low temperatures (usually −196.5°C) for future use.
cryobiology [*kri"o-bi-ol'ə-je*] the science dealing with the effect of low temperatures on biological systems.
cryocautery [*kri"o-kaw'tər-e*] see cold **cautery**.
cryoepilation [*kri"o-ep"ĭ-la'shən*] use of cryotherapy to facilitate epilation and destroy hair follicles thus reducing the chance of regrowth; used in the treatment of distichiasis, ectopic cilia and trichiasis.
cryoextraction [*kri"o-ek-strak'shən*] use of a cryoprobe to form an attachment to the lens capsule and facilitate intracapsular lens removal.
cryoextractor [*kri"o-ek-strak'tər*] a cryoprobe used in cryoextraction.
cryofibrinogen [*kri"o-fi-brin'o-jən*] an abnormal fibrinogen that precipitates at low temperatures and redissolves at 98.6°F (37°C).
cryofibrinogenemia [*kri"o-fi-brin"o-jə-ne'me-ə*] the presence of cryofibrinogen in the blood.
cryogen [*kri'o-jən*] substance used to lower temperature in tissue to be frozen, e.g. liquid nitrogen, Freon, carbon dioxide and nitrous oxide.
cryogenic [*kri"o-jen'ik*] producing low temperatures.
cryoglobulin [*kri"o-glob'u-lin*] an abnormal globulin that precipitates at low temperatures and redissolves at 98.6°F (37°C).
cryoglobulinemia [*kri"o-glob"u-lĭ-ne'me-ə*] the presence of cryoglobulin in the blood, which is precipitated in the microvasculature upon exposure to cold.
cryohypophysectomy [*kri"o-hi"po-fiz-ek'tə-me*] destruction of the pituitary gland by the application of cold.
cryolite a naturally occurring mineral, sodium aluminum fluoride, May be a source of fluorine poisoning if the mineral is used industrially.
cryometer [*kri-om'ə-tər*] a thermometer for measuring very low temperature.
cryopexy [*kri'o-pek"se*] use of a cryoprobe to cause controlled focal chorioretinitis that ultimately scars and fuses retina to underlying choroid. Used to prevent or limit retinal detachment.
cryophilic [*kri"o-fil'ik*] preferring or growing well at low temperatures.
cryophylactic [*kri"o-fə-lak'tik*] resistant to very low temperatures; said of bacteria.
cryoprecipitate [*kri"o-pre-sip'ĭ-tāt*] any precipitate that results from cooling.
cryopreservation [*kri"o-prez"ər-va'shən*] maintenance of the viability of excised tissue or organs by storing at very low temperatures.
cryoprobe [*kri'o-prōb*] an instrument for applying extreme cold to tissue.
cryoprotectant [*kri"o-pro-tek'tənt*] substance added to living biological material, e.g. embryo, ova, spermatozoa, that is to be preserved in a viable state by freezing. The common substances are ethylene glycol, DMSO and glycerol.
cryoprotective [*kri"o-pro-tek'tiv*] capable of protecting against injury due to freezing, as glycerol protects frozen red blood cells.
cryoprotein [*kri"o-pro'tēn*] a blood protein that precipitates on cooling.
cryoreduction [*kri"o-re-duk'shən*] use of cryosurgery to reduce the bulk of an otherwise inoperable tumor. Usually used in association with radiation therapy, but may be palliative.
cryoscopy [*kri-os'kə-pe*] examination of fluids based on the principle that the freezing point of a solution varies according to the amount and nature of the solute.
cryospray [*kri'o-spra*] the use of a liquid nitrogen spray in cryosurgery.
cryostat [*kri'o-stat*] 1. a device by which temperature can be maintained at a very low level. 2. in pathology and histology, a chamber containing a microtome for sectioning frozen tissue.
cryosurgery [*kri"o-sur'jər-e*] the destruction of tissue by application of extreme cold. Used in the treatment of certain malignant lesions of the skin and mucous membranes, anorectal lesions and in the removal of cataracts.
cryothalamectomy [*kri"o-thal"ə-mek'tə-me*] destruction of a portion of the thalamus by application of extreme cold.
cryotherapy [*kri"o-ther'ə-pe*] the therapeutic use of cold. See also **cryosurgery**, **hypothermia**.
cryotolerant [*kri"o-tol'ər-ənt*] able to withstand very low temperatures.
cryotome [*kri'o-tōm"*] microtome used in a cryostat.
cryotonsillectomy [*kri"o-ton"sĭ-lek'tə-me*] cryosurgical excision of the tonsils.
crypt [*kript*] a blind pit or tube on a free surface.
anal c's furrows, with pouchlike recesses at the caudal end, separating the rectal columns; called also anal sinuses.
c's of Lieberkühn the lumen of intestinal glands on the surface of the intestinal mucous membrane.
tongue c. deep, irregular invaginations from the surface of the lingual tonsil.
tonsillar c's epithelium-lined clefts in the palatine tonsils.
cryptectomy [*krip-tek'tə-me*] excision or obliteration of a crypt.
cryptitis [*krip-ti'tis*] inflammation of the mucous membrane of the anal crypts.
crypt(o)- word element. [Gr.] *concealed, pertaining to a crypt*.
Cryptobia a genus of biflagellate protozoa that parasitize fish, amphibians and other aquatic creatures.
C. borreli, C. brachialis, C. cyprini parasitic hemoflagellates of fish, transmitted by leeches.
Cryptocarya pleurosperma Australian tree in the family Lauraceae; the bark contains a very irritating alkaloid, cryptopleurine, and the leaves contain pleurospermine which is also vesicant and irritant. Called also poison walnut.
Cryptocaryon a ciliate protozoan.
C. irritans cause of 'white spot' skin and gill disease in saltwater fish.
cryptocephalus [*krip"to-sef'ə-ləs*] microcephalus.
cryptococcosis [*krip"to-kŏ-ko'sis*] infection by *Cryptococcus neoformans*, having a predilection for the brain and meninges but also invading the skin, nasal cavity, lungs, eyes and rarely other organs such as the udder. In animals it occurs most often in cats, but is recorded in most other species. Granulomas in the upper respiratory tract and meningoencephalitis are the clinical features. Called also European blastomycosis, torulosis.
Cryptococcus [*krip"to-kok'əs*] a genus of yeast-like fungi.
C. farciminosum see ***Histoplasma farciminosum***.

C-90: Cryptococcal granuloma.

VetBooks.ir

C. neoformans a species of worldwide distribution, causing **cryptococcosis** in mammals and birds; there are two biovars, *C.* var *neoformans*, and C. var *gattae*. Previously called *Torula histolytica*, *Torulopsis neoformans*.

Cryptocotyle a genus of flukes (digenetic trematodes) in the family Heterophyidae.

C. concavium, C. jejuna, C. lingua intestinal flukes that can cause enteritis in fish-eating birds, dogs and other mammals. Fish are the intermediate hosts.

cryptodeterminant [krip"to-de-tur'mĭ-nənt] hidden determinant.

cryptodidymus [krip"to-did'ə-məs] endadelphos.

cryptogenic [krip"to-jen'ik] idiopathic.

cryptolith [krip'to-lith] a concretion in a crypt.

cryptomerorachischisis [krip"to-me"ro-rə-kis'kĭ-sis] see **spina** bifida occulta.

cryptophthalmia, cryptophthalmus [krip"tof-thal'me-ə, krip"tof-thal'məs] congenital absence of the palpebral fissure, the skin extending from the forehead to the cheek, and the eye malformed or rudimentary.

cryptopodia [krip"to-po'de-ə] swelling of the lower leg and foot, covering all but the sole of the foot.

cryptorchid [krip-tor'kid] an animal with undescended testes. Called also rig, ridgling.

cryptorchidectomy [krip"tor-kĭ-dek'tə-me] excision of an undescended testis. See also **orchiectomy**.

cryptorchidism [krip-tor'kĭ-diz"əm] the state of being a cryptorchid. An improperly developed testis may never leave the abdomen (abdominal cryptorchidism) or is lodged in the inguinal canal (inguinal cryptorchid). Retained testes (abdominal and inguinal) both produce male hormones and secondary sex characters and behavior. This is the basis for hormonal diagnosis of cryptorchidism. Failure of both testicles to descend is uncommon. Usually only one testis is involved and the other produces sufficient spermatozoa to render the animal fertile. Called also rig.

inherited c. there is some evidence that cryptorchidism can be inherited in most species.

cryptorchism [krip-tor'kiz-əm] see **cryptorchidism**.

cryptosporidiosis [krip"to-spo-rid"e-o'sis] infection with *Cryptosporidium*. Clinical signs usually include diarrhea, vomiting (in carnivores), dehydration, malabsorption, steatorrhea, weight loss and/or wasting. Cryptosporidiosis in humans is mainly caused by *Cryptosporidium hominis* or *C. parvum*. *C. canis, C. felis* or *C. meleagridis* have been recorded. Human cryptosporidiosis is proposed to be transmitted anthroponotically (human-to-human) for *C. hominis* and *C. parvum*, or zoonotically (animal-to-human) for *C. parvum*. The transmission of *C. canis* and *C. meleagridis* to humans is not well characterized. In many cases, cryptosporidiosis resolves as immunity develops to eliminate or suppress the infection, although chronic infections can develop in high-risk host groups, particularly neonates and immuno-compromised or -suppressed patients which, due in part to the limited availability of highly effective chemotherapeutic treatment, can result in death. Asymptomatic infections occur and represent a signficant risk to susceptible host animals.

Cryptosporidium [krip"to-spo-rid'e-əm] a genus of parasitic protists (family Eimeriidae) that predominantly infect the alimentary tract of most vertebrate groups (including mammals, reptiles and birds), usually causing enteritis or gastritis and rarely cholangitis or pancreatitis. Infections can be associated with respiratory disease in birds. More than 19 species and 44 genotypes of *Cryptosporidium* are described to date. Species include *C. bayleyi* and *C. meleagridis* in birds, *C. serpentis* in reptiles, *C. crotalis* in reptiles, *C. nasorum* in fishes, *C. canis* in dogs, and *C. felis* in cats. *C. parvum* can infect different species, including cattle, small ruminants and humans. *C. hominis* infects humans and has been found very rarely in other hosts. Both *C. hominis* and *C. parvum* cause disease in humans. Other species of *Cryptosporidium* (including *C. canis* and *C. meleagridis*) can infect immunocompromised, immunodeficient or immunosuppressed humans. *C. andersoni (C. muris)* infects cattle. See also **cryptosporidiosis**.

Cryptostegia grandiflora plant of the family Asclepiadaceae, originally from Madagascar; contains cardiac glycosides; causes sudden death after exercise in cattle and horses. Called also rubber vine.

Cryptostemma calendula see ***Arctotheca calendula***.

cryptotoxic [krip'to-tok"sik] a substance with toxic properties which are only exhibited in particular circumstances.

crystal [kris'təl] a naturally produced angular solid of definite form.

c.-induced arthritis see **gout**, **pseudogout**.

piezoelectric c. the source of sound waves in **ultrasonography**.

radiographic c's crystals on radiographs caused by faulty use of fixative, commonly excess acidity or insufficient washing of the film.

synovial c. see **gout**, **pseudogout**.

tissue c. recognizable crystals in tissues occur in crystal-associated cholangiohepatopathy, zinc and oxalate poisoning.

urine c's see **crystalluria**.

c. violet a brilliant organic deep purple dye that stains cell walls; used in gram stain to stain gram-positive bacteria.

c. violet vaccine an obsolete hog cholera (classical swine fever) vaccine.

crystallin [kris-tal'in] a protein comprising the lens of the eye.

crystalline [kris'tə-lēn] 1. resembling a crystal in nature or clearness. 2. pertaining to crystals.

c. lens the transparent organ behind the pupil of the eye. See also **lens**.

crystallography [kris"təl-og'rə-fe] the science dealing with the study of crystals.

X-ray c. the determination of the three-dimensional structure of molecules by means of diffraction patterns produced by X-rays.

crystalloid [kris'tə-loid] 1. resembling a crystal. 2. a noncolloid substance. Crystalloids form true solutions and therefore are capable of passing through a semipermeable membrane, as in **dialysis**. The physical opposite of a crystalloid is a **colloid** (3), which does not dissolve and does not form true solutions.

c. particle a matrix particle in a single membrane contained in a peroxisome, when viewed through an electron microscope. Called also nucleoid.

c. solution contains electrolytes and nonelectrolytes which, when given intravenously, will diffuse into all body fluid compartments. Examples are normal saline, Ringer's solution and 5% dextrose in water.

crystalluria [kris"təl-u're-ə] the excretion of crystals resulting from precipatation of salts in the urine, which is subject to the concentration of salts and pH of the urine. See also **struvite**, **feline** lower urinary tract disease.

Cs chemical symbol, *cesium*.

CSA canine secretory alloantigen.

csA cyclosporin A.

CSF cerebrospinal fluid.

CSF-1 monocyte-macrophage colony-stimulating factor.

CSFs colony-stimulating factors.

CSK see chronic superficial **keratitis**.

CSM cerebrospinal meningitis.

CT computed tomography.

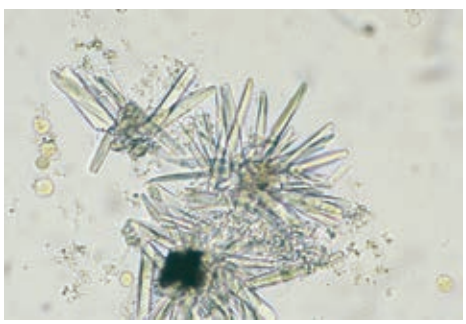
CT number the density assigned to a voxel in a CT (computed **tomography**) scan on an arbitrary scale on which air has a density −1000; water, 0; and compact bone +1000. CT numbers are sometimes said to be expressed in 'Hounsfield units'.

CT 1341 see **Saffan**.

CTA medium a semisolid medium with crystine and trypticase. Used together with carbohydrate disks to demonstrate acid production in the identification of fastidious bacteria.

CTAT computerized transaxial tomography.

ctenidium a series of spines which occur in rows on the heads of fleas; called also combs; useful for morphological identification.



C-91: Crystalluria: calcium phosphate crystals in urine sediment.
From Raskin RE, Meyer D, Atlas of Canine and Feline Cytology. Saunders, 2001.

Ctenizidae a family of venomous spiders, include the trapdoor spider.
Ctenocephalides [te"no-sə-fal'ĭ-dēz] a genus of fleas of the order Siphonaptera. Includes *Ctenocephalides canis* (dogs and related species), *C. felis*, *C. f. felis*, *C. f. strongylus*, *C. f. damarensis* and *C. f. orientalis*; infest cats, dogs and related small animals.
Ctenopharyngodon idella farmed finfish in the family Cyprinidae. Called also grass carp.
CTL cytotoxic T lymphocyte.
cTLI canine trypsin-like immunoreactivity.
cTnI cardiac troponin protein.
CTP cytosine triphosphate.
CTP synthetase see **cytidine** 5′-triphosphate.
cTSH canine thyroid stimulating hormone; see **thyrotropin**.
Cu chemical symbol, *copper* (L. *cuprum*).
cu. cubic.
cu.cm cubic centimeter; cm^3
cu.mm cubic millimeter; mm^3
cub the newborn of a number of animal species as diverse as lion, fox and bear.
Cuban molasses–urea–bagasse a feedlot cattle feeding system based on using excess sugar cane residues. Bagasse is the fibrous residue of sugar cane after the sugar juice is expressed.
cubes feed for animals compressed into cubes. May be entirely concentrate but many nowadays are a complete ration including hammer-milled fiber. Are more expensive but reduce wastage and can be eaten more quickly than a milled grain mixture. See also **pellet** feeding.
cubicles [ku'bĭ-kəlz] individual cow bed spaces separated by half height and half length partitions. Usually located in loose housing cow accommodation in which the cow is free to wander at will.
cubitus [ku'bĭ-təs] the forelimb distal to the humerus; includes the elbow, forearm, paw.
c. valgus a deformity of the elbow in which it deviates away from the midline of the body when extended.
c. varus a deformity of the elbow in which it deviates towards the midline of the body when extended.
cuboid [ku'boid] resembling a cube; applied particularly to bones such as the fourth tarsal bone.
Cubomedusae [ku"bo-mə-doo'se] an order of aquatic animals including sea wasps and box jellyfish, e.g. *Chironex fleckeri*.
Cuboni test a pregnancy test for use in mares and based on detection of estrogens in the urine. Suitable for use only from 5 months of pregnancy.
cuckoopint ***Arum*** *maculatum*.
cucumber [ku'kəm-bər] plants in the genus ***Cucumis***; the common table vegetable is *C. sativus*. Includes striped wild cucumber (*C. africanus*), wild cucumber (*C. trigonus*).
squirting c. see ***Ecballium elaterium***.
Cucumis [ku'kəm-is] a genus in the plant family Cucurbitaceae. The cucumbers. Contain toxic tetracyclic triterpenes which cause enteritis and diarrhea. Includes *C. africanus*, *C. melo* var. *agrostis* (*C. picrocarpus*, *C. trigonus*, Ulcardo melon), *C. myriocarpus* (prickly paddymelon), *C. sativus*.
Cucurbita maxima [ku-kur'bĭ-tə] squash, pumpkin.
cucurbitacins toxic tetracyclic triterpenes found in plants of the family Cucurbitaceae, e.g. squash, pumpkin, cucumber, melons. Called also 'bitter principle of the cucurbits'.
cucurbitine marginally effective cestocidal compound in pumpkin seed.
cud [kud] the bolus regurgitated by ruminants. It contains fiber, other food particles, rumen liquor and flora.
c. chewing after regurgitation, chewing on the remains of the regurgitus.
c. dropping a usually temporary condition in the cow in which each regurgitated bolus is rejected to the exterior. There is no other abnormality.
losing the c. the cow that has 'lost her cud' is not ruminating. This is a nonspecific sign of illness.
c. transfer a therapeutic practice of collecting fresh ruminal contents, from the mouth of a ruminating cow or by stomach tube from a rumen or from a freshly killed normal animal, and administering an infusion of it to a cow with ruminal stasis. The objective is to repopulate the recipient rumen with viable, normal ruminal flora.
cuddie trot the strange gait of a sheep with scrapie. It is an unsteady trot with the ears moving loosely up and down.
cudding [kud'ing] chewing the cud. See also **rumination**.
cuff puffer upper the syringe used to inflate the cuff of endotrachel tubes.
cuffing [kuf'ing] formation of a cufflike arrray, as of leukocytes about a blood vessel in many inflammatory conditions.
c. pneumonia chronic enzootic pneumonia of calves in which there is lymphofollicular cuffing of small airways.
cul-de-sac [kul"də-sak'] [Fr.] *a blind pouch*.
Douglas' c. a sac or recess formed by a fold of the peritoneum dipping down between the rectum and the uterus. Called also rectouterine excavation or pouch.
culard [ku-lahrd'] see **myofiber** hyperplasia.
culdoscope [kul'do-skōp] an endoscope used in culdoscopy.
culdoscopy [kəl-dos'kə-pe] use of an endoscopic instrument inserted into and through the anterior wall of the vagina, into the pelvic cavity to visualize pelvic viscera.
Culex [ku'ləks] a genus of mosquitoes found throughout the world; cause 'insect worry' and many species transmit various infectious agents, e.g. microfilariae, apicomplexan parasites and viruses, such as those of Japanese encephalitis and equine encephalomyelitis.
C. pipiens transmits the virus of fowlpox.
C. pipiens quinquefasciatus a serious pest of poultry and carrier of a number of poultry diseases.
C. tarsalis transmits western equine encephalomyelitis.
C. tritaeniohynchus transmits Japanese encephalitis virus.
Culicidae [ku-lis'ĭ-de] see ***Culex***, ***Anopheles***.
culicide [ku'lĭ-sīd] an agent that destroys mosquitoes.
culicifuge [ku-lis'ĭ-fūj] an agent that repels mosquitoes.
culicine [ku'lĭ-sīn] 1. any member of the genus *Culex* or related genera. 2. pertaining to, involving, or affecting mosquitoes of the genus *Culex* or related species.
culicoid see ***Culicoides***.
Culicoides [ku-lĭ-koi'dēz] a large genus of biting midges belonging to the family Ceratopogonidae. They act as vectors of bluetongue, ephemeral fever, Akabane virus of cattle, epizootic hemorrhagic disease of deer, and African horse sickness and many are intermediate hosts of filarioid nematodes. Many are causes of cutaneous hypersensitivity in horses (Queensland or sweet itch)—*C. brevitarsis*, *C. imicola*, *C. insignis*, *C. lupicaris*, *C. obsoletus*, *C. pulicaris*, *C. punctatus*, *C. spinosus*, *C. stellifer* and *C. varipennis* can be involved.
***C. brevitarsis* (*C. robertsi*)** one of the vectors of bluetongue virus and causes hypersensitivity to its bite. Called also Queensland itch. See also equine **allergic** dermatitis.
C. furens intermediate host of *Mansonella ozzardi*.
C. grahami intermediate host of *Dipetalonema perstans* and *D. streptocerca*.
C. nubeculosus intermediate host of *Onchocerca cervicalis*.
C. pungens intermediate host of *Onchocerca gibsoni*.
culicoides hypersensitivity [ku-lĭ-koi'dēz] see equine **allergic** dermatitis.
Culiseta [ku"lĭ-se'tə] a genus of mosquitoes, e.g. *C. melanura,* which act as vectors for equine encephalomyelitis.
C. melanura transmits American encephalomyelitis virus; does not feed on large mammals but does on water birds.
cull [kul] the act of **culling**. Called also cast.
Cullen genus in the plant family Fabaceae. Contain furanocoumarins and may cause primary photosensitization. Includes *C. cinereum, C. patens*. Called also *Psorolea*.
Cullen's sign [kul'ən] bluish periumbilical discoloration due to subcutaneous intraperitoneal hemorrhage.
culling [kul'ing] removal of inferior animals from a group of breeding stock. The removal is premature, i.e. before completion of its life span, disposal of an animal from a herd or other group. In farm animals this means disposal because of their being superfluous to the needs of the group to maintain its size. Animals may be culled because of age, either because they are too old or because they are very young and their retention would necessitate culling an older, more desirable animal. Animals may also be culled because of disease, failure to produce or reproduce, because of inherited defects or because of undesirable conformation or breed type. There are two general classes of culls, involuntary culls, e.g. deaths, and voluntary culls, e.g. age culls.

VetBooks.ir

biological c. culling of animals on the biological grounds of incapacity to pass a productivity test.
independent c. based on specific levels of performance for each trait included in the breeder's selection program. An example in Hereford cattle might be culling of all heifers below 450 lb at weaning and all heifers with no pigmentation around the eyes.
c. program a set of rules for a manager to follow in carrying out culling within a herd.
c. rate the number of animals culled as a proportion of the number of animals from which the culling was done.
voluntary c. culling by decision of the farmer to accommodate the farm's management plan. See also **culling**.
culls the animals extracted from a herd or flock by culling.
culmen [*kul'mən*] pl. *culmina* [L.] 1. the anterior and upper part of the monticulus cerebelli; called also cacumen. 2. the median longitudinal ridge on a bird's beak.
culms the shoots and roots of sprouted grains in the brewing process. These are removed during brewing and are salvaged as a food supplement. Called also malt culms.
culotte in dogs, the longer hair on the back of the thighs; prominent in some breeds such as the Chow Chow.
cultivation [*kul"tĭ-va'shən*] the propagation of living organisms, applied especially to the growth of microorganisms or other cells in artificial media.
culture [*kul'chər*] 1. the propagation of microorganisms or of animal cells in media conducive to their growth. 2. to induce such propagation. 3. the product of such propagation.
anaerobic c. one carried out in the absence of oxygen.
continuous flow c. the cultivation of bacteria in a continuous flow of fresh medium to maintain bacterial growth in logarithmic phase.
explant c. a small piece of tissue such as trachea or gut maintained in culture.
hanging-drop c. a culture in which the material to be cultivated is inoculated into a drop of fluid attached to a coverglass inverted over a hollowed slide.
primary c. a bacterial, fungal, cell or tissue culture started from material taken directly from an animal. Subsequent passages of cells are referred to as secondary cultures.
secondary c. a subculture derived from a primary culture.
slant c. one made on the surface of solidified medium in a tube which has been tilted when the agar was solidifying to provide a greater surface area for growth while occupying minimal storage space.
stab c. a culture into which the organisms are introduced by thrusting a needle deep into the medium.
streak c. one in which the medium is inoculated by drawing an wire loop carrying the organisms across it.
suspension c. a culture in which cells multiply while suspended in a suitable liquid medium.
tissue c. the maintaining or growing of tissue, organ primordia, or the whole or part of an organ *in vitro* so as to preserve its architecture and function. See explant culture (above).
type c. an exemplary culture of a species of microorganism usually maintained in a central reference collection of type or standard organisms.
Cumberland disease anthrax (Australia).
cumulus [*ku'mu-ləs*] pl. *cumuli* [L.] a small elevation.
c. oophorus a mass of follicular cells surrounding the ovum in the vesicular ovarian follicle. Called also discus oophorus, discus ovigerous, discus proligerous.
cunean pertaining to the cunean tendon.
c. bursa the bursa interposed between the cunean tendon and the tarsal bones on the medial aspect of the hock of the horse.
c. tendon the medial branch of the insertion of the tibialis cranialis muscle in the hindlimb of the horse.
c. tendon bursitis inflammation of the cunean bursa.
c. tendonectomy surgical excision of a section of the cunean tendon as a treatment for bone **spavin** in horses.
cuneate [*ku'ne-āt*] wedge-shaped.
c. tubercle a slight elevation in the medulla oblongata indicating the position of the cuneate nucleus of the lemniscal system.
cuneiform [*ku-ne'ĭ-form*] 1. wedge-shaped. 2. the first, second and third tarsal bones (medial, intermediate, and lateral cuneiforms).
c. process processes of the arytenoid cartilage in dogs, or the epiglottic cartilages of horses.
cuneus [*ku'ne-əs*] pl. *cunei* [L.] a wedge-shaped lobule on the medial aspect of the occipital lobe of the cerebrum.
c. ungulae see **frog** (2) of the horse's foot.
cuniculus [*ku-nik'u-ləs*] pl. *cuniculi* [L.] a burrow in the skin made by the mange mite, *Sarcoptes scabiei*.
cunjevoi ***Alocasia*** *brisbanensis*.
cup [*kup*] a depression or hollow.
physiological c. a slight depression sometimes observed in the optic disk.
tooth c. central depression on the occlusal surface of the horse's incisor teeth at the time of eruption; as the horse ages and the occlusal surface is eroded, the cup becomes smaller and eventually disappears; the reducing size is used in aging of horses by their teeth.
cupola [*koo'pə-lə*] cupula.
cupping [*kup'ing*] a technique in acupuncture in which negative pressure is applied to points using specially designed cups. Some rely on burning a combustible solution inside the cup to create a vacuum and are not much used. In massage therapy, only the hand is used.
Cupressocyparis leylandii member of the plant family Cupressaceae; contains isocupressic acid. May cause abortion in livestock. Called also Leyland cypress.
Cupressus genus of trees in the family Cupressaceae; the leaves contain **isocupressic acid**, and when fed to pregnant cattle cause abortion. The aborted fetus has a typical leukoencephalomalacia. Includes *C. macrocarpa*, *C. sempervirens*. Called also Monterey cypress.
cupric [*koo'prik*] pertaining to or containing divalent **copper**.
c. complex see **cuprimyxin**.
cuprimyxin [*kup"rĭ-mik'sin*] a copper-containing antibacterial and antifungal agent for topical use.
cuproprotein copper bound to a protein, e.g. ceruloplasmin.
cuprous [*koo'prəs*] pertaining to or containing monovalent copper.
cupruresis [*koo"proo-re'sis*] the urinary excretion of copper.
CUPT *c*ombined *u*tero-*p*lacental *t*hickness; measurement taken during pregnancy to evaluate placental health and in particular determine presence or absence of placentitis.
cupula [*koo'pu-lə*] pl. *cupulae* [L.] a small, inverted cup or dome-shaped cap over a structure.
diaphragmatic c. the cranio-ventral dome of the diaphragm.
pleural c. the apex of each pleural sac lying at the cranial aperture of the thorax.
cupulolithiasis [*ku"pu-lo-lĭ-thi'ə-sis*] the presence of calculi in the cupula of the posterior semicircular duct.
cur a derogatory term for a mongrel dog.
curare [*koo-rah're*] any of a wide variety of highly toxic extracts from various botanical sources, including species of *Strychnos*, a genus of tropical trees; used originally as arrow poisons in South America. A form extracted from the shrub, *Chondrodendron tomentosum*, has been used as a skeletal muscle relaxant. The active principle is *d*-tubocurarine.
curariform [*koo-rah'rĭ-form*] like curare in its action.
c. drugs these include *d*-tubocurarine, gallamine, decamethonium, succinylcholine (suxamethonium). Like curare they cause collapse due to neuromuscular paralysis but without loss of consciousness.
curarization [*koo"rah-rĭ-za'shən*] administration of curare (usually tubocurarine) to induce muscle relaxation by its blocking activity at the neuromuscular junction.
curb [*kərb*] 1. thickening of the plantar tarsal ligament in the hock of the horse. The ligament is obviously thickened a few inches below the point of the hock. Initially there is pain at the site, the horse is lame and at rest stands with the weight on the other leg. 2. that part of a curb bit in a bridle that provides the restraint additional to the bit itself. Includes the bars and chain. See also **bit** (2).
c. reins the reins attached to the bars of a curb bit.
curby hocks hocks which are affected by **curb**.
curcin a phytotoxin found in ***Jatropha*** *curcas*.
curd the proteinaceous part of milk precipitated by rennin. Usually contains some fat when whole milk is used.
cure [*kūr*] 1. the course of treatment of any disease, or of a special case. 2. the successful treatment of a disease or wound. 3. a system of treating diseases. 4. a medicine effective in treating a disease. 5. preserve meat by salting, smoking, pickling.

cured meat meat which has been treated with salt and nitrate or nitrite. The salt dehydrates the meat, the nitrate releases nitrous acid which converts myoglobin to nitrosomyoglobin which has an attractive pink color when cooked. The cooking process converts the nitrosomyoglobin to nitrosohemochrome. Salted meat is produced by simply adding salt. Bacon, ham and other specialty cured meats are put through additional processes, especially smoking, to achieve special effects. See also **bacon curing**, **pickling**.

curet [*ku-ret'*] curette.

curettage [*ku"rə-tahzh'*] [Fr.] the cleansing of a diseased surface, as with a curette.

endometrial c. physical curettage of the uterus is not practiced in animals but chemical irritation achieves a similar effect and is used in cows. The commonest infusion is an iodine preparation such as Lugol's iodine.

subgingival c. aids in the treatment of periodontal disease; consists of removing inflammatory tissue under the free gingival margin and adjacent bony structures.

curette, curet [*ku-ret'*] 1. a spoon-shaped instrument for cleansing a diseased surface. 2. to use a curette.

bone c. there are a number of types, e.g. **Brun bone curette**, **nail-hole curette**.

curettement [*ku-ret'ment*] curettage.

curie (Ci) [*ku're*] a non-SI unit of radioactivity, defined as the quantity of any radioactive nuclide in which the number of disintegrations per second is 3.7×10^{10}. Now replaced by the **becquerel**.

curie-hour [*ku're our'*] a non-SI unit of dose equivalent to that obtained by exposure for one hour to radioactive material disintegrating at the rate of 3.7×10^{10} atoms per second.

curietherapy [*ku"re-ther'ə-pe*] see interstitial **brachytherapy**.

curing [*kūr'ing*] said of meat. See **cured meat**.

curium (Cm) [*ku're-əm*] a chemical element, atomic number 96, atomic weight 247. See Table 4.

curled toe see **corkscrew** claw.

curled toe paralysis a disease of chickens caused by a nutritional deficiency of riboflavin. A complete deficiency of the vitamin causes early mortality before the deformity develops. The toes are curled inwards or under and the chicken has to stand and walk on its hocks. See also **crooked toe disease**.

curly calf syndrome see **arthrogryposis** multiplex, **Akabane virus** disease.

curly coat seen in some breeds of dogs, such as Curly coated retrievers, Irish water spaniels; reported as an inherited condition in some breeds of cattle, horses and pigs.

Curly coated retriever a medium-sized gun dog with distinctive black or liver coat in short, crisp curls over the entire body except the face.

Curly horse a North American saddle breed of variable description, derived from wild horses. Characterized by its curly coat, particularly inside the ears and on the fetlocks; said to be hypoallergenic for people. There are dominant gene and recessive gene varieties.

curracabah ***Acacia cunninghamii***.

current [*kur'ənt*] that which flows; electric transmission in a circuit.

alternating c. a current that flows in opposite directions sinusoidally.

direct c. a current whose direction is always the same.

currycomb a flat toothed device used like a brush in grooming horses, principally for removing debris such as caked mud. Made usually of metal or hard rubber. Used in combination with a dandybrush or bodybrush.

Curschmann's spirals [*koorsh'mahn*] coiled, basophilic plugs of mucus formed in the lower airways and found in sputum and tracheal washings; indicate chronic obstruction.

cursorial adapted for running; said of certain birds and mammals.

curvature [*kur'və-chər"*] a nonangular deviation from a normally straight course.

greater c. of reticulum in the cow lies against the diaphragm opposite the sixth and seventh ribs and faces left and ventrally.

greater c. of stomach the left or lateral border of the stomach, marking the junction of the parietal and visceral surfaces.

lesser c. of reticulum in the cow faces right and dorsally and lies against the omasum.

lesser c. of stomach the right or medial border of the stomach, marking the junction of the parietal and visceral surfaces.

spinal c. abnormal deviation of the vertebral column, as in **kyphosis**, **lordosis** and **scoliosis**.

curve [*kərv*] a line that is not straight; the line representing varying values in a graph.

area under moment c. plasma drug concentration time after dosing versus time after drug administration.

area under the c. the area under a plasma concentration versus time curve. A measure of drug absorption.

characteristic c. the photographic characteristics of an emulsion on an X-ray film based on plotting the density of the image obtained against the logarithm of the exposure under specified conditions of development.

epidemic c. a graphical representation showing the number of new cases of the disease plotted against time. A decision on when the new infection rate creates an epidemic varies with the disease and the circumstances. The rate would need to be clearly in excess of its expected frequency.

fitted c. the theoretical frequency distribution whose closeness of fit to the subject data is under test.

freehand c. a line drawn in by hand on a scattergram to establish the relationship between two variables.

frequency c. a curve representing graphically the probabilities of different numbers of occurrences of an event.

growth c. the curve obtained by plotting increase in size or numbers against the elapsed time.

logarithmic c. the curve which demonstrates the straightline relationship between two variables when both of them are scaled as logarithms.

log dose–response c. the standard way of presenting pharmacological data about a drug. The response is plotted against dose on a semilogarithmic graph. It has the advantage that a wide range of dose rates can be entered on the one graph.

one-step growth c. a plot of the growth of a virus in cell culture when all cells are infected simultaneously.

oxygen–hemoglobin dissociation c. a graphic explanation of the release and acquisition of oxygen from and to the hemoglobin in the blood in varying circumstances of oxygen partial pressure in the environment.

plasma concentration–time c. the plasma concentration of a drug plotted against time.

semilogarithmic c. as for logarithmic curve except that only one of the variables is scaled as a logarithm. See also **logarithmic** relationship.

sigmoid c. an S-shaped curve. A common curve in biological distributions.

survivorship c. a graphic presentation of a life table. Obviously the proportion of survivors decreases with advancing age of the group.

vertebral c. the downward curve of the thoracolumbar region and that of the cervical region in some animals.

curvilinear a line appearing as a curve; nonlinear.

c. regression see curvilinear **regression**.

Curvularia [*kur"vu-lar'e-ə*] a colored fungus associated with blackgrain **mycetoma**.

curvus a deformity in which there is curvature. Seen in growth deformities of the radius and ulna in which premature closure of the distal ulnar physis and the radius continues to grow with a cranial bowing. See also **valgus**.

Cuscuta a genus of parasitic plants in the family Convolvulaceae; an unidentified toxin causes nervousness, staggering vomiting, diarrhea. Includes *C. campestris*, *C. epithymium*, *C. europea*, *C. trifolii*. Called also dodder.

cush the position in which a camelid rests in sternal recumbency on the ground; achieved by bending the front legs, dropping to the knees one at a time, then flexing and folding the hind legs. Camelids sleep and chew cud in a kushed position; the normal position for mating. Also spelled kush.

Cushing's disease [*koosh'ing*] hyperadrenocorticism secondary to excessive pituitary excretion of adrenocorticotropic hormone; based on the original description by Dr. Harvey Cushing of humans with pituitary tumors, described as basophil adenomas of the pars distalis; now taken to include also the more common corticotroph adenomas (**cushing-like disease**). Called also pituitary-dependent **hyperadrenocorticism**.

VetBooks.ir

Cushing-like disease a disease caused by functional corticotroph adenomas of the adenohypophysis which may give rise to clinical signs of cortisol excess; seen most commonly in dogs. See also **Cushing's disease**.

Cushing response [*koosh'ing*] increased intracranial pressure causes decreased cerebral blood flow which then leads to systemic hypertension (to maintain cerebral blood flow), a reflex bradycardia and respiratory depression.

Cushing suture pattern [*koosh'ing*] a fast, continuous, easy inverting suture pattern for making the external closure of an intestinal incision. Bites are taken parallel to the incision but the suture does not pass right through the wall into the lumen. The external part of each suture bite crosses the wound. It approximates the peritoneum.

Cushing's syndrome [*koosh'ing*] a group of signs produced by an excess of free circulating cortisol from the **adrenal** cortex. Causes are: (1) excessive secretion of adrenocorticotropic hormone (ACTH) from the pituitary gland, which may actually result from faulty release of corticotropin-releasing factor (CRF) from the hypothalamus or a functional tumor, usually corticotroph adenoma; (2) tumor of the adrenal cortex, causing hypersecretion of the glucocorticoids; (3) *iatrogenic* Cushing's syndrome resulting from excessive or prolonged administration of exogenous glucocorticoids; and in humans (4) ectopic production of ACTH by extrapituitary tumors. Most commonly seen in dogs (canine Cushing's syndrome; CCS), infrequently in aged horses and rarely in other species. See also **hyperadrenocorticism**. Affected dogs show polyuria, polydipsia, polyphagia, muscle weakness and atrophy, pendulous abdomen, hair loss and an increased susceptibility to infection, particularly of the skin and urinary tract.

pseudo C. s. see **alopecia** X.

cushingoid [*koosh'ing-oid*] resembling Cushing's syndrome, said of signs and clinical features.

cushion [*koosh'ən*] a term describing exceptional thickness of the upper lips or flews seen in some short-nosed breeds of dogs, e.g. Boxer, British bulldog.

cushion comb a small, low, oval comb with a smooth surface on a domestic fowl.

cusp [*kusp*] a pointed or rounded projection, such as on the crown of a tooth, or a segment of a cardiac valve.

semilunar c. any of the semilunar segments of the aortic valve or the pulmonary valve.

cuspid [*kus'pid*] 1. in the horse, pig, dog, and cat the fourth tooth on either side from the midline in each jaw; called also canine tooth. 2. having one cusp.

cuspis [*kus'pis*] pl. *cuspides* [L.] a cusp.

custom done to the order of the customer on materials owned by the customer, e.g. custom **feedlot**.

cuSum cumulative sum; sum of the data so far, updated as each item is collected.

cut [*kut*] 1. gelded; castrated. 2. of meat. The standard parts of a carcass of meat. Varies between countries. Includes sirloin, neck chops, silverside and so on. 3. incision made by any sharp edge. 4. yield of wool per head of sheep shorn. 5. to separate one or more animals from a group. 6. a level (cut point) of a performance trait above which animals will be kept and below which they will be sold.

C-92: Canine Cushing's syndrome.

c. proud a lay term and a lay operation used in horses. Intended to retain some stallion characteristics especially ramping and pseudo-aggression. The practice is to leave all of the spermatic cord and a little of the epididymis in the horse. There is no anatomical basis for the view that the practice has the desired effect, nor that the gelding that unintentionally has these characteristics loses them if the ends of his spermatic cords are further pruned.

speedy-c. see **speedy-cutting**.

cut-and-fit ration balancing a trial and error method of designing a ration, adding and deleting different amounts and different source feeds until the target analysis is achieved.

cutability said of meat; the proportion of boneless, trimmed, saleable retail cuts of meat obtained from a carcass.

cutaneous [*ku-ta'ne-əs*] pertaining to the **skin**. See also under headings of individual diseases, e.g. cutaneous actinobacillosis.

idiopathic c. and renal glomerular disease a disease affecting racing Greyhounds caused by a Shigella-like toxin produced *by Escherichia coli* O157:H7, found in uncooked meat. There is a severe vasculitis with cutaneous necrosis, renal failure and death. Called also Alabama rot, Greenetrack disease.

cutdown [*kut'doun*] creation of a small incised opening, especially in the tissues over a vein (venous cutdown) to facilitate venipuncture and permit the passage of a needle or cannula for withdrawal of blood or administration of fluids.

Cuterebra [*ku"tər-e'brə*] large flies whose larvae are parasitic, mostly on wild rodents, but cats and dogs are occasionally infected. The larvae burrow under the skin and cause cyst-like cavities. Called also cuterebra flies. Includes *C. americana*, *C. buccata*, *C. emasculator* and *C. lepivora*.

cuticle [*ku'tə-kəl*] 1. a layer of more or less solid substance covering the free surface of an epithelial cell. 2. the narrow band of epidermis extending from the wall of the nail or claw, onto the surface; called also eponychium. 3. the layer of cells on the surface of a hair shaft or wool fiber. In wool it is the projection of the edge of cuticular plates that gives the fiber its unique felting property. 4. an extremely thin, transparent, proteinaceous covering over the eggshell of bird's eggs. It may contain pigment and is permeable to gases.

c. of koilin a tough membrane, usually greenish, and a carbohydrate–protein complex, produced by the solidification of the secretion of the tubular glands in the gizzard mucosa of birds; the cuticle protects the mucosa during its crushing operations.

Cutifilaria a genus of nematodes in the family Onchocercidae. Includes *Cutifilaria wenki* (deer; skin).

cutin [*ku'tin*] 1. a waxy constituent of the cuticle of plants. 2. a preparation of ox serosa used as suture material and as a wound dressing.

cutireaction [*ku"tĭ-re-ak'shən*] an inflammatory or irritative reaction of the skin, occurring in certain infectious diseases, or on application or injection of a preparation of the organism causing the disease.

cutis [*ku'tis*] the outer protective covering of the body; the skin.

c. anserina transitory erection of the hair follicles due to contraction of the arrectores muscles, a reflection of sympathetic nerve discharge; goose flesh.

c. asthenia see cutaneous **asthenia**.

c. hyperelastica see **Ehlers–Danlos syndrome**.

Cutler-Beard flap see cross-lid **flap**.

cutting 1. a gait defect in horses. See **brushing**. 2. severing tissue, as with a blade, knife or scissors.

press c. a technique for making an incision with a scalpel blade in which there is increasing pressure in the same direction the blade is being moved.

slide c. pressure is applied at right angles to the movement of the blade. Safer and better controlled than press cutting when dissecting.

cutting horse not a breed, but a class of horse used for working cattle on the range, in cattle camps and in yards; especially adept at separating selected animals from a group or herd. Several varieties exist, e.g. Canadian Cutting horse, American Cutting horse. See also **Australian** Stock horse.

cuttlefish a member of the Cephalopoda family of molluscs with a bony structure (gladius) internally. This boatlike structure is a common finding at the sea's edge and is much used as a dietary supplement and plaything for caged birds.

cuvette [*ku-vet'*] [Fr.] a glass container generally having well-defined characteristics (dimensions, optical properties), to contain solutions or suspensions for study.
CV closing volume.
cv. cultivar.
CVA cerebrovascular accident.
CVM Center for Veterinary Medicine; complex **vertebral** malformation.
CVMA Canadian Veterinary Medical Association.
CVMM cervical vertebral malformation malarticulation. See **cervical** spondylomyelopathy.
CVP central venous pressure.
CVS cardiovascular system.
CWD chronic **wasting** disease.
cwt hundredweight. In the USA, equal to 100 lb (45.359 kg.); in imperial units, equal to 112 lb (50.8 kg).
cyacetazide see **cyanacethydrazide**.
cyadox a quinoxaline derivative, used as a growth promotant.
cyanacethydrazide an anthelmintic used in the treatment of lungworms. Poisoning is characterized by incoordination and convulsions. Pyridoxine is the antidote. Called also cyacetazide.
cyanamide [*si-an'ə-mīd*] in the form of calcium cyanamide, a fertilizer and may cause **cyanide** poisoning.
cyanhemoglobin [*si"an-he'mo-glo"bin*] a compound formed by the combination of hydrogen cyanide with hemoglobin. It gives the bright red color to the blood that is characteristic of peracute cyanide poisoning.
cyanide [*si'ə-nīd*] a binary compound of cyanogen. Some inorganic compounds, such as cyanide salts, potassium cyanide and sodium cyanide, are important in industry for extracting gold and silver from their ores and in electroplating. Other cyanide compounds are used in the manufacture of synthetic rubber and textiles. Cyanides are also used in pesticides. There are many potential sources of cyanide in the environment of farm animals. Cyanide poisoning occurs most commonly when cattle gain access to a bulk supply of a cyanogenetic plant, e.g. sudan grass, immature sorghum. Typical clinical signs are dyspnea within a few minutes of getting access to the food, restlessness, recumbency and death within a matter of 15 minutes to 2 hours. The cyanide is not free in the plants but is combined with a glycoside radical and must be degraded by ruminal enzymes to release its HCN. Called also hydrocyanic acid. See **cyanogenetic** glycosides.
cyanmethemoglobin [*si"an-met-he'mo-glo"bin*] a compound formed by combination of hydrocyanic acid with methemoglobin. It is formed when methylene blue is administered as an antidote in cyanide poisoning. In laboratory methods, hemoglobin is converted to cyanmethemoglobin and measured spectrophotometrically.
cyanmetmyoglobin [*si"an-met-he'mo-glo"bin*] a compound formed from metmyoglobin by addition of the cyanide ion.
cyan(o)- word element. [Gr.] *blue*.
cyanoacrylate glue [*si"ə-no-ak'rə-lāt*] tissue adhesives used for treatment of minor wounds and abrasions, vascular and ophthalmic surgery, and hemostasis.
β-cyano-L-alanine a lathyrogenic agent in *Vicia* spp.
cyanobacteria [*si"ə-no-bak-te're-ə*] photosynthesizing bacteria of widely varying form and inhabiting many environments including marine and fresh water. They produce a green pigment which changes color to blue or blue-green when the bacteria are stressed or dying. Formerly classified as algae (division Cyanophyta) and known as blue-green algae. Some species are non-toxic, some produce hepatoxins, others produce neurotoxins, and still others produce dermatoxins. Toxic species include *Anabaena*, *Anabaenopsis*, *Aphanizomenon*, *Coelosphaerium*, *Cylindrospermopsis*, *Fischerella*, *Gloeotrichia*, *Gomphosphaeria*, *Haplosiphon*, *Hormothamnion*, *Lyngyba*, *Microcystis*, *Nodularia*, *Nostoc*, *Oscillatoria*, *Pseudoanabaena*, *Schizothrix*, *Seytonema*, *Synechococcus*, *Tolypothrix*, *Trichodesmium*. Called also cyanophytes. See also **algal** poisoning.
cyanocobalamin [*si"ə-no"ko-bal'ə-min*] **vitamin B_{12}**.
cyanogen bromide [*si-an'o-jən*] reagent used to fragment peptide chains, since it cleaves only those peptide bonds in which methionine contributes the carbonyl group. Also used as coupling agent in affinity chromatography where it reacts with the Sepharose matrix forming a reactive product to which proteins, nucleic acids or other biopolymers can be coupled.

C-93: Cyanosis. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

cyanogenesis [*si"ə-no-jen'ə-sis*] cyanide production.
cyanogenetic, cyanogenic [*si"ə-no-jə-net'ik*] generating or giving rise to cyanide.
c. glycosides potentially poisonous cyanide radicals are found in plants in the form of cyanogenetic glycosides, in which form they are not poisonous. The glycosides may be broken down by plant enzymes or by rumen microorganisms and the material then releases its cyanide.
cyanolabe the pigment in retinal cones that is more sensitive to the blue range of the spectrum than are chlorolabe and erythrolabe.
cyanopenphas an organophosphate insecticide which causes delayed neurotoxicity in birds.
Cyanophyceae see **cyanobacteria**.
cyanophyte see **cyanobacteria**.
cyanophyte see **cyanobacteria**.
cyanopsin [*si"ə-nop'sin*] a visual pigment.
cyanosed [*si'ə-nōzd*] see **cyanosis**.
cyanosis [*si"ə-no'sis*] a bluish discoloration of the skin and mucous membranes due to excessive concentration of reduced hemoglobin in the blood. Used wrongly by clinicians describing skin lesions in pigs where there is severe congestion of cutaneous vessels and some leakage of blood into perivascular tissues.
central c. that due to arterial unsaturation, the aortic blood carrying reduced hemoglobin.
enterogenous c. a syndrome due to absorption of nitrites and sulfides from the intestine, principally marked by methemoglobinemia and/or sulfhemoglobinemia associated with cyanosis.
peripheral c. that due to an excessive amount of reduced hemoglobin in the venous blood as a result of extensive oxygen extraction at the capillary level.
Cyathocephalus a tapeworm genus of the family Cyathocephalidae.
C. truncatus a tapeworm of fish that can cause retardation of growth.
Cyathospirura a spiruroid nematode that causes granulomatous lesions in the stomachs of cats and foxes. Includes *C. seurati*.
Cyathostoma [*si"ə-thos'tə-mə*] a genus of the roundworm family Syngamidae. Includes *Cyathostoma bronchialis*, *C. brantae*, *C. lari* and *C. variegatum* (birds; respiratory tract).
cyathostomiasis [*si"ə-tho-sto-mi'ə-sis*] see **cyathostominiasis**.
Cyathostominae a subfamily of the strongylid roundworms (cyathostomins) of horses which replaces the original genus of *Trichonema*. It includes the genera *Cyathostomum*, *Cylicocyclus*, *Cylicodontophorus*, *Cylicostephanus*, *Poteriostomum*, *Petrovinema*, *Gyalocephalus*, *Cylindropharynx* and *Caballonema*.
cyathostominiasis disease state caused by infestations of small strongyles (cyathostomins - members of the subfamily Cyathostominae), including ***Cyathostomum***, ***Cylicocyclus***, ***Cylicodontophorus***, ***Cylindropharynx***, ***Cylicostephanus***, ***Poteriostomum***, ***Gyalocephalus*** and ***Caballonema***; particularly the larval stages, which emerge synchronously from the large intestinal wall to the lumen, cause acute or chronic diarrhea and can be fatal in severe cases. The disease is usually referred to as larval cyathostominosis or cyathostominiasis.
cyathostominosis see **cyathostominiasis**.
cyathostomosis see **cyathostominiasis**.
Cyathostomum [*si"ə-tho-sto'mum*] a genus of strongylid nematodes of the subfamily Cyathostominae.
C. catinatum, C. coronatum, C. labiatum, C. labratum, C. sagittatum, C. tetracanthum in the large intestine of horses and other equids. Heavy infestations (particularly emerging larval stages) can cause severe diarrhea.

cybernetics [si"bər-net'iks] the science of communication and regulatory systems, which in the animal includes autoregulation and feedback mechanisms in maintaining homeostasis.

cycad [si'kad] dioecious, non-flowering woody plants (gymnosperms) which produce seeds in a woody cone consisting of exposed seed leaves (sporophylls), not enclosed in an ovary. The leaves are usually in a rosette at the top of the stem, which may be subterranean. These plants are not palms. Genera include *Bowenia*, *Cycas*, *Dioon*, *Encephalartos*, *Lepidozamia*, *Macrozamia*, *Zamia*.

c. glycoside group of glycosides, including cycasin and macrozamin, found in cycad plants; oxidized *in vivo* to release toxic methylazoxymethanol (MAM) that damages the liver and intestinal mucosa.

Cycas [si'kəs] one of the cycad genera from Australia, Asia, the Pacific and eastern Africa. Includes many species, all of which should be regarded as potentially poisonous; those known to have poisoned animals include *C. armstrongii* (*C. lane-poolei*), *C. angulata*, *C. basaltica*, *C. media*, *C. circinalis*, *C. revoluta*. They contain the cycad glycoside cycasin. The leaves cause incoordination when eaten by cattle; see ***Zamia*** staggers. The seeds may also cause severe gastroenteritis and hepatic necrosis. Called also zamia. *C. revoluta* is also called sago 'palm'; it is not a palm.

cycasin [si'kə-sin] a toxic glycoside found in *Cycas* spp. and other cycads.

cyclacillin [si"klə-sil'in] a semisynthetic penicillin of the ampicillin class. Called also ciclacillin.

Cyclamen europaeum [sik'lə-mən] a member of the plant family Primulaceae which contains cyclamin, a toxic glycoside.

cyclamin [sik'lə-min] a toxic glycoside present in *Cyclamen europaeum*.

cyclarthrosis [sik"lahr-thro'sis] a pivot joint.

cyclase [si'klās] an enzyme that catalyzes the formation of a cyclic phosphodiester.

cycle [si'kəl] a succession or recurring series of events.

cardiac c. a complete cardiac movement, or heartbeat, including systole, diastole, and the intervening pause. The cycle includes eight separate phases: (1) isovolumetric contraction; (2) maximum ejection; (3) reduced ejection; (4) protodiastole (onset of ventricular relaxation); (5) isovolumetric relaxation; (6) rapid flow; (7) diastasis (onset of atrial contraction); (8) atrial systole.

cell c. see **cell** cycle.

Krebs c. see **tricarboxylic acid cycle**.

ovarian c. the sequence of physiological changes in the ovary involved in ovulation. See also **ovulation** and **reproduction**.

reproductive c. the cycle of physiological changes in the reproductive organs, from the time of fertilization of the ovum through gestation and parturition. See also **reproduction**.

cyclectomy [sik-lek'tə-me] excision of a piece of the ciliary body.

cyclic [si'klik] pertaining to or occurring in a cycle or cycles. The term is applied to chemical compounds that contain a ring of atoms in the nucleus and to metabolic pathways.

c. adenosine monophosphate (AMP) see cyclic **adenosine** monophosphate.

c. guanosine monophosphate (cGMP) see cyclic **guanosine** monophosphate.

canine c. hematopoiesis see cyclic neutropenia (below).

c. neutropenia an abnormality of hematopoietic stem cells that results in detectable, cyclic fluctuations in numbers of circulating neutrophils. Affected dogs have an increased susceptibility to infections when numbers of neutrophils cyclically drop to very low numbers. The condition is inherited as an autosomal recessive in collies where it is occurs with a distinctive silver-gray coat color; called also gray collie syndrome.

c. non-breeder cows cows demonstrating estrus regularly but not being submitted for mating; deferral of mating.

c. nucleotide see cyclic **nucleotide**.

cyclical occurring in cycles; statistically a periodic movement of a time series, e.g. recurrent epidemics.

cyclicity cycling of disease incidence, being seasonal (annual on a seasonal basis) or secular (long-term, greater than one year, e.g. outbreaks of ephemeral fever).

cyclins [si'klinz] a set of related proteins that regulate the passage of cells through the cell cycle by forming complexes with cyclin-dependent protein kinases.

c.-dependent protein kinase (Cdk) forms complexes with cyclins to become active in activating stages of the eukaryotic cell cycle.

cyclitic membrane a fibrovascular membrane which stretches across the back of the lens and develops as a result of chronic inflammation in the posterior chamber of the eye.

cyclitis [sik-li'tis] inflammation of the ciliary body.

cyclizine [si'klĭ-zēn] an antihistamine used as an antinauseant to prevent motion sickness in dogs and cats.

cycl(o)- word element. [Gr.] *round, recurring, ciliary body of the eye.*

cyclochlorotine a cyclic peptide toxin produced by the fungus *Penicillium islandicum*. It is a hepatoxin and its metabolites are hepatocarcinogenic.

cyclochoroiditis [si"klo-kor"oid-i'tis] inflammation of the ciliary body and choroid.

Cyclocoelidae a family of large flukes (digenetic trematodes) parasitic in body and nasal cavities, and air sacs of aquatic birds. Includes *Tracheophilus cymbius* (*Tracheophilus sisowi*) of ducks.

cyclocryotherapy [si"klo-kri"o-ther'ə-pe] destruction of the ciliary body or part thereof; done to decrease aqueous humor production in the treatment of glaucoma.

cyclodestruction destruction of the ciliary body processes by cryotherapy or photocoagulation to reduce aqueous humor production in the treatment of glaucoma.

cyclodialysis [si"klo-di-al'ə-sis] creation of a communication between the anterior chamber of the eye and the suprachoroidal space, to allow alternative route of filtration for aqueous humor in glaucoma. Not used in veterinary ophthalmology.

cyclodiathermy [si"klo-di'ə-thur"me] destruction of a portion of the ciliary body by diathermy to reduce aqueous formation in the treatment of glaucoma. Now largely replaced by cryotherapy and photocoagulation.

cyclohexamines, cyclohexylamines a group of dissociative anesthetics that includes phencyclidine and its analog, ketamine.

cycloheximide an antibiotic produced by *Streptomyces griseus* that inhibits protein synthesis. It is too toxic and nonselective for common clinical use, but is used in treatment of cancers and management of graft-versus-host reactions following transplantation. Also used agriculturally for the control of fungal diseases of plants and turf and as a bacterial inhibitor in selective media for culturing fungi.

cyclokeratitis [si"klo-ker"ə-ti'tis] inflammation of the cornea and ciliary body. More commonly termed keratouveitis since the iris is likely also involved.

cycloleucine [si"klo-loo'sēn] cyclic amino acid related to leucine not found in proteins. Important in the study of amino acid transport.

cyclomethycaine a topical anesthetic agent.

cyclonite a plastic explosive; also used as a rodenticide; toxic effects in humans and dogs manifested by convulsions.

cyclo-oxygenase (COX) [si"klo-ok'sə-jən-ās] enzyme which catalyzes the biosynthesis of prostaglandins from arachidonic acid. *COX-1* is important in the production of prostaglandins responsible for protection of gut mucosa. *COX-2* is associated with production of inflammatory prostaglandins. Non-steroidal anti-inflammatory drugs, including aspirin, ibuprofen and indomethacin, inhibit cyclo-oxygenases. Called also prostaglandin synthetase.

cyclopamine a steroidal alkaloid in the plant *Veratrum californicum* responsible for the development of the cyclopian deformity caused by feeding the plant to pregnant ewes on the 14th day of pregnancy.

cyclopean, cyclopian pertaining to a cyclops.

c. deformity there are two identified causes in animals, poisoning of sheep by the plant ***Veratrum*** *californicum*, and one of the two forms of inherited prolonged gestation in cattle.

cyclopentolate [si"klo-pen'to-lāt] an anticholinergic drug used topically as a mydriatic and cycloplegic in the diagnosis (pupil dilation) and treatment of ophthalmic conditions.

cyclopentanoperhydrophenanthrene [si"klo-pen"tə-no-pər-hi"dro-fə-nan'thrēn] the steroid nucleus.

cyclopentolate [si"klo-pen'to-lāt] in the hydrochloride form, an anticholinergic used as eyedrops to produce cycloplegia and mydriasis.

cyclophosphamide [si"klo-fos'fə-mīd] an alkylating agent used primarily for the treatment of lymphomas and leukemias in dogs and cats. Adverse effects include bone marrow suppression, gastrointestinal toxicity and sterile hemorrhagic cystitis.

cyclophotocoagulation [si"klo-fo"to-ko-ag"u-la'shən] laser treatment to destroy the ciliary body processes and reduce aqueous humor

production in the treatment of glaucoma. See also **cyclodestruction**.

Cyclophyllidea [si"klo-fəl-id'e-ə] important order of cestodes in the class Cestoda, parasitic in birds and mammals.

cyclopia [si-klo'pe-ə] a developmental anomaly characterized by a single orbital fossa, with the globe absent or rudimentary, apparently normal, or duplicated, or the nose absent or present as a tubular appendix located above the orbit and absence of the maxillae. Important animal occurrences of cyclopia are in one of the forms of inherited **prolonged gestation**, and in poisoning by ***Veratrum*** *californicum*.

cyclopiazonic acid a mycotoxin produced by *Aspergillus* and *Penicillium* spp. fungi growing on feedstuffs. Causes feed refusal in pigs but often combined with aflatoxin poisoning and more serious effects.

cycloplegia [si"klo-ple'je-ə] paralysis of the ciliary body muscle; used to reduce accommodation and pain due to ciliary body spasm.

cycloplegic [si"klo-ple'jik] 1. pertaining to, characterized by, or causing cycloplegia. 2. a pharmacologic agent that produces cycloplegia.

cycloposine one of the alkaloids in the plant *Veratrum californicum* responsible for the development of cyclopean deformities in sheep.

cyclopropane [si"klo-pro'pān] a powerful central nervous system depressant used as an inhalation **anesthetic**. The drug can be given in small doses and is particularly useful in anesthetizing poor-risk patients. This gas is highly explosive and requires special handling and precautions against sparks or flames, which would result in an explosion. No longer used for safety reasons.

Cyclops [si'klops] a genus of minute crustaceans with aquatic life cycles, some species of which act as hosts of *Diphyllobothrium* and *Dracunculus* spp. Called also water flea.

cyclops [si'klops] a fetus exhibiting cyclopia.

cyclosis [si-klo'sis] movement of the cytoplasm within a cell, without external deformation of the cell wall.

cyclosporin A [si"klo-spor'in] see **cyclosporine**.

cyclosporine [si"klo-spor'ēn] a neutral cyclic peptide, the major metabolic product of the fungus *Tolypocladium inflatum*; a specific suppressor of the T lymphocyte response. Used as an alternative to glucocorticoids in the managment of atopic dermatitis in dogs and in the treatment of a many steroid-responsive and idiopathic inflammatory disorders in dogs and cats, including the autoimmune diseases, feline eosinophilic granuloma complex, and perianal fistula.

cyclothiazide [si"klo-thi'ə-zīd] a diuretic and antihypertensive agent.

Cyclotogaster heterographa a species belonging to the order Ischocera (insects). Called also head louse. Affects fowl and partridge.

cyclotropia [si"klo-tro'pe-ə] **strabismus** in which there is a deviation of the eye around the anteroposterior axis of one eye relative to its fellow eye.

cyclozoonosis [si"klo-zo-on'ə-sis] a zoonotic disease that requires at least two species of vertebrates as definitive and intermediate hosts. Examples are hydatid disease (*Echinococcus granulosus*) and trichinosis (*Trichinella spiralis*).

Cydonia oblonga the quince tree, a member of the Rosaceae family; can cause cyanide poisoning.

cyesis see **pregnancy**.

cyfluthrin a fluorinated pyrethroid, used in ear tags on cattle to control flies and ticks.

cygnet a young swan.

Cygnus the genus of **swans**.

cygon see **dimethoate**.

cyhalothrin a synthetic pyrethroid used to control lice and ked on sheep.

cyhexatin an acaricide used in horticulture and reputed to cause congenital defects in experimental animals.

CyHV1, CyHV2, CyHV3 **cyprinid** herpesviruses 1, 2, and 3.

Cylicocyclus one of the genera of the strongylid nematodes in the subfamily Cyathostominae. Includes *Cylicocyclus elongatus*, *C. insignis*, *C. leptostomus*, *C. nassatus* and *C. ultrajectinus* (found in large intestines of horses and other equids).

Cylicodontophorus one of the genera of strongylid nematodes in the subfamily Cyathostominae. Includes *Cylicodontophorus bicoronatus*, *C. euproctus* and *C. mettami* (found in horse large intestine).

Cylicospirura felineus a spiruroid nematode associated with the formation of nodules in the stomach of domestic and wild felids.

Cylicostephanus one of the genera of strongylid nematodes in the subfamily Cyathostominae, previously included in the genus *Trichonema*. Found in the large intestine of horses and other equids and include *C. calicatus*, *C. goldi*, *C. hybridus*, *C. longibursatus* and *C. minutus*.

cylicostomes see ***Cyathostominae***.

cylindroid [sil'in-droid] 1. shaped like a cylinder. 2. a urinary **cast** of various origins, which tapers to a slender tail that is often twisted or curled upon itself.

cylindroma [sil"in-dro'mə] adenocystic carcinoma.

Cylindropharynx a genus of strongylid nematodes in the subfamily Cyathostominae. Found in the large intestine of equids.

cylindrospermopsin hepatoxic alkaloid in *Cylindrospermopsis raciborskii* and some other cyanobacteria.

Cylindrospermopsis raciborskii a toxic cyanobacterium containing the alkaloid hepatotoxin cylindrospermopsin.

cylindruria [sil"in-droo're-ə] the presence of cylindroids in the urine. See urinary **casts**.

Cymbiforma see ***Ogmocotyle***.

Cymopterus a genus of toxic plants in the family Apiaceae; contain furanocoumarins which cause primary photosensitization. Includes *C. longipes*, *C. watsonii*. Called also spring parsley.

Cymric a relatively new breed of cat; considered by some to be a longhaired variety of the **Manx** cat.

Cynanchum genus of plants in the family Asclepiadaceae; contains pregnane glycosides (cynafosides) which cause incoordination, tremor, seizures, paralysis. Includes *C. africanum*, *C. ellipticum*, *C. obtusifolium*. Called also monkey rope, klimp, bobbejantou.

cynanfosides pregnane glycoside neurotoxins in ***Cynanchum*** spp.

cynapine toxic piperidine alkaloid in *Aethusa cynapium*.

Cyniclomyces guttulatus a fungus associated with enteritis in young animals. Previously classified as *Saccharomycopsis guttulatus*.

Cynodon [si'nə-don] genus of grasses in the Poaceae family; they may contain cyanogenetic glycosides, and acute cyanide poisoning (geilsiekte) and goiter have been attributed to them. All of the grasses are very widespread and enjoy good reputations as pasture grass. Includes *C. aethiopicus* (Nkuru grass), *C. dactylon* (couch grass, Bermuda grass), *C. incompletus* (blue couch), *C. nlemfuensis* (*C. plectostachyus*, Naivasha stargrass).

C. dactylon* + *Balansia epichloe couch grass infested by the fungus causes incoordination.

Cynoglossum officinale a member of the plant family Boraginaceae; contains the hepatoxic pyrrolizidine alkaloids heliosupine and echinatine; called also houndstongue.

cynology study of dogs.

Cynosurus cristatus a genus in the family of grasses Poaceae. Called dog's grass.

C. cristatus host for *Claviceps purpurea* - rye ergot - and a potential source of ergot poisoning. Called also crested dog's tail.

C. echinatus associated with incidents of so-called 'acute bovine liver disease' in southern Australia. This syndrome is suspected to be a mycotoxicosis, but evidence is lacking. Called also rough dog's tail.

cyotrophy [si-ot'rə-fe] nutrition of the embryo or fetus.

cypermethrin a synthetic pyrethroid used as an insecticide and acaricide.

cypress common name for plants, generally in the family Cupressaceae, but occasionally others. See ***Cupressus***.

Leyland c. ***Cupressocyparis leylandii***.

Monterey c. *Cupressus macrocarpa*.

summer c. ***Kochia scoparia***.

cyprinid a member of the fish family Cyprinidae, including carp, tench, minnow, goldfish, barbel, chub, bream and many others.

c. herpesviruses includes cyprinid herpesvirus 1 (CyHV1; carp pox virus), cyprinid herpesvirus 2 (CyHV2; hematopoietic necrosis virus) and cyprinid herpesvirus 3 (CyHV3; koi herpesvirus).

Cyprinus carpio farmed finfish in family Cyprinidae. Called also common carp.

cyproterone [si-pro'tər-ōn] a synthetic steroid that inhibits the secretion of androgens.

cyproheptadine a histamine and serotonin antagonist used as an antipruritic and antihistaminic. It has also been used in the treatment of pituitary-dependent hyperadrenocorticism.

VetBooks.ir

VetBooks.ir

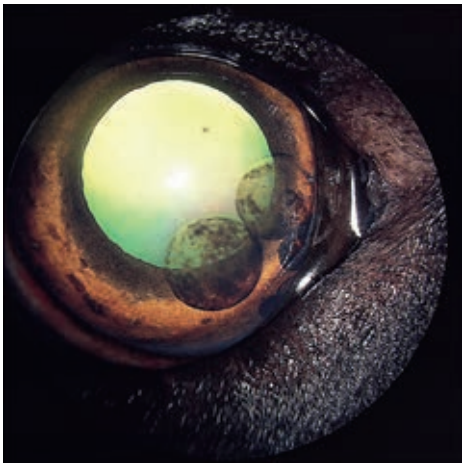
C

Cyrnea a genus of spiruroid worms in the family Habronematidae.
C. colini, C. piliata found in the proventriculus and gizzard of birds.

cyromazine a triazine insect growth regulator, used as a feed additive for chickens to control fecal-feeding flies, and in Australia to control fly strike of sheep.

Cys cysteine.

cyst [*sist*] 1. a closed epithelium-lined sac or capsule containing a liquid or semi-solid substance. Most cysts are harmless but they occasionally may change into malignant growths, become infected, or obstruct a gland. There are four main types of cysts: retention cysts, exudation cysts, embryonic cysts and parasitic cysts. See also specific locations and organs. 2. a stage in the life cycle of certain parasites, during which they are enveloped in a protective wall. See also **cystic**.
aneurysmal c. see **bone** cyst.
anterior uveal c. an acquired or congenital structure which may arise from the iris or ciliary body epithelium. Visible as a mass attached to the iris or free-floating in the anterior or posterior chamber. Those arising from the ciliary body may not be visible. Seen commonly in dogs and horses. See also **iris**[1] cyst.
blood c's small round hemangiomas containing blood found in the carcasses of poultry at meat inspection.
branchial c., branchiogenic c., branchiogenous c. one formed from an incompletely closed branchial cleft. See also **branchial** cyst.
cervical c's retention cysts of glands in the uterine cervix in the cow, are palpable as fluctuating masses on rectal examination. Called also nabothian cyst or follicle.
chocolate c. one filled with hemosiderin following local hemorrhage.
cutaneous c. see **epidermal** cyst, **dermoid** cyst, **follicular** cyst, **sebaceous** cyst.
daughter c. one that develops within a parent cyst, e.g. hydatid cyst.
dentigerous c. see **dental** cyst.
echinococcus c. hydatid cyst.
embryonic c. one developing from bits of embryonic tissue that have been overgrown by other tissues, or from developing organs that normally disappear before birth. An example is a **branchial** cyst.
epidermal inclusion c. see follicular cyst (below).
exudation c. a cyst formed by the slow seepage of an exudate into a closed cavity.
fatty c. formed when fat accumulates in large amounts and the cells break down forming a central mass of lipid surrounded by a multinuclear rim.
follicular c. 1. of skin; spherical nodule in the superficial dermis lined by squamous epithelium and filled with dense dry laminated keratin squames. May be developmental or acquired. Called also keratin cyst, horn cyst. 2. of gland or ovary; chamber formed by occlusion of the duct of a follicle or small gland, especially one formed by enlargement of a graafian follicle as a result of accumulated transudate.



C-94: Multiple anterior uveal cysts in a dog. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

Gartner's duct c. see cystic **Gartner's ducts**.
horn c. see follicular cyst (above).
hybrid c. one combining elements of epidermoid and trichilemmal cysts.
hydatid c. the larval stage (metacestode) of the tapeworms *Echinococcus granulosus* and *E. multilocularis*. See also **hydatid** disease.
inclusion c. see follicular cyst (above).
interdigital c's see **pododermatitis**; interdigital **pyoderma**.
lateral cervical c. see **branchial** cyst.
luteal c's develop from ovarian follicles which fail to rupture but have a lining of luteal cells. Anestrus is the presenting clinical sign.
marine fish c's worldwide occurrence in fish of round nodules in fibrous capsules; the cause is unknown.
meibomian c. misnamed as this is not a cyst; see **chalazion**.
mesenteric c. congenital, thin-walled cyst between the leaves of the mesentery; may enlarge and cause colic or even intestinal obstruction.
c. of Morgagni see **Morgagni's hydatid**.
nabothian c. see cervical cyst (above).
orbital c. see **mucocele**.
ovarian c. see cystic **ovarian** disease.
parasitic c. one forming around larval parasites (tapeworms, amebae, trichinae) that enter the body.
primordial c. a developmental odontogenic cyst, lacking enamel or dentin formation.
pseudohorn c. invagination of hyperplastic epidermis; not a true cyst.
retention c. a tumor-like accumulation of a secretion formed when the outlet of a secreting gland is obstructed. These cysts may develop in any of the secretory glands—the mammae, pancreas, kidney, salivary or sebaceous glands, and mucous membranes. See also renal **retention** cysts.
sarcosporidian c's cylindrical cysts (schizonts) containing bradyzoites, found in the muscles of those infected with *Sarcocystis* spp.
salivary c. see salivary **mucocele**.
sebaceous c. one arising in the pilosebaceous apparatus, lined by stratified squamous epithelium and containing largely macerated keratin and often sufficient sebum to render the contents greasy and often rancid.
subconjunctival c., conjunctival c. misplaced secretory tissue which causes a slowly enlarging, fluctuant subconjunctival mass.
vitelline c. a congenital cyst lined with ciliated epithelium occurring along the gastrointestinal canal; the remains of the omphalomesenteric duct.

cystacanth an intermediate stage of any acanthocephalan, e.g. *Macracanthorhyncus* spp., found in arthropods.

cystadenocarcinoma [*sis-tad"ə-no-kahr"sĭ-no'mə*] adenocarcinoma with extensive cyst formation.

cystadenoma [*sis"tad-ə-no'mə*] cystoma blended with adenoma.
mucinous c. a multilocular, usually benign, tumor produced by ovarian epithelial cells and having mucin-filled cavities.
papillary c. any tumor producing patterns that are both papillary and cystic; called also papilloadenocystoma.
serous c. a cystic tumor of the ovary containing thin, clear yellow serum and some solid tissue.

cystalgia [*sis-tal'jə*] pain in the bladder.

cystathionase [*sis"tə-thi'o-nās*] cystathionine γ-lyase, an enzyme which breaks down cystathionine into cysteine and α-ketobutyrate.

cystathionine [*sis"tə-thi'o-nēn*] key intermediate in the transsulfuration pathway from methionine to cysteine.
c. β-synthase enzyme catalyzing the synthesis of cystathionine from homocysteine in the pathway for cysteine synthesis.

cystatin C [*sis-tat'in*] a protease inhibitor filtered by the glomerulus and almost totally reabsorbed in the proximal renal tubules. With decreased glomerular filtration, serum levels rise. useful as a marker of renal function.

cystectasia [*sis"tek-ta'zhə*] dilatation of the bladder.

cystectomy [*sis-tek'tə-me*] 1. excision of a cyst. 2. excision or resection of the urinary bladder.

cysteine [*sis'te-ēn*] a sulfur-containing non-essential amino acid produced by enzymatic or acid hydrolysis of proteins or biosynthesis from serine and homocysteine, readily oxidized to cystine; sometimes found in urine.

cystencephalus [*sis"tən-sef'ə-ləs*] a fetus with a membranous sac in place of a brain.

cystic [*sis'tik*] 1. pertaining to or containing cysts; see **cyst**. 2. pertaining to the urinary bladder or to the gallbladder.

c. calculus calculus in the urinary bladder.

c. corpus luteum the normal corpus luteum is solid. Some have a central cavity filled with fluid but this does not affect their function. See also **luteal** cyst.

c. duct the excretory duct of the gallbladder. See also **bile duct**.

c. endometritis see **pyometra**.

c. eye the failure of the optic vesicle to come into close apposition to the cranial ectoderm during embryological development results in persistence of the vesicle and the formation of a cystic eye.

c. follicle see cystic **follicle**; cystic ovarian degeneration (below).

c. hyperplasia see cystic **endometrial** hyperplasia.

c. hyperplasia–pyometra complex the term applied to a series of endometrial changes leading to **pyometra** in dogs; first cystic endometrial hyperplasia, then plasma cell infiltration of the endometrium during diestrus, followed by acute inflammatory reaction which then becomes chronic.

c. ovarian degeneration, disease (COD) includes cystic follicle and luteal cyst (cystic corpus luteum are normal; see above). A major cause of reproductive failure and economic loss in dairy cattle. Results in an increase in days open in the post partum period and an increase in culling rates for reproductive failure. It occurs when a mature follicle fails to ovulate as a result of exogenous or endogenous disruption of the hypothalamo-hypophysial-ovarian axis; the resultant anovulatory follicular structure can regress or persist as a follicular cyst or a luteal cyst depending on its structural characteristics. Diagnosis and differentiation of follicular cysts and luteal cysts has traditionally been by transrectal palpation but ultrasound examination is more accurate. COD has an hereditary component.

c. pancreatic duct a sometime congenital defect; occasionally associated with polycystic kidneys and cystic bile ducts.

c. placental mole results from the death of the fetus with the persistence of the fetal membranes.

c. prostatic hyperplasia caused by blockage of glandular ducts. Enlargement of the gland may cause constipation, possibly dysuria. The enlarged gland should be palpable per rectum. Common in intact male dogs.

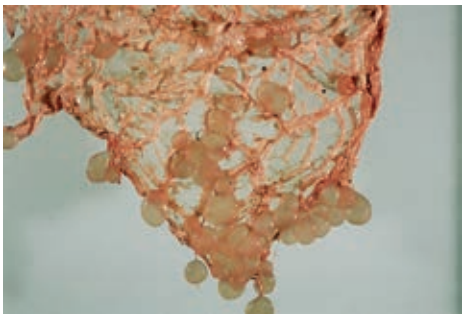
c. rete tubules occur in the ovaries of cows, bitches, queens; may be sufficiently large to be mistaken for cystic follicles.

c. retinal degeneration see **microcystoid retinal degeneration**.

cysticercoid [*sis"tĭ-sur'koid*] a stage in the life cycle of cyclophyllidean cestodes. One of the forms of metacestodes in which there is a single, retracted scolex withdrawn into a small vesicle which has a very small cavity. Found in invertebrates such as oribatid mites, fleas, lice, beetles and copepods.

cysticercosis [*sis"tĭ-sər-ko'sis*] infection with cystercerci in the intermediate hosts of a number of species-specific cestodes. The disease is largely symptomless except for cysticercosis caused by *Cysticercus cellulosae*, but has some hygiene importance. Called also sheep measles, beef measles. See also ***Cysticercus***. Porcine cysticercosis is a disease notifiable to the OIE (see Table 22).

Cysticercus [*sis"tĭ-sur'kəs*] larval (metacestode) stage, consisting of an invaginated scolex surrounded by a fluid-filled cyst cavity, of cyclophyllidean cestodes in the family Taeniidae. Now considered to be an invalid generic name. The common ones are listed below.



C-95: Cysticercosis with cysts in the omentum. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

C. bovis larval stage of ***Taenia*** *saginata*, a tapeworm of humans. The cysticerci are found mainly in the muscles of cattle. Humans are infected by eating uncooked beef. Called also beef measles.

C. cellulosae larval stage of ***Taenia*** *solium*, a tapeworm of humans. The cysticerci are found in the skeletal and cardiac muscles of the pig and in the muscles and central nervous system of humans. Humans are infested by eating uncooked pork. Called also pork measles.

C. fasciolaris the larval stage of ***Taenia*** *taeniaeformis*, a tapeworm of cats and wild Felidae and related species. The cysticerci are in the liver of rodents.

C. ovis the larval stage of ***Taenia*** *ovis*, a tapeworm of dogs and wild canids. The cysticerci are found in the skeletal and cardiac muscles of sheep and goats. Dogs are infected by ingesting raw infected meat.

C. pisiformis the larval stage of ***Taenia*** *pisiformis*, a tapeworm of dogs and wild canids. The cysticerci are in the peritoneal cavity of rabbits and hares.

C. tarandi the larval stage of ***Taenia*** *krabbei*, a cestode parasite of dogs and wild carnivores. The cysticerci are found in the muscles of wild ruminants.

C. tenuicollis the larval stage of the tapeworm ***Taenia*** *hydatigena*, a tapeworm of dogs and wild canids. The cysticerci are found in the liver and on the peritoneum in sheep but also in other ruminants and pigs. Infection in the dog occurs when infected offal is fed raw. Called also long-necked bladderworm.

cysticercus [*sis"tĭ-sur'kəs*] pl. *cysticerci* [Gr.] a larval form of tapeworm. See also **cysticercosis**.

cystiform [*sis'tĭ-form*] resembling a cyst.

cystigerous [*sis-tij'ər-əs*] containing cysts.

cystine [*sis'tēn, sis'tin*] a naturally occurring amino acid, an important sulfur-containing component of the protein molecule. It is sometimes found in the urine and in the kidneys in the form of minute hexagonal crystals, frequently forming cystine calculus in the bladder.

c. calculi see cystine **uroliths**.

cystinemia [*sis'tĭ-ne'me-ə*] the presence of cystine in the blood.

cystinuria [*sis"tĭ-nu're-ə*] a hereditary condition characterized by persistent excessive urinary excretion of cystine, lysine, ornithine and arginine, due to impairment of renal tubular reabsorption of these amino acids. The predominant clinical manifestation is the formation of urinary cystine calculi. Occurs in several breeds of dogs, particularly the Newfoundland with clinical signs of urinary tract disease from a very young age. See also **urolithiasis**.

cystistaxis [*sis"tĭ-stak'sis*] oozing of blood from the mucous membrane into the bladder.

cystitis [*sis-ti'tis*] inflammation of the urinary bladder. The condition may result from an ascending infection coming from the exterior of the body by way of the urethra, or it may be caused by an infection descending from the kidney. Often cystitis is not an isolated infection but is rather a result of some other physical condition. For example, urinary retention, calculi in the bladder, tumors, or neurological diseases impairing the normal function of the bladder may lead to cystitis. Clinical signs include freqency, pain on urination, blood-stained urine, a thickened bladder wall. Significant clinical pathology findings include hematuria, a high cell count indicative of inflammation, and bacteria recovered on culture.

c. cystica cystitis marked by the presence of submucosal cysts.

emphysematous c. an occasional complication of diabetes mellitus in dogs and cats, caused by gas-forming bacteria.

epizootic equine c. an Australian disease of horses similar to *Sorghum* spp. poisoning.

gangrenous c. results from severe inflammation and ischemia; the bladder wall is green to black.

c. glandularis mucin-secreting glands present in the mucosa in a case of cystitis.

hemorrhagic c. hemorrhage is the main clinical feature.

interstitial c. an idiopathic cystitis seen in **feline** lower urinary tract disease; characterized by irritative voiding and the presence of submucosal petechial hemorrhages seen on cystoscopy.

polypoid c. a hyperplastic inflammation of bladder mucosa in which there is development of a non-neoplastic polypoid mass or masses.

VetBooks.ir

C-96: Ultrasonographic image of polypoid cystitis in a dog showing multiple polypoid projections (arrows). From Ettinger SJ, Feldman EC, Textbook of Veterinary Internal Medicine, 6th Edition. Saunders, 2005.

VetBooks.ir

cystitis–ataxia syndrome [*sis-ti'tis ə-tak'se-ə*] principally a disease of horses grazing *Sorghum* spp.; characterized by incoordination, frequent urination, urine scalding of hind quarters; suspected cause is a chronic low-level intake of cyanogenetic glycosides. A similar syndrome seen in cattle and sheep grazing *Sorghum* spp.

cystitis–pyelonephritis [*sis-ti'tis pi"lo-nə-fri'tis*] combined cystitis and pyelonephritis; pyelonephritis often succeeding an initial cystitis.

c.-p. of sows a disease of sows caused by *Actinobaculum suis* (*A. suis, Eubacterium suis, Corynebacterium suis*), carried in the prepuce of the boar (which remains clinically unaffected) and environment and is transmitted venereally. There is acute renal failure and unexpected death in acute cases, and dysuria, blood-stained, turbid urine accompanied by vaginal discharge in those that live a longer period; there is a high case fatality. There is cystitis on endoscopic examination. A major cause of sow mortality in most countries.

cystitomy [*sis-tit'ə-me*] surgical division of the capsule of the crystalline lens.

cyst(o)- word element. [Gr.] *cyst, bladder.*

cystoadenocarcinoma [*sis"to-ad"ə-no-kahr"sĭ-no'mə*] adenocarcinoma associated with cysts.

cystocarcinoma [*sis"to-kahr"sĭ-no'mə*] carcinoma associated with cysts.

Cystocaulus [*sis"to-kaw'lus*] a nematode genus of the family Protostrongylidae. Includes *Cystocaulus nigrescens* (*C. ocreatus*). Found in the lungs of sheep and goats.

cystocele [*sis'to-sēl*] herniation of the urinary bladder into the vagina.

cystocentesis [*sis"to-sen-te'sis*] puncture of the bladder for the purpose of obtaining an uncontaminated urine sample. Usually performed in dogs and cats through the abdominal wall in the suprapubic position. Called also vesicopuncture.

cystodynia [*sis"to-din'e-ə*] pain in the bladder; cystalgia.

cystoelytroplasty surgical repair of a vesicovaginal fistula.

cystoepithelioma [*sis"to-ep"ĭ-the"le-o'mə*] a tumor with cystic and epitheliomatous elements.

cystofibroma [*sis"to-fi-bro'mə*] a fibroma containing cysts.

cystogastrostomy [*sis"to-gas-tros'tə-me*] surgical anastomosis of a pancreatic cyst to the stomach for drainage.

cystogram [*sis'to-gram*] the film obtained by cystography.

micturating c. see voiding cystogram (below).

retrograde c. a radiograph made while the bladder is being filled with contrast agent from the urethra.

C-97: Collection of a urine sample through ultrasound-guided cystocentesis. From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

voiding c. a radiograph of the urinary tract made while the animal is urinating. Called also micturating cystogram.

cystography [*sis-tog'rə-fe*] radiography of the urinary bladder using a contrast medium, so that the outline of the organ can be seen clearly. This type of examination frequently is part of a complete X-ray study of the kidneys, urethra and ureters as well as the bladder. See also **pyelography**. It is useful in diagnosing tumors or other defects in the bladder wall, vesicoureteral reflux, or calculi or other pathological conditions of the bladder.

cystoid [*sis'toid*] 1. resembling a cyst. 2. a cystlike, circumscribed collection of softened material, having no enclosing capsule.

Cystoisospora [*sis"to-i-sos'pə-rə*] a genus of coccidian, previously classified as *Isospora* spp. with indirect life cycles.

C. burrowsi, C. canis, C. heydorni, C. ohioensis, C. wallacei coccidia of dogs; may cause enteritis.

C. felis, C. rivolta coccidia of cats; may cause hemorrhagic enteritis.

cystojejunostomy [*sis"to-jə-joo-nos'tə-me*] surgical anastomosis of a pancreatic cyst to the jejunum.

cystolith [*sis'to-lith*] a vesical calculus.

cystolithectomy [*sis"to-lĭ-thek'tə-me*] surgical removal of a vesical calculus.

cystolithiasis [*sis"to-lĭ-thi'ə-sis*] formation of vesical calculi.

cystolithic [*sis"to-lith'ik*] pertaining to a vesical calculus.

cystolithotomy [*sis"to-lĭ-thot'ə-me*] see **cystolithectomy**.

cystoma [*sis-to'mə*] a tumor containing cysts of neoplastic origin; a cystic tumor.

cystometrogram [*sis"to-met'ro-gram*] the record obtained by cystometrography.

cystometrography [*sis"to-mə-trog'rə-fe*] the graphic recording of intravesical volumes and pressures. See **cystometry**.

cystometry [*sis-tom'ə-tre*] the study of urinary bladder function by measuring filling volume, compliance, threshold volume and pressures obtained through a catheter placed in the bladder. Complementary studies of the urethral pressures are usually also done. See also **urethral** pressure profile.

cystomorphous [*sis"to-mor'fəs*] resembling a cyst or bladder.

cystopexy [*sis'to-pek"se*] fixation of the bladder to the abdominal wall.

cystoplasty [*sis'to-plas"te*] plastic repair of the bladder.

cystoplegia [*sis"to-ple'jə*] paralysis of the bladder.

cystoproctostomy [*sis"to-prok-tos'tə-me*] surgical creation of a communication between the urinary bladder and the rectum.

cystoptosis [*sis"top-to'sis, sis"to-to'sis*] prolapse of part of the inner coat of the bladder into the urethra.

cystopyelitis [*sis"to-pi"ə-li'tis*] inflammation of the bladder and renal pelvis.

cystopyelonephritis [*sis"to-pi"ə-lo-nə-fri'tis*] combined cystitis and pyelonephritis.

cystorrhaphy [*sis-tor'ə-fe*] suture of the bladder.

cystorrhea [*sis"to-re'ə*] mucous discharge from the bladder.

cystorrhexia urinary bladder rupture.

cystoscope [*sis'to-skōp"*] an endoscope especially designed for passing through the urethra into the bladder to permit visual inspection of the interior of that organ. It has an outer sheath with a lighting system, a telescope with forward or oblique viewing, and an obturator which can be removed to allow passage of various devices.

cystoscopy [*sis-tos'kə-pe*] examination of the bladder by means of a cystoscope, which is introduced into the urinary meatus and passed through the urethra and into the bladder. A catheter or biopsy forcep can be passed through the cystoscope into the bladder or, if necessary, beyond, into the ureters and kidneys. In this way samples of urine or tissue biopsies can be obtained for diagnostic purposes. Also, radiopaque fluids can be injected into the bladder or ureters for X-rays of the urinary tract. See also **pyelography**.

cystostomy [*sis-tos'tə-me*] surgical formation of an opening into the bladder.

cystotomy [*sis-tot'ə-me*] incision of the bladder. See also **vesicotomy**.

cystoureteritis [*sis"to-u-re"tər-i'tis*] inflammation involving the urinary bladder and ureters.

cystoureterogram [*sis"to-u-re'tər-o-gram*] a radiograph of the bladder and ureter.

cystourethrography [sis"to-u"rə-thog'rə-fe] radiography of the urinary bladder and urethra using contrast media.
voiding c. X-ray studies taken while the animal is voiding urine.
cystourethroplasty [sis"to-u-re'thro-plas"te] surgical revision of the urinary bladder and urethra, usually applied to creation of a urethral sling in the treatment of urinary incontinence in dogs.
cystourethroscope [sis"to-u-re'thro-skōp"] an instrument for examining the urethra and bladder.
cystourethroscopy [sis"to-u"re-thros'kə-pe] examination of the urethra and bladder by means of a cystourethroscope.
Cyt cytosine.
cytapheresis [sīt"ə-fə-re'sis] a procedure in which cells of one or more kinds (leukocytes, platelets, etc.) are separated from whole blood and retained, the plasma and other formed elements being retransfused into the donor; it includes leukapheresis and thrombocytapheresis.
cytarabine [si-tar'ə-bēn] an antimetabolite that inhibits DNA synthesis, and hence has antineoplastic and antiviral properties. Used to treat leukemias and lymphoid malignancies in dogs and cats. Adverse effects include bone marrow suppression and gastrointestinal toxicity. Called also cytosine arabinoside, arabinosyl cytosine, ara-C.
Cytauxzoon [si"tawk-zo'on] a genus of protozoan parasites of the family Theileriidae.
C. felis causes **cytauxzoonosis**, a fatal disease in domestic cats.
C. sylvicaprae, C. strepsicerosi, C. taurotragi these protozoa multiply by fission in erythrocytes. They have been observed in wild animals and in cats.
cytauxzoonosis [si"tawk-zo"o-no'sis] a disease of cats in the southeastern and south central US caused by *Cytauxzoon felis* transmitted by *Dermacentor variabilis* and characterized by fever, hemolytic anemia, leukopenia, thrombocytopenia and jaundice.
-cyte word element. [Gr.] *a cell*.
cythioate an organophosphorus anthelmintic administered orally to dogs and cats for the control of fleas.
cytidine [si'tĭ-dēn] a nucleoside, cytosine riboside; a constituent of RNA and cytidine nucleotides.
c. 5′-triphosphate (CTP) pyrimidine-nucleotide base involved in the structure of the nucleic acids DNA and RNA, in the activation of sugars, and in phospholipid synthesis.
cytisine [sit'ĭ-sin] the toxic quinolizidine alkaloid in laburnum (*Laburnum anagyroides*), *Retama retam* and broom (*Cytisus scoparius*) trees.
Cytisus [sit'ĭ-səs] genus of the Fabaceae legume family; contain the toxic alkaloid cytisine which causes excitement, incoordination, convulsions and death due to asphyxia. Includes *C. scoparius*, *C. multiflorus*, *C. proliferus*. Called also brooms.
cyt(o)- word element. [Gr.] *a cell*.
cytoanalyzer [si"to-an'ə-li"zər] an electronic optical apparatus for the detection of malignant cells in smears.
cytocentrifuge [si"to-sen'trĭ-fūj] designed for hypocellular fluids; it spins at lower speeds and has more gradual acceleration and deceleration than normal centrifuges. Some are able to deposit cells directly onto a slide for examination.
cytochalasin [si"to-kal'ə-sin] any of a group of fungal metabolites that affect the motility of polymorphonuclear leukocytes.
cytochemistry [si"to-kem'is-tre] the identification and localization of the different chemical compounds and their activities within the cell.
cytochrome [si'to-krōm] any of a class of hemoproteins, widely distributed in animal and plant tissue, whose main function is electron transport; distinguished according to their prosthetic group as *a*, *b*, *c* and *d*.
c. b_5 reductase a flavoprotein that catalyzes the reduction of cytochrome b_5, which is involved in the desaturation of fatty acids in the liver and in cytochrome P450-containing systems.
c. oxidase an *a* type cytochrome which contains copper and receives electrons from another cytochrome, of the *c* type, and transfers them to oxygen atoms allowing the oxygen to combine with hydrogen atoms to form water. A nutritional deficiency of copper leads to a general reduction in metabolic rate because of the absence of cytochrome oxidase *a*.
c. P450 superfamily of hemoproteins having functions in steroid metabolism and detoxification of drugs and other xenobiotics.
c. system the sum of cytochromes which play a part in the body's metabolic processes. Includes the cytochrome oxidases and cytochrome reductases.
cytocidal [si"to-si'dəl] causing cell destruction.
cytocide [si'to-sīd] an agent that destroys cells.
cytoclasis [si-tok'lə-sis] the destruction of cells.
cytodiagnosis [si"to-di"ag-no'sis] diagnosis based on examination of cells.
cytodifferentiation [si"to-dif"ə-ren"she-a'shən] the development of specialized structures and functions in embryonic cells.
cytodistal [si"to-dis'təl] denoting that part of an axon remote from the cell body.
Cytodites a genus of mites; parasites in the air sacs of birds, the air sac mite; usually do not have any pathogenic effect. Includes *Cytodites nudus*.
Cytoecetes previously a genus of rickettsiae.
C. bovis, C. phagocytophila, C. ondiri see ***Anaplasma*** *phagocytophilum*, ***Ehrlichia*** *ondiri*.
cytofilaments [si"to-fil'ə-mənt] elements of the cytoplasmic skeleton; other elements are microtubules, filaments and cytoplasmic inclusions.
cytogenesis [si"to-jen'ə-sis] the origin and development of the cell.
cytogenetic [si"to-jə-net'ik] pertaining to or originating from the origin and development of the cell.
c. defects abnormalities in the number or composition of the chromosomes in an individual animal; abnormalities of the karyotype. These can be detected in the fetus by the study of amniotic fluid obtained by abdominocentesis but has limitations in animals that bear litters. Prenatal sex determination is also possible by this means.
c. infertility infertility related to chromosomal abnormality; karyotype abnormalities.
cytogenetics [si"to-jə-net'iks] that branch of genetics devoted to the cellular constituents concerned in heredity, i.e. the chromosomes; the combined sciences of genetics and cytology.
clinical c. the branch of cytogenetics concerned with relations between chromosomal abnormalities and pathological conditions.
cytogenic [si-to-jen'ik] 1. pertaining to cytogenesis. 2. forming or producing cells.
cytoglycopenia [si"to-gli"ko-pe'ne-ə] deficient glucose content of the body or blood cells.
cytohistogenesis [si"to-his"to-jen'ə-sis] development of the structure of cells.
cytohistology [si"to-his-tol'ə-je] the combination of cytological and histological methods.
cytoid [si'toid] resembles a cell.
cytokine [si'to-kīn] one of a large number of protein substances produced by cells of the immune system that function to signal other cells within the local area of the secreting cell. Include interleukins, lymphokines and chemokines. Bind specific cell-surface receptors on the responding cell. Cell lysis produced by antibody with the participation of complement. See also **monokine** and **lymphokine**.
cytokinesis [si"to-kĭ-ne'sis] the division of the cytoplasm between daughter cells in **mitosis** or **meiosis**.
Cytoleichus see ***Cytodites***.
cytolemma [si"to-lem'ə] of the oocyte, the limiting membrane of the yolk of a bird's egg; the plasma membrane.
cytolisin toxic agent in snake venom; causes cell destruction, including platelets, leading to intravascular coagulation.
cytologic, cytological [si"to-loj'ik] pertaining to cytology.
c. examination examination of material for purposes of cytology. Carried out on cerebrospinal fluid, joint fluid, aspirates of body cavities and cystic lesions. Includes total and differential counts.
cytologist [si-tol'ə-jist] a specialist in cytology.
cytology [si-tol'ə-je] the study of cells, their origin, structure, function and pathology.
aspiration biopsy c. (ABC) the microscopic study of cells obtained from superficial or internal lesions by suction through a fine needle.
brush c. examination of cells obtained from a mucosal surface using a cytological brush.
exfoliative c. microscopic examination of cells desquamated from a body surface or lesion as a means of detecting malignancy and microbiological changes, to measure hormonal concentrations, etc. Such cells may be obtained by such procedures as aspiration, washing, smear and scraping, and the technique may be applied to vaginal secretions, urine, abdominal fluid, prostatic secretion, etc.

VetBooks.ir

cytolysin [*si-tol'ə-sin*] a substance or antibody which causes cytolysis.

cytolysis [*si-tol'ə-sis*] the dissolution of cells.

immune c. cell lysis produced by antibody with the participation of complement.

cytolysosomes [*si"to-li'so-sōmz*] cytolysosomes are formed when products of cytoplasmic degeneration are engulfed by primary lysosomes; they are finally digested and the residual body which remains is extruded from the cell.

cytolytic [*si"to-lit'ik*] pertaining to or emanating from cytolysis.

c. reactivity type II hypersensitivity.

cytomegalic [*si"to-mə-gal'ik*] a state of cytomegaly.

c. inclusion body disease a disease of young pigs. See **inclusion body** rhinitis.

cytomegalovirus [*si"to-meg'ə-lo-vi"rəs*] member of the *Betaherpesvirinae* subfamily, they infect humans, monkeys, pigs and rodents in which they appear to establish life-long infections. The viruses are highly host specific, slow growing, remain highly cell-associated and produce large intranuclear inclusion bodies in enlarged cells. Diseases produced by cytomegaloviruses are subtle.

mouse c. causes subclinical infection of submaxillary salivary glands and other tissues in wild mice.

porcine c. causes **inclusion** body rhinitis and a generalized infection in young pigs.

cytomegaly [*si"to-meg'ə-le*] unique and marked enlargement of cells; a characteristic of cytomegaloviruses; occurs also in cells infected with one strain of an ovine adenovirus.

cytometaplasia [*si"to-met"ə-pla'zhə*] change in function or form of cells.

cytometer [*si-tom'ə-tər*] a device for counting cells.

cytometry [*si-tom'ə-tre*] the counting of cells.

flow c. see **flow cytometry**.

cytomorphology the morphology of body cells.

cytomorphosis [*si"to-mor-fo'sis*] the changes through which cells pass in development.

cyton [*si'ton*] cell body of a neuron; called also soma.

cytopathic [*si"to-path'ik*] pertaining to or characterized by pathological changes in cells.

cytopathogenesis [*si"to-path"o-jen'ə-sis*] production of pathological changes in cells.

cytopathogenic [*si"to-path"o-jen'ik*] pertaining to or emanating from cytopathogenesis.

c. effect having a destructive effect on cells. See also **cytolytic**.

cytopathological, cytopathologic [*si"to-path"o-loj'ĭ-kəl, si"to-path"o-loj'ik*] relating to cytopathology; denoting the changes in cells in disease.

cytopathologist [*si"to-pə-thol'ə-jist*] an expert in the study of cells in disease; a cellular pathologist.

cytopathology [*si"to-pə-thol'ə-je*] the study of cells in disease; cellular pathology.

cytopenia [*si"to-pe'ne-ə*] deficiency in the cells of the blood.

Cytophaga [*si-tof'ə-gə*] a genus of gram-negative, gliding, rod-shaped bacteria.

C. columnaria see ***Flavobacterium columnare***.

C. johnsonae see ***Flavobacterium johnsoniae*** and false **columnaris disease**.

C. psychrophila causes peduncle or cold water disease of Brook trout. Predisposed to by subnormal water temperature. See ***Flavobacterium psychrophilum***.

cytophagy [*si-tof'ə-je*] the ingestion of cells by phagocytes.

cytophilic [*si-to-fil'ik*] having an affinity for cells.

c. antibody see cytotropic **antibody**.

cytophylaxis [*si"to-fə-lak'sis*] 1. the protection of cells against cytolysis. 2. increase in cellular activity.

cytopipette [*si"to-pi-pet'*] a pipette for taking cytological smears.

cytoplasm [*si'to-plaz"əm*] the protoplasm of a cell surrounding the nucleus (nucleoplasm).

cytoplasmic [*si"to-plaz'mik*] pertaining to or included in cytoplasm.

c. inclusions include secretory inclusions (enzymes, acids, proteins, mucosubstances), nutritive inclusions (glycogen, lipids), pigment granules (melanin, lipofuscin, hemosiderin). See also **inclusion body**.

c. inheritance the cytoplasmic organelles, chloroplasts and mitochondria contain DNA which contains a number of genes. These extrachromosomal genes are transmitted to daughter cells via cytoplasm. Called also maternal inheritance.

c. nuclear inclusion see **inclusion body**.

c. skeleton includes microtubules, centrioles, cilia, flagellae.

cytoplasmolysis [*si"to-plaz-mol'ĭ-sis*] lysis or digestion of the cytoplasm of cells as part of the death of tissues.

cytosegresome formations spherical, refractile, eosinophilic structures which develop in hepatic cells that have been sublethally injured. Called also Councilman bodies, hepatocellular acidophilic bodies.

cytosine [*si'to-sēn*] a pyrimidine base found in the **nucleic acids**, **deoxyribonucleic acid** (DNA) and **ribonucleic acid** (RNA).

c. arabinoside see **cytarabine**.

cytoskeleton [*si"to-skel'ə-tən*] a conspicuous internal reinforcement in the cytoplasm of a cell, consisting of tonofibrils, filaments of the terminal web, and other microfilaments.

cytosol [*si'to-sol*] the liquid medium of the cytoplasm, e.g. cytoplasm minus organelles and nonmembranous insoluble components.

cytosome [*si'to-sōm*] the body of a cell apart from its nucleus.

cytospin [*si'to-spin*] 1. a high speed centrifuge used for cytocentrifugation. 2. a method of preparing a concentrated sample of cells from a cell-poor fluid. Using centrifugation to separate cells and deposit them in a thin layer on a slide.

cytostasis [*si-tos'tə-sis*] inhibition of cell proliferation.

cytostatic [*si"to-stat'ik*] 1. suppressing the growth and multiplication of cells. 2. an agent that so acts.

cytotaxis [*si-to-tak'sis*] the movement and arrangement of cells with respect to a specific source of stimulation.

cytotaxonomy [*si"to-tak-son'ə-me*] study of the relationships between and the classification of organisms based on chromosomes.

cytotechnologist [*si"to-tek-nol'ə-jist*] a medical laboratory technologist specializing in cytology.

cytotoxic [*si'to-tok"sik*] having a deleterious effect upon cells.

c. antibody see cytotoxic **antibody**.

c. drugs generally refers to those used in chemotherapy of neoplasms, e.g. cyclophosphamide, vincristine, etc.

c. T lymphocyte see T **lymphocyte**.

cytotoxicity [*si"to-tok-sis'ĭ-te*] destruction of cells; used to describe lysis of cells by immune mechanisms. See also **antibody-dependent cell-mediated cytotoxicity (ADCC)**.

cell-mediated c. assay a test of cell-mediated immunity in which activated cytoxic T lymphocytes cause lysis of ^{51}Cr-labeled target cells.

cytotoxin [*si'to-tok"sin*] a toxin having a specific toxic action on cells of special organs.

cytotrophoblast [*si"to-trof'o-blast*] the cellular (inner) layer of the trophoblast.

cytotropism [*si-tot'ro-piz-əm*] 1. cell movement in response to external stimulation. 2. the tendency of viruses, bacteria, drugs, etc., to be attracted to and exert their effect upon certain cells of the body.

cytula the impregnated ovum.

cyturia [*si-tu're-ə*] the presence of cells of any sort in the urine.

Czech pied cattle red and white, pied, dual purpose cattle from former Czechoslovakia.

Czerny–Lembert suture a combination of the Czerny and Lembert suture patterns. The Czerny suture, which may be interrupted or continuous, is buried by a seromuscular Lembert layer.

Czerny suture [*cher'ne*] 1. an intestinal suture in which the thread is passed through the mucosa only. 2. union of a ruptured tendon by splitting one of the ends and suturing the other into the split.

D

D chemical symbol, *deuterium*.
2,4-D see **2,4-dichlorophenoxyacetic acid**.
d symbol, *deci-*; 2′-deoxyribo.
d- prefix, *dextro-*.
Δ delta, capital; fourth letter in the Greek alphabet. A symbol for increment.
δ delta, small letter; fourth letter in the Greek alphabet.
D gene segment see diversity **gene**.
D-loop a structure produced during the initial stages of the replication of a circular DNA molecule as a result of strand displacement, by the leading strand, of the unreplicated lagging strand.
4D meat meat from animals which are dead, diseased, dying or have been destroyed. Usually salvaged for rendering.
da deca-.
dacarbazine (DTIC) [*də-kahr′bə-zēn*] an alkylating and antimetabolite, cell-cycle nonspecific antineoplastic agent.
Dachshund a small (approximately 20–25 lb) breed of dog characterized by its long body, deep chest and very short legs. A German breed, the name means 'badger dog', bred for hunting small game. There are three coat types: smooth (or shorthaired), longhaired and wire-haired, found in black, shades of brown, brindled and dappled. A miniature variety (less than 10 lb) is also bred in all three coat types. The breed is predisposed to intervertebral disk protrusion, acanthosis nigricans, cystinuria and diabetes mellitus.
Dacie's fluid a diluting fluid containing trisodium citrate and formalin, used for blood counts, particularly for fish blood.
Dacron polyethylene terephthalate, a polyester synthetic material used widely for vascular prostheses.
dacryagogue 1. an agent that induces a flow of tears. 2. a lacrimal duct.
dacry(o)- word element. [Gr.] *tears* or the lacrimal apparatus of the eye.
dacryoadenalgia [*dak″re-o-ad″ə-nal′jə*] pain in a lacrimal gland.
dacryoadenectomy [*dak″re-o-ad″ə-nek′tə-me*] excision of a lacrimal gland.
dacryoadenitis [*dak″re-o-ad″ə-ni′tis*] inflammation of a lacrimal gland.
dacryoblennorrhea [*dak″re-o-blen″o-re′ə*] mucoid discharge emanating from the lacrimal apparatus.
dacryocele [*dak′re-o-sēl″*] see **dacryocystocele**.
dacryocyst [*dak′re-o-sist″*] see **lacrimal** sac.
dacryocystalgia [*dak″re-o-sis-tal′jə*] pain in the lacrimal sac.
dacryocystectomy [*dak″re-o-sis-tek′tə-me*] excision of the lacrimal sac.
dacryocystitis, dacrocystitis [*dak″re-o-sis-ti′tis*] inflammation of the lacrimal sac.
dacryocystoblennorrhea [*dak″re-o-sis″to-blen″o-re′ə*] mucoid discharge emanating from the lacrimal sac, with constriction of the lacrimal duct.
dacryocystocele [*dak″re-o-sis′to-sēl*] hernial protrusion of the lacrimal sac; dacryocele.
dacryocystoptosis [*dak″re-o-sis″top-to′sis*] prolapse of the lacrimal sac.

D-1: Severe dacryocystitis with multifocal cutaneous draining tracts in a Weimaraner.
Dziezyc J, Millchamp N, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2005.

dacryocystorhinography [*dak-re-o-sis″to-ri-nog′rə-fe*] radiographic imaging of the nasolacrimal apparatus; usually performed before and after injection of an iodinated contrast agent through the lacrimal puncta.
dacryocystorhinostenosis [*dak″re-o-sis″to-ri″no-stə-no′sis*] narrowing of the nasolacrimal duct.
dacryocystorhinostomy [*dak″re-o-sis″to-ri-nos′tə-me*] surgical creation of an opening between the lacrimal sac and nasal cavity.
dacryocystorhinotomy [*dak″re-o-sis″to-ri-not′ə-me*] passage of a probe through the lacrimal sac into the nasal cavity.
dacryocystostenosis [*dak″re-o-sis″to-stə-no′sis*] narrowing of the lacrimal sac.
dacryocystostomy [*dak″re-o-sis-tos′tə-me*] surgical creation of a new opening to permit drainage from the lacrimal sac.
dacryocystotomy [*dak″re-o-sis-tot′ə-me*] incision of the lacrimal sac.
dacryocyte [*dak′re-o-sīt*] a teardrop shaped red blood cell; observed in fragmentation anemia and myelofibrosis, but can also be an artifact. Found in iron-deficient ruminants, including llamas.
dacryohemorrhea [*dak″re-o-hem″o-re′ə*] the discharge of tears mixed with blood.
dacryolith [*dak′re-o-lith″*] a lacrimal calculus.
dacryolithiasis [*dak″re-o-li-thi′ə-sis*] the presence of dacryoliths.
dacryoma [*dak″re-o′mə*] a tumor-like swelling due to obstruction of the lacrimal duct.
dacryon [*dak′re-on*] the point where the lacrimal, frontal and maxillary bones meet.
dacryops [*dak′re-ops*] distention of the lacrimal duct with fluid. Compare with **canaliculops**.
dacryopyorrhea [*dak″re-o-pi″o-re′ə*] the discharge of tears mixed with pus.
dacryorrhea [*dak″re-o-re′ə*] excessive flow of tears.
dacryoscintigraphy [*dak″re-o-sin-tig′rə-fe*] scintigraphy of the lacrimal ducts.
dacryosolenitis [*dak″re-o″so-lə-ni′tis*] inflammation of a lacrimal duct.
dacryostenosis [*dak″re-o-stə-no′sis*] stricture or narrowing of a lacrimal duct.
dacryosyrinx [*dak″re-o-sir′inks*] 1. lacrimal duct. 2. a lacrimal fistula. 3. a syringe for irrigating the lacrimal ducts.
dactinomycin [*dak″ti-no-mi′sin*] an antibiotic of the actinomycin complex (actinomycin D), produced by several species of *Streptomyces*; used as an antineoplastic agent.
dactyl [*dak′təl*] a digit.
Dactylaria gallopava [*dak-tə-lār′e-ə*] see ***Ochroconis gallopavum***. A thermophilic dematiaceous hyphomycete known to cause encephalitis in chicken and poults. Called also dactylariosis.
dactylariosis [*dak-tə-lār″e-o′sis*] a fungal encephalitis of birds caused by *Ochroconis (Dactylaria) gallopavum*.
Dactylis glomerata a valuable temperate region pasture grass which contains a lamb growth inhibitor. Called also cocksfoot, orchard grass.
dactylitis [*dak″tə-li′tis*] inflammation of a digit.
dactyl(o)- word element. [Gr.] *a digit*.
Dactyloctenium radulans Australian grass of the family Poaceae. Contains toxic amounts of nitrate when growing in heavily fertilized soil such as that in stockyards, but elsewhere is a valuable pasture plant. Called also button grass.
dactylogryposis [*dak″tə-lo-grī-po′sis*] permanent flexion (contracture) of the digits.
Dactylogyrus [*dak″tə-lo-ji′rəs*] a genus of monogenetic flukes of the family Dactylogyridae that infest fish.
D. extensus, D. vastator cause an important parasitic disease of the gills of marine and freshwater fish.
dactylolysis [*dak″tə-lol′ĭ-sis*] 1. surgical correction of syndactyly. 2. loss or amputation of a digit.
dactylomegaly [*dak″tə-lo-meg′ə-le*] abnormally large digits.

dactylus [*dak'tə-ləs*] pl. *dactyli* [L.] a digit.
daddy-long-legs *Pholcus phalangioides*; see **harvestmen**.
DAF **decay**-accelerating factor.
daffodil [*daf'ə-dil*] see ***Narcissus***.
d. tree ***Cascabela*** *thevetia* (*Thevetia peruviana*).
daft lamb see **cerebellar** atrophy.
dagging removal of lumps of wool matted together with feces (dags) from the perineal region of the sheep.
dags locks or staples of wool in the crutch that are heavily fouled with caked feces.
daidzein an estrogenic plant isoflavone.
daily pull and dead records a daily account kept in a feedlot of the deaths and the animals pulled out of each pen because of illness or injury.
dairy 1. a retail outlet for milk products. 2. the feeding and milking sheds on a dairy farm. 3. pertaining to or emanating from an animals or other thing concerned in the production of milk, e.g. dairy goat, dairy cleanser.
d. barn standard indoor housing in temperate and subarctic northern hemisphere countries; a common plan is to have animals housed on the ground floor and grain and hay on the top floor from which it is delivered to the animals below; the cows are tied in stanchions and milked on the spot or roam free and are milked in a parlor.
d. breeds see **Australian** Shorthorn, **Ayrshire**, **Brown Swiss cattle**, **Dairy shorthorn**, **Jersey**, **Guernsey**, **Holstein-Friesian**, **Red poll**, **Australian** milking zebu, **British white**, **Dexter**, **Jamaica hope**, **Milking shorthorn**.
d. calf calf of a mating between a bull and a cow, both of dairy breeds.
d. cow cow of a breed specifically defined as being for milk production, as distinct from a beef or dual purpose breed.
d. farmer a farmer whose major enterprise is dairy farming.
d. herd includes milking cows, dry cows, heifers (maiden and in-calf), calves and, where needed, bulls. Called also milking herd, dry herd, followers.
d. herd improvement programs traditionally a centralized system, usually sponsored by a government or a farmer-owned cooperative, for recording milk yield and quality and assessing the productive status of individual cows. Larger herds now tend to use programs that are on-farm and stand alone within the single business. With both, recommendations are then made relative to culling or mating program for herd and the individual cows. Programs with a central database provide information on which regional or national analyses of performance can be made relative to a multiplicity of variables, such as herd size, parity, production, reproductive performance, culling, breed, times per day milking.
d. industry includes the farms, the milk collecting and handling services, the processors, manufacturers and retailers and the private and government organizations involved in a coordinating or controlling function with respect to the harvesting and disposal of dairy products.
d. sanitizers disinfectants suitable for use in an environment and in a situation in which contamination of the human food chain is likely to occur.
Dairy shorthorn the dairy variety of the **Shorthorn** breed of cattle. Called also Milking shorthorn.
dairyCHAMP a computer program designed to aid dairy herd health and production management. Originates from the University of Minnesota.
dairyCOMP 305 an on-farm computer program devised to participate in dairy herd health management.
dairying 1. the occupation of being a dairy farmer. 2. the practice of running a dairy farm.
seasonal d. breeding the herd as a block so as to have the herd calve when feed supplies are good.
year-round d. a management system in which cows are bred to calve so that there is a constant influx of freshly calved cows.
dairyMAN a dairy computer program designed to aid dairy herd health and production management. Originates from Massey University, New Zealand.
DAISY acronym for Dairy Information System—a well-known herd health program and dairy information management system. Designed at Reading University, UK.
daisy flowering plants in a number of different genera in the family Asteraceae. Their flowers are carried in a dense mass in a disc, usually with only the outer ones bearing petals.
African d. ***Senecio*** *pterophorus*.
plains plover-d. ***Leiocarpa brevicompta***.
South African d. ***Osteospermum***.
sunflower d. ***Wedelia*** *asperrima*.
tufted burr d. ***Calotis scapigera***.
wild everlasting d. ***Helichrysum*** *argyrosphaerum*.
woolly everlasting d. ***Argentipallium blandowskianum***.
yellow d. ***Wedelia*** *asperrima*.
Dakin's solution [*da'kin*] an aqueous solution containing 0.5% available chlorine as sodium hypochlorite and sodium bicarbonate; used in enormous quantities when veterinary surgery was a barnyard and kitchen table practice, and infected wounds were the norm. It was in general use as a local antibacterial and to irrigate wounds.
DALA delta-amino levulinic acid.
dalapon a chlorinated acid used as a herbicide; experimentally high doses cause abortions and weak lambs; nontoxic at normal concentrations.
Dales pony English heavy miniature horse, 14–14.2 hands high, usually black or dark brown, sometimes gray.
dalfopristin [*dal-fo'pris-tin*] see **quinopristin/dalfopristin**.
Dall sheep *Ovis dalli*; a medium-sized wild sheep.
Dallas grass ***Paspalum*** *dilatatum*.
Dalmatian a medium-sized, shorthaired dog distinguished by its white color with black or brown (liver) spots distributed uniformly over the entire body. The breed has a unique protein metabolism that results in high levels of uric acid excretion into the urine. As a result the breed is predisposed to urate uroliths and some dermatoses believed to be associated with this metabolic characteristic. It also is affected by inherited deafness and a cavitating leukodystrophy. Called also English coach dog, Carriage dog, Plum pudding dog, Fire house dog and Spotted Dick.
normal uric acid (NUA) D's selective breeding of dogs without the gene mutation that causes high concentration of **uric acid** and predisposes to formation of uroliths, has produced a line of Dalmations with a normal concentration of uric acid.
Dalmatian insect powder see **pyrethrum**.
Dalmeny disease see **sarcocystosis**.
dalteparin [*dal-tep'ə-rin*] a low molecular weight heparin used in dogs in the treatment of pulmonary thromboembolism.
dalton [*dawl'tən*] an arbitrary unit of mass, being one-twelfth the mass of the nuclide of carbon-12, equivalent to 1.657×10^{-24} g. Called also atomic mass unit.
Dalton's law [*dawl'tən*] the pressure exerted by a mixture of nonreacting gases is equal to the sum of the partial pressures of the separate components.
dam [*dam*] female parent.
d. line characteristics contributed to the offspring of a cross mating by the dam.
d.–offspring bond the close relationship of seeking, suckling and protecting imprinted at birth by sight, taste and smell. Called also maternal bond.
dam-family average the average performance of the full-sib family of which the subject is a member.
Damalinia [*dam"ə-lin'e-ə*] a genus of mammal lice of the superfamily Ischnocera. Called also *Bovicola*. Includes *Damalinia bovis* (cattle), *D. caprae* (goats), *D. crassiceps* (goats), *D. equi* syn. *D. pilosus* (horses), *D. limbata* (Angora goats) and *D. ovis* (sheep).
DAMN IT acronym for a clinical investigation plan, based on probable pathophysiologic causes of the disease present. It consists of **D**egenerative, developmental; **A**llergic, autoimmune; **M**etabolic, mechanical; **N**utritional, neoplastic; **I**nflammatory, immune-mediated, iatrogenic, ischemic, idiopathic; **T**oxic, traumatic.
damping [*damp'ing*] 1. steady diminution of the amplitude of successive vibrations of a specific form of energy, as of electricity. 2. sprinkling a feed with water to reduce dust and inhalation of dust as a prevention of chronic obstructive respiratory disease in horses and dust tracheitis in feedlot steers.
danazol [*dan'ə-zol*] an attenuated androgen that suppresses the ovarian–pituitary axis by inhibiting the release of gonadotropins from the pituitary gland. In animals, it has been used in the treatment of immune-mediated disorders, including anemia and thrombocytopenia.
dancing pigs see **congenital tremor syndrome**.
dandelion [*dan'də-li"ən*] see ***Taraxacum officinale***.
false d. see ***Hypochaeris radicata***.

D-2: Dandie Dinmont terrier.

dander [*dan'dər*] small scales from the hair or feathers of animals, which may be a cause of allergy in sensitive persons.

Dandie Dinmont terrier a small dog with pendulous ears and a medium length, crisp coat in colors described as mustard (fawn to reddish brown) or pepper (dark bluish black to light silvery gray). The legs are short, with the front being shorter than the rear so the shoulder height is about 10 inches. The large head is accentuated by a fluffy topknot.

dandruff [*dan'drəf*] excessive scaling from the skin or, in humans, scalp.

walking d. cheyletiellosis; so-called because the light-colored mites are visible as they move across the hair coat.

dandy-brush a grooming brush of stiff whisk fiber.

Dandy–Walker syndrome [*dan'de wawk'ər*] congenital hydrocephalus due to obstruction of the foramina of Magendie and Luschka. A deformity in humans also recorded in dogs and sheep. Called also Dandy–Walker malformation.

danewort ***Sambucus*** *ebulus*.

dangerous wild animals animals that may be specified by local legislation as requiring a license if they are to be kept by a private person and outside circuses or zoos, which are legislated for separately.

Danio rerio a tropical aquarium fish also used extensively as a biomedical research model. Called also zebrafish.

Danish black pied cattle Danish black and white dairy cattle, originated from Dutch Friesian.

Danish hobbles see **Abildgaard method**.

Danish red cattle Danish red dairy cattle.

Danish Swine Slaughter Data System a centralized, computer-based system by which pig health can be monitored via an abattoir meat inspection service. There is a standard list of diagnostic codes which ensures compatibility of results over a number of operators.

DANMAP Danish Integrated Antimicrobial Resistance Monitoring and Research Programme, established by the Danish government to monitor antimicrobial resistance in food animals.

danofloxacin antimicrobial agent of the fluoroquinolone group with a wide range of activity against bacteria and mycoplasmas.

dan's cabbage ***Senecio*** *latifolius*, *S. isatideus*.

Danthonia widespread, perennial bunchgrass and a palatable pasture grass. Called also California oatgrass.

danthron a by-product of the dye industry used as a purgative, especially in horses. Called also dihydroxyanthraquinone. Veterinary practice with horses has veered away from these relatively violent purges and depends on mineral oil or liquid paraffin to treat constipation.

dantrolene [*dan'tro-lēn*] skeletal muscle relaxant producing its effect primarily on the neuromuscular junction and the muscle tissue, and only secondarily on the central nervous system.

Daphne [*daf'ne*] a genus of plants in the family Thymelaceae; contain dihydroxycoumarin glycosides, e.g. daphnetin; these are very toxic and cause severe irritation to the gut, leading to severe enteritis, vomiting and diarrhea. Includes *D. cneorum*, *D. genka*, *D. laureola*, *D. mezereum*. Called also spurge laurel, mezereon, garland flower, wood or copse laurel, wild pepper, spurge olive, dwarf bay.

daphnetin [*daf-ne'tin*] toxic dihydroxycoumarin glycoside found in ***Daphne*** spp.

Daphnia pulex [*daf'ne-ə*] a water flea; one of the intermediate hosts of *Echinuria uncinata*, a roundworm of ducks.

daphnin [*daf'nin*] a nontoxic glycoside in ***Daphne***. Called also mezerein.

Daphniphyllum humile a plant in the family Daphniphyllaceae poisonous to cattle in Japan. Called also *D. macropodum* var. *humile*.

dapple a spotted, mottled or irregularly pigmented coat color pattern, usually with darker colors on a lighter background, seen in some Dachshunds. A similar pigmentation pattern in longhaired dog breeds such as Collies is usually called **merle**. Also occurs commonly in horses of any color, but is most striking in grays. May be noticeable only when the coat is short.

dapsone [*dap'sōn*] an antibacterial used in humans for the treatment of leprosy and malaria. Used in cats to treat mycobacterial infections, particularly feline leprosy, caused by *Mycobacterium lepraemurium*.

darbepoetin alfa [*dahr"be-poi'ə-tin al'fə*] a synthetic form of erythropoietin used in humans for the treatment of non-regenerative anemia of chronic kidney disease. It is also subject to abuse as a performance enhancing drug in human athletes and in race horses.

dark [*dark*] approaching black; reflecting little light.

d. firm, dry muscle see dark cutting **beef**.

d. room a room dedicated to the processing of film; must be lightproof, temperature stable and fitted with water and power.

Darling's disease [*dahr'ling*] histoplasmosis.

darmstadtium (Ds) a chemical element, atomic number 110, atomic weight 281. See Table 4.

darnel [*dahr'nəl*] see ***Lolium*** *temulentum*.

Darrows solution a mixture of potassium chloride, sodium chloride and sodium lactate; used in fluid therapy to repair a potassium deficit. Called also lactated potassium saline injection.

dart [*dart*] see **blow dart**.

d. gun see **blow dart**.

Dartmoor pony English heavy pony, 12.2 hands high, bay, black or brown.

dartoid [*dahr'toid*] resembling the dartos.

dartos [*dahr'tos*] the contractile tissue under the skin of the scrotum; called also tunica dartos.

darwinism [*dahr'win-iz-əm*] the theory of evolution according to which higher organisms have been developed from lower ones through the influence of natural selection.

dassie [*das'e*] see **hyrax**.

Dasypsyllus gallinulae a species of flea in the order Siphonaptera. It is found on wild birds.

Dasypus novemcinctus see **armadillo**.

dasyurids carnivorous marsupials in the family Dasyuridae. Includes **Tasmanian devil** (*Sarcophilus harrisii*), **phascogales**, **antechinus**, **quolls**, **dunnarts** and **kowari**.

data [*da'tə*] plural of *datum*. A collection of information or facts. See also **information**.

d. adjustment for useful results data often need to be modified before analysis; for example for age, for sex or for difficulty or for number of attempts.

d. analysis submission of data to statistical analysis; includes sorting into categories and determining relationships between variables.

d. capture a mechanism for collecting specified segments or categories of data from a stream of automatically recorded data some of which may be irrelevant for the specific purpose.

categorical d. are qualitative and suited to classification into categories. Further divisible into nominal (names), ordinal (levels of quality, development), dichotomized (mutually exclusive).

continuous d. data which have an infinite number of possible values.

diagnostic d. lists of diagnoses and data of clinical signs, clinical pathology results and pathology lesions used in the making of diagnoses.

D-3: Dartmoor pony. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

dimensional d. numerical or quantitative data. May be explicit and therefore continuous, or grouped into approximate groups, e.g. nearest whole number, i.e. discrete data.
discrete d. data that have finite (usually whole integer) value and therefore fall naturally into groups of similar values; opposite to continuous data.
incidence d. data related to the occurrence of specific disease incidents.
minimum d. set an accepted list of terms and definitions necessary for veterinary records aimed at creating useful animal disease records. Called also uniform basic data set.
non-normal d. data whose frequency distribution is markedly different to that of normal data (see below).
normal d. data which manifests graphically as a bell-shaped curve distributed symmetrically about the peak value.
ordinal d. a type of data containing limited categories with a ranking from the lowest to the highest, e.g. very mild, moderate, severe.
paired d. see **paired** data.
passive d. data acquired from records collected for some other purpose.
pre-existing d. data in existence before the commencement of a study. Of limited value unless they are exactly the data required, have been collected adequately, and a group of pre-existing controls with their corresponding data can be identified.
prevalence d. disease occurrences are recorded against the size of the population at risk at the time.
raster d. representation one of two formats for data representation (the other being vector) in GIS consisting of a number of equally sized square cells (rectangles, hexagons, and equilateral triangles) forming a grid. The size of the grid determines the spatial resolution of the raster. Easy to manipulate but consumptive of computer storage. Called also grid data.
raw d. data as they are collected and before any calculation, ordering, etc. has been done.
screening d. data obtained by periodic diagnostic testing of randomly selected samples of a population.
secondary d. the use of data for purposes other than that for which it was intended.
sentinel d. data collected from sentinel animals or other recording units.
vector d. representation one of two formats for data representation (the other being raster) in GIS where points are represented as pairs of x, y coordinates, lines a string of points, and polygons as lines that form closed areas. Called also polygon data representation.
Data source the collecting agency.
Datisca glomerata North American plant in the family Datiscaceae; contains an unidentified toxin which causes diarrhea, enteritis. Called also durango root.
Datura [*da-too'rə*] a genus of toxic plants in the family Solanaceae; contain tropane alkaloids including hyoscine (scopolamine), hyoscyamine, atropine which cause excitement, restlessness, pupillary dilation, dryness of the oral mucosa. Poisoning in animals is rare and usually results from eating crushed seeds. Includes *D. candida* (*Brugmansia*, angel's trumpet), *D. ferox* (false castor oil plant, thorn apple), *D. inoxia*, *D. leichhardtii*, *D. metel*, *D. meteloides*, *D. sanguinea* (*Brugmansia sanguinea*), *D. suaveolens* (*Brugmansia suaveolens*), *D. wrightii*. *D. stramonium* is also reported to cause arthrogryposis in piglets when fed to their dams. Fortunately the plant is very unpalatable. Called also devil's food, devil's trumpet, false castor oil plant, Jamestown lily, Jamestown weed, jimson weed, mad apple, thorn apple.
Daubentonia the plant genus *Sesbania* spp.
Daucus carota [*daw'kəs*] plant in the family Apiaceae; excessive consumption has caused hypervitaminosis A in a rabbit. Called also carrot, Queen Anne's lace, wild carrot.
daughter [*daw'tər*] 1. female offspring. 2. arising from cell division, as a daughter cell. 3. product of the decay or radioactive disintegration of a radionuclide. Usually formed as a result of successive transformations in a series. See also **decay** (3).
d. cyst see daughter **cyst**.
daunomycin [*daw-no-mi'sin*] see **daunorubicin**.
daunorubicin an anthracycline antibiotic produced by a strain of *Streptomyces coeruleorubidus* that is closely related to **doxorubicin** and has antimitotic, cytotoxic and immunosuppressive effects.
Davainea [*da-va'ne-ə*] a genus of tapeworms of the family Davaineidae.
D. proglottina causes severe enteritis in fowls and other gallinaceous birds.
Davis forceps thumb-operated tissue forceps with a special atraumatic grasping surface to its blades—a hollow surrounded by shallow ridges. Designed for handling lung.
Davison–Danielli membrane model first generally accepted model of membrane structure proposing a lipid bilayer as the basis of the structure.
day blindness see **hemeralopia**.
day length the number of daylight hours per day, increasing towards midsummer and the reverse towards midwinter. The effective trigger in the commencement and cessation of the breeding seasons in those species that demonstrate seasonal breeding.
day-old chicks the standard output from the hatchery for broiler growers and egg producers in the poultry industry.
days open the period between calving and conception in cows. Called also calving-to-conception interval.
dazzle response eyelid closure and sometimes aversion of gaze in response to a bright light being directed into the eye; a test of all subcortical portions of light perception including the retina, optic nerve, and central visual pathways as far as the superior colliculus and the facial nerve.
2,4-DB 4-(2,4-dichlorophenoxy) butanoic acid; a phenoxyacid herbicide, not poisonous in its own right but may cause damaged plants to have higher than normal concentrations of nitrate.
Db chemical symbol, *dubnium*.
dB decibel.
DCAD **dietary** cation-anion difference.
DCT dry cow treatment.
DD dichlorodiphenyldichloroethane, an insecticide; see **chlorinated hydrocarbons**.
DDAVP see **desmopressin**.
DDT dichlorodiphenyltrichloroethane, a powerful insect poison; see **chlorinated hydrocarbons**.
DDVP see **dichlorvos**.
DDx abbreviation for differential diagnosis; used in medical records.
de- word element. [L.] *down from;* sometimes negative or privative, and often intensive.
de Bruin spatula a small, hand-held obstetrical spatula manipulated from inside the uterus and used to remove the skin of the fetus by blunt dissection.
De Qi in acupuncture the term applied to the nervous stimulus passing from the acupuncture point to the brain. Felt by the patient as a needling sensation.
de Vita pin a bone pin used to stabilize hip luxations by being placed ventral to the ischial tuberosity, dorsal to the femoral neck, and into the ilium. It forms an extension of the dorsal and lateral acetabular rim.
DEA dog erythrocyte antigen.
dead [*ded*] destitute of life. The state of **death**.
dead animal disposal in most intensive farming areas, dead stock facilities (knackery yards in some countries) and rendering works are markets for cadavers. In extensive farming areas burning or burial is desirable but natural decay is a common outcome. Composting is increasingly used.
dead man's fingers ***Oenanthe crocata***.
deadgrass [*ded'gras*] a coat color of pale yellow to tan, associated particularly with the Chesapeake Bay retriever breed of dogs.
deaf [*def*] lacking the sense of hearing or not having the full power of hearing; exhibiting **deafness**.
deafness [*def'nis*] lack or loss, complete or partial, of the sense of **hearing**.
conductive d. deafness in which sound vibrations are interrupted in the outer or middle ear and do not reach the inner ear and its nerve endings. Most commonly caused by otitis externa and the presence of debris in the external ear canal or tympanic bulla.
congenital d. infrequent in dogs and cats, except in certain breeds; not recorded in other species. In most cases is due to cochlear duct degeneration. See also inherited deafness (below).
cortical d. that due to disease of the cortical centers of the cerebrum.
inherited d. occurs in some blue-eyed white cats and in some dog breeds; particularly common in the Dalmatian. In some, it is associated with coat coloration, e.g. white Bull terriers, merle collies and Old English sheepdogs.

nerve d. due to degeneration of the acoustic sensory organ. Most common in dogs at an early age and associated with incomplete pigmentation of the haircoat and the uvea, in animals with a white or merle coat color. Occurs also in mink, cats and mice.
senile d. due probably to degeneration of the hair cells in the organ of Corti, and to loss of neurons in the spinal ganglion; very common in aged dogs. Called also presbycusis.
sensorineural d. due to damage of the inner ear nerve endings, the cochlear portion of the eighth cranial nerve, the vestibulocochlear nerve, or the cortical hearing center. See also nerve deafness (above).
toxic d. overdosing with aminoglycoside antibiotics causes deafness.
transmission d. conductive hearing loss.
deamidase [*de-am'ĭ-dās*] an enzyme that splits amides to form a carboxylic acid and ammonia.
deamidization [*de-am"ĭ-dĭ-za'shən*] liberation of the ammonia from an amide.
deaminase [*de-am'ĭ-nās*] an enzyme causing deamination, or removal of an amino group from organic compounds, named according to its substrate as adenosine deaminase, cytidine deaminase, guanine deaminase, etc.
deamination [*de-am"ĭ-na'shən*] removal of the amino group, $-NH_2$, from a compound.
deAngelis technique a method for extra-articular reconstruction of the cranial cruciate ligament which involves placement of an imbrication suture from the lateral femero-fabella ligament to the distal patellar tendon.
death [*deth*] the cessation of all physical and chemical processes that invariably occurs in all living organisms. Even in humans there is at present no standardized diagnosis of clinical death. The existing procedure, and the one recommended for use in animals, is to declare the animal dead when brain death has occurred. Brain death has occurred when the animal is in a deep irreversible coma. The criteria on which a diagnosis of brain death can be made are: (1) absolute unresponsiveness to externally applied stimuli; (2) cessation of movement and breathing, including no spontaneous breathing for 3 minutes after an artificial respirator has been turned off; and (3) complete absence of cephalic reflexes. The pupils of the eyes must be dilated and unresponsive to direct light.
d. agony involuntary movements of all parts of the body in the few moments before death.
d. camas see ***Zigadenus***.
d. cap a mushroom, ***Amanita*** *phalloides*.
clinical d. the absence of heartbeat and cessation of breathing.
d. rate the number of deaths per stated number of animals in a specified region in a specified, usually annual, time period.
DeBakey [*de-ba'ke*] pertaining to Michael E. DeBakey (1908–2008), American cardiovascular surgeon.
D. bulldog clamps surgical instruments designed for temporary occlusion of large blood vessels.
D. tissue forceps delicate surgical thumb forceps with longitudinal ribs, designed for delicate, nontraumatic vascular surgery.
debarking surgical removal of all or part of the vocal cords; practiced in the dog to reduce a barking nuisance. Called also devocalization.
debeaking removal of part of the beak, usually the front third of the upper beak, of domestic fowls to prevent feather picking and other cannibalistic vices in caged birds, particularly in intensive housing. Called also beak trimming. See also **cannibalism**.
debilitation being in a state of **debility**.
debility [*də-bil'ĭ-te*] lack or loss of strength; weakness.
debleating resection of the vocal cords in a pet goat or sheep which has become a noise nuisance in an urban environment.
deboned carcass meat from which the bone has been removed.
debrancher enzyme [*de-branch'ər en'zīm*] an enzyme involved in the glycogenolytic process of releasing glucose from glycogen. A deficiency of the enzyme results in accumulation of glycogen in tissues. Both are characteristics of type III glycogen storage diseases.
débride [*da-brēd'*] [Fr.] to remove by débridement.
débridement [*da-brēd-maw'*] [Fr.] the removal of all foreign material and all contaminated and devitalized tissues from or adjacent to a traumatic or infected lesion until surrounding healthy tissue is exposed.
block d. a method in which the wound is packed with gauze or toweling, sutured together and then the entire mass is removed surgically. Usually reserved for badly damaged tissues.
enzymatic d. use of enzymes such as trypsin and **chymotrypsin**, usually applied topically, to achieve débridement.
debris [*də-bre'*] devitalized tissue or foreign matter.
debulking [*de-bulk'ing*] removal of excess bulk of tissue from a lesion either to assist in healing or as an adjunct to chemotherapy.
DEC diethylcarbamazine.
deca- (da) [Gr.] *ten* a prefix used in naming units in the metric system of measurement to indicate a quantity 10 times the unit designated by the root with which it is combined.
decalcification [*de-kal"sĭ-fĭ-ka'shən*] 1. the process of removing calcareous matter. Used in processing of bone samples for histological sections. 2. the loss of calcium salts from bone or teeth.
decalcify [*de-kal'sĭ-fi*] to deprive of calcium or its salts.
decamethonium a muscle relaxant used in surgical anesthesia in the form of its bromide or iodide salt.
decamethonium bromide a depolarizing neuromuscular blocking agent.
decannulation [*de-kan"u-la'shən*] the removal of a cannula.
decanoate [*dek"ə-no'āt*] a salt of **decanoic acid**.
decanoic acid [*dek"ə-no'ik*] one of the saturated fatty acids found in the endosperm of the coconut (*Cocos nucifera*), in coconut oil and in other seed oils. Used in diets for patients with fat malabsorption syndromes. Called also *n*-capric acid.
decantation [*de"kan-ta'shən*] the pouring of a clear supernatant liquid from a sediment.
decapeptide [*dek"ə-pep'tīd*] a polypeptide consisting of a chain of ten amino acids.
decapitation [*de-kap"ĭ-ta'shən*] removal of the head, as of an animal, fetus or bone.
decapsulation [*de-kap"su-la'shən*] removal of a capsule, especially the renal capsule.
decarboxylase [*de"kahr-bok'sə-lās*] any of the lyase class of enzymes that catalyze the removal of a carbon dioxide molecule from a compound.
d. test tests for the identification of bacteria, based on the production of ammonia from lysine, ornithine or arginine. In a positive result, the alkaline product is indicated by bromocresol purple.
decarboxylation [*de"kahr-bok"sə-la'shən*] removal of the carboxyl group from a compound.
decay [*de-ka'*] 1. the gradual decomposition of dead organic matter. 2. the process or stage of decline, as in old age. 3. in radioactivity terminology the disintegration of the nucleus of an inactive nuclide by the spontaneous emission of alpha or beta particles. Called also radioactive disintegration. Substances produced by the disintegrations are called **daughter** (3) compounds.
d.-accelerating factor a membrane-associated protein found on many cells, including peripheral blood cells, that prevents assembly or speeds disassembly of C3 convertase (C3bBb), down-regulating the activity of complement.
decerebellate an animal from which the cerebellum has been removed, experimentally or, an unlikely event, accidentally.
d. rigidity posture that results from severe lesions of the cerebellum, especially the rostral portion of the cerebellum. The forelimbs are held in rigid extension whilst the hindlimbs are flexed cranially at the hip. May also include a degree of opisthotonus.
decerebrate [*de-ser'ə-brāt*] to eliminate cerebral function by transecting the brainstem or by ligating the common carotid arteries and basilar artery at the center of the pons; an animal so prepared, or a brain-damaged animal with similar neurological signs.
decerebration [*de-ser"ə-bra'shən*] the act of decerebrating.
decholesterolization [*de"kə-les"tər-ol-ĭ-za'shən*] reduction of cholesterol concentrations in the blood.
deci- (d) [L.] *one-tenth*; a prefix used in the metric system to indicate one-tenth (10^{-1}) of the unit designated by the root with which it is combined.
decibel (dB) [*des'ĭ-bəl*] a unit used to express the relative intensity and pressure of sound; the ratio of two powers, usually electric or acoustic powers, equal to one-tenth of a bel; one decibel equals approximately the smallest difference in acoustic power the human ear can detect. See also **bel**.
decidua [*də-sid'u-ə*] a name applied to the human and primate endometrium during pregnancy, all of which except for the

VetBooks.ir

deepest layer is shed after birth of the young. Called also the decidual, or deciduous, membrane.

basal d., decidua basalis that portion on which the implanted ovum rests.

capsular d., decidua capsularis that portion directly overlying the implanted ovum and facing the uterine cavity.

parietal d. the decidua exclusive of the area occupied by the implanted ovum. Called also true decidua, decidua verra.

true d. see parietal decidua (above).

d. verra see parietal decidua (above).

deciduate, deciduous, decidual [*də-sid'u-āt, də-sid'u-əs, də-sid'u-əl*] characterized by shedding, e.g. teeth, placenta.

d. placenta, deciduate membrane endothelial and hemochorial **placenta**.

deciduation [*də-sid"u-a'shən*] the shedding of the decidua.

deciduitis [*də-sid"u-i'tis*] a bacterial disease leading to changes in the decidua.

deciduoma [*də-sid"u-o'mə*] an intrauterine mass containing decidual cells.

deciduosis [*də-sid"u-o'sis*] the presence of decidual tissue or of tissue resembling the endometrium of human or primate pregnancy in an ectopic site.

deciduous [*də-sid'u-əs*] falling off; subject to being shed, as deciduous **teeth**.

decile [*des'īl*] one of the groups when a series of ranked data is divided into ten equal parts, or dividing points between such groups. See also **quartile**.

decimal scale in homeopathy, the scale of dilution of a remedy. Each dilution is one in ten.

decision a choice between a number of possible answers to a question.

d. analysis a systematic approach to decision making under conditions of imperfect knowledge; a practical application of probability theory. Used to calculate the optimal strategy from among a series of alternative strategies. May be expressed graphically in the form of a decision tree (below).

d. making making a decision can be done in three principal ways and many variations and mixtures of the methods: (1) rote, the decision is made on the basis of a set of rules and no selectivity is required; (2) intuitive, decisions are made on the basis of cerebrally stored information and reasoning systems which permit a fast response. The increasing complexity of veterinary clinical questions increases the probability of error; (3) decision analysis, a means of solving complicated problems by including all of the factors that could possibly affect the outcome of the analysis in a series of sequential questions. This gives each of the factors an opportunity of affecting the outcome. The chance of error by omission can be eliminated but the process is prolonged.

d. theory the theoretical basis for decision analysis.

d. tree a diagrammatic representation of the possible outcomes and events used in decision analysis. The questions to be asked in an analysis of a question are arranged as a series of nodes each with a yes and no branch, creating an arborization effect. The sequential steps proceed with each step depending on the decision made in the preceding step.

decking multiple decks in animal accommodation or transportation facilities. Common for young animals, chiefly piglets, commercial poultry, laboratory animals, cats and dogs.

declawing [*de-klaw'ing*] surgical removal of the claws of Felidae and Canidae. Not a universally accepted procedure except where there are specific health implications for the patient. Can happen accidentally in penned wildlife, e.g. anteaters. Called also onychectomy.

declive [*de-kli've*] a slope or a slanting surface. The part of the vermis of the cerebellum just caudal to the primary fissure.

declivis [*de-kli'vis*] [L.] *declive*.

decoction [*de-kok'shən*] seeping of a substance, usually woody stems, barks, berries, rhizomes and root material, in water to obtain its soluble principles and use as a tea for oral administration. See also **infusion** (1).

decoloration [*de-kul"ər-a'shən*] 1. removal of color; bleaching. 2. lack or loss of color.

decolorizer [*de-kul'ər īz"ər*] an agent that removes color, bleaches.

decombing surgical removal of the comb in the chicken or young bird to facilitate protrusion of the head through the bars of a battery cage. Pendulous wattles may be treated in the same way. Called also dubbing.

decompensation [*de-kom"pən-sa'shən*] failure of compensation.

cardiac d. inability of the heart to maintain adequate circulation; it is marked by dyspnea, venous engorgement, cyanosis and edema.

decomposition [*de"kom-pə-zish'ən*] 1. biologically speaking, the separation of compound bodies into their constituent principles; the natural process of biodegradation of animal and plant materials. Its occurrence in human and animal foods is a constant threat and preventing it is the prime objective of the food hygienist. 2. statistically speaking, the removal of accountable influences on a set of data so that only variation due to random error remains.

decompression [*de"kom-presh'ən*] 1. the return to normal environmental pressure after exposure to greatly increased pressure. 2. the artificial lowering of barometric pressure, e.g. to simulate high altitude.

cerebral d. removal of a flap of the skull and incision of the dura mater for the purpose of relieving intracranial pressure. Decompression can also be accomplished by the intravenous injection of hypertonic solutions, e.g. mannitol, usually accompanied by parenteral corticosteroids.

gastric d. by stomach tube or transperitoneal tap. An essential part of treatment for acute gastric dilatation in dogs and horses.

deconditioning, detraining [*de"kən-dish'ən-ing*] reversal of the training-induced adaptations, usually for physical activity; loss of fitness.

decongestant [*de"kən-jes'tənt)*] 1. tending to reduce congestion or swelling. 2. an agent that reduces congestion or swelling, usually of the nasal membranes. Decongestants may be inhaled, administered as spray or nose drops, or used orally in liquid or tablet form. The medication acts by reducing swelling of the nasal membranes and thus opening up the nasal passages. Among the leading medications used as decongestants are epinephrine, ephedrine and phenylephrine. Antihistamines, alone or in combination with decongestants, may also be effective.

decongestive [*de"kən-jes'tiv*] reducing congestion.

decontamination [*de"kən-tam"ĭ-na'shən*] a step in treatment for toxicosis; includes washing from the body surface, inducing emesis, and administration of activated charcoal and sometimes a cathartic.

decoppering agents drugs which promote excretion of copper; includes D-penicillamine, trientine (2,2,2-tetramine) and 2,3,2-tetramine.

decoquinate [*de-ko-kwin'āt*] a quinolone anticoccidial which is nontoxic but subject to a high rate of development of resistant coccidia.

decorin [*dek'ə-rin*] a small chondroitin sulfate proteoglycan found in connective tissue and bone, thought to be involved in the organization and mineralization of bone.

decortication, decortification [*de-kor"tĭ-ka'shən*] 1. removal of the outer covering from a plant, seed or root. 2. removal of portions of the cortical substance of a structure or organ.

decrement [*dek'rə-mənt*] the recovery after a fever; the excessive stored heat is dissipated by vasodilatation and sweating, and heat production is reduced by relaxation of muscles. Called also defervescence.

decremental conduction a phenomenon which occurs in the cardiac AV node when, during complete AV block, continued stimulation causes a slowing and diminished amplitude of phase 0 in the AV nodal cells until a nonpropagated local response occurs.

decrudescence [*de"kroo-des'əns*] diminution or abatement of the intensity of clinical signs.

Decrusia a genus of nematodes of the family Strongylidae. Includes *Decrusia additicta* (found in the large intestine of Indian elephants).

decubital ulcer [*de-ku'bĭ-təl*] an ulcer due to local interference with the circulation; called also pressure sore. The ulcer usually occurs over a bony prominence such as that of the sacrum, hip, heel, shoulder or elbow. Excessive or prolonged pressure produced by the weight of the body or limb is the primary cause.

decubitus [*de-ku'bĭ-təs*] pl. *decubitus*. 1. the act of lying down; the position assumed in lying down. 2. a decubitus ulcer.

dorsal d. lying on the back.

lateral d. lying on one side, designated right lateral decubitus when the subject lies on the right side and left lateral decubitus when it lies on the left side; lateral recumbency.

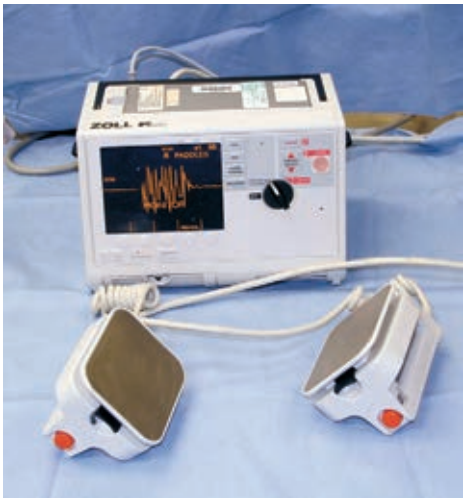
d. ulcer see **decubital ulcer**.

ventral d. lying on the stomach.
decussate [*de-kus'āt*] to cross especially in the form of X.
decussatio nervorum trochlearium [*de"kə-sa'she-o*] the decussation of the trochlear nerve.
decussation [*de"kə-sa'shən*] a crossing over; the intercrossing of fellow parts or structures especially in the form of an X.
d. of pyramids the ventral part of the caudal medulla oblongata in which some of the fibers of each pyramid intersect as they cross the midline and descend as the lateral corticospinal tracts.
dedifferentiation [*de-dif"ər-en"she-a'shən*] regression from a more specialized or complex form to a simpler state.
dedrobenzperidol see **droperidol**.
dee [*de*] a metal part shaped like a capital D and used in harness to make a T junction.
deep litter [*dēp*] a husbandry system used in most species but especially in poultry. Any form of bedding is used but short material such as shavings or sawdust is most easily handled. After an initial shallow layer is fouled, more litter is added to cover the droppings. Additions are continued daily until the end of the housing period when the entire bed is removed. Properly cared for the system is clean and warm and easy on labor.
deer [*dēr*] ruminants in the Cervidae family; see also **elk**, **reindeer**, **wapitii**, **moose** and **muntjac**.
black-tailed d. (*Odocoileus hemionus columbianus*) a native of the Pacific Northwest of the USA; may be a subspecies of mule deer (below).
barking d. see **muntjac**.
chital d. (*Axis axis*) a native of India and Sri Lanka, but they have been introduced to mainland USA, Hawaii and Australia; they are medium-sized, reddish-brown and have three-tined, lyre-shaped antlers which can be quite long. Called also axis deer.
fallow d. (*Dama dama*) a small, 150 lb, fawn deer with white spots and a white spot bordered with black on each buttock, native throughout Europe and the middle East, but introduced in many other locations, particularly game parks. The males have broad, multi-point antlers.
d. fly fever see **tularemia**.
d. herpesvirus (DHV) the pathogenicity is unknown.
hog d. (*Axis porcinus*) a small, short-legged deer native to South and Southeast Asia, but introduced in other countries. It is distinguished by its preference to run, rather than leap, with head held low. Males have three-tined antlers.
d. mouse see deer **mouse**.
mouse d. see **mouse deer**.
mule d. (*Odocoileus hemionus*) small, 3 ft high, native to the western US; has large, mule-like ears and tail tipped with black.
red d. (*Cervus elaphus*) the principal hunting deer; golden red-brown, large, 5 ft tall, and up to 650 lb; males have very large antlers.
roe d. (*Capreolus capreolus*; western roe deer) a small deer, native to Europe and the middle East; it is a game animal. They are red-gold to black with white buttock patch and males have three-tined antlers.
sambar d. see **sambar**.
sika d. (*Cervus nippon*) a small to medium-sized, forest dwelling deer native to Japan and East Asia, but it has been introduced to a number of other countries. It has a reddish-brown coat with rows of white spots on the back, a large white rump and a neck mane. Males have short, straight antlers with 2–5 tines, which are used in Chinese traditional medicine. Some subspecies are endangered.
d. tick fever 1. Lyme disease. 2. tularemia.

D-4: Mule deer (*Odocoileus hemionus*) the major host of the adult winter ticks, *Dermacentor albipictus*. Courtesy of CDC.

white-tailed d. (*Odocoileus virginianus*) a medium-sized, graceful red to gray deer native to North America and introduced to New Zealand and Europe.
Deerhound a common name for **Scottish deerhound** and the name recognized for the breed in the UK.
DEET [*dēt*] diethyltoluamide.
defatted [*de-fat'ad*] 1. fat is removed from the tissue by fat solvents. 2. deprived of fat as a food.
defaunate [*de-fawn'āt*] elimination of microscopic fauna, especially protozoa, in the rumen and cecum, with depressing effects on digestion.
defeathering plucking of feathers from bird carcasses after immersion momentarily in 135–145°F water. Final treatment of poultry is singeing. Ducks are waxed.
defecate [*def'ə-kat*] the act of **defecation**.
defecation [*def"ə-ka'shən*] elimination of wastes and undigested food, as feces, from the rectum.
painful d. see **dyschezia**.
defect [*de'fekt*] an imperfection, failure or absence.
filling d. an interruption in the contour of the inner surface of viscus revealed by contrast radiography, indicating excess tissue or substance on or in the wall of the organ, foreign body or other space-occupying lesions.
negative d. in neurology, a movement that cannot be performed, such as in paresis or paralysis.
positive d. in neurology, an involuntary movement, such as tremors, abnormal posture or seizures.
septal d. a defect in the cardiac septum resulting in an abnormal communication between opposite chambers of the heart. See also **aortic** septal defect, **atrial** septal defect and **ventricular** septal defect.
defective interfering virus [*de-fek'tiv*] viral particles containing subgenomic amounts of nucleic acid usually produced following infection of cells at high multiplicity and which interfere with the replication of complete virions.
defective virus [*de-fek'tiv*] one unable to replicate on its own and needing to be complemented by a 'helper' virus for replication.
defeminization [*de-fem"ĭ-nĭ-za'shən*] loss of female sexual characteristics.
defense [*de-fens'*] 1. against infection, including hematological and immunological systems. 2. behavior directed to protection of the individual from injury.
d. mechanisms means by which the host repels invading organisms; externally, these include the barrier provided by the skin and epithelial lining of the gastrointestinal, genitourinary and respiratory tracts, together with their secretions and normal microflora, and internally, phagocytic cells, humoral and cellular immunity.
d. reaction the physiological reaction to emotional stress, particularly fear, includes tachycardia, increased cardiac output, vasodilation in skeletal muscle, elevation of blood pressure. Behavioral responses include alerting and aggressive behavior.
deferens [*def'ər-enz*] [L.] *deferent*.
deferent [*def'ər-ənt*] conducting or progressing away, as from a center or specific site of reference.
d. duct see **ductus** deferens. Called also vas deferens.
deferentectomy [*def"ər-ən-tek'tə-me*] excision of a ductus deferens. See also **vasectomy**.
deferential [*def"ər-en'shəl*] pertaining to the ductus deferens.
deferentitis [*def"ər-ən-ti'tis*] inflammation of the ductus deferens.
deferoxamine [*də-fər-oks'ə-mēn*] an iron chelating compound used to treat iron poisoning. Called also desferrioxamine
deferral days an important item in dairy cow fertility data; management needs may dictate that cows are not to be bred at their first or subsequent estrus; such delays should not be counted into the average calving-to-mating interval.
defervescence [*def"ər-ves'əns*] the period of abatement of fever. Called also decrement.
defibrillation [*de-fib"rĭ-la'shən*] termination of atrial or ventricular fibrillation, usually by electric shock. Defibrillation by precordial shock is accomplished by delivering a nonsynchronized direct current to the myocardium. It is an emergency procedure, used to terminate a life-threatening ventricular arrhythmia. The electric shock is delivered by means of metal paddles applied directly to the heart muscle, as in cardiac surgery, or by placing the paddles on the chest (closed defibrillation). The high-voltage electrical

VetBooks.ir



D-5: Defibrillator. Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

D-6: Bilateral carpal and metacarpo-phalangeal varus angular deformity in a foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

current delivered during precordial shock causes complete depolarization of the heart muscle, disrupting all of the electrical circuits that are activating the heart muscle and causing ventricular fibrillation. This allows the heart's natural pacemaker to regain control and regulation of the heart rate and rhythm.

chemical d. where electrical equipment is not available for defibrillation, some combinations of drugs have been used. These include potassium chloride followed by calcium chloride or potassium chloride and acetylcholine.

defibrillator [*de-fib″rĭ-la′tər*] an apparatus used to produce defibrillation by application of brief electroshock to the heart, directly or through electrodes placed on the chest wall.

chemical d. certain antiarrhythmic drugs are effective as antifibrillation agents and may be used in emergency situations to overcome ventricular fibrillation.

defibrination [*de-fi″brĭ-na′shən*] the destruction or removal of fibrin, as from the blood.

d. syndrome see disseminated intravascular **coagulation**.

deficient a state of being in deficit.

deficit [*def′ĭ-sit*] a lack or deficiency.

oxygen d. a lack of oxygen, as in hypoxia or anoxia.

defining criterion the hallmark of each disease; a characteristic lesion or result of a clinicopathological test or clinical sign without which the diagnosis cannot be made. Called also key sign, cardinal sign.

definition [*def″ĭ-nish′ən*] establishment of a clear boundary, a clear line of demarcation.

clinical d. an accurate description of the disease in terms of clinical signs and clinicopathological findings.

epidemiological d. an accurate description of the disease in terms of its epidemiological parameters of when, where, why and how it has occurred.

genetic d. an accurate description of a disease in terms of the familial relationships between affected animals.

radiographic d. a sharp line of demarcation between radiographic densities. A gradual merging of densities creates blurring of the image.

deflation receptor [*de-fla′shən*] receptors in the upper airways that are part of the **Hering–Breuer reflexes**.

defleecing [*de-flēs′ing*] see **shearing**.

deflighting [*de-flīt′ing*] removing the ability of birds to fly; can be effected by monthly clipping of the flight feathers on one or both wings, temporarily by bandaging one wing in a flexed position, or permanently by **pinioning** or **patagiectomy**.

defluorination reduction of the fluorine content of a feed to below the level accepted as being nontoxic.

defluvium [*de-floo′ve-əm*] [L.] a falling out, as of the hair.

defluxion [*de-fluk′shən*] 1. a sudden disappearance. 2. a copious discharge, as of catarrh. 3. a falling out, as of hair. See also **anagen** defluxion, **telogen** defluxion.

defoliant a chemical used to remove the leaves from plants to facilitate mechanical harvesting. The early defoliants, especially arsenical compounds, presented serious hazards if the plants were later fed to livestock or if the spray drifted to nearby pasture paddocks. Modern defoliants are nontoxic if used according to manufacturer's recommendations. See **MCPA**, **tributyl triphosphorotrithioite**, **thidiazuron**.

deformability [*de-form″ə-bil′ĭ-te*] the ability of cells, such as erythrocytes, to change shape as they pass through narrow spaces, such as the microvasculature.

deformation [*de″for-ma′shən*] 1. deformity, especially an alteration in shape or structure. 2. the process of adapting in shape or form.

deforming cervical spondylosis [*de-form′ing*] see **hypervitaminosis** A.

deformity [*də-for′mi-te*] distortion of any part or general disfigurement of the body; malformation.

angular limb d's deviation of the limb from the vertical alignment by angulation at the joints or in the bones themselves. May be congenital or acquired; includes genu varus (bowleg) and genu valgus (knock-knee).

deformylase a prokaryotic enzyme that removes the formyl group from amino acids, e.g. the methionine coded by the initiation codon AUG.

DEFRA Department for Environment, Food and Rural Affairs (UK). Replaces what was once the Ministry of Agriculture, Fisheries and Food (MAFF).

degenerate [*de-jen′er-āt*] 1. to change from a higher to a lower form. 2. characterized by degeneration.

degeneration [*de-jen″ər-a′shən*] deterioration; change from a higher to a lower form, especially change of tissue to a lower or less functionally active form. When there is chemical change of the tissue itself it is true degeneration; when the change consists in the deposit of abnormal matter in the tissues, it is infiltration. See also **Wallerian degeneration**, Zenker's **necrosis**.

albuminoid d. cloudy swelling, an early stage of degenerative change characterized by swollen, parboiled-appearing tissues which revert to normal when the cause is removed.

ballooning d. swelling of the cytoplasm in epidermal cells without vacuolization, enlarged or condensed nuclei and acantholysis. A characteristic of viral infections of the skin. Called also koilocytosis.

caseous d. **caseation** (2).

colloid d. degeneration with conversion of the tissues into a gelatinous or gum-like material.

cystic d. degeneration with formation of cysts.

fatty d. see **fatty** change.

feathery d. said of hepatocytes; a hydropic change in hepatocytes which have suffered long-term exposure to cholestasis.

fibrinoid d. deposition or replacement with eosinophilic fibrillar or granular substance resembling fibrin.

fibroid d. degeneration into fibrous tissue.

hyaline d. a regressive change in cells in which the cytoplasm takes on a homogeneous, glassy appearance; also used loosely to describe the histological appearance of tissues. Called also hyalinosis.

hydropic d. see **hydropic** degeneration.
macular d. degenerative changes in the macula retinae; seen in primates only.
mucoid d. degeneration with increased mucin which can be epithelial or mesenchymal in origin.
mucous d. degeneration with accumulation of mucus in epithelial tissues. Called also myxomatous degeneration.
myxomatous d. see mucous degeneration (above).
reticular d. extreme intracellular edema of epidermal cells, resulting in rupture and multilocular intraepidermal vesicles with septae formed by the remaining cell walls. Seen in acute inflammatory dermatoses.
retinal d. degeneration of the retina with concomitant reduction in vision (typically night vision and then day vision); most commonly inherited, but can also be due to previous detachment, glaucoma, nutritional causes, toxicity, chorioretinits, or sudden acquired retinal degeneration (below).
spongy d. on microscopic examination has the physical appearance of a sponge. Usually applied to tissue of the central nervous system, caused by the loss of myelin.
sudden acquired retinal d. (SARD, SARDS) a form of retinal degeneration seen only in dogs (typically middle aged female dogs) in which there is sudden onset of complete blindness. Often associated with Cushingoid-like signs. There are no funduscopically visible changes for 4–8 weeks following vision loss. Diagnosed using electroretinography.

degenerative [*de-jen'ar-ə-tiv*] pertaining to or emanating from degeneration. See also **arthropathy**, **axonopathy**, **encephalomalacia**, degenerative **joint** disease, **myeloencephalopathy**, **myopathy**, **osteoarthritis**.
avian d. joint disease common in coxofemoral joints of mature male turkeys and meat chickens.
d. disease a disease in which the sole pathogenesis is degeneration; that is without the intervention of other pathogeneses, e.g. inflammation, traumatic injury, neoplasia.
d. joint disease see **osteoarthritis**.
d. myopathy due to pressure ischemia in well-conditioned cattle which are recumbent for 24 hours or more; affected muscles are pale, the serum creatine phosphokinase and glutamic-oxaloacetic transaminase concentrations are markedly elevated for brief periods; commonly the condition is irreversible.

degloving [*de-gluv'ing*] the avulsion of skin from underlying structures, usually a result of trauma. Besides the possibility of injury to other structures, viability of the skin involved may be compromised.
deglutition [*deg"loo-tish'ən*] the act of swallowing. There are differences in the mechanism between birds and mammals. Most birds cannot swallow without raising their heads.
degradation [*deg"rə-da'shən*] conversion of a chemical compound to one less complex, as by splitting off one or more groups of atoms.
degranulation [*de-gran"u-la'shən*] the loss of granules; usually refers to the secretory granules in certain cells, e.g. pituitary chromophobes, acidophils and basophils. In basophils and mast cells, it is associated with the release of active substances from the cells and is characteristic of type I immediate **hypersensitivity**.
degreasing agent one used to remove excessive sebaceous secretions and scale from the skin; shampoos containing selenium sulfide or benzoyl peroxide are examples.
degree [*də-gre'*] 1. a grade or rank awarded scholars by a college or university. 2. a unit of measure of temperature. 3. a unit of measure of arcs and angles, one degree being 1/360 of a circle.
degrees of freedom used to define statistical distributions of several tests, usually based on the number of data items less the number of parameters estimated.
degu (*Octodon degus*) a small South American rodent, native to Chile; used as a laboratory animal in neuroscience research and the study of diabetes. Also popular as a pet.
degustation [*de"gəs-ta'shən*] the act or function of tasting.
dehairing [*de"hār'ing*] removal of hairs and bristles of pigs by a scraper after scalding in a tank or a steam cabinet.
dehiscence [*de-his'əns*] a splitting open, as in a surgical wound.
dehorner [*de-hor'nər*] instrument for removing the horns.
Barnes d. two sharp-edged scoops hinged together. Opening them forcefully brings the cutting edges together. Suitable for calves up to 3–4 months of age.

D-7: Use of a Barnes dehorner or scoop for removal of the horns in a calf.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

hot cautery d. an electrically heated instrument that resembles a round soldering iron with a flat, indented head. The iron is heated to red heat and placed over the horn to burn a ring of skin at the base of the horn. The horn is not removed but is allowed to slough. Satisfactory for use in calves up to 2 months of age.
Keystone d. a guillotine type instrument with detachable blades. Has handles 3 feet long and is capable of chopping off the largest cow horns and most bull horns.
tube d. a metal tube with a very sharp edge at one end and a wooden round palm-fitting handle at the other. The tube is placed over the horn and rotated to isolate the horn skin. The tube edge is then used as a gouge to remove the horn. A hole in the side of the tube permits the debris to be removed. For use in calves up to 2–3 months of age.

dehorning [*de-hor'ning*] the removal of horns either by caustic paste or electrocautery when very young or by surgical amputation with a **dehorner** or saw at any age. Special care is needed with goats because of their extreme reaction of shock.
d. nerve block see cornual **block**.
dehull to remove the outer covering of a seed used as feed. Improves the nutrient value of the grain. The hulls may be used separately as a roughage supplement.
dehumidifier [*de"hu-mid'i-fi"ər*] an apparatus for reducing the content of moisture in the atmosphere.
dehydratase [*de-hi'drə-tās*] any enzyme of the lyase class that catalyzes the removal of H_2O, leaving double bonds (or adding groups to double bonds).
dehydrate [*de-hi'drāt*] 1. to undergo the process of dehydration. 2. reduce the moisture content of a feed by drying.
dehydrating agent agent used in the clearing and mounting of tissue slides for microscopic examination, e.g. ethanol, butanol, isopropanol.
dehydration [*de"hi-dra'shən*] the state when the body loses more water than it takes in. There is a negative fluid balance, so that the circulating blood volume decreases and tissue fluids are reduced and tissues are dehydrated. The clinical syndrome of dehydration includes loosening and wrinkling of the skin, and a bad skin-tenting reaction, in which a pinched-up fold of skin takes longer than normal to disappear; there is usually evidence of the cause of the dehydration, e.g. vomiting, polyuria. Clinical pathological tests are essential to determine the severity of the dehydration.
cellular d. caused by increased osmoconcentration of the extracellular fluid.
dehydrocholesterol [*de-hi"dro-kə-les'tər-ol*] 7-dehydrocholesterol; a sterol found in the skin which, when properly irradiated by ultraviolet rays, forms vitamin D.
activated 7-d. cholecalciferol.
dehydrocholic acid [*de-hi"dro-ko'lik*] a semisynthetic bile acid used to increase output of bile by the liver and the filling of the gallbladder. Preparations of this acid are used to aid the digestion of fats and increase absorption of fat-soluble vitamins.
11-dehydrocorticosterone [*de-hi"dro-kor"ti-kos'tər-ōn*] one of the least active of the glucocorticosteroids produced by the adrenal cortex.
dehydroepiandrosterone (DHEA) [*de-hi"dro-ep"e-an-dros'tər-ōn*] an androgen occurring in normal human urine and synthesized from cholesterol.

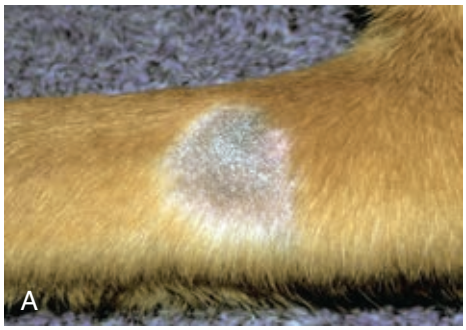
dehydrogenase [*de-hi'dro-jən"ās*] an enzyme that mobilizes the hydrogen of a substrate so that it can pass to a hydrogen acceptor, such as NAD+ or FAD+.
alcohol d. dimeric enzyme protein of the liver catalyzing the NAD+-linked dehydrogenation of ethanol to acetaldehyde.
glucose-6-phosphate d. see **glucose**-6-phosphate dehydrogenase.
glutamate d. (GLDH, GMD, GD), glutamic d. an enzyme that catalyzes the reversible reaction of glutamic acid into 2-oxoglutaric acid and ammonia, which is then converted to urea. High concentrations occur in the liver of sheep, cattle, horses, dogs, birds and exotic species, such as amphibians and reptiles, and increased serum concentration is an indicator of hepatocellular damage.
L-iditol d. (ID) a liver specific enzyme; serum determinations have been used in the horse to detect hepatocellular damage. Called also sorbitol dehydrogenase, SDH.
isocitrate d. (ICD) an enzyme found in high concentrations in many tissues. Exists in two major forms, an NAD+-dependent ICD associated with the mitochondrial TCA cycle and a NADP+-dependent ICD associated with fat synthesis in adipose tissue and lactating mammary gland of ruminants or with steroidogenesis in endocrine tissues. Serum concentrations have been used to detect hepatocellular damage, but it is not highly specific.
lactate d. (LDH, LD), lactic acid d. an enzyme that catalyzes the reversible conversion of pyruvate to lactate, the final step in the glycolysis pathway in anerobic conditions. It is widespread in tissues and is particularly abundant in kidney, skeletal muscle, liver and myocardium. It appears in elevated concentrations when these tissues are injured. See also **mouse** lactic dehydrogenase elevating virus.
lactate d. agent see ***Arterivirus***.
lactate d. test a high concentration in milk used as an indicator of the presence of mastitis in the quarter.
polyol d. see **L-iditol dehydrogenase** (above).
sorbitol d. (SDH) see **L-iditol dehydrogenase** (above).
dehydrogenate [*de-hi'dro-jən-āt*] to remove hydrogen from.
dehydrongaione one of the hepatoxic furanosesquiterpenes found in *Myoporum* spp. and *Eremophila* spp. of plant family Myoporaceae.
dehydropiandrosterone weak androgen secreted by the testes and ovary.
dehydroretinal [*de-hi"dro-ret'ĭ-nəl*] the aldehyde of dehydroretinol, derived from the visual pigment porphyropsin, found in freshwater fishes and certain vertebrates and amphibians; its metabolic role is analogous to that of rhodopsin in other animals.
dehydroretinol [*de-hi"dro-ret'ĭ-nol*] vitamin A_2, the form, $C_{20}H_{28}O$, of vitamin A found in the retina and liver of freshwater fishes and certain invertebrates and amphibians; it differs from retinol (vitamin A_1) in having one more conjugated double bond and has approximately one-third the biological activity of retinol. Called also retinol$_2$.
Deinocerites a mosquito; vector of the virus of equine encephalomyelitis.
deiodinase an enzyme that deiodinates two of the iodinated amino acids (iodothyrosines) within the thyroid gland. Selenium-dependent deiodinase I converts thyroxine (T4) to triiodothyronine (T3), the more active thyroid hormone.
deionization [*de-i"on-ĭ-za'shən*] the production of a mineral-free state by the removal of ions.
Deiter's nucleus [*di'terz*] lateral vestibular nucleus in the brainstem.
dejecta excrement.
deka- deca-.
delacrimation [*de-lak"rĭ-ma'shən*] excessive flow of tears.
delactation [*de-lak"-ta'shən*] 1. weaning. 2. cessation of lactation.
Delafondia see ***Strongylus***.
DELAT direct enzyme-linked antiglobulin test.
delay phenomenon [*de-la'*] a method of improving survival of skin grafts by raising large flaps in several stages before they are transferred.
delayed [*de-lād'*] prolonged beyond the time normally required.
d. hypersensitivity see delayed **hypersensitivity**.
d. neurotoxic effects a characteristic effect of the neurotoxins in industrial triaryl phosphates.
d. ovulation individual cows appear to have a prolonged follicular phase in their estral cycle, usually about 48 hours.
d. primary closure the surgical closing of a wound several days after the injury because the wound was initially too contaminated to close. Union of the wound closed in this manner is called healing by third intention.
delead, de-lead [*de-led'*] to induce the removal of lead from tissues and its excretion in the urine by the administration of chelating agents.
deleterious [*del"ə-tēr'e-əs*] injurious; harmful.
deletion [*də-le'shən*] in genetics, loss of genetic material from a chromosome.
Deletrocephalus nematode genus of the superfamily Strongyloidea. Placed in the family Deletrocephalidae; found in the large intestine of the rhea.
Delhi boil see **leishmaniasis**.
deliquescence [*del"ĭ-kwes'əns*] the condition of becoming moist or liquified as a result of absorption of water from the air.
deliver [*de-liv'ər*] 1. to aid in parturition. 2. to remove, as a fetus, placenta or lens of the eye.
delivery [*de-liv'ər-e*] expulsion or extraction of the young and fetal membranes at birth.
abdominal d. delivery of a neonate through an incision made into the uterus through the abdominal wall (**cesarean section**).
d. per vaginam normal birth, the fetus being delivered through the vagina; in contrast to a cesarean delivery.
dell [*del'*] a small depression or dimple.
dellen [*del'ən*] saucer-shaped excavations at the periphery of the cornea, usually on the temporal side.
delmadinone acetate [*del-mad'ĭ-nōn*] a progesterone with anti-estrogen and antiandrogen activity; used to suppress estrus and prevent pregnancy in dogs and cats, and for treatment of benign prostatic hyperplasia, perianal tumors and hypersexuality.
delomorphous [*del"o-mor'fəs*] having definitely formed and well-defined limits, as a cell or tissue.
Delosperma genus of African plants in family Aizoaceae; contains soluble oxalates which cause nephrosis, edema. Called also mesems, vygies.
delphinine [*del'fĭ-nēn*] the best known toxic alkaloid in *Delphinium* plants.
Delphinium [*del-fin'e-əm*] a genus of the plant family Ranunculaceae which includes the domesticated plants, delphinium and larkspur. One of the commonest causes of plant poisoning in North America. In the western United States larkspur species are commonly described in three basic categories: plains, low and tall, based on mature plant height and geographic distribution. They produce more than 18 different toxic diterpenoid alkaloids of which methyllycaconitine is believed the major toxic principle. It is a potent blocker of acetylcholine receptors and poisoned animals show muscle weakness, trembling, incoordination, stiff gait, straddled posture and sudden collapse. Animals may die from respiratory paralysis or inhalation of regurgitated ruminal contents. Include *D. andersonii*, *D. barbeyi*, *D. brownii*, *D. geyeri*, *D. glaucum*, *D. glauscens*, *D. nelsonii* (*D. bicolor*, *D. menziesii*), *D. nuttallianum*, *D. occidentale* (*D. cucullatum*, *D. scopulorum*), *D. parryi*, *D. ramosum* (*D. elongatum*), *D. recurvatum* (*D. hesperium*), *D. robustum*, *D. tricorne*, *D. trolliform*, *D. vestitum*, *D. virescens* (*D. camporum*).
delrad an algicide used in water supplies but is nontoxic at the concentrations used. Poisoning can occur with high doses.
delta [*del'tə*] 1. the fourth letter of the Greek alphabet, Δ or δ; used in chemical names to denote the fourth of a series of isomeric compounds or the carbon atom fourth from the carboxyl group, or to denote the fourth of any series. 2. a triangular area.
delta-aminolevulinic acid see **δ-aminolevulinic acid**.
delta-lysin one of the toxins produced by *Staphylococcus aureus*. Can cause dermonecrosis and destroy leukocytes, but its role in pathogenesis is unclear. Called also delta-toxin.
delta-toxin **delta-lysin** of *Staphylococcus aureus*.
Delta Society an international, non-profit organization promoting the human-animal bond through the use of animal-assisted activities and therapies.
delta virus hepatitis D virus.
deltamethrin [*del"tə-meth'rin*] a synthetic pyrethroid.
Deltaretrovirus a genus in the family *Retroviridae* that includes exogenous, horizontally transmitted viruses found in several groups of mammals. Examples are bovine leukemia virus and human T-lymphotropic virus.
deltoid [*del'toid*] 1. triangular. 2. a muscle of the shoulder, between the scapula and the humerus that helps flex the shoulder and abducts the forelimb. See also Table 13.

VetBooks.ir

VetBooks.ir

Demansia [*de-man'se-ə*] a genus of venomous **snakes**.
dematiaceous [*de-mat"e-a'shəs*] darkly pigmented; said of some fungi.
deme [*dēm*] a population of animals with very similar physical characteristics, which interbreed and occupy a limited geographic region. Called also a genetic population.
demeanor behavior towards others; body language.
demecarium [*dem"ə-kar'e-əm*] an indirect acting cholinergic agonist, used topically in the management of glaucoma; it is more potent and has longer duration of activity than pilocarpine.
demeclocycline [*dem"ə-klo-si'klēn*] a broad-spectrum tetracyclic antibiotic produced by a mutant strain of *Streptomyces aureofaciens*.
demecolcine a cytotoxic alkaloid derived from *Colchicum autumnale*. It is used in **chromosome** analysis to arrest cell division in mid-metaphase so that the chromosomes can be stained by one of several techniques that produce a distinct pattern of light and dark bands along the chromosomes, and each chromosome can be recognized by its size and banding pattern.
dementia [*də-men'shə*] loss of intellectual capacity accompanied usually by irrational behavior.
demephion an organophosphorus compound used as an insecticide and acaricide.
Demerol [*dem'ər-ol*] a proprietary name for meperidine.
demeton an organophosphorus insecticide used as a treatment for sucking lice. Consists of a mixture of two compounds; toxicity varies significantly, depending on their relative concentrations.
demilune [*dem'e-*] crescent shaped.
serous d. serous fluid-producing cells in glands; small canals connect the serous cells with the luminal surface.
demineralization [*de-min"ər-əl-ĭ-za'shən*] excessive elimination of mineral or organic salts from the tissues of the body.
demodectic mange [*dem-o-dek'tik*] mange which in all species is caused by species-specific *Demodex* spp. Characterized by folliculitis with hair loss and often pustule formation anywhere on the body although the head, face, neck and shoulders are most often affected. The cause of wastage due to the disease in large animals, mainly cattle, goats and pigs, is the reduced value of the hide or pelt. See also **demodecosis**.
Demodex [*dem'o-deks*] a genus of mites parasitic within the hair follicles of the host; a member of the family Demodicidae. Some of the more common species are: *Demodex aries* (found in sheep), *D. bovis* (infests cattle), *D. caballi* (infests horses), *D. canis* (infests dogs), *D. caprae* syn. *D. capri* (infests goats), *D. cati* (infests cats), *D. cornei* (short bodied mite of dogs and cats), *D. criceti* (infests hamsters), *D. equi* (infests horses), *D. folliculorum* (infests humans), *D. gatoi* (infests cats), *D. ghanensis* (infests cattle), *D. inja* (long bodied mite of dogs), *D. muscardini* (infests dormice), *D. ovis* (infests sheep), *D. phylloides* (infests pigs).
demodicosis [*dem"ə-dĭ-ko'sis*] demodectic mange; the disease is most common in dogs where it is associated with an abnormality of cell-mediated immunity. Most often, there are one or a few areas of hair loss in young dogs (localized) which will heal spontaneously, although treatment is often given. Occasionally the disease is generalized, severe and resistant to all treatment. Secondary bacterial infection is very common. Examination of a skin scraping confirms the diagnosis. Called also follicular mange, red mange, demodectic mange. In cats, several species of *Demodex* mites are associated with skin disease. *D. cati* causes follicular demodecosis, similar to the disease in dogs and is often associated with an underlying immunosuppressive disease. Alopecia, erythema and scaling may be localized around the head, face and ears; otitis externa may be the principle complaint. *D. gatoi* is found in the superficial epidermis with clinical disease varying from asymptomatic to alopecia with intense pruritus and self trauma. *D. injai* (the large bodied *Demodex* mite) is found in sebaceious glands and is associated with a dorsal seborrheic dermatitis. Mites are less easily recovered in skin scrapings from cats than from dogs.

D-8: *Demodex canis* mites.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



D-9: (A) Localized demodicosis on the foreleg of a dog. (B) Generalized demodicosis.

demogram [*de'mo-gram*] a report of demographic results, usually in grid form.
demographics [*de"mo-graf'iks*] the graphic representation of demographic results.
demography [*de-mog'rə-fe*] the statistical science dealing with populations, including matters of health, disease, births and mortality. Strictly speaking the word refers to human populations but common usage includes lower animal populations.
demucosation [*de-mu"ko-sa'shən*] removal of the mucous membrane from a part.
demulcent [*de-mul'sənt*] 1. soothing; bland. 2. a soothing mucilaginous or oily medicine or application.
alimentary d. substances of high molecular mass and good solubility that lubricate, coat and protect the mucosa of the upper alimentary tract. Usually they mask unpleasant tastes, stabilize emulsions, and act as suspension agents. Methyl cellulose, gum tragacanth, agar, mineral oil and propylene glycol are used for this purpose.
demyelinate [*de-mi'ə-lin'āt*] to destroy or remove the myelin sheath of a nerve or nerves.
demyelination [*de-mi"ə-lĭn-a'shən*] destruction, removal, or loss of the myelin sheath of a nerve or nerves.
demyelinization [*de-mi"ə-lin-ĭ-za'shən*] see **demyelination**.
denarcotize [*de-nahr'ko-tīz*] to deprive of narcotics or of narcotic properties.
denaturant [*de-na'chər-ənt*] a denaturing agent.
denaturation [*de-na"chər-a'shən*] 1. a change in the usual nature of a substance, as by the addition of methanol or acetone to alcohol to render it unfit for drinking. 2. disruption in protein and nucleic acid structure, produced by heat or certain chemicals, usually results in loss of function. In proteins, various noncovalent bonds are disrupted resulting in unfolding of the polypeptide chain; in nucleic acids hydrogen bonds between nucleotides are disrupted converting double-stranded molecules or parts of them into single-stranded forms.

protein d. any nonproteolytic change in the chemistry, composition or structure of a native protein which causes it to lose some or all of its unique or specific characteristics.

denature to deprive a substance of its natural qualities, e.g. by heating a protein to destroy its specific biological activity.

dendraxon a nerve cell whose axon splits up into terminal filaments immediately after leaving the cell.

dendric [*den'drik*] pertaining to a dendrite.

dendriform [*den'drĭ-form*] tree-shaped.

dendrite [*den'drīt*] any of the threadlike extensions of the cytoplasm of a neuron; dendrites, which typically branch into treelike processes, compose most of the receptive surface of a neuron.

dendritic [*den-drit'ik*] 1. branched like a tree. 2. pertaining to or possessing dendrites.

d. cell see dendritic **cell**.

d. reticular cell cells in lymph nodes participating in the provision of immune responses.

d. zone region of the neuron subjected to excitatory and inhibitory stimulation.

Dendritobilharzia a genus of digenetic trematodes in the family Schistosomatidae.

D. pulverulenta found in the dorsal aorta of swans.

dendr(o)- word element. [Gr.] *tree, treelike*.

Dendroaspis [*den"dro-as'pis*] see **mamba**.

dendrochiotoxicosis [*den-dro"do-ke-o-tok"sĭ-ko'sis*] see ***Dendrochium toxicum***.

Dendrochium toxicum [*den-dro-do'ke-əm*] toxic fungus which parasitizes stored grain; contains an unidentified toxin which causes a blood dyscrasia and degenerative visceral lesions.

Dendrocnide genus of Asian, Australian and Pacific rainforest trees and shrubs in the family Urticaciae. Stinging hairs on the foliage cause severe and persistent pain on contact; horses have died from the effects; contains a toxic peptide moroidin. Includes *D. excelsa*, *D. moroides*, *D. photinophylla*. Called also *Laportea* spp., stinger, gympie.

dendrodendritic see dendrodendritic **synapse**.

dendroid [*den'droid*] branched like a tree.

dendron [*den'dron*] dendrite.

Dendronessa galericulata mandarin duck. See ***Aix galericulata***.

denervation [*de"nər-va'shən*] interruption of the nerve connection to an organ or part. See also **denervating**.

d. atrophy reduction in muscle fiber diameter as a result of discontinuation of nerve supply; always accompanied by paralysis; also called neurogenic atrophy.

denervating the process of denervation.

distal d. disease condition seen in dogs affecting multiple peripheral nerves. Clinical signs are the result of distal motor axon degeneration within muscles and include tetraparesis, head and neck weakness, muscle atrophy and possibly change in voice. Sensation is preserved. Recovery occurs over approximately 4–6 weeks and the condition appears similar in some respects to idiopathic **polyradiculoneuritis**. The etiology is currently unknown.

Denman Island disease [*den'mən*] severe disease of Pacific oysters in British Columbia, especially in the vicinity of Denman Island. Caused by the protozoan ***Mikrocytos*** *mackini*. There are abscess-like lesions.

denominator the bottom line of a fraction; the base population on which population rates such as birth and death rates are calculated.

dens [*dens*] pl. *dentes* [L.] a tooth or toothlike structure. The axis vertebra has a dens or odontoid process which protrudes from the cranial part of the body and articulates with the ventral arch of the atlas.

d. en dente a malformed tooth consisting of an invagination of the enamel, dentin and pulp within the tooth bud, appearing as a tooth within a tooth.

d. hypoplasia see **atlantoaxial subluxation**.

d. lupinus first premolar tooth in the horse. Always vestigial, often missing. Called also wolf tooth.

dense bars optically dense structures which occur in series aligned along the presynaptic membrane in neuromuscular junctions and contribute to active zones in muscle–nerve relationships.

dense bodies round, amorphous bodies scattered through the cytoplasm of smooth muscle fibers; they appear to be points of attachment for myofilaments.

densimeter, densitometer [*den-sim'ə-tər, den"sĭ-tom'ə-tər*] 1. an instrument for determining density or specific gravity of a liquid. 2. an instrument used for measuring photographic transmission and/or reflection density.

densitometry [*den"sĭ-tom'ə-tre*] determination of variations in density by comparison with that of another material or with a certain standard.

density [*den'sĭ-te*] 1. the ratio of the mass of a substance to its volume. 2. the quality of being compact. 3. the quantity of matter in a given space. 4. the quantity of electricity in a given area, volume or time. 5. the degree of film blackening in an area of a photograph or radiograph.

population d. number of animals per unit of area; important in relation to the rate of spread of disease.

d. sampling see **sampling**.

Densovirus a genus in the family *Parvoviridae*, subfamily *Densovirinae*, members of which infect insects.

dental [*den'təl*] pertaining to the **teeth**.

d. abscess see **alveolar**[1] abscess, **malar** abscess.

d. aging telling the age of an animal by its teeth. Significant especially in horses, cattle and sheep, but it can only classify in relatively broad age categories. See also **age** determination.

d. alloy alloys used in the restoration of teeth.

d. arcade the complete array of teeth in the form of an arch. There is an upper and a lower arcade, except in ruminants where the incisor sector of the upper arcade is absent.

d. bud the dental laminae, focal thickenings of the oral mucosae of the developing embryo, invaginate to form dental buds, the early stage of the enamel organ of the embryonic teeth.

d. chisel see dental hoe (below).

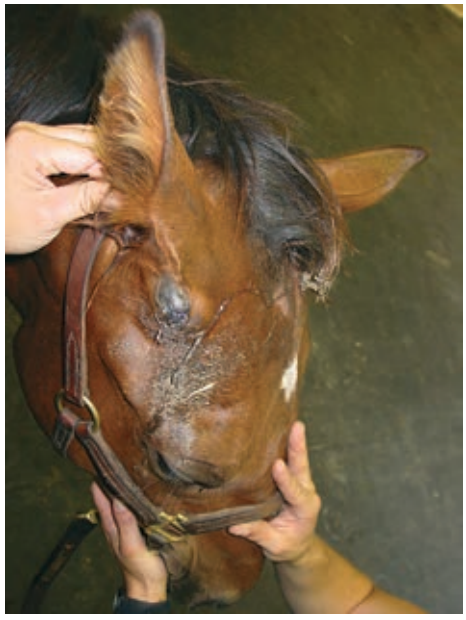
d. claw an instrument used often for scaling teeth in dogs and cats. It has a thick, sickle-shaped end.

d. cyst may be odontogenic, containing cell rests of dental tissue, or dentigerous, in which all or part of a tooth is in the cyst. Causes a local swelling of the jaw which may be visible externally. Called also dentigerous cyst.

d. discoloration occurs as a result of medication with tetracyclines when the teeth are still in the development stage, in cases of porphyrinuria, and in small discrete lesions in association with fluorosis, again when the poisoning occurred in the pre-eruption stage. Congenital absence of dentin and enamel, as occurs in calves, causes the teeth to look pink because of their vascularity.

d. fistula caused by the spread of alveolar periostitis or abscess. The fistula discharges from the tooth root to the side of the face below the eye, the maxillary sinus or the nasal cavity. Called also **malar** abscess, gum boil.

d. formula an alphanumeric system for listing the number, type (I = incisor, C = canine, P = premolar, M = molar), and position (upper or lower) of teeth: ox and sheep $2(I_4^0\ C_0^0\ P_3^3\ M_3^3) = 32$; horse $2(I_3^3\ C_1^1\ P_3^4\ M_3^3) = 42$; camel $2(I_1^3\ C_1^1\ P_{1\text{-}2}^3\ M_3^3) = 32 - 34$; llama, alpaca $2(I_1^3\ C_1^1\ P_{1\text{-}2}^{1\text{-}2}\ M_3^3) = 28 - 32$; pig $2(I_3^3\ C_1^1 P_4^4\ M_3^3) = 44$; dog $2(I_3^3\ C_1^1\ P_4^4\ M_2^3) = 42$; cat $2(I_3^3\ C_1^1\ P_2^3\ M_1^1) = 30$.



D-10: Dental (dentigerous) cyst with a draining tract in a horse. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

d. fracture/fissure usually the result of traumatic injury. Causes great discomfort, unwillingness to close the jaw or chew; often the mouth sags open and saliva is allowed to drool.
d. hoe an instrument commonly used in veterinary dentistry. It has a broad end with a beveled edge. Called also dental chisel.
d. impaction failure of teeth to erupt out of the alveolar bone or through the gum.
d. interlock in dogs, eruption of deciduous and permanent canine teeth that causes them to interlock after which the maxilla and mandible are forced to grow at the same rate. Can result in prognathism, narrow mandible or brachygnathism.
d. irregular wear see **wave mouth**.
d. lamina in the embryonic oral mucosa dental lamina form as local thickenings of the epithelium; they invaginate to form dental buds, later the enamel organ. See also **dental** bud.
d. luxation includes loosening of teeth through to complete avulsion.
d. mirror a small round mirror set at an angle on one end of a handle, used in dental examinations to reflect images from intraoral surfaces.
d. numbering systems see **Palmer's dental notation**, **Fédération Dentaire Internationale system**, **Triadan system**.
d. pad the thick layer of mucous membrane covered connective tissue that replaces the upper incisor teeth in the ruminant; a rostral projection of the hard palate and a form of modified gum. Because of the angle of the incisor teeth in the lower jaw and their absence in the upper jaw cattle cannot inflict a painful bite with their incisors but can inflict severe crushing injury with their molar teeth if the hand is inserted further back in the oral cavity.
d. papillary mesenchyme the tissue which converts the dental cap stage of the growing tooth to the bell stage by covering it with enamel.
d. records contain the history of dental treatment given, generally recorded on diagrams or charts of the mouth, showing position of individual teeth, gingiva and occlusion.
d. resorption may occur if the tooth pulp is traumatized, by osteoclastic action inside the tooth or outside, in the alveolar bone.
d. sac the remains of the dental follicle at the apex of immature teeth.
d. star the mark on the occlusal surface of a tooth, especially horse incisors, which is caused by the appearance of secondary dentin, contributed by the pulp cavity, as the tooth wears.
d. tartar see dental **calculus**.
dentalgia [*den-tal'jə*] toothache.
dentate [*den'tāt*] notched, toothed; tooth-shaped.
dentia [*den'shə*] a condition relating to development or eruption of the teeth.
d. precox premature eruption of the teeth.
d. tarda delayed eruption of the teeth, beyond the usual time for their appearance.
dentibuccal [*den"tĭ-buk'əl*] pertaining to the cheek and teeth.

D-11: Opened mouth of a cow showing the lower incisors and the dental pad on the upper jaw.

D-12: Dental star. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

denticle [*den'tĭ-kəl*] 1. a small toothlike process. 2. a distinct calcified mass within the pulp chamber or in the dentin of a tooth.
dentification [*den"tĭ-fĭ-ka'shən*] formation of tooth substance.
dentigerous [*den-tij'ər-əs*] bearing teeth.
d. cyst see **dental** cyst.
dentilabial [*den"tĭ-la'be-əl*] pertaining to the teeth and lips.
dentilingual [*den"tĭ-ling'wəl*] pertaining to the teeth and tongue.
dentin [*den'tin*] one of the hard tissues of the teeth which constitutes most of its bulk. Lies between the pulp cavity and the enamel, and where it is not covered by enamel is covered by cementum; the inorganic fraction (about 70%) is mainly hydroxyapatitie; it is perforated by numerous tubules that are processes of odontoblasts that run outwards from the pulp cavity.
sclerotic d. a dense clear dentin formed when the dentinal tubules are filled with mineralized material.
secondary d. dentin laid down in later development of a tooth, helping to avoid the exposure of the tooth pulp. It is often pigmented and is responsible for the appearance of the dental star.
tertiary d. produced in response to irritation of odontoblastic processes. Called also reparative dentin.
dentinal [*den'tĭ-nəl*] pertaining to dentin.
d. fibers fibers contained in predentin but displaced by dentin as it is deposited, the fibers leaving apical processes of odontocytes behind, contained in dentinal tubules through which nerves also pass; called also odontoblastic processes.
d. tubules microscopic, fluid-containing, parallel channels densely populating dentin.
dentine [*den'tēn*] dentin.
dentinoblastoma [*den"tĭ-no-blas-to'mə*] see **dentinoma**.
dentinoenamel junction [*den"tĭ-no-ə-nam'əl*] the junction where dense, acellular enamel, being deposited by ameloblasts, meets the retreating ameloblastic front.
dentinogenesis [*den"tĭ-no-jen'ə-sis*] the formation of dentin.
d. imperfecta disorder of tooth development characterized by discoloration and early wear of all teeth.
dentinoma [*den"tĭ-no'mə*] a tumor of odontogenic origin and consisting mainly of dentin.
dentinosteoid [*den"tĭ-nos'te-oid*] a tumor composed of or containing dentin and bone.
dentinum [*den-tī'nəm*] see **dentin**.
dentistry [*den'tis-tre*] the evaluation, diagnosis, prevention or treatment of abnormalities and pathology of the oral cavity and maqxillofacial region.
conservative d. involved with the preservation of natural teeth.
restorative d. the repair of defects or injury to teeth.
dentition [*den-tish'ən*] the teeth in the dental arch; ordinarily used to designate the natural teeth in position in the alveoli.
deciduous d. the complement of teeth that erupt first and are later succeeded by the permanent teeth.
milk d. the dentition of sucklings, the deciduous teeth.
mixed d. the complement of teeth in the jaws after eruption of some of the permanent teeth, but before all the deciduous teeth are shed.
permanent d. the complement of teeth that normally erupt after the deciduous teeth and that are never shed except in old age.
temporary d. the temporary or first set of teeth in animals with diphyodont dentition. See also deciduous **teeth**.
dent(o)- word element. [L.] *tooth, toothlike.*
dentoalveolar [*den"to-al-ve'ə-lər*] pertaining to a tooth and its alveolus.
d. abscess see **alveolar abscess**.
dentoalveolitis [*den"to-al"ve-ə-li'tis*] periodontitis.
dentofacial [*den"to-fa'shəl*] of or pertaining to the teeth and alveolar process and the face.
dentulous [*den'tu-ləs*] having natural teeth.
denture [*den'chər*] a complement of teeth, either natural or artificial; ordinarily used to designate an artificial replacement for the natural teeth and adjacent tissues. Isolated reports of use in dogs.
denucleation [*de-noo"kle-ā'shən*] deprivation of the nucleus.
denudation [*den"u-da'shən*] the stripping or laying bare of any part.
deodorant [*de-o'dər-ənt*] 1. destroying or masking odors. 2. an agent that masks offensive odors.
deodorize [*de-o'dər-īz*] to neutralize or absorb odor.
deodorizer [*de-o'dər-īz"ər*] a deodorizing agent.
deorsumversion [*de-or"səm-vur'zhən*] the simultaneous turning downward of both eyes.

VetBooks.ir

deossification [*de-os"ĭ-fĭ-ka'shən*] loss or removal of the mineral elements of bone.

deoxidation [*de-ok"sĭ-da'shən*] the removal of oxygen from a chemical compound.

deoxy- a chemical prefix designating a compound containing one less atom of oxygen than the reference substance. For words beginning thus, see also those beginning *desoxy-*.

deoxycholate [*de-ok"se-ko'lāt*] any salt of deoxycholic acid.

deoxycholic acid [*de-ok"se-ko'lik*] one of the bile acids, capable of forming soluble, diffusible complexes with fatty acids, and thereby allowing for their absorption in the small intestine.

deoxydexamethasone [*de-ok"se-dek-sə-meth'ə-sōn*] desoximetasone.

deoxygenation [*de-ok"sĭ-jən-a'shən*] the act of depriving of oxygen.

2-deoxy-D-glucose an antimetabolite of glucose with antiviral activity; it acts by inhibiting the glycosylation of glycoproteins and glycolipids; it has been investigated for treatment of herpesvirus infections.

deoxyhemoglobin [*de-ok"se-he"mo-glo'bin*] hemoglobin not combined with oxygen, formed when oxyhemoglobin releases its oxygen to the tissues.

deoxynivalenol [*de-ok"se-nĭ-val'ə-nol*] trichothecene toxin produced by the fungus *Fusarium graminearum* and other fungi. Called also don, food refusal factor, emetic factor, vomitoxin.

deoxyribonuclease (DNase) [*de-ok"se-ri"bo-noo'kle-ās*] an enzyme that catalyzes the hydrolysis (depolymerization) of deoxyribonucleic acid (DNA). Group A streptococci elaborate DNases and commercially available DNase agar may be used to identify pathogenic species.

deoxyribonucleic acid [*de-ok"se-ri"bo-noo-kle'ik*] a **nucleic acid** occurring in cells as the basic structure of the genes. DNA is present in all body cells of every species, including unicellular organisms and DNA viruses. The structure of DNA was first described in 1953 by J.D. Watson and F.H.C. Crick. DNA molecules are long linear polymers of small molecules called *nucleotides*, each of which consists of one molecule of the five-carbon sugar *deoxyribose* bonded to a *phosphate* group and to one of four heterocyclic nitrogenous compounds referred to as *bases*. A single strand of DNA is made by linking the nucleotides together in a chain with bonds between the sugar and phosphate groups of adjacent nucleotides. It thus consists of a backbone of alternating sugar and phosphate groups with a base attached to each sugar as a side chain. The four bases are two purines, *adenine* (A) and *guanine* (G), and two pyrimidines, *cytosine* (C) and *thymine* (T). Single-stranded DNA can be synthesized with any specified sequence of bases, but in living cells the base sequence has a meaning; it specifies the amino acid sequence of all of the polypeptides and proteins made by the cell. And since all of the enzymes that catalyze biochemical reactions are proteins, the DNA contains the specifications for all of the biochemistry and structure of the cell. The chemical basis of the genetic code lies in the ability of the bases to form hydrogen bonds with each other. Unlike the covalent bonds holding together the atoms of a single strand of DNA, hydrogen bonds are weak and easily broken and reformed. Hydrogen bonding is governed by the base pairing rule: A always bonds with T, and C always bonds with G. A and T (or C and G) are called *complementary bases*. The genetic information is read and preserved by the matching up of complementary bases. In cells, the DNA is double-stranded. The configuration of the DNA molecule resembles a ladder in which the sides are the sugar–phosphate backbones, which are antiparallel (they run in opposite directions), and the rungs are hydrogen-bonded complementary bases; thus, the entire sequence along the two strands is complementary. This whole structure is twisted so that the two strands form a double helix. Once before each cell division, a group of proteins splits the two strands apart, and as complementary nucleotides bond to the bases of each strand they are jointed to form a new strand. This process is called *replication*. It results in the exact duplication of the DNA molecule, because each strand serves as a *template* (pattern) for the synthesis of its complementary strand. When the cell divides, one copy goes to each daughter cell. Thus, the genetic information is passed on from generation to generation without change except for rare mutations, which result from copying errors or incorrectly repaired breaks in the DNA molecule that change the base sequence. The reading of the genetic code involves two processes: *transcription* and *translation*. In transcription, a length of DNA is used as a template to make a complementary strand of *messenger RNA* (mRNA). RNA (ribonucleic acid) is a nuceic acid like DNA. The only differences are that the sugar, ribose, has an extra oxygen atom, and the pyrimidine base, *uracil* (U), which also pairs with adenine, replaces thymine. In translation, the mRNA molecule is read by a structure called a ribosome, which produces the polypeptide specified by the mRNA message. The genetic code is a triplet code. Every triplet of bases along the strand specifies a single amino acid. There are 64 possible triplets (codons) that can be formed from the four bases. Each one specifies that one of 20 different amino acids be inserted in a growing polypeptide chain or marks either the start or the end of a chain. Two other types of RNA are involved in translation. *Ribosomal RNA* (rRNA) forms a large part of the ribosome. *Transfer RNA* (tRNA) is the means by which codons are matched with amino acids. tRNAs are small molecules with several self-complementary sections so that they fold up into a compact structure owing to bonding between complementary bases. One end of the molecule is a three-base anticodon, which bonds to its complementary codon on mRNA molecules. The other end is recognized by a specific enzyme which attaches the correct amino acid to it. During translation, the ribosome proceeds along the mRNA molecule and, as each codon is matched by a specific tRNA, the amino acid it carries is transferred to the growing polypeptide chain, and the process is repeated until the 'stop' codon is reached. Like the mRNA molecules, rRNA and tRNA molecules are formed on DNA templates; the genetic material contains not only the information for polypeptide sequences but also for rRNA and tRNA sequences. The chromosomes of mammalian cells contain 3×10^9 base pairs which is enough to code for the 100 000 or so enzymes and structural proteins. Less than 10% of the DNA codes for proteins and RNA, the rest is noncoding, also referred to as 'junk' DNA, and is of uncertain purpose. DNA is the molecule that directs all of the activities of living cells, including its own reproduction and perpetuation in generation after generation.

deoxyribonucleoprotein [*de-ok"se-ri"bo-noo"kle-o-pro'tēn*] a nucleoprotein in which the sugar is D-2-deoxyribose.

deoxyribonucleoside [*de-ok"se-ri"bo-noo'kle-o-sīd*] a nucleoside having a purine or pyrimidine base bonded to deoxyribose.

deoxyribonucleotide [*de-ok"se-ri"bo-noo'kle-o-tīd*] a nucleotide having a purine or pyrimidine base bonded to deoxyribose, which in turn is bonded to a phosphate group.

deoxyribose [*de-ok"se-ri'bōs*] an aldopentose found in deoxyribonucleic acid, deoxyribonucleotides and deoxyribonucleosides.

depasture to feed livestock by grazing them on pasture.

Dependovirus [*də-pen'do-vi"rəs*] a genus in the family ***Parvoviridae***, subfamily *Parvovirinae* that includes the **adeno-associated viruses**.

dephosphophosphorylase the less active form of the regulatory hydrolytic enzyme involved in the phosphorolytic breakdown of glycogen to glucose.

dephosphorylation [*de-fos"for-ə-la'shən*] hydrolytic removal of a phosphate group from an organic molecule.

depigmentation [*de-pig"mən-ta'shən*] removal of pigment; usually refers to melanin. See also **hypopigmentation**.

nasal d. occurs in dogs with a normal, darkly pigmented nasal planum at birth which later fades to brown or a pale gray-white. Called also Dudley nose, the cause is unknown, but it may be a form of vitiligo. A seasonal loss of pigmentation, usually during winter months, occurs in some breeds, including Siberian huskies, Golden retrievers, Labrador retrievers and Bernese mountain dogs. Called also snow nose. Not to be confused with disease involving the nasal planum in which there is loss of pigment, but usually with other changes present.

depilate [*dep'ĭ-lāt*] to remove hair.

depilation [*dep"ĭ-la'shən*] removal of hair by the roots. See also **epilation**.

chemical d. the use of chemicals applied externally or internally to remove hair. See also chemical **shearing**.

depilatory [*də-pil'ə-tor"e*] 1. having the power to remove hair. 2. an agent that removes or destroys the hair.

depletion syndrome [*də-ple'shən*] chronic water and electrolyte deficits.

depluming removing the feathers of birds.

d. itch ***Cnemidocoptes laevis gallinae***. Called also depluming mite, depluming scabies.

d. scabies see depluming itch (above).

depolarization [*de-po"lər-ĭ-za'shən*] the process or act of neutralizing polarity as in the decrease of membrane potential.

D-13: Nasal depigmentation (Dudley nose).

myocardial d. the conducted cardiac impulse transiently reverses membrane polarity. In this depolarized phase the myocardium is incapable of further contraction.

depolarize [*de-po'lər-īz*] the act of depolarization.

depolarizing agent a drug that causes depolarization. Usually applied to those used to produce neuromuscular block and muscle paralysis.

depolymerization [*de"pə-lim"ər-ĭ-za'shən*] the breakdown of a polymer into its simpler components.

depopulation [*de"pop-u-la'shən*] removal of all animals from the particular environment.

herd d. disposal of all animals in the herd.

deposit [*de-poz'it*] 1. sediment or dregs. 2. extraneous inorganic matter collected in the tissues or in an organ of the body.

depot [*de'po*] a body area in which a substance, e.g. a drug, can be accumulated, deposited or stored and from which it can be distributed.

fat d. a site in the body in which large quantities of fat are stored, as in adipose tissue.

L-deprenyl [*dep'rə-nəl*] a monoamine oxidase inhibitor that decreased pituitary secretion of ACTH; used in the treatment of pituitary-dependent hyperadrenocorticism in dogs and also canine **cognitive dysfunction syndrome**. Called also selegiline hydrochloride.

depressant [*de-pres'ənt*] 1. diminishing any function or activity. 2. an agent that retards any function, especially a drug that acts on the central nervous system to depress activity at all levels by stabilizing neuronal membranes. CNS depressants, e.g. barbiturates and inhalational anesthetics, are used as sedatives, hypnotics and anesthetics.

depressed [*de-prest'*] carried below the normal level; associated with depression.

depression [*de-presh'ən*] 1. a hollow or depressed area. 2. a lowering or decrease of functional activity. 3. decreased interest in surroundings, decreased response to external stimuli. The least degree in a range of depressive mental states. See also **somnolence**, **lassitude**, **narcolepsy**, **catalepsy**, **syncope**, **coma**.

d. fracture important in the skull where they may penetrate brain tissue, introduce infection, or cause pressure on the brain because of hemorrhage or hematoma formation.

depressomotor [*de-pres"o-mo'tər*] 1. retarding or abating motor activity. 2. an agent that so acts.

depressor [*de-pres'ər*] anything that depresses, as a muscle, agent or instrument, or an afferent nerve, whose stimulation causes a fall in blood pressure.

tongue d. an instrument for pressing down the tongue, usually for purposes of visualizing the soft palate and posterior pharynx. Not often used in examining animals.

deracoxib a nonsteroidal anti-inflammatory in the coxib class; used as an anti-inflammatory and analgesic agent to treat osteoarthritis in dogs.

deradelphus [*der"ə-del'fəs*] a conjoined twins joined at or near the navel, and having one head.

derangement [*de-rānj'mənt*] 1. mental disorder. 2. disarrangement of a part or organ.

deregistration [*de"rej-is-tra'shən*] removal of right to practice by local registering body, usually as a disciplinary measure because of professional misconduct.

deregulation [*de"reg-u-la'shən*] removing restrictions and government controls on animal management and animal disease.

derencephalus [*der"en-sef'ə-ləs*] a fetus with a rudimentary skull and bifid cervical vertebrae, the brain resting in the bifurcation.

derepression [*de"re-presh'ən*] 1. elevation of the concentration of an enzyme above the normal, either by lowering the corepressor concentration or by a mutation that decreases the formation of aporepressor or the response to the complete repressor. 2. the inhibition of the repressor substance produced by the regulator genes with the result that the operator gene is free to initiate the process of polypeptide formation.

Derf needle holder a fine instrument used for grasping and passing suture needles in ophthalmic surgery.

derm- prefix meaning dermis or skin.

derma [*dur'mə*] the corium, or true skin.

dermabrasion [*dur"mə-bra'zhən*] **planing** of the skin done by mechanical means, e.g. sandpaper, wire brushes, etc.

Dermacentor [*dur"mə-sen'tər*] a genus of ticks parasitic on various animals; can act as, an vectors of disease-producing microorganisms; member of the family Ixodidae.

D. albipictus a one-host tick that transmits anaplasmosis and possibly Rocky Mountain spotted fever. Parasitizes moose mostly but also other wild ruminants and pastured livestock. Called also moose tick or winter tick.

D. andersoni a species of tick common in the western USA, parasitic on numerous wild mammals, most domestic animals and humans. It is a vector of Rocky Mountain spotted fever, tularemia, Colorado tick fever, and Q fever in the USA, and is one of the causes of tick paralysis in the USA.

D. halli, D. marginatus, D. nuttalli, D. silvarum miscellaneous ticks of little importance to animals.

D. nigrolineatus a one-host tick occurring mostly on white-tailed deer, but also on pastured livestock. Called also brown winter tick.

D. nitens a one-host tick that parasitizes horses mostly and is the vector of equine piroplasmosis; predisposes animals to screwworm attack. Called also tropical horse tick, *Anocentor nitens.*

D. occidentalis a three-host tick found on many animals. Immature forms are on rodents. Transmits anaplasmosis, Colorado tick fever, Q fever, tularemia, causes tick paralysis. Called also Pacific Coast tick.

D. parumapterus a vector of Rocky Mountain spotted fever.

D. reticulatus a three-host tick that transmits equine piroplasmosis.

D. variabilis a three-host tick that transmits *Anaplasma marginale* in cattle, tularemia in humans, is the chief vector of Rocky Mountain spotted fever in the central and eastern USA and causes tick paralysis in the dog. The dog is the principal host of the adult forms, but also parasitic on cattle, horses, rabbits and humans. Called also American dog tick.

D. venustus see *Dermacentor andersoni* (above).

dermal [*dur'məl*] pertaining to the true **skin**, or corium.

d. asthenia called also dermal fragility syndrome; see cutaneous **asthenia**.

d. fragility syndrome see dermal asthenia (above).

d. melanocytosis the neoplastic form of melanoma in horses with multiple lesions in the skin and in internal organs; common in gray horses and mules.

d. network sensory nerves of the dermis.

D-14: *Dermacentor andersoni.* Courtesy of CDC/Dr Christopher Paddock; Photo: James Gathney.

VetBooks.ir

d. papillae fingerlike processes invading the epidermis from the dermis, that serve to anchor the overlying epidermis in place; they are most numerous over hairless skin.

Dermanyssidae [*dur"mə-nis'ĭ-de*] family of parasitic mites. Includes *Dermanyssus*, *Ornithonyssus* and *Pneumonyssoides* spp.

Dermanyssus gallinae [*dur"mə-nis'əs*] a member of the genus of the family Dermanyssidae of mites. A major parasite of domestic fowls but also occurs on other birds including aviary and wild colonies. Causes death due to anemia. A vector for spirochetosis of fowls and possibly the equine encephalitides. A common chance parasite of humans from heavy infestations in urban bird colonies. Called also red mite.

dermatan sulfate [*dur"mə-tan*] a component of the acellular ground substance of skin.

dermatic dermal.

dermatitides [*dur"mə-tit'ĭ-dēz*] plural of *dermatitis*; inflammatory conditions of the skin considered collectively.

dermatitis [*dur"mə-ti'tis*] inflammation of the skin. Dermatitis can result from various animal, vegetable and chemical substances, from heat or cold, from mechanical irritation, from certain forms of malnutrition, or from infectious disease.

actinobacillary d. rare disease in cattle; large ulcers discharging yellow pus or nodules, on lymphatics with local lymph node enlargement.

acute moist d. a superficial bacterial infection of the skin, usually caused by self-trauma, i.e. scratching, rubbing, biting. In dogs, ectoparasites, otitis, anal sacculitis and pruritic skin diseases are common precipitating causes. Affected skin is moist, weeping, and has a covering of matted haircoat and dried exudate. *Staphylococcus* spp. are usually present. Called also pyotraumatic dermatitis, 'hot spots'.

allergic contact d. see **allergic** contact dermatitis.

allergic inhalant d. see canine **atopy**.

annular d. inflammation and crusting in an annular pattern is characteristic of dermatophytosis (ringworm), particularly in pigs.

atopic d. see canine **atopy**.

canine eosinophilic d. erythematous and edematous, variably pruritic, macules and plaques on the ears, thorax and abdomen; there is a marked infiltration of eosinophils. Believed to be a hypersensitivity reaction. There are similarities with eosinophilic cellulitis (Wells syndrome) in humans.

cercarial d. see ***Trichobilharzia***.

cheyletiella d. see ***cheyletiellosis***.

chronic radiant heat d. erythema, alopecia and hyperpigmentation in areas exposed to moderate heat, especially radiant heat, over a long period of time. Reported in dogs and cats. Called also erythema ab igne.

contagious pustular d. of sheep see contagious **ecthyma**.

coronet d. part of several infectious mucosal diseases of cattle; also in equine pemphigus.

d. crustosa exudative epidermitis.

digital d. characterized by round, proliferative, painful, raised lesion on the back of the lower pastern just above the digital cleft, most commonly on hindlimb of cattle, especially heifers. Invasive treponemes displaying large genotypic and phenotypic diversity and representing three phylogroups within the genus (*Treponema medium/T. vinventii*-like; *T. phagedenis*-like; *T. denticola/T. putidum*-like) can be isolated from affected feet. Responds well to antibiotic treatment but in dairy cattle, milk withholding requirements make this uneconomic and treatment and control is usually with antibacterials in footbaths. Called also Mortellaro's disease.

elaeophorial d. see **elaeophoriasis**.

equine contagious pustular d. see **Canadian horsepox**.

equine exfoliative eosinophilic d. see multicentric **eosinophilic** epitheliotrophic disease.

equine staphylococcal d. see **equine** staphylococcal dermatitis.

exfoliative d. of calves rarely reported widespread dermatitis including vesicles on the muzzle in very young calves; recovers sponaneously.

exudative d. of pigs see **exudative** epidermitis.

facial d. see **sore** nose, idiopathic **facial** dermatitis of Persian cats.

feline miliary d. a papular, crusting cutaneous reaction pattern of cats; lesions are located predominantly on the back, with varying degrees of pruritus. Hypersensitivity reaction to flea bites is a leading cause, but food and drug allergy, immune-mediated skin diseases and infection by fungi or bacteria are among the many possible causes. Called also scabby cat disease.

D-15: Clinical presentation of different stages of digital dermatitis. (A) M1 (within red oval): Early stage lesion; mostly 0–2 cm; not painful on palpation. (B) M2 ('active infection'): classical ulcerative stage; diameter >2 cm, often painful on palpation. (C) M3: healing stage after local therapy; lesion is covered by a scab; not painful on palpation. (D) M4: chronic stage; dyskeratosis or proliferation of surface; generally not painful on palpation.
From Holzhauer M, Bartels CJM, Döpfer D, van Schaik G: Clinical course of digital dermatitis lesions in an endemically infected herd without preventive herd strategies. Vet J 177: 222-230, 2008. Elsevier.

feline psychogenic d. see idopathic **hyperesthesia** syndrome.

feline solar d. see solar dermatitis (below).

fibrosing d. dermatitis sufficiently severe to affect deep layers of the dermis results in scarring of the skin due to excessive fibrous tissue formation.

filarial d. see **stephanofilarosis**, **onchocercosis**.

focal ulcerative d. manifest by ulcers in the unfeathered anterior breast skin of 4–5-month-old male turkeys. The incidence is influenced by litter type. Called also breast buttons.

fold d. moisture, friction and secondary infection in body folds such as facial fold in brachycephalic dog breeds, tail fold in dog breeds with extremely short, often screw, tails, lip fold in spaniel breeds, perivulvar fold in obese bitches, and in the Shar pei, all over the body.

grain itch mite d. a transient, superficial dermatitis, mostly about the head in horses; may be all over the body in pigs. Caused by ***Pediculoides ventricosus*** or ***Tyroglyphus***.

granular d. swamp cancer.

d. herpetiformis chronic dermatitis in humans marked by successive crops of grouped, symmetrical, erythematous, papular, vesicular, eczematous or bullous lesions, accompanied by itching and burning; a granular deposition of IgA immunoglobulin around the lesion almost always occurs. Occurs rarely in dogs.

idiopathic caprine d. alopecic, exudative dermatitis of pygmy goats of all ages affecting head, perineum, ventral abdomen.

infectious d. of piglets see **contagious** porcine pyoderma.

inhalant d. see canine **atopy**.

interdigital d. see **interdigital** dermatitis.

interface d. a histopathological pattern of inflammatory skin disease with the dermoepidermal junction obscured by hydropic degeneration and/or lichenoid cellular infiltrate.

intertriginous d. see fold dermatitis (above).

intraepidermal pustular d. see equine **allergic** dermatitis.

lipfold d. see fold dermatitis (above).

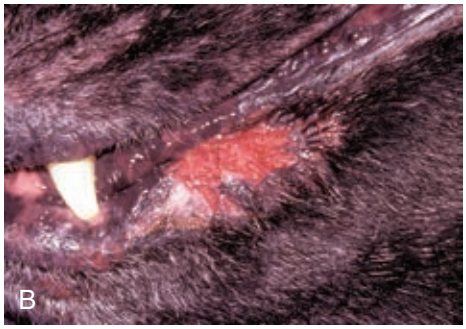
***Malassezia* d.** a pruritic, seborrheic skin disease of dogs, particularly some breeds including West Highland white terriers, Shetland sheepdogs, Poodles, and Cocker spaniels, and rarely cats, caused by colonization of the skin by the yeast, *Malassezia pachydermatis*. There is usually an underlying cause such as atopy or bacterial pyoderma.

d. medicamentosa an eruption or solitary skin lesion caused by a drug taken internally.

miliary d. see feline miliary dermatitis (above).

moist d. of rabbits the rabbit's pendulous dewlap keeps getting wet and develops a moist dermatitis as a result. Called also slobbers, wet dewlap.

D-16: (A) Facial fold (B) Lip fold dermatitis in a dog. (C) Body fold dermatitis in a Shar pei. (A) From Kummel BA, Color Atlas of Small Animal Dermatology. Mosby, 1989. (B) From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.



mycotic d. see **mycotic** dermatitis.
nasal d. see **sore** nose.
nasal solar d. see solar dermatitis (below), collie nose.
ovine interdigital d. see ovine **footrot**.
ovine staphylococcal d. ulcerative dermatitis of the face of adult sheep and young lambs caused by a dermatopathic strain of *Staphylococcus aureus*. Called also ovine staphylococcal pyoderma.
pastern d. see **greasy heel**.

D-17: Photosensitive dermatitis with swelling of the face, eyelids and ears.

D-18: *Pelodera* dermatitis. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

pelodera d. caused by larvae of the free-living nematode *Pelodera strongyloides* and characterized by alopecia, itching, thick, scurfy skin and pustules (~0.5 inch in diameter) which contain the larvae.
photocontact d. allergic contact dermatitis caused by the action of sunlight on skin sensitized by contact with a substance capable of causing this reaction.
photosensitive d. is confined to the dorsal parts of the body exposed to the sunlight, and to parts with little or no pigment and the least hair or wool covering. Develops when photodynamic agents are activated by ultraviolet light (wavelength of 200–400 nm) as they circulate through superficial vessels of non-pigmented skin to produce local tissue injury via formation of oxygen free radicals that subsequently damage cell membranes and DNA. The dermatitis is diffuse and often sufficiently severe to kill the animal. Initially there is itching and rubbing, then edema, followed by weeping, then necrosis or gangrene. Additional lesions may be on the undersurface of the tongue, at the mucocutaneous junction at the lips and on the lateral aspects of the teats.
plastic dish d. a contact dermatitis caused by plastic feeding dishes to which a dog is allergic.
porcine juvenile pustular psoriasiform d. see **pityriasis** rosea.
potato d. see **potato** dermatitis.
primary-irritant d. contact dermatitis (see above) induced by a substance acting as an irritant rather than as a sensitizer or allergen.
proliferative d. see strawberry **footrot**.
psoriaform, psoriasiform d. of swine see **pityriasis** rosea.
pyotraumatic d. see acute moist dermatitis (above).
d.–pyrexia–hemorrhage syndrome a pruritic, papulocrustous dermatitis in dairy cows which is accompanied by fever and hemorrage from the nose and anus. Mycotoxins, particularly citrinin, have been implicated as the cause.
rhabditic d. see pelodera dermatitis (above).
seasonal allergic d. see **atopy**, equine **allergic** dermatitis.
seborrheic d., d. seborrheica a chronic, usually pruritic, dermatitis with erythema, dry, moist or greasy scaling, and yellow crusted patches on various areas, with exfoliation of an excessive amount of dry scales (dandruff) or encrustations of sebum on the skin. See also **exudative** epidermitis (pigs), **greasy heel** (horses), **flexural** seborrhea (cows). See also **seborrhea**.
solar d. a chronic, inflammatory reaction on white or lightly pigmented and exposed skin caused by sunlight. Most commonly seen on the ear tips, nose and eyelids of white cats and the nose of collie dogs or related breeds. Squamous cell carcinomas sometimes develop in affected skin. Called also nasal solar dermatitis, actinic dermatitis. See also **Collie** nose.
spongiotic d. perivascular inflammation with spongiosis.
summer d. see equine **allergic** dermatitis.
superficial necrolytic d. frequently associated with glucagon-secreting tumors of the pancreas and with cases of diabetes mellitus or chronic hepatitis; called also hepatocutaneous syndrome; lesions are erythematous, erosive, ulcerative and crusted with marked hyperkeratosis of the footpads.
superficial pustular d. immature dogs may develop pustules on the inguinal or axillary skin, often in association with poor nutrition, systemic infection, or parasitism. In kittens, these may occur on the neck, caused by 'mouthing' by the queen.
trefoil d. see ***Trefoil*** dermatitis.
tyroglyphid d. see ***Tyroglyphus***.

VetBooks.ir

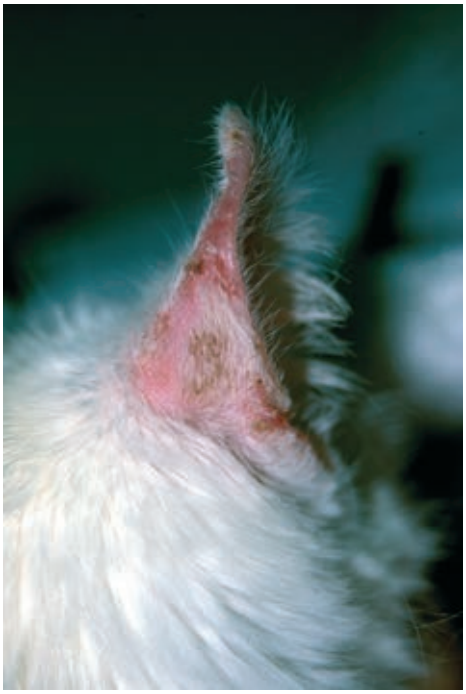
D-19: Seborrheic dermatitis.



D-20: Feline solar dermatosis.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

ulcerative d. of foals syndrome of unknown etiology with transient ulcerative dermatitis accompanied by thrombocytopenia and neutropenia affecting neonatal foals.
unilateral papular d. a disease of horses characterized by the appearance of many nodules or papules on one side of the neck and body. The lesions are eosinophilic folliculitis and perifolliculitis. The etiology and the unilateral distribution of the lesions are unexplained.
ventral midline d. small ulcers with hemorrhagic crusts and hair loss, located on the abdomen, particularly around the umbilicus, of horses; caused by biting flies and gnats.
vesicular d. see avian **vesicular** dermatitis.
viral contagious d. see contagious **ecthyma**.
viral papular d. see **equine** papular dermatitis.
X-ray d. radiodermatitis.

dermat(o)- word element. [Gr.] *skin*.

Dermatobia [*dur"mə-to'be-ə*] a genus of bot flies in the family Cuterebridae. Includes *Dermatobia hominis*, the larvae of which are parasitic in the skin of humans, mammals and birds, causing subcutaneous swellings with central holes. A major parasite of cattle in South America.

dermatocele a disorder in which the skin and subcutaneous tissue hypertrophy so that the skin hangs in loose folds.

dermatofibroma [*dur"mə-to-fi-bro'mə*] a fibrous tumor-like nodule of the skin.

dermatofibrosarcoma [*dur"mə-to-fi"bro-sahr-ko'mə*] a fibrosarcoma of the skin.

dermatofibrosis [*dur"mə-to-fi-bro'sis*] a syndrome inherited as a dominant trait in German shepherd dogs in which multiple, firm cutaneous and subcutaneous nodules of mature fibrous tissue, up to 2 inches in diameter, develop in middle age. Affected animals show a high incidence of renal cystadenocarcinoma and females have multiple uterine and vaginal leiomyomas. Called also nodular dermatofibrosis.

dermatoglyphics [*dur"mə-to-glif'iks*] the surface features of skin, including wrinkles, folds, ridges and furrows; the science of fingerprints.

dermatographia dermatographism.

dermatographism [*dur"mə-tog'rə-fiz"əm*] urticaria due to physical allergy in which a pale, raised welt or wheal with a red flare on each side is elicited by stroking or scratching the skin with a dull instrument.

dermatoheteroplasty [*dur"mə-to-het'ər-o-plas"te*] the grafting of skin derived from an animal of another species.

dermatohistopathology [*dur"mə-to-his-to-pə-thol'ə-je*] the histopathological study of the skin.

dermatologic, dermatological [*dur"mə-to-loj'ik, dur"mə-to-loj'ĭ-kəl*] pertaining to dermatology; of or affecting the skin.

dermatologist [*dur"mə-tol'o-jist*] a veterinarian who specializes in dermatology.

dermatology [*dur"mə-tol'ə-je*] the specialty concerned with the diagnosis and treatment of skin diseases.

dermatomal pertaining to a dermatome.
d. mapping designation of regions of the body, the extent of each corresponding to the distribution of the dorsal root axons.

dermatome [*dur'mə-tōm*] 1. an instrument for cutting thin skin slices for grafting. 2. the area of skin supplied with afferent nerve fibers by a single dorsal spinal root. 3. the lateral part of an embryonic somite.
air d. (1) an instrument designed for cutting split thickness skin grafts.
Brown d. (1) an electric or pneumatic instrument used for cutting split-thickness skin grafts.

dermatomegaly [*dur"mə-to-meg'ə-le*] see **dermatocele**.

dermatomere [*dur'mə-to-mēr"*] a segment of the embryonic integument.

dermatomycosis [*dur"mə-to-mi-ko'sis*] a fungal infection of the skin or of its appendages by a fungus other than one of the dermatophytes, *Microsporum*, *Trichophyton* or *Epidermophyton*.

dermatomyoma [*dur"mə-to-mi-o'mə*] a dermal leiomyoma.

dermatomyositis [*dur"mə-to-mi"ə-si'tis*] an acute, subacute or chronic disease of humans, marked by nonsuppurative inflammation of the skin, subcutaneous tissue and muscles, with necrosis of muscle fibers.
canine familial d. an inherited disease found in many breeds, but mainly in Collies and Shetland sheepdogs. Starting at a young age, there is hair loss, alopecia, scaling, crusting, erosions and scarring on the face, ear tips, pressure areas over the elbows, carpus and tarsus, and the tail. Myositis may be severe, causing a stiff gait, difficulty in chewing and atrophy, or be unrecognized except by biopsy. Megaesophagus may also occur.

dermatopathic, dermopathic [*dur"mə-to-path'ik, dur"mo-path'ik*] of the nature of or pertaining to dermatopathy.

dermatopathology [*dur"mə-to-pə-thol'ə-je*] pathology that is especially concerned with lesions of the skin.

dermatopathy [*dur"mə-top'ə-the*] any disease of the skin; dermopathy.

Dermatophagoides [*dur"mə-tof"ə-goi'dēs*] a genus of mites of the family Epidermoptidae. Includes *Dermatophagoides farinae* and *D. pteronyssinus* (housedust mites).

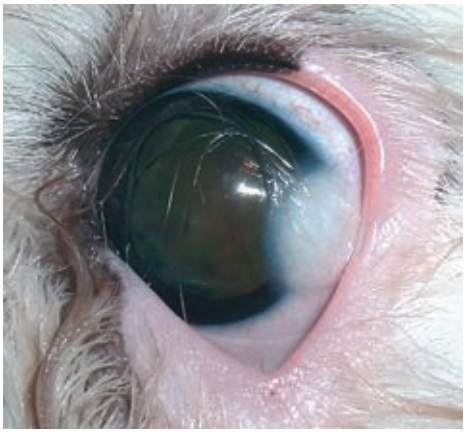
dermatophilosis [*dur"mə-to-fi-lo'sis*] a group of diseases caused by *Dermatophilus* spp. Includes **mycotic** dermatitis, strawberry **footrot**.

Dermatophilus [*dur"mə-tof'ĭ-ləs*] a genus of bacteria in the family *Dermatophilaceae*. Broad, gram-positive, filaments that fracture longitudinally and transversely, producing coccoid cells and flagellated, motile zoospores.
D. chelonae causes skin lesions in turtles.
D. congolensis causes **mycotic** dermatitis, strawberry **footrot**, streptothricosis. Previously classified as *Actinomyces congolensis, A. dermatonomus, D. dermatonomus, D. pedis, Nocardia dermatonomous, Streptothrix bovis* and *Tetragenus congolensi*.

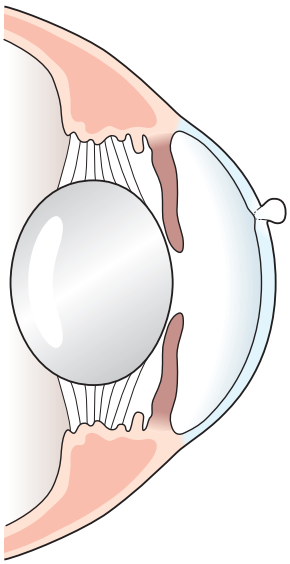
dermatophyte [*dur'mə-to-fīt"*] fungi parasitic upon the skin, including *Microsporum*, *Trichophyton*, and *Epidermophyton* spp. Occasional pathogens are *Keratinomyces allejoi* in horses and *Scopulariopsis brevicaulis* in cattle.
d. test medium (DTM) a special culture medium for fungi containing phenol red as an indicator. Pathogenic fungi produce alkali during growth causing the medium to turn red.
dermatophytid [*dur"mə-tof'ī-tid*] a secondary skin eruption which is an expression of hypersensitivity to a dermatophyte, occurring on an area remote from the site of infection. Called also an 'id' reaction.
dermatophytosis [*dur"mə-to-fī-to'sis*] fungal infection of the skin caused by one of the pathogenic genera, *Microsporum*, *Trichophyton* or *Epidermophyton*; see also **ringworm**.
dermatoplasty [*dur'mə-to-plas"te*] a plastic operation on the skin; operative replacement of lost skin.
dermatorrhagiae parasitaire [Fr.] parafilariasis.
dermatosclerosis [*dur"mə-to-sklə-ro'sis*] see **scleroderma**.
dermatosis [*dur"mə-to'sis*] pl *dermatoses*; any skin disorder, especially one not characterized by inflammation.
ear margin d. a disorder of keratinization in which greasy plugs form on the hair at the edges of the external ear flap in dogs, mainly Dachshunds. Ulceration, necrosis and scarring may follow.
exfoliative d. one involving severe desquamation; includes drug reaction, contact hypersensitivity, autoimmune diseases, cutaneous lymphomas and parapsoriasis.
generic dog food d. see generic **petfood**.
growth hormone-responsive d. see **alopecia** X.
hereditary lupoid d. a scaling and crusting skin disease seen from a young age in German shorthaired pointers.
infantile pustular d. pustules, depression and anorexia in neonatal puppies; the etiology is unknown.
invisible d. skin diseases which are evident clinically, but the histopathology is consistent with normal skin.
linear IgA d. a rare, immune-mediated skin disease of Dachshunds in which immunoglobulin A is deposited at the basement membrane zone. There are pustules, with alopecia, hyperpigmentation, scaling and crusting.
linear preputial d. a narrow line of hyperpigmentation along the midline between the prepuce and scrotum is considered a marker for testicular neoplasia in dogs.
psychogenic d. see psychogenic **alopecia**.
seborrheic d. see seborrheic **dermatitis**.
sterile neutrophilic d. cutaneous and extracutaneous sterile infiltrates of neutrophils with systemic signs of fever, arthritis, pneumonia and marked neutrophilia with many similarities to Sweet's syndrome in humans. A rare occurrence in dogs and horses; some cases have had a temporal association with administration of carprofen.
subcorneal pustular d. a very rare skin disorder of dogs in which short-lived, sterile, superficial pustules form, particularly on the head and trunk. Pruritus is variable. The cause is unknown.
d. vegetans an inherited skin disease of Landrace pigs. Young piglets may be affected at birth or develop at an early age an erythematous, papular dermatitis, mainly on the ventral abdomen and medial thighs. There is also erythema and edema of the coronary bands and subsequent deformities of the foot. Pneumonia develops before death.
vitamin A-responsive d. see vitamin A-responsive **dermatosis**.
zinc-responsive d. a breed-related form occurs in Siberian huskies and several other Arctic breeds, and a dermatosis can occur in puppies of any breed if their diet is deficient in zinc or absorption is impaired by excessive supplementation of calcium. There is scaling and crusting, especially over pressure points and footpads. See also **parakeratosis** for a similar disease in pigs and a familial one in cattle.
dermatosparaxia [*dur"mə-to-spə-rak'se-ə*] fragility of skin and subcutaneous tissue rendering the skin very stretchable. Most common as inherited defects in cattle and dogs. See also **Ehlers–Danlos syndrome**, **hereditary** equine regional dermal asthenia (HERDA).
dermatosparaxis [*dur"mə-to-spə-rak'sis*] an inherited defect in collagen synthesis caused by a deficiency of procollagen peptidase. Results in fragility, hyperelasticity and laxity of the skin. Occurs in cattle, some breeds of sheep, and Himalayan cats. Called also Ehlers–Danlos syndrome, hyperelastosis cutis, cutaneous **asthenia**.
dermatotherapy [*dur"mə-to-ther'ə-pe*] treatment of skin diseases.
dermatotropic [*dur"mə-to-tro'pik*] having a specific affinity for the skin.
d. bovine herpesvirus see **lumpy skin disease**.
Dermatoxys a genus of nematodes in the family Oxyuridae. Includes *Dermatoxys veligera* (occurs in the large intestine of rabbits and hares).
dermatozoon [*dur"mə-to-zo'ən*] any animal parasite on the skin; an ectoparasite.
Dermestes a genus of larder beetles in the order Coleoptera.
dermis [*dur'mis*] the corium; the principal layer of skin between the epidermis and the subcutaneous tissue; made up mostly of a network of collagen fibers but also containing nerves, blood vessels, cells and other fibers. It is divided into papillary and reticular parts, and when tanned forms leather.
hoof d. a greatly modified dermis, continuous at the coronet with the common dermis of the skin; the modified dermis supports the horn of the hoof. See hoof **corium**.
dermoabrasion removal of the superficial layers of hypertrophic epidermis with a wire brush.
dermoblast [*dur'mo-blast*] the part of the mesoderm which develops into the true skin.
Dermocystidium a protozoan parasite which causes cysts in the skin of fish and amphibians.
D. ranae parasitizes the grass frog (*Rana temporaria*).
dermoepidermal [*dur"mo-ep-ī-dur'məl*] pertaining to the dermis and the epidermis.
d. junction is straight compared to the undulating border in humans; consists of lamina lucida externa, lamina densa, lamina lucida interna and anchoring filaments.
Dermoglyphus a genus of the family Dermoglyphidae mites. Includes *Dermoglyphus elongatus*, *D. minor* (found in the feather shafts of birds but cause no lesion).
dermogram [*dur'mo-gram*] a diagram illustrating sequential stages in the development of a skin disease, or various changes which may occur, as a cross-section of the skin.
dermographia see **dermatographism**.
dermographism [*dur"mo-graf'iz-əm*] see **dermatographism**.
dermoid [*dur'moid*] 1. skinlike. 2. a dermoid cyst.
d. cyst a tumor of developmental origin consisting of a fibrous wall lined with stratified epithelium and containing hair follicles, sweat glands, sebaceous glands, nerve elements and teeth; a teratoma. Occurs in subcutaneous sites, in the ovary and various locations in the eye, including cornea, conjunctiva and eyelids.
ocular d. dermoid on the eyelid, cornea or conjunctiva.
ovarian d. when these cysts occur in the ovary they may present no signs but their long pedicles may cause twisting, resulting in acute abdominal pain.
d. sinus an inherited abnormality in Rhodesian Ridgeback dogs in which an embryonic invagination of the skin, residual from closure of the neural tube in the embryo, persists and connects the skin with the dura mater in the vertebral canal or to an intervening structure. Characterized by the presence of a tuft of

D-21: Zinc-responsive dermatosis in a Siberian husky.

D



D-22: Temporal limbal dermoid in a dog.
From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.



D-23: Descemetocele.
From Maggs D, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

VetBooks.ir

hair protruding from each sinus and sometimes complicated by infection with drainage. Called also pilonidal sinus.

dermoidectomy [*dur"moid-ek'tə-me*] excision of a dermoid cyst.

dermolipoma [*dur"mo-lĭ-po'mə*] a congenital, yellow growth of fatty tissue occurring under the bulbar conjunctiva.

dermomycosis [*dur"mo-mi-ko'sis*] dermatomycosis.

dermonecrosis [*dur"mo-nə-kro'sis*] necrosis of the skin.

dermopathy [*dər-mop'ə-the*] any skin disease; dermatopathy.

diabetic d. see necrolytic migratory**erythema**.

dermosynovitis [*dur'mo-sin"o-vi'tis*] inflammation of the skin overlying an inflamed bursa or tendon sheath.

dermotropic [*dur"mo-tro'pik*] dermatotropic.

dermovascular [*dur"mo-vas'ku-lər*] pertaining to the skin and blood vessels of the skin.

derodidymus [*der"o-did'ə-məs*] dicephalus.

deroof [*de-rōōf'*] to remove a portion of tissue surrounding an enclosed lesion permanently exposing the cavity which is left to heal by second intention. Used most commonly in the treatment of rectal fistulae.

derquantel 2-desoxyparaherquamide; a spiroindole; a medium spectrum anthelmintic used against nematodes in ruminants.

derriengue [*dar-yāng'ga*] from the Spanish *derrengado* meaning wobbly; an irreversible posterior paresis and paralysis in cattle in the Caribbean region caused by an unidentified toxin in *Zamia* spp. leaves or seeds; degenerative lesions present in spinal cord white matter, including the proprioceptive pathways. See also **zamia** staggers.

derris [*der'is*] powdered root of plants of the genus *Derris* of the family Leguminosae. Used as an insecticide and source of rotenone and rotenoid compounds. See also **rotenone**.

Derry's disease type 2, GM_1 gangliosidosis.

Derzsy's disease see **goose** hepatitis.

DES diethylstilbestrol.

desaturase [*de-sach'ə-rās*] an enzyme capable of catalyzing desaturation of fatty acids.

desaturation [*de-sach"ə-ra'shən*] insertion of double bonds; process of insertion of double bonds in the hydrocarbon chain of fatty acids.

descemetocele [*des"ə-met'o-sēl*] deep corneal ulcer with complete stromal loss such that Descemet's membrane is exposed; usually a result of bacterial superinfection of a simple corneal ulcer.

Descemet's membrane [*des-ə-ma'*] the posterior lining membrane of the cornea, a thin hyaline membrane between the substantia propria and the endothelial layer. In buphthalmos, stretching of the globe may be accompanied by tears in Descemet's membrane, called Descemet's streaks.

descensus [*de-sen'səs*] pl. *descensus* [L.] downward displacement or prolapse.

d. testis normal migration of the testis from its fetal position in the abdominal cavity to its location within the scrotum.

d. uteri prolapse of the uterus.

descenting [*de-sen'ting*] surgical excision of the sebaceous glands on the top of the head of the male goat or the anal sacs of the skunk in order to eliminate the unpleasant odors each gives off.

Deschamps aneurysm needle [*da-shah'*] a long thin instrument with a palm-held handle and a thin needle-like extension which at its tip bends laterally at right angles and then describes a semicircle in the same plane. The tip has a needle eye and a pointed but not sharp end. It is designed to place ligatures around vessels in poorly accessible sites.

descriptive statistics see **statistics**.

Descurainia pinnata a plant member of the Brassicaceae family, a mustard; an unidentified toxin causes impaired vision, inability to swallow, paresis of tongue and muscles of mastication. Called also tansy mustard.

desensitization [*de-sen"sĭ-tĭ-za'shən*] the prevention or reduction of immediate hypersensitivity reactions mediated by IgE by the administration of graded doses of allergen; hyposensitization. See also **immunotherapy**.

extinction d. see **extinction**.

desensitize [*de-sen'sĭ-tīz*] 1. to deprive of sensation. 2. to subject to desensitization.

desert baileya ***Baileya multiradiata***.

desert fever the primary form of **coccidioidomycosis**. Called also desert rheumatism.

desert poison bush ***Gastrolobium*** *grandiflorum*.

desert rheumatism see **desert fever**.

desert velvet ***Psathyrotes annua***

desex removal of the organs of generation, the ovaries or testes.

desferrioxamine [*des-fer"e-oks'ə-mēn*] see **deferoxamine**.

desflurane [*des-floo'rān*] a highly volatile, fluorinated gaseous anesthetic agent with low blood solubility.

desiccant [*des'ĭ-kənt*] 1. promoting dryness. 2. an agent that promotes dryness.

desiccate [*des'ĭ-kāt*] to render thoroughly dry.

desiccation [*des"ĭ-ka'shən*] the act of drying.

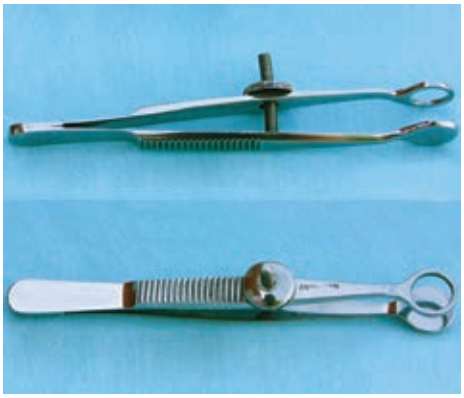
designated persons (DPs) staff in a radiology unit who are in frequent contact with X-rays and who are allotted a higher Dose Equivalent Limit of radiation than other persons. It is expected that the DPs will have been instructed in all matters related to radiation safety.

desipramine [*də-sip'rə-mēn*] a tricyclic antidepressant.

deslanoside [*des-lan'o-sīd*] a rapid-acting cardiotonic glycoside obtained from lanatoside C.

deslorelin a GnRH analog used as an implant or long acting injection for induction and timing of ovulation in mares and some other species.

Desmarres pertaining to Louis-Auguste Desmarres, French ophthalmologist (1810–1882).



D-24: Desmarres forceps. From Sonsthagen TF, Veterinary Instruments and Equipment, 2nd Edition. Mosby, 2011.

D. forceps forceps for grasping and isolating the eyelid surrounding a chalazion. Thumb-operated spring forceps with large oval tips to the blades, one a solid plate the other a circle. The blades can be clamped shut with a thumbscrew to provide hemostasis and stabilization of the tissue.

D. retractors handheld eyelid retractors consisting of a handle and a bent spoon tip which curves back on itself.

desm(o)- word element. [Gr.] *ligament*.

desmin [*dez'min*] protein found in muscle cells that forms intermediate filaments.

desmitis [*des-mi'tis*] inflammation of a ligament.

desmocollins [*dez"mo-kol'inz*] one of the glycoproteins found in the core of desmosomes; responsible for adhesive recognition between cells.

desmocranium [*des"mo-kra'ne-əm*] the mass of mesoderm at the cranial end of the notochord in the early embryo, forming the earliest stage of the skull.

Desmodus rotundus murinus [*dez-mo'dəs*] vampire bat of Central and South America. Important as long-term vectors of rabies virus. See also **derriengue**.

desmogleins [*dez-mog'le-inz*] one of the glycoproteins found in the core of desmosomes; responsible for adhesive recognition between cells.

desmography [*des-mog'rə-fe*] a description of ligaments.

desmoid [*dez'moid*] 1. fibrous or fibroid. 2. a fibromatous tumor arising in a muscle sheath; it resembles a fibrosarcoma. Called also desmoma.

desmology [*des-mol'ə-je*] the science of ligaments.

desmolysis [*des-mo-li'sis*] acantholysis.

desmoma [*dez-mo'mə*] see **desmoid** (2).

desmopathy [*des-mop'ə-the*] any disease of the ligaments.

desmoplasia [*des"mo-pla'zhə*] the formation and development of fibrous tissue, usually indicating that caused by neoplastic processes.

desmopressin [*des"mo-pres'in*] a synthetic analog of 8-arginine vasopressin; the acetate (DDAVP) is used for antidiuretic replacement therapy in the management of central diabetes insipidus and for the temporary polyuria and polydipsia associated with trauma to or surgery in the pituitary region.

d. response test assesses renal responsiveness to antidiuretic hormone by administering desmopressin and measuring the effect on 24-hour water intake and urine concentration. A normal response is a reduction of at least 50% with urine specific gravity of 1.020 or greater.

desmorrhexis [*des"mo-rek'sis*] rupture of a ligament.

prepubic d. rupture of the prepubic ligament.

desmosine [*des'mo-sēn*] special amino acid, derived from four lysine residues, and found only in elastin. Allows elastin to stretch reversibly in all directions.

desmosome [*dez'mo-sōm*] the 'spot-welds' which provide one of the structural units that bind epithelial cells together. Half units are called hemidesmosomes.

d. core a dense core of glycoproteins filling the space between cells which are adhered by desmosomes.

half d's structures which provide points of adhesion to anchor cytoskeletal elements to basal cell membranes. Called also hemidesmosomes.

desmotomy [*des-mot'o-me*] the cutting or division of ligaments. See also **patellar** ligament desmotomy, **check ligament** desmotomy.

desnooding surgical removal of the snood in the turkey to prevent cannibalism and the creation of a portal of entry for erysipelas infection.

desonide [*des'ə-nīd*] a synthetic corticosteroid used as a topical anti-inflammatory agent in the treatment of steroid-responsive dermatoses.

desorb [*de-sorb'*] to remove a substance from the state of absorption or adsorption.

desorption [*de-sorp'shən*] the process or state of being desorbed.

desoximetasone [*des-ok"sĭ-met'ə-sōn*] an anti-inflammatory, anti-pruritic and vasoconstrictive corticosteroid used topically to relieve inflammation in corticosteroid-responsive dermatoses. Called also deoxydexamethasone, desoxymethasone.

desoxy- for words beginning thus, see also those beginning *deoxy-*.

11-desoxycorticosterone, deoxycorticosterone, deoxycortone [*des-ok"se-kor"tĭ-kos'tər-ōn*] one of the mineralocorticoids, adrenocortical steroids which lack a substituent at C-11; has a greater effect on electrolyte metabolism than glucocorticoids. Available pharmaceutically as the acetate (DOCA), which is short-acting, and the pivalate (DOCP), a slow release form for use in the treatment of hypoadrenocorticism.

desoxymethasone [*des-ok"se-meth'ə-sōn*] desoximetasone.

desquamation [*des"kwə-ma'shən*] the shedding of epithelial elements, chiefly of the skin, in scales or sheets.

desulfhydrase [*de"səlf-hi'drās*] an enzyme that splits cysteine into hydrogen sulfide, ammonia and pyruvic acid.

detachment [*de-tach'mənt*] the condition of being separated or disconnected.

retinal d. separation of the nine inner layers of the neurosensory retina from the retinal pigment epithelium, which typically remains attached to the underlying choroid; therefore sometimes called *retinal separation*. Retinal detachment occurs due to one of three mechanisms: rhegmatogenous, tractional or exudative. Causes include inherited retinal dysplasia, systemic hypertension, chorioretinitis, hyperviscosity, immune-mediated disease, vasculitis or following lens removal.

exudative d. retinal detachment due to efflux usually from the choroid of a serous transudate, hemorrhage, or inflammatory fluid from the choroid which accumulates between the retinal pigment epithelium and neurosensory retina, e.g. systemic hypertension, chorioretinitis.

rhegmatogenous d. retinal detachment due to tearing of the retina, and creation of breaks through which the vitreous can pass and undermine the retina.

tractional d. retinal detachment due to contraction of fibrinous or hemorrhagic debris within the vitreous that create traction bands pulling the neurosensory retina centripetally.

detail in radiological terms means ease of defining structures visually. Depends on degree of contrast, sharpness of edges and absence of fogging or other obscuring defect.

detection limit [*de-tek'shən*] the lowest concentration of an analyte that can be detected with reasonable certainty for a given analytical range.

detemir see detemir **insulin**.

detergent [*de-tur'jənt*] 1. purifying, cleansing. 2. an agent that purifies or cleanses.

anionic d. a substance which when dissolved contributes a hydrophobic ion which carries a negative charge to the solution. Soap is an example.

cationic d. the dissociated substance produces a positively charged hydrophobic ion. The quarternary ammonium compounds are the best known examples. They are innocuous if properly diluted but the concentrates can be toxic.

nonionic surface-acting d. e.g. the polyoxyethylenes are regarded as nonpoisonous.

detergescence the state of relative dehydration that contributes greatly to the transparency of the cornea; maintained by several active mechanisms, especially the sodium-pump of endothelium and epithelium.

determinant [*de-tur'mĭ-nənt*] a factor that establishes or changes the nature of an entity or event. The factor may be environmental, be a part of the host or its defenses, be single or multiple and be immediate or remote.

VetBooks.ir

VetBooks.ir

allotypic d. an antigenic determinant which varies among members of the same species.
antigenic d. an exposed region of an antigen against which immune responses are made and that represent the precise site that is bound by antibody or the T cell receptor; an antigen such as a protein has many antigenic determinants. Called also epitope.
disease d's factors which affect the occurrence or rate of occurrence of a disease.
hidden d. an antigenic determinant located in an unexposed region of a molecule so that it is prevented from interacting with receptors on lymphocytes, or with antibody molecules, and is unable to induce an immune response; it may appear following alteration of molecular secondary or tertiary structure.
isotypic d. one that occurs in all individuals of the same species.
key d. a risk factor that is key to the occurrence of a disease and that is the subject for modification or elimination to prevent or correct the disease.

determination [*de-tur'mĭ-na'shən*] the establishment of the exact nature of an entity or event. See also **age determination**, **sex determination**.
d. coefficient see determination **coefficient**.
embryonic d. the loss of pluripotentiality in any embryonic part and its start on the way to an unalterable fate.

determinism [*de-tur'mĭ-niz-əm*] the theory that all phenomena are the result of antecedent conditions and that nothing occurs by chance.

deterministic model one in which each variable changes according to a mathematical formula, rather than with a random component.

detomidine [*de-to'mĭ-dēn*] a potent α_2-adrenoceptor agonist, used as a sedative and analgesic, primarily in horses.

detorsion rod [*de-tor'shən*] an obstetrical instrument used to assist in the correction of uterine torsion in the cow. It is a meter long rod with a bar handle for applying torque. At the other end is a double prong with an eyelet at the end of each prong. Each of the two presenting limbs is fixed to one of the prongs by rope or chain and the fetus can then be rotated along its long axis by rotating the handle.

detoxicate [*de-tok'sĭ-kāt*] detoxify.

detoxification, detoxication [*de-tok"sĭ-fĭ-ka'shən, de-tok"sĭ-ka'shən*] 1. reduction of the toxic properties of a substance. 2. treatment designed to assist in recovery from the toxic effects of a drug.
metabolic d. reduction of the toxic properties of a substance by chemical changes induced in the body, producing a compound which is less poisonous or more readily eliminated.

detoxify [*de-tok'sĭ-fi*] to subject to detoxification.

detrition [*de-trish'ən*] the wearing away, as of teeth, by friction. See also **attrition**.

detritus [*de-tri'təs*] particulate matter produced by or remaining after the wearing away or disintegration of a substance or tissue. See also **debris**.
d. cysts occur in arthritis where there is hemorrhage and necrotic bone.

detrusor [*de-troo'sər*] a general term for a muscle that expresses a substance. The detrusor muscle of the bladder squeezes urine towards the outlet.

detumescence [*de"too-mes'ans*] the subsidence of congestion and swelling.

detusking removal of part or all of the tusks of a boar to prevent injury to other pigs and people.

deuterium (D or ^{2}H) [*doo-tēr'e-əm*] the mass 2 isotope of hydrogen; it is available as a gas or heavy water and is used as a tracer or indicator in studying metabolism.

deuterohemophilia [*doo"tar-o-he-mo-fil'e-ə*] a group of hemorrhagic disorders resembling classical hemophilia, due to coagulation factor deficiencies or to the action of certain anticoagulants.

Deuteromycetes [*doo"tər-o-mi-se'tēz*] a group of fungi for which the sexual form is not known (Fungi Imperfecti) and which contains many of the fungi pathogenic for humans and animals.

Deuteromycota [*doo"tər-o-mi-ko'tə*] the group of fungi known as Fungi Imperfecti, containing *Cryptococcus*, *Candida* and some *Microsporum* and *Trichophyton* spp. Fungi for which the sexual form is not known.

deuteropathy [*doo"tər-op'ə-the*] a disease that is secondary to another disease.

deuteroporphyrin III the protoporphyrin of heme, the only known naturally occurring isomer of etioporphyrin III.

devascularization [*de-vas"ku-lər-ĭ-za'shən*] interruption of circulation of blood to a part due to obstruction or destruction of blood vessels supplying it.

developer develops the latent image on the exposed X-ray film.

developing agent [*de-vel'əp-ing*] see **developer**.

development [*de-vel'əp-mənt*] the process of growth and differentiation.

developmental [*de-vel"əp-men'təl*] pertaining to development.
d. anomaly absence, deformity or excess of body parts as the result of faulty development of the embryo. Called also developmental defect.
d. defect see developmental anomaly (above).

Deverra triradiata a Eurasian desert plant in the family Apiaceae containing furanocoumarins; causes primary photosensitization. Called also *Pituranthos triradiatus*.

deviant [*de've-ənt*] varying from a determinable standard.

deviation [*de"ve-a'shən*] variation from the regular standard or course. 1. in ophthalmology, a tendency for the visual axes of the eye to fall out of alignment owing to muscular imbalance. 2. in statistics, the difference between the predicted value of a variable and the actual value.
standard d. (σ) a measure of the dispersal of a random variable; the square root of the average squared deviation from the mean. For data that have a normal distribution about 68% of the data points fall within one standard deviation from the mean and 95% fall within two standard deviations.

devil's pertaining to the devil; said of something evil.
d. apple ***Solanum*** *capsicoides*.
d. bit see ***Scabiosa succisa***.
d. droppings see ***Asafetida***.
d. fig ***Solanum*** *torvum*.
d. food ***Datura*** *stramonium*.
d. grip a conformation defect in sheep in which the thorax is pinched in behind the shoulders. Reputed to make affected sheep more susceptible to fleece rot and blowfly strike.
d. ivy see ***Datura***.
d. thorn see ***Tribulus*** *terrestris*.
d. trumpet ***Datura*** *stramonium*.

devitalized literally, without life; usually describes tissues deprived of blood supply or damaged and with little or no prospect of survival.

devocalization surgical interference with the voice-producing mechanism to prevent annoying noise made by the animal. In the dog and sea lion the operation is a resection of the vocal cords. Equine devocalization was an important procedure for mounted units in wartime; it was a ventriculectomy with added cord resection for a greater level of muting. In the peacock devocalization is carried out by scarification of the mucosa of the syrinx.

Devon a cherry red breed of dairy cattle, bred in the UK. See also **South Devon**.

Devon rex see **Rex**.

Dewar flask an insulated container for the storage of cryogenic liquids such as liquid nitrogen.

dewattling surgical removal of the wattles from a chicken. See also **decombing**.

dewclaw [*doo'klaw*] 1. the rudimentary first digit of dogs and cats, found on the inner side of the front legs, above the weight-bearing digits. These are commonly removed from puppies at an early age because of the susceptibility to injury throughout life. Occasionally found on the hindlegs of some dogs and in some breeds this is required, e.g. the Great Pyrenees dog and Briard in which double rear dewclaws must be present. 2. the accessory claws of the ruminant foot.
d. slough (2) sequel to laminitis, severe edema of the lower extremity, severe coronitis.

dewlap [*doo'lap*] loose skin under the throat and neck which may be pendulous in some species or breeds, e.g. Bloodhounds, Zebu cattle, rabbits, and some birds.

deworming preparations [*de-warm'ing*] see **anthelmintic**.

DEXA see **DXA**.

dexamethasone [*dek"sə-meth'ə-sōn*] a synthetic glucocorticoid used primarily as an anti-inflammatory agent in various conditions, including autoimmune diseases, hypersensitivity reactions and

shock; it is also used in a screening test for the diagnosis of **Cushing's syndrome** and for the termination of pregnancy in cattle.

d. suppression test the determination of blood cortisol concentrations before and after administration of dexamethasone assists in diagnosing Cushing's syndrome and identifying the cause, depending on the protocol and dose used. Dexamethasone suppresses secretion of corticotropin-releasing hormone and ACTH in normal animals and therefore the blood concentration of cortisol is decreased. Dogs or cats with pituitary dependent hyperadrenocorticism are more resistant and high doses of dexamethasone (*high-dose dexamethasone suppression test*; HDDST) are required to suppress cortisol concentrations; adrenal tumors are not responsive. Low doses (*low-dose dexamethasone suppression test*; LDDST) may be used as a screening test for pituitary-dependent Cushing's syndrome in dogs.

dexbrompheniramine [*deks"brom-fən-ēr'ə-mēn*] the dextrorotatory isomer of **brompheniramine**, used as an antihistaminic in the form of the maleate salt.

dexchlorpheniramine [*deks"klor-fən-ēr'ə-mēn*] the dextrorotatory form of chlorpheniramine used as an antihistaminic in the form of the maleate salt.

dexmedetomidine [*deks"med-ə-to'mĭ-dēn*] a potent α_2-adrenoceptor agonist, containing only the active (dextro-rotary) isomer of medetomidine; used as a sedative and analgesic.

Dexon [*dek'son*] trademark for a synthetic suture material, polyglycolic acid, a polymer that is completely absorbable and nonirritating.

dexpanthenol [*deks-pan'thə-nol*] the D-isomer of panthenol, a coenzyme A precursor with cholinergic activity. Used to increase peristalsis in atony and paralysis of the lower intestine and as an antiflatulent; also used topically to stimulate skin healing in various skin diseases.

dexrazoxane [*deks"ra-zok'sān*] used with doxorubicin in dogs to minimize the cardiotoxic effects.

Dexter a red or black, short-legged breed of cattle used for dairy or beef purposes, produced in Ireland. Called also Dexter-Kerry. They are achondroplastic and the breed has a number of inherited defects, including bulldog calves.

dexter [*deks'tər*] [L.] *right, on the right side.*

Dexter-Kerry see **Dexter**.

dextran [*deks'trən*] a water-soluble polysaccharide of glucose (dextrose) produced by the action of *Leuconostoc mesenteroides* on sucrose; used as a plasma volume extender. Several preparations of dextran are used as anticoagulants.

d. 40 used as an adjuvant in blood transfusion, an anticoagulant.

d. 70 a plasma volume expander with an average molecular weight of 70 daltons with osmotic effects similar to albumin. May interfere with platelet function; promotes rouleaux formation and may interfere with crossmatching of blood.

d. sulfate used as an anticoagulant and investigated for its antiviral activity.

dextranomer [*deks-tran'o-mər*] small beads of highly hydrophilic dextran polymers used in débridement of secreting wounds, such as venous stasis ulcers; the sterilized beads are poured over secreting wounds to absorb wound exudates and prevent crust formation.

dextriferron a complex of ferric hydroxide and partially hydrolyzed dextrin used in the treatment of iron-deficiency anemia.

dextrin [*deks'trin*] any of a range of glucose polymers of varying sizes formed during the hydrolysis of starch.

limit d. a by-product of glycogenolysis.

D-25: Dexter beef bull. From Sambraus HH, Livestock Breeds. Mosby, 1992.

dextrin-1,6-glucosidase dextrin 6-glucanohydrolase: an enzyme that catalyzes the hydrolysis of α-1,6-glucan links in dextrins containing short 1,6-linked side chains.

dextrinose see **isomaltose**.

dextrinosis [*dek"strĭ-no'sis*] a condition characterized by accumulation in the tissues of an abnormal polysaccharide.

dextrinuria [*deks"trĭ-nu're-ə*] presence of dextrin in the urine.

dextr(o)- word element. [L.] *right.*

dextroaorta [*dek"stro-a-or'tə*] dextropositioned aorta; a congenital anomaly in which the aorta develops from the embryonic right fourth aortic arch instead of the left. The left subclavian artery then crosses over the esophagus, forming a vascular ring and a cause of regurgitation in the neonate.

dextrocardia [*dek"stro-kahr'de-ə*] location of the heart in the right side of the thorax, the apex pointing to the right.

mirror-image d. location of the heart in the right side of the chest, the atria being transposed and the right ventricle lying anteriorly and to the left of the left ventricle.

dextromethorphan [*dek"stro-math-or'fan*] a synthetic morphine derivative used as an antitussive in the form of the hydrobromide salt.

dextroposition [*dek"stro-pə-zish'ən*] displacement to the right.

dextropropoxyphene [*dek"stro-pro-pok'sə-fēn*] see **propoxyphene**.

dextrorotatory [*dek"stro-ro'tə-re*] turning the plane of polarization, or rays of light, to the right.

dextrose [*dek'strōs*] an old chemical name for D-glucose, an important energy source for all tissues and the sole energy source for the brain in some species such as the sheep. The term dextrose continues to be used to refer to glucose solutions administered intravenously for fluid or nutrient replacement. See also **glucose**.

dextrosuria [*dek"strōs-u're-ə*] glucosuria.

dextrothyroxine sodium [*dek"stro-thi-rok'sin*] the dextrorotatory isomer of thyroxine used as an antihyperlipoproteinemic in the treatment of hyperlipemia.

dextroversion [*dek"stro-vur'zhən*] 1. version to the right, especially movement of the eyes to the right. 2. location of the heart in the right chest, the left ventricle remaining in the normal position on the left, but lying anterior to the right ventricle.

df degrees of freedom.

DF-2 see ***Capnocytophaga***.

DFA test direct fluorescent antibody test.

DFB acronym for dark, firm, dry meat. Called also dark cutting beef.

DFP di-isopropylfluorophosphate. See **isoflurophate**.

DHA docosahexaenoic acid.

DHAP dihydroxyacetone phosphate, an intermediate of glycolysis formed as an end product of the aldol cleavage of fructose-1,6-bisphosphate.

24,25-DHCC 24,25-dihydroxycholecalciferol; a metabolite in calcium metabolism, formed in the kidney from 25-hydroxycholecalciferol by the activation of a 24-hydroxylase. See also **dihydroxycholecalciferol**.

DHEA dehydroepiandrosterone.

dhfr* gene** see *dlhfrgene**.

DHI see **dairy** herd improvement.

DHIA Dairy Herd Improvement Association. Most developed countries have a DHIA dedicated to improving the productivity of their dairy cattle. Membership is optional but fees are low because of heavy government subsidy. See also **dairy** herd improvement.

Dhobie itch see **equine allergic dermatitis**.

dhrek see ***Melia azederach***.

dhurrin [*doo'rin*] a cyanogenetic glycoside in sorghum.

DHV deer herpesvirus.

di- word element. [Gr., L.] *two.*

2,6-di-iodo-4-nitrophenol see **disophenol**.

dia- word element. [Gr.] *through, between, apart, across, completely.*

diabetes [*di"ə-be'tēz*] a general term referring to a variety of disorders characterized by polyuria and polydipsia. See **diabetes mellitus** and **diabetes insipidus**.

metahypophysial d. diabetes mellitus which occurs as a result of active hyperplasia or tumor of the acidophil cells of the pituitary gland.

diabetes insipidus [*di"ə-be'tēz*] a metabolic disorder due to injury of the neurohypophyseal system, which results in a deficient quantity of antidiuretic hormone (ADH or vasopressin) being released or produced, resulting in failure of tubular reabsorption of water

VetBooks.ir

in the kidney. As a consequence, there is the passage of a large amount of urine having a low specific gravity, and great thirst. It may be acquired through infection, neoplasm or trauma to the posterior lobe of the pituitary gland or it may be inherited or idiopathic. Called also central diabetes insipidus.

dipsogenic d. i. see psychogenic diabetes insipidus (below).

nephrogenic d. i. a rare form of diabetes insipidus, resulting from failure of the renal tubules to reabsorb water; there is excessive production of antidiuretic hormone but the tubules fail to respond to it. Can be secondary to other conditions, including pyometra, hyperadrenocorticism and hypercalcemia.

psychogenic d. i. a primary polydipsia resulting from a disorder of thirst control, or as a behavioral problem. The polyuria is secondary to the excessive water intake. Called also dipsogenic diabetes insipidus.

diabetes mellitus [*di"ə-be'tēz*] a broadly applied term used to denote a complex group of syndromes that have in common a disturbance in the oxidation and utilization of glucose, which is secondary to a malfunction of the beta cells of the pancreas, whose function is the production and release of **insulin**. Because insulin is involved in the metabolism of carbohydrates, proteins and fats, diabetes is not limited to a disturbance of glucose homeostasis alone. Diabetes mellitus has been recorded in all species but is most commonly seen in cats and middle-aged to older, obese, female dogs. A familial predisposition has been observed in some dog breeds. Two classifications are recognized. In *type 1*, or insulin-dependent diabetesmellitus (IDDM), there is a deficiency of insulin. This is the form seen in almost all dogs and some cats with diabetes mellitus. *Type 2*, or noninsulin-dependent diabetes mellitus (NIDDM), is caused by a relative lack of insulin and insulin resistance. This is the form seen in most cats with diabetes mellitus. A diagnosis of diabetes mellitus is usually not made in dogs and cats until the disease is well advanced or complicated by the development of **ketoacidosis**. Clinical signs include polyuria, polydipsia, and weight loss despite an increased appetite. Persistent fasting hyperglycemia, glucosuria and sometimes ketonuria are present. Dogs may develop cataracts and present with an acute blindness. Cats may show gait abnormalities, hindlimb weakness and a plantigrade stance due to diabetic nephropathy. With the development of ketoacidosis, there is anorexia, vomiting and dehydration.

complicated d. m. see diabetic **ketoacidosis**.

hyperosmolar d. m. a syndrome of marked hyperglycemia and hyperosmolarity with central nervous signs, resembling diabetic coma.

juvenile d. m. develops in the young, typically less than 1 year of age; uncommon in dogs and cats.

secondary d. m. insulin resistance and hyperglycemia secondary to another disease, such as pancreatitis, hyperadrenocorticism, or acromegaly, or treatment with drugs, such as glucocorticoids or progesterone. Called also type 3 diabetes mellitus.

steroid d. m. altered carbohydrate tolerance is induced by glucocorticoids and progestogens. Hyperglycemia and diabetes mellitus can be associated with the administration of such drugs or hyperadrenocorticism.

transient d. m. following successful initiation of treatment, some cats regain their ability to maintain euglycemia; may be long- or short-term.

diabetic [*di"ə-bet'ik*] pertaining to or characterized by diabetes.

d. dermatopathy see necrolytic migratory**erythema**.

diabetogenic [*di"ə-bet"o-jen'ik*] producing diabetes.

diabetogenous [*di"ə-be-toj'ə-nəs*] caused by diabetes.

diabrotic [*di"ə-brot'ik*] 1. ulcerative; caustic. 2. a corrosive or escharotic substance.

diacetoxyscirpenol [*di-as"ə-tok"se-sur'pə-nol*] non-macrocyclic trichothecene mycotoxin from the fungi *Fusarium* spp. Causes emesis, voracious appetite, frequent passage of normal feces, and posterior paresis in pigs.

diacetylmorphine [*di"ə-se"təl-mor'fēn*] heroin.

diacrisis [*di-ak'rĭ-sis*] 1. diagnosis. 2. a disease characterized by a morbid state of the secretions. 3. a critical discharge or excretion.

diacritic [*di"ə-krit'ik*] diagnostic; distinguishing.

sn-1,2-diacylglycerol [*dī-a"səl-glis'ər-ol*] compound consisting of two long chain fatty acids esterified to glycerol. Second messenger produced from the action of an agonist via G-proteins activating phospholipase C leading to the hydrolysis of phosphatidylinositol 4,5-bisphosphate to sn-1,2-diacylglycerol and inositol 1,4,5-trisphosphate. sn-1,2-Diacylglycerol subsequently activates protein kinase C by greatly increasing the affinity of the enzyme for calcium ions.

diadochokinesia [*di-ad"ə-ko-kĭ-ne'zhə*] the function of arresting one motor impulse and substituting one that is diametrically opposite.

diadromous said of fish; those migrating between fresh and marine waters in either direction.

diadromy migration of fish in either direction, from fresh to sea water or the reverse.

diagnose [*di'əg-nōs*] to identify or recognize a disease.

diagnosis [*di"əg-no'sis*] a name given to a disease so that each veterinarian means the same syndrome as every other veterinarian. It is then possible to prescribe for and make a prognosis about any one case on the basis of the outcomes in a series of animals with the same diagnosis. A diagnosis may be the name of a disease with a specific etiology, or one which is only a description of the morphological identity of the disease, a pathoanatomical diagnosis, or be a syndrome which is a description of the total clinical presentation, or a single clinical sign.

clinical d. diagnosis based on clinical signs and laboratory findings during life.

computer assisted d. a computer program identifies the diseases that fit the identified abnormalities best.

differential d. the determination of which one of several diseases may be producing the signs observed.

etiological d. identifies the specific cause of the disease.

pathoanatomical d. diagnosis to the point of identifying the system and organ involved and the nature of the lesion, but short of identifying the cause.

physical d. diagnosis based on information obtained by inspection, palpation, percussion and auscultation.

radiological d. a good radiological report does more than report findings. It interprets these findings if possible up to the point of making a pathoanatomical diagnosis (see above).

veterinary d. diagnosis performed by a veterinarian and based on information gleaned from a variety of sources, including (1) findings from a physical examination, (2) interview with the owner or custodian of the animal, (3) veterinary history of the patient and its cohorts, (4) epidemiology, and (5) paraclinical findings as reported by pertinent laboratory tests and radiological studies.

zebra d. arriving at an unlikely diagnosis instead of a more common one.

diagnostic [*di"əg-nos'tik*] pertaining to or emanating from the making of a diagnosis.

d. codes alphanumeric codes used to identify diagnoses for the purposes of computer storage. The codes can be entirely alphabetical, and therefore much more user-friendly, but the number of diagnoses that the system can hold is limited. Completely numeric code systems offer limitless volumetric capacity, a disadvantage in a working hospital.

d. data data with finite values as opposed to continuous data, e.g. the number of puppies born per litter.

d. disciplines the disciplines applied to the making of diagnoses. Includes clinical medicine, surgery and reproduction and also epidemiology, pathology, microbiology, parasitology and toxicology.

d. hypotheses preliminary list of potential diagnoses.

d. kits commercially available tests used in the diagnosis of disease. Most are intended for biochemical estimation or the qualitative detection of antigen or antibody. Many are based on an ELISA.

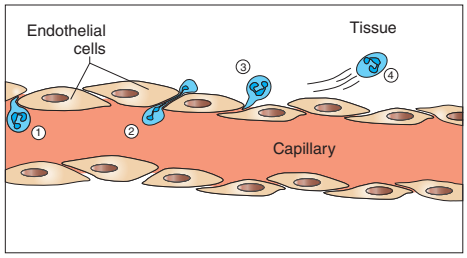
d. laboratory, veterinary d. laboratory present in most countries to provide veterinary laboratory diagnostic services, particularly with respect to regulatory diseases but, in almost all cases, also for laboratory diagnostic support for any animal disease. Most are supported, in part, by state or national funding but most also need to charge a fee for diagnostic services. In the US, accreditation is through the American Association of Veterinary Laboratory Diagnosticians (AAVLD). Regional veterinary diagnostic laboratories are established to serve the needs of farms in their proximity

d. plan in problem-oriented diagnosis, the systematic outline of procedures and tests to be undertaken in making a diagnosis.

d. points in acupuncture terminology include association points (back *Shu* points and alarm points, front *Mu* points).

d. test tests likely to provide information which aids in the making of a diagnosis.

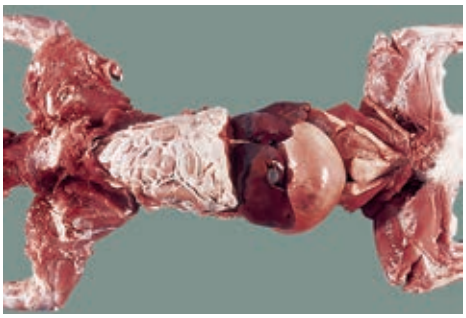
d. trail a standard procedure for making a clinical and laboratory examination so that nothing is omitted and so that the procedure can be checked or repeated.
diagnostician [*di"əg-nos-tish'ən*] an expert in diagnosis.
diagnostics [*di"əg-nos'tiks*] the science and practice of diagnosis of disease
diagonal gait see diagonal **gait**.
diagram [*di'ə-gram*] a visual representation of information that explains the relationship between qualitative data, concepts or variables ; may be taken to include charts and graphs.
bar d. a method of presenting data in which frequencies are displayed along one axis and categories of the variable along the other, the frequencies being represented by the bar lengths.
ladder d. a method of interpreting cardiac arrhythmias by using the electrocardiogram with a diagram drawn from the important points of atrioventricular conduction.
Lewis d. a ladder diagram of cardiac impulse formation and conduction.
scatter d. a graphic representation of a scatter of two variables.
tree d. see **decision** tree.
Venn d. a pictorial representation, usually in the form of two or more overlapping circles, of the extent to which two or more quantities or concepts have comparable or disparate characteristics.
diakinesis [*di'ə-kĭ-ne'sis*] in cell division the stage of first meiotic prophase, in which the nucleolus and nuclear envelope disappear and the spindle fibers form.
di-allate a thiocarbamate herbicide; chronic poisoning causes anorexia, weight loss and alopecia. See also **tri-allate**.
di-allylacetamide a weedkiller. Acute poisoning is unlikely because of the large dose required. Chronic toxicity is possible.
Dialopsis africana see **Zanha africana**.
dialysance [*di-al'ə-səns*] the minute rate of net exchange of solute molecules passing through a membrane in dialysis.
dialysate [*di-al'ə-sāt*] the material passing through the membrane in dialysis. In peritoneal dialysis, the fluid infused and later removed from the peritoneal cavity.
dialysis [*di-al'ə-sis*] the diffusion of solute molecules through a semipermeable membrane, passing from the side of higher concentration to that of the lower; a method sometimes used in cases of defective renal function to remove from the blood elements that are normally excreted in the urine (hemodialysis). The principles of dialysis are utilized in renal dialysis with a hemodialyzer (**hemodialysis**) and in **peritoneal** dialysis.
extracorporeal d. dialysis by a hemodialyzer. See **hemodialysis**.
peritoneal d. dialysis through the peritoneum, the dialyzing solution being introduced into and removed from the peritoneal cavity, as either a continuous or an intermittent procedure. See also **peritoneal** dialysis.
dialyzer [*di'ə-līz"ər*] an apparatus for performing dialysis; a hemodialyzer.
diameter [*di-am'ə-tər*] the length of a straight line passing through the center of a circle and connecting opposite points on its circumference; hence the distance between the two specified opposite points on the periphery of a structure such as the cranium or pelvis.
cranial d's, craniometric d's imaginary lines connecting points on opposite surfaces of the cranium.
pelvic d. any of the diameters of the pelvis; any measurement that expresses the diameter of the birth canal in the female.
diamfenetide, diamphenethide a fasciolicide used in sheep; effective against immature flukes but with diminishing activity as the fluke ages. An effective compound for use in prophylactic programs against *Fasciola hepatica*.
diamide [*di-am'īd*] 1. compound containing two amido groups. 2. hydrazine.
diamidine [*di-am'ĭ-dēn*] 1. a compound that contains two-C(=NH) NH_2 groups (eg pentamidine). 2. a group of antiprotozoal drugs; includes phenamidine, pentamidine, diminazene and imidocarb.
diaminobutyric acid a neurotoxin in ***Lathyrus*** *hirsutus*.
diaminodiphenoxyalkane a schistosomicidal drug; causes degeneration of pigmented retinal epithelium.
diaminophenylsulfone see **dapsone**.
diaminopyrimidines synthetic antimicrobial agents that act as competitive antagonists in the conversion of folic acid to folinic acid. Examples are trimethoprim and pyrimethamine. Usually combined with a sulfonamide, providing a sequential blockade in nucleic acid synthesis.



D-26: Diapedesis. 1. Neutrophil lying against vessel wall begins to squeeze through the space between endothelial cells by flowing into pseudopod. 2. Pseudopod continues to push its way between cells. 3. Pseudopod and the rest of the cell emerge on tissue side of blood vessel. 4. Neutrophil is off in tissue space.
Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2007.

diamnionic [*di"am-ne-on'ik*] having or developing within separate amniotic cavities, as diamnionic twins.
diamniotic [*di-am"ne-ot'ik*] diamnionic.
diamond skin disease [*di'ə-mond*] see **erysipelas** (1).
Diamond's medium [*di'ə-mond*] a culture medium especially suitable for culturing cervicovaginal mucus for the isolation of *Tritrichomonas foetus*.
diamorphine [*di"ə-mor'fēn*] heroin.
diamphenethide **diamfenetide**.
dianthrone group of primary photosensitizing plant pigment toxins, includes hypericin, fagopyrin. Called also helianthrone.
diapause [*di'ə-pawz*] a state of inactivity and arrested development accompanied by greatly reduced metabolism, as in many eggs, insect pupae and plant seeds. It is a mechanism for surviving adverse weather conditions.
diapedesis [*di"ə-pə-de'sis*] the outward passage of blood cells through intact vessel walls.
diaphanoscope [*de-af'ə-no-skōp"*] an instrument for transilluminating the interior of a body cavity to allow it to be visible from the exterior.
diaphemetric [*di-af'ə-met'rik*] pertaining to measurement of tactile sensibility.
diaphoresis [*di"ə-fə-re'sis*] perspiration, especially profuse perspiration.
diaphoretic [*di"ə-fo-ret'ik*] 1. pertaining to, characterized by, or promoting diaphoresis. 2. an agent that promotes diaphoresis.
diaphragm [*di'ə-fram*] 1. the musculomembranous partition separating the thoracic and abdominal cavities. On its sides, it is attached to the caudal ribs; ventrally to the sternum; at the back, to the spine. The esophagus, the aorta and vena cava, and nerves pass through the diaphragm. When relaxed, the diaphragm is convex but it flattens and moves caudally as it contracts during inhalation, thereby enlarging the chest cavity and allowing for expansion of the lungs. See also **respiration**. 2. any separating membrane or structure. 3. a disk with one or more openings or with an adjustable opening, mounted in relation to a lens, by which part of the light may be excluded from the area. See also **diaphragmatic**.
grid d. a grid interposed between the film and the X-ray beam. See also **grid** (1).
Potter–Bucky d. see Potter–Bucky **grid**.
light beam d. an adjustable diaphragm which is used to cone down a light beam that indicates the dimensions of an X-ray beam and marks the position of the central ray.
pelvic d. the muscular sheet guarding the pelvic outlet made up of the coccygeus and levator ani muscles. See Table 13.2.
slit d. see **filtration** membrane.
urogenital d. the musculomembranous layer superficial to the pelvic diaphragm, extending between the ischiopubic rami and surrounding the urogenital ducts.
diaphragma sellae [*di"ə-frag'mə*] a sheet of dura separating the pituitary gland in its fossa from the brain above.
diaphragmatic [*di"ə-frag-mat'ik*] pertaining to the diaphragm.
d. abscess in the cow produces a syndrome of humped back, pain on percussion over the xiphoid area, fever and leukocytosis.

VetBooks.ir



D-27: Diaphragmatic hernia at post mortem showing intestines and omentum in the thoracic cavity displacing liver and stomach caudally. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

d. hernia in cattle, cases resulting from traumatic reticulitis show chronic ruminal tympany, distention, emaciation, anterior displacement of the heart with systolic murmur. Congenital cases in calves and those in cows due to trauma show dyspnea, displacement of the heart, and gut sounds audible in the chest. Horse cases are usually traumatic in origin and result in an acute onset of severe colic with no good distinguishing signs. In dogs and cats, uncommonly congenital but a common sequela to trauma with signs of dyspnea and pleural effusion. See also **peritoneopericardial hernia**.

d. rupture see diaphragmatic hernia (above).

d. septal defects include pleuroperitoneal and pericardioperitoneal defects.

synchronous d. flutter violent, unilateral hiccoughs occur with each heartbeat, sometimes with muscle tetany reminiscent of **lactation tetany**; some cases of that disease also have flutter. Acid–base imbalance is present in most cases. Recovery is spontaneous and following treatment with calcium solutions.

d. tendon the heart-shaped tendinous center of the diaphragm.

diaphragmatocele [*di"ə-frag-mat'o-sēl*] see **diaphragmatic** hernia.

diaphragmitis [*de"ə-frag-mī'tis*] inflammation of the diaphragm.

diaphyseal, diaphysial [*di"ə-fiz'e-əl, di"ə-fiz'e-əl*] pertaining to or affecting the shaft of a long bone (diaphysis).

d. aclasis see multiple cartilaginous **exostosis**, inherited multiple **exostosis**.

d. dysplasia see juvenile **hyperostosis**.

diaphysectomy [*di"ə-fiz-ek'tə-me*] excision of part of a diaphysis.

diaphysis [*di-af'ə-sis*] pl. *diaphyses*. 1. the portion of a long bone between the ends or extremities, which are usually articular, and wider than the shaft; it consists of a tube of compact bone, enclosing the medullary cavity. Called also shaft. 2. the portion of a bone formed from a primary center of ossification.

diaplasis the setting of a fracture or reduction of a dislocation.

diapophysis [*di"ə-pof'ə-sis*] a transverse process of a vertebra.

Diaporthe toxica a toxic fungus growing on dead lupin plants (lupin stubble) and in lupin seeds producing *phomopsins* and causing the toxicosis, lupinosis. See also **lupinosis**. Called also *Phomopsis* sp. The phomopsin-producing fungus was originally erroneously called *Phomopsis leptostromiformis*.

diapositive mask a mask used in subtraction radiography. It is prepared from a scout film of the site and masks out the high density shadows so that the one created by a contrast radiograph will be highlighted.

Diaptomus gracilis [*di-ap'to-məs*] a diaptomid copepod, a first intermediate host of the cestode ***Diphyllobothrium latum***.

diapyesis [*di"ə-pi-e'sis*] suppuration.

diarrhea [*di"ə-re'ə*] rapid movement of fecal matter through the intestine resulting in poor absorption of water, nutritive elements and electrolytes, and producing abnormally frequent evacuation of watery droppings. The major causes are local irritation of the intestinal mucosa by infectious or chemical agents (gastroenteritis). In all types of diarrhea there is rapid evacuation of water and electrolytes resulting in a loss of these essential substances. Base (bicarbonate) especially is depleted by diarrhea, thus producing **acidosis** as well as **fluid** volume deficit.

acute idiopathic d. acute diarrhea syndromes in horses which are not immediately diagnosable or differentiable and need to be treated symptomatically pending diagnosis, such as **salmonellosis**, **strongylosis**, **cyathostomiasis**,Potomac horse fever, **colitis**-X, antibiotic-associated diarrhea (below), **intestinal** clostridiosis.

acute undifferentiated d. of the horse see acute idiopathic diarrhea (above).

antibiotic-associated d. results from disruption of the normal bowel flora as a result of antimicrobial therapy for any reason. May occur as moderate diarrhea or as a life threatening syndrome often with severe colitis or pseudo-membranous colitis. See also antibiotic-associated **colitis**.

bovine virus d. see **bovine** virus diarrhea.

campylobacter d. watery diarrhea without other obvious signs and without other obvious cause in yearling sheep, calves and foals. *Campylobacter jejuni* and *C. coli* have been suggested as causes. *Campylobacter* infection is the leading bacterial cause of diarrhea in humans in many industrialized countries and livestock and poultry products are one source. See also **winter dysentery**.

chronic undifferentiated d. of the horse chronic, very watery diarrhea for very long periods but the horse has normal appetite and loses weight only gradually. Esthetically very displeasing to pleasure horse owners. Irreversible but not usually fatal.

ciliate d. colitis caused by ***Troglodytella*** in primates.

dietary d. a result of dietary indiscretion; occurs in all species. It is caused by the chemical or physical nature of the ingested material. The commonest occurrence of the syndrome is in newborn animals, especially those who ingest too much milk. There is often a history of access to an oversupply of milk or of a recent change of source to an over-rich milk replacer or indigestible components in replacer. It is also caused by too-rapid drinking. Affected animals are bright and alert and have a normal appetite but the feces are voluminous, soft to fluid and evil-smelling. Secondary bacterial enteritis may ensue but most cases recover spontaneously when the diet is adjusted. Scavenging dogs and cats ('garbage eaters') commonly ingest food that is spoiled or to which they are unaccustomed, resulting in various degrees of vomiting or diarrhea. Called also dietetic scours.

effusion d. caused by an increase in the transepithelial hydrostatic pressure gradient, such as occurs in congestive heart failure and hepatic portal hypertension.

large bowel d. in dogs and cats, signs referable to the site of enteric disease responsible for the diarrhea being the large intestine include tenesmus, mucus, hematochezia, and increased frequency of defecation.

malabsorptive d. villous atrophy, such as occurs with some viral infections, causes malabsorption diarrhea because of the reduction in area of absorptive intestinal epithelium.

nursery d. see **nursery** diarrhea.

osmotic d. an overload of unabsorbed osmotically active particles will attract and retain water, increasing fecal volume and causing diarrhea. Associated with maldigestion, malabsorption, overeating, excessive carbohydrates or fats. The basis for the laxative effect of magnesium sulfate, sodium sulfate or sodium phosphate.

pasture d. see **copper** nutritional deficiency.

porcine epidemic d. occurs in most swine-raising countries in Europe and Asia and causes an economically significant outbreak of enteric disease with acute diarrhea, dehydration and significant mortality. It is caused by porcine epidemic diarrhea virus, a coronavirus that replicates in differentiated enterocytes covering the villi of the small intestine, leading to villous atrophy and malabsorption. There are several genotypes of the virus. Called also epizootic porcine diarrhea.

psychogenic d. see irritable **colon** syndrome.

secretory d. derangement of normal secretory and absorptive functions of intestinal epithelium such as occurs with bacterial enterotoxins may result in excessive secretion and a resulting diarrhea. *Escherichia coli* is the prime example of an infection with this effect.

small bowel d. in dogs and cats, signs referable to the site of enteric disease responsible for the diarrhea being the small intestine include lack of tenesmus or mucus, increased fecal volume, melena and weight loss.

undifferentiated d. of the newborn the situation in which a newborn animal (less than 7 days old) has life-threatening acute diarrhea. There is insufficient time and it would cost too much to differentiate between all of the possible causes. Added to this is the common occurrence in which there are two or more agents present, often acting in concert. Because of the need to treat these cases urgently and effectively if their lives are to be saved it has become the practice to group them together for the purposes of treatment, mainly with fluid replacement therapy and correction of acid base imbalance.

D-28: Diascopy.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

diarrheogenic [*di"ə-re"o-jen'ik*] giving rise to diarrhea.
diarrhoea diarrhea.
diarthric [*di-ahr'thrik*] pertaining to or affecting two different joints; biarticular; diarticular.
diarthrodial [*di"ahr-thro'de-əl*] of the nature of a diarthrosis.
d. joint see **diarthrosis**.
diarthrosis [*di"ahr-thro'sis*] pl. *diarthroses* [Gr.] a specialized form of articulation in which there is more or less free movement, the union of the bony elements being surrounded by an articular capsule enclosing a cavity lined by synovial membrane; an outmoded term for a synovial joint.
d. rotatoria a joint characterized by mobility in a rotary direction.
diarticular [*di"ahr-tik'u-lər*] pertaining to two joints; diarthric.
diaschisis [*di-as'kĭ-sis*] loss of function and electrical activity in an area of the brain due to a lesion in a remote area that is neuronally connected with it.
diascopy [*di-as'kə-pe*] a technique for examination of erythematous skin lesions. If a clear glass slide, pressed over the lesion, causes the color to fade, there is vascular engorgement; if it does not fade, it is hemorrhage in the skin (ecchymosis).
diastase [*di'ə-stās*] a combination of enzymes produced during germination of seeds, and contained in malt; it converts starch into maltose and then into dextrose.
diastasis [*di-as'tə-sis*] 1. dislocation or separation of two normally attached bones between which there is no true joint. Also, an abnormally large separation between associated bones, as between the ribs. 2. diastasis cordis, the rest period of the cardiac cycle, occurring just before systole.
diastema [*di"ə-ste'mə*] a space or cleft, e.g. the space in the dental arch between the incisors and canines and cheek teeth. Called also interdental space.
diastematocrania [*di"ə-stem"ə-to-kra'ne-ə*] congenital longitudinal fissure of the cranium.
diastematomyelia [*di"ə-stem"ə-to-mi-e'le-ə*] abnormal congenital length-wise division of the spinal cord by a bony spicule or fibrous band protruding from a vertebra or two, into two halves, each of the halves being surrounded by a dural sac.
diastematopyelia [*di"ə-stem"ə-to-pi-e'le-ə*] congenital median fissure of the pelvis.
diastole [*di-as'to-le*] the phase of the cardiac cycle in which the heart relaxes between contractions; specifically, the period when the two ventricles are dilated by the blood flowing into them. See also **blood pressure** and **heart**.
diastrophic [*di"ə-strof'ik*] bent or curved; said of structures, such as bones, deformed in such manner.
diataxia [*di"ə-tak'se-ə*] ataxia affecting both sides of the body.
diathermal, diathermic [*di"ə-thur'məl, di"ə-thur'mik*] pertaining to diathermy; permeable by heat waves.
diathermy [*di'ə-thur"me*] the use of high-frequency electrical currents as a form of physical therapy and in surgical procedures. Diathermy is used in physical therapy to deliver moderate heat directly to pathological lesions in the deeper tissues of the body. Surgically, the extreme heat that can be produced by diathermy may be used to destroy neoplasms, warts and infected tissues, and to cauterize blood vessels to prevent excessive bleeding. The technique is particularly valuable in neurosurgery and surgery of the eye. See also **electrosurgery**.
surgical d. electrosurgery.
diathesis [*di-ath'ə-sis*] an unusual constitutional susceptibility or predisposition to a particular disease, e.g. bleeding diathesis, **exudative** diathesis.
diatomic [*di"ə-tom'ik*] 1. containing two atoms. 2. dibasic.
diatoms a series of unicellular algae, microscopic in size, with cell walls containing silica. Members of the family *Diatomaceae*. Their remains accumulate as geological deposits and are mined. See diatomaceous **earth**.
diatrizoate [*di"ə-tri-zo'āt*] the most commonly used water-soluble, iodinated, radiopaque X-ray contrast medium; may be used in place of barium for X-rays of the gastrointestinal tract.
diaveridine [*di"ə-ver'ĭ-dēn*] a folic acid antagonist used as a synergist with sulfonamides against *Eimeria* spp.
diazemuls see **diazepam**.
diazepam [*di-az'ə-pam*] a benzodiazepine tranquilizer used as an antianxiety agent, a skeletal muscle relaxant, anticonvulsant, and as an appetite stimulant.
diazinon an organophosphorus insecticide, used in ear tags for cattle and in flea collars and rinses for dogs. Called also dimpylate. See also **organophosphorus compound**.
diazo- the group $-N_2-$ linked to one organic radical, general formula $R_2C{=}N_2$.
diazotize [*di-az'o-tīz*] to introduce the diazo group into a compound.
diazoxide [*di"əz-ok'sīd*] a benzothiadiazine derivative that inhibits insulin release, enhances glycogenolysis and inhibits the uptake of glucose; administered orally to treat hypoglycemia due to hyperinsulinism.
dibasic [*di-ba'sik*] containing two replaceable hydrogen atoms, or furnishing two hydrogen ions.
Dibothriocephalus [*di-both"re-o-sef'ə-ləs*] see **diphyllobothrium**.
dibromoethane [*di-bro"mo-eth'ān*] a fungistat used to protect stored grain from weevils which causes fatal edema, fibrosis and alveolar epithelialization of the lungs when eaten by livestock.
dibromsalan one of two bromsalans (the other is tribromsalan) which, mixed in a variety of proportions, are used as treatments for liver flukes. See also **bromsalans**.
dibucaine [*di'bu-kān*] a long-acting local anesthetic used topically and intraspinally in the form of the base and as the hydrochloride salt; the latter is also used intramuscularly for infiltration anesthesia. Called also cinchocaine. Has a special characteristic of needing only a small dose (about one-fortieth the dose of procaine).
dibutyltin dilaurate a coccidiostat used in commercial poultry.
d. d. poisoning feeding to calves in error causes diarrhea and polyuria.
DIC disseminated intravascular **coagulation**.
dicamba a benzoic acid herbicide of very low toxicity. Very large doses cause anorexia, weight loss and stiffness of the hindlimbs.
dicarboxylic acid [*di"kahr-bok-sil"ik-as"id*] any organic molecule containing two carboxyl groups.
dicelous, dicoelus [*di-se'ləs, di-se'ləs*] 1. hollowed on each of two sides. 2. having two cavities.
Dicentra [*di-sen'trə*] a genus of the Fumariaceae family of plants; contain an isoquinoline alkaloid which causes a syndrome of diarrhea, incoordination and other nervous signs. Includes *D. cucullaria* (dutchman's breeches), *D. canadensis* (squirrel corn), *D. eximia* (wild bleeding heart), *D. formosa* (western bleeding heart), *D. spectabilis* (dutchman's breeches, wild bleeding heart). Called also *Bikukulla* spp.
dicephalus [*di-sef'ə-ləs*] a fetus with two heads. Called also derodidymus.
dicephalus a fetus with two heads.
Dichapetalum [*di"kə-pet'ə-lum*] African genus of the plant family Dichapetalaceae; contain large amounts of fluoroacetate; cause very sudden death, preceded in some cases by momentary tremor. Includes *D. barteri*, *D. braunii*, *D. cymosum* (*D. venenatum*, poison leaf, gibflaar), *D. deflexum*, *D. guineense*, *D. heudelotii*, *D. macrocarpum*, *D. michelsonii*, *D. mossambicense*, *D. ruhlandiii*, *D. stuhlmanii*, *D. tomentosum*, *D. toxicarium* (ratsbane).
Dichelobacter nodosus [*di-ke'lo-bak"tər*] causative bacteria of infectious footrot of sheep and goats. Previously called *Bacteroides nodosus*.
dichlone a fungicide, algacide and herbicide used to treat seeds and water.
dichloralphenazone [*di"klor-əl-fen'ə-zōn*] a mixture of chloral hydrate and antipyrine, a sedative and hypnotic.
dichlormate a carbamate non-cholinesterase inhibiting organic herbicide; has low toxicity but in very large doses causes diarrhea, abdominal pain and bloat in cattle.

VetBooks.ir

dichloro-diphenyl-trichloroethane DDT.

dichlorophen [*di-klor'o-fən*] a phenol derivative used as a cestocide; superseded except in combination with piperazine and other compounds.

2,4-dichlorophenoxyacetic acid [*di-klor"o-fən-ok"se-ə-se'tic*] a herbicide not known to be toxic at normal use rates in agriculture. Spraying may increase nitrate content of sprayed plants to toxic levels. Gastroenteritis can be seen in all species; myotonia has been reported in dogs. Called also 2,4-D.

S-dichlorovinyl-L-cysteine a compound thought to be the toxic agent in trichlorethylene-extracted **soybean** meal poisoning.

dichlorovos dichlorvos.

dichlorphenamide [*di"klor-fen'ə-mīd*] a systemically administered carbonic anhydrase inhibitor used to reduce intraocular pressure in glaucoma.

dichlorvos [*di-klor'vos*] a broad-spectrum organophosphorus insecticide and anthelmintic. Can be combined with polyvinyl chloride resin; when administered orally or in collars or ear tags gives a slow release effect.

dichorial [*di-kor'e-əl*] dichorionic.

dichorionic [*di-kor"e-on'ik*] having two distinct chorions; said of dizygotic twins.

Dichrocephalia chrysanthemifolia small perennial African shrub, in the family Asteraceae; contains an unidentified toxin that causes diarrhea and abortion; plant toxic only when there are green shoots.

dichroic [*di-kro'ik*] characterized by dichroism.

dichroism [*di'kro-iz-əm*] the quality or condition of showing one color in reflected and another in transmitted light.

dichromate [*di-kro'māt*] a salt containing the bivalent Cr_2O_7 radical.

dichromatic [*di"kro-mat'ik*] pertaining to or characterized by dichromatism.

dichromatism [*di-kro'mə-tiz-əm*] 1. the quality of existing in or exhibiting two different colors. 2. dichromatic vision; dichromatopsia.

Dickinson–Nunamaker procedure a surgical technique for intra-articular reconstruction of the cranial cruciate ligament which involves a modification of the Paatsama procedure in which the fascia graft based on the craniolateral tibia is placed directly into the joint and emerges through a tunnel in the lateral femoral condyle before being sutured to itself.

diclazuril a benzeneacetonitrile active against coccidia in chickens when used in feed.

diclofenac [*di-klo'fen-ak*] a nonsteroidal anti-inflammatory agent, which may be used topically in ophthalmic diseases and in the treatment of actinic dermatitis. Use in livestock has been associated with a decline in the population of vultures in India due renal failure caused by the accumulation of residues.

dicloxacillin [*di-klok"sə-sil'in*] a semisynthetic penicillinase-resistant penicillin used primarily in the treatment of infections due to penicillinase-resistant staphylococci.

DICOM *D*igital *I*maging and *Co*mmunications in *M*edicine, an industry standard for image format and communications protocol for exchange of digital images.

dicoria double pupil.

dicoumarol, dicumarol [*di-koo'mə-rol*] a potent anticoagulant that acts by inhibiting the synthesis of vitamin K-dependent clotting factors (prothrombin and factors VII, IX and X) in the liver; used in the prevention and treatment of thromboembolic disorders. Produced naturally by conversion of nontoxic coumarin in moldy sweet clover hay, lespepeza hay or sweet vernal hay. Eating the hay causes blood loss due to spontaneous hemorrhage. Formerly called bishydroxycoumarin. See also ***Melilotus***, ***Anthoxanthum odoratum***, ***Kummerowia (Lespedeza) stipulacea***.

dicrocoeliasis hepatic fascioliasis due to infection with ***Dicrocoelium dendriticum***.

Dicrocoelium [*dik"ro-se'le-əm*] a genus of flukes (digenetic trematodes) in the family Dicrocoeliidae.

***D. dendriticum* (syn. *D. lanceolatum*)** a liver fluke that infects most domestic and many wild animals. Has been reported in humans. Heavy infestation causes cirrhosis and biliary obstruction and a clinical syndrome of edema, anemia and emaciation.

D. hospes occurs in the bile ducts of cattle in Africa.

dicrotic [*di-krot'ik*] having the characteristic of dicrotism, e.g. the dicrotic notch of the pulse.

dicrotism [*di'krŏ-tiz-əm*] the occurrence of two sphygmographic waves or elevations to one beat of the pulse.

dictyate a stage in the development of oocytes which are arrested at the same stage of meiotic prophase; the stage varies between species.

Dictyocaulus [*dik"te-o-kaw'ləs*] a genus of lungworms in the family Dictyocaulidae. Includes *D. arnfieldi* (see below) and *D. cameli* (camels), *D. eckerti* (deer), *D. filaria* (see below) and *D. viviparus* (see below).

D. arnfieldi primarily a lungworm of donkeys but has little clinical effect in them. The infestation in horses is also clinically innocuous and the worms do not usually mature in this species.

D. filaria lungworms that cause a chronic disease in small ruminants. Clinical signs are limited to persistent cough, moderate dyspnea and loss of condition. Young sheep and goats may be severely affected, occasionally fatally.

D. viviparus the common lungworm of cattle causes several serious diseases including verminous pneumonia, acute interstitial pneumonia and secondary bacterial pneumonia. The infestation is widespread and affects mainly young cattle. Massive larval intakes can cause a high mortality due to a peracute syndrome of interstitial pneumonia. More moderate infestation causes a syndrome of paroxysmal coughing, moderate dyspnea and loss of condition. A few calves may die as a result of a secondary bacterial pneumonia. Warm moist autumnal conditions are most conducive to serious outbreaks.

dictyoma [*dik"te-o'mə*] see **diktyoma**.

dictyosome [*dik"te-o-sōm'*] see **Golgi stack**.

dicyclomine [*di-si'klo-mēn*] an anticholinergic; used as a gastrointestinal antispasmodic and for urinary incontinence caused by derusor instability.

didactylism [*di-dak'təl-iz-əm*] the presence of only two digits on the paws of a usually four- or five-toed animal.

didelphia [*di-del'fe-ə*] the condition characterized by failure of proper fusion of the caudal part of the Muellerian or paramesonephric duct resulting in double cranial vagina, double cervix and a divided uterine fundus with 2 single-horned uteruses. A normal feature of the female reproductive tract in rabbits and some marsupials.

dideoxynucleotide a synthetic molecule used in enzymatic DNA sequencing.

didymalgia pain in a testis.

didymitis [*did"ə-mi'tis*] inflammation of a testis; orchitis.

Didymotheca cupressiformis see ***Gyrostemon tepperi***.

didymous [*did'ə-məs*] occurring in pairs.

didymus [*did'ə-məs*] a testis; also used as a word termination designating a fetus with duplication of parts or one consisting of conjoined symmetrical twins.

diecious [*di-e'shəs*] sexually distinct; denoting species in which male and female genitals do not occur in the same individual. In botany, having staminate and pistillate flowers on separate plants.

Dieffenbach forceps [*de'fən-bahk*] small, thumb-operated spring forceps that cross over so that releasing the blades causes the tips to close.

Dieffenbachia seguine a tropical plant in the family Araceae commonly used as a house plant; contains calcium oxalate raphide crystals, and possibly other toxins; mastication of leaves causes severe irritation of the oral mucosa, especially swelling of the tongue. Called also *D. maculata, D. picta*, dumbcane.

diehard nickname for the Scottish terrier.

dieldrin [*di-el'drin*] see **chlorinated hydrocarbons**.

dielectric [*di"ə-lek'trik*] said of an insulating substance through which an electric force acts by induction but not conduction.

diembryony [*di-em'bre-on"e*] the production of two embryos from a single zygote.

diencephalic [*di"ən-sə-fal'ik*] pertaining to or arising from the diencephalon.

d. infundibulum funnel-shaped diverticulum of the third ventricle which contributes to the formation of the caudal surface of the adenohypophysis, the distal part forming the neurohypophysis.

d. syndrome an uncommon syndrome seen in dogs in which a lesion in the diencephalon is associated with abnormalities of the hypothalamus and hypophysis, including electrolyte disturbances, abnormal thermoregulation, abnormal thirst and hunger,

diabetes insipidus, altered levels of growth and other hormones, and autonomic nervous system dysfunction.

diencephalon [*di"ən-sef'ə-lon*] 1. the caudal part of the forebrain, consisting of the hypothalamus, thalamus, epithalamus and subthalamus; the subthalamus is often considered to be a distinct division. 2. the more caudal of the two brain vesicles formed by specialization of the prosencephalon in the developing embryo. See also **brainstem**.

dienestrol [*di"ən-es'trol*] a synthetic estrogen, related to stilbestrol.

Dientamoeba [*di"ent-ə-me'bə*] a genus of flagellates commonly found in the colon and appendix of primates and of humans.

D. fragilis occurs in the large intestine of humans and monkeys. Has been associated with diarrhea but its pathogenicity is unclear.

dieresis [*di-er'ə-sis*] 1. the division or separation of parts normally united. 2. the surgical separation of parts.

diesel oil a common fuel on farms. Grazing ruminants are most likely to be poisoned by diesel fuel, especially cattle who find petroleum products palatable. Obvious clinical signs are anorexia, mild bloat, vomiting and aspiration pneumonia. The feces are oily and have a characteristic smell.

diesoline see **diesel oil**.

diestral shift in vaginal cytology of the bitch, the rapid change from predominantly superficial epithelial cells to parabasilar cells which occurs at the end of estrus and the beginning of diestrus.

diestrus [*di-es'trəs*] the resting period between estral periods of animals. The female rejects the male, blood concentrations of estrogens are minimal and progesterone concentrations are high. This provides a physiological state in the uterus which is most conducive for implantation and growth of the developing fetus. Diestrus is terminated by luteolytic factors, such as prostaglandin $F_{2\alpha}$ secreted by the endometrium, if pregnancy does not occur.

diet [*di'ət*] the customary amount and kind of food and drink taken by an animal from day to day; more narrowly, a diet planned to meet specific requirements of the animal, including or excluding certain foods. See also **winter diet**.

acid d. diets of low alkalinity which are fed to cows to prevent bovine parturient hypocalcemia (milk fever). The diet in the 4 weeks preceding parturition, which is ordinarily alkaline, is supplemented with calcium chloride, and aluminum and magnesium sulfates, to reduce this alkalinity. See also **dietary** cation-anion difference.

bland d. one that is free from any irritating or stimulating foods.

calcium homeostatic d. a diet aimed at maintaining normal blood concentrations of calcium in recently calved cows.

calculolytic d. formulated to aid in the dissolution of struvite uroliths. Usually provides a low intake of protein, restricts phosphorus and magnesium, and acidifies the urine. Additional salt may also be included. These have been used successfully in dogs and cats.

deficient d. see **nutritional** deficiency disease.

drought feeding d. see **drought feeding**.

elemental d. contains nutrients as small molecular weight compounds, i.e. proteins as amino acids or peptides, carbohydrates as oligosaccharides or monosaccharides, and fats as medium-chain triglycerides. Used in the treatment of gastrointestinal disease. Called also monomeric diet.

elimination d. one for diagnosing food allergy, based on the sequential omission of foods which might cause the clinical signs in the patient.

geriatric d. may vary in composition; generally, they are formulated to provide lower energy intake and increased digestibility.

gluten-free d. one without wheat, rye, barley, buckwheat, or oats or related products.

high-calorie d., high-energy d. one that furnishes more calories than needed for maintenance; used to increase body condition, in recovery from illness and for maintenance under stressful conditions.

high-fiber d. one relatively high in dietary fiber; in dogs and cats, used in the management of large and small bowel diarrhea, diabetes mellitus, constipation and obesity.

high-protein d. one containing large amounts of protein; used in the management of dogs and cats recovering from illness.

home-prepared d. one prepared in the home kitchen, in contrast with commercially prepared pet foods.

hydrolyzed d. one in which the protein has been hydrolyzed to small molecular weght so they are of insufficient size and structure to induce antigenic recognition. Used in the treatment of food allergies in dogs and cats.

hypoallergenic d. one formulated to avoid suspected allergens; usually used in the management of allergic skin or bowel disease.

liquid d. a diet limited to liquids or to foods that can be changed to a liquid state.

low-calorie d. one containing fewer calories than needed to maintain weight; normally used in management of obesity in dogs and cats.

low-fat d. one containing limited amounts of fat; used in the management of pancreatic disease, bowel disease, and obesity in dogs and cats.

low-fiber d. see low-residue diet (below).

low purine d. in dogs and cats, generally a low-meat diet.

low-residue d. one with a minimum of cellulose and fiber and restriction of connective tissue found in certain cuts of meat. It is prescribed for irritations of the intestinal tract, after surgery of the large intestine, in partial intestinal obstruction, or when limited bowel movements are desirable. Called also low-fiber diet.

low vitamin A d. one containing low concentrations of vitamin A; in dog and cat diets, this would mean little or no organ meats. The only probable indication for such a diet is in the treatment of hypervitaminosis A.

lower urinary tract disease d. one that promotes acidification of the urine and containing restricted magnesium and phosphorus, and sometimes increased salt.

monomeric d. see elemental diet (above).

phosphate-restricted d. one containing restricted amounts of phosphorus; used in the management of chronic renal disease.

polymeric d. meal replacement diets; fed to animals with almost normal gastrointestinal function. Proteins, fats and carbohydrates are present in high molecular weight forms.

sodium-restricted d. used in management of congestive heart failure and systemic hypertension in dogs and cats.

dietary [*di'ə-tar"e*] 1. pertaining to diet. 2. a course or system of diet.

d. cation-anion difference prepartum has a major influence on the incidence of bovine parturient hypocalcemia (milk fever) in dairy cattle and, in the control of the disease, is manipulated so as to result in a metabolic acidosis which facilitates the mobilization of calcium. Defined as milliequivalents of (Na+K)–(Cl+S) per kg DM diet.

d. hepatic necrosis see **hepatosis** dietetica.

d. indigestion see **indigestion**.

d. mineral tolerance concentrations of minerals in the diet which animals will tolerate without impairing their productivity.

d. requirement the amount of each dietary constituent required in the diet for the animal to produce efficiently. In some individuals the requirements are abnormally high compared to the rest of the population.

dietetic [*di"ə-tet'ik*] pertaining to diet or proper food.

d. microangiopathy occurs in pigs on diets deficient in selenium and vitamin E.

d. scours see dietary **diarrhea**.

dietetics [*di"ə-tet'iks*] the science of diet and nutrition.

diethyl ether [*di-eth'əl*] see **ether** (1).

diethylcarbamazine [*di-eth"əl-kahr-bam'ə-zēn*] an antifilarial or microfilaricidal (active against the larval stages during molting) agent used in dogs as the citrate salt for the prevention of heartworm infection. Used also for the treatment of ascarids in dogs and immature lungworms in cattle and sheep.

diethyldithiocarbamate a carbamate insecticide; causes spinal cord tract degeneration in chickens.

diethylene glycol [*di-eth'əl-ēn gli'kol*] an industrial solvent. Causes poisoning similar to **ethylene** glycol.

diethylenetriamine penta-acetic acid (DTPA) [*di-eth"əl-ēn-tri'ə-mēn pen"tə-ə-se'tik as'id*] a chelating agent; used in nuclear medicine in preparing radiopharmaceuticals, e.g. ^{99m}Tc-DTPA. Called also pentetic acid.

diethylstilbestrol (DES) [*di-eth"əl-stil-bes'trol*] a synthetic nonsteroidal estrogen. In cattle used to treat infertility and as a stimulant to weight gain by increasing muscular development. Its use is limited as a weight gain stimulant because of the possible entry of the compound into the human food chain. Excessive, long-term administration causes anal prolapse, abortion, fracture of the

VetBooks.ir

pelvis and nymphomaniac behavior. Sometimes used in dogs to treat misalliance and urinary incontinence, but limited by its myelotoxic effects.

diethylthiambutene hydrochloride an analgesic with an effect like that of morphine. Highly toxic to cats. Can cause convulsions if injected intravenously.

diethyltoluamide (DEET) [*di-eth"əl-tol-u'ə-mīd*] an insect repellent used on dogs and cats. Toxicity signs include vomiting, tremors and seizures.

dietitian [*di"ə-tish'ən*] one who is concerned with the promotion of good health through proper diet and with the therapeutic use of diet in the treatment of disease.

dietotherapy [*di"ə-to-ther'ə-pe*] the scientific regulation of diet in treating disease, especially important in patients with inborn errors of metabolism and various other metabolic diseases.

difenacoum a potent, synthetic anticoagulant rodenticide with prolonged antagonism of vitamin K.

difenoxin [*di"fə-nok'sin*] a meperidine derivative used to control diarrhea.

Diff-Quik stain a commercial name for a Romanowsky stain which can be applied rapidly to smears of aspirated cells or exudate.

differentiation [*dif"ər-en"she-a'shən*] 1. the distinguishing of one thing from another. 2. the act or process of acquiring completely individual characteristics, such as occurs in the progressive diversification of cells and tissues in the embryo, e.g. sex differentiation. 3. increase in morphological or chemical heterogeneity.

diffraction [*dĭ-frak'shən*] the bending or breaking up of a ray of light into its component parts.

X-ray d. a method used to determine the three-dimensional structure of the single object, e.g. protein molecule, that composes the crystal. Based on recording and analyzing the diffraction pattern of an X-ray beam passing through a crystalline structure, either organic or inorganic.

diffusate [*dĭ-fu'zāt*] material that has diffused through a membrane.

diffuse [*dĭ-fūs'*] 1. not definitely limited or localized. 2. to pass through or to spread widely through a tissue or substance.

d. intravascular coagulation see disseminated intravascular **coagulation**.

diffusing capacity [*dĭ-fūs'ing*] the rate at which a gas diffuses across the alveolar–capillary membrane per unit difference in the partial pressure of the gas across the membrane, expressed in mL/min/mmHg. Because of their high affinity for hemoglobin both oxygen and carbon monoxide are limited in their rate of diffusion by their diffusing capacity.

diffusion [*dĭ-fu'zhən*] 1. the state or process of being widely spread. 2. the spontaneous mixing of the molecules or ions of two or more substances resulting from random thermal motion; its rate is proportional to the concentrations of the substances and it increases with the temperature. In the body fluids the molecules of water, gases, and the ions of substances in solution are in constant motion. As each molecule moves about, it bounces off other molecules and loses some of its energy to each molecule it hits, but at the same time it gains energy from the molecules that collide with it. The rate of diffusion is influenced by the size of the molecules; larger molecules move less rapidly, because they require more energy to move about. Molecules of a solution of higher concentration move more rapidly toward those of a solution of lesser concentration; in other words, the rate of movement from higher to lower concentration is greater than the movement in the opposite direction.

d. coefficient the number of milliliters of a gas that will diffuse at a distance of 0.001 mm over a square centimeter surface per minute, at 1 atmosphere of pressure. The diffusion coefficient for any given gas is proportional to the solubility and molecular weight of the gas. The diffusion coefficient for oxygen is 1.0, for carbon dioxide it is 20.3, and for nitrogen it is 0.53. The diffusion capacity of a gas varies directly with the diffusion coefficient.

facilitated d. mechanisms in intestinal absorption which assist the passage of those products of digestion, which cannot occur by simple diffusion, across the intestinal cell membranes. They include a carrier mechanism involving proteins, and active transport which provides energy from the breakdown of high-energy phosphate bonds.

Fick's first law of d. see **Fick's first law of diffusion**.

d. hypoxia a transient hypoxic episode after the cessation of nitrous oxide anesthesia if air is inhaled instead of pure oxygen; caused by the rapid outward diffusion of nitrous oxide and the re-introduction of nitrogen into the alveoli resulting in dilution of the oxygen that is there.

diflorasone diacetate [*di-flor'ə-sōn*] a corticosteroid used topically in treatment of inflammatory skin diseases.

difloxacin a fluorinated quinolone antibiotic.

diflubenzuron an ectoparasiticide similar to lufenuron.

diflunisal [*di-floo'nĭ-səl*] a salicylic acid derivative that, like aspirin, has analgesic and anti-inflammatory properties.

difluoromethylornithine **eflornithine** hydrochloride.

difluorotetrachloroethane see **tetrachlorodifluorethane**.

digastric [*di-gas'trik*] 1. having two bellies. 2. digastric muscle. See Table 13.

Digenea a subclass of trematodes (class Trematoda) that includes most of the flukes of veterinary importance.

digenean pertaining to or of the nature of members of the fluke subclass Digenea.

digenetic [*dī"jə-net'ik*] 1. having two stages of multiplication, one sexual in the mature forms, the other asexual in the larval stages. 2. belonging to the subclass Digenea (flukes).

d. trematodes see ***Digenea***.

DiGeorge syndrome [*dĭ-jorj'*] an immunodeficiency syndrome in humans and mice, associated with thymic hypoplasia or aplasia and absence of T lymphocytes, resulting from a congenital absence of the third and fourth branchial pouches.

digesta alimentary tract contents undergoing digestion.

digestant [*di-jes'tənt*] 1. assisting or stimulating digestion. 2. an agent capable of aiding digestion.

digestibility the proportion of a feed or diet which can be digested by the normal animal of the subject species.

true d. the endogenous source of a fecal content of a feed moiety under examination is taken into account when assessing the input–output relationship of the moiety.

digestible having the quality of being able to be digested.

d. energy the proportion of the potential energy in a feed which is in fact digested.

d. protein see digestible **protein**.

total d. nutrients see **total digestible nutrients**.

digestion [*di-jes'chən*] 1. the act or process of converting food into chemical substances that can be absorbed into the blood and utilized by the body tissues. 2. the subjection of a substance to prolonged heat and moisture, so as to disintegrate and soften it. Digestion is accomplished by physically breaking down, churning, diluting and dissolving the food substances, and also by splitting them chemically into simpler compounds. Carbohydrates are eventually broken down to monosaccharides (simple sugars); proteins are broken down into amino acids; and fats are absorbed as fatty acids, monoglycerides and glycerol (glycerin). The digestive process takes place in the alimentary canal or **digestive** system. The salivary glands, liver, gallbladder and pancreas are located outside the alimentary canal, but they are considered accessory organs of digestion because their secretions provide essential enzymes and other substances.

avian d. differs markedly from mammals in the mouth; there are no teeth, dental functions being performed by the beak and the muscular gizzard; the esophagus, in other than owls and insectivorous species, has one or two crops, dilations where ingesta are held temporarily.

enzymatic d. most digestive processes in monogastric animals are enzymatic brought about by enzymes secreted into the lumen of the gastrointestinal tract and enzymes located at the brush borders of the intestinal epithelium.

d. error any disruption of the normal digestive process; caused by abnormal ingesta, either chemically or physically, or by an error in the physiological and biochemical processes which constitute digestion.

gastric d. digestion by the action of gastric juice.

impaired d. see **maldigestion**.

intestinal d. digestion by the action of intestinal juices, bile and pancreatic juice.

luminal phase d. the stage of the digestion of fats that goes on in the lumen of the intestine; as distinct from the mucosal phase that occurs in the epithelial cells.

pancreatic d. digestion by the action of pancreatic juice.

peptic d. gastric digestion by pepsin.

primary d. digestion occurring in the gastrointestinal tract.

ruminant d. characterized by the fermentative functions that are carried on in the forestomachs. Cellulose is readily digested with the output of short-chain fatty acids being the chief energy source for the animal. Nonprotein nitrogen is utilized by the ruminal bacteria for the manufacture of protein which is later available for the satisfaction of the animal's protein needs.
salivary d. the change of starch into maltose by the saliva; most marked in humans.
d. tests see **starch** digestion test, **lactose** digestion test, **gelatin** digestion test.
digestive [*di-jes'tiv*] pertaining to digestion.
d. enzymes include **salivary** (amylase), **gastric** (pepsin), **pancreatic** (trypsin, chymotrypsin, amylase, lipase), **small intestinal mucosa** (carbohydrases including isomaltase, lactase, maltase, sucrase, trehalase).
d. inoculant administered mostly to neonatal calves and foals, intended to provide an inoculum of beneficial bacteria and protozoa essential to proper digestion and usually picked up from the environment. In many commercial products the irresistible temptation to include other materials, including dietary essential vitamins and minerals, clouds the effect of the inoculant, and may, as in iron poisoning in foals, cause disaster.
d. system the organs that have as their particular function the ingestion, digestion and absorption of food or nutritive elements. They include the mouth, teeth, tongue, pharynx, esophagus, stomach and intestines. The accessory organs of digestion, which contribute secretions important to digestion, include the salivary glands, pancreas, liver and gallbladder. Birds have an unusual system in that there are no teeth and no soft palate in most. There is a pregastric buffer, the crop; the stomach is separated into two organs, one secretory (the proventriculus) and one muscular (the gizzard), and the large intestine is replaced by a double cecum. The rectum empties into a cloaca which is shared with the urogenital tract. The ruminant system is complicated by the presence of a compound stomach made up of the reticulum, rumen, omasum and abomasum, and there are no upper incisor teeth. The peculiarities of horses are the greatly distended large intestine and the absence of a gallbladder.
d. tract the digestive system less the ancillary organs of salivary glands, liver and pancreas; the luminal organs through which food passes. See also **alimentary** canal.
digit [*dij'it*] 1. a toe in cats, dogs and chickens, a foot in the horse, a claw or cleat in cattle, sheep, goats and pigs. Called also a cleat in sheep. 2. any of the ten numerals in the series 0 to 9.
digital [*dij'ĭ-təl*] emanating from or pertaining to the digit.
d. cushion a wedge-shaped mass of white and elastic fibers mixed with some fat and islands of cartilage overlying the frog of the horse's hoof and acting as a shock absorbing mechanism.
d. dermatitis see digital **dermatitis**.
d. pad see **footpad**.
d. sheath a common synovial sheath shared, in ruminants and horses, by the superficial and deep digital flexor tendons.
digital image a computer graphic file made up of a matrix of picture elements (pixels).
digital image processing computer software used to modify the appearance of a digital image; used in digital radiology.
d. i. p. correction to replace erroneous pixel values from nonfunctioning image chip elements equal to the average of the surrounding pixel values; compensation of different sensitivity of detector elements in the systems by making a flat field X-ray exposure and to apply correction factors so that each detector outputs an equal signal.
d. i. p. image leveling determines the midpoint of the pixel values to be displayed leading to a change in the brightness of the image.
d. i. p. image sharpening convolution filter and unsharp mask filtering makes a blurred image; the degree of blurring is dependent on the number of pixels selected (kernal size); this new blurred image is then subtracted from the original image and the subtracted image is then added back to the original image to accentuate the edges of structures.
d. i. p. windowing determines the range of pixel values about the level to be displayed leading to a change in the image contrast.
digital radiography electronic recording of an X-ray image in place of film radiography. See also digital **radiography**, **digital subtraction radiology**.
direct d. r. utilizes a large area selenium plate coupled wth a transistor array; X-ray interaction in the selenium layer releases electrons that are used to form an electric signal which leads to generation of a radiographic-like computer image.
indirect d. r. X-ray sensitive fluorescent screen coupled to a light-sensitive silicone panel coupled to a transistor array, which releases electrons that are used to form an electrical signal which leads to generation of a radiographic-like computer image.
indirect charge-coupled device (CCD) d. r. an X-ray fluorescent screen is coupled to a light sensitive **charge-coupled device** (CCD) which releases electrons that are used to form an electrical signal leading to generation of a radiographic-like computer image.
digitalin [*dij"ĭ-tal'in*] a mixture of digitalis glycosides extracted from the seeds of *Digitalis purpurea.*
Digitalis [*dij"ĭ-tal'is*] a genus of herbs in the family Scrophulariaceae; contains digitalis-related (cardenolide) cardiac glycosides, e.g. digoxin, lanatoside. Includes *D. lanata* (woolly foxglove), *D. purpurea* (purple foxglove). Sources of commercial digitalis.
digitalis [*dij"ĭ-tal'is*] dried leaf of *Digitalis purpurea*; used as a cardiotonic agent. All drugs prepared from this digitalis leaf are members of the same group and principles of administration are the same. The drugs vary according to speed of action and potency. Digitalis can be very effective in the treatment of various cardiac conditions, but its therapeutic range is very narrow; a therapeutic dose is only about one-third less than the dose that will induce toxicity. Toxicity is manifested by vomiting, diarrhea, cardiac irregularity and heart failure.
d. glycosides **digitoxin**, **digoxin**.
digitalization [*dij"ĭ-təl-ĭ-za'shən*] the administration of digitalis in a dosage schedule designed to produce and then maintain optimal therapeutic concentrations of its cardiotonic glycosides.
Digitaria grass genus containing a large number of valuable species in the family Poaceae. Contains cyanogenetic glycosides, can cause cyanide, and possibly oxalate, poisoning. Includes *D. eriantha* (*D. decumbens*), *D. didactyla*, *D. saginata*, *D. sanguinalis*. Called also crabgrass, pangola grass, summer grass.
D. exilis seed is used for human and animal food, and the plant for pasture or hay. Called also hungry rice, acha.
digitation [*dij"ĭ-ta'shən*] 1. a finger-like process. 2. surgical creation of a functioning digit by making a cleft between two adjacent metacarpal bones, after amputation of some or all of the digits.
digitiform [*dij'ĭ-tĭ-form*] finger-like.
digitigrade [*dij'ĭ-tĭ-grād"*] a form of locomotion in which the animal walks only on its digits (or strictly the pads that support the proximal and distal interphalangeal joints), e.g. dogs, contrasted with plantigrade, in which the animal walks on its metatarsi, metacarpi, metapodials e.g. bears, humans, and also contrasted with unguligrade in which the animal walks on the tips of its digits via hooves.
digitonin [*dij"ĭ-to'nin*] a saponin in *Digitalis purpurea.* It has no effect on heart muscle.
digitoxigenin [*dij"ĭ-tok"sĭ-je'nin*] a metabolic product of the cardioactive alkaloids, digitoxin and gitoxin.
digitoxin [*dij"ĭ-tok'sin*] a cardiotonic glycoside originally obtained from *Digitalis purpurea* and other species of the same genus; used in the treatment of congestive heart failure.
digitoxose [*dij"ĭ-tok'sōs*] a desoxy sugar, a metabolic product of digitoxin and gitoxin.
diglossia [*di-glos'e-ə*] bifid tongue.
diglyceride [*di-glis'ər-īd*] a glyceride containing two fatty acid molecules in ester linkage.
dignathus [*dig-na'thəs*] a fetus with two lower jaws.
digoxin [*dĭ-jok'sin*] a cardiotonic glycoside originally obtained from the leaves of *Digitalis lanata*; used in the treatment of congestive heart failure.
DiGuglielmo's syndrome [*de goo-lyel'mo*] erythroleukemia.
digyny fertilization of one ovum by more than one spermatozoon.
dihematoporphyrin ether a photosensitizing agent used in photodynamic treatment of neoplasms.
dihydrocodeine [*di-hi"dro-ko'dēn*] an opioid analgesic and antitussive.
dihydrocodeinone [*di-hi"dro-ko'de-nōn*] hydrocodone.
dihydroergotamine [*di-hi"dro-ər-got'ə-mēn*] hydrogenated ergotamine, an alpha-adrenergic blocking agent and vasoconstrictor.

VetBooks.ir

dihydrofolate reductase [*di-hi"dro-fo'lāt re-duk'tās*] enzyme catalyzing the conversion of folate to 5,6,7,8-tetrahydrofolate, which is the key carrier of one-carbon units in purine and pyridime synthesis, the pathway for the breakdown of histidine and the synthesis of *S*-adenosylmethionine from *S*-adenosylhomocysteine. This enzyme is the target for methotrexate, which inhibits enzyme action, a key means of inducing remissions in acute leukemias.

dihydrolipoic acid the reduced form of **lipoic acid**, an essential coenzyme of pyruvate dehydrogenase enzyme complex.

dihydrostreptomycin [*di-hi"dro-strep"to-mi'sin*] an aminoglycoside antibiotic produced by the hydrogenation of streptomycin; ototoxic with damage to sensory end organs.

dihydrotachysterol [*di-hi"dro-tak-is'tə-rol*] a synthetic steroid derived from tachysterol; an antihypocalcemic agent used in the treatment of hypoparathyroidism.

dihydrotestosterone [*di-hi"dro-tes-tos'tə-rōn*] reduced, more active form of testosterone in males; associated with follicular atresia in the female.

dihydroxyanthraquinone see **danthron**.

dihydroxycholecalciferol [*di"hi-drok"se-ko"lə-kal-sif'ə-rol*] a group of active metabolites of cholecalciferol (vitamin D_3) numbered according to the carbon atom(s) on which a hydroxyl group is substituted. 1,25-Dihydroxycholecalciferol (calcitriol) is the most active derivative; the 25-hydroxylation occurs in the liver under the influence of substrate concentration whereas the 1-hydroxylation or 24-hydroxylation occurs subsequently in the kidney mitochondria. 1-hydroxylation is under regulation by parathyroid hormone in response to decreases in plasma calcium concentration. 1α,25-Dihydroxycholecalciferol acts like a steroid hormone stimulating calcium absorption from the small intestine and calcium mobilization from bone. 24,25-Dihydroxycholecalciferol is an essential hormone for the process of bone fracture healing.

dihydroxycoumarin glycoside a group of plant toxins including daphnin and daphnetin in *Daphne* spp. and other plants.

3,4-dihydroxyphenylalanine [*di"hi-drok"se-fen"əl-al'ə-nēn*] dopa.

1,25-dihydroxyvitamin D_3 [*di"hi-drok"se-vi'tə-min*] see **dihydroxycholecalciferol**.

1,25-dihydroxyvitamin D_3 glycoside [*di"hi-drok"se-vi'tə-min*] the calcinogenic agent in ***Solanum*** *glaucophyllum (S. malacoxylon)* and related plants.

diiodohydroxyquinoline iodoquinol.

di-iodotyrosine, diiodotyrosine [*di"i-o"do-ti'ro-sēn*] a step in the pathway to the formation of thyroglobulin in the thyroid gland. I_2 conjugates with tyrosine to form compounds which are then coupled to form thyronines, the principal thyroid hormones.

dikkop cardiac form of **African** horse sickness.

dikoor see yellow **bighead**.

diktyoma [*dik"te-o'mə*] a tumor of the ciliary epithelium resembling embryonic retinal tissue in structure.

dilaceration [*di-las"ər-a'shən*] 1. a tearing apart, as of a cataract. In dentistry. See **discission**. 2. in dentistry, an abnormal angulation or curve in the root or crown of a formed tooth.

dilan a chlorinated hydrocarbon used as an insecticide.

dilatation [*dil"ə-ta'shən*] the condition, as of an orifice or tubular structure, of being dilated or stretched beyond normal dimensions. See under anatomical location, e.g. esophageal, cardiac, intestinal, gastric, pupillary.

d.–torsion syndrome see **gastric** dilatation-volvulus.

dilated pupil syndrome see **dysautonomia**. Called also Key–Gaskell syndrome.

dilation [*di-la'shən*] the act of dilating or stretching. See also **dilatation**.

dilator [*di-la'tər*] a structure (muscle) that dilates, or an instrument used to dilate.

d. pupillae muscle dilator muscle of the pupil.

diltiazem [*dil-ti'ə-zəm*] a calcium-channel blocking agent used to produce peripheral and coronary vasodilation in the management of heart disease and as an antiarrhythmic in dogs.

diluent [*dil'u-ənt*] 1. diluting. 2. an agent that dilutes or renders less potent or irritant.

semen d. see semen **extender**.

dilution [*di-loo'shən*] 1. reduction of concentration of an active substance by admixture of a neutral agent. 2. a substance that has undergone dilution.

limit d. a method of obtaining a pure culture of bacteria or virus by subculturing from the highest dilution in which the organism is demonstrably present.

serial d. 1. the progressive dilution of a substance or infectious agent in a series of tubes or wells in a tray in predetermined ratios, e.g. 2-fold or 10-fold dilution steps. 2. a method of obtaining a pure bacterial culture by rapid transfer of a small amount of material from one nutrient medium to a succeeding one of the same volume.

DIM days in milk.

dimenhydrinate [*di"mən-hi'drĭ-nāt*] an antihistamine used as an antinauseant and antiemetic.

dimensional data see dimensional **data**.

dimer [*di'mər*] chemical compound formed by the union of two identical molecules.

D-dimer test a test for the presence of D-dimers, which are fibrin degradation products and markers for clot lysis. Used in diagnosing and monitoring treatment for disseminated intravascular coagulation (DIC).

dimercaprol a chelating agent used in the treatment of heavy metal poisoning. The drug forms a relatively stable compound with arsenic, mercury, gold and certain other metals, thus protecting the vital enzyme systems of the cells against the effects of the metals. It is sometimes diluted with water and used to wash the stomach, some of the solution being permitted to remain in the stomach. At the dose concentrations required for effect in ruminants at the concentration of poison dose experienced in agriculture, dimercaprol is itself poisonous. The drug has a very disagreeable skunklike odor and should be handled carefully to avoid spilling. Called also British antilewisite, BAL, dimercaptopropanol.

dimercaptopropanol see **dimercaprol**.

dimercaptosuccinic acid (DMSA) an organosulfur compound used primarily to chelate lead in lead poisoned patients. Called also succimer.

dimethicone [*di-meth'ĭ-kōn*] a silicone oil used as a skin protective and as an antifoaming agent in the treatment of frothy bloat in ruminants.

activated d. see **simethicone**.

dimethindene a histamine H_1 antagonist.

dimethisoquin a local anesthetic; used topically to relieve pain and pruritus.

dimethoate an organophosphorus contact insecticide used principally as a premise spray; capable of causing poisoning. Chronic intake causes salivation and diarrhea in calves.

dimethyl ether of *d*-tubocurarine a little-used muscle relaxant used as an adjunct to general anesthesia.

dimethyl phthalate (DMP) an insect repellent, sometimes used topically on dogs to discourage licking of skin lesions.

dimethyl sulfoxide see **DMSO**.

***p*-dimethylaminoazobenzene** [*di-meth"əl-ə-me"no-a"zo-ben'zēn*] see **butter yellow**.

dimethyldisulfide a hemolytic agent produced in the rumen by bacterial action on *S*-methylcysteine sulfoxide; present in *Brassica* spp. plants.

dimethylnitrosamine [*di-meth"əl-ni-tro'sə-mēn*] a potent hepatoxin in **herring meal**. Chronic poisoning causes changes reminiscent of neoplasia and the substance is now regarded as a carcinogen.

dimethylnortestosterone see **mibolerone**.

dimethylpolysiloxane dimethicone.

dimethyltryptamine [*di-meth"əl-trip'tə-mēn*] a group of alkaloids found in the grass *Phalaris aquatica* and known to be closely associated with the acute form of poisoning with this plant.

dimetilan a chlorinated hydrocarbon used as an insecticide.

dimetria a rare condition characterized by a double uterus.

dimetridazole [*di"mə-tri'də-zōl*] a nitrothiazole compound used therapeutically and prophylactically in histomoniasis in turkeys. Poisoning is manifested by infertility and hepatic and renal insufficiency.

dimidium bromide a compound used in the treatment of trypanosomiasis.

diminazene [*dĭ-min'ə-zēn*] a diamidine antiprotozoal agent used as the aceturate.

diminishing returns the characteristic of any production system in which increases in variable inputs result in increasing reduction

of total output. An indicator of when to stop making additional inputs to the system, when the input exceeds the additional output.

Dimorphandra South American genus of plants in the legume family Caesalpiniaceae; contain an unidentified toxin which causes nephrosis in cattle. Includes *D. gardneriana*, *D. mollis* (faveira).

dimorphic [*di-mor'fik*] see dimorphic **fungus**.

dimorphism [*di-mor'fiz-əm*] the quality of existing in two distinct forms.

sexual d. 1. physical or behavioral differences associated with sex; males and females of the same species are different in appearance. 2. having some properties of both sexes, as in the early embryo and in some hermaphrodites.

Dimorphotheca South African genus of plants in the family Asteraceae; some species contain cyanogenic glycosides and poison livestock. Includes *D. cuneata* (Karoo bietou, witgousblom). Called also *Osteospermum*, South African daisy, bietou, madeliefies.

dimple [*dim'pəl*] see **myotonic** dimple.

dimpylate see **diazinon**.

Dina parva a leech found in the nasal cavity of aquatic birds.

Dingmann clamp a heavy-duty bone and cartilage clamp; scissor action with ratcheted handles and curved, heavily serrated blade faces which enclose an oval space when closed.

dingo Australian wild dog (*Canis lupus dingo*) a medium-sized, yellow to red dog with large pricked ears and a bushy tail. Predatory on sheep flocks, calves, and possibly small humans.

dingy used as a description of fleece wool; the wool is lacking in brightness.

dinitolmide, dinitolamide a nitrobenzamide anticoccidial agent that acts on first generation schizonts and inhibiting sporulation of oocysts.

dinitro compounds a group of herbicides including 2,4-**dinitrophenol**, **dinitro-orthocresol** and **dinoseb**. They are relatively nontoxic at recommended dose rates. Signs of poisoning include dyspnea, sweating, thirst, weakness, prostration and death.

dinitro herbicide effective herbicides, nontoxic unless administered in concentrate form or if the material as supplied contains a toxic contaminant.

dinitro-*o*-toluamide a toxic coccidiostat; can cause ataxia, torticollis and reduced growth.

dinitro-orthophenol relatively nontoxic wood preservative.

dinitroaniline a group of herbicides of low toxicity for animals. Accidental poisoning causes diarrhea, nervousness and failure to gain weight.

3,5-dinitrobenzamide a coccidiostat used in poultry. Called also nitromide.

dinitrochlorobenzene (DNCB) [*di-ni"tro-klor"o-ben'zēn*] a hapten whose application to the skin results in a contact hypersensitivity. Sometimes used to test for ability to produce type IV or delayed type hypersensitivity reactions.

dinitrocresol see **dinitro-orthocresol**.

dinitro-orthocresol (DNOC) a valuable herbicide but it can cause deaths in animals exposed to high doses by inhalation, percutaneous absorption or ingestion. Signs of poisoning include restlessness, sweating, dyspnea and collapse. Ruminants are also subject to intravascular hemolysis, methemoglobinemia and hypoproteinemia. Chronic poisoning causes cataracts.

2,4-dinitrophenol, dinitrophenol (DNP) [*di-ni"tro-fe'nol*] 1. an inhibitor of oxidative phosphorylation. Acts by uncoupling electron flow from phosphorylation. Used as a haptenic immunogen in immunology. 2. a herbicide toxic to animals. Effects are similar to those of **dinitro-orthocresol**. See also **dinitro compounds**.

4-dinitrophenol relatively nontoxic herbicide and insecticide.

dinitrotoluidine chemical compounds used as insecticides and herbicides; toxic to fish if they pollute streams.

dinkum oil eucalyptus oil.

Dinobdella [*di"nob-del'ə*] a leech of the class Hirudinea.

D. ferox found in the pharynx of ruminants and the upper respiratory tract of dogs, monkeys and humans.

dinobdelliasis infestation of all animal species with nasal leeches (*Dinobdella ferox*).

dinoflagellates [*di"no-flaj'ə-lāts*] minute aquatic protozoa; they produce red pigment and toxins which are taken up by shellfish without apparent ill effect, but the toxin is not metabolized and the shellfish may poison animals if eaten.

dinoprost prostaglandin $F_{2\alpha}$ stimulates contraction of the myometrium and luteolysis. Used as the tromethamine and administered to induce abortion or parturition, to synchronise estrus and for the treatment of some ejaculatory disorders in the stallion.

dinoseb a phthalmic acid derivative herbicide which may cause poisoning in range chickens when used at standard dose rates. Includes dinoseb 136.

dinsed [*din'səd*] an anticoccidial agent used in mixtures for the control of coccidiosis in chickens.

Dioctophyme a genus of nematodes in the family Dioctophymidae. Includes *Dioctophyme renale*, a very large nematode found in the kidneys and other organs of dogs and wild carnivores and occasionally ruminants. May be severely destructive and cause fatal uremia.

dioctophymosis infection with the kidney worm ***Dioctophyme renale***.

dioctyl sodium sulfosuccinate (DSS) docusate sodium; used pharmacologically as a fecal softener, wetting agent and cathartic. Overdosing in horses for the treatment of impaction colic can cause deaths preceded by paralytic ileus, severe dehydration and diarrhea.

diode [*di'od*] a piece of equipment with two terminals which carries electrical current in one direction only.

Diodontidae a family of venomous fishes closely related to the pufferfishes. Called also toadfish, porcupinefish, globefish.

dioestrus see **diestrus**.

diol an organic compound containing two hydroxy groups, a dihydric alcohol. Called also glycol.

Dioon Central American cycad genus in the family Zamiaceae; contains a cycad glycoside causing diarrhea, posterior ataxia and hepatic necrosis in cattle. Includes *D. edule*.

diopter (D) [*di-op'tər*] unit for describing refractive power of a lens, being the reciprocal of the focal length when expressed in meters.

dioptric [*di-op'trik*] pertaining to refraction or to transmitted and refracted light; refracting.

dioptrics [*di-op'triks*] the science of refracted light.

Diorchis nyrocae a common cestode of ducks in the family Hymenolepididae.

Dioscorea a plant genus with edible root tubers in the family Dioscoreaceae. Some species are poisonous due to their content of dioscorine, an alkaloid with an action like picrotoxin. Called also yams. Includes *D. communis* (*Tamus communis*, black bryony).

dioscorine an alkaloid in the plants of *Dioscorea* spp. Has an action similar to picrotoxin.

Diospyros a plant genus in the family Ebenaceae; fruit consumption is associated with phytobezoar formation, particularly in horses. Includes *D. kaki*, *D. virginiana*. Called also persimmon.

dioxacarb a carbamate pesticide.

dioxathion an organophosphorus insecticide used as a spray or dip mainly against ticks. The toxic concentration is about four times the therapeutic concentration.

dioxin [*di-ok'sin*] a highly toxic and teratogenic chlorinated hydrocarbon that once was a trace contaminant in the herbicide 2,4,5-T. Acute poisoning causes vomiting, abortion and anestrus. Chronic poisoning causes liver damage, especially in dogs. Congenital defects caused include cranio-facial deformity and anasarca. It is excreted in the milk.

dioxygenases [*di"ok'sĭ-jən-ā-səs*] enzymes which incorporate both atoms of O_2 into one substrate. Less common than monooxygenases. Important example is the 15-15'-dioxygenase enzyme in the small intestine which cleaves plant carotenoids containing provitamin A activity, such as β-carotene, into retinol. This enzyme is absent from felines, such as the cat, and is the reason cats are dependent on animal sources of vitamin A.

dip 1. plunge (vat) or spray dip installations in which insecticide solutions are applied to animals, especially cattle and sheep. 2. the dipping solutions, commonly sodium arsenite, rotenone, synthetic pyrethroids and organophosphorus preparations. 3. to submit animals to **dipping**. 4. see **teat dip**.

d. stain wool fiber stained by improper dipping procedure.

dipalmityl lecithin a surfactant present in the lungs of most species and necessary for normal respiratory function produced by alveolar type II cells.

dipalmitylphosphatidylcholine principal constituent of the phospholipid surfactant in the lungs, the absence of which plays a

VetBooks.ir

large part in the development of the acidophilic hyaline membranes which characterize the pulmonary lesions in neonatal respiratory distress syndrome in foals and piglets. See **neonatal** maladjustment syndrome.

Dipcadi glaucum African plant in the family Liliaceae (Hyacinthaceae); included in the genus *Ornithogalum* by some authorities; contains an unidentified toxin which causes head pressing, aimless wandering, flexed fetlocks, posterior paresis, and diarrhea. Called also *D. gracilipes*, *D. longibracteatum*, wild or poison onion, malkop-ui.

dipeptidase [*di-pep'tĭ-dās*] a proteolytic enzyme occurring in the pancreatic secretion of chickens, and the intestinal brush border of mammals.

dipeptidyl aminopeptidase IV [*di-pep"tĭ-dəl*] a digestive enzyme of the small intestine enterocytes (brush border).

diperodon [*di-per'o-don*] a surface anesthetic and analgesic; used as the hydrochloride salt.

dipes having two hindlimbs.

Dipetalonema [*di-pet"ə-lo-ne'mə*] a genus of nematodes of the superfamily Filarioidea (filarioids).

D. dracunculoides found in peritoneal membranes of dogs and humans.

D. evansi found in spermatic and pulmonary artery of camels.

D. gracile, D. marmosetae, D. obtusa, D. tamarinae found in the peritoneal cavity of primates.

D. grassii occurs in the subcutaneous tissue of dogs.

D. loxodontis found in the African elephant. Called also *Loxodontofilaria loxodontis*.

D. odendhali found in the subcutaneous and intermuscular tissues of California sea lion.

D. perstans, D. streptocerca these species are primarily parasitic in humans, other primates serving as reservoir hosts.

D. reconditum see ***Acanthocheilonema reconditum***.

D. spirocauda found in the right heart and pulmonary artery of seals.

diphacinone [*di-fa'sə-nōn*] an inandione derivative anticoagulant rodenticide, similar in effect to warfarin, but with prolonged activity. See also **pindone** and **warfarin**.

diphallia [*di-fal'e-ə*] the state of **diphallus**.

diphallus [*di-fal'əs*] a rare developmental anomaly characterized by duplication of the penis. Called also diphallic terata, diphallasparatus.

diphasic [*di-fa'zik*] occurring in two phases.

d. milk fever see Russian spring-summer **encephalitis**.

diphemanil [*di-fe'mə-nil*] an anticholinergic drug used as the methyl sulfate to inhibit gastric motility and secretion, relieve pylorospasm, control sweating and relieve pruritus.

diphenadione [*di-fen"ə-di'ōn*] an indandione type anticoagulant used as a rodenticide and as a counter to vampire bat predation. Effects are similar to those of warfarin. See also **pindone**.

diphenamid an amide type of herbicide with very low toxicity if used at recommended concentrations. Poisoning causes anorexia, weight loss and posterior paresis.

diphenhydramine [*di"fen-hi'drə-mēn*] an antihistamine used as the hydrochloride in treatment of allergic disorders and also for its sedative, antiemetic, antitussive, local anesthetic, and anticholinergic effects. Well known as Benadryl.

diphenidol [*di-fen'ĭ-dōl*] used as the hydrochloride for control of nausea and vomiting; it has an antivertigo effect on the vestibular apparatus, inhibiting the chemoreceptor trigger zone to control nausea and vomiting, thus preventing motion sickness.

diphenoxylate [*di"fən-ok'sə-lāt*] a derivative of meperidine with little analgesic effect, but used as the hydrochloride for the management of diarrhea.

diphenylamine [*di-fen"əl-am'ēn*] 1. a larvicide used in mixtures applied topically to screw-worm lesions. 2. a common contaminant in phenothiazine and may cause clotting defects after dosing with phenothiazine. 3. used in a field test for nitrate/nitrite poisoning.

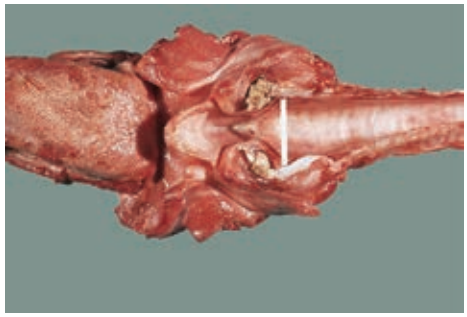
diphenylhydantoin [*di-fen"əl-hi-dan'to-in*] phenytoin.

2,3-diphosphoglycerate [*di-fos'fo-glis'ər-āt*] see **2,3-bisphosphoglycerate**.

diphosphonates [*di-fos'fə-nāts*] bisphosphonates.

diphosphopyridine nucleotide nicotinamide-adenine dinucleotide (NAD). One of the two growth factors released from erythrocytes during the preparation of chocolate agar. Called also V-factor.

diphosphoric acid see **pyrophosphoric acid**.



D-29: Necrotizing laryngitis in calf diphtheria.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

diphthamide an amino acid residue formed by post-translational modification of histidine and found in eukaryotic elongation factor 2 (eEF-2). Diptheria toxin causes its ADP ribosylation, inactivating eEF-2 and blocking mRNA translation.

diphtheria [*dif-thēr'e-ə*] a human disease caused by *Corynebacterium diphtheriae*. There is no counterpart in animals but the name diphtheria is used in diseases that have some clinical similarity to it.

avian d. see **fowlpox**.

calf d. a severe, often fatal necrosis of the pharynx and larynx in calves up to 3 months of age caused by *Fusobacterium necrophorum*. The disease is commonly associated with poor hygienic management, especially in the feeding of milk or milk substitutes, but some losses occur in well-managed calf units, and severe outbreaks can also occur in yearling cattle in feedlots. Characteristic clinical signs include high fever, moist painful cough, severe dyspnea, nasal discharge, pain on external palpation of the larynx and a foul smell on the breath. See also oral **necrobacillosis**.

diphtheritic [*dif"the-rit'ik*] pertaining to features of the human disease, diphtheria.

d. inflammation an adherent membrane, consisting of necrotic mucosa combined with fibrinous inflammatory exudate on the affected mucosa. Removal of the exudate reveals a hemorrhagic ulcerated surface.

d. membrane the membrane characteristic of diphtheritic inflammation. See also diphtheritic inflammation (above).

diphtheroid [*dif'thə-roid*] 1. resembling the diphtheria bacillus *Corynebacterium diphtheriae*. See also **coryneform**. 2. pseudodiphtheria.

diphydont diphyodont.

diphyllobothriasis [*di-fil"o-both-ri'ə-sis*] infection with *Diphyllobothrium* spp.

Diphyllobothrium [*di-fil"o-both're-əm*] a genus of long tapeworms in the family Diphyllobothriidae.

D. dalliae, D. dendriticum, D. pacificum, D. strictum, D. minus, D. ursi tapeworms of fish-eating mammals including humans.

D. erinacei ***Spirometra*** *erinacei*.

D. latum the broad or fish tapeworm, a species found in the small intestines of humans, dogs, cats and other fish-eating mammals.

diphyodont [*di-fi'o-dont"*] having two dentitions, a deciduous and a permanent.

diphyodonty having a single replacement set of teeth after a first erupted set; characteristic of mammals.

dipivefrin [*di-piv'ə-frin*] an epinephrine prodrug used as the hydrochloride in ophthalmic drops to treat glaucoma.

Diplarrhena Southern Australian genus of plants in the family Iridaceae; probably contains cardiac glycosides; causes hemorrhagic diarrhea. Includes *D. moraea*, *D. latifolia*. Called also *Diplarrena*, butterfly flag, native lily.

diplegia [*di-ple'je-ə*] paralysis of like parts on either side of the body.

diplobacillus [*dip"lo-bə-sil'əs*] a short, rod-shaped organism occurring in pairs; diplobacterium.

diplobacterium [*dip"lo-bak-tēr'e-əm*] see **diplobacillus**.

diploblastic [*dip"lo-blas'tik*] having two germ layers.

diplocardia [*dip"lo-kahr'de-ə*] a condition in which the heart appears to be partly divided by a central fissure.

Diplococcus [*dip"lo-kok'əs*] former name for a genus of bacteria (tribe Streptococcaceae). The species have been assigned other names. See ***Streptococcus*** *pneumoniae*.

diplococcus [*dip"lo-kok'əs*] pl. *diplococci*. Any of the spherical bacteria occurring usually in pairs as a result of incomplete separation after cell division in a single plane.

diplocoria double pupil.

Diplocyclos palmatus African vine in the plant family Cucurbitaceae; may contain cucurbitacins; causes severe diarrhea. Called also *Bryonopsis laciniosa*.

Diplodia maydis [dip-lo'de-ə] previously *D. zeae*; see ***Stenocarpella maydis***.

diplodiosis [dip"lo-de-o'sis] a neuromuscular paretic syndrome of cattle, and less commonly sheep, manifest with ataxia, a high-stepping gait, incoordination, paresis, paralysis, death and leukoencephalomalacia. Associated with feeding on corn infested with *Diplodia maydis (Stenocarpella maydis)* a contaminant of corn crops late in the development of the kernel, especially during humid seasons, which produces a toxic metabolite named diplodiatoxin.

diploë [dip'lo-e] the spongy layer between the inner and outer compact layers of the flat bones of the skull.

diplogenesis [dip"lo-jen'ə-sis] the production of a conjoined twins.

Diplogonoporus [dip"lo-go-nop'ə-rəs] a genus of tapeworms in the family Diphyllobothriidae. Includes *D. grandis*, found in humans, probably an accidental final host. The true host is probably a seal.

diploid [dip'loid] 1. having a pair of each chromosome characteristic of a species, i.e. genomes in which chromosomes occur in pairs. 2. a diploid individual or cell.

human d. cell vaccine see human diploid cell **vaccine**.

d. karyotype a karyotype consisting of chromosomes in pairs.

diploidy [dip'loi-de] the state of being diploid.

Diplolophium africanum an African plant in the family Apiaceae; contains an unidentified toxin and, if ingested in large quantities when it is green, causes dyspnea, salivation, abdominal pain, staggering and death.

diplomyelia [dip"lo-mi-e'le-ə] lengthwise fissure and seeming doubleness of the spinal cord.

diplonema [dip"lo-ne'mə] the double chromosomes in the diplotene stage.

diploneural [dip"lo-noor'əl] having a double nerve supply.

diplopia [dĭ-plo'pe-ə] seeing two images; double vision.

Diplopoda [di-plop'o-də] see ***Myriapoda***.

Diplopylidium [dip"lo-pi-lid'e-əm] a genus of tapeworms found in dogs and cats. Belongs to the family Dipylidiidae.

diplosomatia [dip"lo-so-ma'she-ə] a condition in which complete twins are joined at some of their body parts.

diplosomia [dip"lo-so'me-ə] symmetrical conjoined twins.

Diplostomum a genus of digenetic trematodes of the family Diplostomatidae.

D. spathaceum found in the intestines of gulls. A cause of cataracts in fish and heavy infestations may cause severe mortalities.

diplotene [dip'lo-tēn] the stage of the first meiotic prophase, following the pachytene, in which the two chromosomes in each bivalent begin to repel one another and a split occurs between the chromosomes.

Diplozoon a genus of monogean trematode parasites in the family Diplozooidae.

D. barbi, D. paradoxus found on the gills of freshwater fish. They cause damage to the gills and predispose to bacterial infection.

Dipnoi see **lungfish**.

dipole [di'pōl] 1. a molecule having charges of equal and opposite sign. 2. a pair of electric charges or magnetic poles separated by a short distance.

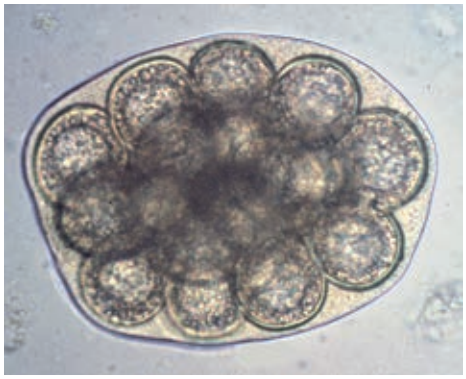
dipped back conformation in an animal in which the normal dip between withers and croup is exaggerated. Called also swayback.

dipping [dip'ing] application of insecticide in large volume, dilute solution over the entire body for the purpose of controlling external parasites. It may be done in a plunge bath where the animal is totally immersed and must swim to the other end, or by spray dip where the animal passes through a battery of sprays that apply spray under pressure from every direction. Local application of insecticide for local effect is also carried out by jetting, and general effects are also obtained by insecticides applied as pour-ons. See also **dip**, **teat** dipping.

d. cage the beasts are put into the cage one at a time and lowered into a small vat of insecticide.

d. vat a deep, long trough which is filled with insecticide and the animals are forced to swim through it. Called also plunge dip.

dippity pig see **erythema** multiforme.



D-30: Egg packet of *Dipylidium caninum*. From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

diprenorphine an analgesic antagonist used principally to reverse the effects of etorphine in captured wild animals. The reversal is complete and very quick. Called also M50-50 or Revivon.

diprivan [di'prĭ-van] see **propofol**.

diprophylline a theophylline derivative used as a bronchodilator. Called also dyphylline.

diprosopus [di-pros'o-pəs] a fetus with varying degrees of duplication of the face.

dipsotherapy [dip"so-ther'ə-pe] the therapeutic limitation of the amounts of fluids ingested.

dipsticks [dip'stiks] absorbent paper strips impregnated with reagents for testing urine or other fluid for their content of electrolytes, other solutes and blood. The container is usually provided with a color matching scale so that a rough quantitative estimation can be made.

Diptera [dip'tər-ə] an order of insects with two wings, including flies, gnats and mosquitoes.

dipterous [dip'tər-əs] 1. having two wings. 2. pertaining to insects of the order Diptera.

dipygus [di-pi'gəs] a fetus with a double pelvis.

dipylidiasis [dip"ə-lĭ-di'ə-sis] infection with *Dipylidium caninum*.

Dipylidium [dip"ə-lid'e-əm] a genus of **tapeworms** of the family Dipylidiidae. Besides those listed below, includes *D. buencaminoi (syn. D. caninum), D. compactum, D. diffusum, D. gracile, D. sexcoronatum* (cats).

D. caninum the dog tapeworm, parasitic in dogs and cats and occasionally found in humans. Esthetically unattractive when excreted in the feces, but causes little damage other than anal irritation. Fleas and lice are intermediate hosts.

dipyridamole [di"pĭ-rid'ə-mōl] a coronary vasodilator with antiplatelet activity.

dipyridyl compounds highly toxic herbicides. See **diquat**, **paraquat**.

dipyrone [di'pi-rōn] a nonsteroidal anti-inflammatory drug used as an analgesic, antispasmodic antipyretic and anti-inflammatory in horses and dogs.

diquat a hormone weedkiller which may poison animals, particularly those grazing pasture contaminated by the agent. Lesions in fatal cases include pulmonary emphysema, enteritis, abomasitis and hepatic, renal and myocardial degeneration. Clinical signs include diarrhea and a high mortality rate.

direction orientation within the body.

caudal d. towards the tail end of the body.

cranial d. towards the head end of the body.

distal d. distant from the long axis of the body.

dorsal d. 1. the surface directed towards the back or spine. 2. the extensor surface of the distal limbs.

lateral d. the surface directed away from the median plane.

medial d. towards the median plane (a vertical plane passing through the body from nose tip to tail tip).

palmar d. the flexor aspect of the foot, below the carpus, the surface directed towards the ground.

plantar d. below the tarsus, the surface directed towards the ground.

proximal d. closer to the long axis of the body.

rostral d. towards the head or mouth.

ventral d. the surface directed towards the belly or ground.

director a long, slender, grooved instrument for guiding a knife or other surgical instrument.

VetBooks.ir

dirlotapide a novel nicrosomal triglyceride transfer protein inhibitor that causes reduced intestinal lipid absorption and appetite suppression; used for pharmacological treatment of of obesity in humans and dogs.

Dirofilaria [*di"ro-fĭ-lar'e-ə*] a genus of nematode parasites of the superfamily Filarioidea.

D. acutiuscula causes swelling in the subcutaneous fascia of the dorsolumbar area of the peccary.

D. conjunctivae a zoonotic infection on the eyelids of humans, due to infestation of wildlife.

D. corynodes occurs in monkeys.

D. immitis occurs in cat, dog, fox and wolf and has been recorded in humans and many other species. Transmitted by the intermediate hosts, *Culex*, *Aedes*, *Anopheles* and other mosquito genera. Found in the blood vessels, especially the heart and the pulmonary artery. Causes **heartworm** disease.

D. repens occurs in the subcutaneous tissues of the dog and cat, and occasionally humans.

D. roemeri see ***Pelecitus roemeri***.

D. striata found in the bobcat.

D. tenuis found in subcutaneous tissues of raccoons and humans.

D. ursi occurs in black bears.

dirofilariasis [*di"ro-fil"ə-ri'ə-sis*] infection with nematodes of the genus *Dirofilaria.* Includes subcutaneous swellings. See also **heartworm** disease.

dirty mare syndrome the vaginal discharge seen in nonspecific metritis in the mare, which may be caused by a number of bacteria and opportunist fungi.

dirty puppy syndrome see congenital **seborrhea**.

dirty shadowing see **reverberation**.

dirty tail disease ascending urinary tract disease of koalas, caused by *Chlamydophila pecorum*.

dis- word element. [L.] *reversal, separation*. [Gr.] *duplication*.

disability [*dis"ə-bil'ĭ-te*] 1. inability to function normally, physically or mentally; incapacity. 2. anything that causes disability.

disaccharidase [*di-sak'ə-ri-dās"*] any of a group of enzymes which are components of the brush border of the intestinal epithelium and which hydrolyze disaccharides to monosaccharides. They include lactase, maltase, sucrase and galactosidase. Enteric infections may cause a temporary deficiency of lactase leading to the development of an osmotic-type diarrhea. All disaccharidases are not present immediately following birth and feeding sucrose to young calves will result in diarrhea.

disaccharide [*di-sak'ə-rīd*] any of a class of sugars each molecule of which yields two molecules of monosaccharide on hydrolysis.

disarming [*dis-ahrm'ing*] various methods of minimizing the risk of bites for pesonnel and other animals by nonhuman primates; most commonly, it involves crown reduction of the canine teeth, followed by root canal therapy .

disarticulation [*dis"ahr-tik"u-la'shən*] amputation or separation at a joint.

disaster medicine the practice of veterinary medicine under circumstances resulting from natural disasters. Appropriate planning usually includes provisions for emergency treatment of animal injuries, control of and temporary housing of displaced animals, reuniting lost animals with their owners, and contributions to management of public health.

disbudding [*dis-bud'ing*] removal of the immature horns in young ruminants. This is a much simpler and less traumatic operation than removal of the adult horns and is usually done without an anesthetic. The usual technique is a dehorning tube or set of scoops. A hot iron has some exponents. See **dehorning**.

disc [*disk*] an alternative spelling of the more commonly used **disk**.

embryonic d. a flattish area in a cleaved ovum in which the first traces of the embryo are seen. Called also germinal disk.

germinal d. the embryo in a hen egg. the embryo in a hen egg.

olfactory d. these develop on the ventrolateral aspects of the head early in fetal development. They deepen, are surrounded by the developing nasal processes, then break through into the oral cavity and become the nasal cavities.

disc- for words beginning thus, see words beginning *disk-*.

discard time period following the ceasation of the use of a drug that a food product, such as milk, must be discarded and not used for human consumption.

discharge [*dis'chahrj*] 1. a setting free, or liberation. 2. material or force set free. 3. an excretion or substance evacuated.

D-31: Vaginal discharge from a mare with placentitis.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

ocular d. overflow of liquid from the ocular surface over typically the lower eyelid. May be serous, mucoid, sanguineous, or purulent in nature, or some combination of the four. Indicates either excess production, reduced drainage, or both, of one of these fluids. As with other regions, the nature of the discharge can give some indication of likely cause and chronicity, but ocular discharge is seen with the majority of ocular diseases.

discission [*dĭ-sizh'ən*] incision, or cutting into, as of a soft cataract.

d.-aspiration a surgical technique for removal of soft cataracts in which abnormal lens material is broken into small pieces and removed by aspiration. Similar to phacofragmentation.

Discocotyle a genus of monogenetic trematode parasites of the family Discocotylidae.

D. sagittata a significant parasite of fish, causing serious mortalities due to damage to the gills.

discocyte [*dis'ko-sīt*] a discoid-shaped red blood cell, seen normally in dogs.

discoid [*dis'koid*] 1. disk-shaped. 2. a disk-like medicated tablet.

d. lupus erythematosus see **lupus erythematosus**.

d. meniscus an abnormality of the meniscus, usually lateral, in the stifle joint, reported in dogs. Instead of being semilunar in shape it is discoid; the frequency, clinical significance and cause are unclear.

discontinuous variable [*dis"kən-tin'u-əs*] see discrete **variable**.

discoplacenta a disc-shaped placenta.

discordance [*dis-kor'dəns*] the occurrence of a given trait in only one member of a twin pair.

discreditable conduct conduct by a professional person which is likely to bring sufficient discredit to the profession generally that the public's confidence in it is reduced. Penalties imposed by the registering authority may be as severe as deregistration.

discrete [*dis-krēt'*] made up of separated parts; characterized by lesions that do not become blended.

discretizing measurements modification of measurement data (e.g. body weight to the nearest kg) to make classification into discrete groups possible.

discus [*dis'kəs*] pl. *disci* [L.] 1. see **disk**. 2. a popular aquarium fish in the genus *Symphysodon* spp. It is compressed, round and brightly colored.

d. oophorus see **cumulus** oophorus.

d. ovigerus see **cumulus** oophorus.

d. proligerus see **cumulus** oophorus.

disease [*dĭ-zēz'*] traditionally defined as a finite abnormality of structure or function with an identifiable pathological or clinicopathological basis, and with a recognizable syndrome or constellation of clinical signs. This definition has long since been widened to embrace subclinical diseases in which there is no tangible clinical syndrome but which are identifiable by chemical, hematological, biophysical, microbiological or immunological

means. The definition is used even more widely to include failure to produce at expected levels in the presence of normal levels of nutritional supply and environmental quality. For specific diseases see under the specific name, e.g. Aujeszsky's disease, Bang's disease, foot-and-mouth disease.

air-borne d. the causative agent is transmitted via the air without the need for intervention by other medium. See also **wind-borne disease**.

atypical d. a form of a disease which differs significantly in clinical signs or pathological lesions from classical or textbook forms of the disease, e.g. bovine atypical interstitial pneumonia.

d. carrier see **carrier**, **vector**.

clinical d. see **clinical** (3).

d. cluster a group of animals with the same disease occurs at an unusual level of prevalence for the population as a whole. The cluster may be in space, with high concentrations in particular localities, or in time, with high concentrations in particular seasons or in particular years.

communicable d. infectious disease in which the causative agents may pass or be carried from one animal to another directly or indirectly on inanimate objects or via vectors.

complicating d. one that occurs in the course of some other disease as a complication.

constitutional d. one involving a system of organs or one with widespread signs.

contagious d. see communicable disease (above).

d. control reducing the prevalence of a disease in a population, including eradication, by chemical, pharmaceutical, quarantine, management including culling, or other means or combinations of means.

d. control programs at the national or regional level, organized routines specifying agents, control strategies, administration, time and personnel allocations, community support, funding, participation of corporate or government agencies, animal and animal product disposal.

deficiency d. a condition due to dietary or metabolic deficiency, including all diseases caused by an insufficient supply of essential nutrients.

demyelinating d. any condition characterized by destruction of myelin.

domestic d. indigenous to the country.

egg-borne d. an infectious disease of birds in which the agent is spread via the egg.

emerging d's. diseases that are emerging or exploding in any area of the world, either as *de novo* diseases or ones whose boundaries are expanding. Examples would be Ebola virus and West Nile virus. Followed by an emerging number of veterinary, medical and microbiological journals. The emergence of human, plant and animal diseases is the focus of the Federation of American Scientists and the internet web site of the International Society for Infectious Diseases, ProMED-mail.

endemic d. see **endemic**.

environmental d. control control by changing the environment, e.g. draining a swamp, ventilating a barn.

epidemic d. see **epidemic**.

etiological d. classification diseases arranged in the order of their etiological agents, e.g. bacterial, mycoplasma.

exotic d. a disease that does not occur in the subject country. Said of infectious diseases that may be introduced, e.g. rabies is exotic to the UK, contagious bovine pleuropneumonia is exotic to the USA.

focal d. a localized disease.

d. forecasting the monitoring of specific biological and environmental risk factors to predict the risk that a disease will occur or that its intensity will increase. An example would be the use of climatic data to predict the risk for fascioliasis in sheep and cattle.

fulminant d. an explosive outbreak in a group or a rapidly developing, peracute development of a disease in an individual. Called also fulminating.

functional d. any disease involving body functions but not associated with detectable organic lesion or change.

generalized d. one involving all or many body systems; often said of infectious diseases in which there is spread via the bloodstream. See also systemic disease (below).

glycogen d. any of a group of genetically determined disorders of glycogen metabolism, marked by abnormal storage of glycogen in the body tissues. See also **glycogen storage disease**.

heavy chain d. see **heavy-chain disease**.

hemolytic d. of newborn see **alloimmune** hemolytic disease of the newborn.

hemorrhagic d. of newborn see neonatal **hemorrhagic** disease.

d. history that part of a patient's history which relates only to the disease from which the patient is suffering.

holoendemic d. most animals in the population are affected.

hyperendemic d. the rate of infection is steady but high.

hypoendemic d. the rate of infection is steady and only a few animals are infected.

immune complex d. see **immune** complex disease.

infectious d. one caused by small living organisms including viruses, bacteria, fungi, protozoa and metazoan parasites. It may be contagious in origin, result from nosocomial infections or be due to endogenous microflora of the nose and throat, skin or bowel. See also communicable disease (above).

manifestational d. classification diseases arranged in the order of their clinical signs, epidemiological characteristics, necropsy lesions, e.g. sudden death diseases.

mesoendemic d. the disease occurs at an even rate and a moderate proportion of animals are infected.

metabolic d. see **metabolic** diseases.

molecular d. any disease in which the pathogenesis can be traced to a single, precise chemical alteration, usually of a protein, which is either abnormal in structure or present in reduced amounts. The corresponding defect in the DNA coding for the protein may also be known.

multicausal d. 1. a number of causative agents are needed to combine to cause the disease. 2. the same disease can be caused by a number of different agents.

multifactorial d. see multicausal disease (above).

new d. disease not previously recorded. May be variants on an existing disease, e.g. infectious bovine rhinotracheitis, or escapes from other species, e.g. the Marburg virus disease of humans.

notifiable d. see reportable disease (below).

occupational d. one caused by exposure to substances or agents at the workplace.

organic d. due to or accompanied by structural changes.

pandemic d. a very widespread epidemic involving several countries or an entire continent.

quarantinable d. a disease which the law requires to be restricted in its spread by putting the affected animals, farms or properties on which it occurs in quarantine.

reportable d. a disease that under local law must be reported to the office of the State Veterinarian in the US, or to the equivalent authority in other countries, by any licensed veterinarian or veterinary laboratory when it is diagnosed or its existence suspected. Several infectious diseases of livestock have the potential for serious and rapid spread, with implications for international trade and/or risk for significant zoonotic disease. Because of the nature of these diseases and the risk to regional or national animal and human health, their control is beyond the capability of the individual practitioner and requires the intervention of state and possibly national veterinary personnel and organizations. The list of reportable diseases is published by each state and includes the diseases notifiable to the OIE (see Table 22) as well as others that have importance to that state or region. Called also notifiable disease, scheduled disease.

d. reservoir any animal or fomite in which an infectious disease agent is preserved in a viable state or multiplies and upon which it may depend for survival.

secondary d. 1. a disease subsequent to or a consequence of another disease or condition. 2. a condition due to introduction of incompatible, immunologically competent cells into a host rendered incapable of rejecting them by heavy exposure to ionizing radiation.

self-limited d. see **self-limited**.

sex-limited d. disease limited in its occurrence to one or other sex. See also **sex-linked**.

sexually transmitted d. (STD) a disease that can be acquired by sexual intercourse.

slaughter d. control see **slaughter** (2).

sporadic d. occurring singly and haphazardly; widely scattered; not epidemic or endemic. See also sporadic bovine **encephalomyelitis**, **sporadic leukosis**, **sporadic lymphangitis**.

storage d. see **storage disease**.

d. syndrome see **syndrome**.

VetBooks.ir

systemic d. sufficiently widespread in the body to cause clinical signs referable to any organ or system, and in which localization of infection may occur in any organ.
transboundary animal d. highly contagious animal diseases that have the potential to spread very rapidly irrespective of national borders. Examples are rinderpest and foot and mouth disease.
d. triangle interaction between the host, the disease agent, and the environment.
vector-borne d. one in which the pathogenic microorganism is transmitted from an infected individual to another individual by an arthropod or other agent, sometimes with other animals serving as intermediary hosts. Vector-borne infectious diseases are emerging or resurging as a result of factors such as insecticide and drug resistance and climate change.
d. wastage loss of income generated by production of milk, eggs, fiber, or loss of capital value because of diminution in the patient's value.
wasting d. any disease marked especially by progressive emaciation and weakness.
zoonotic d. disease capable of spread from animals to humans. See also **zoonosis**.

disease-free animals a term for animals born and reared in an uncontaminated environment from uninfected parents and guaranteed to be free of infection. More guarded titles are usual, e.g. hysterectomy produced, artificially reared, specific pathogen free.

disengagement [*dis"ən-gāj'mənt*] emergence of the fetus, or part thereof, from the vaginal canal.

disequilibrium [*dis-e"kwĭ-lib're-əm*] unstable equilibrium.

dish development [*dish*] development of radiographic film in the simplest equipment, developing trays.

dished face less than normal growth of the facial bones so that the lateral silhouette of the face is depressed. Called also stag face.

dishing [*dish'ing*] a fault in a horse's gait in which one or both forefeet is thrown outwards when moving forward.

dishorning [*dis-horn'ing*] see **dehorning**.

disinfect [*dis"in-fekt'*] to free from pathogenic organisms, or to render the potential pathogens inert.

disinfectant [*dis"in-fek'tənt*] 1. freeing from infection. 2. a chemical agent that destroys infective agents. Disinfectants are usually applied to inanimate objects since they are too toxic to be used on living tissues. Disinfectants may vary in their efficacy against different infectious agents.

disinfection [*dis"in-fek'shən*] the act of disinfecting.
terminal d. disinfection of a loose box or cage and its contents at the termination of a disease.
d. time the time required for a disinfectant to achieve its maximum effect. It is influenced by the material being disinfected, the agent's targets and potency of the disinfectant.

disinfestants see **insecticide**.

disinfestation [*dis"in-fəs-ta'shən*] destruction of insects, rodents or other animal forms present on the animal or its harness or in its surroundings, and which may transmit disease.

disintegrant [*dis-in'tə-grənt*] an agent used in pharmaceutical preparation of tablets, which causes them to disintegrate and release their medicinal substances on contact with moisture.

disjunction [*dis-junk'shən*] the act or state of being disjoined. In genetics, the moving apart of bivalent chromosomes at the first anaphase of meiosis.

disk [*disk*] a circular or rounded flat plate. See also **disc**, **intervertebral** disk.
articular d. a pad of fibrocartilage or dense fibrous tissue present in some synovial joints such as that between the ulna and the carpus of carnivores and primates. As specialized intra-articular structures they differ from articular plates in that they have nerve and blood supplies.
choked d. papilledema.
d. explosion the lesion produced by a sudden extrusion of nondegenerate nucleus pulposus from intervertebral disks into the cervical vertebral canal as a result of trauma.
intra-articular d. articular disk.
optic d. the optic nerve head or that part of the optic nerve visible funduscopically where nerve fibers running from the brain turn approximately at right angles to spread over the retina.
slipped d. the popular name for prolapse of the nucleus of an **intervertebral** disk.

disk-diffusion test see **antimicrobial sensitivity test**.

diskectomy [*dis-kek'tə-me*] excision of an intervertebral disk.

diskiform in the shape of a disk.

diskitis [*dis-ki'tis*] inflammation of a disk, especially of an intervertebral disk.

diskogenic caused by derangement of an intervertebral disk.

diskography [*dis-kog'rə-fe*] radiography of the vertebral column after injection of radiopaque material into an intervertebral disk.

diskolysis lysis of an intervertebral disk. See also **intervertebral** disk disease.

diskospondylitis [*dis"ko-spon-də-li'tis*] a destructive, inflammatory and proliferative process involving intervertebral disks, their associated end-plates and vertebral bodies; best described in pigs and dogs.

dislocation [*dis"lo-ka'shən*] 1. displacement of a bone from a joint. Signs include loss of motion, temporary paralysis of the involved joint, pain and swelling, and sometimes shock. Some dislocations, especially of the hip, are congenital, usually resulting from a faulty construction of the joint. 2. displacement of the lens in the eye. See **lens** luxation.
complete d. one in which the surfaces are entirely separated.
compound d. one in which the joint communicates with the outside air through a wound.
pathological d. one due to disease of the joint or to paralysis of the muscles.
simple d. one in which there is no communication with the air through a wound.

dismemberment [*dis-mem'bər-mənt*] amputation of a limb or a portion of it.

dismutase any of a group of enzymes that have the ability to catalyze the reaction of two molecules of the same compound to yield two molecules in different oxidation states.

disodium EDTA [*di-so'de-əm*] see **edetate**.

disomus [*di-so'məs*] synencephaly.

disophenol (DNP) an injectable anthelmintic for hookworms in cats and dogs and *Haemonchus contortus* in sheep. Larger than normal doses cause somnolence, prostration and sometimes death. Transient cataract is also recorded as a toxic sequel. See also **nitrophenol**.

disoprofol see **propofol**.

disopyramide [*di"so-pir'ə-mīd*] an oral antiarrhythmic agent, similar to procainamide.

disorder [*dis-or'dər*] a derangement or abnormality of function. Used as a euphemism when it is not certain that the abnormality is in fact a disease, or when public relations suggest that the word disease is likely to be inflammatory or upsetting.

disorganization [*dis-or"gən-ĭ-za'shən*] the process of destruction of any organic tissue; any profound change in the tissues of an organ or structure which causes the loss of most or all of its proper characters.

disorientation [*dis-or"e-ən-ta'shən*] the patient appears to suffer a loss of proper bearings, or a state of mental confusion as to time, place or identity.
cetacean d. see **stranding**.

dispensary [*dis-pen'sə-re*] 1. a place for dispensation of free or low-cost medical treatment. 2. any place where drugs or medicines are actually dispensed.

dispensatory [*dis-pen'sə-tor-e*] a book that describes medicines and their preparation and uses.
D. of the United States of America a collection of monographs on unofficial drugs and drugs recognized by the Pharmacopeia of the United States, the Pharmacopoeia of Great Britain, and the National Formulary, also on general tests, processes, reagents, and solutions of the USP and NF, as well as drugs used in veterinary medicine.

dispensing [*dis-pen'sing*] provision of drugs or medicines as set out properly on a lawful prescription. A prescription can only be filled, the drugs supplied, by a registered pharmacist, veterinarian, dentist or member of the medical profession. The law requires that a prescription be written only for patients that are in the veterinarian's care.

dispermy [*di'spər-me*] the fertilization of one egg by two sperm.

dispersal sale sale of an entire herd or flock; implies that the breeder is not retaining breeding animals and that the purchaser will now have the advantage of controlling that genotype.

disperse [*dis-pərs'*] to scatter the component parts, as of a tumor or the fine particles in a colloid system; also, the particles so dispersed.

dispersion [*dis-pur'zhən*] 1. the act of scattering or separating; the condition of being scattered. 2. the incorporation of one substance into another. 3. a colloid solution.

Dispharynx see ***Synhimantus***.

displaced see **displacement**.

displacement [*dis-plās'mənt*] removal to an abnormal location or position.

d. of abomasum see left, right **abomasal** displacement.

fracture d. the movement of fractured bone fragments away from their relatively normal alignment.

inherited d. of molar teeth see inherited displacement of **molar**[2] teeth.

left dorsal colon d. see left **colon** displacement.

liver d. see **liver** displacement.

display work station in digital radiology, the computer, image software and monitor to enable the display and adjustment of digital images.

disposition [*dis"pə-zīsh'ən*] setting in place.

d. curve the graphic representation of changes in the blood concentration of a drug after administration.

drug d. getting a drug into its appropriate position in the body and in an appropriate concentration.

disproportion [*dis"pro-por'shən*] a lack of the proper relationship between two elements or factors.

fetopelvic d. abnormally large size of the fetus in relation to the maternal pelvis (fetomaternal disproportion), leading to difficulties in delivery.

dissect [*di-sekt'*] to cut apart, or separate; especially, the exposure of structures of a cadaver for anatomical study.

dissection [*dĭ-sek'shən*] 1. the act of dissecting. 2. a part or whole of an organism prepared by dissecting. 3. passage of blood between layers of the wall of a blood vessel.

blunt d. separation of tissues along natural lines of cleavage, by means of a blunt instrument or finger.

sharp d. separation of tissues by means of the sharp edge of a knife or scalpel, or with scissors.

water beam d. the use of a high-pressure jet of saline to remove parenchymal cells, retaining more resistant structures such as ducts, capsule and vessels.

disseminated [*dĭ-sem'ĭ-nāt"əd*] scattered; distributed over a considerable area.

Disse's space small lymph-carrying spaces between the liver sinusoids and hepatocytes.

dissociation [*dĭ-so"se-a'shən*] the act of separating or the state of being separated.

atrial d. independent beating of the left and right atria, each with normal rhythm or with various combinations of normal rhythm, atrial flutter or atrial fibrillation.

atrioventricular d. independent pacemakers in the atria and ventricles.

hepatocyte d. hepatocytes becomes detached from their neighboring cells, either generally or locally; a feature of death of the patient.

dissolution [*dis"o-loo'shən*] 1. the process in which one substance is dissolved in another. 2. separation of a compound into its components by chemical action. 3. liquefaction. 4. death.

dissolve [*dĭ-zolv'*] 1. to cause a substance to pass into solution. 2. to pass into solution.

distad [*dis'tad*] in a distal direction.

distaff the female line in the pedigree of an animal.

distal [*dis'təl*] remote; farther from any point of reference. See also **direction**.

d. convoluted tubule the part of the renal tubular system interposed between the nephron loop and the arched collecting tubule. See also convoluted **tubules**.

d. interphalangeal joints see Table 11.

d. phalanx the third phalanx of digits with three bones, but the terminal phalanx of digits which contain more than three bones such as those of cetacean flippers and avian toes.

d. sesamoid navicular bone in the horse.

d. tarsal bones the tarsal bones that abut against the metatarsals.

distance [*dis'təns*] the measure of space intervening between two objects or two points of reference.

critical d. see flight distance (below).

social d. average distance between animals in a community. An expression of the concentration of the animals in the environment.

flight d. the distance that agricultural and wild animals like to keep between themselves and a threat of danger. The distance varies with the degree of wildness of the animals and the circumstances. Called also the circle of safety, critical, fright or guard distance. Important in planning animal handling facilities, yards, zoos and the like. Neglect of the need to provide adequate space in which an animal can escape will lead to them damaging themselves by running into fences.

guard d. see flight distance (above).

interocclusal d. the distance between the occlusal surfaces of the maxillary and mandibular teeth with the mandible in physiological rest position.

interocular d. the distance between the eyes, usually used in reference to the interpupillary distance (the distance between the two pupils when the visual axes are parallel).

D-32: Distemper teeth.

distemper [*dis-tem'pər*] a name for several infectious diseases of animals.

avian d. see **Newcastle disease**.

canine d. an acute virus disease of dogs caused by a morbillivirus, and characterized by high morbidity and high mortality, ocular and nasal discharge, vomiting, diarrhea, coughing, dyspnea and seizures. In addition, some dogs develop 'hard pads' (hyperkeratosis of the footpads), persistent muscle twitches (chorea), optic neuritis and later retinal atrophy, enamel hypoplasia (distemper teeth —see below), or a chronic encephalitis. Interstitial pneumonia and demyelinating encephalomyelitis are common pathological features. Also occurs in other Canidae as well as Procyonidae, Ursidae, Mustelidae and Hyaenidae. The disease can be prevented by vaccination at a young age. Called also Carré's disease.

equine d. see **strangles**.

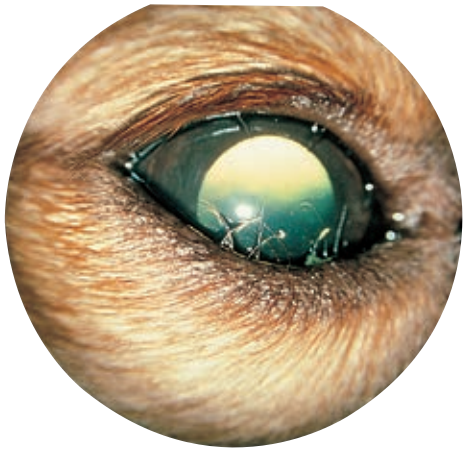
feline d. see **feline** panleukopenia.

phocine d. a disease first observed in European harbor seals in 1988 caused by a morbillivirus; clinical signs are similar to those of distemper.

d. teeth the pitted, discolored teeth that may result when young dogs are infected with distemper virus prior to the eruption of their permanent teeth. Other insults to enamel formation at this age may also be responsible for this defect.

distention [*dis-ten'shən*] the state of being distended, or stretched out or enlarged; the act of distending. For individual local distentions see the location, e.g. abomasal distention.

distichia [*dis-tik'e-ə*] eyelashes (cilia) misdirected so as to emerge through the meibomian (tarsal) gland openings at the eyelid margin and therefore usually touching and irritating the corneal surface.



D-33: Distichiasis. From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

VetBooks.ir

distichiasis [*dis"ti-ki'ə-sis*] having distichia can be clinically irrelvant or cause varying degrees of keratoconjunctival irritation or ulceration.
distillate [*dis'til-āt*] a product of distillation.
distillation [*dis"ti-la'shən*] vaporization; the process of vaporizing and condensing a substance to purify the substance or to separate a volatile substance from less volatile substances.
fractional d. separation of volatilizable substances into a number of fractions, based on their different boiling points.
distiller's pertaining to the by-products of the distillation of spirits.
d. grains one of the residues of fermentation for the production of spirits. Contains most of the protein of the original grain and is an excellent supplement to diets of heavy milking cows.
d. solubles the dehydrated thin stillage from whisky manufacture. Contains a high concentration of B vitamins.
distobuccal [*dis"to-buk'əl*] pertaining to or formed by the distal and buccal surfaces of a tooth, or by the distal and buccal walls of a tooth cavity.
distoclusion [*dis"to-kloo'zhən*] malrelation of the dental arches, with the lower jaw in a distal or caudal position in relation to the upper. A class II malocclusion in the classification of **occlusion**.
distomatosis [*dis"to-mə-to'sis*] see **fascioliasis**.
distomiasis [*dis"to-mi'ə-sis*] infection due to trematodes or flukes. See also **fascioliasis**.
Distomum hepaticum see ***Fasciola hepatica***.
distortion [*dis-tor'shən*] the state of being twisted out of normal shape or position.
distraction [*dis-trak'shən*] 1. diversion of attention. 2. separation of joint surfaces without rupture of their binding ligaments and without displacement. 3. surgical separation of the two parts of a bone after it is transected.
d. index a measure of hip laxity in which the degree of subluxation demonstrated radiographically when some stress is applied to the femurs is assessed as an indicator of hip dysplasia in dogs.
d. osteogenesis the development of new bone growth in an area subjected to gradual tension stress by the deliberate separation of fragments by traction.
distress [*dis-tres'*] physical or mental anguish or suffering.
distribution [*dis"tri-bu'shən*] the arrangement of numerical data. The arrangement may be in accordance with magnitude, a frequency distribution, or in relation to geographical location, a spatial distribution.
age d. see **age** distribution.
bimodal d. the distribution has two regions of high frequency of observations separated by a zone of low frequency.
binomial d. a probability distribution associated with two mutually exclusive outcomes.
cluster d. a nonrandom distribution with observations aggregating about geographic or temporal variables. May be deceptive and merely reflect the distribution of an uneven population.
frequency d. a table or graph of the frequency of occurrence of each value of a variable.
Gaussian d. see normal distribution (below).
hypergeometric d. may apply to sampling without replacement of a finite population.
lognormal d. a distribution which is normal when the log values of the variable are considered.
normal d. a graph of the distribution appears as a bell-shaped curve which is symmetrical on the two sides of the vertical axis through the peak of the curve. Called also gaussian distribution.
parent d. the distribution (population) that was originally sampled.
Poisson d. see **Poisson distribution**.
regular d. distributed at regular intervals of time or space; all values within its given interval are equally likely.
sex d. an increase in frequency in one sex, which includes neutered males and neutered females. Called also sex-linked or sex-associated.
skewed d. a distribution in which the curve illustrating it is not symmetrical but has a long tail on one or other side of the graph.
spatial d. variations in distribution related to position in space, e.g. close to the door of a barn.
***t*-d.** see **t-test**.
temporal d. variation in distribution related to time, e.g. occurrence of disease incidents after visits by veterinarians, inseminators, feed salesmen.
distributive circulatory failure see vasogenic **shock**.
disturbance [*dis-tur'bəns*] a departure or divergence from that which is considered normal.
disturbed places areas of pasture seriously impacted by livestock action such as winter-feeding areas or gateway area where normal pasture species are replaced by weeds and annual grasses.
disulfoton an organophosphorus pesticide.
DIT di-iodotyrosine.
diterpene highly irritant plant diterpenoid esters, e.g. daphnane, tigliane, ingemane.
diterpenoid alkaloid a group of complex plant chemicals with similar structure to that of a terpene. Includes well-known toxins, e.g. aconitine, barbitine, lycoctinine, delphine, heteratisine.
dithiazanine a broad-spectrum anthelmintic and microfilaricide used for the treatment of heartworm in dogs; also used for treatment of *Strongyloides* and *Spirocerca* spp. Called also dizan.
dithiocarbamates fungal seed dressing unlikely to be poisonous for animals.
dithizone 1. a chelating agent used in the treatment of thallium poisoning, but has its own toxicity, causing blindness in dogs. 2. a very sensitive test agent for small amounts of metals, e.g. lead. Called also dithizon.
Dittrichia graveolens plant in the family Asteraceae; contains a toxic oil and causes dermatitis, diarrhea, enteritis. Called also *Inula graveolens*, stinkwort, cape khaki weed.
di-ureido isobutane (DUIB) a nitrogen-rich industrial by-product, used as a feed supplement but can be poisonous to ruminants if fed in more than small amounts and in a diet deficient in carbohydrate. The toxic effect is that of ammonia poisoning as experienced with urea feeding. See also **urea**.
diurese [*di"u-rēs'*] the act of effecting diuresis.
diuresis [*di"u-re'sis*] increased excretion of the urine.
cold d. occurs in hypothermia as a result of peripheral vasoconstriction, hyperglycemia and decreased renal tubular absorption.
osmotic d. due to increased concentration of solutes which are not reabsorbed in the proximal tubules and which, by osmotic pressure, cause water to be retained. See also osmotic **diuretic**.
postobstruction d. due to the diuretic effect of urea and electrolytes retained during the period of obstruction.
water d. ingestion and excretion of an excess of water, without a corresponding amount of sodium; involves expansion of plasma volume, increased left atrial pressure and inhibition of ADH. See also **obligatory** water diuresis.
diuretic [*di"u-ret'ik*] 1. increasing urine excretion or the amount of urine. 2. an agent that promotes urine secretion.
aldosterone antagonist d. affects tubular function by blocking the sodium retention activity of aldosterone. See also **spironolactone**.
aminouracil d's heterocyclic compounds similar to xanthines and with similar effects. See xanthine diuretics (below).
benzothiazide d's exert their effect on the proximal part of the renal tubule preventing resorption of sodium. Called also thiazide diuretics. The best known members of the group are chlorothiazide and its derivatives.
carbonic anhydrase inhibitor d's exert their effect on tubular resorption in the kidney by inhibiting carbonic anhydrase. These compounds are used preferentially for the treatment of chronic glaucoma because the formation of aqueous humor is highly dependent on carbonic anhydrase. See also **acetazolamide**.
loop of Henle d's affect the resorption of sodium in the ascending loop of Henle. Called also loop diuretic. See also **furosemide**, **ethacrynate sodium**.
mercurial d. now largely displaced; the mode of action is to interfere with tubular enzyme systems so that tubular resorption is blocked. Overuse causes permanent renal damage.
osmotic d's produce a very rapid loss of sodium and water by inhibiting their reabsorption in the kidney tubules and the loop of Henle. Mannitol is clinically the most useful of these diuretics, but it has some serious side-effects, such as pulmonary edema and congestive heart failure.
potassium-retaining d's appear to act directly on renal tubular function. See also **triamterene**.
xanthine d's have effect of stimulating cardiac activity but also have a direct effect on the renal tubules. See also **theophylline**.

VetBooks.ir

diurnal [*di-ur'nəl*] pertaining to or occurring during the daytime, or period of light.
diuron a phenylurea herbicide of low toxicity but capable of poisoning animals if given in very large amounts. Causes anorexia, weight loss and muscular weakness.
divalent [*di-va'lent*] 1. bivalent. 2. carrying an electronic charge of two units.
divalproex [*di-val'pro-eks*] a salt of **valproic acid**.
divergence [*di-vur'jəns*] a moving apart, or inclination away from a common point.
diverticular [*di"vər-tik'u-lər*] pertaining to or resembling a diverticulum.
diverticulectomy [*di"vər-tik"u-lek'tə-me*] excision of a diverticulum.
diverticulitis [*di"vər-tik"u-li'tis*] inflammation of a diverticulum, especially inflammation involving diverticula of the intestine. Weakness of the muscles of the bowel leads to the formation of diverticula, small blind pouches lined by intestinal mucosa in the lining and wall, usually following blood vessels. Inflammation may occur as a result of collections of bacteria or other irritating agents trapped in the pouches and perforation may occur. In horses and pigs these are associated with muscular hypertrophy of the small intestine.
d. and ileitis see porcine proliferative **enteropathy**.
diverticulogram [*di"vər-tik'u-lo-gram*] a radiograph of a diverticulum.
diverticulosis [*di"vər-tik"u-lo'sis*] the presence of diverticula in the absence of inflammation. See **diverticulitis**.
diverticulum [*di"vər-tik'u-ləm*] pl. *diverticula* [L.] a circumscribed pouch or sac occurring normally or created by herniation of the lining mucous membrane through a defect in the muscular coat of a tubular organ.
auditory tube d. see **guttural pouch**.
dorsal urethra d. a small pouch dorsal to the urethra in the male ruminant.
esophageal d. a congenital or acquired localized dilatation or outpouching of the esophageal wall in which food and liquids may accumulate. *Pulsion* (or pressure) diverticula result from increased intraluminal pressure and protrusion of mucosa through the muscular wall. *Traction* diverticula are created by periesophageal inflammation, fibrosis and adhesions to surrounding structures. Vascular ring anomalies are a common cause of anterior thoracic esophageal diverticula in dogs. *Epiphrenic* are those located between the heart base and diaphragm. Clinical signs include dysphagia and regurgitation, and esophageal obstruction by impacted food may occur.
intestinal d. a pouch or sac formed by hernial protrusion of the mucous membrane through a defect in the muscular coat of the intestine.
nasal d. the part of the horse's nostril dorsal to the alar fold leads into this blind pouch, which is lined with skin. Called also false nostril.
pressure d. see esophageal diverticulum (above).
pulsion d. see esophageal diverticulum (above).
rectal d. weakness and rupture of the muscular layer of the rectal wall allows formation of a pocket. Most commonly seen in dogs in association with perineal hernia. There is straining and an obvious bulge beside the anus.
stomach d. a small pouch at the left end of the pig's stomach, close to the esophageal entry into the stomach.
suburethral d. lies below the opening of the urethra of the cow.
traction d. see esophageal diverticulum (above).
d. tubae auditivae see **guttural pouch**.
diving [*di'ving*] the act of submerging underwater; diving by fish and amphibians creates an obvious need for mechanisms that allow them to be submerged under water for long periods. Most mammalian and avian orders also have aquatic species that have a similar need. Diving reflexes operate as soon as nostrils are submerged and include oxygen conservation, respiratory arrest, intense peripheral vasoconstriction, bradycardia and compression of the chest with almost complete evacuation of the lungs.
divulsion [*dĭ-vul'shən*] the act of separating or pulling apart.
divulsor [*dĭ-vul'sər*] an instrument for dilating the urethra.
dizygotic [*di"zi-got'ik*] pertaining to or derived from two separate zygotes (fertilized ova); said of **twins**.
dizygous [*di-zi'gəs*] dizygotic.
DJD degenerative joint disease, See **osteoarthritis**.
dk symbol, deca-.
DL- chemical prefix (small capitals) denoting that the substance is an equimolecular mixture of two catamorphs, one of which corresponds in configuration to D-glyceraldehyde, the other to L-glyceraldehyde.
D_Lco diffusing capacity of the lung for carbon monoxide.
D_Lo_2 diffusing capacity of the lung for oxygen.
dL decaliter (the unit of volume).
DLA dog leukocyte antigen.
DLE discoid lupus erythematosus.
DM dry matter.
DMI dry matter intake.
DMAC a combination cancer chemotherapy protocol that uses dexamethasone, melphalan, actinomycin D and cytosine arabinoside.
DMNA dimethylnitrosamine.
DMP dimethyl phthalate.
DMSA dimercaptosuccinic acid.
DMSO dimethyl sulfoxide, an industrial solvent that has the ability to penetrate plant and animal tissues and to preserve living cells during freezing. It has bacteriostatic, anti-inflammatory, analgesic, radioprotective, fibrinolytic and vasodilative properties, and inhibits cholinesterase and granulation tissue. DMSO also has been used as an agent to increase the penetrability of other substances. Only approved for veterinary use, it has found varied applications as a topical treatment for musculoskeletal conditions in horses and skin diseases, mainly in dogs.
DMT dimethyltryptamine.
DNA **deoxyribonucleic acid**.
DNA binding proteins are of two general types, histone proteins which are part of the unit structure of chromosomes called nucleosomes and nonhistone proteins which are present in small amounts and include regulatory proteins.
chromosomal DNA see **chromosome**.
circular DNA a DNA molecule that is a closed-ring structure, found in mitochondria, and some prokaryote chromosomes, plasmids, and viruses.
closed DNA complexes the first of two kinetically distinct steps required for RNA polymerase to initiate transcription in which the RNA polymerase holoenzyme binds electrostatically to the promoter DNA.
DNA construct a DNA molecule which has been inserted into a cloning vector.
copy DNA (cDNA) see **cDNA**.
DNA deletion see **deletion**.
DNA double helix see double **helix**.
duplex DNA double-stranded DNA. See **deoxyribonucleic acid**.
end labeling DNA methods for labeling DNA with radioisotopes or other detectable marker molecules at the ends using the terminal transferase 3′-labeling or polynucleotide kinase for 5′-labeling.
episomal DNA that present in a cell as extra chromosomal; exemplified by plasmids of prokaryotic cells. See **plasmid**.
eukaryotic DNA see **deoxyribonucleic acid**.
exogenous DNA the DNA that has been introduced into a host by cloning.
DNA fingerprint see **restriction fragment length polymorphism (RFLP)**.
DNA glycosylases enzymes involved in the excision-repair mechanisms for DNA.
heteroduplex DNA duplex DNA with strands from different origins.
DNA gyrase [*ji'rās*] see **gyrase**.
DNA library a collection of cloned DNA molecules from a genome.
DNA ligase [*li'gās*] an enzyme that repairs breaks or nicks in the DNA backbone, for example joining Okazaki fragments during DNA replication; essential in recombinant DNA technology for DNA cloning.
DNA methylome a map of cytosine methylation sites in a cell DNA that has epigenetic effects.
DNA microarray an ordered set of oligonucleotides immobilized on a microscope slide or other solid surface used for the detection of cognate nucleotide sequences such as the pattern of gene expression in a particular cell population by hybridization with fluorescently labeled cDNA prepared from total mRNA isolated from the cells.

VetBooks.ir

VetBooks.ir

mobile DNA a sequence present in the variable locations on the chromosome. Called also jumping genes. See also **retrotransposon** and transposable **genetic** elements.

open DNA complex a local opening of about 10 base pairs formed at the transcription initiation site following the electrostatic binding of RNA polymerase holoenzyme to the promoter region.

DNA polymerase [*pə-lim'ər-ās*] of *Escherichia coli*; has three distinct enzymatic activities: (1) a 5′ to 3′ polymerase activity which, under the direction of a template DNA, catalyzes the addition of mononucleotide units, produced from deoxynucleoside 5′-triphosphates, to the 3′-hydroxyl terminus of a primer chain; (2) a 5′ to 3′ exonuclease active only on duplex DNA; (3) a 3′ to 5′ exonuclease primarily active on single-stranded DNA which can selectively remove mismatched terminal nucleotides, thus carrying out a proofreading function. Additionally it catalyzes both the pyrophosphorolysis of DNA, a reaction which is the reverse of polymerization, and pyrophosphate exchange which represents a repetitive sequence of nucleotide addition and pyrophosphorolysis.

DNA probe see **probe** (2).

DNA repair a series of enzymatic mechanisms whereby errors or damage to one of the two DNA strands are removed by excision and replaced by correct nucleotides using the undamaged strand as template. The mechanisms include removal of lesions of depurination and DNA glycosylases which recognize altered bases.

repeat DNA, repetitive DNA includes (1) satellite DNA and so-called (2) interspersed repeated DNA sequences. The latter are interspread throughout the chromosomes in hundreds of thousands of individual copies, each about 300 nucleotides long; they are, unlike satellite DNA, transcribed.

satellite DNA serially repeated DNA sequences of one or a few nucleotides with a repeat length of up to 250 nucleotides that are not transcribed and commonly located in the heterochromatin associated with the centrometric regions of chromosomes.

selfish DNA a mobile DNA element that appears to have no function except to replicate itself. Part of junk DNA.

DNA sequencing determining the order of nucleotides in DNA from which amino acid in a polypeptide chain can be predicted. Numerous technologies include Maxim-Gilbert, dideoxy, and more recently developed massively parallel systems utilized in proprietary technologies, including 454 and Solexa systems.

single-copy DNA the fraction of DNA that contains most of the protein-coding genes and reassociates most slowly.

single-stranded DNA produced when double-stranded DNA is denatured or found naturally in some viruses.

spacer DNA single-copy DNA sequences separating tandemly repeated genes; do not encode proteins or functional RNA molecules.

supercoiled DNA the double helix is itself twisted.

superhelical DNA a twisted structure formed by circular DNA molecules. See also supercoiled DNA (above).

DNA transcription see **deoxyribonucleic acid**.

DNA translation see **deoxyribonucleic acid**.

unique DNA DNA sequences that occur only once in the haploid genome.

DNA viruses contain a single molecule of DNA that is either double- or single-stranded. Parvoviruses and circoviruses are single-stranded, hepadnaviruses are partially double-stranded and all others are double-stranded. DNA virus families are: *Poxviridae*, *Asfarviridae*,*Herpesviridae*, *Adenoviridae*, *Papillomaviridae*, *Polyomaviridae*, *Parvoviridae*, *Circoviridae*, and *Hepadnaviridae*.

Z-DNA an alternative structural form of DNA which differs from the more commonly occurring B- and related A-form in that the helix is left handed compared with the right hand helixes of B- and A-forms. Z is for zig-zag. The functional significance of Z-DNA is unknown but may be related to strain relief in regions of DNA replication.

DNase *d*eoxyribo*n*uc*lease*. See **deoxyribonuclease**.

DNCB dinitrochlorobenzene.

DNOC dinitro-orthocresol.

DNP 2,4-dinitrophenol.

DOA dead on admission (arrival).

DOB abbreviation for date of birth; used in medical records.

Doberman pinscher, Dobermann a medium-sized (66–88 lb), lean, muscular dog with very short hair that is usually black with brown markings around the face and on the legs, but occasionally has a brown or blue body color. The tail is docked to a short length and where practiced, the normally pendant ears are cropped. The breed is often used for police or guard work. It is subject to cervical spondylomyelopathy (wobbler syndrome), color mutant alopecia, generalized demodecosis, chronic active hepatitis, cardiomyopathy, progressive juvenile nephropathy, von Willebrand disease, and degeneration of the bundle of His.

dancing D. disease a very slowly progressive, painless neuromuscular disease in which affected dogs periodically flex one hindleg when standing. Hindleg weakness and atrophy of the gastrocnemius muscle eventually develops. In some cases both hindlegs are affected with flexion and extension of alternating hindlegs, hence the name.

miniature D. p. see **Miniature pinscher**.

dobutamine [*do-bu'tə-mēn*] a synthetic catecholamine administered parenterally for inotropic support in short-term treatment of cardiac decompensation due to depressed contractility resulting either from organic heart disease or from cardiac surgical procedures.

DOC desoxycorticosterone.

DOCA desoxycortosterone acetate.

dock[1] [*dok*] 1. the amputation of a tail; occasionally required for removal of a diseased or damaged tail. Tail docking is commonly performed in dogs, usually in accordance with breed standards that strictly define length, particularly in the spaniel and terrier breeds. Also occasionally done in some draft and harness horses. In both species, the practice is now being viewed as unnecessary and discouraged by many authorities. An almost universal procedure in lambs, for the avoidance of fly strike and carried out by farmers at marking time. Also, a common husbandry practice in pastoral dairy herds where tails full of sloppy feces are unwelcome industrial hazards to farmhands working in pit type milking parlors, especially on cold mornings. Claimed to reduce the risk for leptospirosis in milkers and to improve udder cleanliness. Amputation is by hot docking iron or by the application of a tight elastic or by the application of a rubber band and is conducted shortly after birth, at weaning or shortly before springing heifers enter the herd. Severe tail docking, the practice of removing the tail close to the point of attachment to the body, used for exhibition purposes in some breeds, increases the risk for rectal prolapse. The practice of docking tails in dairy cattle is banned in many countries. 2. the solid part of a horse's tail. 3. dock, docked; reduction in price received for an animal at sale because of some defect or problem with the animal, e.g. presence of horns.

dock[2] group of plants in the family Polygonaceae. Called also dock sorrel, *Rumex* spp. Includes bladder, pink, red or ruby dock (*R. vesicarius*), clustered dock (*R. conglomeratus*), curled (curly) dock (*R. crispus*), sour dock (*R. acetosa*), swamp dock (*R. brownii*), veined dock (*R. venosus*).

docking protein [*dok'ing*] see **signal** recognition particle (SRP).

docking [*dok'ing*] tail amputation. See **dock**[1].

d. ring see **elastrator**.

docosahexaenoic acid an omega-3 (n-3) fatty acid found in the diet or derived from eicosapentaenoic acid (EPA). Cold water fish oils are an especially rich source. See also omega-3 (n-3) **fatty acids**.

DOCP desoxycorticosterone pivilate.

doctor [*dok'tər*] 1. a practitioner of the healing arts, as one graduated from a college of medicine, osteopathy, dentistry or veterinary medicine and licensed to practice. 2. a holder of a diploma of the highest degree from a university, qualified as a specialist in a particular field of learning.

docusates [*dok'u-sāts*] anionic surfactants used as the calcium, sodium or potassium salts as fecal softeners. See **dioctyl sodium sulfosuccinate**.

dodder see ***Cuscuta***.

doddler calf a congenital defect of the nervous system in Hereford calves produced by the inheritance of an autosomal recessive trait. It is characterized by continuous clonic convulsions, nystagmus and pupillary dilatation, all of which are present at birth. The disease is inevitably lethal.

dodine dodecylguanidine acetate, an agricultural fungicide; causes irritation of skin and mucosae; ingestion causes vomiting and diarrhea.

Dodonaea viscosa a plant in the family Sapindaceae; an unidentified toxin causes liver necrosis in cattle in South America. Called also sticky hopbush.

doe an adult female goat or deer; amongst deer it is especially common usage in the roe, fallow, muntjac and Chinese water deer species. In the larger species the term cow is used.

doenca da sono [Span.] *trypanosomiasis*.

dog [*dog*] 1. a member of the family Canidae of the order Carnivora. Includes the domestic dog, *Canis familiaris*, many wild dogs, foxes, fennecs, jackals and wolves. 2. the term is also used by dog people to mean the entire male dog. There is no other name for him as there is in the other species. See also **canine**.

assistance d. includes guide dogs, hearing dogs and 'service dogs', which are trained to work or perform tasks for the benefit of a person with a disability.

barkless d. see **Basenji**.

d.-catcher a loop of rope at the end of a pole, with the end of the rope at the holding end of the pole. The loop goes over the dog's head and is pulled tight.

domestic d. classified as **hound**, gun **dog**, **terriers**, **nonsporting dog**, **working dogs**, **draft**[1] animals, **toy breeds**. Breeds of dogs are listed below: **Affenpinscher**, **Afghan hound**, **Airedale terrier**, Akita inu, **Alaskan malamute**, **American pit bull terrier**, **American staffordshire terrier**, **American water spaniel**, **Anatolian shepherd dog**, **Appenzeller**, **Australian** cattle dog, **Australian** kelpie, **Australian** silky terrier, **Australian** terrier. **Basenji**, **Basset Fauve de Bretagne**, **Basset hound**, **Beagle**, **Bearded collie**, **Bedlington terrier**, **Belgian shepherd dog** (sheepdog) (Groenendael, Malinois and Tervueren), **Bergamasco**, **Berger de Beauce**, **Bernese mountain dog**, **Bichon frise**, **Black and tan coonhound**, **Bloodhound**, **Bluetick coonhound**, **Bolognese**, **Border collie**, **Border terrier**, **Borzoi**, **Boston terrier**, **Bouvier des Flandres**, **Boxer**, **Boykin spaniel**, **Braco Italiano**, **Briard**, **Brittany spaniel**, **Brussells griffon**, **Bull mastiff**, **Bull terrier**, **Bulldog**, **Bullmastiff**. **Cairn terrier**, **Canaan dog**, **Catahoula**, **Cavalier King Charles spaniel**, **Cesky terrier**, **Chesapeake Bay retriever**, **Chihuahua**, **Chinese crested**, **Chow chow**, **Clumber spaniel**, **Cocker spaniel**, **Collie**, **Coonhound**, **Coton deTtulear**, **Curly coated retriever**. **Dachshund**, **Dalmatian**, **Dandie Dinmont terrier**, **Deerhound**, **Dobermann pinscher**, **Dogue de Bordeaux**, **Dunker**. **Elkhound**, **English setter**, **English springer spaniel**, **English toy terrier**, **Eskimo dog**, **Estrela mountain dog**. **Field spaniel**, **Finnish lapphund**, **Finnish spitz**, **Flat coated retriever**, **Fox terrier**, **Foxhound**, **French bulldog**. **German pinscher**, **German shepherd dog**, **German shorthaired pointer**, **German spitz**, **German wirehaired pointer**, **Glen of Imaal terrier**, **Golden retriever**, **Gordon setter**, **Grand Basset Griffon Bendeen**, **Grand Bleu de Gascoigne**, **Great dane**, **Great Pyrenees**, **Greater Swiss mountain dog**, **Greyhound**, **Griffon Bruxellois**. **Hamiltonstovare**, **Harrier**, **Hovawart**, **Ibizan hound**, **Irish setter**, **Irish terrier**, **Irish water spaniel**, **Irish wolfhound**, **Italian greyhound**, **Jack Russell terrier**, **Japanese chin**, **Japanese spitz**. **Karelian bear dog**, **Keeshond**, **Kerry blue terrier**, **King Charles spaniel**, **Komondor**, **Kooikerhondje**, **Kuvasz**, **Labrador retriever**, **Lakeland terrier**, **Lancashire heeler**, **Large Munsterlander**, **Leonberger**, **Lhasa apso**, **Lowchen**, **Lundehund**, **Maltese**, **Manchester terrier**, **Maremma sheepdog**, **Mastiff**, **Mexican** hairless, **Miniature pinscher**. **Neopolitan mastiff**, **Newfoundland**, **Nippon inu**, **Norfolk terrier**, **Norwegian** buhund, **Norwegian** elkhound, **Norwich terrier**, **Nova Scotia duck tolling retriever**, **Old English sheepdog**, **Otter hound**, **Papillon**, **Parson Russell terrier**, **Pekingese**, **Petit Basset Griffon Veneen**, **Pharaoh hound**, **Plott**, **Pointer**, **Polish lowland sheepdog**, **Pomeranian**, **Poodle**, **Portugese water dog**, **Pug**, **Puli**. **Redbone coonhound**, **Rhodesian ridgeback**, **Rottweiler**, **Saint Bernard**, **Saluki**, **Samoyed**, **Schipperke**, **Schnauzer**, **Scottish deerhound**, **Scottish terrier**, **Sealyham terrier**, **Segugio Italiano**, **Shar pei**, **Shetland sheepdog**, **Shiba Inu**, **Shih tzu**, **Siberian husky**, **Skye terrier**, **Sloughi**, **Soft coated wheaten terrier**, **spinoni italiani**, **Staffordshire bull terrier**, **Stumpy-tail cattle dog**, **Sussex spaniel**, **Swedish lapland dog**, **Swedish vallhund**. **Tibetan mastiff**, **Tibetan spaniel**, **Tibetan terrier**, **Treeing Walker coonhound**, **Vizsla**, **Walker hound**, **Weimaraner**, **Welsh corgi**, **Welsh springer spaniel**, **Welsh terrier**, **West Highland white terrier**, **Whippet**, **Wirehaired pointing griffon**, **Yorkshire terrier**.

d. erythrocyte antigen (DEA) see dog erythrocyte **antigen**.

guide d. one trained as an aid to the mobility of a visually impaired person. Guide dogs do not 'take' their owners to specific destinations, but respond to commands given for directions. They are of particular value in avoidance of obstacles, both on the ground and overhead. Many breeds have been used for this purpose, but German shepherd dogs and Labrador retrievers are the most common. Called also seeing-eye dogs.

D-34: Dog-sitting posture in a piglet due to painful arthritis.

gun d. one of the group of domestic dogs developed for use in hunting fowl. The dogs work with the hunter by detecting the scent of birds on the ground, then indicating their location (setters, pointers) or flushing them from the undergrowth, or by retrieving the fallen bird (retrievers). Called also sporting dogs.

hearing d. one trained to respond to certain sounds such as a telephone bell or door knocker and to alert a person with impaired hearing.

d. kennel a small box-like unit for housing a single dog, or an establishment that boards dogs, or breeds them or maintains a colony, e.g. a pack of hounds, or a stable of Greyhounds.

d. leukocyte antigen (DLA) complex the major **histocompatibility** complex in dogs.

d. murrain chronic selenium poisoning in pastured ruminants. An Irish expression.

d. pox a papular balanoposthitis and vaginitis described in young dogs; a viral etiology is suspected, but has never been confirmed.

seeing-eye d. see guide dog (above).

wild d. includes dingo, Siberian wild dog, the South American bush dog, the maned wolf, Cordillera fox, crab-eating fox, Azara's fox. See also **fox**, **jackal**, **wolf**.

dog-ear a defect in skin created when an elliptical surgical incision is too short or one side is longer than the other.

dog-sitting posture sitting on the haunches like a dog. When cattle or horses sit for long periods on their haunches with the foreparts of their body off the ground and their forelimbs extended like a dog, and if there is difficulty in rising, there may be a musculoskeletal problem in the area of the pelvis and caudal vertebral column. This dog-sitting posture adopted for short periods by horses and associated with other signs indicative of abdominal pain is usually associated with impaction of the large bowel and pressure on the diaphragm.

dogbane [*dog'bān*] see ***Apocynum** cannabinum*.

spreading d. *Apocynum androsaemifolium*.

Dogue de Bordeaux a French breed of dogs, resembling the Bull mastiff. The head is massive with a short nose; the coat is short and dark auburn or fawn in color. Called also French mastiff.

Döhle body [*dur'lə*] bluish cytoplasmic inclusion of neutrophils made up of retained aggregates of rough endoplasmic reticulum. It is evidence of mild toxic change in the neutrophil.

dol [*dōl*] a unit of pain intensity.

dola see ***Ligularia amplexicaulis***.

dolasetron [*do-las'ə-tron*] a 5-HT_3 antagonist used as an antiemetic, particularly in association with cancer chemotherapy.

Dole pony a small Norwegian horse, 14.2 to 15.2 hands high, most of which are black or brown. Called also Dole-Gudsbrandsdal.

D. p. trotter a pony related to Dole pony but lighter in weight and used for harness racing.

dolich(o)- word element. [Gr.] *long*.

dolichocephalic [*dol"ĭ-ko-sə-fal'ik*] having a narrow, long head. Characteristic of some dog breeds, e.g. Collie, Borzoi, Greyhound.

dolichofacial [*dol"ĭ-ko-fa'shəl*] having a long face.

dolichol [*dol'ĭ-kol*] long chain lipid molecules consisting of varying numbers of isoprene units and containing an alcohol group. Links oligosaccharide to asparagine residues in proteins via a pyrophosphate bridge; an example of protein glycosylation.

dolichopellic [*dol"ĭ-ko-pel'ik*] having a long pelvis from front to back.

VetBooks.ir

VetBooks.ir

dolicomorphic [*dol"ĭ-ko-mor'fik*] having a long, thin, asthenic body type.

dollar spots subcutaneous plaques characteristic of the second stage of dourine caused by *Trypanosoma equiperdum*. See **dourine**.

doll's eye the fixation of the eye in midorbit, unresponsive to vestibular stimulation. Seen in brainstem injury due to damage to the medial longitudinal fasciculus.

d. e. reflex symmetrical deviation of the eyes when the head is moved in different positions, always returning to center. Abnormalities are caused by lesions of the inner ear or brainstem, especially the pons and midbrain. Called also oculocephalic reflex, oculovestibulocephalic reflex, doll's head reflex.

doll's eyes see ***Actaea spicata***.

doll's head reflex see **doll's eye** reflex.

dolomite a limestone with a high concentration of magnesium. Used as a mineral supplement for animals. Called also dolomitic limestone.

dolophine [*do'lo-fēn*] see **methadone**.

dolor [*do'lor*] [L.] *pain;* one of the cardinal signs of inflammation.

dolorific [*do"lor-if'ik*] producing pain.

dolorimeter [*do"lor-im'ə-tər*] an instrument for measuring pain in dols.

dolphin a member of the suborder Odonotoceti of the order Cetacea and closely related to whales and porpoises; includes the Amazon and Ganges freshwater dolphins, the common dolphins (*Delphinus* spp.), bottlenose dolphins (*Tursiops truncatus*), and the Arctic dolphin, more commonly called the beluga whale.

domain [*do-mān'*] 1. region of a protein with a characteristic tertiary structure and function; homologous domains may occur on different proteins. 2. regions of the heavy chain of immunoglobulins. See **C_H domain**, **C_L domain**.

transmembrane d. for any membrane-bound protein or glycoprotein, those amino acid sequences that traverse and are present in the cell membrane. In receptor biology, transmembrane domains are distinguished from the extracellular ligand binding domains, cytoplasmic domains, and from immunological domains.

domed forehead bulging of the forehead; in the newborn it is usually indicative of congenital hydrocephalus or of achondroplastic disease as in dwarfism. A domed forehead is also a sign of prematurity in foals. See also **meningocele**.

domestic pertaining to an environment managed by humans.

d. animals animals accustomed to living in a domestic environment.

d. cat often used to describe mongrel or crossbred cats, either shorthaired or longhaired.

domiciliary [*dom"ĭ-sil'e-ar"e*] pertaining to a household.

d. calls professional veterinary calls made to patients at their owners' residences. Called also house calls.

d. practice the practitioner does not possess a fixed professional premises but makes all of his/her calls at the owners' houses.

D-35: Domed forehead of a premature foal.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

D-36: Don horse.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

dominance [*dom'ĭ-nəns*] 1. the supremacy, or superior manifestation, in a specific situation of one of two or more competitive or mutually antagonistic factors or animals. 2. in genetics, alleles which fully express their phenotype when present in the heterozygous state.

d. aggression behavior by an animal that asserts its dominance over another or a human, such as competing for food, resisting control measures, or assuming dominant postures.

d. deviation a deviation from gene additive action due to dominance.

incomplete d. when a heterozygote displays the effects of two alleles at the same location; the alleles are said to be incompletely dominant or co-dominant.

location dependent d. behavior in which an animal is dominant when in its home territory, but it becomes subordinate outside that territory.

d. relationship probability of relatives having the same genotype.

dominant [*dom'ĭ-nənt*] 1. exerting a ruling or controlling influence; in genetics, capable of expression when carried by only one of a pair of homologous chromosomes. 2. a dominant allele or trait. If a defect, appearance in all heterozygotes and homozygotes tends toward the trait being self-limiting because of culling or death. See also **gene**, **dominance**.

d. X-linked inheritance see **X-linked**.

domination the relationship between animals and humans in which little consideration is given to the rights of the animals. The prevailing sentiment is one of proprietary domination.

domino effect a complication of cervical disk surgery in which compressive lesions develop at the next interspace.

domperidone [*dom-per'ĭ-dōn*] a dopamine antagonist used as an antiemetic and an appetite stimulant.

DON see **deoxynivalenol**.

Don horse golden chestnut Russian light horse.

Donati vertical mattress suture a variation on the vertical mattress suture pattern in which the suture material penetrates the skin on only one side. On the other side it is intracutaneous.

donkey a member of the family Equidae, *Equus africanus asinus* or *Equus asinus*, descended from the wild ass of which there are still many varieties. Characteristically gray to sable in color, short of stature, long, floppy-eared and with a bray as a call instead of a whinny. Many have a dorsal and shoulder stripes. The male participates in the development of the mule and the female in the production of the hinny. Males are jacks, females are jennies. Called also ass, burro.

d. foot an upright, narrow foot with a small sole area and usually a poorly developed frog. Works well on a donkey but in a horse expected to do fast, hard work it causes chronic mild lameness. All four feet are affected.

D-37: Donkey.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

Donnan's equilibrium [don'ən] the state of equilibrium that exists at a semipermeable membrane when it separates two solutions containing electrolytes, the ions of some of which are able to permeate the membrane and the others not. The distribution of the ions in the two solutions becomes complicated so that an electrical potential develops between the two sides of the membrane and the two solutions have different osmotic pressures. Called also Gibbs–Donnan phenomenon.

donor [do'nər] 1. an organism that supplies living tissue to be used in another body, as an animal which furnishes blood for transfusion, or an organ for transplantation. 2. a substance or compound that contributes part of itself to another substance (acceptor).

dont- prefix meaning teeth.

doolan see ***Acacia salicina***.

dopa [do'pə] L-3,4-dihydroxyphenylalanine. Key intermediate in two pathways; the production of melanins from tyrosine catalyzed by the copper-containing enzyme, tyrosinase, to produce dopa, or the biosynthesis of catecholamines catalyzed by the action of tyrosine. It is used in manganese poisoning. Precursor of dopamine able to cross the blood-brain barrier. Called also L-dopa and levodopa.

dopamine [do'pə-mēn] a compound, hydroxytyramine, produced by the decarboxylation of dopa; an intermediate product in the synthesis of norepinephrine. It is a neurotransmitter in the central nervous system; administered intravenously to correct hemodynamic imbalance in shock syndrome.

d. agonist used to terminate pregnancy or eliminate undesirable lactation. See **bromocriptine**, **cabergoline**, **pergolide**.

d. β-hydroxylase enzyme catalyzing the synthesis of norepinephrine from dopamine. A copper-containing mono-oxygenase requiring vitamin C (ascorbic acid).

dopaminergic [do"pə-mēn-ur'jik] activated or transmitted by dopamine; pertaining to tissues or organs affected by dopamine.

dopexamine a β-$_2$-andrenergic receptor agonist with positive inotropic effects.

doping [do'ping] the illicit administration of drugs or other agents to racing animals with the intention of altering their physical performance, either adversely or positively. Called also sting.

doppellender, doppellendigkeit [dop'əl-en"dər] [Ger.] see **myofiber** hyperplasia.

Doppler [dop'lər] named after Christian Doppler (1803–1853), an Austrian physicist and mathematician.

duplex D. imaging see **Doppler ultrasound**.

D. effect the relationship of the apparent frequency of waves, as of sound, light and radio waves, to the relative motion of the source of the waves and the observer, the frequency increasing as the two approach each other and decreasing as they move apart. The Doppler effect can be experienced when a train whistle or automobile horn produces a continuous sound as it approaches and passes a listener. The pitch of the sound suddenly falls as the source passes the listener.

D. shift the change in frequency that occurs when high frequency sound waves are reflected from a moving surface; the basis for **Doppler ultrasound**.

Doppler ultrasound [dop'lər] that in which measurement and a visual record are made of the shift in frequency of a continuous ultrasonic wave proportional to the blood-flow velocity in underlying vessels; used in diagnosis of extracranial occlusive vascular disease. It is also used in detection of the fetal heartbeat or of the velocity of movement of a structure, such as the beating heart.

color flow D. u. a form of pulse wave Doppler in which the energy of the returning echoes is displayed as an assigned color; by convention echoes representing flow towards the transducer are seen as shades of red, and those representing flow away from the transducer are seen as shades of blue. The color display is usually superimposed on the B-mode image, thus allowing simultaneous visualization of anatomy and flow dynamics.

continuous wave D. u. a technique in which the transducer emits and receives the ultrasound beam continuously, enabling the measurement of high velocity blood flow, such as occurs through heart valve stenoses.

duplex D. u. a form of image display in which both spectral and color flow images are seen simultaneously. This facilitates accurate anatomical location of the blood flow under investigation.

D. u. flowmeter a device for measuring blood flow that transmits sound at a frequency of several megahertz downstream along the flowing blood. Some of the sound waves are reflected by the moving red blood cells back toward the transducer. The difference in pitch between the transmitted and reflected sounds is produced as an audible tone and is proportional to the velocity of blood flow. The flowmeter can be incorporated into a stethoscope so that qualitative and quantitative measurements of the flow of blood through arteries and veins can be obtained. The Doppler flowmeter is capable of recording very rapid pulsatile changes in flow as well as steady flow.

power D. u. a form of puse wave Doppler in which the integral of the power spectrum is estimated and color coded. The colors indicate that blood flow or other motion is present but display no information of flow direction or velocity. The color display is usually superimposed on the B-mode image, thus allowing simultaneous visualization of anatomy and the flow dynamics.

pulse wave D. u. a technique in which the transducer emits ultrasound in pulses. Blood flow velocities so measured are limited to around the physiologic range (up to approximately 1.5 meters/second) but the depth from which the returning echoes originate can be accurately determined.

spectral D. u. a form of ultrasound image display in which the spectrum of flow velocities is represented graphically on the Y-axis and time on the X-axis; both pulse wave and continuous wave Doppler are displayed in this way.

doramectin a macrocyclic lactone parasiticide; one of the avermectins used as an antiparasitic agent in agricultural animals. It has also been used to treat generalized demodecosis in dogs.

Dormer South African dual-purpose sheep with fleece of 22–24 micron fiber diameter. Produced by crossing Merino and Dorset Horn breeds.

dormitory effect the apparent influence on promoting estrus in queens when they are housed with others who are cycling.

dormouse small, arboreal rodent with a furred tail in the family Gliridae with characteristics of both mice and squirrels. They are often heavily parasitized by ticks and are important reservoirs for the spirochete that causes Lyme disease.

dornase [dor'nāz] a shortened term for *deoxyribonuclease*; also a word termination, as in strepto*dornase*.

Doronicum hungaricum European plant in the family Asteraceae; contains an unidentified toxin which causes paralysis and convulsions. Called also wild sunflower.

Dorper South African meat sheep bred by crossing **Blackhead Persian** with **Dorset horn** sheep; white with black head, black feet, and a hairy, carpetwool fleece.

dorsad [dor'sad] toward the back.

dorsal [dor'səl] directed toward or situated on the back surface, the surface facing away from the ground; opposite the ventral.

dorsalgia [dor-sal'jə] pain in the back.

dorsalis [dor-sa'lis] [L.] *dorsal*.

Dorset short white wool, meat sheep, with large, curled horns; widely used as fat lamb sire. Wool is medium-fine at 27 microns. There are horned and polled varieties.

Dorset Down English short wool, meat sheep, polled, with brown face and legs.

dorsiflexion [dor"si-flek'shən] backward flexion or bending, as of the neck.

dors(o)- word element. [L.] *the back, the dorsal aspect*.

dorsocephalad [dor"so-sef'ə-lad] toward the back of the head.

dorsolateral [dor"so-lat'ər-əl] pertaining to the back and side.

d. tract a group of nerve fibers in the lateral funiculus of the spinal cord that cap the dorsal column.

dorsopalmar [dor"so-pal'mər] the passage of an X-ray beam from the dorsal aspect of the forelimb to the palmar aspect. Its use is limited to the carpus and below.

dorsoplantar [dor"so-plan'tər] passage of an X-ray beam from the dorsal aspect of the hindlimb to the plantar aspect. Its use is limited to the hock and below.

dorsoventral [dor"so-ven'trəl] 1. pertaining to the back and belly surfaces of a body. 2. passing from the back to the belly surface.

d. view in radiology, passage of the X-ray beam from the dorsum of the animal to the ventral side of the body.

dorsum [dor'səm] pl. *dorsa* [L.] 1. the back; the superior surface of a body or body part, as of the paw or foot. 2. the aspect of an anatomical structure or part corresponding in position to the back; posterior in the human.

VetBooks.ir

dorzolamide [*dor-zo'lə-mīd*] a topical carbonic anhydrase inhibitor used in the treatment of glaucoma.

dosage [*do'səj*] 1. in pharmaceutical terms is the determination and regulation of the size, frequency and number of doses. 2. genetically speaking refers to the amount of gene product in each cell.
d. compensation compensation by random X-inactivation, of the dosage of gene material in the cells of males and females carrying X-linked genes.

dose [*dōs*] the quantity to be administered at one time, as a specified amount of medication or a given quantity of radiation.
absorbed d. that amount of energy from ionizing radiations absorbed per unit mass of matter, expressed in Grays.
air d. the intensity of an X- or gamma-ray beam in air, expressed in coulombs per kilogram.
booster d. an amount of immunogen (vaccine, toxoid or other antigen preparation), sometimes smaller than the original amount, injected at an appropriate interval after primary immunization to enhance and sustain the immune response to that immunogen.
curative d. (CD) a dose that is sufficient to restore normal health.
divided d. a fraction of the total quantity of a drug prescribed to be given at intervals, usually during a 24-hour period.
d. equivalent limits the limits of ionizing radiation set for radiation workers and the general public by the International Commission on Radiological Protection. For radiology workers this limit for the whole body is 50 mSv. However, the recommendation for radiation workers in the veterinary profession by the Australian Radiation Protection and Nuclear Safety Agency, Code of Practice, Radiation Protection in Veterinary Medicine, 2009 is 20 mSv per year, averaged over 5 years.
fatal d. lethal dose.
d. fractions in radiation therapy, the small doses given to reach the total radiation dose during the treatment period.
infectious d. 50 (ID_{50}) that amount of pathogenic microorganisms that can be exptected to produce infection in 50% of the test subjects. Called also the median infectious dose.
infective d. (ID) that amount of pathogenic microorganisms that will cause infection in susceptible subjects.
lethal d. (LD) the amount of toxin or drug that will kill an animal.
d. level the amount administered per unit of body weight.
loading d. the initial large dose of a drug given to bring tissue and fluid concentrations to an effective concentration quickly. Called also priming dose.
maintenance d. the smaller doses given to maintain effective concentrations in body fluids and tissues after the loading dose has achieved the concentration desired.
maximum permissible d. see dose equivalent limits (above).
median curative d. (CD_{50}) a dose that abolishes signs in 50% of test animals.
median effective d. (MED) the dose that produces the desired effect in 50% of the test animals.
median lethal d. (MD_{50}) the quantity of an agent that will kill 50% of the test subjects; in radiology, the amount of radiation that will kill, within a specified period, 50% of individuals in a large group or population.
minimum lethal d. (MLD) the lowest dose which kills all of the test subjects.
d. rate the amount administered per unit of time.
d. response 1. the incremental change in the subject per unit of additional dose. The response as a function of the dose. 2. the frequency of occurrence of a disease as the intake of the suspected risk factor increases. The relationship is expressed by the proximity of the illustrative curve to the expected relationship.
skin d. 1. the air dose of radiation at the skin surface, comprising the primary radiation plus backscatter. 2. the absorbed dose in the skin.
tolerance d. the largest quantity of an agent that may be administered without harm.

dose-related see **dose** response.

dosimeter [*do-sim'ə-tər*] an instrument used to detect and measure exposure to radiation.
d. badge see **film** badge.

dosimetry [*do-sim'ə-tre*] scientific determination of amount, rate and distribution of radiation emitted from a source of ionizing radiation.

dosing injuries [*do'sing*] injuries inflicted on patients with dosing equipment. Includes buccal and pharyngeal injuries with balling guns, dosing syringes, drenching guns, esophageal and nasal tubes, gags and specula.

double-blind study [*dub'əl blīnd*] a study of the effects of a specific agent in which neither the administrator nor the recipient, at the time of administration, knows whether the active or an inert substance is given.

double gee see ***Emex australis*** .

double scalp palpable thinning of the cranial bones in young sheep on inadequate diet. Called also cappie.

double-seeded emu bush see ***Gyrostemon tepperi***.

douche [*doosh*] [Fr.] a stream of water or air directed against a part of the body or into a cavity.
air d. a current of air blown into a cavity, particularly into the tympanum to open the eustachian tube.
vaginal d. irrigation of the vagina to cleanse the area, to apply medicated solutions to the vaginal mucosa and the cervix.

dough stage a stage in the maturation of a cereal crop when the seeds are soft and immature but fully formed. This is the optimum time to convert the crop into hay or ensilage.

dourine [*doo-rēn'*] a sexually transmitted trypanosomiasis of horses, donkeys and mules and endemic in parts of Africa and Asia, including Russia, caused by *Trypanosoma equiperdum*, characterized primarily by inflammation of the external genitalia, but with progressive infection, edema of the ventral abdominal wall, muscle weakness, incoordination and paralysis. Severe loss of condition may be followed by emaciation to the point where euthanasia is necessary. Urticaria-like plaques called silver dollar spots occur on the skin in some forms of the disease. A disease notifiable to the OIE (see Table 22).

douroucouli see owl **monkey**.

dove a bird which together with the pigeon forms the large bird family Columbidae. There appears not to be a clearcut distinction between the two groups and some types have alternative names, one of them a pigeon, the other one a dove. They vary in color, but mostly within the range of gray, through cream and light brown to a deep beige, sometimes with markings. The legs are clean of feathers.

dowel [*dou'əl*] a slim cylinder of bone consisting of two plates of cortical bone separated by an internal sandwich of cancellous bone. Used for fusing bones or reconstructing large bones.

down feather [*doun*] small feathers whose barbs do not unite to form a closed vane, thus giving it a fluffy appearance.

down regulation [*doun"reg-u-la'shən*] means of controlling hormone action where the number of hormone receptors at the cell surface is decreased by internalization of the receptor complex.

down staging the use of chemotherapy or radiation therapy prior to surgery to reduce the pathological stage of a neoplasm. See also **staging** (2).

downer a non-ambulatory animal, one not able to stand, which may result from a variety of causes including broken limb bones, neurological diseases, muscular disease or terminal systemic disease. The term is particularly used for animals that are presented for slaughter. Historically, these animals have been accepted or rejected for slaughter subject to pre-slaughter veterinary examination to determine cause and acceptability. Currently, in many countries it is now illegal for downer animals to be bought, sold, transported or slaughtered for human consumption. This is, in part, because of risk for human exposure to bovine spongiform encephalopathy in downer cattle. However, with all animal species, a major public concern is one of animal welfare, because the facilities in abattoirs, or in some cases the culture, is inadequate to handle these animals in a humane fashion.

downer cow syndrome a commonly fatal condition of dairy cows closely associated with the unsuccessful treatment of cases of hypocalcemic parturient paresis and manifest with inability to rise from sternal or lateral recumbency. At postmortem examination there is a variety of contributing lesions including especially ischemic necrosis of the muscles of the thigh, damage to major nerves to the hindlimb, traumatic separation of muscles and tendons, hip dislocation and hepatic and myocardial degeneration.
prepartum d.c.s. preparturient cows that become recumbent and are unable to rise. Occurs occasionally in beef and dairy cows; associated with hypocalcemia, severe prepartum weight loss and ketosis in beef cattle, and hydrallantois in both cattle types.

downhill vagina the cranial vagina is lower than the vestibule so that drainage is inadequate; results in urine pooling, urovagina, urine pooling and urometra.

Downs sheep a group of breeds of British shortwool or mutton breeds of sheep with colored faces. All are polled and have some Southdown blood. Includes Dorset Down, Hampshire, Oxford Down, Shropshire, Southdown, Suffolk.

downstream [doun'strēm] a term used in molecular biology to describe nucleotides of a nucleic acid molecule which lie in the 3′ direction from a particular reference point, such as the site of initiation of transcription. See also **upstream**.

doxacurium [dok"sə-ku're-əm] a long-acting, nondepolarizing muscle relaxant.

doxapram [dok'sə-pram] a respiratory stimulant which acts upon peripheral chemoreceptors; it has been used to reverse sedation induced by xylazine, although the antagonism is not specific.

doxepin [dok'sə-pin] a tricyclic antidepressant and potent histamine H_1-receptor blocker, similar to amitriptyline, used in the treatment of pruritus in dogs and cats.

doxorubicin [dok"so-roo'bĭ-sin] an antineoplastic antibiotic obtained from *Streptomyces* spp., which binds to DNA and inhibits synthesis of nucleic acids and cell division. Commonly used chemotherapeutic agent in veterinary medicine. The side-effects include bone marrow depression, alopecia and cardiac toxicity. See also anthracycline **antibiotic**.

doxycycline [dok"se-si'klēn] a second-generation, lipid-soluble tetracycline derivative with greater activity against anaerobes and intracellular bacteria, and a longer half-life. Used as the monohydrate.

doxylamine [dok-sil'ə-mēn] an antihistamine used in the treatment of allergic reactions and laminitis in cattle and horses.

Doyen forceps [dwah-yah'] lightly compressive, long-bladed, curved forceps with rachet handle designed for intestinal compression. The blade faces are lightly grooved along their length. Called also Gillman forceps.

Doyle's disease see **Newcastle disease**.

DP designated person.

DPG diphosphoglycerate.

DPN diphosphopyridine nucleotide.

Dr. Doctor.

dr dram.

Dr. Larson's teat tube a plastic, self-retaining tube with a blunt end and side holes which acts as a permanent drain for the quarter. It has a screw-on cap so that the drainage can be arrested. Good for retaining patency after teat surgery.

Drabkin's solution a solution containing potassium ferricyanide and potassium cyanide; used in a technique for hemoglobin estimation.

drachm archaic spelling for dram.

dracunculiasis, dracunculosis [drə-kung"ku-li'ə-sis, drə-kung"ku-lo'sis] infection and infestation by nematodes of the genus *Dracunculus*.

Dracunculus [drə-kung'ku-ləs] a genus of spiruroid nematode parasites in the family Dracunculidae. Includes *D. alii*, *D. dahomensis*, *D. globocephalus*, *D. lutrae* (in otter), *D. ophidensis* (all in reptiles), *D. fuelleborni* (in opossum).

D. insignis a spiruroid nematode infesting dogs and wild carnivores. Causes cutaneous lesions and ulcers, sometimes internal lesions, e.g. in heart and vertebral column. Called also dragon, fiery dragon or guinea worm.

D. medinensis a thread-like worm widely distributed in North America, Africa, the Near East, East Indies and India; frequently found in the subcutaneous and intermuscular tissues of humans and also in dogs, sometimes horses and cattle. Causes cutaneous nodules and subsequently ulcers.

draft[1] a potion or dose.

draft[2] 1. the hauling of vehicles, implements and other loads. 2. separation of a group of animals into different classifications, e.g. those for sale and those to be kept for breeding. Commonly a procedure performed in a drafting race or chute, and through a drafting gate.

d. animals includes dogs, horses and other Equidae, oxen, reindeer, yak, elephant, water buffalo.

draft horses see **draft**[2] animals.

Dräger vaporizer a precision vaporizer; is temperature compensating and calibrated to deliver precise concentrations of halogenated gas anesthetics.

North American D. v. a mechanical ventilator which operates as a flow generator and controller.

dragon see ***Dracunculus*** *insignis*.

drain [drān] 1. to withdraw liquid gradually. 2. any device by which a channel or open area may be established for exit of fluids or purulent material from a cavity wound, or infected area.

active d. continuous or intermittent suction is used for greater efficiency in fluid removal.

cigarette d. a drain made by drawing a small strip of gauze or surgical sponge into a tube of gutta-percha or rubber.

passive d. relies on gravity and must be placed in a dependent position.

Penrose d. a thin tube of latex rubber; secretions drain around, not through this tube.

sump d. a drainage system in which a small air tube is located inside the lumen or wall of a larger tube that drains fluid from a cavity.

underwater d. the external opening of the drainage tube is immersed in a sealed container of water; used for drains from the pleural cavity to collect drainage yet maintain a mild negative pressure.

drainage [drān'aj] systematic withdrawal of fluids and discharges from a wound, sore or cavity.

d. angle **iridocorneal** angle.

capillary d. that effected by strands of hair, catgut, spun glass, or other material of small caliber which acts by capillary attraction.

closed d. drainage of an empyema cavity carried out with protection against the entrance of outside air into the pleural cavity.

open d. drainage of an empyema cavity through an opening in the chest wall into which one or more rubber drainage tubes are inserted, the opening not being sealed against the entrance of outside air.

peritoneal d. drainage of the peritoneum; limited by the rapid formation of adhesions and can only be accomplished with lavage or through an open cavity.

suction d. a source of continuous or intermittent negative pressure is used to maintain drainage in various sites, particularly negative pressure in the pleural cavity. A syringe and valve, one-way valve, vacuum tube or underwater drain can be used for this purpose.

d. systems see **drain**.

tidal d. drainage of the urinary bladder by an apparatus that alternately fills the bladder to a predetermined pressure and empties it by a combination of siphonage and gravity flow.

d. tubes see **drain**.

Draize test used by pharmaceutical and chemical companies to test the acute toxicity of products in the eyes of animals, usually albino rabbits. Now abandoned as the result of active opposition by a number of individuals and animal welfare organizations.

drake [drāk] 1. male duck. 2. ***Lolium*** *temulentum*.

Drakensberger a black breed of cattle used for meat and dairying, produced in South Africa. Called also Black Africander.

dram [dram] a unit of weight in the avoirdupois (27.344 grains, 1/16 ounce) or apothecaries' (60 grains, 1/8 ounce) system; symbol.

fluid d. a unit of liquid measure of the apothecaries' system, containing 60 minims, and equivalent to 3.697 mL. See also Table 2.3. Abbreviated fl. dr.

drape the cloth used to cover the animal for surgery leaving exposed only that part of the body that has been aseptically prepared and is actually required for the surgical procedure. Applying the drapes is called draping.

draping [drāp'ing] covering the animal with sterile drapes for surgery leaving exposed only that part of the body that has been aseptically prepared and is actually required for the surgical procedure.

Draschia [drā'she-ə] a genus of the worm family of Habronematidae. Includes *D. megastoma* (syn. *Habronema megastoma*) found in often large intramural nodules in the stomach wall of horses.

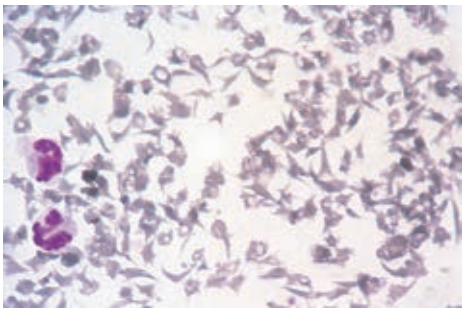
drastics [dras'tik] a term used to describe highly irritant laxatives.

drawer sign see **anterior** (cranial) drawer sign.

anterior (cranial) d. s. cranial, nonrotary movement of the proximal tibia in relation to the distal femur. Normally restricted by the cranial (anterior) cruciate ligament and used as a diagnostic test for rupture of that structure.

posterior (caudal) d. s. instability of the stifle joint with caudal movement of the proximal tibia in relation to the distal femur; normally restricted by the intact posterior (caudal) cruciate ligament. This movement is used as a test in the diagnosis of rupture of the ligament in the dog.

VetBooks.ir



D-38: Sickle cells (drepanocytes) in normal deer blood.
From Hendrix CM, Sirois M, Laboratory Procedures for Veterinary Technicians, 5th Edition. Mosby, 2007.

VetBooks.ir

D

drawing knife see hoof **knife**.

Drechslera [*dreks'lə-rə*] genus of fungi; includes *D. biseptata*, *D. campanulata*, *D. rostrata*, *D. spicifera*. Most are now classified as *Bipolaris* spp.

D. rostrata a fungus isolated from nasal cavities of cattle affected by **enzootic** nasal granuloma. Now called *Exserohilum rostratum*.

D. spicifera an obsolete name for *Bipolaris spicifera*. The imperfect state of *Cochliobolus spicifera*. Associated with phaeohyphomycosis in animals.

drench [*drench*] 1. to give medicines in liquid form by mouth and forcing the animal to drink. See also **drenching**. 2. medicines given as a drench.

saline d. an orally administered preparation of electrolytes in water used in racehorses but more particularly in endurance and event horses in which heavy electrolyte losses in sweat are likely. A variety of formulations is used but all contain sodium, potassium, calcium and magnesium ions; some also contain glucose.

drenching farmer's term for the administration of medicines as solutions or suspensions in water by mouth with a drench bottle, gun or funnel.

d. bit to be included in a bridle as a bit. Has a hollow tube instead of a solid bit, with perforations, and an inlet to which a funnel is fitted. The drench material is poured into the funnel and exits into the mouth.

d. gun injury laceration of the oral mucosa or fauces or pharynx with the nozzle of the gun, due usually to over-vigorous attempts to use the gun as a device to open the jaws or over-vigorous insertion.

drepanocyte [*drep'ə-no-sīt*] a sickle cell; occur commonly in the preparation of normal deer blood.

drepanocytosis [*drep"ə-no-si-to'sis*] occurrence of drepanocytes (sickle cells) in the blood.

dressage the dressing of a riding horse as distinct from the training of a racing horse. The term has come to include formal training and competition in a standard arena and with standard furniture for jumps and a standard layout for the course to be followed. The formal training comprises a complex series of exercises in deportment for the horse and rider. They require great precision in execution so that the quintessence of the training is the lightness of the commands and controls and the degree to which the horse and rider are collected in their movements.

dressed seed corn cereal grain intended for seed and treated with antifungal agents; it is often fed to livestock when it is not needed for seed and may cause poisoning. See **seed** dressing.

dressed weight weight of a carcass of an animal being prepared for use as meat; the head, lower limbs, skin (with the exception of poultry which have, however, been defeathered) and viscera (except kidney) have been removed.

dressing [*dres'ing*] 1. any of various materials used for covering and protecting a wound. A pressure dressing is used for maintaining constant pressure, as in the control of bleeding. A protective dressing is applied to shield a part from injury or from septic infection. 2. of a carcass of meat see **carcass** dressing.

biological d. skin grafts.

butterfly d. an adhesive dressing used to hold wound edges together.

dry d. support and pressure bandages not applied to moist wounds.

line d. (2) a system of handling carcasses in an abattoir. The carcasses move along an overhead chain line past a series of stations where the dressing and meat inspection is done.

occlusive d. 1. a surgical dressing applied to close off an aperture, e.g. a trephine opening into a maxillary sinus. 2. a dressing used on the skin that retains moisture and heat while increasing the concentration and absorption of medication being applied.

on-the-rail d. (2) abattoir dressing of carcasses while they are still suspended from an overhead monorail and workers are stationed at key points along the chain.

d. percentage (2) see **carcass** yield.

wet d. soaking of a bulky dressing to aid in cleansing, drainage and débridement of a wound. May be applied intermittently or continuously.

dressing-out percentage see **carcass** yield.

Drever a short-legged hunting breed of dogs from Sweden with characteristics of the Dachshund and the Beagle. Used for deer hunting in Sweden and Norway.

DRG see **dorsal** respiratory group.

dribblers steers in feedlots with incomplete urethral obstruction by urinary calculi so that they pass small amounts of urine frequently. In some of these cases the calculus has an irregular shape and permits the passage of some urine.

dried fruit mite itch see ***Carpoglyphus***.

drift [*drift*] chance variation; in genetics, the random changes in gene frequencies in a population.

antigenic d. see **antigenic drift**.

d. lambing a strategy in which ewes which have lambed are periodically removed from a flock of lambing ewes by moving the unlambed ewes on to the next paddock or field.

drifting sideways the patient moves gradually to one side when attempting to walk in a straight line.

drill[1] [*dril*] (*Mandrillus leucophaeus*) one of the Old World monkeys; in the same genus as mandrills, which it resembles. It has the characteristic ridged and grooved nasal bones, but with a black face, and bright red skin on the rump. An endangered species.

drill[2] in dentistry, a mechanical device used for removing tooth structure. See also **bur**.

Drimia an African-Mediterranean plant genus in the family Liliaceae (Hyacinthaceae); contain bufadienolide cardiac glycosides; causes abdominal pain, cardiac irregularity, diarrhea, dyspnea, and sudden death. Includes *D. altissima* (*Urginea altissima*, maerman), *D. calcarata* (*U. rubella*), *D. capensis*, *D. depressa* (*U. capitata*, bergslangkop), *D. macrocentra* (*U. macrocentra*, Natal slangkop), *D. maritima* (*U. maritima, Scilla maritima*, red squill, sea onion), *D. physodes* (*U. physodes, U. pusilla*), *D. robusta*, *D. sanguinea* (*U. sanguinea, U. burkei*, Transvaal slangkop). Called also *Urginea*, slangkop, snakehead, jeukbol, sea onion, red squill.

drinking water [*drin'king*] supply of water available to animals for drinking supplied via nipples, in troughs, dams, ponds and larger natural water sources; an insufficient supply leads to dehydration; it can be the source of infection, e.g. leptospirosis, salmonellosis, or of poisoning, e.g. fluorine, sodium chloride.

Drinkwater mouth gag a mouth gag for use in cattle and horses. Made of cast aluminum, it consists of two wedges, one for each side of the mouth, which are pushed up between the upper and lower molars. The reflex clamping of the jaws ensures that they are retained. Gives excellent access to the pharynx and the incisors are in full view.

drip [*drip*] the slow, drop-by-drop infusion of a liquid.

postnasal d. drainage of excessive mucous or mucopurulent discharge from the postnasal region into the pharynx.

d. rate pumps a mechanical device used to deliver a constant rate of intravenous fluids. It applies pressure to the fluid line through a set of rollers.

dripping [*drip'ing*] 1. continuous discharge of an exudate or secretion. 2. rendered beef fat.

drive census [*drīv*] collection of data about a population by herding them all together, making a complete muster for an area.

driving disease [*drīv'ing*] see ovine **pulmonary** adenomatosis.

Dromaius novae-hollandiae see **emu**.

dromedary see ***Camelus dromedarius***.

dromotropic [*drom"o-tro'pik*] pertaining to dromotropy.

dromotropy affecting conductivity of a nerve fiber; it may be positive or negative.

Droncit [*dron'cit*] a proprietary name for **praziquantel**.

dronkgras see ***Melica decumbens***.

drooling the discharge of saliva from the mouth. A normal feature in some breeds of dogs such as Saint Bernard, Newfoundland and

English bulldog, presumably because of their loose, pendulous lips. In other animals it can be a sign of abnormalities of swallowing, painful oral lesions, diseased teeth, or disorders of salivary glands with hypersialosis.

drooping quarters see **goose-rumped**.

droperidol [*dro-per'ĭ-dol*] a tranquilizer of the butyrophenone series, used as a narcoleptic preanesthetic and, in combination with fentanyl citrate, as a neuroleptanalgesic.

droplet [*drop'lət*] very small drop of fluid.

d. nuclei the finite particles of matter which are transmitted from animal to animal.

dropout a patient which becomes inaccessible or ineligible to follow-up procedures.

dropped said of an anatomical part that has fallen below its usual position.

d. abdomen pendulous abdoment due to muscle weakness or rupture of prepubic tendon.

d. elbow results from injury to the axillary and/or thoracodorsal nerves and paralysis of the flexors of the shoulder. Occurs in injuries to the brachial plexus or its roots, such as avulsion. See also **radial** paralysis.

d. jaw see mandibular **neurapraxia**.

d. monkey muscle separation of the triceps muscle from the scapula in a Greyhound.

d. muscle rupture of the gracilis muscle.

d. sole a lesion only in the horse. The horn of the sole becomes detached from its sensitive laminae and drops to the point where the concavity of the normal sole is flat. Can occur acutely due to edema of the part or because of acute laminitis, or chronically, usually due to recurrent minor episodes of laminitis.

d. toe rupture of the extensor tendons and dorsal elastic ligament of a toe in a dog; especially common in racing Greyhounds.

d. udder see **mammary** suspensory ligament rupture.

d. wrist ventriflexion and weakness of the hand in primates with severe demineralization because of dietary deficiency of vitamin D alone or in combination with calcium.

dropper [*drop'ər*] 1. a pipette or tube for dispensing liquids in drops. 2. a wooden or metal spreader holding the wires in a farm fence apart.

droppings [*drop'ingz*] a term commonly applied to feces, particularly from birds.

dropsical [*drop'sĭ-kəl*] affected with or pertaining to dropsy.

dropsy [*drop'se*] an abnormal accumulation of serous fluid in a body cavity or in the cellular tissues; called also hydrops, edema. See also **edema**, fetal **anasarca**.

fetal d. see fetal **anasarca**.

fetal sacs d. see **hydrallantois**, **hydramnios**.

placenta d. placental edema; usually accompanies placentitis or fescue toxicosis.

tropical fish d. bacterial infection, particularly *Aeromonas* or *Pseudomonas* spp. causing ascites and sometimes protrusion of the eyes. Called also pinecone disease because of the appearance of the distended abdomen with protruding scales.

dropwort [*drop'wort*] see **water dropwort**.

Drosanthemum genus of southern African plants in the family Aizoaceae; contain soluble oxalates which may cause nephrosis. Includes *D. floribundum* (vygie).

Drosera genus of insectivorous plants in family Droseraceae; some species may cause cyanide poisoning. Called also sundews.

drought feeding feeding of cattle and sheep on minimal diets to maintain life during periods of poor rainfall and pasture growth. Requires judgment to avoid animals reaching an irreversible stage of thinness.

drought-resistant pasture types or animal breeds which survive better than others during periods of low rainfall.

Droughtmaster a red, polled or horned breed of beef cattle produced in Australia by crossing Brahman and Shorthorn breeds.

droving 1. moving cattle or sheep from one place to another by driving them slowly on foot along roadways or stock routes. 2. in less temperate climates the same exercise conducted by truck is called droving.

drowning [*droun'ing*] death from suffocation resulting from aspiration of water or other substance or fluid. Drowning occurs because the liquid prevents breathing.

dry-d. asphyxiation, but with little or no inhalation of water as a result of persistent laryngospasm.

near-d. see **near-drowning**.

secondary d. pulmonary edema may occur some time after a near-drowning due to loss of surfactant.

drug [*drug*] 1. any medicinal substance. 2. a narcotic. 3. to administer a drug.

d. administration includes aerosol, oral, transtracheal infusion, subcutaneous, intramuscular, intravenous, intrauterine, intraperitoneal, intra-articular, intramammary, intrathecal, subconjunctival, percutaneous, percutaneous intraruminal, gas inhalation. Mass medication is per feed or drinking water or, in the case of captive fish, in the tank water. For feral animals individual dosing by projectile dart is usual, for group therapy administration by bait is possible.

d. allergy immune-mediated hypersensitivity to a drug molecule. Includes anaphylaxis, cutaneous reaction.

animal d. a drug specifically tested for, and recommended for use in, animals. A legal point of importance if an animal dies as a result of an unusual or allergic reaction to medication with a drug not licensed for use in animals.

d. augmented swine dysentery pigs receiving prophylactic medication are more severely affected than untreated pigs.

bactericidal/bacteriostatic d. see **antibiotic**.

d. binding binding of a drug to a large molecule in the tissues or fluids, e.g. binding to protein in the blood, may affect the metabolism of the drug, especially its rate of excretion.

chemotherapeutic d. see **chemotherapy**.

d. combinations a pharmaceutical strategy of combining several drugs into one formulation to provide for a specific requirement, e.g. an antibiotic combined with an anti-inflammatory agent in a mastitis ointment. Has the disadvantage that the dose of one drug is determined by the dose of the other.

controlled d. availability and use of the drug is controlled by law. The control is at various levels of severity depending on the degree of danger associated with the uncontrolled use of each drug.

d. delayed swine dysentery swine dysentery appears several days after treatment is discontinued.

d. delayed-augmented swine dysentery after successful treatment during an attack of swine dysentery a more severe form of the disease occurs after treatment ceases.

d. diminished swine dysentery the disease is reduced in severity as a result of treatment but is not eliminated.

d. eruption an eruption or solitary skin lesion caused by a drug. See also **dermatitis** medicamentosa.

d. hypersensitivity see drug allergy (above).

mutagenic d's those that affect the DNA of the target organism have the hazard of creating new races of microorganisms with increased pathogenicity.

d. residue the amount of the drug that can be detected in tissues at specified times after administration of the drug ceases. See also drug **tolerance**.

d. resistance said mainly of antibacterial drugs and of microorganisms that are unaffected by the drug whilst most organisms of its species are susceptible. The resistance may be inherent or secondary to frequent exposure at sublethal concentrations. Resistance of an animal to a specific drug, e.g. to insulin, can also occur in this way.

d. resistant swine dysentery medication of the feed is not an effective procedure and diarrhea and deaths occur.

d. safety margin the magnitude of the difference between the dose required to produce a maximum therapeutic effect and that which produces a toxic effect. Registering authorities require this information.

scheduled d's. those drugs subject to controls that regulate who may possess, prescribe or use them. In most countries, they are classified into different schedules according to accepted medical use and potential for abuse. In the USA, the Controlled Substances Act places all substances into one of five schedules. Heroin and lysergic acciddiethylamide are examples of Schedule I substances; cough medicines with codeine are examples of Schedule V drugs. The schedule number determines who may prescribe it and the requirements for storage in a veterinary pharmacy.

d. selectivity capacity to produce a single effect.

teratogenic d. produces a toxic effect on the fetus at a particular phase of development producing a malformation.

veterinary prescription d. a drug that may not be dispensed without the prescription of a veterinarian and that bears the label statement: 'CAUTION: Federal law restricts this drug to use by or on the order of a licensed veterinarian'.

VetBooks.ir

drug-induced caused by the administration of a drug. See also **iatrogenic**.
drug–nutrient interaction alterations in nutritional status can affect drug metabolism; some drugs can affect nutritional status.
druggist [*drug'ist*] pharmacist.
drumstick [*drum'stik*] a spherical shape with a single, long extension or conversely, a long stick with a knob on the end.
d. lobe a lobe attached by a thin strand of nuclear membrane to the nucleus of a varying percentage of neutrophils in females. Contains the Barr body. Called also sex bud.
d. spore the characteristic spherical, terminal spore of *Clostridium tetani*.
drunken horse grass ***Stipa*** *inebrians*.
druse crystals a crust of small crystals lining the sides of a cavity.
drusen [*droo'zən*] 1. hyaline excrescences in Bruch's membrane, particularly of primates; usually due to aging. 2. rosettes of granules occurring in the lesions of actinomycosis. Called also sulfur granules.
dry [*dri*] a state of dehydration or relative deficiency of water.
d. bench 1. that part of a radiographic dark room where film and cassettes are handled, i.e. there is no chance of film being contaminated by chemicals. 2. a slang expression for simulated research work, for reported experiments that were not actually done.
d. ice solidified carbon dioxide; in an icebox, it produces temperatures of about −76°F (−60°C).
d. lot the livestock, usually cattle, are kept in a small area with a firm floor but no roof or walls. All food and water are brought to them. Refers usually to dairy herds. See also **feedlot**.
d. mash a method of feeding poultry. Essentially a mixture of grain and supplements.
d. sow house/room area where sows are housed and fed between mating and farrowing. Called also gestation barn.
dry cow one not lactating.
close up d.c. a cow approximately 2 weeks from calving, usually housed separately to facilitate different feeding and close to the milking parlor so there is easy and frequent observation.
far-off d. c. cows more than 2 weeks from calving.
dry herd see **dairy** herd.
dry matter (DM) plant or animal tissue residue after it has been heated to a constant weight and all of the moisture in the sample has been driven off by gentle heat.
d. m. basis a method of expressing the concentration of a nutrient or poison in a feed, by expressing its concentration in terms of the dry matter content.
d. m. intake the feed intake, usually per day, expressed in terms of its dry matter content. Dry matter intake is the most critical factor in evaluating nutritional adequacy of a diet, but is difficult to determine in group feeding situations.
dry period the period during the lactation cycle when the cow is not lactating, i.e. the period between the end of one lactation and the beginning of the next.
d. p. colostrum see dry period secretion (below).
d. p. secretion after lactation ceases in normal cows the milk in the udder changes to a thin watery fluid, then disappears altogether in some, then a thick, honey-like secretion appears, then to a very thick opalescent colostrum and finally the normal custard-like colostrum.
d. p. treatment treatment of the udder of dairy cows during the dry (nonlactating) period. This is an important part of most bovine mastitis control programs in the removal of subclinical infections which have established during the lactation, and reduction of new infections occurring during the dry period. This is effected by treating each quarter of the udder with a long-acting, broad-spectrum antibiotic preparation immediately after the last milking of a lactation. The strategy is highly effective against the common contagious bacterial causes of mastitis, including *Staphylococcus aureus*, *Streptococcus agalactiae*. The possibility exists that the sterilizing effect that the technique has on the udder may increase its sensitivity to other infections. In order to avoid this it is recommended that only those cows that show evidence of mastitis be treated in this way. This also greatly reduces the cost of the operation in those herds in which the incidence of the disease is low.
dry sheep equivalent (DSE) a unit of animal feed, mainly used in Australia, based on how much more or less feed each animal requires compared with that required by one dry (not lactating) sheep. The same system can be used to estimate the nutritive value of a paddock of pasture or a shed full of hay. Based on the figure of a daily requirement for 7.2 megajoules of metabolizable energy for a 2-year-old dry sheep weighing 45 kg; e.g. a dairy cow milking 20 kg milk/day has a DSE of 23; a beef calf of 200 kg body weight has a DSE of 4. In the USA, **animal** dry equivalents are used.
dryfarming farming without the aid of irrigation.
drying off the management technique of ceasing to milk cows that are still lactating. Dairy herd management is greatly facilitated if cows can be dried off abruptly when the milk yield has fallen below a profitable level or the ensuing parturition is close. Cows with subclinical mastitis are likely to suffer an attack of clinical mastitis if milking is ceased abruptly, especially if the milk yield is still high. The risks of new infections during the dry period are also greater with abrupt drying off and this may be significant if the prevalence of quarter infection in the herd is high. Precautions against these problems include a short period of once-daily milking and severe restriction of food and water intake, and use of dry period treatment. Another problem arising at drying off, or at cessation of milking to improve the appearance of the cow, is that of anaphylaxis or milk **allergy**. This takes the form of urticaria and dyspnea about 24 hours after milking is stopped.
d. o. anaphylaxis see milk **allergy**.
d. o. chronic quarters infusion of an escharotic agent, e.g. silver nitrate, copper sulfate solution into the individual chronically affected quarter, leaving it for a short period, then evacuating the quarter and if necessary perfusing it with normal saline.
drylot see **dry** lot.
Drymaria a plant genus of the family Caryophyllaceae; contain an unknown toxin which causes tremor, diarrhea and liver and kidney lesions. Includes *D. arenarioides* (alfombrilla), *D. cordata*, *D. diandra* (tropical chickweed), *D. pachyphylla* (drymary).
drymary ***Drymaria*** *pachyphylla*.
Dryopteris [*dri-op'tə-ris*] a genus of the fern family Aspleniaceae; rhizomes contain a toxin thought to be a thiaminase and which causes somnolence, stumbling gait and blindness due to encephalopathy in sheep and cattle. Includes *D. affinis* (*D. borreri*), *D. carthusiana* (buckle fern), *D. filix-mas*. Called also male fern.
Drysdale New Zealand carpetwool sheep derived from **Romney Marsh** by mutation; wool fiber diameter 35–45 microns, white face and dark hooves; rams are horned, ewes polled.
Ds chemical symbol, *darmstadtium*.
ds double-stranded; used in reference to nucleic acid.
dsDNA double-stranded DNA.
DSE dry sheep equivalent.
DSMA disodium monomethanearsonate; an organic arsenical herbicide. Can cause poisoning similar to inorganic arsenic. See also **arsenic** poisoning.
dsRNA double-stranded RNA.
DSS dioctyl sodium sulfosuccinate.
DTH delayed type hypersensitivity.
DTIC dacarbazine.
DTM dermatophyte test medium.
DTPA diethylenetriamine penta-acetic acid.
Du Mai see **Governing Vessel**.
dual-purpose applies to any animal but usually refers to cattle (meat and milk), sheep (wool and meat) and fowl (eggs and meat). Dual-purpose cattle breeds include **Dairy shorthorn**, **Dexter**, **Meuse-Rhine-Yssel**, **Red poll Simmental**, **South Devon** and **welsh black**.
dubbeltjie [Af.] see ***Tribulus*** *terrestris*.
dubbing see **decombing**.
dubnium (Db) a chemical element, atomic number 105, atomic weight 262. See Table 4.
Dubin–Johnson syndrome [*doo'bən jon'sən*] hereditary chronic nonhemolytic jaundice thought to be due to defective excretion of conjugated bilirubin and certain other organic anions by the liver; a brown coarsely granular pigment in hepatic cells is pathognomonic. A very similar disease occurs in Corriedale and Southdown sheep. See also inherited **photosensitization**.
Duboisia [*doo-boi'se-ə*] Australian genus of the plant family Solanaceae.
D. hopwoodii contains the piperidine alkaloids nicotine and nornicotine. Called also pituri, pitchery.
D. leichhardtii, D. myoporoides contain pyridine alkaloids, e.g. hyoscine, hyoscyamine, with atropine-like actions. Poisoning

signs include somnolence, tremor, thirst, dilatation of pupil, and incoordination. Called also corkwood.

Duchenne dystrophy [*du-shen'*] see Duchenne **muscular dystrophy**.

duck [*duk*] a member of the family Anatidae which includes many genera of ducks, geese and swans. See ***Anas platyrhynchos***, **Aylesbury**, **Rouen**, **Indian runner**, **Khaki Campbell**, **Pekin**, **Muscovy**.

d. bush, d. plant *Gomphocarpus physocarpus*. See also ***Asclepias***.

d. virus hepatitis a highly infectious and fatal disease of young ducklings caused by an enterovirus, and characterized by hepatitis of sufficient severity to kill the birds within a few hours of signs of illness first being observed. A disease notifiable to the OIE (see Table 22).

new d. disease see ***Riemerella anatipestifer***.

d. plague see duck **plague**.

d. septicemia see ***Riemerella anatipestifer***.

d. sickness type C botulism.

d. virus enteritis see duck **plague**.

duck-billed platypus see **platypus**.

duckling [*duk'ling*] baby duck.

duckmole see **platypus**.

duct [*dukt*] a passage with well-defined walls, especially a tubular structure for the passage of excretions or secretions. See also **ductus**.

accessory pancreatic d. the duct of the dorsal pancreatic primordium that opens on the minor duodenal papilla. Called also Santorini's duct or duct of Santorini.

allantoic d. see **urachus**.

alveolar d. one of the final branches of the bronchial tree consisting of a tube whose walls are composed of alveoli.

bile d., biliary d. the passages for the conveyance of bile in and from the liver. See also **bile duct**.

cochlear d. an endolymph-filled spiral membranous tube in the bony canal of the cochlea that separates the scala tympani below, the scala vestibuli above, and which begins in a blind extremity (the vestibular caecum) and contains the spiral organ of Corti in its floor.

common bile d. a duct formed by the union of the cystic and hepatic ducts. See also **bile duct**.

cystic d. the passage connecting the gallbladder neck and the bile duct.

efferent d. any duct that gives outlet to a glandular secretion.

ejaculatory d. the duct formed by union of the ductus deferens and the duct of the seminal vesicles, opening into the prostatic urethra on the colliculus seminalis. Found in the horse and ruminants.

endolymphatic d. a canal connecting the membranous labyrinth of the ear with the endolymphatic sac.

epididymal d. developed from the first part of the mesonephric duct.

excretory d. one through which the secretion is conveyed from a gland.

d. of Gartner see **Gartner's ducts**.

hepatic d. the excretory duct of the liver, or one of its branches in the lobes of the liver. See also **bile duct**.

incisive d. one of a pair of ducts perforating the palate and which communicate between the mouth and the vomeronasal organ within the nasal cavity; they are thought to conduct chemicals for olfactory appraisal by the vomeronasal organ.

intralobar d. ducts within lobes which provide drainage for secretions of lobes of glands.

intralobular d. ducts found within lobules which provide drainage for secretions of lobules of glands.

lacrimal d. one of the excretory ducts of the lacrimal gland. See also **lacrimal** apparatus.

lacrimonasal d. nasolacrimal duct.

lactiferous d. ducts conveying the milk secreted by the lobes of the mammary gland to the lactiferous sinuses or to the teats.

lobar d. drains the secretions from the lobes of gland, connecting with the main excretory duct.

lobular d. drains the secretions of lobules of glands.

lymphatic d. any of the larger lymph drainage vessels, e.g. thoracic duct.

lymphatic d. (left) thoracic duct.

lymphatic d. (right) a vessel draining lymph from the cranial right side of the body, receiving lymph from the right subclavian, jugular and mediastinal trunks when those vessels do not open independently into the right brachiocephalic vein.

mammary d. lactiferous ducts.

mandibular d. drainage duct of the mandibular salivary gland.

mesonephric d. see **mesonephric** duct.

metanephric d. the embryonic ureter.

müllerian d. see **müllerian duct**.

nasal d. see nasolacrimal duct (below).

nasolacrimal d. the tear duct leeading from the lacrimal sac to open on the floor of the nasal vestibule. See also **lacrimal** apparatus.

nasopalatine d. see incisive duct (above).

pancreatic d. the main excretory duct of the pancreas, which usually opens with the bile duct on the major duodenal papilla; may be a single duct, or two ducts which join, or two independent ducts opening into opposite sides of the intestine. See also **bile duct**. Called also Wirsung's duct.

papillary d's (kidney) the straight excretory or collecting portions of the renal tubules, which descend through the renal medulla to a renal papilla or renal crest.

papillary d. (teat) the duct leading from the teat sinus to the exterior; see **teat canal**.

paramesonephric d. **müllerian duct**.

parotid d. the duct by which the parotid gland empties into the mouth vestibule opposite the upper molars. See also **parotid** glands.

perilymphatic d. see **aqueduct** of cochlea.

pronephric d. the early embryonic duct from the primitive kidney which leads into the mesonephric duct in the embryo's later stages.

prostatic d's minute ducts from the prostate, opening into or near the prostatic sinuses on the dorsal wall of the urethra.

salivary d's the ducts of the salivary glands.

semicircular d's the long ducts of the membranous labyrinth of the ear.

sublingual d. the excretory ducts of the sublingual salivary glands.

submandibular d. the duct that drains the submandibular gland and opens at the sublingual caruncle. Called also submaxillary duct.

submaxillary d. submandibular duct (above).

tear d. nasolacrimal duct.

thoracic d. a duct beginning in the cisterna chyli and emptying into the venous system at the junction of the left subclavian and left jugular veins. It acts as a channel for the collection of lymph from the portions of the body caudal to the diaphragm and from the left side of the body cranial to the diaphragm.

thyroglossal d. the transient, non-patent duct, from the thyroid gland to the floor of the pharynx which is the legacy of the development of the thyroid from the floor of the pharynx.

vitelline d. see **Meckel's** diverticulum.

ductile [*duk'til*] susceptible of being drawn out without breaking.

ductless [*dukt'ləs*] having no excretory duct.

d. glands the endocrine glands.

ductule [*duk'tūl*] a minute duct.

efferent d's. drainage pathways from the rete testis that pierce the testicular capsule and join the head of the epididymis.

ductuli biliferi smaller bile ducts accompanying the branches of the portal vein.

ductuli efferentes connect the rete testis with the ductus epididymis.

ductulus [*duk'tu-ləs*] pl. *ductuli* [L.] ductule.

ductus [*duk'təs*] pl. *ductus* [L.] duct.

d. arteriosus a fetal blood vessel that joins the aorta and pulmonary artery. Abnormal persistence of an open lumen after birth results in a **patent** ductus arteriosus. Called also persistent or patent ductus arteriosus.

d. choledochus see **bile duct**.

d. deferens the excretory duct of the testis, which is a continuation of the epididymal duct and which in horses and ruminants joins the excretory duct of the seminal vesicle to form the ejaculatory duct; called also vas deferens.

d. epididymis the duct which, in combination with connective tissue and muscle, forms the head, body and tail of the epididymis and continues as the ductus deferens.

d. epoophori longitudinales see **Gartner's ducts**.

d. reuniens the joining channel between the cochlea and sacculus of the membranous labyrinth of the inner ear.

d. venosus a major blood channel that develops through the embryonic liver from the left umbilical vein to the caudal vena cava and closes within a few days after birth. If it remains patent, a congenital portacaval anastamosis is created. See **patent** ductus venosus.

VetBooks.ir

Dudley nose see nasal **depigmentation**.
Dugaldia hoopesii ***Helenium*** *hoopesii*.
dugaldin a toxic glycoside in **Helenium**.
Dugbe virus a tickborne bunyavirus infection of cattle in West Africa; related to Nairobi sheep disease virus.
dugite see brown **snake**.
dugong a herbivorous marine mammal (*Dugong dugon*), the only member of the family Dugongidae. Massive (10–13 ft long, weighing 600 lb) with a fusiform silhouette, well-developed forelimbs, but no hindlimbs or dorsal fin.
Duhring's disease [*doo'ring*] dermatitis herpetiformis.
DUIB di-ureido isobutane.
duiker, duyker small (up to 50 lb) African antelope with short, straight horns; includes *Cephalophus* and *Philantomba* spp. and *Sylvicapra grimmia* (common duiker).
duinebos ***Crotalaria*** *spartioides*.
duinsiekte [Af.] 'dune disease', a manifestation of pyrrolizidine alkaloidosis caused by *Crotalaria spartioides* poisoning.
dulaa a saclike pouch of the soft palate, capable of being inflated, everted through the mouth and gargled through by the male camel when in rut.
Dulbecco's medium [*dool-bek'o*] a phosphate buffered saline solution used for embryo collection in a variety of species.
dullness [*dul'nis*] 1. a quality of sound elicited by percussion, being short and high-pitched with little resonance. 2. a state of consciousness in which the animal's movements are sluggish and its response to external stimuli is one of indifference.
cardiac d. the area of the precordium over which a dull percussion sound is elicited.
dumb [*dum*] mute. Commonly said of animals generally but their capacity for vocal communication makes it necessary on occasion to mute the mute. See **devocalization**.
dumbcane ***Dieffenbachia seguine***.
dumdum fever [*dum'dum*] see **leishmaniasis**.
dummy [*dum'e*] state of depressed consciousness in which the still mobile animal walks continuously and compulsively, head down, stumbling gait, walking into fixed objects, head presses when it meets a fixed object, when trapped in a narrow place is incapable of backing out, walks into human habitation which it would ordinarily shun. May walk in circles. Does not respond to ordinary stimuli, does not eat or drink. Caused by encephalitis, hepatic encephalopathy, subacute lead poisoning. Called also blind staggers, dummy syndrome. See also **neonatal** maladjustment syndrome.
d. calf syndrome thought to be a behavior problem inherited in some breeds; the newborn calf is bright and alert but lacks teat seeking and teat sucking reflexes.
d. disease said of lambs born with hydranencephaly due to intrauterine infection with bluetongue virus, usually the vaccine strain.
dumping [*dump'ing*] 1. shortening the toe of the hoof by rasping down the outside wall; creates a weakness of the wall and is a defect in a shod horse. 2. heavy mechanical compression of a standard bale of wool to about half of its normal size and clamping by metal bands; used to facilitate export shipment.
dumping syndrome [*dump'ing*] a complex of vasomotor signs associated with eating and the rapid emptying of hyperosmolar gastric contents into the proximal small intestine; believed to be due to the shift of fluid into the gut lumen, intestinal distention and contraction of plasma volume.
DUMPS a lethal inherited disorder of Holstein cattle that causes infertility. The name is an acronym of *D*eficiency of *U*ridine *M*ono*P*hosphate *S*ynthetase, the enzyme which participates in the reaction which converts orotate to uridine 5'-monophosphate. Individuals having the homozygous recessive genotype die at about 40 days of gestation.
dun a coat color, generally a yellow varying from gray-yellow to light yellow, always with a brown stripe from the wither to the tail butt.
Duncan applicator [*dung'kən*] a device used for the control of ticks in game animals; as the animal licks bait feed in the center of the device it receives a dose of pour-on insecticide.
dune bush ***Crotalaria*** *spartioides*.
dung [*dung*] feces. Called also manure, droppings.
Dunker a medium-sized scenthound, popular in Norway. It is a powerfully built dog with a short coat, pendulous ears and long tail. The short coat may be tan with black saddle and white markings, or the black may be splotched (merled). Called also Norwegian hound.
dunkop the pulmonary form of **African** horse sickenss.
dunnarts (*Sminthopsis* spp.) small, mainly insectivorous marsupials, native to Australia and Papua New Guinea.
dunsiekte [*dun-sēk'tə*] [Af.] dummy syndrome due to hepatic insufficiency and caused by pyrrolizidine alkaloidosis. Called also 'thin disease'. See ***Senecio***.
duodenal [*doo"o-de'nəl, doo-od'ə-nəl*] of or pertaining to the duodenum.
d. glands glands in the submucosa of the duodenum, opening into the small intestine; called also Brunner's glands.
d. reflux retrograde movement of duodenal contents, either into the stomach where it has been incriminated as a cause of vomiting and gastric hyposecretion, or into the pancreatic duct and parenchyma as a factor in the etiology of acute pancreatitis.
d. stenosis occurs in young foals up to 4 months old. Characterized by salivation, mild colic, regurgitation and unthriftiness.
d. ulcer peptic ulcer of the duodenum. See also **ulcer**.
duodenectomy [*doo"o-də-nek'tə-me*] excision of the duodenum, total or partial.
duodenitis [*doo-od"ə-ni'tis*] inflammation of the duodenum. A cause of colic in horses; a high case fatality rate, possibly associated with *Fusarium moniliforme* toxins in feed. In cattle, occcurs from damage caused by the migration of the young amphistomes from the duodenum in infestations with *Calicophoron* spp. See **paramphistomiasis**.
duodenocholedochotomy [*doo"o-de"no-ko"led-o-kot'ə-me*] incision of the duodenum and common bile duct.
duodenoenterostomy [*doo"o-de"no-en"tər-os'tə-me*] anastomosis of the duodenum to some other part of the small intestine.
duodenography [*doo"o-də-nog'rə-fe*] radiography of the duodenum.
duodenohepatic [*doo"o-de"no-hə-pat'ik*] pertaining to the duodenum and liver.
duodenoileostomy [*doo"o-de"no-il"e-os'tə-me*] anastomosis of the duodenum to the ileum.
duodenojejunostomy [*doo"o-de"no-jə-joo-nos'tə-me*] anastomosis of the duodenum to the jejunum.
duodenorrhaphy [*doo"o-də-nor'ə-fe*] suture of the duodenum.
duodenoscopy [*doo"o-də-nos'kə-pe*] examination of the duodenum by an endoscope.
duodenostomy [*doo"o-də-nos'tə-me*] surgical formation of a permanent opening into the duodenum. May be for the purpose of introducing a tube for post-pyloric feeding.
duodenotomy [*doo"o-də-not'ə-me*] incision of the duodenum.
duodenum [*doo"o-de'nəm, doo-od'ə-nəm*] the first or proximal portion of the small intestine, extending from the pylorus to the jejunum. It plays an important role in digestion of food because the bile and pancreatic ducts empty into it. See also **digestive** system.
duplex DNA double-stranded DNA. See **deoxyribonucleic acid**.
duplication [*doo"plĭ-ka'shən*] a doubling; in genetics, the presence of an extra segment of chromosome.
dupp a syllable used to represent, or mimic the second sound heard at the apex of the heart in auscultation. See also **heart sounds**.
dura mater [*doo'rə ma'tər*] [L.] the outermost, toughest and most fibrous of the three membranes (meninges) covering the brain and spinal cord.
dural [*doo'rəl*] pertaining to the dura mater.
d. ossification see dural **ossification**.
d. sinuses, d. venous sinuses venous spaces between the layers of dura which collect cerebrospinal fluid and return it to the vascular system.
durango root see ***Datisca glomerata***.
Duranta repens an American plant in the family Verbenaceae; fruits and leaves contain unidentified toxins causing tetanic seizures and enteritis in mammals and birds. Called also pigeonberry, golden dewdrop, Sheena's gold, Geisha girl.
Durham tube [*door'əm*] an inverted glass tube in bacterial carbohydrate fermentation tests. Used to detect gas production.
Durham's tube [*door'əm*] a jointed tracheotomy tube.
Durikainema macropti nematode parasite (superfamily Muspiceoidea) in the venous system of some kangaroo species.
duroarachnitis inflammation of the dura mater and arachnoid.
Duroc Jersey red pigs with prick ears lopped over halfway up. Produced by the merging of two breeds, Duroc and Jersey, in USA. Called also Duroc.

D-39: Duroc pig.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

durotomy incision of the dura mater.
durum a class of **wheat** producing hard flour.
dust [*dust*] heavy dust such as in dust storms or volcanic fallout may contaminate animal feed sufficiently to cause sand colic in horses. Ruminants seem not to be much affected.
d. balls equine intestinal foreign bodies composed of plant fibers with a superficial coating of dense minerals. Because of their light weight they are often evacuated with the feces.
d. inhalation important risk factor in etiology of coccidioidomycosis (corral dust), chronic obstructive pulmonary disease in horses (feed dust in stables).
d. rhinotracheitis dusty feed fed in a confined space such as a stable can cause chronic coughing due to rhinotracheitis in cattle.
dusting powders [*dus'ting*] a popular form of applying antibacterial materials onto animal wounds, external parasiticides onto skin generally, and ophthalmic preparations for large animals that present difficulties in restraint.
dusty miller ***Senecio*** *cineraria*.
Dutch black pied cattle black and white dual-purpose cattle from Holland.
Dutch rabbit a very hardy, trouble-free, breed of rabbits with white saddle, feet and face markings and almost any other color elsewhere, including tortoiseshell, chocolate and yellow. It is a small, less than 5 lb rabbit with a dense coat of fine fur.
Dutch sheepdog see **Schapendoes**.
dutchman's breeches ***Dicentra*** *cucullaria*, *D. spectabilis*, *Thamnosma texana*.
dutchman's pipe ***Aristolochia*** *elegans*.
Duttonella [*dut"o-nel'ə*] a subgenus of the genus *Trypanosoma*. Includes *Trypanosoma vivax* and *T. uniforme*.
Duvenhage virus a member of the *Lyssavirus* genus, isolated from fruit-eating bats in which it causes a disease similar to rabies.
Duverny's glands [*du-vər-na'*] see **Bartholin's glands**.
DV dorsoventral.
DVM Doctor of Veterinary Medicine.
dwarf [*dworf*] an abnormally undersized animal or plant. See also **dwarfism**.
d. bay ***Daphne*** *mezereum*.
d. cattle see **dwarfism**.
dolichocephalic d. dwarf with a long, narrow head.
long-nosed d. dwarf defect in American Angus cattle in which affected calves have shortened limbs but normal body size, diminished endochondral ossification and premature calcification of chondrocytes.
dwarfing genes alleles at different loci in chicken chromosomes that generate chickens with a much lower body weight at maturity.
dwarfism [*dworf'iz-əm*] the state of being a dwarf; underdevelopment of the body. Dwarfism may be the result of a developmental anomaly, of nutritional or hormone deficiencies, or of other diseases. See also **achondroplasia**, **cretinism**.
achondroplastic d. an inherited defect in cattle caused by defective cartilage growth which is effectively lethal because the calves do not grow well and die before 6 months of age. Typical signs are short legs, large, wide, short head, protruding lower jaw, depression of the maxilla with obstruction of respiration and stertorous breathing. The tongue protrudes and the eyes bulge, the abdomen is distended and there is chronic bloat. Urine concentrations of glycosaminoglycans are much higher than normal in some of the calves. Called also snorter dwarfs. The condition has also been seen in dogs and cats. See also **achondroplasia**.
chondrodystrophic d. with hydrocephalus see **bulldog calves**.
constitutional d. a proportional dwarfism due to a generalized genetic defect.
disproportionate d. the skeleton is dystrophic, the soft tissues are normal. The animal is pot-bellied, dyspneic and the tongue protrudes. Characteristic of achondroplastic and chondrodystrophic dwarfs.
German shepherd dog d. an inherited juvenile panhypopituitarism caused by a defect in differentiation of the oropharyngeal ectoderm of Rathke's pouch. Affected puppies appear normal at birth but soon show a reduced rate of growth, retention of deciduous teeth and puppy hair, alopecia, delayed closure of epiphyseal growth plates, infantile genitalia and shortened life span.
pituitary d. see German shepherd dog dwarfism (above).
primordial d. general proportional dwarfism of all organs of the kind that has produced Kerry cattle and Miniature pinschers.
proportional d. a recently described congenital miniature condition in Angus and Angus crossbred cattle, characterized by extremely small stature and proportionate growth. Inherited in a dominant manner with incomplete penetrance. See also primordial dwarfism (above).
thyroid d. hypothyroidism in an immature animal causes retarded growth and development of bones with disproportionate dwarfism. See **cretinism**.
dwarfism–joint hypermobility inherited disproportionate dwarfism in some cattle breeds with abnormal joint mobility caused by a collagen defect in joint cartilage.
dwelling an abnormality of gait in a horse in which there is a momentary hesitation before the foot is placed on the ground.
Dx abbreviation for diagnosis; used in medical records.
DXA duel energy X-ray absorptiometry; a form of X-ray technology used most commonly to measure bone mineral content (density), but also used in small animals to measure total body composition, i.e. fat and lean body mass.
Dy chemical symbol, *dysprosium*.
dyclonine hydrochloride [*di'klo-nēn*] a bactericidal and fungicidal topical anesthetic agent.
dye [*di*] any of various colored substances containing auxochromes and thus capable of coloring substances to which they are applied; used for staining and coloring, as test reagents, and as therapeutic agents.
acridine d. acriflavine and proflavine are antiseptic dyes.
azo d. dyes like scarlet red and phenazopyridine are used as antiseptics to be applied topically or as urinary antiseptics.
diagnostic d. several diagnostic test procedures involve the administration of a dye and determination of the rate of excretion, either by measuring concentrations remaining in the body or amounts excreted in the urine, feces, etc.
d. dilution method the standard method of measuring circulating plasma volume; based on the degree of dilution of a physiologically inert dye injected intravenously.
vital d. see vital **stain**.
dyeberry ***Phytolacca*** *octandra*.
dyhydrose tropicale see **sweating** sickness.
dying back neuropathy [*di'ing*] axonal degeneration which selectively involves distal parts of long fibers first, then slowly spreads to more proximal parts. Seen in humans with conditions that cause 'toxic' damage to large diamteter sensorimotor nerves, including beri-beri, pontocerebellar atrophy, spastic paraplegia, and thallium intoxication.
dynamics 1. the scientific study of forces in action; a phase of mechanics. 2. the motivating or driving forces, physical or moral, in any field.
dynamite a commercially available explosive containing ammonium nitrate, which has caused nitrate poisoning in cattle.
dynamization a strategy for promoting bone healing in fractures by allowing some movement or compressive loading.
dynamograph [*di-nam'o-graf*] a self-registering dynamometer.
dynamometer [*di"nə-mom'ə-tər*] an instrument for measuring the force of muscular contraction.
dyne [*dīn*] the metric unit of force, being that amount which would, during each second, produce an acceleration of 1 cm per second in a particle of 1 gram mass.
dynein [*di'nēn*] group of motor proteins in cels which uses energy from ATP to produce movement. Axonemal dyneins are found in the axonemes of cilia and flagella and cause motility by enabling the sliding of microtubules in these structures. Cytoplasmic dyneins are found in all animal cells and are involved in organelle transport and centrosome assembly.

VetBooks.ir

dynorphins [*di-nor'finz*] a family of endogenous opioid peptides.
dyphylline [*di'fal-in*] see **diprophylline**.
dys- prefix. [Gr.] *bad, difficult, disordered.*
dysadrenalism, dysadrenia [*dis"ə-dren'əl-iz-əm*] any disorder of adrenal function, whether of decreased or heightened function.
dysarthrosis [*dis"ahr-thro'sis*] 1. deformity or malformation of a joint. 2. dysarthria.
dysautonomia [*dis"aw-to-no'me-ə*] dysfunction of the autonomic nervous system characterized by constiptation, megaesophagus with regurgitation, dilated pupils, protrusion of the nictitating membranes, dry nasal and buccal mucosae, reduced laryngeal secretions and bradycardia. Seen in cats, dogs, horses and rabbits, more commonly in the United Kingdom and United States. The cause is unknown, although a toxicoinfection with *Clostridium botulinum* Type C has been proposed. Called also Key-Gaskell syndrome, feline dysautonomia, canine dysautonomia, **grass** sickness, dilated pupil syndrome, feline autonomic polyganglionopathy.
equine d. see **grass** sickness.
dysbacteriosis 1. possibly a bacterial disease; classified as a bacterial disease but its authentication is dubious. 2. disease caused by an imbalance of the normal flora of the organ or part of the organ.
dysbarism [*dis'bar-iz-əm*] any clinical syndrome caused by difference between the surrounding atmospheric pressure and the total gas pressure in the various tissues, fluids and cavities of the body, including such conditions as barosinusitis, barotitis media, or expansion of gases in the hollow viscera.
dysbasia [*dis-ba'zhə*] difficulty in walking, especially that due to a nervous lesion.
dysbetalipoproteinemia [*dis-ba"tə-lip"o-pro"te-ne'me-ə*] the accumulation of abnormal β-lipoproteins in the blood.
dyscephaly [*dĭ-sef'ə-le*] malformation of the cranium and bones of the face.
dyschezia [*dis-ke'zhə*] difficult or painful evacuation of feces from the rectum. Characteristic of distal colonic or rectal disease.
dyschondroplasia [*dis"kon-dro-pla'zhə*] see **enchondromatosis**.
tibial d. a mass of hypertrophic cartilage develops in the proximal end of the tibiotarsal bone in young broilers and turkeys. May cause lameness and limb deformity.
dyschromia [*dis-kro'me-ə*] any disorder of pigmentation of the skin or hair.
dyscoria [*dis-kor'e-ə*] abnormal shape or form of the pupil.
dyscorticism [*dis-kor'tĭ-siz-əm*] disordered functioning of the adrenal cortex.
dyscrasia [*dis-kra'zhə*] a morbid condition, usually referring to an imbalance of component elements.
blood d. any abnormal or pathological condition of the blood.
bone marrow d. see **bone marrow** dyscrasia.
dysecdysis [*dis-ek'dĭ-sis*] abnormal shedding of the skin of reptiles, usually due to undernutrition or too cold or too dry environment.
dysembryoma [*dis-em"bre-o'mə*] see **teratoma**.
dysentery [*dis'ən-ter"e*] any of a number of disorders marked by inflammation of the intestine, especially of the colon, with abdominal pain, tenesmus, and frequent stools often containing blood and mucus. The causative agent may be chemical irritants, bacteria, protozoa, viruses or parasitic worms. See also **lamb** dysentery, **swine** dysentery, **winter dysentery**, **coccidiosis**, **salmonellosis**, canine **parvovirus**, **colitis**-X, **trichuriasis**, ***Entamoeba*** *histolytica* infection.
amebic d. see **amebic** dysentery.
swine d. see **swine** dysentery.
dyserythropoiesis [*dis-ə-rith"ro-poi-e'sis*] abnormal red cell formation with disorderly maturation.
d. dyskeratosis–progressive alopecia probably inherited congenital anemia of Polled Hereford cattle.
dysesthesia [*dis"es-the'zhə*] 1. impairment of any sense. 2. abnormal perception of a sensory stimulus. Assumed to occur in animals.
dysfibrinogenemia [*dis-fi-brin"o-jə-ne'me-ə*] the presence of abnormal fibrinogens in the body. An inherited dysfibrinogenemia occurs in humans and has been reported in a collie dog.
dysfunction [*dis-funk'shən*] disturbance, impairment or abnormality of functioning of an organ.
dysgalactia [*dis"gə-lak'te-ə*] disordered milk secretion.
dysgammaglobulinemia [*dis-gam"ə-glob"u-lin-e'me-ə*] a selective deficiency of one or more, but not all, class of immunoglobulin. A **hereditary** dysgammaglobulinemia has been recorded in chickens.
dysgenesis [*dis-jen'ə-sis*] defective development; malformation.
dysgenic [*dis-jen'ik*] genetically harmful.
dysgerminoma [*dis"jər-mĭ-no'mə*] a solid, often radiosensitive, malignant ovarian neoplasm derived from undifferentiated germinal cells; the counterpart of seminoma of the testis.
dysglycemia [*dis"gli-se'me-ə*] any disorder of blood sugar metabolism.
dysgnathia [*dis-na'the-ə*] any oral abnormality extending beyond the teeth to involve the maxilla or mandible, or both. See also **brachygnathism**, **prognathism**
dysgonic [*dis-gon'ik*] seeding badly; said of bacterial cultures that grow poorly.
dyshematopoiesis [*dis-he"mə-to"poi-e'sis*] defective blood formation.
dyshesion [*dis-he'zhən*] 1. disordered cell adherence. 2. loss of intercellular cohesion; a characteristic of malignancy.
dyshidrosis [*dis"hĭ-dro'sis*] any disorder of the eccrine sweat glands.
dyskaryosis [*dis-kar"e-o'sis*] abnormality of the nucleus of a cell.
dyskeratoma [*dis-ker"ə-to'mə*] a dyskeratotic tumor.
warty d. benign proliferation of the epithelium seen in dogs; the lesions are wart-like papules with a hyperkeratotic, umbilicated center.
dyskeratosis [*dis-ker"ə-to'sis*] abnormal, premature or imperfect keratinization of the keratinocytes as in primary seborrhea.
dyskeratotic [*dis-ker"ə-tot'ik*] pertaining to or of the nature of dyskeratosis.
d. alopecia deficiency of hair fibers in skin affected by dyskeratosis.
dyskinesia [*dis"kĭ-ne'zhə*] impairment of the power of voluntary movement.
ciliary d. see primary **ciliary** dyskinesia.
paroxysmal d. abonormalities of movement occurring in episodes. Scottie **cramp** is an example.
dyslipoproteinemia [*dis-lip"o-pro"te-ne'me-ə*] an abnormal distribution of lipoproteins in the blood.
dyslochia [*dis-lo'ke-ə*] disordered lochial discharge.
dysmaturity [*dis-mə- 'ĭ-te*] the condition of being small or immature for gestational age; said of fetuses that are the product of a pregnancy involving placental dysfunction. See also **prematurity** and dysmaturity in foals.
congenital hypothyroid d. syndrome of foals occurs predominantly in the prairie provinces of Canada and the Pacific Northwest USA and is manifest by prolonged gestation, dysmaturity and limb deformity due to delayed ossification of the carpal bones. Histologically, but not grossly, there is thyroid hyperplasia. In Canada, the syndrome has been associated with high nitrate concentrations in feed, but in the western USA epidemiological data suggest it occurs in late-foaling mares and results from ingestion of goitrogenic winter annual mustard species in the latter three months of gestation.
dysmelia [*dis-me'le-ə*] malformation of a limb or limbs due to disturbance in embryonic development.
dysmetria [*dis-me'tre-ə*] inability to properly direct or limit motions. A characteristic of cerebellar lesions.
dysmorphism [*dis-mor'fiz-əm*] 1. appearing under different morphological forms. 2. an abnormality in morphological development.
dysmorphogenesis giving rise to dysmorphism.
dysmyelination [*dis"mi-ə-lin-a'shən*] see **hypomyelination**.
dysmyelinogenesis any abnormality of myelin formation. Includes hypomyelinogenesis, as occurs in congenital tremor of piglets, and puppies and calves.
dysmyelopoiesis [*dis-mi"ə-lo-poi-e'sis*] see **myelodysplasia**.
dysmyelopoietic syndromes see **myelodysplasia**.
dysmyotonia [*dis"mi-o-to'ne-ə*] muscular dystonia; abnormal tonicity.
dysodontiasis [*dis"o-don-ti'ə-sis*] defective, delayed, or difficult eruption of the teeth.
dysontogenesis [*dis"on-to-jen'ə-sis*] defective embryonic development.
dysorexia [*dis"o-rek'se-ə*] impaired or deranged appetite.
dysostosis [*dis"os-to'sis*] defective ossification; a defect in the normal ossification of fetal cartilages.
dysoxia a state in which oxygen availability limits metabolism with an immediate fall in phosphorylation potential.
dyspancreatism disorder of function of the pancreas.
dyspepsia [*dis-pep'se-ə*] specifically, impairment of digestion, but commonly applied to subjective feelings of indigestion in humans.

dysphagia [*dis-fa'je-ə*] difficulty in swallowing.
cricopharyngeal d. see cricopharyngeal **achalasia**.
esophageal d. difficulty in swallowing due to esophageal malfunction.
gastroesophageal d. impaired passage of the bolus through the caudal esophageal sphincter.
neuropathic d. may be caused by lesions of the glossopharyngeal or vagus nerves or associated nuclei of the caudal medulla oblongata.
oral d. abnormal prehension and mastication.
oropharyngeal d. abnormalities in mastication and pharyngeal contraction may be caused by hypoglossal nerve dysfunction, polyneuropathy, polymyositis, meningitis, brainstem lesions and generalized neuromuscular disease.
Dysphania a genus in the plant family Chenopodiaceae; may cause cyanide poisoning. Includes *D. glomulifera* (red crumbweed), *D. littoralis* (red crumbweed), *D. rhadinostachya* (*Chenopodium rhadinostachyum*, mouse-tailed crumbweed).
dyspigmentation [*dis-pig"mən-ta'shən*] any abnormality of pigmentation of the skin or hair.
dysplasia [*dis-pla'zhə*] an abnormality of development; in pathology a developmental abnormality leading to alteration in size, shape and organization of adult cells.
black hair follicular d. see canine black hair **follicular** dysplasia.
canine hip d. see **hip** dysplasia.
occipital d. congenital enlargement of the foramen magnum, sometimes associated with hydrocephalus or cerebellar herniation or spina bifida. Observed most often in toy breeds of dogs.
dysplastic [*dis-plas'tik*] emanating from or pertaining to abnormality of development.
dyspnea [*disp-ne'ə ,disp'ne-ə*] labored or difficult breathing; a sign of a variety of disorders and is primarily an indication of inadequate ventilation, or of insufficient amounts of oxygen in the circulating blood.
expiratory d. the dyspnea is primary during the expiratory phase of respiration. Usually associated with lower airway obstruction.
inspiratory d. the dyspnea is primarily during the inspiratory phase of respiration. Usually associated with upper airway obstructions and sometimes disorders of the pleura.
dyspnoea dyspnea.
dyspoiesis a disorder of formation; as of blood cells.
dyspragia [*dis-pra'je-ə*] painful performance of any function.
dyspraxia [*dis-prak'se-ə*] partial loss of ability to perform coordinated movements.
dysprosium (Dy) [*dis-pro'se-əm*] a chemical element, atomic number 66, atomic weight 162.50. See Table 4.
dysproteinemia [*dis-pro"tēn-e'me-ə*] disorder of the protein content of the blood. This may be associated with clotting defects due to concurrent thrombocytopenia or to coating of the platelet with the abnormal protein.
dysraphism [*dis-rāf'iz-əm*] incomplete closure of a raphe, e.g. of the neural tube. The defect may be complete or partial.
spinal d. an inherited defect in Weimaraner dogs and reported in many other breeds. From an early age, affected puppies show varying degrees of 'bunny hopping', symmetrical and simultaneous use of the back legs, often overextending them before stepping forward. More severe defects have associated musculoskeletal abnormalities and may be a cause of perinatal death.

D-40: Sixteen-year-old cat with dyspnea and open mouth breathing caused by thoracic effusion due to feline infectious peritonitis. From August JR, Consultations in Feline Internal Medicine, Volume 6. Saunders, 2009.

D-41: Dystocia may damage the dam or the newborn. This calf has swelling of the tongue and face due to prolonged birth while the head was outside the vagina, and will have difficulty nursing the cow and getting an early intake of colostrum. Courtesy O Szenci.

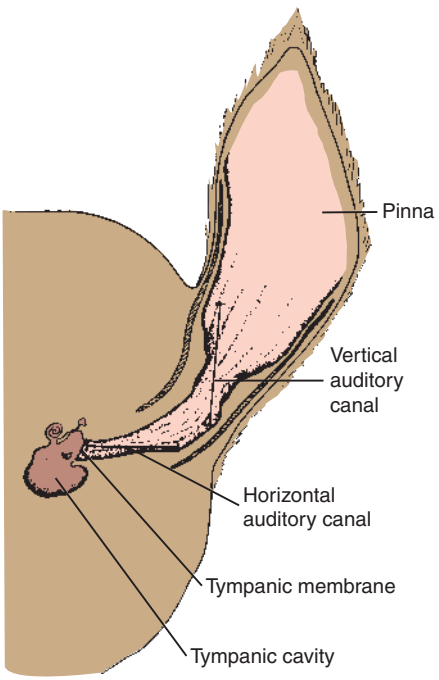
sternal d. congenital split of the sternum; may be associated with peritoneopericardial diaphragmatic hernia.
dysrhythmia [*dis-rith'me-ə*] disturbance of rhythm.
paroxysmal d. a cardiac rhythm disturbance which occurs briefly and transiently.
dysspermia [*dis-spur'me-ə*] impairment of the spermatozoa, or of the semen.
dysstasia [*dis-sta'shə*] difficulty in standing.
dyssynergia [*dis"sin-ur'je-ə*] muscular incoordination; called also reflex dyssynergia.
detrusor-sphincter d. see detrusor-urethral dyssynergia (below).
detrusor-urethral d. a disorder of micturition caused by a lack of coordination between contraction of the detrusor muscle and relaxation of the urethra; the urine stream is weak and intermittent, with dribbling. Occurs in large male dogs.
dystectia [*dis-tek'she-ə*] defective closure of the neural tube.
dysthrombopoiesis [*dis-throm"bo-poi-e'sis*] defective platelet formation, such as occurs in systemic lupus erythematosus, with histological changes evident in the platelets.
dysthyroid, dysthyroidal [*dis-thi'roid, dis"thi-roi'dəl*] denoting defective functioning of the thyroid gland.
dystocia [*dis-to'shə*] difficult parturition to the point of needing human intervention.
fetal d. that due to some condition inherent to the fetus.
maternal d. that due to some condition inherent in the dam.
placental d. difficult delivery of the placenta.
d. rate number of assisted births per hundred births.
d. risk the incidence of dystocia is enhanced by many factors including inherited large fetal size, especially in some breeds, high feeding level of the dam during pregnancy, inherited small diameter pelvic canal, youth of the dam, male calves compared to females, the occurrence of multiple births and congenital abnormalities which increase fetal size.
dystokia dystocia.
dystonia [*dis-to'ne-ə*] abnormality of muscular tonus.
dystopia [*dis-to'pe-ə*] malposition; displacement.
dystrophia [*dis-tro'fe-ə*] [Gr.] *dystrophy*.
d. adiposogenitalis see **adiposogenital dystrophy**.
d. epithelialis corneae dystrophy of the corneal epithelium, with erosions.
d. ungulae see **seedy toe**.
dystrophic [*dis-tro'fik*] pertaining to or emanating from dystrophia.
d. calcification mineralization of soft tissues can occur in **hyperadrenocorticism**, **vitamin D** toxicity, and **hypervitaminosis** A. See also **calcification**.
dystrophin [*dis'trə-fin*] a membrane-associated protein, deficient in some types of **muscular dystrophy**.
dystrophy [*dis'trə-fe*] any disorder due to defective or faulty nutrition. See also **corneal** dystrophy, **muscular dystrophy**.
bone d. see **osteodystrophia fibrosa**, **osteomalacia**, **rickets**, **osteoporosis**.
Duchenne d. see Duchenne **muscular dystrophy**.
muscular d. includes **enzootic** muscular dystrophy of cattle, sheep, pigs and foals, all of dietary origin, and some probably familial diseases in cattle, sheep and dogs. See also **muscular dystrophy**.
dysuria [*dis-u're-ə*] painful or difficult urination.
Dz abbreviation for disease; used in medical records.
dzo any cross between cattle and yak. Called also zho, zo.

VetBooks.ir

E

VetBooks.ir

e- for words beginning thus, see also those beginning *oe-*.
ε epsilon, small letter; fifth letter in the Greek alphabet. Used to designate random error in regression analysis.
η eta, small letter; seventh letter in the Greek alphabet.
EAE 1. experimental allergic encephalomyelitis. 2. enzootic abortion of ewes.
EAEC enteroaggregative or enteroadherent *Escherichia coli*.
eagle [*e'gəl*] raptor bird of the family Accipitridae. Although there is variation between species, they are generally large powerful birds with very good vision, a hooked beak and powerful talons making them formidable predators. Includes the harpy eagle (*Harpia harpyja*), golden eagle (*Aquila chrysaetos*), tawny eagle (*Aquila rapax*) and bald eagle (*Haliaeetus leucocephalus*).
EAN experimental allergic **neuritis**.
ear [*ēr*] the organ of hearing and of equilibrium. The ear is made up of the outer (external) ear, the middle ear and the inner (internal) ear. The anatomical parts of all three can be found under their specific names. See also **auricular**, **auditory**, **external ear**. The outer ear consists of the auricle, or pinna, and the external acoustic meatus. The auricle collects sound waves and directs them to the external acoustic meatus which conducts them to the tympanum. The tympanic membrane (eardrum) separates the outer ear from the middle ear. The middle ear contains three ossicles, the malleus (hammer), incus (anvil), and stapes (stirrup), so called because of their resemblance to these objects. These three small bones form a chain across the middle ear from the tympanum to the oval window of the inner ear. The middle ear is connected to the nasopharynx by the auditory tube, through which the air pressure on the inner side of the eardrum is equalized with the air pressure on its outside surface. Two muscles attached to the ossicles contract when loud noises strike the tympanic membrane, (the stapedius and tensor tympani) that limit its vibration and thus protect it and the inner ear from damage. The inner ear contains a bony labyrinth that supports a membranous labyrinth made up of the cochlea, semicircular canals, utriculus and sacculus. When a sound strikes the ear it causes the tympanic membrane to vibrate. The ossicles function as levers, gearing down the motion of the tympanic membrane so that its impedance of a membrane vibrating in air, matches the impedance of vibration in the fluid occurring in the inner ear, and passing the vibrations on to the cochlea. From there the vestibulocochlear (eighth cranial) nerve transmits the vibrations, translated into nerve impulses, to the auditory center in the brain. See also **hearing**. The semicircular canals, utriculus and sacculus, provide essential information for the sense of balance. See also **equilibrium**.



E-1: Anatomy of the canine ear.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

e. alopecia see pinnal **alopecia**.
bat e. an erect, broad-based ear in some dogs, especially the French bulldog and Welsh corgi.
bear e. one with a very rounded tip.
break in e. the fold line in the semi-dropped ear of dogs.
broken e. deformed or misshapen ears, as a result of injury or congenital defect. Most often of concern in dog breeds that are supposed to have erect or specifically defined ear conformation, e.g. Collie, German shepherd dog, Chihuahua.
button e. in dogs, an ear flap lying close to the head, and pointing toward the eye. Seen in fox terriers.
e. cancer a squamous cell carcinoma of the ear of sheep. The lesion commences around the free edge and then invades the entire ear.
e. canker a lay term applied generally to **otitis** externa but sometimes specifically to that caused by ear mites.
e. carriage drooped, erect, alert, all indicative of mental state or state of muscle tone. Also a specified feature of breed standards for dogs.
e. cartilage see auricular **cartilage**.
e. chewing a vice of confined pigs due largely to boredom and overcrowding.
e. cyst a misplaced tooth germ or ear tooth in horses; occur unilaterally at the base of the ear, attached to the temporal bone. Called also heterotopic polyodontia.
drop e. an ear that is normally not erect; the end folds over or droops forward. Seen in many dog breeds.
drooping e. inability of the ear to remain in an upright position in those species in which that is the norm. It may be a congenital abnormality, due to injury that has damaged the cartilage, or a sign of neurological deficit.
e. hematoma see **auricular** hematoma.
e. mange see **psoroptic mange**, ***Otodectes*** *cynotis*, ***Raillietia***.
e. mark patterned pieces of cartilage punched out as a means of identification. Very popular at one time with intricate codes to identify age and family groups of pigs. Marks nicked out of the edges but also the centers of the ears.
e. notch see ear mark (above).
e. notch test used for detecting cattle persistently infeced with bovine virus diarrhea virus using immunohistochemistry on the ear notch sample. Provides an easily collected sample and a less expensive antemortem diagnostic test.
e. plaque hypertrophic dermatitis appearing as small (0.5 inch diameter) plaques on the inner surface of the ear pinna in horses. They are scaly, slightly papillomatous, painless and alopecic. The cause is unknown.
e. points see **auricular** points.
e. punch alligator forceps with cup-shaped opposing blades up to 1.5 inch diameter. A biopsy instrument for use in the depths of the ear canal.
e. resection see lateral ear **resection**, vertical ear canal **resection**.
e. rigid ear pricked and patient unable to move them; indicative of general skeletal muscle tetany.

rose e. a requirement for the Bulldog: the lower edge folds inward while the upper edge folds outward and backward, so that the ear is folded down but the inner part of the pinnae is exposed.
e. sloughing result of phlebitis and venous thrombosis occurring in many septicemias. It is most common in pigs where it begins as purple discoloration of the ears and surrounding skin. Also part of the response in peripheral gangrene syndrome caused by ingestion of ergot alkaloids.
spinose e. tick see ***Otobius*** *megnini*.
e. sucking a vice occurring in penned pigs and calves caused by boredom. Has no serious effect unless it leads to cannibalism in pigs.
e. tag a technique of animal identification favored in sheep and cattle. Has the disadvantage that tags are often lost. This can be avoided by putting duplicates in each ear (double tagged). The need to catch the animal to read the tag is overcome by using large placard type tags. For cattle being worked through a chute, tail tags are more convenient. Insecticides can be incorporated into the tag to provide protection against horn fly and head fly. May contain transponders for individual identification or trace back.
e. tick see ***Otobius*** *megnini*.
e. tipping clipping off the tip of the external ear so that the animal can be identified from a distance. Limited categories available.
e. tip necrosis a common problem in individual pig herds; sporadic cases usually related to frostbite, thrombosis after septicemic disease, especially *Salmonella dublin* in young calves; herd problems may be due to ergot poisoning or endophyte-containing hay, or an ear-sucking habit.
e. tooth see ear cyst (above).
e. trimming see **ear cropping**.
ear cropping [ēr] a cosmetic surgical procedure carried out on dogs of certain breeds, including Boxer, Great Dane, Schnauzer, Doberman pinscher and Bouvier des Flandres, that removes approximately one-third of the ear flap and braces the remainder so it stands erect during the healing process. Practiced widely in the USA, but considered inhumane and an unethical procedure in most of the British Commonwealth countries and some European countries.
e. c. clamps clamps consisting of two aluminum bars with thumbscrews at both ends to screw the bars together, with the part of the ear to be cropped protruding from the edge. They act as a template for cropping the ears of dogs in the correct shape.
eardrum [ēr'drəm] see **tympanic** membrane.

E-2: Calf double-tagged with large plastic identification tags in the ears.

E-3: Ear tip necrosis in a calf associated with *Salmonella dublin* infection.

early warning system a specific procedure for the early detection of any departure from normal frequencies of clinical cases or serological reactors of specific diseases by monitoring a sample of the population at risk. An essential requirement for effective containment and control of epidemic animal diseases and zooonoses.
earmark [ēr'mahrk] taking a piece out of the edge or center of the ear with a punch as an identification mark. The shape of the mark may be registerable under local legislation. Called also ear notch.
earsore [ēr'sor] dermatitis around the ear of water buffalo caused by *Stephanofilaria zaheeri*.
earth [ərth] 1. soil; softer part of the land, as distinct from rock. 2. metallic oxides in the form of unchangeable powder.
diatomaceous e. a fine white powder composed of the siliceous skeletons of diatoms; used in treating diarrhea and as a feed additive. Called also infusorial earth, purified siliceous earth.
infusorial e. see diatomaceous earth (above).
siliceous e. see diatomaceous earth (above).
earth-eating most commonly associated with nutritional deficiency of sodium chloride. See also **pica**.
earthing [ərth'ing] the safety device of connecting an electrical system in a building to the earth, especially in a milking shed. Failure of the connection causes electrification of parts of the building. This may cause poor milk letdown, restlessness, convulsions or sudden death depending on the strength of the current and the completeness of the animals' contact with the floor. See also **electrocution**, **free** electricity.
earthworm [ərth'werm] the common oligochete worm of the genera *Lumbricus*, *Allobophora*, *Eisenia*, etc.; they act as intermediate or transport hosts for a number of internal parasites of livestock, and are reputed to bring anthrax spores to the surface and precipitate an outbreak of the disease.
earwax [ēr'waks] see **cerumen**.
e. remover various proprietary mixtures are used to aid in the removal of cerumen in the treatment of otitis externa.
earworm [ēr'werm] infestation of the ears of cattle by ***Rhabditis*** *bovis*, often complicated by blowfly infestation.
ease of fracture bones fracture easily due to local weakness of structure and calcification due to osteomyelitis or generalized osteoporosis. Can be the presenting indication of a copper deficiency problem in mature cattle.
East African sleeping sickness a disease of humans caused by *Trypanosoma rhodesiense*. The parasite is infectious for many animal species which act as reservoirs for humans. The disease is fatal in humans if it is not treated. Keratitis and encephalitis occur in goats and sheep, facial paralysis and emaciation in horses.
East African swine fever see **African** swine fever.
East Coast fever a disease of cattle caused by ***Theileria*** *parva* and transmitted by the tick ***Rhipicephalus*** *appendiculatus*. Other ticks are known to be capable of transmitting the infection. Resident and zebu cattle are resistant to infection. Clinical signs in susceptible animals are high fever, lymphadenopathy, nasal discharge, lacrimation, diarrhea and dysentery. The mortality rate is high.
East Friesian, East Friesland marsh-type dairy sheep, polled, with a woolless rat-tail.
east-west front in dog conformation, front feet turned outwards.
Easter flower see ***Anemone***.
Easter lily see ***Lilium longiflorum***.
Easter rose ***Helleborus*** *niger*.
Eastern equine encephalitis see Eastern equine **encephalomyelitis**.
Easton's syrup an antique proprietary medicine from the era of empirical remedies and nonspecific stimulants. Contains strychnine (renowned as a stimulant), iron phosphate (listed as a brain

E-4: East Friesian or East Friesland dairy sheep. From Sambraus HH, Livestock Breeds. Mosby, 1992.

food) and quinine (appetite and general stimulant). Available also as tablets.

easy-care sheep sheep of any breed but selected for ease of lambing. Is a response to the need to reduce labor inputs into sheep husbandry.

easy keeper an animal of any species that grows or fattens on a smaller intake than average.

eating [ēt'ing] combined prehension, mastication and swallowing.
e. disorders see **anorexia**, **regurgitation**, **quidding**, **dysphagia**, **polyphagia**, **pica**.

EBA enzootic bovine abortion.

EBHS European brown hare syndrome.

Ebner named after Victor von Ebner (1842–1925), Australian anatomist and histologist.
E's glands specialized lingual glands that secrete a serous product; are associated with the large gustatory lingual papillae.
E's lines incremental lines in the dentin of normal teeth.

Ebola virus [eb'o-lə] see ***Filoviridae***.

Ebstein's anomaly [eb'shtīn] a malformation of the tricuspid valve, usually associated with an atrial septal defect, characterized by a downward displacement of the base of the valves.

eburnation [e"bər-na'shən] formation of smooth, dense bone surfaces in false joints, or joints whose articular cartilage has been destroyed.

EBV estimated **breeding value**.

E&C euthanasia and cremation.

ec- prefix meaning outward.

ecaudate [e-kaw'dāt] tailless.

Ecballium elaterium toxic plant in the family Cucurbitaceae; contains cucurbitacins, which cause diarrhea and enteritis. Called also squirting cucumber.

ecbolic [ek-bol'ik] oxytocic; promotes myometrial contractions.

eccentrocyte an erythrocyte in which the hemoglobin is localized to part of the cell, leaving a portion with little hemoglobin. Caused by oxidative injury to the cell. Called also hemighost.

ecchondroma, ecchondrosis [ek"on-dro'mə, ek"on-dro'sis] a hyperplastic growth of cartilaginous tissue on the surface of a cartilage or projecting under the periosteum of a bone.

ecchymoma [ek-ĭ-mo'mə] swelling due to blood extravasation.

ecchymosis [ek"ĭ-mo'sis] pl. *ecchymoses* [Gr.] a hemorrhagic spot, larger than a petechia, in the skin or mucous membrane, forming a nonelevated, rounded or irregular, blue or purplish patch.

ecchymotic hemorrhage [ek-ĭ-mot'ik] see **ecchymosis**.

eccrine [ek'rin] exocrine, with special reference to glands that secrete their product without loss of cytoplasm. See **sweat** glands.
e. tumors adenomas and adenocarcinomas occur rarely.

eccritic 1. promoting excretion. 2. an agent that promotes excretion.

eccyesis [ek"si-e'sis] ectopic pregnancy; implantation of the embryo ion an abnormal location. Called also tubal pregnancy.

ecdysis [ek'dĭ-sis] shedding of the external layers of the skin-only the epidermis participates. Is controlled by the endocrine glands. May be complete or incomplete due usually to poor nutrition. Called also exuviate. See also **dysecdysis**.

ECF 1. extracellular fluid. 2. early conception factor

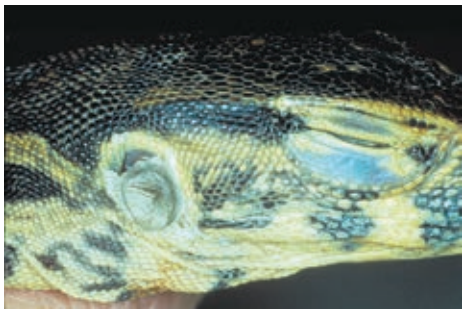
ECF-A eosinophil chemotactic factor of anaphylaxis.

ECG electrocardiogram. Called also EKG.

eCG equine chorionic gonadotropin. A glycoprotein hormone with both FSH and LH activity and used for ovarian stimulation in ruminants. Called also pregnant mare serum gonadotropin.

echidna [e-kid'nə] a small (up to 15 lb) monotreme, covered in coarse hair and sharp spines. The short-beaked echidna (*Tachyglossus aculeatus*) is found in Australia and New Guinea and the long-beaked echidna (*Zaglossus bruijni*) only in New Guinea. These two species, in the Family Tachyglossidae, are the only members of their genera. They have no teeth, but use their sticky tongue for feeding on ants and termites; their pectoral girdle has two additional bones; the males have prominent hindlimb spurs and the male's glans is divided into four heads, each with a branch of the urethra. As monotremes, the female lays her egg directly into a shallow abdominal pouch and feeds her young with milk expressed directly onto the skin of the pouch. The young are called puggles. Called also spiny anteater.

E-5: Ecchymoses.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.



E-6: A monitor lizard (*Varanus* spp.) undergoing ecdysis here sheds the outer layer of transparent skin that covers the tympanic membrane.
From Mader DR, Reptile Medicine and Surgery, 2nd Edition. Saunders, 2005.

Echidnophaga [ek"id-nof'ə-gə] a genus of fleas that remain attached to the host for long periods. Includes *E. myrmecobii* (in rabbits) and *E. perilis* (in rats).
E. gallinacea causes insect worry and blood loss in poultry. Does not transmit disease in animals but may transmit endemic murine typhus to humans. Called also stickfast flea.

echimidine one of the toxic pyrrolizidine alkaloids in *Echium plantagineum*.

Echinacea [ek"ĭ-na'shə] a genus of plants in the family Astraceae; source of the popular herbal product echinacea, used mainly as a stimulant of the immune system.

echinatine a toxic alkaloid in *Cynoglossum officinale*.

echinocandins a class of fungicidal agents that inhibit β-glucan synthase in fungal cell walls; effective against *Candida* spp., *Aspergillus* spp. and *Pneumonocystis carinii*, but not *Cryptococcus neoformans*. Includes caspofungin, micafungin and anidulafungin.

Echinochasmus [e-ki"no-kaz'məs] a genus of flukes of the family Echinostomatidae. Includes *E. perfoliatus* in intestines of carnivores.

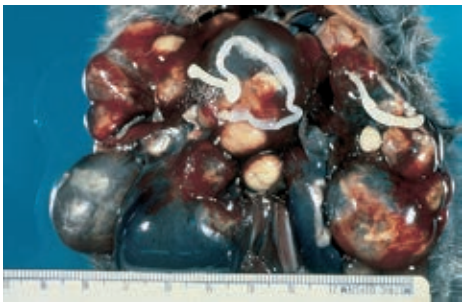
Echinochloa genus of grasses in the family Poaceae. Mostly good forage plants but linked anecdotally with outbreaks of primary photosensitization in grazing ruminants. Toxin unidentified but some plants contain high concentrations of nitrate. Includes *E. crus-galli* (barnyard grass, Japanese millet), *E. pyramidalis* (antelope grass), *E. utilis*.

echinococcosis [e-ki"no-kok-o'sis] an infection of humans and animals, usually of the liver or lungs, caused by the larval stage (hydatid cysts) of **tapeworms** of the genus *Echinococcus*, marked by the development of expanding cysts. See also **hydatid** disease. A disease notifiable to the OIE (see Table 22).

Echinococcus [e-ki"no-kok'əs] a genus of small **tapeworms** of the family Taeniidae.

E-7: Adult *Echidnophaga gallinacea*, the stick-tight flea of poultry. A common flea of chickens and guinea fowl, it also feeds on dogs and cats.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

VetBooks.ir



E-8: *Echinococcus multilocularis* in a rat. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

VetBooks.ir

E. granulosus a species parasitic in dogs and wolves and occasionally in foxes and cats; its larvae may develop in ungulates and macropods, forming hydatid cysts in the liver, lungs, kidneys and/or other organs.

E. multilocularis a species whose adult stage usually parasitizes the fox, dog and cat. It resembles *E. granulosus*, but the larval stage in the intermediate host represents alveolar or multilocular rather than unilocular cysts which occur principally in rodents but infect humans.

E. oligarthus occurs in wild cats with larval stages in rodents.

E. vogeli occurs in domestic and wild dogs with intermediate stages in rodents and humans.

echinocyte [*e-ki'no-sīt*] a spiculated erythrocyte with different configurations. Artifactual echinocytes, which can be found in old blood or caused by excess EDTA, are called crenated erythrocytes. Also associated with snake envenomation, doxorubricin toxicosis, and phosphokinase deficiency in dogs. An expected finding in a smear of porcine blood. Called also burr cell.

Echinolaelaps echidninus [*e-ki"no-le'ləps*] the spiny rat mite, transmitter of *Hepatozoon* spp., the protozoan blood parasite. A mite of the Gamasidae family. Called also laelapid mite.

Echinoparyphium a genus of the fluke family Echinostomatidae.

E. paraulum see ***Echinostoma revolutum***.

E. recurvatum occurs in the small intestine of doves, pigeons and domesticated birds, and can cause emaciation and anemia.

Echinophthirius horridus sucking lice of seals; cause pruritus and self-injury.

Echinopogon genus of grasses in the Poaceae family; toxic species contain a fungal endophyte that produces an unidentified tremorgenic toxin causing incoordination, convulsions and distressed breathing. Includes *E. caespitosus*, *E. ovatus*. Called also rough-bearded grass, hedgehog grass.

Echinorhynchus salmonis [*e-ki"no-ring'kəs*] acanthocephalan parasite of freshwater and marine fish. Found in the intestine of salmonids.

Echinostoma [*ek"ī-nos'to-mə*] a genus of flukes in the family Echinostomatidae. Includes, besides those listed below, *E. aphylactum*, *E. caproni*, *E. hortense*, *E. jassyenese*, *E. lindoensis* and *E. suinum*.

E. iliocanum found in the intestine of dogs, rodents and humans and may cause enteritis.

***E. revolutum* (syn. *E. paraulum*)** found in the rectum and ceca of birds and in humans. Severe infestations may cause enteritis.

Echinostomatidae [*ek"ī-no-sto-mat'ĭde*] a family of flukes (digenetic trematodes) found in birds.

echinulate [*e-kin'u-lāt*] having small spikes or prickles.

Echinuria a genus of spiruroid nematodes of the family Acuariidae. Includes *E. uncinata* (infests the upper alimentary tract of birds, causing caseous nodules in the wall of the esophagus).

Echium a genus of the Boraginaceae family of plants; contains a series of hepatotoxic pyrrolizidine alkaloids and continued ingestion of the plants causes chronic liver damage. The plant also contributes to the development of toxemic jaundice, the end-stage of chronic copper poisoning in sheep. Includes *E. plantagineum* (*E. lycopsis*), *E. sericeum*, *E. vulgare*. Called also Paterson's curse, Salvation Jane, Viper's buglos, Lady Campbell weed.

echiumidine one of the hepatoxic pyrrolizidine alkaloids in *Echium plantagineum*.

echo [*ek'o*] a reflected sound; the basis for **echocardiography** and **ultrasonography**.

echo-ranging [*ek"o-rānj'ing*] in ultrasonography, determination of the position or depth of a body structure on the basis of the time interval between the moment an ultrasonic pulse is transmitted and the moment its echo is received.

echocardiogram [*ek"o-kahr'de-o-gram"*] the record produced by echocardiography.

echocardiography [*ek"o-kahr"de-og'rə-fe*] recording of the position and motion of the heart walls or internal structures of the heart and neighboring tissue by the echo obtained from beams of ultrasonic waves directed through the chest wall. Echocardiography is based on the same principle as the oceanographic technique of depth-sounding; that is, it utilizes ultrasound to delineate anatomical structures by recording on a graph the echoes from the heart structures. It is particularly useful in demonstrating, without danger to the patient, valvular and other structural deformities of the heart which formerly required **cardiac** catheterization or some other elaborate procedure for accurate diagnosis. See also **ultrasonography**.

contrast e. microbubbles in liquid are used as a vascular contrast medium. When injected intravenously in a selected or non-selected location, these can be tracked to demonstrate abnormalities of blood flow.

transesophageal e. the ultrasound probe is mounted on a flexible endoscope and is positioned in the esophagus over the base of the heart, thus enabling unique viewing projections of structures in this area.

echocontrast agents [*ek"o-kon'trast*] see contrast **echocardiography**.

echoencephalogram [*ek"o-en-sef'ə-lo-gram*] the record produced by echoencephalography.

echoencephalography [*ek"o-en-sef"ə-log'rə-fe*] a diagnostic technique in which pulses of ultrasonic waves are beamed through the head from both sides, and echoes from the midline structures of the brain are recorded graphically; shifts from any midline may indicate a centrally placed mass.

echogenic [*ek"o-jen'ik*] in **ultrasonography**, giving rise to reflections (echoes) of ultrasound waves; hyperechoic.

echogenicity [*ek"o-jen-is'ĭ-te*] the characteristic ability of a tissue or substance to reflect sound waves and produce echoes. Bone and gas are most echogenic and fluids such as urine and bile the least. Organ parenchyma and soft tissues are intermediate, but each differs slightly from the other and relative characteristics are known.

echogram [*ek'o-gram*] the record made by echography.

echography [*ə-kog'rə-fe*] **ultrasonography;** the use of ultrasound as a diagnostic aid. Ultrasound waves are directed at the tissues, and a record is made, as on an oscilloscope, of the waves reflected back through the tissues, which indicate interfaces of different acoustic densities and thus differentiate between solid and cystic structures.

echolocation [*ek"o-lo-ka'shən*] producing, receiving and interpreting ultra-high frequency sound waves for navigation or location of prey. Used by bats and toothed whales. Called also biosonar.

echolucent [*ek"o-loo'sənt*] permitting the passage of ultrasonic waves without giving rise to echoes, the representative areas appearing black on the sonogram.

echophonocardiography [*ek"o-fo"no-kahr"de-og'rə-fe*] the combined use of echocardiography and phonocardiography.

echopoor hypoechoic.

echovirus [*ek'o-vi"rəs*] some viruses, which were originally considered nonpathogenic, in the family *Picornaviridae*, genus *Enterovirus*. The name is derived from the first letters of the description '*e*nteric *c*ytopathogenic *h*uman *o*rphan', but similar viruses ECBO and ECPO (for bovine and porcine, respectively, and other species) are also recognized. At the time of the isolation of the viruses the diseases they caused were not known, hence the term 'orphan', but it is now known that some of these viruses produce many different types of human disease, especially aseptic meningitis, and diarrhea and various respiratory diseases. The members of the group are now included in the enteroviruses.

Eck's fistula [*ek*] an artificial communication made between the portal vein and the vena cava.

eclabium eversion of a lip.

eclampsia [*ə-klamp'se-ə*] a syndrome including convulsions and coma occurring in animals soon after birth of the young; nonspecific because the etiology and clinical features vary depending on which species is involved.

bitch e. see puerperal **tetany**.
guinea pig e. see **pregnancy** toxemia (3) and **ketosis**.
mare e. see **lactation tetany** (2).
puerperal e. see puerperal **tetany**.
sow e. a poorly defined condition of older sows after farrowing which responds to treatment with calcium and magnesium.

eclamptogenic [ə-klamp"to-jen'ik] causing eclampsia.

Eclectus roratus small, wax-billed parrot in the family Psittacidae; the males are green, the females wine-red; called also eclectus parrot. Popular as an aviary bird.

eclipse period [e-klips'] the time interval between viral penetration and the production of progeny virions.

ecological emanating from or pertaining to ecology.
e. biome see **biome**.
e. climax the state of balance in an ecosystem when its inhabitants have established their permanent relationships with each other.
e. fallacy bias following misinterpretation that ecological factors affect all individuals equally.
e. imbalance the naturally occurring changes in the environment, e.g. bushfires, floods, volcanic fallout, which leave it unbalanced with respect to the type and quality of the feed they provide.
e. interface the border between two ecosystems.
e. mosaic a pattern of interspersed ecosystems.
e. niche 1. the position occupied by an organism in relation to other organisms and to the environment. 2. a particular part of an ecological environment in which a particular plant or animal species prospers. It is the set of terms, in relation to food and water supply and relationship with predators and disease and with competitors, by which the organism achieves its full biological potential.

ecologist [e-kol'o-jist] a person skilled in ecology.

ecology [e-kol'ə-je] the science of organisms as affected by environmental factors; the study of the environment and the life history of organisms.

econazole [ə-kon'ə-zōl] an imidazole antifungal agent related to miconazole; used topically in the treatment of fungal infections of the skin.

EcoR1 EcoR1 restriction endonuclease.

ecosystem [e'ko-sis"təm] the fundamental unit in ecology, comprising the living organisms and the nonliving elements interacting in a certain defined area. In more sophisticated terms, a biotic community living in its biotope.

ecotaxis [e'ko-tak'sis] the movement or 'homing' of a circulating cell, e.g. a lymphocyte, to a specific anatomical compartment. See **homing**.

ecotype [e'ko-tīp] a breed or race within a species adapted to a specific environment.

ECSU extracorporeal circulatory support unit.

ECT electroconvulsive therapy.

ectasia [ek-ta'zhə] expansion, dilatation or distention.

ectasis [ek'tə-sis] see **ectasia**.

-ectasis suffix meaning expansion.

ectental [ek-ten'təl] pertaining to the ectoderm and endoderm, and to their line of junction.

ecthyma [ek-thi'mə] a shallowly eruptive form of impetigo.
contagious e. a specific dermatitis of sheep caused by a poxvirus in the genus *Parapoxvirus*. The virus is strongly antigenic and an attack of the disease or vaccination provides long-lasting immunity. If the flock has previously been exposed the disease is restricted in occurrence to lambs and young sheep. The characteristic lesions occur mostly on the lips and the skin around the mouth, but have appeared wherever skin contact has been made with a source of infective virus, e.g. ear tagging, tail docking. Lesions are first papules, then crusts, and finally discrete thick tenacious scabs over vigorous granulation tissue. Very young lambs develop an extensive form of the disease involving even the alimentary tract. Occasional older sheep also have extensive lesions on other skin areas such as the coronets, and at the other mucocutaneous junctions. The disease is transmissible to humans. Called also orf, scabby mouth, contagious pustular dermatitis.

ect(o)- word element. [Gr.] *external, outside.*

ectoantigen [ek"to-an'tə-jən] 1. an antigen that seems to be loosely attached to the outside of bacteria. 2. an antigen formed in the ectoplasm (cell membrane) of a bacterium.

ectoblast [ek'to-blast] the ectoderm.

E-9: Proliferative lesions of contagious ecthyma on the face of a Suffolk sheep. Suffolk sheep have a particular propensity to develop proliferative, strawberry-like lesions, with this infection.

ectocardia [ek"to-kahr'de-ə] congenital displacement of the heart; exocardia.

ectocervix [ek"to-sur'viks] the vaginal part of the cervix. Called also portio vaginalis.

ectoderm [ek'to-dərm] the outermost of the three primitive germ layers of the embryo; from it are derived the epidermis and epidermal derivatives, such as the claws, hair and glands of the skin, the nervous system, external sense organs (eye, ear, etc.) and mucous membrane of the mouth and anus.

ectodermal [ek"to-dur'məl] pertaining to the ectoderm.
anhidrotic e. dysplasia characterized by hypotrichosis, reduced number of sweat glands, and incisor anodontia in cattle; caused by a deletion in the bovine EDA gene on the X-chromosome. Called also congenital hypotrichosis with anodontia, congenital X-linked ectodermal dysplasia.

ectodermosis [ek"to-dər-mo'sis] a disorder based on congenital maldevelopment of organs derived from the ectoderm.

ectoentad [ek"to-en'tad] from without inward.

ectoenzyme [ek"to-en'zīm] an extracellular enzyme.

ectogenous [ek-toj'ə-nəs] originating outside the organism.

ectoglobular [ek"to-glob'u-lər] formed outside the blood cells.

ectomere [ek'to-mēr] one of the blastomeres taking part in formation of the ectoderm.

-ectomy word element. [Gr.] *excision, surgical removal.*

ectoparasite [ek"to-par'ə-sīt] a parasite living on the surface of the host's body.

ectoparasitism [ek"to-par'ə-si-tiz-əm] the state in which the ectoparasite is living on the surface of the host's body.

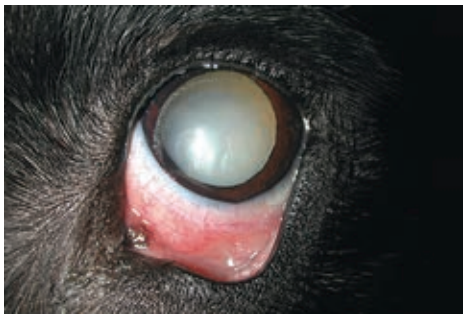
ectophyte [ek'to-fīt] a plant parasite living on the surface of the host's body.

ectopia [ek-to'pe-ə] [L.] *ectopy* displacement or malposition, especially if congenital.
e. cordis congenital displacement of the heart outside the thoracic cavity.
e. lentis displacement of the crystalline lens away from its usual site of attachment to the ciliary body via the lens zonules. Now called **lens** dislocation. An inherited syndrome of Jersey cattle; the calves are normal in other respects. Also occurs in **Marfan syndrome**,

ectopic [ek-top'ik] 1. pertaining to or characterized by ectopy. 2. located away from normal position. 3. arising or produced at an abnormal site or in a tissue where it is not normally found. See also specific sites or structures.
e. ACTH syndrome production of ACTH by nonpituitary tumors occurs in humans and is a cause of adrenal hyperplasia and hyperadrenocorticism. It has not been reported in animals.
e. endocrinopathy production of hormones by nonendocrinal, usually neoplastic, tissues. The most common example in animals is pseudohyperparathyroidism in dogs caused by a variety of tumors, particularly apocrine adenocarcinomas of the anal sacs and lymphosarcoma.
e. heart see **ectopia** cordis.
e. kidney usually an unascended kidney.
e. teeth see **dental** cyst.

ectoplacental cone [ek"to-plə-sen'təl] a syncytial body formed in the murine trophoblast; an essential component of the nidation process in this species.

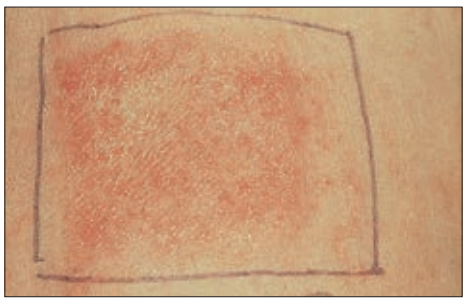
ectoplasm [ek'to-plaz"əm] an old-fashioned term which referred to a peripheral band of gel-like cytoplasm, free of organelles, found in free and motile cells.



E-10: Ectropion of the lower eyelid (and unrelated immature cataract) in an 8-year-old Saint Bernard.
From Dziezyc J, Millchamp N, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2004.

E-12: Dependant edema in the subcutaneous tissues of the ventral abdomen and in the prepuce of a horse.

ectopy [*ek'to-pe*] ectopia.
ectosteal [*ek-tos'te-əl*] pertaining to or situated on the outside of a bone. See also **periosteal**.
ectostosis [*ek"to-sto'sis*] ossification beneath the perichondrium of a cartilage or the periosteum of a bone.
ectothrix [*ek'to-thriks*] a fungus that grows inside the shaft of a hair, but produces a conspicuous external sheath of spores.
ectoturbinates [*ek"to-tur'bĭ-nāts*] papyraceous bones in the nasal cavity which are interleaved with endoturbinates.
ectozoon [*ek"to-zo'on*] ectoparasite.
ectr(o)- word element. [Gr.] *miscarriage, congenital absence*.
ectrodactylia [*ek'tro-dak-til'e-ə*] inherited, congenital skeletal defect in pups and kittens; there is incomplete fusion of the three rays that develop from the forelimb bud in the embryo; the paw is split up the middle as far as the metacarpals or to the carpus in some. Typically, the third metacarpal and digit are missing. Called also split-hand or lobster claw deformity.
ectrodactyly [*ek"tro-dak'tə-le*] see **ectrodactylia**.
ectrogeny [*ek-troj'ə-ne*] congenital absence or defect of a part.
ectromelia [*ek"tro-me'le-ə*] 1. gross hypoplasia or aplasia of one or more long bones of one or more limbs. 2. a generalized poxvirus disease of mice resembling smallpox in humans. Used in studies as a model of generalized virus infections.
ectromelus [*ek-trom'ə-ləs*] exhibiting ectromelia.
ectropion [*ek-tro'pe-on*] eversion or turning outward, as of the margin of an eyelid.
cicatricial e. caused by contraction of scar tissue following injury or surgery to the eyelid.
congenital e. ectropion present at birth; usually heritable. Seen most commonly in some breeds of dogs, such as Saint Bernard, Bloodhound, Newfoundland and Mastiff.
heritable e. ectropion of genetic origin. Often but not always congenital. May improve or worsen as the animal reaches facial maturity.
e. uveae eversion or rolling out of the pupillary margin; seen clinically or histologically with chronic iritis; called also iridectropium.
eczema [*ek'zə-mə*] 1. a general term for any superficial inflammatory process involving primarily the epidermis, marked early by redness, itching, minute papules and vesicles, weeping, oozing and crusting, and later by scaling, lichenification and often pigmentation. 2. atopic dermatitis.
facial e. see **facial** eczema.
miliary e. see feline miliary **dermatitis**.
moist e. see acute moist **dermatitis**.
nasal e. see solar **dermatitis**. Called also Collie nose.



E-11: An erythematous and eczematous skin reaction.
From Male D, et al, Immunology, 7th Edition. Mosby, 2007.

summer e. see equine **allergic** dermatitis.
watery e. **exudative** epidermitis.
eczematoid [*ek-zem'ə-toid*] resembling eczema.
eczematous [*ek-zem'ə-təs*] characterized by or of the nature of eczema.
E&D euthanasia and disposal.
ED_{50} median effective dose; 50% effective dose.
EDB ethylene dibromide; a grain fumigant toxic to chickens.
edema [*ə-de'mə*] an abnormal accumulation of fluid in the cavities and intercellular spaces of the body. Edema is due to diminished capacity of small blood vessels to retain water and solutes within their lumens. This in turn is caused by three factors acting singly or in combination: (1) decreased colloid osmotic pressure within blood vessels, usually due to hypoproteinemia; (2) decreased hydrostatic pressure differential between arterial and venous ends of blood capillaries (seen in heart failure or restricted venous or lymphatic drainage); and (3) increased capillary permability caused by inflammation or other endothelial disturbance. See also **anasarca**, **ascites**, **hydrothorax**, **hydropericardium** and anatomically located edemas, e.g. brain, corneal, pulmonary edema.
angioneurotic e. see **angioedema**.
cardiac e. is part of the syndrome of congestive heart failure. It comprises 'bottle jaw', jugular vein engorgement, edema of the brisket and underline, and ascites, hydrothorax and hydropericardium. See also congestive **heart failure**.
cerebral e. see **cerebral** edema.
dependent e. edema affecting most severely the lowermost parts of the body.
e. disease 1. in *pigs* a highly fatal disease of young pigs in the weaner and grower age groups characterized by incoordination, a hoarseness of voice, weakness, flaccid paralysis and blindness. Edema of the eyelids, face and ears is diagnostic but is seldom visible on clinical examination. The course is short, often less than 24 hours, and many pigs are just found dead. The disease is caused by the opportunistic proliferation of specific serotypes of *Escherichia coli* in an intestinal environment brought about by a change to a diet more dense in carbohydrates. These have pilus attachment antigens that allow attachment of the organism to the small intestines and produce a verotoxin (VT2e) which produces an increase in vascular permeability in the target vessels in the CNS with resultant neurological disease. Called also gut edema, bowel edema. 2. in *goats* a disease caused by *Mycoplasma* strain F38; a fatal cellulitis.
gravitational e. see dependent edema (above).
gut e. see edema disease (above).
hepatic e. edema is a common accompaniment of hepatic disease because of the decline in production of plasma proteins and a fall in the blood's hydrostatic pressure. Ascites may occur independently because of portal hypertension when there is severe liver disease and obstruction to blood flow in the portal vein.

E-13: Edema disease. Recumbent depressed pig showing edema of eyelid and forehead.
Courtesy of JT Done.

hypoproteinemic e. caused by insufficient production of albumin or excess loss through a protein losing enteropathy. See hepatic edema (above), **Johne's disease**, **proliferative** enteropathy, type II **ostertagiasis**.
laryngeal e. see **laryngeal** edema.
leg e. a disease of market age turkeys of unknown cause and characterized by edema of the legs and focal muscle necrosis.
neurogenic pulmonary e. results from head trauma, central nervous system lesions and toxins, which may cause increased pulmonary blood pressure and alteration to sympathetic innervation leading to fluid leakage from vessels. Known also as non-cardiogenic pulmonary edema.
pitting e. edema in which pressure by the clinician's finger leaves a persistent depression in the tissues.
pulmonary e. an effusion of serous fluid into the pulmonary interstitial tissues and alveoli. Preceded by pulmonary congestion or by increased alveolar capillary permeability. If sufficiently severe may cause hypoxemia. The breathing will then be labored, the normal breath sounds on auscultation may be absent, and a frothy nasal discharge, often blood-tinged, may appear. At this stage the animal's life is about to terminate.
subcutaneous e. may be generalized and constitute **anasarca**. Local areas of edema occur in such other conditions as **angioedema** and **urticaria**, edematous plaques in dourine and infectious equine anemia, and in purpura hemorrhagica.
vasogenic e. see vasogenic **cerebral** edema.

edemagen [*ə-de'mə-jen*] an irritant that elicits edema by causing capillary damage but not the cellular response of true inflammation.
plant e. plant substances that cause edema in animals, e.g. 3-methyl indole, produced in the rumen from tryptophan.

edematogenic [*ə-dem"ə-to-jen'ik*] producing or causing edema.

edentate [*e-den'tāt*] an animal without teeth, e.g. giant anteater.

edentia [*e-den'shə*] absence of the teeth.

edentulous [*e-den'tu-ləs*] without teeth.

edetate [*ed'ə-tāt*] any salt of ethylenediaminetetraacetic acid (EDTA), including *edetate disodium calcium*, used in the diagnosis and treatment of lead poisoning, and *edetate disodium*, used in the treatment of poisoning with lead and other heavy metals, and, because of its affinity for calcium, in the treatment of hypercalcemia. Also commonly used as anticoagulants for blood samples collected for laboratory analysis, particularly hematology.

edetic acid [*ə-det'ik*] ethylenediamine tetra-acetic acid (EDTA).

EDIM epizootic diarrhea of infant mice. See **murine** epizootic diarrhea.

Edles Warmblut horse German light horse.

EDRF endothelium-derived relaxing factor.

edrophonium [*ed"ro-fo'ne-əm*] a cholinergic used in the form of the chloride salt as a curare antagonist; used in the edrophonium challenge test to diagnose myasthenia gravis. See also **Tensilon**.

EDS see **egg** drop syndrome.

EDTA ethylenediaminetetraacetic acid. See **edetate**.
Ca-EDTA calcium ethylenediaminetetraacetic acid. See **edetate**.
Cr^{51} EDTA see **Cr^{51} EDTA**.

Educational Commission for Foreign Veterinary Graduates (ECFVG) a committee of the American Veterinary Medical Association overseeing the procedures for acceptance of veterinary graduates of foreign colleges to be licensed to practice veterinary medicine in the USA. The ECFVG certification program is an educational prerequisite in the USA for veterinary licensure in most states and for certain federal programs for graduates of foreign, non-AVMA-accredited schools. It requires successful completion of an educational equivalency assessment certification program, which comprises four steps. The first is to confirm an applicant's veterinary college credentials, the second is to assess a candidate's English language ability, the third to assess a candidate's basic and clinical veterinary science knowledge by passing the Basic and Clinical Sciences Examination (BCSE) and the fourth, the Clinical Proficiency Examination (CCE) to assess a candidate's hands-on clinical veterinary medical skills.

E-14: Pulmonary edema.

Edwards medium [*ed'wərdz*] agar medium selective for streptococci, which show **esculin** hydrolysis.

Edwardsiella [*ed-wahrd"se-el'ə*] a genus of bacteria of the family *Enterobacteriaceae*. Inhabits the intestines of snakes; found also in water.
E. ictaluri causes enteric septicemia in catfish.
***E. tarda* (syn. *E. anguillimortifera*)** causes edwardsiellosis, septicemia in catfish and eels, characterized by the appearance of evil-smelling, gas-filled cavities in muscle. Also a reported cause of diarrhea in dogs, pigs and calves.

edwardsiellosis disease caused by infection with *Edwardsiella* spp. See enteric **septicemia** of catfish.

EEE Eastern equine encephalomyelitis.

EEG electroencephalogram.

eel [*ēl*] elongated, serpent-like fish with no scales. Most are marine species but there are some freshwater types. They are members of the order Apodes and constitute a number of suborders.
e. rhabdovirus several isolates from eels have not been shown to be associated with disease in eels, but some are pathogenic for trout and salmon.
e. stomatopapilloma cauliflower-like growths in European eels. Several viruses have been isolated from lesions, but none yet shown to be the etiologic agent. Called also cauliflower disease.

EENT eye–ear–nose–throat; see **otolaryngology**.

EF elongation factor.

ef- prefix meaning away from or outward.

EF-4 eugonic fermenter-4.

EFA essential fatty acid.

EFF Elokomin fluke fever.

effacement [*ə-fās'mənt*] the obliteration of form or features; applied to the cervix uteri during labor when it is so changed that only the ostium uteri remains.

effect [*ə-fekt'*] a result produced by an action. The relationship between the two can be expressed in linear form. The total association between them may be the sum of a number of effects. The effect may be direct when it is exerted without being transmitted through intervening factors, or indirect when it is. It may also be a spurious effect when the observed changes are due to causes and correlations common to both.
additive e. the combined effect produced by the action of two or more agents, being equal to the sum of their separate effects.
Coolidge e. the stimulation of sexual behavior in a male animal upon exposure to a new female.
cumulative e. cumulation action.
direct e. the effect of one variable on another without passing through a third variable.
experimenter e's demand characteristics; the characteristics supplied by the experimental subject in response to what it perceives are the demands of the experimenter.
e. modifier a factor which modifies the effect of a causal factor under study. Called also interaction.
position e. in genetics, the changed effect produced by alteration of the relative positions of various genes on the chromosomes.
pressure e. the sum of the changes that are due to obstruction of tissue drainage by pressure.
side e. a consequence other than that for which an agent is used, especially an adverse effect on another organ system.

effective [*ə-fek'tiv*] exerting a measurable effect.
e. circulating volume that part of the blood volume that is effectively perfusing the tissues at a particular time.
e. refractory period time interval during which the effector cell remains unresponsive after a previous reaction to a stimulus: see also **refractory** period.

effectiveness [*ə-fek'tiv-nis*] the ability to produce a specific result or to exert a specific measurable influence.

relative biological e. an expression of the effectiveness of other types of radiation in comparison with that of gamma or X-rays.

effector [ə-fek'tər] 1. a muscle or gland that contracts or secretes, respectively, in direct response to nerve impulses. 2. a molecule that binds to an enzyme with an effect on its catalytic activity, i.e. either an activator or inhibitor.

allosteric e. one that regulates the activity of an enzyme by binding at a site other than the active site.

e. cell cell in the immune system that mediates an immune function.

effemination [ə-fem"ĭ-na'shən] feminization.

efferent [ef'ər-ənt] conducting or progressing away from a center or specific site of reference, as an efferent nerve.

e. arterioles see efferent **arteriole**.

e. ductules conducting tubules from the rete testis to the head of the epididymis, forming part of the transport mechanism for spermatozoa in the testis.

γ e's small nerves supplying intrafusal muscle fibers.

e. nerve any nerve that carries impulses from the central nervous system toward the periphery, as a motor nerve. See also **neuron**.

efficacy [ef'ĭ-kə-se] intrinsic activity; is equal to the magnitude of the maximal response.

efficiency [ə-fish'ən-se] 1. in clinical practice equals the effect achieved in relation to the expenditure and effort expended. 2. in physiological terms, efficiency of any organ or tissue is equal to the ratio of useful energy produced to total energy expended.

effleurage [ef-lŏŏ-rahzh'] [Fr.] stroking movement in massage, intended to encourage venous and lymphatic return.

efflorescence [ef"lo-res'əns] 1. the quality of being efflorescent. 2. a rash or eruption.

efflorescent [ef"lo-res'ənt] becoming powdery by losing the water of crystallization.

effluent [ef'floo-ənt] waste from an abattoir carried away in liquid form. Disposal is a major problem because of the need to avoid pollution of waterways. See **aerobic** effluent treatment, **anaerobic** effluent treatment.

effluvium [ə-floo've-əm] pl. *effluvia* [L.] 1. an outflowing or shedding, as of the hair. 2. an exhalation or emanation, especially one of noxious nature.

anagen e. see **anagen** defluxion.

effusion [ə-fu'zhən] 1. escape of a fluid into a part; exudation or transudation. See also specific anatomic sites. 2. an exudate or transudate.

eflornithine [ef-lor'nĭ-thēn"] an antiprotozoal agent, used as the hydrochloride in trypanosomiasis and ***Pneumocystis*** *carinii* pneumonia.

eft [əft] the terrestrial juvenile stage of **newts**, following metamorphosis from tadpoles and before adulthood.

EGD esophagogastroduodenoscopy.

egesta [e-jes'tə] undigested material discharged from the body.

egestion [e-jes'chən] the casting out of undigested material, as in birds that eject from the gizzard.

egg [eg] 1. an ovum; a female gamete. 2. an oocyte. 3. a female reproductive cell at any stage before fertilization and its derivatives after fertilization and even after some development. 4. hen egg, consisting of a blastodisk, remnant of the nucleus in a mass of white yolk sitting on top of the yellow yolk, the yolk suspended by two twisted strands of mucin-like protein, the chalazae, from the two poles of the egg, two yolk membranes that separate the yolk from the albumen, the albumen or white of the egg, which is in four separate layers of liquid and jelly material, two thin shell membranes and an eggshell. See also **avian** oogenesis. 5. helminth egg.

e. bound a disease of cage birds, birds in zoological collections and in fish. In birds the hen may show pain and be straining and the egg may be palpable. The syndrome is comparable with dystocia in a viviparous animal. In fish the signs can include distention of the belly and wrinkled, shriveled eggs.

e. count counting of helminth eggs as an estimate of the parasite status in an animal or group. Flotation techniques and special counting chambers are used. The results are expressed as eggs per gram (e.p.g.) of feces.

e. dipping dipping of hatchery eggs in antibiotic solutions, especially erythromycin or tylosin, to prevent the transmission of infections from adults to chickens.

e. drop syndrome first observed in 1976 the disease is caused by an adenovirus and characterized by the hens laying a reduced number of thin-shelled or shell-less eggs. Subsequently the egg yield is reduced.

e. eating a vice which begins without apparent reason. A high rate of egg breaking in the unit encourages birds to begin. Many techniques are used in prevention but frequent egg removal is essential.

grader e. a reject from those destined for household use; used in petfood manufacture.

e. heating heating eggs in a hot-air incubator for 12–14 hours to reduce the transmission of infection on the egg exterior.

e. peritonitis see egg **peritonitis**.

e. retention see egg bound (above).

e. shell secreted around the egg mass and membranes during its last 15 hours in the uterus; composed of calcium carbonate and a glycoprotein matrix; surrounded by the cuticle.

thin-shelled e. occurs in egg drop syndrome (see above), DDT poisoning. The shell of the egg is very thin, often missing altogether.

e. tooth the additional tip to the beak in birds that is used by the hatching chick to peck out the circular hatch of shell to allow it to emerge. The egg tooth drops off in a few days. Called also bean.

e. transmission transmission of disease from hen to chicken and between chickens via infection in the egg, e.g. *Mycoplasma gallisepticum*, *M. meleagridis*.

e. white injury the effects of biotin deficiency induced by feeding of raw egg whites (albumen). The factor responsible is avidin which binds biotin, preventing absorption.

e. yield in domestic fowl the normal annual average over a large, national population is about 130 eggs per bird; good units average 200.

Eggers bone plate [eg'ərz] slotted contact plate for orthopedic use in stainless steel or vitallium. Fitted with matching screws.

eggplant [eg'plant] ***Solanum*** *melongena*.

egobronchophony [e"go-brong-kof'o-ne] increased vocal resonance with a high-pitched bleating quality of the transmitted voice or other sound, detected by auscultation of the lungs, especially over lung tissue compressed by pleural effusion.

egophony [e-gof'o-ne] egobronchophony.

egret wading birds in the family of herons (Ardeidae) and particularly of the genera *Egretta* and *Ardea* with long legs and bills; highly prized for ornamental plumage.

cattle e. (*Bubulcus ibis*) a member of the heron family Ardeidae, but not confined to aquatic habitats. An opportunistic feeder, it is commonly associated with grazing animals and may be seen perching on their backs.

Egyptian mau a medium-sized, muscular breed of cats with green eyes and a distinctive medium length, patterned coat which is a mixture of spots and stripes.

EHD epizootic hemorrhagic disease.

EHDV epizootic hemorrhagic disease virus.

EHEC enterohemorrhagic *Escherichia coli*.

Ehlers–Danlos syndrome [a'lərz dahn-los'] a congenital hereditary syndrome of joint hyperextensibility, hyperelasticity and fragility of the skin, poor wound healing leaving parchment-like scars, capillary fragility and subcutaneous nodules after trauma. Called also cutis hyperelastica, cutaneous asthenia, hereditary collagen dysplasia. In humans a series of these disorders, listed as Ehlers–Danlos syndrome Type I to Type VII, represent different

E-15: Ehlers-Danlos syndrome in a 5-month-old Weimaraner showing the characteristic skin elasticity.

VetBooks.ir

E-16: Ehmer sling.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

errors in collagen synthesis and maintenance with subsequent variations in clinical and pathological manifestations.

Ehmer sling a style of bandage used in dogs and cats that holds the hindleg in flexion with the hip in abduction and internal rotation. Commonly used after reduction of hip luxation.

Ehretia membranifolia member of the Boraginaceae plant family; may cause nitrate–nitrite poisoning.

Ehrlichia [*ār-lik'e-ə*] a genus of bacteria in the family *Anaplasmataceae*, order *Rickettsiales,* recently reclassified so that some species are now classified as *Anaplasma* and some as *Neorickettsia.* All are intracellular parasites of leukocytes and endothelial cells of animals or humans and require a vector for transmission. See also ***Rickettsia***, ***Anaplasma***, ***Neorickettsia***.

E. bovis see **Anaplasma** *bovis.*

E. canis causes canine **ehrlichiosis**.

E. chaffeensis causes canine **ehrlichiosis**.

E. equi see ***Anaplasma*** *phagocytophilum*.

E. ewingii causes canine **ehrlichiosis**.

E. ondiri causes **Ondiri disease**. Called also bovine petechial fever.

E. ovina now ***Anaplasma*** *phagocytophilum*; causes benign ovine rickettsiosis.

E. phagocytophila see ***Anaplasma*** *phagocytophilum*.

E. platys now ***Anaplasma platys***.

E. risticii see ***Neorickettsia*** *risticii*.

E. ruminantium cause of heartwater in cattle and transmitted by *Amblyomma* spp. Previously classified as *Rickettsia ruminantium* and *Cowdria ruminantium.*

ehrlichial colitis [*ār-lik'e-əl*] see equine monocytic **ehrlichiosis**.

ehrlichiosis [*ar-lik"e-o'sis*] disease caused by infection with members of the genus *Ehrlichia* as well as some former members now in the genera *Anaplasma* and *Neorickettsia.*

canine e. infection by *Ehrlichia canis, E. chaffeensis,* or *E. ewingii, transmitted by ticks, causes transient, mild to severe clinical signs of fever, anorexia, and lymphadenopathy with usually asymptomatic leukopenia and thrombocytopenia. This is followed by a subclinical to severe, chronic phase in which there may be bleeding tendencies, anemia, weight loss, anterior uveitis, retinal hemorrhages, and neurologic signs. In addtion, joint swelling and lameness may be seen in infection by* E. ewingii. *eurologic dysfunction and lameness anfection with* E. ewingii. *Thrombocytopenia is a consistent finding. Organisms may be seen in monocytes (*E. canis, E. chaffeensis*) or neutrophils (*E. ewingii*).*

equine granulocytic e. is a tick-borne infectious disease caused by *Anaplasma phagocytophilum*. The clinical syndrome comprises high fever, hemolytic anemia, petechial hemorrhage, incoordination and edema of the extremities. The disease bears a strong resemblance to equine infectious anemia. Diagnosis is by detection of cytoplasmic inclusion bodies present in the neutrophilic and occasionally eosinophilic granulocytes and PCR analysis.

equine monocytic e. infectious, but not contagious, enterocolitis of horses caused by **Neorickettsia** *risticii*. Infection occurs by ingestion of aquatic insects (caddis flies) infected by the organism and disease is more common near rivers or large bodies of water. Infection may be inapparent, or with transient fever or result in severe disease characterized by high fever, acute diarrhea and colic and laminitis. Abortion can be a sequela in pregnant mares. Diagnosis is by culture, PCR analysis and serology. Called also Potomac horse fever, Shasta River crud, equine ehrlichial colitis.

ehrlichosis [*ar-lik"o'sis*] ehrlichiosis.

Ehrlich's test [*ār'lik*] used to examine urine for the presence of urobilinogen; based on the use of Ehrlich's diazo reagent, a sodium *p*-diazobenzenesulfonate solution.

EHV equine herpesvirus.

EHV1, EHV2, EHV3, EHV4, EHV5 see **equine** herpesvirus.

EIA equine infectious anemia.

eicosanoids [*i-ko'sə-noidz*] a family of compounds derived from C20 polyunsaturated fatty acids including arachidonic acid (eicosatetraenoic acid), eicosapentaenoic acid and dihomo-γ-linolenate (eicosatrienoic acid). Includes prostaglandins, prostacyclins, leukotrienes, lipoxins and thromboxanes, the principal mediators of inflammation.

eicosapentaenoic acid (EPA) a 20-carbon polyunsaturated fatty acid with five double bonds; a precursor of series 3 prostaglandins, series 3 thromboxanes and series 5 leukotrienes.

eicosatetraenoic acid [*i-ko"sə-pen"tə-e-no'ik*] arachidonic acid.

EIEC enteroinvasive *Escherichia coli*.

eigenvalues statistical term meaning latent root.

Eight Principles in traditional Chinese medicine, the four pairs of opposites that are the basis for all diagnoses: *Yin* and *Yang*, internal and exterior, cold and heat, deficiency and excess. Called also guiding principles.

Eimeria [*i-mēr'e-ə*] a genus of protozoan parasites in the family Eimeriidae. There are many species (see below), mostly in birds and herbivores. They are the principal cause of **coccidiosis**, which also has other causes. See ***Cystoisospora***, ***Isospora***, ***Tyzzeria***, ***Wenyonella***. Commonly listed *Eimeria* spp. and their hosts are listed below: *E. abramovi*—wild duck, geese; *E. acervulina*—domestic poultry, quail; *E. adenoides*—turkey; *E. ahsata*—sheep, goats; *E. alabamensis*—cattle; *E. alijevi*—goats; *E. alpacae*—llama, alpaca; *E. anatis*—mallard, domestic duck; *E. ankarensis*—water buffalo; *E. anseris*—domestic geese, wild geese; *E. aspheronica*—goats; *E. arkhari*—sheep, goats; *E. arloingi*—sheep, goats; *E. auburnensis*—cattle; *E. augusta*—grouse; *E. aurata*—fish; *E. azerbaidschanica*—water buffalo. *E. bactriani*—one- and two-humped camel; *E. bakuensis*—sheep; *E. bareillyi*—water buffalo; *E. battakhi*—domestic duck; *E. bombaynsis*—zebu cattle; *E. bonasae*—grouse; *E. boschadis*—wild duck, geese; *E. bovis*—cattle, zebu, water buffalo; *E. brantae*—wild duck, geese; *E. brasiliensis*—cattle, zebu, water buffalo; *E. brinkmanni*—rock ptarmigan; *E. brunetti*—domestic poultry; *E. bucephalae*—wild duck, geese; *E. bukidnonensis*—cattle, zebu, buffalo. *E. cameli*—one- and two-humped camels; *E. canadensis*—domestic cattle, zebu, bison, water buffalo; *E. canis*—dogs and cats; *E. caprina*—goats; *E. caprovina*—goats; *E. carinii*—rats; *E. carpelli*—fish; *E. caviae*—guinea pig; *E. cerdonis*—pig; *E. christenseni*—domestic goat; *E. christianseni*—mute swan; *E. clarkei*—lesser snow goose; *E. coecicola*—rabbit; *E. colchici*—pheasant; *E. columbae*—pigeon; *E. columbarum*—rock dove; *E. coturnicus*—quail; *E. crandallis*—domestic sheep, small wild ruminants; *E. cylindrica*—domestic cattle, zebu, water buffalo; *E. cyprini*—fish. *E. danailovi*—mallard; *E. danielle*—domestic sheep; *E. debliecki*—pig; *E. dispersa*—turkey; *E. dolichotis*—Patagonian cavy; *E. dromedarii*—one- and two-humped camels. *E. ellipsoidalis*—domestic cattle, zebu, Euro-pean bison, water buffalo; *E. elongata*—domestic rabbit; *E. exigua*—rabbit, Greenland hare. *E. falciformis*—mouse; *E. fanthami*—rock ptarmigan; *E. farri*—white fronted goose; *E. faurei*—sheep, small wild ruminants; *E. ferrisi*—mouse; *E. fulva*—wild geese. *E. gallopavonis*—turkey; *E. gilruthi*—sheep, goats; *E. gokaki*—buffalo; *E. gonzalei*—sheep; *E. gorakhpuri*—guinea fowl; *E. granulosa*—domestic and wild sheep; *E. grenieri*—guinea fowl; *E. guevarai*—pig. *E. hagani*—poultry; *E. hasei*—rats; *E. hawkinsi*—sheep, goats; *E. hermani*—wild geese; *E. hindlei*—

E-17: Unsporulated oocyst of *Eimeria leuckarti.*
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

mouse; *E. hirci*—goats. *E. illinoisensis*—cattle; *E. innocua*—turkey; *E. intestinalis*—rabbit; *E. intricata*—sheep, wild small ruminants; *E. irresidua*—rabbit, jackrabbit. *E. jolchijevi*—goats; *E. keilini*—mouse; *E. kocharli*—goats; *E. kofoidi*—partridge; *E. koganae*—wild duck, geese; *E. kosti*—cattle; *E. kotlani*—domestic geese; *E. krijgsmanni*—mouse. *E. labbeana*—pigeon; *E. lagopodi*—ptarmigan; *E. lamae*—alpaca; *E. langeroni*—pheasant; *E. leuckarti*—horse; *E. lyruri*—partridge. *E. macusaniensis*—llama, alpaca; *E. magna*—rabbit, hare; *E. magnalabia*—wild geese; *E. mandali*—peafowl; *E. marsica*—sheep; *E. matsubayashii*—domestic rabbit; *E. maxima*—poultry; *E. mayurai*—peafowl; *E. media*—domestic and wild rabbit; *E. megalostromata*—pheasant; *E. meleagridis*—turkey; *E. meleagrimitis*—domestic turkey; *E. mitis*—poultry; *E. mivati*—domestic fowl; *E. miyairii*—rat; *E. mundaragi*—cattle, zebu; *E. musculi*—mouse. *E. nadsoni*—grouse; *E. nagpurensis*—rabbit; *E. necatrix*—domestic fowl; *E. neodebliecki*—pig, wild pig; *E. neoleporis*—rabbit; *E. nieschultzi*—rat; *E. ninakohlyakimovae*—sheep, goats and small wild ruminants; *E. nocens*—domestic and wild geese; *E. nochti*—rat; *E. norvegicus*—rat; *E. numida*—guinea fowl. *E. ovina*—domestic sheep, small wild ruminants; *E. ovoidalis*—buffalo. *E. pacifica*—pheasant; *E. pallida*—domestic sheep and goats; *E. parva*—domestic sheep and goats, small wild ruminants; *E. parvula*—geese; *E. pavonina*—peafowl; *E. pavonis*—peafowl; *E. pelleryi*—bactrian camel; *E. pellita*—cattle; *E. perforans*—rabbit, hare; *E. perminuta*—pig; *E. peruviana*—llama; *E. phasiani*—pheasant; *E. piriformis*—domestic rabbit; *E. polita*—pig; *E. porci*—pig; *E. praecox*—poultry; *E. procera*—partridge; *E. punctata*—sheep; *E. punoensis*—alpaca. *E. rajasthani*—dromedary; *E. ratti*—rat. *E. saitamae*—duck; *E. scabra*—domestic and wild pig; *E. schachdagica*—duck; *E. schueffneri*—mouse; *E. scrofae*—pig; *E. separata*—rat; *E. solipedum*—horse; *E. somateriae*—wild duck; *E. spinosa*—pig; *E. stiedai*—rabbit, hare; *E. stigmosa*—domestic goose; *E. striata*—wild goose; *E. subepithelialis*—carp; *E. subrotunda*—turkey; *E. subspherica*—cattle, zebu, water buffalo; *E. suis*—domestic pig. *E. tenella*—domestic poultry; *E. tetricis*—grouse; *E. thianethi*—buffalo; *E. tropicalis*—pigeon; *E. truncata*—domestic and wild goose; *E. truttae*—salmon. *E. uniungulati*—horse, mule; *E. weybridgensis*—sheep; *E. wyomingensis*—cattle, zebu, water buffalo; *E. zuernii*—cattle, zebu, water buffalo.

einsteinium (Es) [*īn-sti'ne-əm*] a chemical element, atomic number 99, atomic weight 254. See Table 4.

Einthoven [*īn'to-vən*] named after Willem Einthoven (1860–1927), Dutch physiologist, discoverer of the electrocardiogram.

E.'s law the potential differences between the bipolar leads measured simultaneously will, at any given moment, have the values II=I+III.

E. triangle an equilateral triangle used as a model of the standard limb leads used in electrocardiography.

EIPH exercise induced pulmonary hemorrhage. See **epistaxis**.

Eisenmenger [*i'sən-meng"ər*] Victor Eisenmenger, Austrian physician (1864–1932).

E. complex interventricular septal defect.

E. syndrome the clinical syndrome caused by the Eisenmenger complex, a ventricular septal defect with pulmonary hypertension and cyanosis due to right-to-left (reversed) shunt of blood. Sometimes defined as pulmonary hypertension (pulmonary vascular disease) and cyanosis with the shunt being at the atrial, ventricular, or great vessel area. Characterized by exercise intolerance, cyanosis, anasarca, palpable thrill and auscultatable cardiac murmur.

ejaculate [*e-jak'u-lāt*] 1. to expel an ejaculate. 2. the products of an ejaculation. See also **ejaculation**.

ejaculatio [*e-jak"u-la'she-o*] ejaculation.

ejaculation [*e-jak"u-la'shən*] forcible, sudden expulsion; especially expulsion of semen from the male urethra, a reflex action that occurs as a result of sexual stimulation. Includes lubricating fluid from bulbourethral glands, prostatic and seminal vesicular fluids and semen. Called also seminal ejaculation.

chemical e. see ex-copula ejaculation (below).

electrical e. see **electroejaculation**.

ex-copula e. ejaculation in the absence of copulation; the ejaculate is often obtained by injection of drugs (imipramine hydrochloride and xylazine) and is commonly used in stallions that are unable to mount because of injuries. Called also chemical ejaculation.

incomplete e. the process of ejaculation of semen is not completed and semen does not reach the external urethral orifice, due usually to a defect in the sympathetic innervation of the region.

retrograde e. after intercourse, in which no semen is ejaculated from the external urethral orifice, semen is found in the urinary bladder.

ejecta [*e-jek'tə*] refuse cast off from the body.

ejection [*e-jek'shən*] forcible expulsion through a narrow orifice.

e. fraction of the cardiac stroke volume equals the ratio of the stroke volume to the end-diastolic volume.

ventricular e. time that part of the cardiac ventricular contraction time when blood is actually discharged through the semilunar valves.

ejection fraction [*e-jek'shən*] in echocardiography, the fractional volume of blood leaving the left ventricle in systole.

EKG electrocardiogram.

ekoa see ***Leucaena leucocephala***.

EKY electrokymogram.

El Guedda see **hemorrhagic** septicemia.

elaborate [*e-lab'o-rāt*] to produce complex substances out of simpler materials.

elaboration [*e-lab"ə-ra'shən*] the process of producing complex substances out of simpler materials.

Elaeodendron buchananii African tree in family Celastraceae, whose leaves, if ingested, cause death after a clinical illness with signs of dyspnea, incoordination and diarrhea in those animals that live for several days. A causative toxin has not been identified. Called also *Cassine buchananii*, *E. kiniense*.

Elaeophora [*el"e-of'ə-rə*] a genus of filarioid nematodes in the family Onchocercidae.

E. bohmi found in the arteries and veins of the extremities of horses. Called also *Onchocerca bohmi*.

E. poeli found in the aorta of cattle and other ruminants.

E. sagittus found in bovine hearts. Called also *Cordophilus sagittus*.

E. schneideri found in arteries of deer, elk and sheep; causes **elaeophoriasis**.

elaeophoriasis [*el"e-of"ə-ri'ə-sis*] dermatitis caused by vascular lesions of infestation with microfilariae of *Elaeophora schneideri*. The parasite can also cause rhinitis, keratoconjunctivitis and stomatitis in sheep infected by bites of horse flies. This and other species may also cause sporadic cases of disease due to vascular obstruction.

elaeophorosis [*el"e-of"ə-ro'sis*] see **elaeophoriasis**.

Elam gag a gag used in horses and cattle to obtain access to the interior of the mouth. Shaped like a stringless tennis racquet with two horizontal bars, one of which can be moved by manipulating a screw drive. The gag is inserted in the mouth in a horizontal position and immediately brought to the vertical position with the bars located caudad to the incisor teeth. The bars are now screwed apart giving unimpeded access to the interior of the mouth.

eland (*Taurotragus* spp.) large African antelopes characterized by their corkscrew horns and a prominent dewlap, capable of domestication and farming for meat, milk and hides and favored for game ranches. The two species are *T. oryx* (common eland) and *T. derbianus* (giant eland).

elandsboontjie see ***Elephantorrhiza elephantina***.

elaphostrongyliasis infestation with *Paraelaphostrongylus tenuis*. See **neurofilariasis**.

Elaphostrongylus a genus of metastrongyloid nematodes of the family Protostrongylidae.

E. cervi found in connective tissue and central nervous system of deer. Causes **cerebrospinal** nematodiasis.

E. panticola found in the brain of deer.

E. rangiferi occurs in the central nervous system and muscles of reindeer. See also **cerebrospinal** nematodiasis.

E. tenuis see ***Parelaphostrongylus tenuis***.

elapid [*el'ə-pid*] a snake belonging to the **Elapidae** family.

Elapidae a family of venomous front-fanged snakes; includes cobras, kraits, mambas, coral snakes and hamadryads. Their poison is largely neurotoxic.

elasmobranch [*e-las'mo-brank*] members of the class Elasmobranchii; includes sharks and rays.

elastase [*se-las'tās*] a protease enzyme which breaks down elastin, a component of connective tissue. Elastase-1 is secreted by the exocrine pancreas and takes part in protein digestion in the small intestine. Elastase-2 is produced by neutrophils and breaks down bacterial membrane proteins. An ELISA test for fecal elastase has

VetBooks.ir

been used to investigate exocrine pancreatic insufficiency in dogs; they have very low or negligible amounts.

elastic [*e-las'tik*] capable of resuming normal shape after distortion.

e. modulus the constant or scale factor which defines quantitatively the relationship between the deformation of the vascular wall (or other elastic medium) and the deforming force.

e. tissue connective tissue made up of yellow elastic fibers, frequently massed into sheets.

elasticity [*e"las-tis'ĭ-te*] the quality of being elastic.

blood vessel e. a composite value of the combined elasticities of the smooth muscle, collagen and elastin of which the walls are composed.

elastin [*e-las'tin*] a yellow scleroprotein, the essential constituent of elastic connective tissue; it is brittle when dry, but flexible and elastic when moist.

elastofibroma [*e-las"to-fi-bro'mə*] a tumor consisting of both elastin and fibrous elements.

elastolysis [*e"las-tol'ə-sis*] the digestion of elastic substance or tissue.

elastoma [*e"las-to'mə*] a tumor or focal excess of elastic tissue fibers or abnormal collagen fibers of the skin.

elastometer [*e"las-tom'ə-tər*] an instrument for measuring the elasticity of tissues.

elastorrhexis [*e-las"to-rek'sis*] a rupture of fibers composing elastic tissue.

elastosis [*e las-to'sis*] 1. degeneration of elastic tissue. 2. degenerative changes in the dermal connective tissue with increased amounts of elastotic material. 3. any disturbance of the dermal connective tissue.

solar e. degenerative changes in superficial dermal collagen and elastin caused by solar radiation.

elastotic [*e-las-tot'ik*] 1. pertaining to or characterized by elastosis. 2. resembling elastic tissue; having the staining properties of elastin.

elastration [*e-las-tra'shən*] see **elastrator**.

elastrator an implement used for castration and tail docking by applying elastrator rings to animals. Closing the handles of this double-action, scissor-like instrument opens the jaws and dilates the rubber ring. This is slipped over the scrotum or tail and the handles released. The ring is now in place and the tool is withdrawn.

e. ring a specially constructed, thick and very strong rubber ring for use in an elastrator. Has sufficient strength to close off all the blood vessels to a part and cause it to slough.

elbow [*el'bo*] 1. the bend of the lower forelimb. 2. the joint connecting the humerus, radius and ulna. It is one of the body's more versatile joints, with a combined hinge and rotating action allowing the limb to bend and paw to make a half turn. The flexibility of the elbow and shoulder joints together permits a nearly infinite variety of paw movements. In ungulates the elbow is a simple hinge.

e. abduction in the standing posture the elbows are constantly abducted from the chest; usually a posture indicative of pleural pain.

e. dysplasia includes the inherited developmental defects, ununited anconeal process, fragmented (ununited) coronoid process, osteochondritis of the medial humeral condyle, and radioulnar incongruence, which occur in young, actively growing, large breed dogs, causing lameness and later arthritis of the elbow.

e. flexion a frequent malposition of a forelimb causing dystocia in cows. The foot is presented but is a long way back from the one on the opposite limb. The flexed limb increases the diameter of the fetus significantly.

e. luxation uncommon in most species because of the innate stability of the elbow joint; can be congenital or caused by trauma, sometimes associated with fractures.

point of the e. the summit of the olecranon process.

elder [*el'dər*] see ***Sambucus***. Includes black elder (*S. nigra*), dwarf elder (*S. ebulus*), stinking elder (*S. pubens*).

poison e. ***Toxicodendron*** *vernix*.

elderberry see ***Sambucus***.

elderly animals see **geriatric**.

ELDU extra-label drug use.

ELE equine leukoencephalomalacia.

elective [*e-lek'tiv*] non-urgent; at an elected time, e.g. of surgery.

electrical [*e-lek'trĭ-kəl*] producing, produced by or powered by electricity.

e. ignition sources electric power outlets, switches and electrical equipment in the surgery can be the cause of explosion if flammable anesthetic agents or oxygen are being used.

e. injuries shock caused by the passage of electric current passing through the body can cause irritation, unconsciousness, burns or immediate death depending on the voltage, the amperage of the current, the efficiency of the patient as an earth contact and the duration of the shock. Signs and the fatal outcome are due to paralysis of medullary centers in the medulla oblongata. Burns when they occur are usually at the points of contact between the animal and the earth. High voltage current will cause sudden death (electrocution). Low voltage house current will knock a cow down and may cause death, trickle current loss will cause cows to bellow and to kick. Lower voltage current still has been associated with a high prevalence rate of mastitis. See also **lightning** injury. Household pets, particularly puppies and kittens, most often are injured from chewing on electrical cords. If not electrocuted, they incur burns of the mouth or lips that vary from small, punctate lesions to large areas. These are caused by coagulation and necrosis and do not become apparent until 2–3 weeks after the incident, making the diagnosis very difficult. Pulmonary edema is also a major feature of electrical injury in dogs and cats and it can be the cause of death.

electro- word element. [Gr.] *electricity*.

electroacupuncture [*e-lek "tro-ak"u-punk'chər*] the application of electrical stimulation to acupuncture points, either through contact electrodes or implanted acupuncture needles.

electroaffinity [*e-lek"tro-ə-finĭ-te*] see **electronegativity**.

electroanalgesia [*e-lek "tro-an"əl-je'ze-ə*] the reduction of pain by electrical stimulation of a peripheral nerve or the dorsal column of the spinal cord.

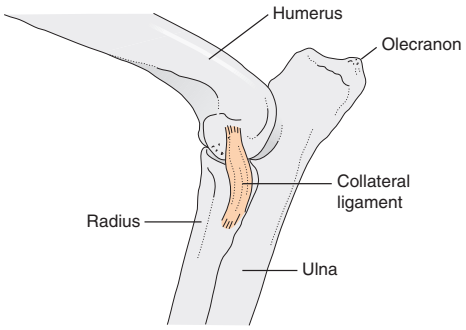
electroanesthesia [*e-lek"tro-an"es-the'zhə*] see electrical **immobilization**, **electronarcosis**.

electrocardiogram (ECG) [*e-lek"tro-kahr'de-o-gram"*] the record produced by **electrocardiography**; a tracing representing the heart's electrical action derived by amplification of the minutely small electrical impulses normally generated by the heart. Called also EKG.

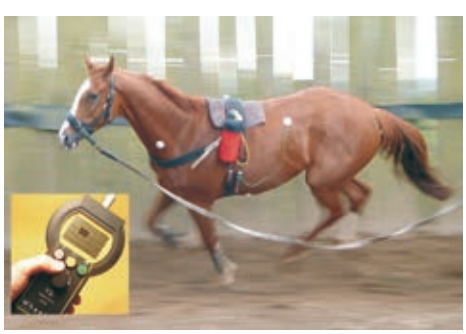
electrocardiograph [*e-lek"tro-kahr'de-o-graf"*] the apparatus used in electrocardiography.

electrocardiographic [*e-lek"tro-kahr-de-o-graf'ik*] emanating from or pertaining to electrocardiography.

e. monitoring maintenance of a more or less continuous surveillance of a patient's cardiac status by means of electrocardiography.



E-18: Elbow joint of the dog.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.



E-19: Portable electrocardiograph used during exercise.
From Hinchcliff KW, Kaneps AJ, Geor RJ, Equine Sports Medicine and Surgery. Saunders, 2004.

electrocardiography [*e-lek"tro-kahr"de-og'rə-fe*] the graphic recording from the body surface of the potential of electric currents generated by the heart, as a means of studying the action of the heart muscle. With the modern electrocardiograph, the current that accompanies the action of the heart is amplified 3000 times or more, and it moves a small, sensitively balanced lever in contact with moving paper. The pattern of heart waves that is traced on the paper indicates the heart's rhythm and other actions. The normal electrocardiogram is composed of a P wave, Q, R and S waves known as the **QRS complex**, or QRS wave, and a T wave. The P wave occurs at the beginning of each contraction of the atria. The QRS wave occurs at the beginning of each contraction of the ventricles. The T wave seen in a normal electrocardiogram occurs as the ventricles recover electrically and prepare for the next contraction. There is a refractory period after each P wave and QRS complex during which the muscle is inexcitable. The electric impulses in the heart muscle are picked up and conducted to the electrocardiograph by electrodes or leads connected to the body by small metal plates or other methods. The metal plates are moistened with a conductive paste and attached to the limbs and chest (cardiac area) of the animal.

electrocautery [*e-lek -kaw'tər-e*] cauterization of tissue by means of an electrode that consists of a red hot piece of metal, such as a wire, held in a holder, and is heated by either direct or alternating current. The term *electrocautery* is used to refer to both the procedure and the instrument used in the procedure.

electrochemical [*e-lek "tro-kem'ĭ-kəl*] emanating from or pertaining to electrochemistry.

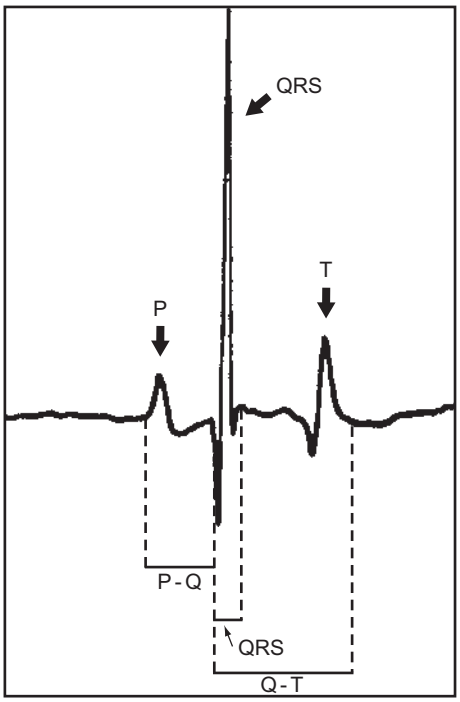
e. equivalent the atomic weight divided by the ionic valence of an electrolyte. Provides a quantitative indication of the combining properties of an electrolyte solution. The relationship between weight per volume and milliequivalents can be expressed as:

$$\frac{\text{mg /100 mL}}{\text{atomic weight}} \times \text{Valence} \times 10 = \text{mEq/L}$$

e. gradient the differences in electrochemial potential between two points.

intestinal e. gradient electrical potential differences and ion concentration differences across the external membrane of the intestinal mucosa arising from the active transport of most electrolytes and some nonelectrolytes across the membrane.

electrochemistry [*e-lek "tro-kem'is-tre*] the study of chemical changes produced by electric action.



E-20: Electrocardiography: Normal lead II ECG complex of the dog. From Morgan RV, Bright R, Swartout M, Handbook of Small Animal Practice, 4th Edition. Saunders, 2002.

electrocoagulation [*e-lek"tro-ko-ag"u-la'shən*] a method of electrosurgery used to coagulate tissue, which employs moderately damped or modulated undamped alternating current, and requires both an active concentrating electrode and an inactive dispersing electrode. See also **electrosurgery**.

bipolar e. the electrical current passes between two tips of a handpiece.

monopolar e. the electrical current passes from the handpiece to a ground plate, passing through the patient.

electrocochleography [*e-lek "tro-kok"le-og'rə-fe*] measurement of electrical potentials of the eighth cranial nerve in response to acoustic stimuli applied by an electrode to the external acoustic canal, promontory or tympanic membrane.

electrocontractility [*e-lek"tro-kon"trak-til'ĭ-te*] contractility in response to electric stimulation.

electrocorticography [*e-lek"tro-kor"tĭ-kog'rə-fe*] electroencephalography with the electrodes applied directly to the cerebral cortex.

electrocution [*e-lek"tro-ku'shən*] causing death by the passage of an electric current through the body of the patient. May be intentional, as a means of euthanasia, or accidental by lightning strike or electrical current. See **electrical** injuries.

electrocutting [*e-lek"tro-kut'ing*] making an incision using an electroscalpel which generates an undamped sine wave causing microcoagulation at the point of contact. See also **electrocoagulation**.

electrode [*e-lek'trōd*] either of two terminals of an electrically conducting system or cell.

active e. therapeutic electrode.

calomel e. one capable of both collecting and giving up chloride ions in neutral or acidic aqueous media, consisting of mercury in contact with mercurous chloride; used as a reference electrode in pH measurements.

depolarizing e. an electrode that has a resistance greater than that of the portion of the body enclosed in the circuit.

hydrogen e. an electrode made by depositing platinum black on platinum and then allowing it to absorb hydrogen gas to saturation; used in determination of hydrogen ion concentration.

indifferent e. one larger than a therapeutic electrode, dispersing electrical stimulation over a larger area.

point e. an electrode having on one end a metallic point; used in applying current.

therapeutic e. one smaller than an indifferent electrode, producing electrical stimulation in a concentrated area; called also active electrode.

electrodermal [*e-lek"tro-dur'məl*] pertaining to the electrical properties of the skin, especially to changes in its resistance.

electrodesiccation [*e-lek"tro-des"ĭ-ka'shən*] a method of electrosurgery that desiccates tissue by dehydration. A highly or moderately damped alternating electrical current is radiated through a monoterminal active electrode that is applied directly to or inserted into the tissue being treated. See also **electrosurgery**.

electrodiagnosis [*e-lek-tro-di"əg-no'sis*] the use of electrical recording devices such as **electromyography**, **electroencephalography**, **cystometrography**, **electrocardiography**, in making a clinical diagnosis. In energy medicine, also taken to include the use of devices that are supposed to measure electrical frequencies emitted by the body as a means of diagnosing current or forthcoming disease.

electrodialyzer [*e-lek"tro-di"ə-li'zər*] a blood dialyzer utilizing an applied electric field and semipermeable membranes for separating the colloids from the solution.

electroejaculation [*e-lek"tro-e-jak"u-la'shən*] a method used for the collection of semen for artificial insemination or for examination. Electrical stimulation has to be provided by electrodes applied to the lumbar sympathetic nerves to promote semen emission and to the pelvic splanchnic and internal pudendal nerves to promote ejaculation and erection of the penis. The electrodes are contained in a probe placed in the rectum.

electroejaculator [*e-lek"tro-e-jak'u-la"tər*] a device consisting of a rectal probe and a power control system which gives stepwise control over the current applied, and a stimulator control which permits variation within the steps. Probes vary in their construction and a good design will direct stimulation at the relevant nerves, reducing the stimulation of the back and the hindlimbs.

electroencephalogram (EEG) [*e-lek"tro-en-sef'ə-lo-gram"*] the record produced by **electroencephalography**; a tracing of the electric impulses of the brain.

electroencephalograph [*e-lek"tro-ən-sef'ə-lo-graf"*] the instrument used in electroencephalography.

electroencephalography [*e-lek"tro-ən-sef'ə-log'rə-fe*] the recording of changes in electric potentials in various areas of the brain by means of electrodes placed on the head or on or in the brain itself, and connected to an amplifier, which augments the impulses more than a million times. Electroencephalography is used most commonly to detect activity associated with seizures in order to confirm a diagnosis of epilepsy and may be used to localize the origin of seizures.

electroendosmosis [*e-lek"tro-en"dos-mo'sis*] osmosis under the influence of an electric field as in electrophoresis.

electroepilation [*e-lek"tro-ep"ĭ-la'shən*] use of electrosurgical methods, such as electrocautery or diathermy, for destroying hair follicles; used in the treatment of distichiasis.

electrofulguration [*e-lek"tro-ful"gur-ra'shun*] a method of electrosurgery used to produce superficial desiccation of tissue, which employs a highly or moderately damped alternating electrical current that is radiated through a monoterminal active electrode that is held close to the patient so that sparks spray over the lesion being treated. See also **electrosurgery**.

electrogastrograph [*e-lek"tro-gas'tro-graf*] an instrument for recording the electrical activity of the stomach by means of swallowed gastric electrodes.

electrogastrography [*e-lek"tro-gas-trog'rə-fe*] the recording of the electrical activity of the stomach as measured between its lumen and the body surface.

electrogoniometer [*e-lek"tro-go"ne-om'ə-tər*] an instrument for measuring angles, e.g. the angle of a joint. Used in gait research. See also **goniometer**.

electrogoniometry [*e-lek"tro-go"ne-om'ə-tre*] the science of measuring angles and the changes in them. Much used in the study of gait.

electrogram [*e-lek'tro-gram*] any record produced by changes in electric potential.

His bundle e. an intracardiac electrocardiogram of potentials in the bundle of His, done through a cardiac catheter.

electrohemostasis [*e-lek"tro-he-mos'tə-sis*] arrest of hemorrhage by electrocautery.

electrohysterography [*e-lek"tro-his"tər-og'rə-fe*] the recording of changes in electric potential associated with contractions of the uterine muscle.

electro-immobilization [*e-lek"tro-ĭ-mo"bil-ĭ-za'shən*] see electrical **immobilization**.

electroimmunoassay [*e-lek"tro-im"u-no-as'a*] see **immunoelectrophoresis**.

electroimmunodiffusion [*e-lek"tro-im"u-no-dĭ-fu'zhən*] see **immunoelectrophoresis**.

electroincision [*e-lek"tro-in-sizh'ən*] cutting of tissue by an electrosurgical device.

electrokymogram [*e-lek"tro-ki'mo-gram*] the record produced by electrokymography.

electrokymograph [*e-lek"tro-ki'mo-graf*] the instrument used in electrokymography.

electrokymography [*e-lek"tro-ki-mog'rə-fe*] the photography on X-ray film of the motion of the heart or of other moving structures which can be visualized radiographically.

electrolysis [*e"lek-trol'ə-sis*] destruction by passage of a galvanic current, as in disintegration of a chemical compound in solution or destruction of hairs such as cilia from eyelids in distichiasis or trichiasis.

electrolyte [*e-lek'tro-līt*] a chemical substance which, when dissolved in water or melted, dissociates into electrically charged particles (*ions*), and thus is capable of conducting an electric current. The principal positively charged ions in the body fluids (*cations*) are sodium (Na+), potassium (K+), calcium (Ca^{2}+), and magnesium (Mg^{2}+). The most important negatively charged ions (*anions*) are chloride (Cl^{-}), bicarbonate (HCO^{3}−), and phosphate (PO_4^{3}−). These electrolytes are involved in metabolic activities and are essential to the normal function of all cells. Concentration gradients of sodium and potassium across the cell membrane produce the membrane potential and provide the means by which electrochemical impulses are transmitted in nerve and muscle fibers. The concentration of the various electrolytes in body fluids is maintained within a narrow range. However, the optimal concentrations differ in the extracellular fluid and intracellular fluid. An electrolyte imbalance exists when the serum concentration of an electrolyte is either too high or too low. Stability of the electrolyte balance depends on adequate intake of water and the electrolytes, and on homeostatic mechanisms within the body that regulate the absorption, distribution and excretion of water and its dissolved particles. The effects of an electrolyte imbalance are not isolated to a particular organ or system. In general, however, imbalances in **calcium** concentrations affect the bones, kidney and gastrointestinal tract. Calcium also influences the permeability of cell membranes and thereby regulates neuromuscular activity. **sodium** affects the osmolality of blood and therefore influences blood volume and pressure and the retention or loss of interstitial fluid. **potassium** affects muscular activities, notably those of the heart, intestines and respiratory tract, and also affects neural stimulation of the skeletal muscles.

e. clearance ratio see **fractional excretion** tests.

e. disturbances include hyper- and hypo-potassemia, natremia, phosphatemia, calcemia, chloremia.

e. fluid balance balance between fluid and electrolytes.

e. homeostasis maintenance of the osmotic pressure of the blood and tissue fluids by the maintenance of a proper balance between the normal electrolytes in the fluid, and at the same time maintaining adequate concentrations of calcium and magnesium and the proper acid–base balance.

e. solution therapy see **fluid** therapy.

electrolytic [*e-lek"tro-lit'ik*] pertaining to electrolysis or to an electrolyte.

electromagnetic [*e-lek"tro-mag-net'ik*] pertaining to or emanating from electromagnetism.

e. flowmeter measures the electromagnetic force generated when the blood flowing through a vessel of known diameter passes through a magnetic field at right angles to the magnetic lines of force.

e. receptors receptors which perceive electromagnetic stimuli.

electromagnetism [*e-lek"tro-mag'nə-tiz-əm*] magnetism developed by an electric current.

electromechanical coupling [*e-lek"tro-mə-kan'ĭ-kəl*] the coupling which transforms an electrical impulse into a mechanical action, e.g. in smooth muscle.

electromechanical dissociation [*e-lek"tro-mə-kan'ĭ-kəl*] when the electrical impulse passes through the system but no movement occurs, e.g. in ECG recordings.

electromyogram (EMG, EMyG) [*e-lek"tro-mi'o-gram*] the record obtained by electromyography.

single fiber e. a selective EMG that records action potentials from individual muscle fibers.

electromyograph (EMG) [*e-lek"tro-mi'o-graf*] the instrument used in electromyography.

electromyography [*e-lek"tro-mi-og'rə-fe*] the recording and study of the intrinsic electrical properties of skeletal muscle. When it is at rest, normal muscle is electrically silent, but when the muscle is active, diseased or denervated, spontaneous electrical activity is generated. In electromyography the electrical impulses are picked up by needle electrodes inserted into the muscle and amplified. Common waveforms seen originating from denervated muscle include prolonged insertional activity, fibrillation potentials and positive sharp waves. In damaged or diseased muscle, complex repetitive discharges, myotonic discharges and pseudomyotonic discharges may be seen. In addition, recordings taken from muscle undergoing volitional contraction can yield information about motor units in the form of recruitment patterns.

electron [*e-lek'tron*] any of the negatively charged particles arranged in orbits around the nucleus of an atom and determining all of the atom's physical and chemical properties except mass and radioactivity. Electrons flowing in a conductor constitute an electric current; when ejected from a radioactive substance, they constitute the beta particles.

e. acceptor see **oxidant**.

e. beam the stream of electrons that flows from the anode to the cathode in the X-ray tube and then interacts with the tungsten target to produce X-rays.

e. carrier a molecule associated with membrane-bound proteins that accepts and transfers electrons.

e. donor see **reductant**.

e. transport transport of electrons in the electron transport chain.

e. transport chain series of reactions in which electrons are transferred from a donor such as NADH to an acceptor along a chain of

carrier proteins with molecular oxygen as the final acceptor; the process generates the proton motive force which drives the production of ATP in oxidative phosphorylation. Called also the respiratory chain.

electron-dense in electron microscopy, having a density that prevents electrons from penetrating.

electronarcosis [*e-lek"tro-nahr-ko'sis*] narcosis produced by passage of an electric current through electrodes placed on the head.

electronegative [*e-lek"tro-neg'ə-tiv*] bearing a negative electric charge or an excess of electrons.

electronegativity [*e-lek"tro-neg"ə-tiv'i-te*] the relative power of an atom to attract electrons.

electroneurography [*e-lek"tro-noo-rog'rə-fe*] the measurement of the conduction velocity and latency of peripheral nerves.

electroneuromyography [*e-lek"tro-noo"ro-mi-og'rə-fe*] electromyography in which the nerve of the muscle under study is stimulated by application of an electric current.

electronystagmography [*e-lek"tro-nis"tag-mog'rə-fe*] electroencephalographic recordings of eye movements that provide objective documentation of induced and spontaneous nystagmus.

electro-olfactogram (EOG) [*e-lek"tro-ol-fak'to-gram*] a recording of electrical activity detected by an electrode placed on the olfactory mucosa as it is exposed to odorous stimuli.

electropexy electric shock. See also electrical **stunner**.

electropherogram [*e-lek"tro-fer'o-gram*] electrophoretogram.

electrophile [*e-lek'tro-fil*] a chemical compound that serves as an electron acceptor in a chemical reaction.

electrophoresis [*e-lek"tro-fə-re'sis*] the movement of charged particles suspended in a liquid through various media, e.g. paper, cellulose acetate, gel, liquid, under the influence of an applied electric field. The various charged particles of a particular substance migrate in a definite and characteristic direction—toward either the anode or the cathode—and at a characteristic speed. This principle has been widely used in the separation of proteins and nucleic acids and is therefore valuable in the study of diseases in which the serum and plasma proteins are altered. See also **immunoelectrophoresis**.

SDS–polyacrylamide gel e. (SDS–PAGE) a procedure that revolutionized the analysis of complex mixtures of proteins. The proteins are solubilized by the powerful, negatively charged detergent sodium dodecyl sulfate (SDS) which causes proteins to unfold into extended, single polypeptide chains. A reducing agent such as mercaptoethanol is usually added to break disulfide bonds. The constituent polypeptides are then electrophoresed through an inert matrix of highly cross-linked gel of polyacrylamide. The pore size of the gel can be varied by altering the concentration of polyacrylamide.

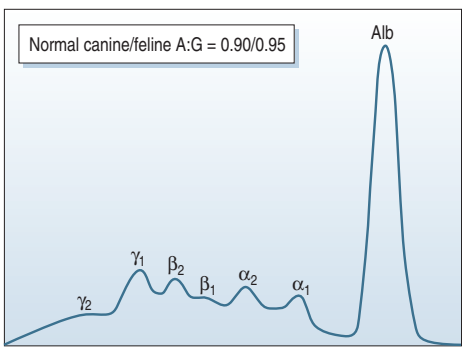
two-dimensional gel e. a SDS–polyacrylamide gel electrophoresis run, first in one direction, then again at right angles. In the first dimension an isoelectric-focusing gel is run and in the second dimension the proteins are separated in SDS–PAGE. A greater number of individually different proteins can be resolved in a highly repeatable fingerprint-like pattern.

electrophoretogram [*e-lek"tro-fə-ret'o-gram*] the recording produced by bands of material as they have been separated on the support medium by the electrophoresis process.

electrophysiologic testing [*e-lek"tro-fis"i-o-loj'ik*] see **electromyography**, **electrocardiography**.

electrophysiology [*e-lek "tro-fiz"e-ol'ə-je*] study of the electrical phenomena involved in physiological processes.

electroplectic emanating from or pertaining to electroplexy.



E-21: Cellulose acetate electrophoretogram. From Kaneko JJ, Harvey JW, Bruss ML, Clinical Biochemistry of Domestic Animals, 5th Edition. Academic Press, 1997.

e. fit the extensor tonus or tetanic fit experienced by most animals that are stunned for slaughter by electric shock.

electroporation [*e-lek"tro-pə-ra'shən*] a means of increasing permeability of a cell by application of a low voltage electric charge. Small pores are transitently opened in the clel membrane by the voltage, allowing entry of a gene construct or other substance into the cell.

electropositive [*e-lek"tro-poz'i-tiv*] bearing a positive electric charge.

electroreceptors [*e-lek"tro-re-sep'tərs*] nerve endings which perceive differences in voltage fields; a feature of fish and monotremes.

electroresection [*e-lek"tro-re-sek'shən*] electrosection.

electroretinogram (ERG) [*e-lek"tro-ret'i-no-gram*] the record obtained by electroretinography.

electroretinograph [*e-lek"tro-ret'i-no-graf*] an instrument for measuring the electrical response of the retina to light stimulation.

electroretinography [*e-lek"tro-ret"i-nog'rə-fe*] the recording of electrical changes in the retina in response to stimulation by light. Used to assess retinal function, particularly prior to cataract surgery and for the diagnosis of sudden acquired retinal degeneration and progressive retinal atrophy/degeneration.

electroscission [*e-lek"tro-sizh'ən*] cutting of tissue by means of electrosurgery.

electroscope [*e-lek'tro-skōp*] an instrument for measuring radiation intensity which really measures the electrical charge.

electrosection [*e-lek"tro-sek'shən*] a method of electrosurgery used to incise or excise tissue, which employs a slightly damped, modulated undamped, or undamped alternating electrical current, and requires both an active concentrating electrode and an inactive dispersing electrode. Called also electroresection. See also **electrosurgery**.

electrostatic [*e-lek"tro-stat'ik*] pertaining to static electricity.

e. unit (esu) a measure of electrical energy. 1 esu = 2.08×10^9 electrons. Relative to radiological output 1 roentgen (R) = amount of x- or gamma radiation which produces 1 esu/mL in dry air. Replaced by the SI unit, **coulomb** (2).

electrostimulation [*e-lek"tro-stim"u-la'shən*] electric stimulation of tissues.

electrostimulator [*e-lek"tro-stim'u-la"tər*] a device used as a form of physiotherapy. It delivers electrical impulses via needles inserted in tissues or clamps applied to the skin. An alternative to acupuncture.

electrostriatogram [*e-lek"tro-stri-āt'o-gram*] an electroencephalogram showing differences in electric potential recorded at various levels of the corpus striatum.

electrosurgery [*e-lek"tro-sur'jər-e*] the use of high-frequency alternating current to remove, incise or destroy tissue. This is accomplished by converting the electrical energy into heat through tissue resistance to the passage of the electrical current. Called also surgical diathermy. Two types of current are utilized in electrosurgery, damped and undamped; a damped current destroys and coagulates tissue and stops bleeding, and undamped current destroys minimal tissue and incises tissue. Basically, there are four types of electrosurgical techniques: electrodesiccation, electrofulguration, electrocoagulation and electrosection.

electrotaxis [*e-lek"tro-tak'sis*] taxis in response to electric stimuli.

electrotherapeutics [*e-lek"tro-ther"ə-pu'tiks*] see **electrotherapy**.

electrotherapy [*e-lek"tro-ther'ə-pe*] treatment of disease by means of electricity. See also **diathermy**.

electrotonic [*e-lek"tro-ton'ik*] 1. pertaining to electrotonus. 2. denoting the direct spread of current in tissues by electrical conduction, without the generation of new current by action potentials.

e. junctions see **gap junctions**.

electrotonus [*e-lek-trot'ə-nəs*] the altered electrical state of a nerve or muscle cell when a constant electric current is passed through it.

electroureterography [*e-lek"tro-u-re"tər-og'rə-fe*] electromyography in which the action potentials produced by peristalsis of the ureter are recorded.

electrovalence [*e-lek"tro-va'ləns*] the number of charges an atom acquires in a chemical reaction by gain or loss of electrons.

electroversion [*e-lek"tro-vur'zhən*] the act of electrically terminating a cardiac dysrhythmia.

electrovert [*e-lek'tro-vərt*] to apply electricity to the heart or precordium to depolarize the heart and terminate a cardiac dysrhythmia. See also **defibrillation**, **cardioversion**.

VetBooks.ir

electuary [*e-lek'tu-ar"e*] a medicinal preparation consisting of a powdered drug made into a paste with honey or syrup.

eledoisin [*el-ə-doi'sin*] a decapeptide from the posterior salivary gland of a species of snail (*Eledone*), which is a precursor of a large group of biologically active peptides; it has vasodilator, hypotensive and extravascular smooth muscle stimulant properties.

eleidin [*el-e'ĭ-din*] a substance, allied to keratin, found in the cells of the stratum lucidum of the skin.

element [*el'ə-mənt*] 1. any of the primary parts or constituents of a thing. 2. in chemistry, a simple substance that cannot be decomposed by ordinary chemical means; the basic 'stuff' of which all matter is composed. Chemical elements are made up of atoms. Each atom consists of a nucleus with a cloud of negatively charged particles (**electrons**) revolving around it. The two major components of the nucleus are protons and neutrons. The number of protons in the atoms of a particular element is always the same, and therefore the physical and chemical properties of the element are always the same. It is possible, however, for a chemical element to exist in several different forms, the difference depending on the number of neutrons in the nucleus of its atoms. Different forms of the same element are called isotopes. There are at least 105 different chemical elements known. Table 4 lists the elements, and the symbol, atomic weight and atomic number of each. The atomic number of an element is determined by the number of protons in the nucleus of an atom of the element. The mass number of an isotope is determined by the total number of neutrons and protons in the nucleus.

formed e's (of the blood) erythrocytes, leukocytes and platelets.

e. points see **horary points**.

trace e. a chemical element present or needed in extremely small amount by plants and animals, such as manganese, copper, cobalt, zinc, iron. See also **trace element**.

ele(o)- word element. [Gr.] *oil*.

eleoma [*el"e-o'mə*] a tumor or swelling caused by injection of oil into the tissues.

elephant [*el'ə-fənt*] a member of the order Proboscidae, family Elephantidae. The largest land mammals, they are immediately recognizable by their trunk (proboscis) and, in the males, tusks, which are elongated, second upper incisors. Includes the African elephant (*Loxodonta africana*) and Asian elephant (*Elephas maximus*).

e. foot callus see hypertrophic **callus**.

e. skin disease see **besnoitiosis**.

A. elephant there are two species, the African bush elephant (*Loxodonta africana*), the larger of the two, and the African forest elephant (*L. cyclotis*).

Asian e., Asiatic e. (*Elephas maximus*) native to South and, some parts of, Southeast Asia, it is smaller than the African elephant and has smaller ears. Although it is revered in some cultures and is domesticated widely, demand for its use as a work animal has decreased, as has its habitat. It is an endangered species.

elephant ears ***Alocasia*** spp., ***Colocasia*** *esculenta*.

elephant grass see ***Pennisetum*** *purpureum*.

elephant's ear *Xanthosoma*.

Elephantorrhiza elephantina African plant in the legume family Mimosaceae; contains toxic tannins which cause diarrhea. Called also elandsboontjie.

Eleusine grasses in the family Poaceae; some species, e.g. *E. indica*, are capable of causing nitrite or cyanide poisoning; includes *E. aegyptica*, *E. indica* (crowfoot or crab grass).

elevator [*el'ə-va"tər*] 1. dental elevator; an instrument used to disrupt the periodontal ligament when extracting a tooth. 2. rib elevator, usually combined with a periosteum stripper, e.g. Sayre double-ended **periosteal** elevator, Matson rib stripper and elevator.

elimination [*e-lim"ĭ-na'shən*] 1. discharge from the body of indigestible materials and of waste products of body metabolism. See also elimination **behavior**, **defecation**, **urination**. 2. of a disease; equivalent to eradication.

ELISA [*e-li'sə*] *e*nzyme-*l*inked *i*mmunosorbent *a*ssay. A type of primary binding test used to detect and measure either antigen or antibody that utilizes antibody binding sites for specificity. In the most simple applications, either antigen or antibody is bound to a solid substrate (polystyrene surface), and a second antibody to which enzyme is conjugated is added, followed by a substrate for the enzyme.

competitive E. detection of the analyte is based on its ability to quantitatively inhibit the binding of a known amount of a standard analyte to a limiting amount of antibody.

direct E. the primary antigen-antibody interaction is directly measured as the enzyme is directly labeled to one or the other.

indirect E. the primary antigen-antibody reaction is detected with the use of an enzyme-labeled antiglobulin.

sandwich E. the analyte is captured by one antibody and detected by another enzyme-linked antibody.

elixir [*e-lik'sər*] a clear, sweetened, usually hydroalcoholic liquid containing flavoring substances and sometimes active medicinal ingredients, for oral use.

Elizabethan collar a rigid material fashioned so as to project outward from around the neck of a dog or cat like a lampshade and prevent the mouth or teeth from damaging skin, casts or dressings on the legs or body. X-ray film or heavy plastic sheeting are usually used for this purpose. Also used in birds. Called also buster collar.

reversed E. c. in birds, reversing the collar permits better movement and is better tolerated.

E. c. test improvement of alopecia or traumatic skin lesions after placement of an Elizabethan collar for a short period of time will identify the cause as self trauma or excessive grooming.

elk [*elk*] (*Cervus canadensis*) a very large deer, native to North America and Asia, where they are called wapiti. Antlers in males can be very large with multiple tines. They are susceptible to chronic **wasting** disease and **brucellosis**. In Europe, the name refers to *Alces alces*, which is known elsewhere as the moose.

e. lip a blemish in a horse, a heavy, overhanging top lip.

tule e. (*C. canadensis canadensis*) a subspecies native to California.

Elkhound see **Norwegian** elkhound.

Ellangowan poison bush ***Eremophila*** *deserti*.

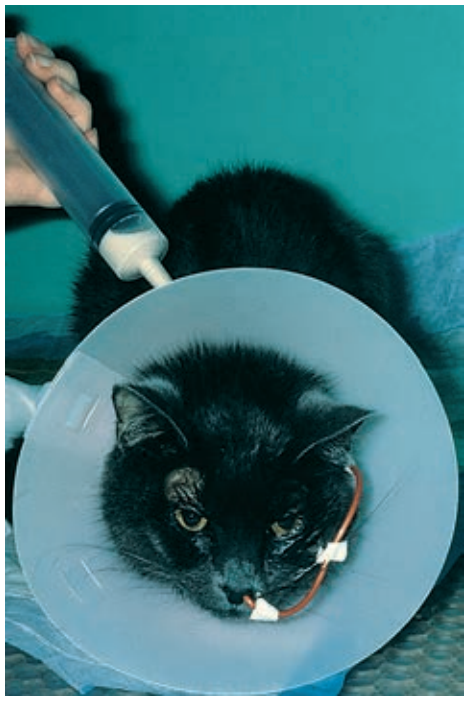
-elle suffix meaning a small.

Elliottdale Australian carpetwool sheep, derived from the **Romney Marsh** by mutation; wool of 35–45 microns, white face and dark hooves; mostly polled.

ellipsoid body [*e-lip'soid*] see ellipsoid **body**.

elliptical excision surgical undermining of the edges of a wound that is too wide to be sutured. Frees up the edges so that they can be approximated.

elliptocyte [*e-lip'to-sīt*] an oval-shaped erythrocyte. The normal erythrocyte in camelid, avian, reptilian and amphibian species; otherwise, is associated with myelofibrosis in dogs and hepatic lipidosis in cats, as well as other conditions. A hereditary elliptocytosis occurs in dogs. Called also ovalocyte.



E-22: Elizabethan collar. From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

elliptocytosis [*e-lip"to-si-to'sis*] the presence of elliptocytes (ovalocytes) in the peripheral blood. A normal finding in camelids, reptiles and amphibians.
hereditary e. erythrocyte membrane defects (deficiency of protein band 4.1) in dogs have been reported, but apart from causing elliptocytosis, the clinical effects have been minimal to inapparent.
elliptone an insecticidal substance, other than rotenone, found in derris root.
Ellis pin a device used in fracture repair which has threads at the tip, designed to engage only the opposite cortex of the bone in which it is inserted.
elodont a tooth that increases in length throughout its life; occur in rabbits, chinchillas and guinea pigs.
Elokomin fluke fever a disease of Canidae, ferrets, bears and raccoons caused by a *Neorickettsia elokominica*, transmitted by a fluke, *Nanophyetus salmincola*. Fish are the intermediate host and dogs are infected by eating the fish. Clinical signs are similar to, but milder than, those of **salmon** poisoning.
elongation [*e"long-a'shan*] 1. in protein synthesis, cyclic process of growth of a polypeptide chain from mRNA attached to ribosomes. Requires mRNA, ribosomes, activated aminoacyl-tRNA, elongation factor EF-Tu activated with GTP. 2. in fatty acids, a process of adding carbon from acetyl CoA to a lengthening acyl chain. Mechanism for achieving diversity of fatty acids in biological systems.
e. factor one in a group of proteins involved in the elongation of polypeptide chains during protein synthesis.
Elso heel an inherited spastic paresis of calves that develops after birth. Signs are stiffness of one or both hindlimbs on rising but with the stiffness passing after a few minutes. Affected animals have to be destroyed at about 12 months of age because of irreversible changes in the muscles of the affected limbs. No lesion has yet been identified as being involved in the pathogenesis of the disease. See also inherited spastic **paresis**.
eluate [*el'u-āt*] the substance separated out by, or the product of, elution or elutriation.
eluent [*e-loo'ant*] the solution used in elution.
elution [*e-loo'shan*] in chemistry, extraction of a substance that is adsorbed to another by washing. In chromatography, the emergence of substances from a column in the mobile phase.
elutriation [*e-loo"tre-a'shan*] separation of particles according to size by passing a solvent upwards through them in a vertical tube and slowly increasing the flow rate. The most slowly sinking particles emerge from the top of the tube first and larger, denser particles follow at high flow rates.
EM electron microscope.
emaciation [*e-ma"she-a'shan*] excessive leanness; a wasted condition of the body; generally taken to mean that the body weight is less than 50% of the normal expected for a comparable normal animal.
emanation [*em"a-na'shan*] that which is given off, such as a gaseous disintegration product given off from radioactive substances, or an effluvium.
emasculation [*e-mas"ku-la'shan*] removal of the penis or testes.
emasculatome instrument for bloodless castration of cattle or sheep. Works on the principle of crushing spermatic cord without breaking the skin of the neck of the scrotum. Several types available. See **Burdizzo emasculatome**.
emasculator [*e-mas'ku-la-tar*] instrument for simultaneous crushing and cutting of exposed spermatic cord in open castration. Cutting the cord is simple, crushing the vessels so that hemorrhage is avoided in a mature stallion is much more difficult. Crushing is effected by having one or a series of opposing ridged surfaces on the horse side of the cutting edge. Complexity of crushing apparatus varies from a single crushing face, e.g. the Frank emasculator, to a multiple with ratchet handle so that the apparatus can be left in place for a short time, e.g. the **Reimer emasculator**.
Frank e. a single crush emasculator with a thumbscrew at the joint.
Reimer e. a complicated, multiple-crush emasculator for horses. A scissor type with the main pair of handles ratcheted. The crushing jaws are multiple and there is a secondary crushing jaw operated by a third handle or lever. There are two blades on either side; these interlock and it is important that the instrument is applied in the correct way so that the last crushing action is applied to the cord that remains in the horse.
Serra e. single action emasculator with a ratchet on the handle so that the jaws can be clamped shut. One of the jaws is a single, curved blade that closes between two blades on the other side. Designed for use in horses.
White e. a triple crush emasculator for use on horses. The central pivot is a thumb screw so that the joint can be tightened or the instrument dismantled.
EMB eosin-methylene blue.
embalming [*em-bahm'ing*] chemical treatment of a dead body to retard decomposition.
embarrass [*am-bar'as*] to impede the function of; to obstruct.
Embden–Meyerhof pathway [*em'dan mi'ar-hof*] the series of enzymatic reactions in the anaerobic conversion of glucose to lactic acid, resulting in energy in the form of adenosine triphosphate (ATP).
embedding [*am-bed'ing*] fixation of tissue in a firm medium, in order to keep it intact during cutting of thin sections for pathological examination.
embole [*em'ba-le*] the reducing of a dislocated joint.
embolectomy [*em"ba-lek'ta-me*] surgical removal of an embolus.
emboli [*em'ba-li*] plural of *embolus*.
embolic [*em-bol'ik*] pertaining to embolism or an embolus.
e. endarteritis see **endarteritis**.
e. glomerulitis glomerular inflammation as a result of lodgment of an infected embolus, e.g. in cases of endocarditis.
fibrocartilaginous e. myelopathy necrotizing myelopathy as a result of vascular obstruction by a fibrocartilaginous embolus.
e. pneumonia see embolic **pneumonia**.
embolism [*em'ba-liz-am*] the sudden blocking of an afferent vessel (usually an artery, but may be the portal vein) by a body of material (embolus) that has been brought to the site of lodgment by the blood current. The obstructing material is most often a thrombus, but may be a fat globule, air bubble, piece of tissue, e.g. degenerated intervertebral disk, or clump of bacteria. It may therefore be the site of origin of a shower of microabscesses or a neoplastic metastasis. See also saddle **thrombus**, **iliac** artery thrombosis.
air e. air injected accidentally into veins which may cause temporary paralysis or dyspnea, or may be fatal if the embolism occurs in the heart or brain. Has been reported after intravascular catheter disconnection and associated with surgical procedures.
cerebral e. embolism of a cerebral artery; one of the causes of **cerebral** vascular accident.
fibrocartilaginous e. embolism of one of the arteries supplying the spinal cord or brain, causing a peracute onset myelopathy. Proposed to be the result of intervertebral disc material entering blood vessels near the spinal cord.
renal e. embolism in the kidney causes no observable clinical effect unless it involves a large enough area to cause renal failure.
embolization [*em"ba-li-za'shan*] 1. the process or condition of becoming an embolus. 2. therapeutic introduction of a substance into a vessel in order to occlude it.
embolus [*em'bo-las*] pl. *emboli* [Gr.] a clot or other plug, usually part or all of a thrombus, brought by the blood from another site and forced into a smaller one, thus obstructing circulation. See also **embolism**.
fibrocartilaginous e. see fibrocartilaginous **embolism**.
saddle e. one situated at the bifurcation of a large artery, usually the terminal aorta, blocking both branches. See also **aortic** embolism, saddle **thrombus**.
embrocation [*em"bro-ka'shan*] a liquid medication for external use; see **liniment**.
embryo [*em'bre-o*] a new organism in the earliest stage of development, i.e. from the time that the fertilized embryo begins to develop a long axis up to the time that the major structures have begun to develop, when it becomes a fetus.
e. collection collection of an embryo from the genital tract for the purposes of embryo transfer; surgical and nonsurgical techniques available.
e. cryopreservation preservation of embryos by freezing.

VetBooks.ir

hexacanth e. the larva with six hooks present in the cestode egg, released from the uterus/segment of the adult tapeworm. Called also oncosphere.
e. micromanipulation handling of an embryo under a microscope, for examination, dissection.
e. transfer collection of fertilized ova from one female before they become implanted and transfer to another female to complete the gestation. The donor is usually superovulated and then inseminated. Collection may be surgical via a laparotomy or nonsurgical by flushing through the cervix. Collected embryos must be stored carefully. They are evaluated in terms of fertilization, possibly cleaved artificially to create clones, and washed to eliminate the possibility of transferring infection with the embryo. Long-term storage by freezing is a practicable procedure. The recipient needs to be in appropriate stage of uterine receptivity, effected by synchronizing the estrus cycle with that of the donor.
e. transplant see embryo transfer (above).
embryocardia [*em"bre-o-kahr'de-ə*] a clinical sign in which the heart sounds resemble those of the fetus, there being very little difference in the quality of the first and second sounds.
embryoctony [*em"bre-ok'tə-ne*] destruction of the living embryo or fetus.
embryogenesis [*em"bre-o-jen'ə-sis*] the process of embryo formation. See also **embryo**.
embryoid [*em'bre-oid*] resembling an embryo.
embryological patterning [*em"bre-ol-oj'ĭ-kəl*] during embryonic growth the establishment of groups of cells in the proper relationship to each other and to surrounding tissues.
embryologist an expert in embryology.
embryology [*em"bre-ol'ə-je*] the science of the development of the individual animal during the embryonic stage and, by extension, in several or even all preceding and subsequent stages of the life cycle.
embryoma [*em"bre-o'mə*] a general term applied to neoplasms thought to be derived from embryonic cells or tissues, including dermoid cysts, teratomas, embryonal carcinomas.
embryonal [*em'bre-o"nəl*] emanating from or pertaining to embryo.
e. nephroma see **nephroblastoma**.
embryonated a fertilized egg in which an embryo is developing; said of hens' eggs commonly used for isolation and propagation of viruses.
embryonic [*em"bre-on'ik*] emanating from or pertaining to embryo. See also **embryo**.
e. death see early embryonic mortality (below).
e. disk larger cells of the mammalian blastocyst which develop into the embryo.
early e. mortality death of the embryo, i.e. before it becomes a fetus; a principal cause of temporary infertility in farm livestock. Amongst causes are errors in timing of insemination, chromosomal defects, asynchronous development of the endometrium.
e. period see **embryo**.
e. regulation ability of embryonic tissues to recognize changes in their size and location and to make the necessary adjustments to form the disk-shaped assembly of appropriate structures.
e. stem cell pluripotent stem-cell lines drived from early embryos before formation of the tissue germ layers.
e. vesicle see **chorionic** vesicle.
embryonization [*em"bre-o'nĭ-za'shən*] reversion of a tissue or cell to the embryonic form.
embryonoid [*em'bre-o-noid"*] embryoid.
embryopathy [*em"bre-op'ə-the*] a morbid condition of the embryo or a disorder resulting from abnormal embryonic development, with consequent congenital anomalies.
embryophore [*em'bre-o-for*] the thick layer of the tapeworm egg, which surrounds the oncosphere.
embryoplastic [*em"bre-o-plas'tik*] pertaining to or concerned in formation of an embryo.
embryotome [*em'bre-o-tōm*] see **fetotome**.
embryotomy [*em"bre-ot'o-me*] dismemberment of the fetus in difficult labor in which a normal delivery is impossible.
embryotoxicity [*em"bre-o-tok-sis'ĭ-te*] toxic to embryos.
embryotoxin [*em"bre-o-tok'sin*] a substance poisonous to embryos.
embryotroph [*em'bre-o-trōf"*] the total nutriment (histotroph and hemotroph) made available to the embryo.
embryotrophy [*em"bre-ot'rə-fe*] the nutrition of the early embryo.
embryulcus a blunt hook for removal of the fetus from the uterus.
EMC encephalomyocarditis.
Emden an upright, white goose with orange beak and legs, blue eyes.
emedullate [*e-med'u-lāt*] to remove bone marrow.
emerald green cheap green pigment containing arsenic and capable of causing poisoning.
emergency [*e-mur'jən-se*] a sudden and unexpected occurrence which requires urgent attention. Most veterinary practice is based on the need to take care of animal emergencies in medicine, surgery and reproduction. See also **veterinary** emergency service.
e. care delivery of urgent treatment to an animal, either as a temporary measure until full investigation and treatment is practical, or as a life-saving measure. See also **critical care**.
e. slaughter a desirable procedure if animals are to be dealt with humanely and farmers protected against avoidable financial loss. Sheep and cattle burned in bush fires are a case in point. Emergency slaughter of animals with unspecified illness is a common source of food poisoning unless the animals are submitted to rigorous meat inspection.
Emergency Prevention System for Transboundary Animal and Plant Pests and Diseases (EMPRES) programs established by FAO to provide information, training and emergency assistance to prevent and control serious livestock diseases at their source. An example is the program for global eradication of rinderpest. EMPRES-i is a web-based application which facilitates access to regional and global disease information.
emergent [*e-mur'jənt*] 1. coming out from a cavity or other part. 2. coming on suddenly.
emesis [*em'ə-sis*] the act of vomiting. Also used as a word termination, as in *hematemesis*.
emetic [*ə-met'ik*] 1. causing vomiting. 2. an agent that causes vomiting. A strong solution of salt (1 tablespoon to 1 cup of water), mustard water (1 tablespoon to 1 cup of water), and powdered ipecac or ipecac syrup are examples of emetics. In dogs, commonly in need of such treatment, apomorphine may be used.
e. factor an agent, probably deoxynivalenol, produced by *Fusarium graminearum* and found in mold-affected grain. Causes vomiting and food rejection in pigs fed the grain. Called also vomitoxin.
emetine [*em'ə-tēn*] the principal alkaloid of ipecac; used as an antiamebic.
emetocathartic [*em"ə-to-kə-thahr'tik*] 1. both emetic and cathartic. 2. an emetocathartic agent.
Emex australis plant in the family Polygonaceae; contains sufficient oxalate to cause poisoning but field occurrences are rare. Called also spiny emex, double gee, Cape spinach, prickly jack.
EMF electromotive force.
EMG, EMyG electromyogram, electromyograph, electromyography.
-emia [Gr.] *condition of the blood*.
emigration [*em"ĭ-gra'shən*] the escape of leukocytes through the walls of small blood vessels; diapedesis.
eminence [*em'ĭ-nəns*] a projection or boss.
iliopubic e. on the leading edge of the pubis; an attachment point for abdominal muscles.
eminentia [*em"ĭ-nen'shə*] pl. *eminentiae* [L.] see **eminence**.
emiocytosis a form of glandular secretion in which granules storing the secretory product are released through the plasma membrane into the extracellular space. Seen in insulin secretion by beta cells of the pancreas.
emissarium a vein that connects an intracranial venous sinus with a vein outside the cranium.
emissary [*em'ĭ-sar"e*] affording an outlet, referring especially to the venous outlets from the dural sinuses through the skull.
emission [*e-mish'ən*] a discharge.
EMMA Engstrom Multigas Monitor for anesthesia.
emmetropia [*em"ə-tro'pe-ə*] proper coordination of the refractive system and the focal length of the eye so that the focused image falls exactly on the retina.
Emmonsia [*ĕ-mon'se-ə*] a genus of fungi. See ***Chrysosporium***.
EMO vaporizer Epstein–Macintosh–Oxford vaporizer, designed to deliver ether anesthesia.
emodepside an octadepsipeptide anthelmintic effective against gastrointestinal nematodes; used topically in cats and as an oral

preparation in dogs. Semisynthetic derivative of the metabolite of the fungus *Mycelia sterilia*; part of the microflora found on the leaves of *Camellia japonica*.

emodin [*em'o-din*] a purgative glycoside found in the plant ***Rhamnus***.

emollient [*e-mol'e-ənt*] 1. soothing and softening, as an emollient bath given for various skin disorders. 2. an agent that softens or soothes the skin, or soothes an irritated internal surface.

emotion [*e-mo'shən*] aroused state involving intense feeling, autonomic activation and related behavior. Animals have emotions insofar as they are motivated to behave by what they perceive and much of the reaction is learned rather than intuitive. The reactions are based on rewarding and aversive properties of stimuli from the external environment. The center for the control of emotional behavior is the limbic system of the brain.

emphysema [*em"fə-se'mə*] a pathological accumulation of gas (usually air) in tissues. The air may derive from a skin laceration and be drawn in by the movements of muscles. A discontinuity of the tracheal mucosa is a common cause, either by way of laceration or ulceration. Extension from a pulmonary lesion is also common. The syndrome resulting depends on the location of the air. See also pulmonary emphysema and subcutaneous emphysema (below).

acute bovine pulmonary e. see **atypical interstitial pneumonia**.

alveolar e. see pulmonary emphysema (below).

bullous e. emphysema in which bullae form in areas of lung tissue so that these areas do not contribute to respiration.

conjunctival e. may occur after head trauma which permits escape of air from the paranasal sinuses into the subconjunctival space.

fetal e. accumulation of gases in tissues of a dead fetus as a result of putrefaction. Complicates the management of dystocia.

functional alveolar e. reversible, uncomplicated bronchiolitis.

generalized e. widespread distribution of air, including subcutaneous tissues, seen with pneumomediastinum.

hypoplastic e. pulmonary emphysema due to a developmental abnormality, resulting in a reduced number of alveoli, which are abnormally large.

interlobular e. accumulation of air in the septa between lobules of the lungs. Often seen in cattle as a result of dyspnea.

interstitial e. see interlobular emphysema (above).

intestinal e. a condition marked by accumulation of gas under the tunica serosa of the intestine.

lobar e. emphysema involving less than all the lobes of the affected lung.

mediastinal e. see **pneumomediastinum**.

orbital e. may occur after trauma to the head which permits escape of air from the paranasal sinuses; appears as swelling with crepitus under the conjunctiva or periocular skin.

panacinar e., panlobular e. generalized obstructive emphysema affecting all lung segments, with atrophy and dilatation of the alveoli and destruction of the vascular bed.

pulmonary e. distention of the lung caused by overdistention of alveoli and rupture of alveolar walls (alveolar emphysema) and in some cases escape of air into the interstitial spaces (interstitial emphysema). It is a common pathological finding in many diseases of the lung in all species, but also occurs independently, especially in horses, as a principal lesion in chronic obstructive **pulmonary** disease. The interstitial form is also a prominent feature of bovine **atypical interstitial pneumonia**. It is secondary to a primary condition in which air is more easily inspired than expired. It is characterized clinically by cough, dyspnea, forced expiratory effort and poor work tolerance. A double expiratory effort is a characteristic sign—hence broken wind.

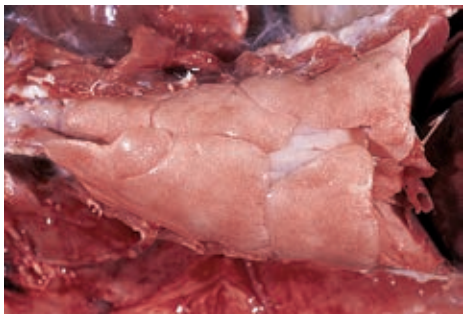
subconjunctival e. see conjunctival emphysema (above).

subcutaneous e. air or gas in the subcutaneous tissues. The characteristic lesion is a soft, mobile swelling which crackles (crepitates) when palpated. There is no pain, nor heat and no ill effects unless the pharyngeal area is sufficiently involved to cause asphyxia.

surgical e. subcutaneous emphysema following operation.

unilateral e. emphysema affecting only one lung, frequently due to congenital defects in circulation.

vesicular e. see panacinar emphysema (above).



E-23: Diffuse pulmonary emphysema in a cat. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

emphysematous [*em"fə-sem'ə-təs*] of the nature of or affected with emphysema.

e. gangrene see **blackleg**.

empiricism [*em-pir'i-siz-əm*] skill or knowledge based entirely on experience; compare with rationalism.

EMPRES Emergency Prevention System for Trans-boundary Animal and Plant Pests and Diseases.

emprosthotonos [*em"pros-thot'ə-nəs*] tetanic downward flexure of the head and tail and upward flexure of the back.

empty said of a female of breeding age; nonpregnant. Called also open.

emptying disorder see **gastric** emptying time.

emptying time the time taken for stomach contents to be passed into the duodenum; influenced by gastric motility and activity of the pyloric sphincter.

empyema [*em"pi-e'mə*] accumulation of pus in a body cavity, particularly the presence of a purulent exudate within the pleural cavity (pyothorax). It occurs as an occasional complication of pleuritis or some other respiratory disease. Signs include dyspnea, coughing, chest pain, malaise and fever. Thoracentesis may be done to confirm the diagnosis and determine the specific causative organism. Said also of nasal sinus, joint cavity, epidural space. See also **guttural pouch** empyema, **pyothorax**.

empyesis [*m"pi-e'sis*] a pustular eruption.

emu (*Dromaius novae-hollandiae*) a large flightless bird, native to Australia; up to 6 ft high and weighing up to 100 lb. They are farmed commercially for meat and leather.

emulgent [*e-mul'jənt*] effecting a straining or purifying process.

emulsifier [*e-mul'si-fi"ər*] a substance used to make an emulsion.

emulsion [*e-mul'shən*] a mixture of two immiscible liquids, one being dispersed throughout the other in small droplets; a colloid system in which both the dispersed phase and the dispersion medium are liquids. Margarine, cold cream and various medicated ointments are emulsions. In some emulsions the suspended particles tend to join together and settle out; hence the container must be shaken each time the emulsion is used.

X-ray e. radiation-sensitive coating of an X-ray film consisting of a suspension of finely divided grains of silver halide in gelatin.

emulsoid [*e-mul'soid*] a colloid system in which the dispersion medium is liquid, usually water, and the disperse phase consists of highly complex organic substances, such as starch or glue, which absorb much water, swell, and become distributed throughout the dispersion medium.

emunctory [*e-munk'tə-re*] 1. excretory or cleansing. 2. an excretory organ or duct.

Emydidae the largest and most diverse family of turtles; includes box turtles and pond turtles, which accounts for the large number of species sold in the commercial pet trade. See also **turtle**.

en- prefix meaning inward.

en bloc resection see en bloc **resection**.

enalapril [*ə-nal'ə-pril*] an angiotensin converting enzyme (ACE) inhibitor, used in the management of heart failure by reducing systemic blood pressure and producing diuresis.

enalaprilat [*ə-nal'ə-pril-at"*] the pharmacologically active product of hepatic hydrolysis of **enalapril**.

enamel [*ə-nam'əl*] the white, compact and very hard substance covering and protecting the dentin of the crown of a tooth.

e. bulge the area of greatest diameter of a tooth, just external to the gum line, which acts to deflect food from the free gingival margin and the gingival crevice.

VetBooks.ir

E-24: Enamel hypoplasia. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

e. epithelium epithelium which creates a bell-shaped enamel organ, surrounding the dental papilla; the internal epithelium consists of columnar ameloblasts which secrete enamel.
e. hypoplasia incomplete or defective development; porous enamel or exposed dentine become discolored. A common defect in dogs. See also **distemper** teeth.
inherited e. defect an inherited absence of enamel from all teeth combined with excessive flexibility of joints in Holstein–Friesian cattle. The teeth are pink and obviously deficient in substance. A defect in collagen formation is probable.
e. layer the outermost layer of cells of the enamel organ.
mottled e. dental fluorosis; defective enamel, with a chalky white appearance or brownish stain, caused by excessive amounts of fluorine in drinking water and food preparations during the period of enamel calcification.
e. organ an epithelial cap over a dental papilla that develops into the enamel-producing organ. The shape of the enamel organ determines the shape of the tooth.
e. points sharp projections of enamel at the junction of the buccal and occlusal surfaces of a tooth. Seen most commonly in horses.
e. rods progressively mineralized glycoproteinaceous tubules, the basic structural units of enamel; enamel is acellular and consists of interrod material and rods.
e. spot remnant of the enamel cup in the center of an incisor tooth table in a horse.
e. works factories manufacturing enamels or using them extensively; sources of fluorine for pollution of pasture and water.
enameloblastoma [*ə-nam″əl-o-blas-to′mə*] see **ameloblastoma**.
enanthema [*en″an-the′mə*] an eruption upon a mucous surface.
enantiomorph [*en-an′te-o-morf″*] one of a pair of isomeric substances, the molecular structures of which are mirror opposites of each other.
enarthrodial [*en″ahr-thro′de-əl*] having the nature of an **enarthrosis**.
enarthrosis [*en″ahr-thro′sis*] a joint in which the rounded head of one bone is received into a socket in another, permitting motion in three planes; called also ball-and-socket joint.
encainide [*en-ka′nid*] an antiarrhythmic drug that blocks Na+ conduction; used as the hydrochloride in the treatment of ventricular arrhythmias.
encapsulation [*ən-kap″su-la′shən*] enclosure within a capsule.
Encephalartos genus of African cycad plants in the family Zamiaceae. Meal made from seed contains cycad glycoside and causes liver, kidney and heart damage. Includes *E. hildebrandtii, E. laevifolius, E. lanatus, E. villosus*.
encephalic [*en″sə-fal′ik*] 1. pertaining to the brain. 2. within the skull.
encephalins [*en-sef′ə-linz*] natural opiate hormones found in the central nervous system.
encephalitides [*en-sef″ə-lit′ĭ-dēz*] plural of *encephalitis*.
encephalitis [*en-sef″ə-li′tis*] inflammation of the brain. Changes in vessel walls, as well as of nervous tissue, are almost a constant feature of encephalitis. There are many types of encephalitis, depending on the causative agent and the structures involved. Infectious causes include viruses (e.g. equine encephalomyelitis), bacteria, fungi (e.g. cryptococcosis), protozoa (e.g. toxoplasma encephalitis) and other organisms (e.g. amebae). In small animals, non-infectious causes are more common and include granulomatous **meningoencephalitis** and nectrotizing **meningoencephalitis** (collectively referred to as meningoencephalitis of unknown etiology prior to histopathological diagnosis). Clinically, encephalitis is characterized by signs dictated by the region of the brain affected, with signs such as seizures, circling and cortical blindness common when the prosencephalon is affected, and stupor, vestibular abnormalities and cranial nerve deficits when the brainstem is afftected. Commonly signs suggest more than one region of the brain is affected and are asymmetrical. Systemic evidence of illness (increased peripheral white blood cell counts, pyrexia) are variably present. Many encephalitides are accompanied by involvement of either the spinal cord and are more correctly classified as either meningoencephalitides or encephalomyelitides, respectively. See also **encephalomyelitis**. The etiologically or geographically specific diseases are listed under their specific titles. Human pathogens which sometimes infect animals include Central European, Far Eastern Russian tick-borne encephalitides, Omsk hemorrhagic fever, Kyasanur forest disease. Viruses isolated from asymptomatic cases of encephalomyelitis include Kunjun virus.
acute disseminated e. postinfection encephalitis.
arthropod-borne e. a group of viral encephalitides of animals. See **Togaviridae**, ***Flaviviridae***.
canine distemper e. a demyelinating encephalitis which is a feature of infection by the canine distemper virus.
demyelinating e. seen in certain viral infections, e.g. canine distemper, caprine arthritis–encephalitis and visna of sheep.
Eastern equine e. (EEE) see Eastern equine **encephalomyelitis**.
equine herpesvirus e. see equine herpesvirus **myeloencephalopathy**
granulomatous e. see granulomatous **meningoencephalomyelitis**.
histiocytic e. see granulomatous **meningoencephalomyelitis**.
Israeli turkey e. see Israeli turkey **encephalomyelitis**.
Japanese e. (JE) occurs in temperate and topical areas of Eastern and Southern Asia where it is the major cause of encephalitis in humans. The virus is maintained in a zoonotic cycle between wading birds, pigs and ***Culex*** spp. mosquitoes. There are high seroprevalence rates in many mammalian species, but clinical disease is largely restricted to horses and pigs. Manifest in horses by a wide variety of neurologic signs including incoordination, excitability and blindness. Most cases recover. Vaccination of racehorses is mandatory in several Asian countries. The disease in pigs consists of encephalitis in young pigs, abortion and stillbirth in sows and aspermia in boars. A disease notifiable to the OIE (see Table 22).
Murray Valley e. there is serological evidence of clinically inapparent infection of horses in Australia with this flavivirus virus.
necrotizing e. see necrotizing **meningoencephalitis** and **meningoencephalitis** of unknown etiology.
Nipah virus e. caused by a *Henipavirus* within the family Paramyxoviridae with severe disease in humans and swine. In humans, it produces encephalitis and respiratory disease with a high case fatality. In pigs, infection may be inapparent or produce respiratory disease, especially in younger pigs, and neurologic disease, abortion or sudden death. Reservoir hosts are flying foxes (bats) belonging to the genus *Pteropus*, family Pteropodidae, which shed the virus, most often in urine. Transmission of virus may occur directly from reservoir hosts or from infected humans or pigs. The first occurrence was in Malaysian pig farmers in the late 1990s with spread to Singapore as a result of movement of pigs. Close contact with pigs and handling pig carcasses is a major risk factor for infection and more than 1 million pigs were culled to minimize the risk of cross-species transmission. Classified as a biosafety level four pathogen due to high case fatality rate following human infection. A disease notifiable to the OIE (see Table 22).
non-suppurative e. inflammation of the brain not characterized by accumulation of polymorphonuclear leucocytes. Gross changes are usually absent, and the histological features are focal

E-25: Enamel spot. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

gliosis and perivascular cuffing by mononuclear cells (predominantly lymphocytes). A feature of most examples of viral encephalitis.

old dog e. a chronic, progressive, sclerosing panencephalitis in mature dogs, caused by canine distemper virus; characterized by motor and mental deterioration, blindness, pacing and circling.

Ontario e. see hemagglutinating **encephalomyelitis** virus disease of pigs.

paramyxovirus e. see porcine **blue eye** disease.

postinfection e. an acute disease of the central nervous system seen in patients convalescing from infectious, usually viral, diseases.

postvaccinal e. acute encephalitis sometimes occurring after vaccination, mediated by immune mechanisms.

Powassan e. a tick-borne flavivirus disease of humans with serological but no clinical evidence of infection in nearby goats.

Pug e. see necrotizing **meningoencephalitis**.

Ross River e. not a major veterinary pathogen, but this member of the family Togaviridae, genus *Alphavirus* has been isolated from horses in Australia and there is serological evidence of infection. There is a temporal association with a generalized disease in horses, often including arthropathy, and the occurrence of specific antibody in serum.

Russian spring–summer e. a similar and probably identical disease to the flavivirus that causes louping ill of sheep, occurring in central Europe. It is a disease of humans occurring in epidemics related to the prevalence of vector ticks in forests where the disease is most common. Humans can also be infected orally from raw milk, usually from goats. Lesions are present in organs other than the brain. The severity varies from mild to fatal.

St. Louis e. an arthropod-borne flavivirus infection, first observed in 1932 in Illinois. It is a serious pathogen of humans, but does not cause disease in animals.

toxoplasma e. see **toxoplasmosis**.

West Nile e. see **West Nile fever**.

Western equine e. (WEE) see Western equine **encephalomyelitis**.

encephalitis virus disease [*en-sef"ə-li'tis*] of fish; see **viral nervous necrosis**.

Encephalitozoon [*en"sə-fal"ĭ-to-zo'on*] a genus in the phylum Microsporidia, which are spore-forming unicellular parasites.

E. cuniculi occurs in rodents, dogs, primates and humans. Has a similar physical appearance and pathogenetic effect to toxoplasmosis. Causes **encephalitozoonosis**.

encephalitozoonosis [*en"sə-fal"ĭ-to-zo"o-no'sis*] a disease caused by the protozoa *Encephalitozoon cuniculi* in rabbits, mice, rats, hamsters and guinea pigs; characterized clinically by paralysis and lesions in the brain. Dogs and cats may also be infected.

encephal(o)- word element. [Gr.] *brain*.

encephalocele [*en-sef'ə-lo-sēl"*] hernial protrusion of brain substance through a congenital or traumatic opening of the skull.

encephalocystocele [*en-sef"ə-lo-sis'to-sēl*] hydroencephalocele.

encephalogram [*en-sef"ə-lo-gram*] recording obtained by encephalography.

encephalography [*en-sef"ə-log'rə-fe*] radiography demonstrating the intracranial fluid-containing spaces after the withdrawal of cerebrospinal fluid and introduction of air or water-soluble contrast media. Called also pneumoencephalography, ventriculography, cerebral ventriculography.

encephalolith [*en-sef'ə-lo-lith"*] a brain calculus.

encephalology the sum of knowledge regarding the brain, its functions and its diseases.

encephaloma [*en-sef"ə-lo'mə*] 1. any swelling or tumor of the brain. 2. medullary carcinoma.

encephalomalacia [*en-sef"ə-lo-mə-la'shə*] literally, softening of the brain. The term is used to include degenerative diseases and necrosis of the brain generally. *Leukoencephalomalacia* refers to the white matter, *polioencephalomalacia* to the gray matter. The syndrome associated with encephalomalacia is primarily one of loss of function related to the region of the brain affected. Signs may include somnolence, blindness, ataxia, head pressing, circling and terminal coma.

degenerative e. includes **nigropallidal encephalomalacia**, **leukoencephalomalacia**.

focal symmetrical e. a subacute form of enterotoxemia due to *Clostridium perfringens* type D in sheep which are partly immune to the toxin. Clinical signs are the dummy syndrome of aimless wandering, head pressing, blindness and incoordination. Most affected sheep die after an illness of about 7 days.

nigropallidal e. see **nigropallidal encephalomalacia**.

encephalomeningitis [*en-sef"ə-lo-men"in-ji'tis*] see **meningoencephalitis**; inflammation of the brain and meninges.

encephalomeningocele [*en-sef"ə-lo-mə-ning'go-sēl*] meningocephalocele; protrusion of the brain and meninges through a defect in the skull.

encephalomeningopathy [*en-sef"ə-lo-men"in-gop'ə-the*] meningoencephalopathy; disease involving the brain and meninges.

encephalomere [*en-sef'ə-lo-mēr*] one of the segments making up the embryonic brain.

encephalometer [*en-sef"ə-lom'ə-tər*] an instrument used in locating the cortical centers on the skull.

encephalomyelitides plural of *encephalomyelitis*.

encephalomyelitis [*en-sef"ə-lo-mi"ə-li'tis*] inflammation of both the brain (encephalitis) and spinal cord (myelitis). The causes and clinical signs are similar to those of encephalitis. The pathological lesions, however, include significant involvement of the spinal cord. Many of the causes are identical to the causes of encephalitis.

arthropod-borne e. a number of viral agents responsible for causing encephalomyelitis are transmitted by arthropods. See **arbovirus**.

avian e. caused by an enterovirus this disease affects young birds up to few weeks old. There is an obvious tremor of the neck, followed by weakness and incoordination and finally paralysis and death.

Eastern equine e. (EEE) a disease primarily of horses and humans, but also camelids, in the Americas. Caused by Eastern equine encephalitis virus, an *Alphavirus* (family Togaviridae) with two antigenic variants, North American and South American. Transmitted by mosquitoes. The horse is a terminal host and the reservoir of infection in birds and other native fauna. While many infections in horses and humans are subclinical it is considered the most deadly of the mosquito-borne alphaviruses due to the high case fatality rate associated with apparent infections in horses and humans with many survivors exhibiting crippling neurologic sequelae. South American strains are less virulent, occasionally causing disease and death in horses, but human infections are rarely recognized. Clinical signs in horses include initial excitement, muscle tremor, walking in circles, followed by a paralytic phase including somnolence, staggering, dropping of the head and finally recumbency. Prevention in horses is by vaccination. A disease notifiable to the OIE (see Table 22).

equine protozoal e. see equine protozoal **myeloencephalitis**.

equine viral e. see Eastern equine encephalomyelitis (above), Western equine encephlomyelitis (below) and Venezuelan equine encephalomyelitis (below).

experimental allergic e. (EAE) inoculation of animals with brain tissue in Freund's complete adjuvant produces an autoimmune encephalomyelitis.

granulomatous e. see granulomatous **meningoencephalomyelitis**.

hemagglutinating e. virus disease of pigs a disease of sucking pigs caused by a coronavirus characterized by the occurrence of two different clinical forms of the disease. They are probably the extremes of a clinical spectrum of one disease because both may be seen in the one outbreak in one piggery. The encephalitic form is characterized by incoordination, convulsions and death in 2–3 days. In the other form the principal signs are vomiting, inability to drink and severe dehydration and emaciation—hence vomiting and wasting disease. Called also Ontario encephalitis.

Israeli turkey e. nonsuppurative encephalomyelitis of turkeys caused by a flavivirus and carried by insects, probably mosquitoes. Manifested by a progressive paralysis.

mouse e. virus see **Theiler's disease**.

Near Eastern equine e. the cause is a virus, antigenically identical with the Borna disease virus, which normally infects birds, but in its transport by a vector tick it infects horses. The disease is clinically indistinguishable from **Borna disease**.

North American equine e. Western and Eastern equine encephalomyelitis.

ovine e. see **louping ill**.

porcine viral e. caused by members of the genus, *Teschovirus*, family *Picornaviridae*. The virulence of the viruses and the severity

VetBooks.ir

VetBooks.ir

of the diseases that they cause varies. Clinically the disease is characterized by a syndrome comprising hyperesthesia, paresis and convulsions but the severity is very much less in older pigs than in baby pigs. Adult pigs are commonly infected but show no clinical signs. Also known as Teschen disease, Talfan disease, poliomyelitis suum.

postinfectious e. inflammation of the brain and spinal cord following vaccination or infection. Was commonly seen after the administration of earlier rabies vaccines containing brain tissue.

postvaccinal e. see postinfectious encephalomyelitis (above).

sporadic bovine e. caused by *Chlamydophila pecorum* and characterized by inflammation of vessel walls, serous membranes and synoviae, with incidental involvement of nervous tissue in some cases. Clinically there is high fever and weakness, circling and knuckling in some. At necropsy there is fibrinous peritonitis, pleurisy and pericarditis—hence serositis—as well as encephalomyelitis. Called also transmissible serositis, Buss disease, SBE.

Venezuelan equine e. (VEE) caused by an arthropod-borne alphavirus (family Togaviridae) with one virus, but six antigenically related subtypes, within which are variants. There are non-pathogenic and pathogenic strains. Non-pathogenic VEE viruses persist in sylvatic cycles in rodents associated with swamps, and transmitted by mosquitoes of the genus *Culex*. Horses and humans are accidental hosts. Pathogenic epizootic strains arise by mutation and horses develop a profound viremia and are amplifying hosts; all species of mosquitoes that feed on horses are thought to be capable of spreading the infection. Clinical signs in horses include fever, muscle fasciculation, severe depression, head pressing, incoordination, recumbency, opisthotonos, paddling and death. There can be high case fatality. Infection of humans typically causes a 'flu-like' illness that ranges from mild to severe, but neurologic involvement is rare. Prevention in horses is by vaccination. A disease notifiable to the OIE (see Table 22).

Western equine e. (WEE) an occasional disase in horses and humans. Caused by an *Alphavirus* (family Togaviridae) and likely arose as a recombinant of Eastern equine encepalomyelitis virus, Sindbis virus. Wild birds are the hosts and mosquitoes the vectors. Occurs primarily west of the Mississippi. Epidemics of WEE are uncommon, but sporadic individual cases are not. Clinical signs in horses include excitement, muscle tremor, walking in circles, followed by a paralytic phase including smnolence, staggering, dropping of the head and finally recumbency. See also Eastern equine encephalomyelitis (above). A disease notifiable to the OIE (see Table 22).

encephalomyeloneuropathy [*en-sef"ə-lo-mi"ə-lo-noo-rop'ə-the*] a disease involving the brain, spinal cord and nerves.

encephalomyelopathy [*en-sef"ə-lo-mi"əl-op'ə-the*] a disease involving the brain and spinal cord.

encephalomyeloradiculitis [*en-sef"ə-lo-mi"ə-lo-rə-dik"u-li'tis*] inflammation of the brain, spinal cord and spinal nerve roots.

encephalomyeloradiculopathy [*en-sef"ə-lo-mi"ə-lo-rə-dik"u-lop'ə-the*] a disease involving the brain, spinal cord and spinal nerve roots.

encephalomyocarditis (EMC) [*en-sef-ə-lo-mi"o-kahr-di'tis*] inflammation of the brain and cardiac muscle.

e. virus disease of pigs a sporadic disease of pigs caused by a picornavirus (genus *Cardiovirus*) which is primarily a pathogen of rodents but which infects other species including humans. Affected pigs are most commonly found dead of heart failure without having displayed clinical signs. Longer surviving pigs show tremor, incoordination and dyspnea. There is a characteristic myocarditis evident at necropsy.

E-26: Horse with mosquito-borne Western equine encephalomyelitis (WEE) displaying the typical stance.
Courtesy of CDC/Mr J Bagby.

E-27: Ewe with pregnancy toxemia encephalopathy, unaware and not reactive to surroundings, and with abnormal stance.

encephalon [*en-sef'ə-lon*] the brain; that part of the central nervous system contained within the carnium.

encephalopathy [*en-sef"ə-lop'ə-the*] any disease affecting the brain.

biliary e., bilirubin e. kernicterus.

feline ischemic e. an acute, ischemic cerebral necrosis in cats causing various degrees of cerebral dysfunction. Clinical signs relate to the region of the brain affected and may include depression, ataxia, circling, vestibular signs, behavioral changes, blindness and seizures. Proposed to be due to migration of cuterebra larvae.

hepatic e. severe hepatic insufficiency which may induce clinical signs of prosencephalic dysfuntion. Signs may include hyperexcitability, tremor, compulsive walking, head pressing, seizures and blindness, followed by coma and possibly death. The pathogenesis of this hepatic encephalopathy is the unknown, but proposed theories include the accumulation of ammonia, changes in neurotransmitter concentrations, the generation of endogenous benzodiazepines and electrolyte and acid-base imbalances. A similar pathogenesis is hypothesized for the genesis of a cerebrotoxicant in companion animals with congenital defects in hepatic vasculature. See also **portosystemic** shunt, **hepatitis**. Note that similar signs, especially seizures, can develop in animals with portacaval shunts following ligation or coil placement, despite an absence of signs previously.

hypernatremic e. a severe hemorrhagic encephalopathy induced by the hyperosmolarity accompanying hypernatremia and dehydration.

hypoxic-ischemic e. see **neonatal** maladjustment syndrome.

lead e. brain disease caused by lead poisoning.

e.–microphthalmia syndrome an inherited disorder in **Hereford** cattle with ocular and neurological defects and muscular dystrophy. Affected calves are blind and unable to stand.

multifocal symmetrical myelinolytic e. a fatal disease of Limousin and Simmental calves, beginning at about a month of age with blindness and dysmetria (Limousins) or at 5–8 months of age with signs of ataxia and weight loss (Simmentals).

neonatal e. a developmental brain disease of neonatal Standard Poodle puppies characterized by extreme weakness, ataxia, seizures and death within weeks; caused by a missense mutation in the canine ortholog of ATF2

symmetrical multifocal e. inherited disease in two forms: Limousin form appears at about a month old with blindness, forelimb hypermetria, hyperesthesia, nystagmus, aggression, weight loss; Simmental form does not appear until 5–8 months, no blindness, hindquarters affected instead of forelimbs. Euthanasia inevitable in both forms.

portosystemic e. hepatic encephalopathy.

transmissible mink e. transmissible disease of mink which resembles scrapie in sheep. There is a very long incubation period, hyperirritability, biting, paralysis, coma and death. The scrapie agent is believed to be the cause.

encephalopuncture [*en-sef"ə-lo-pungk'chər*] surgical puncture of the brain.

encephalopyosis [*en-sef"ə-lo-pi-o'sis*] suppuration or abscess of the brain.

encephalorrhagia [*en-sef"ə-lo-ra'jə*] hemorrhage within or from the brain.

encephalosclerosis [*en-sef"ə-lo-sklə-ro'sis*] hardening of the brain.
encephalosis [*en-sef"ə-lo'sis*] any organic brain disease.
encephalotomy [*en-sef"ə-lot'ə-me*] 1. incision into the brain. See also **craniotomy** (2). 2. dissection or anatomy of the brain.
enchondral [*en-kon'drəl*] situated, formed or occurring within cartilage.
e. ossification see enchondral **ossification**.
retained e. cartilage cores see retained enchondral **cartilage** cores.
enchondroma [*en"kon-dro'mə*] a benign growth of cartilaginous origin arising within the medullary cavity in the metaphyseal region of bone. May be solitary or multiple, which are referred to as enchondromatosis. They may be incidental findings or cause swelling and pain, or fracture due to thinning of cortical bone.
enchondromatosis [*en-kon"dro-mə-to'sis*] multiple enchondromas; rare in dogs. Called also dyschondroplasia and in humans, Ollier's disease.
enchondrosarcoma [*en-kon"dro-sahr-ko'mə*] central chondrosarcoma.
Enchylaena tomentosa Australian plant in the family Chenopodiaceae. Contains high concentrations of soluble oxalate and may cause poisoning. Called also Barrier salt bush, ruby salt bush, berry cotton bush.
enclave [*en'klāv, ahn-klahv'*] tissue detached from its normal connection and enclosed within another organ.
enclitic having the planes of the fetal head inclined to those of the maternal pelvis.
encode [*en'kōd*] to code. See **genetic** code.
encopresis [*en-ko-pre'sis*] incontinence of feces not due to organic defect or illness.
encrustation scale 1. the formation of a crust. 2. a crust, scab or scale.
encysted [*en-sist'əd*] enclosed in a sac, bladder or cyst.
end-artery an artery that supplies a territory of tissue without contributions from other arteries. They are often further classified into 'anatomical end-arteries' that remain strictly free from anastomoses with other arteries, and 'physiological end-arteries' that may retain a few anastomoses restricted to the capillary level. Occlusion or interruption of end arteries can lead to infarction. See **infarction**, collateral **circulation**.
end-bulb [*end'bulb*] one of the small encapsulated bodies at the end of sensory nerve fibers in skin, mucous membranes, muscles and other areas. Called also Krause's bulbs or corpuscles.
end-feet button- or knob-like terminal enlargements of naked nerve fibers which end in a synapse with dendrites of another cell.
END method the *E*xaltation of *N*ewcastle *D*isease virus method; a Japanese technique for indirectly detecting the presence of classical swine fever (hog cholera) virus.
end organ one of the larger, encapsulated endings of sensory nerves.

E-28: Multiple enchondromatosis in a 9-month-old Chihuahua.

end pieces the distal portion of the spermatozoon consisting of irregularly arranged microtubules.
end-plate a flattened discoid expansion at the neuromuscular junction, where a myelinated motor nerve fiber joins a skeletal muscle fiber.
e.-p. potential created by acetylcholine causing depolarization of the muscle cell membrane.
end-stage a pathologist's term for any organ in the final stages of functional life. Said of kidney, liver, muscle, joint.
end-tidal at the end of a respiratory cycle. Said of the carbon dioxide concentration.
e.-t. CO_2 ($ETCO_2$) concentration of CO_2 at the end of an expiration; demonstrated in a **capnogram**.
end-to-end a pattern of anastomosis in which severed ends are matched and united, in contrast with other patterns such as end-to-side or side-to-side. Usually applied to anastomosis of the intestine.
endadelphos [*end"ə-del'fos*] a fetus in which a parasitic twin is enclosed within the body of the other twin (the autosite). Called also cryptodidymus.
Endamoeba a genus of amebae parasitic in the intestines of invertebrates. They differ from *Entamoeba* spp. because they lack a central endosome.
endangered species species of animals (and plants) whose existence on earth is threatened, principally by the activities of humans.
endangiitis [*en-an"je-i'tis*] inflammation of the endangium.
endangium tunica intima (inner coat) of a blood vessel.
endaortitis [*end"a-or-ti'tis*] inflammation of the membrane lining the aorta.
endarterectomy [*end-ahr"tər-ek'tə-me*] excision of thickened atheromatous areas of the innermost coat of an artery.
carotid e. endarterectomy within an extracranial carotid artery, usually within the common carotid. See also carotid **endarterectomy**.
endarterial [*end"ahr-tēr'e-əl*] within an artery.
endarteritis [*end-ahr"tər-i'tis*] inflammation of the innermost coat (tunica intima) of an artery.
e. obliterans a form in which the lumen of the smaller vessels becomes narrowed or obliterated as a result of proliferation of the tissue of the intimal layer.
endaural [*end-aw'rəl*] within the ear.
endbrain [*end'brān*] see **telencephalon**.
endectocides systemically administered parasiticides which remove nematodes and arthropods; includes ivermectin and milbemycin oxime.
endemic [*en-dem'ik*] present in a predictable, continuous pattern in an animal community at all times; said of a disease which is clustered in space but not in time. See also **enzootic**.
endemiology the science dealing with all the factors relating to the occurrence of endemic disease.
endemoepidemic [*en"də-mo-ep"i-dem'ik*] endemic, but occasionally becoming epidemic.
endergonic [*end"ər-gon'ik*] characterized or accompanied by the absorption of energy; requiring the input of free energy.
ending [*end'ing*] a termination, especially the peripheral termination of a nerve or nerve fiber.
end(o)- word element. [Gr.] *within, inward.*
endoaneurysmorrhaphy [*en"do-an"u-riz-mor'ə-fe*] opening of an aneurysmal sac and suture of the orifices.
endoangiitis [*en"do-an-je-i'tis*] endangiitis.
endoarteritis [*en"do-ahr"tər-i'tis*] see **endarteritis**.
endoblast [*en'do-blast*] endoderm.
endobronchial [*en"do-brong'ke-əl*] pertaining to or emanating from the lining of the bronchi.
e. intubation incorrect positioning of an endotracheal tube; a cause of inadequate delivery of gaseous anesthesia, hyperventilation, hypoxia and cyanosis.
endobronchitis [*en"do-brong-ki'tis*] inflammation of the epithelial lining of the bronchi.
endocardial [*en"do-kahr'de-əl*] 1. situated or occurring within the heart. 2. pertaining to the endocardium.
e. cushions elevations on the atrioventricular canal of the embryonic heart which later help partition the heart. Defective development contributes to several cardiac anomalies, including ventricular septal defect and **atrioventricularis communis**.

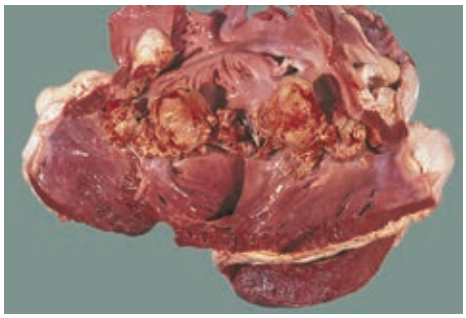
VetBooks.ir

VetBooks.ir

e. fibroelastosis pallid thickening of the endocardium by collagen and elastic fibers in response to chronic overdistension of cardiac chambers, particularly in younger animals; Burmese cats are predisposed. It is a prominent feature of congenital heart conditions that produce ventricular overload.
e. fibrosis occurs with cardiac dilatation or hypertrophy. In cats, leads to restrictive **cardiomyopathy**.
e. splitting a complication of chronic valvular insufficiency and congestive cardiomyopathy in dogs. May be partial or full thickness; can occur on the interatrial septum, producing an acquired septal defect, or elsewhere causing hemopericardium.
e. tube formed from the cardiogenic plate in the developing embryo, this forms the primordium of the truncus arteriosus, the atrium and the ventricles; it is later invested by the myocardium.

endocardiosis [*en"do-kahr"de-o'sis*] common cause of cardiac disease in the dog. Characterized by chronic fibrosis and nodular thickening of the free edges of the atrioventicular valves. In the worst cases the valve cusps are distorted converting a minor leak into a massive incompetence. Leads to congestive heart failure. See chronic **valvular** heart disease.
endocarditis [*en"do-kahr-di'tis*] exudative and proliferative inflammatory alterations of the endocardium, characterized by the presence of vegetations on the surface of the endocardium or in the endocardium itself, and most commonly involving a heart valve, but also affecting the inner lining of the cardiac chambers or the endocardium elsewhere. Lesions on the valves may interfere with the ejection of blood from the heart by causing insufficiency or stenosis of the valves. Murmurs associated with the heart sounds are the major manifestation and if interference with the blood flow is sufficiently severe congestive heart failure develops. The further hazard with endocarditis, especially if it is bacterial in origin, is that of septic emboli in the lungs, kidneys, joints or in the other organs.
bacterial e. infectious endocarditis, acute or subacute, caused by various bacteria, including streptococci, staphylococci, enterococci and gram-negative bacilli. Of particular interest in animals is the predilection of *Erysipelothrix rhusiopathiae* to cause endocarditis, epecially in pigs.
ductal e. due to thrombosis in a persistent ductus arteriosus with resulting mural inflammation.
infectious e., infective e. that due to infection with microorganisms, especially bacteria and fungi.
mural e. that affecting the lining of the walls of the heart chambers only.
nonbacterial thrombotic e. that in which the vegetations, single or multiple, consist of fibrin and other blood elements.
parietal e. mural endocarditis.
tuberculous e. that resulting from extension of a tuberculous infection from the pericardium and myocardium.
valvular e. that affecting the membrane over the heart valves only.
vegetative e. endocarditis, infectious or noninfectious, the characteristic lesions of which are vegetations or verrucae on the endocardium. Called also verrucous endocarditis.
endocardium [*en"do-kahr'de-um*] the endothelial lining membrane of the cavities of the heart and the connective tissue bed on which it lies.
endocervicitis [*en"do-sur"vĭ-si'tis*] inflammation of the endocervix.
endocervix [*en"do-sur'viks*] 1. the mucous membrane lining the canal of the cervix uteri. 2. the region of the opening of the cervix uteri into the uterine cavity.

E-29: Endocardiosis of the left atrioventricular valve in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.



E-30: Vegetative and ulcerative endocarditis of the atrioventricular valve in a dog.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

endochondral [*en"do-kon'drəl*] see **enchondral**.
e. ossification see enchondral **ossification**.
endochondroma [*en"do-kon-dro'mə*] tumor arising from cartilage within the medullary cavity.
endocolitis [*en"do-ko-li'tis*] inflammation of the mucous membrane of the colon.
Endoconidium temulentum [*en"do-kə-nid'e-um*] an imperfect fungus that grows on the grass ***Lolium*** *temulentum* or darnel grass and may be responsible for the grass's toxic effects.
endocranial [*en"do-kra'ne-əl*] within the cranium.
endocranitis [*en "do-kra-ni'tis*] inflammation of endocranium.
endocranium [*en"do-kra'ne-əm*] the endosteal layer of the dura mater of the brain.
endocrine [*en'do-krĭn, en'do-krin*] 1. secreting internally, i.e. into the blood or lymph and not by way of ducts to any epithelial surface. 2. pertaining to internal secretions; hormonal.
e. cells are either gathered together in specific endocrine glands or scattered diffusely through other tissue, e.g. in the walls of the gastrointestinal tract and the pancreas in which the cells are clustered together into islands.
e. dermatosis skin changes accompanying many diseases of the endocrine glands such as hypothyroidism, hyperadrenocorticism and hypopituitarism.
e. glands included are the pituitary, thyroid, parathyroid and adrenal glands, gonads, pancreas and paraganglia.
e. system organs or groups of cells that secrete regulatory substances that are released directly into the circulation (**hormone**). The endocrine or hormonal system and the nervous system are the two major control systems of the body, and their functions are interrelated. Hormonal activity is mostly concerned with regulating metabolic activities by controlling the rates at which chemical reactions take place within cells, the transport of substances across the cell membrane, and activities related to growth and reproduction. The word hormone is applied to substances released by the endocrine glands that have physiological effects on target organs (which can be other endocrine glands) and tissues distant from the gland. There are, however, local hormones (autacoids) secreted at the site of the tissue being affected, for example, acetylcholine and serotonin.
e. tumor adenoma or carcinoma; usually only one cell type, that of the normal tissue, but may be more than one type of cell capable of secreting more than one hormone.
endocrinism endocrinopathy.
endocrinologist [*en"do-krĭ-nol'ə-jist*] an individual skilled in endocrinology, and in the diagnosis and treatment of disorders of the glands of internal secretion, i.e. the endocrine glands.
endocrinology [*en"do-krĭ-nol'ə-je*] study of the endocrine system.
endocrinopathy [*en"do-krĭ-nop'ə-the*] any disease due to disorder of the endocrine system.
endocrinotherapy [*en"do-krĭ"no-ther'ə-pe*] treatment of disease by the administration of endocrine preparations; hormonotherapy.
endocrinous of or pertaining to an internal secretion (hormone) or to a gland producing such a secretion, i.e. to an endocrine gland.
endocystitis [*en"do-sis-ti'tis*] inflammation of the bladder mucosa.
endocytosis [*en"do-si-to'sis*] the uptake by a cell of material from the environment by invagination of the plasma membrane; it includes both phagocytosis and pinocytosis.
receptor mediated e. uptake of materials bound to specific cell-surface receptors by invagination of the plasma membrane to form a small membrane-bounded vesicle; a mechanism for entry of viruses into cells.

endoderm [*en'do-dərm*] the innermost of the three primitive germ layers of the embryo; from it are derived the epithelium of the pharynx, respiratory tract (except the nose), digestive tract, bladder and urethra.

endodermal [*en"do-dur'məl*] pertaining to or emanating from endoderm.

e. sinus tumor see **yolk** sac tumor.

endodontia see **endodontics**.

endodontic [*en"do-don'tik*] pertaining to or emanating from the pulp cavity of the tooth.

e. file an instrument used in the débridement of root canals.

endodontics [*en"do-don'tiks*] the branch of dentistry concerned with the etiology, prevention, diagnosis and treatment of conditions that affect the tooth pulp, root and periapical tissues. Includes pulp capping, partial pulpectomy and root canal therapy.

endodontium [*en"do-don'she-əm*] dental pulp.

endodyogeny [*en"do-di-oj'ə-ne*] asexual multiplication in protozoa in which two daughter cells are formed within the parent cell. Occurs for example in *Toxoplasma* and *Sarcocystis* spp.

endoenteritis [*en"do-en"tər-i'tis*] inflammation of the intestinal mucosa.

endogamy [*en-dog'ə-me*] fertilization by union of separate cells having the same chromatin ancestry.

endogenous [*en-doj'ə-nəs*] produced within or caused by factors within the organism.

e. feline oncornavirus see **RD114 virus**.

e. sarcoma virus see **feline** sarcoma virus.

endointoxication [*en"do-in-tok"sĭ-ka'shən*] poisoning by an endogenous toxin.

endolaryngeal [*en"do-lə-rin'je-əl*] situated on or occurring within the larynx.

Endolimax [*en"do-li'maks*] a genus of amebae found in the colon of humans, other mammals, birds, amphibians and cockroaches; none of them appear to be pathogenic.

E. caviae found in guinea pigs.

E. nana found in humans and monkeys.

E. ratti found in rats.

endolymph [*en'do-limf*] the fluid within the membranous labyrinth of the ear.

endolymphatic [*en"do-lim-fat'ik*] pertaining to or emanating from the endolymph.

e. duct connects the saccule of the membranous labyrinth of the internal ear to the endolymphatic sac.

endometrial [*en"do-me'tre-əl*] pertaining to or emanating from the endometrium.

e. biopsy punch biopsy specimens obtained in the mare and cow by passing the instrument through the cervix and controlling the site of the biopsy by a hand in the rectum.

e. cups round, raised structures in the endometrium of the pregnant mare. They are produced by trophoblastic cells from the chorionic girdles of the conceptus, but become detached from it. Their function is to produce equine chorionic gonadotropin (eCG), formerly PMSG.

e. curettage débridement of the endometrium by metal curette is not practiced in animals but a chemical equivalent, by the infusion of irritant substances, is used instead.

e. cyst in cows and ewes near caruncles; develop during uterine involution due to adhesions from the caruncle; no clinical importance. In mares, often due to development of preglandular fibrosis.

cystic e. hyperplasia pathological hyperplasia of endometrium, as distinct from the physiological state, due in most instances to excessive and prolonged estrogenic stimulation; characterized by thickening of the endometrium, development of mucus-filled glands and the accumulation of mucus in the lumen of the uterus. Associated with cystic ovarian disease in cows. In ewes it is usually due to prolonged low level intake of phyto-estrogens, e.g. on subterranean clover pasture. It may be a precursor of or associated with pyometra, especially in the dog where the hormonal cause is progesterone. See also **pyometra**.

e. folds in the mare these run the length of the uterus as observed by fiberscope or by ultrasonography.

e. glands provide uterine fluid (histotrophe) on which the developing fetus depends for subsistence during its first few days of existence.

e. hyperplasia with pyometra see cystic **endometrial** hyperplasia.

e. polyp found in the bitch and may cause prolapse of the affected horn with the polyp visible in the vagina.

e. regeneration postpartum return to normal of the endometrium, e.g. in cows by the sloughing of superficial layers of caruncles.

endometriosis [*en"do-me"tre-o'sis*] a condition in which tissue more or less perfectly resembling the uterine mucous membrane occurs aberrantly in various locations in the pelvic cavity. See also uterine **adenomyosis**.

endometritis [*en"do-me-tri'tis*] inflammation of the endometrium. See also **metritis**.

hyperplastic e. see **pyometra**.

puerperal e. endometritis following parturition.

purulent e. characterized by a small accumulation of pus in the uterus and a discharge, which may be intermittent, of thick pus from the vulva.

syncytial e. a benign tumor-like lesion with infiltration of the uterine wall by large syncytial trophoblastic cells.

tuberculous e. inflammation of the endometrium, usually also involving the uterine tubes, due to infection by *Mycobacterium bovis*, with the presence of tubercles.

endometrium [*en"do-me'tre-əm*] the mucous membrane lining the uterus.

endomitosis [*en"do-mi-to'sis*] mitosis taking place without dissolution of the nuclear membrane, and not followed by cytoplasmic division, resulting in doubling of the number of chromosomes within the nucleus.

endomyocardial fibrosis [*en "do-mi"o-kahr'de-əl*] see restrictive **cardiomyopathy**.

endomyocarditis [*en"do-mi"o-kahr-di'tis*] inflammation of the endocardium and myocardium.

endomysium [*en"do-mis'e-əm*] the sheath of delicate reticular fibrils that surrounds each muscle fiber.

endoneuritis [*en"do-nŏŏ-ri'tis*] inflammation of the endoneurium.

endoneurium [*en"do-noor'e-um*] the interstitial connective tissue in a peripheral nerve, separating individual nerve fibers.

endonuclease [*en"do-noo'kle-ās*] a nuclease that cleaves internal bonds of polynucleotides.

restriction e. see **restriction endonuclease**.

phosphate yielding e's. a class of ribonuclease involved in the usually fairly rapid turnover of RNA in the cell that degrades RNA by cleavage of the phosphodiester bonds within the molecule.

endoparasite [*en"do-par'ə-sīt*] a parasite that lives within the body of the host.

endopelvic [*en"do-pel'vik*] within the pelvis.

endopeptidase [*en"do-pep'tĭ-dās*] a peptidase capable of acting on any non-terminal peptide linkage in a peptide chain.

endopericarditis [*en"do-per"ĭ-kahr-di'tis*] inflammation of the endocardium and pericardium.

endoperimyocarditis [*en"do-per"ĭ-mi"o-kahr-di'tis*] inflammation of the endocardium, pericardium and myocardium.

endoperitonitis [*en"do-per"ĭ-to-ni'tis*] inflammation of the serous lining of the peritoneal cavity.

endophlebitis [*en"do-flə-bi'tis*] inflammation of the intima of a vein.

endophthalmitis [*en"dof-thal-mi'tis*] inflammation (usually purulent) within the ocular cavities (anterior, posterior and vitreous chambers) as a result of inflammation of the surrounding ocular tunics; frequently occurs as a result of a penetrating injury or septicemia; compare with **panophthalmitis**.

lens-induced e. see phacoanaphylactic endophthalmitis (see below).

nonsuppurative e. may be caused by trauma to the eye, or secondary to severe corneal inflammation.

phacoanaphylactic e. hypersensitivity to lens material. Called also lens-induced endophthalmitis.

starch e. inflammation caused by starch from surgical gloves.

suppurative e. caused by foreign bodies or infectious agents, which may be associated with systemic infection.

endophyte [*en'do-fīt*] microbes, principally fungi of the *Neotyphodium/Epichloe* complex, living within plants in a mutualistic symbiotic relation. Transmission of *Neotyphodium* endophytes is asexual, they are exclusively transmitted vertically from host plants to seeds. Transmission of *Epichloe* endophytes can be both horizontal and vertical as some are transmitted by sexual spores. Endophytes, especially *Neotyphodium* endophytes in grasses, and

VetBooks.ir

VetBooks.ir

their bioactive alkaloids, confer benefits to the grass that include increased resistance to environomental stresses and protection against insect herbivory. In agriculture and veterinary medicine endophytes have great interest due to the opposing effects of pasture protection against insect herbivory and concomitant toxicity to stock.

endophytic [*en"do-fit'ik*] 1. pertaining to an endophyte. 2. growing inward; proliferating on the interior of an organ or structure.

e. fungus fungal species living as symbionts within the tissues of pasture grasses including *Neotyphodium (Acremonium)* spp. in *Festuca* and *Lolium* spp.

endoplasm [*en'do-plaz"əm*] central cytoplasm, full of organelles.

endoplasmic [*en"do-plas'mik*] pertaining to or arising from endoplasm.

e. ribosomes small, cytoplasmic granules consisting of approximately 60% RNA and 40% protein.

endopolygeny asexual reproduction in protozoa in which new progeny are produced by budding within the parental cell.

endoreduplication [*en"do-re-doo"pli-ka'shan*] replication of chromosomes without subsequent cell division.

endorphin [*en-dor'fin, en'dor-fin*] one of a group of opiate-like peptides produced naturally by the body at neural synapses at various points in the central nervous system pathways where they modulate the transmission of pain perceptions. The term *endorphin* was coined by combining the words *endogenous* and *morphine.* Like morphine, endorphins raise the pain threshold and produce sedation and euphoria; the effects are blocked by naloxone, a narcotic antagonist.

endosalpingitis [*en"do-sal"pin-ji'tis*] inflammation of the endosalpinx.

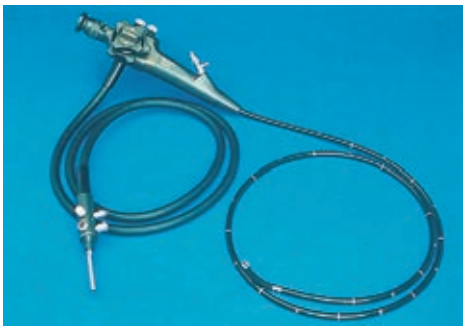
endosalpingoma [*en"do-sal"pin-go'mə*] adenomyoma of the uterine tube.

endosalpinx [*en"do-sal'pinks*] the mucous membrane lining the oviduct (uterine tube).

endoscope [*en'do-skōp*] to 'look inside'; an instrument used for direct visual inspection of hollow organs or body cavities. Specially designed endoscopes are used for such examinations as **bronchoscopy**, **cystoscopy**, **gastroscopy**, **laparoscopy**, and **proctoscopy**. Although the design of an endoscope may vary according to its specific use, they are either of a 'rigid' or 'flexible' construction. Rigid endoscopes are constructed from a series of glass lenses arranged in a linear sequence within a hollow metal or fiber tube that permits viewing in a variety of angles. Flexible endoscopes all use fiberoptics for the transmission of light from the light source to the tip of the endoscope. Transmission of the image is either via a fiberoptic image bundle to an eyepiece (fiberscope) or via an electrical signal from a sensor (chip) at the tip of the endoscope, directly to a video processor. The endoscope also has a light source, power cord and power source. Accessories that might be used with an endoscope for diagnostic or therapeutic purposes include suction tip, tubes and suction pump; forceps for removal of biopsy tissue or a foreign body; and electrode tip for cauterization.

flexible e. an optical instrument that is able to turn corners and provides an opportunity to enter irregularly shaped, tortuous organs, such as the intestine, and to look around corners.

rigid e. an optical instrument that comes in a variety of sizes and viewing angles which are useful for a number of minimally invasive surgical procedures, either via a natural orifice, such as cystoscopy, or via a surgically created orifice, such as laparascopy.



E-31: Storz veterinary small animal endoscope. From Tams T, Small Animal Endoscopy, 2nd Edition. Mosby, 1999.

semi-rigid e. a subclass of narrow, rigid endoscopes constructed of a fused silica bundle; useful for examination of areas otherwise inaccessible with standard lensed telescopes.

endoscopy [*en-dos'kə-pe*] visual examination of interior structures of the body with an endoscope.

endosepsis [*en"do-sep'sis*] septicemia originating from causes inside the body.

endoskeleton [*en"do-skel'ə-ton*] the cartilaginous and bony skeleton of the body, exclusive of that part of the skeleton of dermal origin. See also **exoskeleton**.

endosmosis [*en"dos-mo'sis*] inward osmosis; inward passage of liquid through a membrane of a cell or cavity, by which one fluid passes through a septum into a cavity that contains fluid of a different density.

endosome [*en'do-sōm*] intracellular vesicles formed from the cell membrane which are involved in intracellular transport.

endosteal [*en-dos'te-əl*] 1. pertaining to the endosteum. 2. occurring or located within a bone.

e. lining cells cover the internal surfaces of the compact bone, trabecular bone and osteonal canals.

endosteitis [*en-dos"te-i'tis*] inflammation of the endosteum.

endosteoma [*en-dos"te-o'mə*] a tumor in the medullary cavity of a bone.

endosteum [*en-dos'te-əm*] the tissue lining the medullary cavity of a bone.

cortical e. endosteal lining to cortical bone; delimits the marrow cavity.

osteonal e. endosteal lining of the osteonal canals.

trabecular e. the endosteum which coats the surfaces of the trabeculae.

endostoma [*en"dos-to'mə*] see **endosteoma**.

endostoses bony outgrowths on the medullary surface of long bones. Called also enostosis.

endosulfan an organochlorine insecticide. See **chlorinated hydrocarbons**.

endosurgery [*en'do-sur"jər-e*] minimally invasive surgical procedures carried out with the aid of endoscopes.

endotendineum [*en"do-tən-din'e-əm*] the delicate connective tissue separating the secondary bundles (fascicles) of a tendon.

endotendon, endotenon [*en"do-ten'don, en"do-ten'on*] the synovial connective tissue sleeve that covers the surface of certain tendons and which is separated from an outer exotendon by a slender synovial-fluid filled cavity.

endothelia [*en"do-the'le-ə*] [Gr.] plural of *endothelium*.

endothelial [*en"do-the'le-əl*] pertaining to or made up of endothelium.

e. tissue special connective tissue lining blood and lymph spaces.

e. tumors many caused by fowl leukosis virus; mesothelioma may also result.

endothelin [*en"do-the'lin*] see **endothelium-derived** constricting factor.

endotheliochorial [*en"do-the"le-o-kor'e-əl*] see **placenta**.

endotheliocyte a large mononuclear phagocytic wandering cell of the circulating blood and tissues. Called also endothelial leukocyte.

endothelioid [*en"do-the'le-oid*] resembling endothelium.

endothelioma [*en"do-the"le-o'mə*] a tumor arising from the endothelial lining of blood vessels.

endotheliosis [*en"do-the"le-o'sis*] proliferation of endothelial elements.

endothelium [*en"do-the'le-əm*] pl. *endothelia* [Gr.] the layer of epithelial cells that lines the cavities of the heart and of the blood and lymph vessels, sometimes applied to other internal epithelial surfaces.

corneal e. lines the inner surface of the cornea, between the corneal stroma and aqueous humor; called also the posterior epithelium.

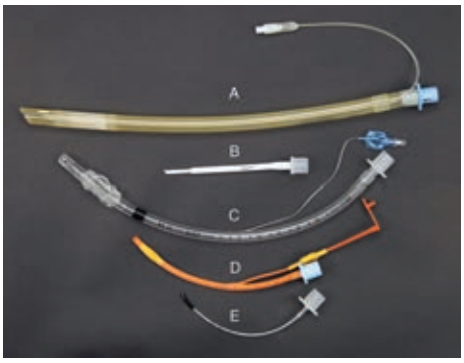
endothelium-derived derived from endothelium.

e.-d. vasoactive substances substances produced by or released from endothelial cells which regulate vascular smooth muscle or other regulatory mechanism; include prostacyclin and other prostanoids, angiotensin, and relaxing or constricting factors.

e.-d. constricting factor vasoconstrictive peptides isolated from vascular endothelial cells which are actively vasoconstrictive; **endothelin** (ET) is the most active of them.

e.-d. relaxing factor several are known; nitrous oxide is one of the chief mediators, probably derived from L-arginine.

endothermal, endothermic [*en"do-thur'məl, en"do-thur'mik*] 1. characterized by the absorption of heat. 2. pertaining to endothermy.
endothermy [*en"do-thur'me*] see **diathermy**.
endothrix [*en'do-thriks*] a dermatophyte whose growth and spore production are confined chiefly within the shaft of a hair.
endotoxemia [*en"do-tok-se'me-ə*] the presence of endotoxins in the blood.
endotoxic [*en"do-tok'sik*] pertaining to or possessing endotoxin.
e. shock see **toxemic** shock.
endotoxin [*en'do-tok"sin*] a heat-stable toxin not secreted by intact gram-negative bacterial cells. It is the lipopolysaccharide (LPS) of gram-negative outer membranes. Also called O antigen. It is pyrogenic and increases capillary permeability through stimulation of tumor necrosis factor alpha release.
endotracheal [*en"do-tra'ke-əl*] within the trachea.
Cole-pattern e. tube one with a tapered shape with no cuff; designed to be fitted with a wider shoulder at the larynx and narrow end in the trachea. Useful for birds and reptiles.
e. intubation an **airway** catheter inserted in the trachea during endotracheal **intubation** to assure patency of the upper airway by allowing for removal of secretions and maintenance of an adequate air passage. In animals, endotracheal intubation is usually accomplished through the mouth using an orotracheal tube.
nasal e. tube an endotracheal tube designed to be passed through the nasal cavity into the trachea. It usually has a thin wall.
reinforced e. tube a spiral wire or nylon strip is incorporated into the wall to reduce the risk of collapse or kinking.
e. tube a variety of endotracheal tubes is available. The tubes are almost always 'cuffed' to allow for their use with a mechanical ventilator. The cuff is a rubber balloon-like device that fits over the lower end of the tube. It is attached to a narrow tube that extends outside the body and allows for inflation of the cuff. Once the cuff is inflated there is no flow of air through the trachea other than that going through the endotracheal tube.
endoturbinates [*en"do-tur'bĭ-nāts*] the larger of the ethmoturbinalia that interleave with ectoturbinates in the caudal part of the nasal cavity and that are most complicated in animals with an acute sense of smell such as dogs.
endovasculitis [*en"do-vas"ku-li'tis*] see **endangiitis**.
endrin [*en'drin*] a highly toxic insecticide of the chlorinated hydrocarbon group. See **chlorinated hydrocarbons**.
endurance rides equine performance tests requiring contestants to complete a course of 80–150 km in 1–2 days. They create special problems in equine sports medicine. These include the exhausted horse syndrome, evidence of impending pulmonary edema, heat exhaustion, exertional rhabdomyolysis and a variety of disturbances of acid–base balance. The problem for the veterinarian is to decide whether horses should be allowed to continue in the contest. See also **exhaustion** syndrome.
Endymion nonscriptus see ***Hyacinthoides non-scripta***.
enema [*en'ə-mə*] 1. introduction of fluid into the rectum. 2. a solution introduced into the rectum to promote evacuation of feces or as a means of administering nutrient or medicinal substances, or opaque material in radiological examination of the lower intestinal tract. See also **barium** study.
through-and-through e. an extensive enema in which a large volume of fluid is slowly introduced into the rectum, massaged through the intestines, and finally emerges from the duodenum to cause vomiting of intestinal contents. Sometimes advocated for complete clearing of the intestinal tract in cases of ingested poisons.
enemata plural of *enema*.
energy [*en'ər-je*] power that may be translated into motion, overcoming resistance, or effecting physical change; the ability to do work. Energy assumes several forms; it may be thermal (in the form of heat), electrical, mechanical, chemical, radiant or kinetic. In doing work, the energy is changed from one form to another or to several forms. In these changes some of the energy is 'lost' in the sense that it cannot be recaptured and used again. Usually there is loss in the form of heat, which escapes or is dissipated unused. All energy changes give off a certain amount of the energy as heat. All activities of the body require energy, and all needs are met by the consumption of food containing energy in chemical form. The animal diet comprises three main sources of energy: carbohydrates, proteins and fats. Of these three, carbohydrates most readily provide the kind of energy needed to activate muscles. Proteins work to build and restore body tissues. The body transforms chemical energy derived from food by the process of **metabolism**, an activity that takes place in the individual cell. Molecules of the food substances providing energy pass through the cell membrane. Inside the cell, chemical reactions occur that produce the new forms of energy and yield by-products such as water and waste materials. See also **adenosine**.
dietary e. the total energy intake in the diet is the gross energy. Digestible energy is gross energy less fecal energy. Metabolizable energy is digestible energy less that lost in fermentation in the gut, energy lost in urine. Net energy is metabolizable energy less energy used in **specific** dynamic action response. Expressed as joules, calories or occasionally therms (1 calorie=4.18 joule).
e. balance is the difference between energy intake and energy expenditure.
e. density see **caloric** density.
e. expenditure under normal conditions, consists of three elements: basal metabolism, postprandial thermogenesis and physical activity.
e. feeds feeds with a high carbohydrate content and therefore low fiber (<18%) and protein (<20%) contents.
free e. the energy equal to the maximum amount of work that can be obtained from a process occurring under conditions of fixed temperature and pressure.
gross e. total energy of a feed as measured by direct calorimetry.
nuclear e. energy that can be liberated by changes in the nucleus of an atom (as by fission of a heavy nucleus or by fusion of light nuclei into heavier ones with accompanying loss of mass).
nutritional e. deficiency causes loss of body weight, milk, egg and wool production. Continued for long periods or severe restriction causes particular metabolic upsets in pregnant and lactating ewes and cows—see **pregnancy** toxemia, **ketosis** (2); in neonates, **hypoglycemia**. In others causes **emaciation**, **inanition**, **starvation**.
e. production production of ATP through oxidative phosphorylation or substrate-level phosphorylation.
e. requirements generally vary between species and particularly between individuals. They are determined by many factors, especially age, level of activity, physiological status and body size, specifically body surface area. The *basal energy requirement* (BER) is the level required by a healthy animal at complete rest in a neutral environmental temperature. It can be calculated by using several formulae, based on body weight or body surface area, which is then used in the further calculation of the *maintenance energy requirement* (MER) which takes into account the individual animal's level of activity or disease status.
e. reserves any reduced carbon stored in compounds such as fatty acids in triacylglycerols of adipose tissue, glucose in glycogen, and amino acids in protein releases energy, ultimately in the form of ATP on oxidation of the carbon.
e. transfer conversion of energy from one form usually chemical in the form of ATP to another usually chemical, but can be electrical, mechanical or heat energy.
enervation [*en"ər-va'shən*] 1. lack of nervous energy. 2. removal of a nerve or a section of a nerve.
enflagellation [*en-flaj"ə-la'shən*] the formation of flagella; flagellation.
enflurane [*en'floo-rān*] a fluorinated ether, similar in action to halothane, used for general inhalation anesthesia.



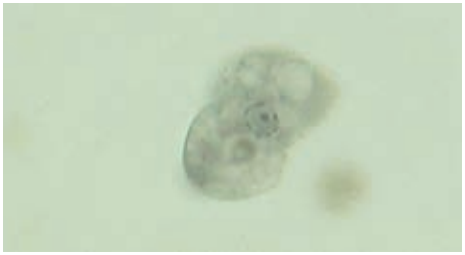
E-32: Endotracheal tube type, material, and size comparison. A, Cuffed 11-mm, silicone rubber Murphy tube. B, 2.5-mm Cole tube. C, Cuffed 8-mm polyvinyl chloride (PVC) Murphy tube. D, Cuffed 4-mm red rubber Murphy tube. E, Uncuffed 2 mm PVC Murphy tube.
From Thomas JA, Lerche P, Anesthesia and Analgesia for Veterinary Technicians, 4th Edition. Mosby, 2011.

VetBooks.ir

ENG enzootic nasal granuloma.
engastrius [*en-gas'tre-əs*] conjoined twins in which one fetus is contained within the abdomen of the other.
engine oil [*en'jin*] a cause of poisoning. See **sump oil**.
English bobtail see **Old English sheepdog**.
English bulldog see **Bulldog**.
English coach dog see **Dalmatian**.
English cocker spaniel see **Cocker spaniel**.
English coonhound see **American English coonhound**.
English foxhound see **Foxhound**.
English Game a long-legged, long-necked meat fowl with a wide, shallow body, long, muscular legs and muscular wings. Multicolored, mostly red, brown and white; originated from fighting birds.
English ivy see ***Hedera helix***.
English Leicester see **Leicester**.
English longwool a class of sheep; includes Romney Marsh, Leicester, Lincoln (Lincoln longwool) and Border Leicester. Called also British longwool.
English pointer see **Pointer**.
English setter a medium-weight, tall, lean, deep-chested dog with a long, silky coat that is most profuse under the neck, trunk, tail and behind the legs. The coat is basically white with black, liver, lemon or orange spots and flecks (belton markings). The breed is predisposed to neuronal ceroid lipofuscinosis (juvenile amaurotic familial idiocy), deafness, entropion and progressive retinal atrophy.
English spot a breed of medium-sized rabbits with a white coat and distinctive colored markings on the face, ears and down the back in a herringbone pattern with a chain of spots on either side.
English springer spaniel a medium-sized (20–50 lb), compact dog with floppy ears, short, docked tail and a long, flat, silky coat in brown (liver) or black and white, blue or liver roan, or tricolor, that is most profuse under the neck and body, and behind the legs. The breed is affected by an inherited storage disease (fucosidosis), cutaneous asthenia, factor XI deficiency, retinal dysplasia and cataracts.
English toy spaniel a small, compact dog with domed head, very short nose, pendulous ears and long, silky, wavy coat; four solid or broken-colored varieties are recognized: black and tan, ruby (rich chestnut red), Blenheim (white with chestnut red patches, one of which must be in a white blaze in the center of the skull and called the 'lozenge' or 'kissing spot'), and tricolor (called Prince Charles in the USA) (white with black patches and tan markings). Similar to, but smaller than, the **Cavalier King Charles spaniel**. In the UK and Australia, the breed is called the King Charles spaniel.
English toy terrier a very small (7–9 lb), lean, short-coated black and tan dog with erect, 'candle-flame' shaped ears and a tapered tail. Similar in appearance to the Manchester terrier, but smaller. Called also Black and tan terrier.
engorgement [*en-gorj'mənt*] distention.
carbohydrate e. see **carbohydrate engorgement**.
equine wheat e. see **carbohydrate engorgement**.
vascular e. local congestion; distention with fluids; hyperemia.
Engstrom Multigas Monitor a monitoring system for all halogenated hydrocarbon anesthetics which makes possible accurate continuous estimation of the concentration of anesthetic. The system uses a quartz crystal detector sensitive to anesthetic vapors.
enhancement [*en-hans'mənt*] immunologically speaking, ways of increasing the level of an immune response. Immunoenhancement.
tumor e. successful establishment and prolongation of survival time of a transplanted tumor allograft, as a result of binding of specific antibody which acts to mask tumor specific antigens on the surface of the tumor cells.
enhancer [*en-hans'ər*] see enhancer **sequence**.
enilconazole a broad-spectrum imidazole antifungal agent particularly useful in the treatment of canine nasal aspergillosis.
enkatarrhaphy the operation of burying a structure by suturing together the sides of tissues adjacent to it.
enkephalin [*en-kef'ə-lin*] either of two naturally occurring pentapeptides (methionine enkephalin and leucine enkephalin) isolated from the brain, which have potent opiate-like effects and probably serve as neurotransmitters. They are classified as **endorphins**.

E-33: Enophthalmos in both eyes resulting from emaciation.
From Dziezyc J, Millchamp N, Color Atlas of Canine and Feline Ophthalmology. Saunders, 2004.

enol [*e'nol*] one of two tautomeric forms of a substance, the other being the keto form; the enol is formed from the keto by migration of hydrogen from the adjacent carbon atom to the carbonyl group.
enolase [*e'no-lās*] an enzyme in glycolytic systems that changes phosphoglyceric acid into phosphoenolpyruvic acid.
enophthalmos [*en"of-thal'mos*] a backward displacement of the globe into the orbit; may be active due to contraction of the retractor bulbi (in most veterinary species) or passive due to loss of orbital contents.
enostosis [*en"os-to'sis*] a bony growth within a bone cavity or on the internal surface of the bone cortex. See also **panosteitis**.
enoxacin [*ĕ-nok'sə-sin*] a broad spectrum fluoroquinolone antibiotic, similar to ciprofloxacin.
enoxaparin [*e-nok"sə-par'in*] a low molecular weight heparin used as an antithrombotic agent.
enoxolone see **glycyrrhetinic acid**.
enrobing the process of spraying additional ingredients, usually fat and palatibility enhancers, on the outside of extruded, dry-type pet foods.
enrofloxacin [*en"ro-flok'sə-sin*] a fluoroquinolone antibiotic, similar to ciprofloxacin, useful against a wide spectrum of aerobic bacteria, but particularly gram-negative bacteria and mycoplasma. Marketed for veterinary use only as Baytril.
ENS enteric nervous system.
ensiform [*en'sĭ-form*] sword-shaped; xiphoid.
e. cartilage the xiphoid cartilage.
ensilage see **silage**.
ensiled pertaining to or emanating from ensilage.
ensomphalus [*ən-som'fə-ləs*] conjoined twins with blended bodies, two separate navels and two umbilical cords.
enstrophe [*en'stro-fe*] inversion; especially of the margin of the eyelids; entropion.
ENT ear, nose and throat.
entactin [*en-tak'tin*] an adhesive glycoprotein contributing to the cell-to-basal membrane and lamina-to-matrix interfaces.
entad [*en'tad*] toward a center; inwardly.
ental [*en'təl*] inner; central.
Entameba [*en"tə-me'bə*] a genus of amebae parasitic in the intestines of vertebrates. Member of the family Endamoebidae.
E. bovis found in cattle; nonpathogenic.
E. bubalis an ameba with a single nucleus in the cysts in its trophozoite.
E. canibuccalis **(syn.** *E. gingivalis***)** in the mouth of cats, dogs, humans and primates; nonpathogenic.
E. caviae found in guinea pigs; nonpathogenic.
E. coli a nonpathogenic form found in the intestinal tract of humans. Its importance is that it may be confused with the pathogenic *E. histolytica*.
E. cuniculi found in large bowel of rabbits.
E. equi found in horses.
E. equibuccalis nonpathogenic; found in the mouths of horses.
E. gedoelsti found in horse large intestine; nonpathogenic.
E. hartmanni found in large intestine of humans and the colons of dogs; nonpathogenic.
E. histolytica a species causing amebic dysentery and abscess of the liver in humans. Found also in monkey, dog, cat, rat, pig.
E. invadens cause of entamebiasis in reptiles. See **amebiasis**.
E. moshkovskii found in sewage. Resembles *E. histolytica*.
E. muris found in large intestine of rats and mice; nonpathogenic.
E. ovis found in sheep.
E. ranarum found in tadpoles.

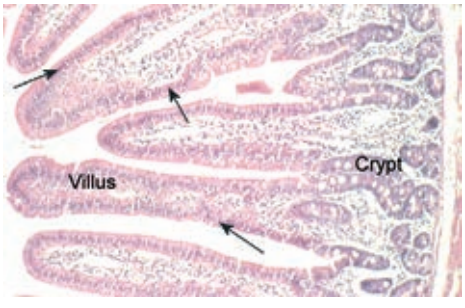


E-34: Motile feeding stage of *Entamoeba histolytica*, the trophozoite stage. From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

E. suigingivalis found in the mouths of pigs.
E. suis found in swine.
E. wenyoni an entameba with eight-nucleated cysts in the trophozoite.
entamebiasis infection by *Entamoeba* spp. Occurs in most animal species but clinical illness is evident only in humans in the form of amebic dysentery caused by *E. histolytica.*
Entandrophragma cylindricum African tree in the family Meliaceae whose wood shavings, when used as bedding, have caused balanoposthitis in rams. Sawdust from this tree, used as litter for chickens, has caused hyperkeratosis, weight loss, nervous signs and collapse. Called also aboudikro, redwood, sapele.
entasia a constrictive spasm; tonic spasm.
ENTEC enterotoxigenic *Escherichia coli*.
enteque seco [en-ta'ka] [Span.] see **enzootic** calcinosis.
enteral [en'tər-əl] within, by way of, or pertaining to the intestine.
e. feeding delivery of nutrients directly into the stomach, duodenum or jejunum. Called also enteral nutrition.
e. nutrition see enteral feeding (above).
e. tube the feeding tube positioned in the alimentary tract for administration of nutrients. See also **enterostomy** tube.
enteralgia [en"tar-al'jə] pain in the intestine. Called also colic.
enterectomy [en"tər-ek'tə-me] excision of a portion of the intestine.
enterelcosis ulceration of the intestine.
enteric [en-ter'ik] pertaining to the small intestine.
e. bacteria straight gram-negative rods, members of the family **Enterobacteriaceae**.
e.-coated designating a special coating applied to tablets or capsules which prevents release and absorption of their contents until they reach the intestine.
e. fever see **salmonellosis**.
e. protein loss see protein-losing **enteropathy**.
e. red mouth disease see **red mouth disease**.
enteritis [en"tər-i'tis] inflammation of the intestinal mucosa resulting in clinical signs of diarrhea, sometimes dysentery, abdominal pain and dehydration and electrolyte loss and imbalance. In more severe cases there is much mucus in the feces and in the worst ones there are shreds or even sheets of exfoliated mucosa. Gastritis is commonly an accompanying lesion. Vomiting may be a concurrent sign in monogastric animals. The causes are many and include bacteria, viruses, chemicals, damaged feedstuffs and nematode parasites and protozoa. Descriptions of those diseases will be found under the headings of their causative agents, e.g. rotavirus, coronavirus, enterovirus, *Salmonella*. There is a further list of diseases in which diarrhea is the cardinal sign but in which there are no lesions of enteritis. These are the enteropathies. See also **enteropathy**.
canine viral e. common causes in dogs are canine parvoviruses, coronavirus and rotavirus. Other viruses isolated from dogs with enteritis but of unknown clinical significance are astrovirus, calicivirus and parainfluenza virus.
equine chronic eosinophilic e. an eosinophilic intestinal condition in the horse, without known causes for eosinophilia, that is part of the inflammatory bowel disease complex that includes idiopathic focal eosinophilic enteritis (below). This disease is a multisystemic epitheliotropic syndrome including eosinophilic pancreatitis, dermatitis, and eosinophilic enteritis.
feline e. see **feline** panleukopenia.
granulomatous e. horses with this disease continue to lose condition over a long period and most have diarrhea and edema. There is a hypoproteinemia and protein loss in the feces. In dogs, the changes are similar, but may be segmental and can be the cause of partial obstruction.
hemocytic e. enteritis of shrimps associated with blooms of some blue-green algae.
idiopathic focal eosinophilic e. a rare diffuse eosinophilic enteritis without a known cause, but believed to be a distinct entity represented by an accumulation of leucocytes in the submucosa and muscularis, with dominance of eosinophils. Clinical signs may include weight loss, hypoalbuminemia and diarrhea, consistent with diffuse infiltrative intestinal disease. A cause of intestinal obstruction.
lymphocytic–plasmacytic e. infiltration of the lamina propria with lymphocytes and plasma cells can be a nonspecific response to chronic inflammation, but is classified by some as a primary, immune-mediated disease of the intestine causing malabsorption, chronic watery diarrhea and sometimes a protein-losing enteropathy.
mink e. see **mink** enteritis.
necrotic e. see **necrotic** enteritis.
parvoviral e. see canine **parvovirus**.
phlegmonous e. a condition with clinical signs resembling those of peritonitis, which may be secondary to other intestinal diseases, e.g. chronic obstruction, strangulated hernia, carcinoma.
proximal e. duodenitis.
regional e. inflammation of the terminal portion of the ileum. See also terminal **ileitis**, **Crohn's disease** and porcine proliferative **enteropathy**.
turkey hemorrhagic e. see **turkey** hemorrhagic enteritis.
ulcerative e. an acute disease of chickens, poults and game birds caused by *Clostridium colinum.* It is characterized by rapid spread of an acute symptomless disease. Quail show watery white droppings. Lesions include hemorrhagic enteritis in acute cases with ulceration the major finding in subacute cases. The morbidity in quail may be 100%, in chickens it is nearer 10%. Called also quail disease.
enter(o)- word element. [Gr.] *intestine.*
enteroaggregative [en"tər-o-ag'rə-ga"tiv] adhering to or forming colonies on intestinal mucosa.
e. *Escherichia coli* have fimbrial adherence to intestinal mucosa. Subsequent production of mucus by the bacteria and the host cell forms a biofilm on the surface of the enterocytes with release of toxins and elicitation of an inflammatory response and diarrhea.
enteroanastomosis [en"tər-o-ə-nas"to-mo'sis] see **enteroenterostomy**.
Enterobacter [en"tər-o-bak'tər] a genus of lactose-fermenting, gram-negative rod-shaped bacteria of the tribe Klebsielleae of the family *Enterobacteriaceae*. Found chiefly in the environment in water and soil but are common invaders of tissues in contaminated wounds of animals and in opportunistic infections such as cystitis and pyelonephritis in cattle. *E. aerogenes* (previously *Klebsiella mobilis*) is occasionally a cause of bovine mastitis, uterine infections in mares and the mastitis–metritis–agalactia syndrome in sows.
E. cloacae occasionally isolated from dogs and cats with septicemia.
Enterobacteriaceae [en"tər-o-bak-te"re-a'se-e] a family of gram-negative, rod-shaped bacteria (order *Eubacteriales*) occurring as plant or animal parasites or as saprophytes. Includes the lactose-fermenting genera of *Escherichia*, *Enterobacter*, *Serratia* and *Klebsiella*, and the apathogenic genera, *Citrobacter* and *Erwinia*. Also includes the nonlactose fermenters of pathogenic significance, *Salmonella*, *Proteus* and *Yersinia*.
enterobiasis [en"ter-o-bi'ə-sis] infection with nematodes of the genus *Enterobius*, especially *E. vermicularis.* A disease of humans that also occurs in primates, causing perianal irritation and aggressive behavior.
Enterobius [en"tər-o'be-əs] a genus of nematodes of the family Oxyuridae. Includes *E. vermicularis*, the human pinworm; causes **enterobiasis**.
enterocele [en'tər-o-sēl"] 1. intestinal hernia. 2. the body cavity formed by outpouchings from the archenteron.
enterocentesis [en"tər-o-sen-te'sis] surgical puncture of the intestine.
enteroception [en"tər-o-sep'shən] reception of sensory stimuli in the walls of hollow internal organs.
enterochromaffin [en"tər-o-kro'mə-fin] pertaining to intestine and chromaffin.
e. cells epithelial cells of the intestinal mucosa which stain with chromium salts; they usually contain serotonin.
e. tumor see **carcinoid**.

VetBooks.ir

enteroclysis [*en"tər-ok'lĭ-sis*] the injection of liquids into the intestine.
enterococci gram-positive bacteria in the genus *Enterococcus*.
Enterococcus [*en"tər-o-kok'əs*] a group of streptococci, mostly of Lancefield Group D. *E. durans* (previously *Streptococcus durans*), *E. faecalis* (previously *S. faecalis*) and *E. faecium* (previously *S. faecium*) are a cause of avian **streptococcosis**. Mostly they are found in the feces of animals and may be involved in opportunist infections. *E. avium* (previously *S. avium*) is of unknown pathogenicity. Of particular significance as multi-resistant opportunisitic pathogens of humans.
E. cecorum causes arthritis and osteomyelitis of the spine and hip in male broilers.
E. seriolicida an important pathogen of Japanese yellowtail and rainbow trout. Previously called *Lactococcus parviae* and *Streptococcus* spp. biovar 1.
enterocolectomy [*en"tər-o-ko-lek'tə-me*] resection of part of the intestine, including the ileum, cecum and colon.
enterocolitis [*en"tər-o-ko-li'tis*] inflammation of the small intestine and colon. Classifications include eosinophilic, granulomatous, hemorrhagic, plasmacytic, pseudomembranous, ulcerative.
antibiotic-associated e. see antibiotic-associated **colitis**.
hemorrhagic e. enterocolitis characterized by hemorrhagic breakdown of the intestinal mucosa, with inflammatory cell infiltration.
protothecal e. caused by oral infection with *Prototheca* spp. may cause chronic intractable diarrhea, with or without dysentery; necropsy lesions include ulcerative and hemorrhagic colitis.
pseudomembranous e. an acute inflammation of the bowel mucosa, with the formation of pseudomembranous plaques, usually associated with antimicrobial therapy.
ulcerative e. ulcers of the enteric mucosa resulting from bacterial or fungal infection of pre-existing erosions; can also result from tannin poisoning as in horses which consume foliage of oak trees.
enterocolostomy [*en"tər-o-kə-los'tə-me*] surgical anastomosis of the small intestine to the colon.
enterocrinin a hormone found in the canine small intestine and may stimulate intestinal juice secretion.
enterocutaneous [*en"tər-o-ku-ta'ne-əs*] pertaining to or communicating with the intestine and the skin, or surface of the body.
enterocyst [*en'tər-o-sist"*] a cyst proceeding from subperitoneal tissue.
enterocystocele [*en"tər-o-sis'to-sēl*] hernia of the bladder and intestine.
enterocystoma [*en"tər-o-sis-to'mə*] see vitelline **cyst**.
enterocyte [*en'tər-o-sīt"*] the predominant cells in the small intestinal mucosa. They are tall columnar cells and responsible for the final digestion and absorption of nutrients, electrolytes and water.
Enterocytozoon [*en"tər-o-si"to-zo'ən*] a genus in the phylum Microsporidia; includes *E. bieneusi*, a cause of microsporidiosis.
enterodynia [*en"tər-o-din'e-ə*] pain in the intestine.
enteroendocrine [*en"tər-o-en'do-krin*] pertaining to intestinal hormones.
e. cells cells of the intestinal mucosa that produce hormones such as secretin and cholecystokinin.
enteroenteropexy [*en"tər-o-en'tər-o-pek"se*] see bowel **plication**.
enteroenterostomy [*en"tər-o-en"tər-os'tə-me*] surgical anastomosis between two segments of the intestine.
enteroepiplocele [*en"tər-o-ə-pip'lo-sēl*] hernia of the intestine and omentum.
enterogastritis [*en"tər-o-gas-tri'tis*] inflammation of the small intestine and stomach.
enterogastrone [*en"tər-o-gas'trōn*] an uncharacterized hormone of the duodenum which has been suggested to mediate the humoral inhibition of gastric secretion and motility produced by ingestion of fat. Called also anthelone E.
enterogenous [*en"tər-oj'ə-nəs*] 1. arising from the primitive foregut. 2. originating within the small intestine.
enteroglucagon [*en"tər-o-gloo'kə-gon*] a peptide hormone secreted by gastrointestinal mucosal cells; it's many functions include inhibiting gastric acid secretion, regulation of insulin and glycemic control
enterogram [*en'tər-o-gram"*] an instrumental tracing of the movements of the intestine.
enterohemorrhagic [*en"tər-o-hem"ə-raj'ik*] causing bloody diarrhea.
e. *Escherichia coli* (EHEC) induce the attaching and effacing lesion, but in the colon and induce diarrhea by the production of Shiga toxin (Stx).
enterohepatic [*en"tər-o-hə-pat'ik*] pertaining to the liver and the intestine.
e. circulation see enterohepatic **circulation**.
enterohepatitis [*en"tər-o-hep"ə-ti'tis*] inflammation of the intestine and liver.
infectious e. a disease of poultry. See **histomoniasis**.
enterohepatocele [*en"tər-o-hep'ə-to-sēl"*] an umbilical hernia containing intestine and liver.
enterohydrocele [*en"tər-o-hi'dro-sēl*] hernia with hydrocele.
enteroinsular axis the relationship between insulin secretion and the entrance of a glucose load into the intestine. The response to a glucose meal taken orally is much greater than if the glucose is given intravenously.
enteroinvasive [*en"tər-o-in-va'siv*] invading the intestinal mucosa.
e. *Escherichia coli* invade colonic epithelial cells to produce colonic cell damage and diarrhea.
enterokinase [*en"tər-o-ki'nās*] the intestinal hormone that activates trypsinogen into becoming active trypsin.
enterokinesia [*en"tər-o-kĭ-ne'zhə*] peristalsis.
enterokinetic [*en"tər-o-kĭ-net'ik*] pertaining to or stimulating peristalsis.
enterolike viruses see **infectious** stunting syndrome.
enterolith [*en'tər-o-lith"*] a calculus in the intestine; they achieve their greatest importance in horses where they can cause obstruction of the large intestine. In most cases the resulting attacks of colic are recurrent. The enteroliths are smooth, lamellated objects consisting of ammonium magnesium phosphate and occur in mature animals.
Enterolobium Central American genus of plants in the family Mimosaceae. Includes *E. cyclocarpum* (conocaste tree), *E. contortisiliquum* (timbauba), *E. gummiferum* (tamboril da campo), *E. timbouva* (orelha de preto, timbora); no specific toxin identified, but associated with hepatogenous photosensitization and in some cases, abortion.
enterolysis [*en"tər-ol'ə-sis*] surgical separation of intestinal adhesions.
enteromegaly [*en"tər-o-meg'ə-le*] enlargement of the intestines.
enteromerocele [*en"tər-o-me'ro-sēl*] femoral hernia.
Enteromonas [*en"tər-o-mo'nəs*] a genus of the family Monocercomonadidae of protozoa. None appears to have pathogenic effects.
E. caviae found in the cecum of the guinea pig.
E. hominis found in the cecum of humans, primates and rodents.
E. suis found in the cecum of pigs.
enteromycosis [*en"tər-o-mi-ko'sis*] fungal disease of the intestine.
enteron the gut or alimentary canal; usually used in medicine with specific reference to the small intestine.



E-35: Tall columnar enterocytes lining the villus and being produced in the crypts in the small intestine.

E-36: Enterolith from a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

enteroparesis [*en"tər-o-pə-re'sis*] relaxation of the intestine resulting in dilatation.

enteropathogen [*en"tər-o-path'o-jən*] a microorganism with pathogenicity for the intestine. Includes enterobacteria, enterococci, corynebacteria, *Mycobacterium avium* subspecies *paratuberculosis*, ***Brachyspira*** *hyodysenteriae*, *Lawsonia intracellularis*, campylobacters, clostridia, coronaviruses, rotaviruses, toroviruses, caliciviruses, astroviruses, noroviruses, canine parvovirus, bovine virus diarrhea virus, rinderpest virus, **malignant catarrhal fever** virus, coccidia, cryptosporidia.

enteropathogenesis [*en"tər-o-path"o-jen'ə-sis*] the production of disease or disorder of the intestine.

enteropathogenic [*en "tər-o-path"o-jen'ik*] having pathogenicity for the intestine.

e. *Escherichia coli* strains that adhere to small bowel enterocytes, destroy normal microvillar architecture resulting in a characteristic attaching and effacing lesions, accompanied by an inflammatory response and diarrhea. Called also attaching and effacing *E. coli*.

enteropathy [*en"tər-op'ə-the*] any disease of the intestine. Includes enteritis plus those diseases in which there is no physical lesion of enteritis but in which there is severe diarrhea.

Basenji e. a severe lymphocytic plasmacytic enteropathy in Basenjis characterized by chronic diarrhea, emaciation and hyperglobulinemia.

cystic mucinous e. see lymphocytic–plasmacytic **enteritis**.

equine proliferative e. a disease of weaned foals presenting with lethargy, weight loss, a varying degree of fever, inappetance, a potbellied appearance with a rough coat, colic, diarrhea and ventral edema associated with a pronounced hypoproteinemia. The disease is a protein losing enteropathy associated with a proliferation of crypt epithelial cells in the terminal small intestine and thickening of the intestine at this site. The causative agent, *Lawsonia intracellularis*, is present in proliferating cells. The disease responds to a long treatment course with erythromycin and rifampicin or tetracyclines.

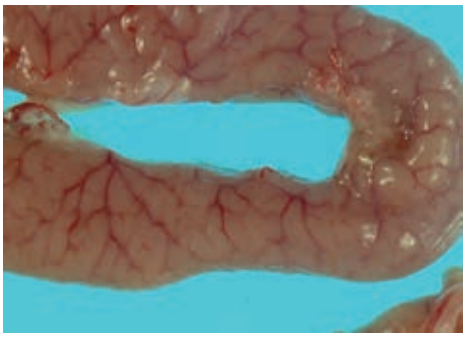
gluten e. see wheat-sensitive enteropathy (below).

mucoid e. a secretory diarrhea of rabbits, of unknown cause; characterized by occurrence of mucoid diarrhea, abdominal distention, cecal impaction, constipation, depression and hypothermia in rabbits of weaning age and older.

mycotic e. one caused by a fungal agent; see **histoplasmosis**, **phycomycosis**, **candidiasis**.

porcine proliferative e. a disease of recently weaned pigs characterized by diarrhea, anorexia, weight loss, a clinical course of a few weeks and recovery in most cases. One of the common causes of failure to grow, weight variation in batches of pigs and delay to market. The diagnostic feature at postmortem is the thickening of the wall of the ileum due to proliferation of intestinal epithelial crypt cells. *Lawsonia intracellularis* is the causative agent. There is an etiological and pathological relationship between porcine proliferative enteropathy, necrotic enteritis, regional enteritis and proliferative hemorrhagic enteropathy. In some outbreaks, inflammation and necrosis, and an accompanying infection with *Salmonella* spp. can result in necrotic enteritis and regional ileitis with intestinal perforation, diarrhea, severe weight loss and death. Occurs also in recently weaned gilts and young boars but at that age it is usually manifest as a hemorrhagic enteropathy.

proliferative hemorrhagic e. a disease, usually of replacement gilts and boars, characterized by anemia and bloody diarrhea, a short clinical course and a proliferative, hemorrhagic lesion in the terminal ileum, and a high death rate. The underlying intestinal abnormality is porcine proliferative enteropathy caused by *Lawsonia intracellularis*. The later age of onset is believed to occur because of suppression of infection by antibiotic use during the growing period, but the reason for the hemorrhagic complication is not known.



E-37: Thickened wall of the jejunum in porcine proliferative enteropathy.

protein-losing e. (PLE) a nonspecific term referring to conditions associated with excessive and non-selective loss of plasma proteins into the intestinal lumen; characterized by low total serum protein concentrations. Associated with a variety of systemic and bowel disorders, including congestive heart failure, gastric ulceration, gastric tumors, intestinal mucosal ulceration, inflammatory bowel disease, lymphangectasia, intestinal parasitic infestations, bacterial induced lesions such as in Johne's disease and the proliferative enteropathies.

rabbit e. complex term used to designate a number of poorly defined diarrheal conditions of rabbits; includes mucoid enteropathy and nonspecific enteropathy.

wheat-sensitive e. a hereditary sensitivity to gluten, seen in Irish setters and Soft-coated wheaten terriers. There is chronic, intermittent diarrhea and poor growth from a young age, all of which resolve when a gluten-free diet is fed. The condition resembles celiac disease of humans, but the pathogenesis differs.

enteropeptidase [*en"tər-o-pep'tĭ-dās*] an enzyme of the intestinal juice which activates the proteolytic enzyme of the pancreatic juice by converting trypsinogen into trypsin.

enteropexy [*en'tər-o-pek"se*] surgical fixation of the intestine to the abdominal wall.

enteroplasty [*en'tər-o-plas"te*] plastic repair of the intestine.

enteroplegia [*en'tər-o-ple'jə*] see paralytic **ileus**.

enteroplication [*en"tər-o-plĭ-ka'shən*] surgical procedure for treatment of intussusception and prevention of obstructive adhesions following abdominal surgery; adjacent loops of intestine are sutured to each other.

enteropooling [*en"tər-o-pōōl'ing*] increased fluids and electrolytes within the lumen of the intestines due to increased concentrations of prostaglandins.

enterorrhagia [*en"tər-o-ra'jə*] intestinal hemorrhage.

enterorrhaphy [*en"tər-or'ə-fe*] suture of the intestine.

enterorrhexis [*en"tər-o-rek'sis*] rupture of the intestine.

enteroscope [*en'tər-o-skōp*] an instrument for inspecting the inside of the alimentary tract.

enterosepsis [*en"tər-o-sep'sis*] sepsis developed from the intestinal contents.

enterospasm [*en'tər-o-spaz"əm*] intestinal colic.

enterostasis [*en"tər-o-sta'sis*] intestinal stasis.

enterostenosis [*en"tər-o-stə-no'sis*] narrowing or stricture of the intestine.

enterostomal [*en"tər-o-sto'məl*] relating to or having undergone an enterostomy.

enterostomy [*en"tər-os'tə-me*] the artificial formation of a permanent opening into the intestine through the abdominal wall. See also **colostomy**, **ileostomy**, **duodenostomy**, **jejunostomy**.

e. tube one introduced through a surgical opening in the small intestine (duodenostomy or jejunostomy). May be for purposes of introducing food past the pylorus, or for collection of intestinal contents.

enterosystemic [*en"tər-o-sis-tem'ik*] the relationship between the intestine and the systemic circulation.

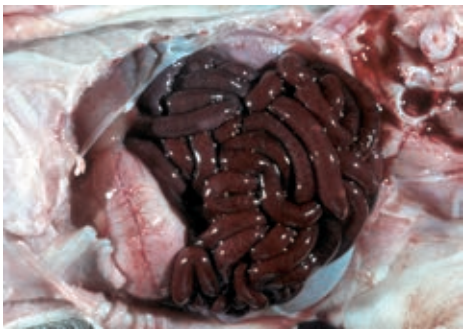
e. fluid cycle the net movement of fluid into and out of the gut lumen every 24 hours. The volume of the exchange is large and a temporary suspension of it can cause fatal dehydration in a horse in 24 hours. The volume depends very much on the diet, being much larger on a high-fiber diet such as in herbivores.

enterotomy [*en"tər-ot'ə-me*] incision of the intestine.

enterotoxemia [*en"tər-o-tok-se'me-ə*] a condition characterized by the presence in the blood of toxins produced in the intestines.

***Clostridium perfringens* e.** all of the types of *C. perfringens* cause profound enteroxemia with sudden death as the principal manifestation. The postmortem lesions in type D (pulpy kidney disease) enterotoxemia are minimal especially if the course is short. In types A, B, C and E there is a severe enteritis with diarrhea and dysentery. The diseases are most common in young rapidly growing ruminants but foals and piglets are sometimes affected.

VetBooks.ir



E-38: Enterotoxemia (necrotic enteritis) caused by *Clostridium perfringens* type C. McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

VetBooks.ir

coliform e. see *Escherichia coli* enterotoxemia (below).
***Escherichia coli* e.** calves with an enteric infection with the relevant serotype of *E. coli* show sudden collapse, subnormal temperature, coma, slow irregular heart rate, collapse of veins and pale mucosae. The course is short and affected calves die within 2–6 hours. Postmortem lesions are limited to flaccidity of the intestines and the presence of thin, yellow contents.
hemolytic e. a little reported disease recorded mostly in Australia in sheep, cattle and foals; a highly fatal hemolytic anemia associated with a heavy population of *Clostridium perfringens* type A in the intestines.
enterotoxemic jaundice an acute disease of lambs reported in the Western USA in which there is hemoglobinuria, anemia and jaundice. It is caused by *Clostridium perfringens* type A, alpha toxin. Called also yellow lamb disease.
enterotoxic [*en'tər-o-tok"sin*] of the nature of or pertaining to enterotoxin.
e. bacteria bacteria capable of producing enterotoxins.
e. colibacillosis a severe toxemia caused by enterotoxic strains of *Escherichia coli*; characterized by collapse, low body temperature, coma, and slow irregular heart rate.
enterotoxicosis [*en"tər-o-tok"sĭ-ko'sis*] intoxication by enterotoxins.
enterotoxigenic [*en"tər-o-tok"sĭ-jen'ik*] producing, produced by, or pertaining to production of enterotoxin. Said particularly of specific strains of *Escherichia coli*.
e. colibacillosis see *Escherichia coli* **enterotoxemia**. Called also enterotoxic colibacillosis.
e. *Escherichia coli* adhere to small intestinal enterocytes and induce watery diarrhea by the secretion of heat-labile (LT) and/or heat-stable (ST) enterotoxins.
enterotoxin [*en"tər-o-tok'sin*] 1. a toxin specific for the cells of the intestinal mucosa. 2. a toxin arising in the intestine.
enterotoxism [*en"tər-o-tok'siz-əm*] autointoxication of enteric origin.
enterotropic [*en"tər-o-tro'pik*] affecting the intestines.
enterovaginal [*en"tər-o-vaj'ĭ-nəl*] pertaining to or communicating with the intestine and the vagina, as an enterovaginal fistula.
enterovenous [*en"tar-o-ve'nəs*] communicating between the intestinal lumen and the lumen of a vein.
enterovesical [*en"tər-o-ves'ĭ-kəl*] pertaining to or communicating with the intestine and urinary bladder.
Enterovirus [*en'tər-o-vi"rəs*] a genus of the family *Picornaviridae*. The genus includes the important animal pathogens of porcine poliomyelitis (Teschen disease), possibly SMEDI disease (see porcine **parvovirus**), avian encephalomyelitis (epidemic tremor), duckling hepatitis, turkey hepatitis. Equine and bovine enteroviruses of doubtful pathogenicity have also been isolated. Human enteroviruses, e.g. Coxsackie virus, ECHO virus, are also isolated occasionally from animals without appearing to cause disease.
enterovirus [*en'tər-o-vi"rəs*] a virus in the genus *Enterovirus*.
e. encephalitis several porcine enteroviruses cause highly transmissible encephalitides. See also porcine viral **encephalomyelitis** (Teschen disease, Talfan disease, poliomyelitis suum).
enterozoon an animal parasite in the intestines.
enterprise a definable system which produces a commodity or groups of related commodities. On a farm there may be only one or several, e.g. grass seed production, lamb production, fat sheep sales, wool production, wheat production.
enthalpy [*en'thal-pe*] the heat content of a biochemical system.
enthesis [*en-the'sis*] 1. the use of artificial material in the repair of a defect or deformity of the body. 2. the site of attachment of a muscle or ligament to bone.
enthesopathy [*en"thə-sop'ə-the*] disease of an enthesis. Called also enthesitis.
enthesophyte, enthesiophyte calcification of a muscle attachment, tendon, joint capsule or ligament at the point of its insertion into the bone.
enthetobiosis [*en-thet"o-bi-o'sis*] a term suggested to denote the dependency of an organism on a mechanical device implanted within the body, for example, dependency of a patient on an electronic cardiac pacemaker to regulate the heartbeat. The relationship between the organism and the device is critical. Called also epenthetobiosis.
entire [*en-tīr'*] a term used in reference to an uncastrated animal, male or female.
Entlebucher mountain dog the smallest (45–65 lb) of the Swiss mountain dogs (**Sennenhund**) with a short coat in the typical tricolors.
ent(o)- word element. [Gr.] *within, inner*.
entoblast [*en'to-blast*] endoderm.
entocele an internal hernia.
entochoroidea [*en"to-ko-roid'e-ə*] the inner layer of the choroid of the eye.
entoderm [*en'to-dərm*] endoderm.
entoectad [*en"to-ek'tad*] from within outward.
entomere [*en'to-mēr*] a blastomere normally destined to become endoderm.
entomology [*en"to-mol'ə-je*] that branch of biology concerned with the study of insects.
Entomophthora [*en"to-mof'thə-rə*] a genus of phycomycetous fungi. See **swamp cancer** and ***Conidiobolus coronatus***.
entomophthoromycosis [*en "tə-mof"thə-ro-mi-ko'sis*] infection caused by *Entomophthora* spp. See **swamp cancer**.
Entomopoxvirinae subfamily in the order *Poxvirales* that includes insect poxviruses.
entomopoxvirus a group of poxviruses recovered from insects.
Entonyssus an entonyssid mite of snakes.
Entophionyssus an mite of snakes; see ***Ophionyssus***.
entopic [*en-top'ik*] occurring in the proper place, as opposed to ectopic.
entoptic [*en-top'tik*] originating within the eye.
entoptoscopy [*en"top-tos'ko-pe*] inspection of the interior of the eye.
entoretina [*en"to-ret'ĭ-nə*] the nervous or inner layer of the retina.
entotic situated in or originating within the ear.
entozoon [*en"to-zo'on*] an internal animal parasite.
entrainement [*en-trān'mənt*] the phenomenon in which a species of bacteria growing close to another may acquire some of the characteristics of the second species. See also **recombination**.
entraining [*en-trān'ing*] loading horses, cattle or any other livestock onto a train.
entrapment [*en-trap'ment*] the state of being trapped.
bowel e. the intestine is caught up in adhesions or peritoneal ligaments. Obstruction, with or without compromise of the blood supply to the incarcerated loop, follows.
epiglottic e. see **epiglottic**.
Entrefino Spanish meat and medium wool sheep, white, polled; includes many Spanish breeds. It is a class of sheep rather than a single breed.
entropion [*en-tro'pe-on*] inversion, or turning inward, as of the margin of an eyelid.
anatomic e. see conformational entropion (below).

E-39: Entropion of lower eyelid margin in a foal. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

E-40: Inherited congenital entropion in a Suffolk lamb involving the lower eyelid and resulting in conjunctivitis and purulent ocular discharge.

cicatricial e. caused by scarring of the eyelid or conjunctiva following surgery, injury or inflammation.
conformational e. seen as a presumed inherited feature in many species; especially common in some dog breeds, including Shar peis, Chow Chows, and St. Bernards. Called also anatomic entropion. May be congenital or occur during cranial maturation.
inherited congenital e. occurs in sheep, cattle, miniature pigs and some breeds of dogs.
lateral e. entropion of the lateral canthus and lateral ends of the upper and lower eyelids. Seen most commonly in broad-skulled dogs such as Rottweilers, Chow chows, retrievers, etc. May be caused by inadequate function of the retractor anguli oculi muscle or an inverting force from the lateral canthal ligament.
medial e. entropion of the medial aspect of the lower eyelid; seen most often in brachycephalic dogs.
neonatal e. usually temporary entropion seen in newborn animals, especially foals, lambs, and calves. Often due to a lack of orbital fat or dehydration. Self limiting as these conditions resolve although temporary surgical correction may be required.
spastic e. due to spasm of the orbicularis oculi muscle in response to ocular pain (ulcerative keratitis, ectopic cilia, foreign bodies or keratoconjunctivitis sicca). Usually temporary and resolves with resolution of the source of pain. However, if chronic, can become permanent due to shortening of the orbicularis oculi muscle.
uveal e., e. uveae inversion of the pupillary border sometimes with adherence to the anterior lens capsule (osterior synechia). A sign of (usually chronic) uveitis.

entropy [*en'tro-pe*] 1. in thermodynamics, a measure of the part of the internal energy of a system that is unavailable to do work. In any spontaneous process, such as the flow of heat from a hot region to a cold region, entropy always increases. 2. in information theory, the negative of information, a measure of the disorder or randomness in a physical system. The theory of statistical mechanics proves that this concept is equivalent to entropy as defined in thermodynamics.

enucleate [*e-noo'kle-āt*] to remove whole and clean, as the eye from its socket.

enucleation [*e-noo"kle-a'shən*] removal of an organ or other mass intact from its supporting tissues, as of the eye from the orbit.
transconjunctival e. surgical method of globe removal with initial incisions through the perilimbal conjunctiva.
transpalpebral e. surgical removal of the globe with initial incisions made through the eyelid skin just outside the eyelid margins.

enuresis [*en"u-re'sis*] see **incontinence**.

***env* gene** a gene which encodes a protein precursor for the envelope proteins, found in the retroviral genome.

envelope [*en'və-lōp*] an encompassing structure or membrane. In virology, a bilayer lipid membrane with glycoprotein spikes surrounding the nucleocapsid and usually furnished, at least partially, by the host cell. In bacteriology, the cell wall and the plasma membrane considered together.
nuclear e. the condensed double layer of lipids and proteins enclosing the cell nucleus and separating it from the cytoplasm; its two concentric membranes, inner and outer, are separated by a perinuclear space.

envenomation [*en-ven"o-ma'shən*] the poisonous effects caused by the bites, stings or effluvia of insects and other arthropods, or the bites of snakes.

environment [*en-vi'ron-mənt*] the sum total of all the conditions and elements that make up the surroundings and influence the development of an animal. The environment of animals is often assumed to comprise only physical, chemical and biological factors but society is gradually coming to appreciate that there is also an emotional and psychological side to the life of all animals.
external e. environment outside the animal; includes ambient temperature, wind chill factor, bedding adequacy, stall space, feed and water supply.
indoor e. the physical, social and psychological environment within a human dwelling that can influence the health of a companion animal. See also **environment**.

environmental [*en-vi"ron-mənt'-əl*] pertaining to or emanating from the environment.
e. injuries include burns, electrical injuries, frostbite, heat stroke.
e. melanosis see acquired **melanosis**.
permanent e. factors factors which affect all measures of performance equally and through the patient's lifetime, e.g. fulltime at pasture, tropical climate.
e. pollution the presence of offensive, but not necessarily infectious, matter in the environment. For example, pollution may be by specific organic or inorganic chemicals, by physical agents such as dust, volcanic fallout, smoke, automobile fumes, radioactive material and animal feces and urine. Each of these items and noise pollution is dealt with under specific headings.
e. stress see **stress** (2).
temporary e. factors risk factors which may vary widely, e.g. nutrition, pregnancy status, disease.

Environmental Systems Research Institute (ESRI) world's leading developer of geographic information systems software, ArcGIS, used by the majority of governmental veterinary and regulatory bodies. Can be server based or operate on personal desk top computers. Main components are ArcView, which is a program for viewing spatial data, creating layered maps, and performing basic spatial analysis, ArcEditor, a program with more advanced tools than ArcView, and ArcInfo, a program that allows data manipulation, editing and analysis.

environmentalist [*en-vi"ron-mənt'-əl-ist*] a person with an interest and knowledge about the interaction of humans and animals with the environment.

enzootic [*en"zo-ot'ik*] peculiar to or present constantly in a location. See also **endemic**.
e. abortion of ewes late abortion in ewes caused by *Chlamydophila abortus* introduced to a flock by carrier sheep. In many countries one of the most common causes of abortion. Characterized by late term abortions, stillbirths and the birth of weak lambs. Infection occurs by ingestion and the major source is the placenta and uterine discharge of aborting ewes and the associated contaminated pasture. Infected animals abort, or give birth to weak neonates, at the next pregnancy following infection, as the result of a placentitis. A disease notifiable to the OIE (see Table 22).
e. arthrogryposis/hydranencephaly infection of the pregnant cow, ewe or goat doe with the Akabane virus causes congenital defects of the nervous system of the fetus.
e. ataxia a disease of unweaned lambs caused by a nutritional deficiency of copper and characterized by an absence of myelin in tissues of the central nervous system, and a clinical picture of incoordination and terminally recumbency and death from starvation. Called also Gingin rickets, renguera, swayback, lamkruis.
e. balanoposthitis an endemic inflammation of the prepuce and penis of castrated male sheep. It is caused by *Corynebacterium renale* but the clinical disease appears only when there is lush pasture and a consequent high alkalinization of the urine, and also a high intake of estrogens from the pasture. There is a concurrent vulvitis in ewes and bulls may be affected. There is swelling, scabby ulceration and inflammation of the exterior and the interior of the prepuce and the glans penis. Affected wethers dribble urine, show pain at the site and may become flyblown. Called also pizzle rot, sheath rot.
e. bovine adenomatosis see **atypical interstitial pneumonia**.
e. bovine arthrogryposis see **Akabane virus** disease.
e. bovine leukosis see **bovine** viral leukosis.
e. calcinosis a poisoning by the plant *Solanum glaucophyllum (S. malacoxylon)* causes a significant increase in calcium absorption and deposition in tissues. The characteristic clinical signs are stiffness of the limbs and the back, and unwillingness to stand up if lying down, or to lie down if standing up. Identical diseases are caused by the plants *Cestrum diurnum, Nierembergia veitchii,*

VetBooks.ir

Solanum erianthum, S. linneaneum, S. torvum, Stenotaphrum secundatum and *Trisetum flavescens*. Called also enteque seco, Manchester wasting disease, Naalehu disease, espichamento.

e. equine ataxia see enzootic equine incoordination (below).

e. equine incoordination a series of diseases with very strong clinical similarity. The syndrome is one of chronic incoordination in young horses associated with a variety of pathological processes in the cervical spinal cord. These include a degenerative myeloencephalopathy of unknown origin, compression of the cord by overflexion of the neck, or by stenosis of the vertebral canal, and an inflammatory lesion in the cord caused by *Sarcocystis* spp. Affected horses are quite unsafe to ride even though some of them do not get to be too badly affected. Surgical intervention in appropriate cases is now a practical reality. Called also wobbler syndrome.

e. ethmoidal tumor this carcinoma has been a problem in cattle in South America, but has also occurred in Sweden and Asia. Occurs as multiple cases over several years on some farms. Epistaxis and nasal obstruction are the important findings. The paranasal sinuses may also be invaded.

e. hematuria a disease characterized by hemangiomatous lesions in the bladder of cattle, causing the intermittent passage of heavily blood-stained urine. The blood loss may be sufficiently severe to cause a fatal hemorrhagic anemia. Caused by chronic intake of ptaquiloside from *Pteridium* spp., *Cheilanthes sieberi*, *Onychium contiguum*; most cases are obviously related to the long-term ingestion of bracken. See also **ptaquiloside**.

e. icterus a syndrome which includes the hepatopathies of grazing animals. Includes facial eczema, **toxemic** jaundice and toxipathic hepatitis.

e. intestinal adenocarcinoma a disease of sheep in New Zealand, Iceland, Norway and of cows in New Zealand. Associated with grazing bracken fern and ingestion of ptaquilosde.

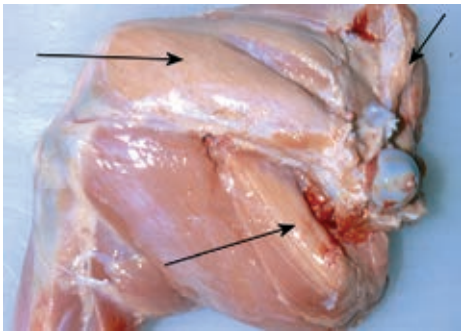
e. marasmus see **cobalt** nutritional deficiency.

e. muscular dystrophy a disease which is due to a nutritional deficiency of vitamin E or selenium and occurs in calves, lambs and foals. There is a sudden onset, commonly after exercise. The calf may drop dead or show dyspnea, a frothy nasal discharge and a rapid and irregular heartbeat, all signs of acute heart failure. Less acute cases show recumbency with inability to rise, and increased respiratory rate. Less severe cases still are able to stand and walk but are weak and dyspneic. Although the pathogenesis is an acute myopathy there is no myoglobinuria except in unusual circumstances in yearling male cattle. Called also white muscle disease.

e. nasal granuloma a form of chronic nasal obstruction which occurs most commonly in dairy cows of the Channel Islands breeds. The disease is a chronic dyspnea with stertorous breathing due to partial obstruction of both nasal cavities by eosinophilic granulomas about 4 mm in diameter on the mucosa just inside the nostril. The disease is thought to have an allergic origin. Called also allergic rhinitis, atopic rhinitis. See also **caprine** enzootic nasal granuloma.

e. nasal tumor see enzootic **nasal** adenocarcinoma.

e. nasal adenocarcinoma contagious neoplasm of the ethmoidal turbinates with sporadic occurrence in sheep and goats. May be clustered in some farms, associated with closely related but different retroviruses, both of which have close homology to the jaagsiekte retrovirus. Disease of mature animals manifest with seromucous and seropurulent nasal discharge, sneezing, stertorous respiration, facial deformity in some, progressive weight loss and death in 3 to 6 months. Called also enzootic nasal tumor.



E-41: Leg of lamb that died from enzootic muscular dystrophy (white muscle disease) showing the characteristic change in muscle color that gives this disease this colloquial name.

e. nodular thelitis of alpine cows in Switzerland; characterized by nodular lesions in the teat wall. See enzootic abortion of ewes (above).

e. pneumonia a group of pneumonic diseases which affect young animals. They are principally of viral origin, although mycoplasmas also play a part, and are only mildly pathogenic unless secondary bacterial invasion intervenes. In calves parainfluenza-3 virus, respiratory syncytial virus, adenovirus, bovine herpesvirus 1, rhinovirus, reovirus and mycoplasmas and *Chlamydophila* are causes. In lambs the list of causes is the same. In pigs there is only one agent, *Mycoplasma hyopneumoniae* (syn. *M. suipneumoniae*). The importance of these diseases is not the wastage that they cause in their own right, although there is sometimes a significant loss of productivity and occasional cases of severe illness and even death, but the losses that occur when lethal bacterial pneumonia supervenes.

e. posthitis see enzootic balanoposthitis (above).

e. staphylococcosis a septicemia of lambs caused by *Staphylococcus aureus*; the spread of the disease is facilitated in some way by tick bites. The lambs are affected soon after birth and die quickly of septicemia or develop arthritis and meningitis later. Called also tick pyemia.

enzootische herztod see **porcine** stress syndrome.

enzygotic [*en"zi-got'ik*] developed from one zygote.

enzymatic [*en"zi-mat'ik*] of, relating to, caused by, or of the nature of an enzyme.

enzyme [*en'zīm*] any protein that acts as a catalyst, increasing the rate at which a chemical reaction occurs. The animal body probably contains about 10 000 different enzymes. At body temperature, very few biochemical reactions proceed at a significant rate without the presence of an enzyme. Like all catalysts, an enzyme does not control the direction of the reaction; it increases the rates of the forward and reverse reactions proportionally.

activating e. one that activates a given amino acid by attaching it to the corresponding transfer ribonucleic acid.

e. assays several enzymes are important in clinical pathology. Enzymes characteristic of a tissue are released into the blood when the tissue is damaged, and enzyme concentrations in the blood can aid in the diagnosis or monitoring of specific diseases. Lipase and amylase concentrations are useful in pancreatic diseases; alkaline phosphatase (ALP), aspartate aminotransferase (AST) and alanine aminotransferase (ALT) in liver diseases; and lactate dehydrogenase (LD), AST and creatine kinase (CK) in muscle disease. ALP is also released in bone diseases. Many enzymes have different forms (*isoenzymes*) in different organs. The isoenzymes can be separated by electrophoresis in order to determine the origin of the enzyme. Isoenzymes of LD, CK and ALP have the most clinical utility.

brancher e., branching e. amylo-(1,4→1,6)-transglycosylase; important in the synthesis of the branched glycogen molecule. Absence of the enzyme causes an increase in the length of the glucose chains and a decrease in the number of branch points in the glycogen molecules.

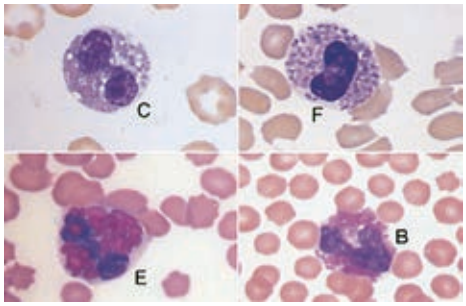
congenital e. deficiency in humans hundreds of genetic diseases that result from deficiency of a single enzyme are now known. Many of these diseases fall into two large classes. The *aminoacidopathies*, e.g. phenylketonuria (PKU), result from deficiency of an enzyme in the major pathway for the metabolism of a specific amino acid. The amino acid accumulates in the blood, and it or its metabolites are excreted in the urine. The *lysomal storage diseases*, e.g. gangliosidosis, mannosidosis, result from deficiency of a lysomal enzyme and the accumulation of the substance degraded by that enzyme in lysosomes of cells throughout the body. The stored material is usually a complex substance, such as glycogen, a sphingolipid or a mucopolysaccharide. Many similar diseases are now identified in animals and are to be found under the specific name of each disease.

constitutive e. one produced by a microorganism regardless of the presence or absence of the specific substrate acted upon.

core e. the smallest aggregate of an enzyme's subunits that has enzymatic activity.

debrancher e., debranching e. dextrin-1,6-glucosidase: an enzyme that acts to move glucose residues of the glycogen molecule, and is important in glycogenolysis.

induced e., inducible e. one whose production requires or is stimulated by a specific small molecule, the inducer, typically a substrate of the enzyme or a compound structurally related to it.
e. induction increase in the activity of an enzyme caused by an inducer. For example, the effect some compounds such as phenobarbitone and phenytoin have in increasing the activity of microsomal hepatic enzymes. This may cause alterations in the metabolism of concurrently administered drugs.
microsomal e's those associated with the endoplasmic reticulum of cells.
proteolytic e. one that catalyzes the hydrolysis of proteins and various split products of proteins, the final product being small peptides and amino acids.
repressible e. one whose rate of production is decreased as the concentration of certain metabolites is increased.
respiratory e's enzymes of the mitochondria, e.g. cytochrome oxidase, which are involved in the respiratory chain.
restriction e's see **restriction endonuclease**.
enzyme-linked immunoabsorbent assay see **ELISA**.
enzymic [*en-zim'ik*] enzymatic.
enzymology [*en"zi-mol'ə-je*] the study of enzymes and enzymatic action.
enzymopathy [*en"zi-mop'ə-the*] an inborn error of metabolism consisting of defective or absent enzymes, as in the glycogenoses or the mucopolysaccharidoses.
EOD abbreviation for every other day; used in medical records.
EOG electro-olfactogram.
Eohippus 'dawn horse'. See **Hyracotherium**.
Eomenacanthus see ***Menacanthus***.
EOSCC equine ocular squamous cell carcinoma.
eosin [*e'o-sin*] any of a class of rose-colored stains or dyes, all being bromine derivatives of fluorescein; eosin Y, the sodium salt of tetrabromofluorescein, is much used in histological and laboratory procedures. See also hematoxylin and eosin **stain**.
eosin- prefix meaning red.
eosinopenia [*e"o-sin-o-pe'ne-ə*] abnormal deficiency of eosinophils in the blood. Commonly associated with stress or the administration of corticosteroids.
eosinophil [*e"o-sin'o-fil*] a circulating blood cell readily stained by eosin; specifically, a granular leukocyte with a nucleus that usually has two lobes connected by a thread of chromatin, and cytoplasm containing coarse, round or rod-shaped, eosinophilic granules (lysosomes) of uniform size. The size, number and staining characteristics of granules varies between species.
eosinophilia [*e"o-sin"o-fil'e-ə*] the formation and accumulation of an abnormally large number of eosinophils in the blood.
eosinophilic [*e"o-sin"o-fil'ik*] staining readily with eosin; pertaining to eosinophils or to eosinophilia.
cartilaginous e. streaks streaks of eosinophilic matrix in cartilage. Some are normal zones of development, others represent areas of matrix degeneration and osteochondrosis.
canine e. granuloma proliferative nodules or plaques that occur on skin or oral mucosa of dogs. Usually not pruritic, but oral lesions can cause some difficulties in eating. Siberian huskies and Cavalier King charles spaniels appear to be predisposed. The cause is unknown, but a hypersensitivity reaction is suspected. See also feline eosinophilic granuloma complex (below), and **equine** nodular collagenolytic granuloma.
e. chemotactic factor a primary mediator of type I anaphylactic hypersensitivity, it is an acidic peptide (molecular weight 500) released by mast cells, which attracts eosinophils to areas where it is present.



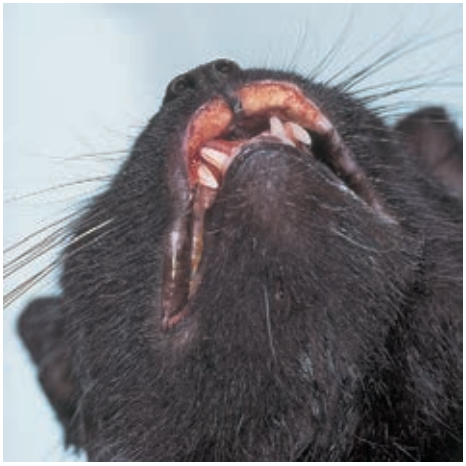
E-42: Canine (C), feline (F), equine (E), and bovine (B) eosinophils demonstrating the variable size, shape, and color of granules in different species.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

E-43: Eosinophilic ulcer (bilateral) on the upper lip margins and an eosinophilic granuloma on the chin of a cat.

equine e. chronic dermatitis see multicentric eosinophilic epitheliotrophic disease (below).
feline e. granuloma complex a reaction pattern in cats that includes eosinophilic ulcer, eosinophilic plaque, and eosinophilic or linear **granuloma** because of similarities in histopathology, clinical course and occasionally simultaneous occurrence in the cat. Treatment can be difficult and only symptomatic unless the inciting cause can be identified.
e. intestinal granuloma see ***Angiostrongylus*** *costaricensis*.
e. lung disease see **PIE syndrome**.
e. meningitis see ***Angiostrongylus*** *cantonensis*, *A. costaricensis*.
e. meningoencephalitis see **sodium** chloride poisoning, ***Angiostrongylus*** *cantonensis*.
multicentric e. epitheliotrophic disease (MEED) rare idiopathic disease of horses characterized by eosinophilic infiltrates and eosinophilic granulomas in a variety of tissues. Eosinophilia is not a feature. Clinical signs vary according to the organs affected but commonly include weight loss and exfoliative dermatitis. Called also eosinophilic granulomatosis, equine esoinophilic chronic dermatitis.
e. myocarditis in cattle may be observed in normal animals at slaughter. Histologically there is a predominant eosinophil invasion of the heart muscle. May be accompanied by similar lesions in skeletal muscles.
e. plaque well-defined, raised, ulcerated and extremely pruritic lesions that occur on the skin of cats, usually on the abdomen or hindlegs. There are large numbers of eosinophils present in the dermis and sometimes peripheral blood. See also eosinophilic granuloma complex (above), eosinophilic linear **granuloma** of cats.
e. pneumonia see **PIE syndrome**.
e. ulcer a well-defined ulceration, usually on the upper lip of cats, usually overlying the canine tooth, which is shallow initially but can become extremely erosive and sometimes neoplastic. Generally not painful or pruritic, but mildly irritating to the cat causing frequent licking. Called also indolent ulcer, rodent ulcer. See also feline eosinophilic granuloma complex (above).

E-44: Eosinophilic plaque on the abdomen of a cat.

VetBooks.ir



E-45: Bilateral eosinophilic ulcer in a cat.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

eosinopoiesis formation of eosinophils.
EPA eicosapentaenoic acid.
Epagneul Breton see **Brittany spaniel**.
epallobiosis [*ap-al"o-bi-o'sis*] dependency on an external life-support system, as on an **extracorporeal** circulatory support unit or hemodialyzer. See **hemodialysis**.
epaxial [*ap-ak'se-əl*] situated above or upon an axis.
EPD expected progeny difference.
EPE equine pituitary extract.
EPEC enteropathogenic *Escherichia coli*.
ependyma the cells lining the cerebral ventricles and the central canal of the spinal cord; principal source of cerebrospinal fluid, mostly from where the ependyma covers the choroid plexuses.
ependymal [*ə-pen'də-məl*] emanating from or pertaining to ependyma.
e. cells squamous-to-columnar cell lining of the spinal central canal and the four ventricles of the brain; supports the choroid plexuses.
ependymitis [*ə-pen"də-mi'təs*] inflammation of the ependyma.
ependymoma [*ə-pen"də-mo'mə*] fleshy masses protruding into the third ventricles, the central canal in the medullary region or the central spinal canal; arise from the ependyma.
epenthetobiosis see **enthetobiosis**.
Eperythrozoon [*ep"ə-rith"ro-zo'on*] a group of bacteria that parasitize erythrocytes and now recognized to be within the genus ***Mycoplasma***. *E. parvum* is the only species not yet reassigned due to lack of current isolates for characterization.
E. coccoides see ***Mycoplasma*** *coccoides*.
E. felis see ***Mycoplasma*** *haemofelis*.
E. ovis see ***Mycoplasma*** *ovis*.
E. parvum a usually apathogenic species found in pigs. Likely to be reclassified as *Mycoplasma parvum*.
E. suis see ***Mycoplasma*** *suis*.
E. wenyoni see ***Mycoplasma*** *wenyoni*.
eperythrozoonosis [*ep"ə-rith"ro-zo"o-no'sis*] infection with hemophilic mycoplasmas previously grouped in the genus *Eperythrozoon*. The infection is mostly innocuous but in times of stress, e.g. in the presence of another disease, it may cause an acute anemia with fever. There is no hemoglobinuria. The infection is spread by insects and the disease may be seasonal as a result. In many cases the disease is a subacute one with illthrift as the main presenting sign.
EPF early pregnancy factor.
EPH early pregnancy hormone.
ephapse [*ə-faps'*] a point of lateral contact (other than a synapse) between nerve fibers across which impulses are conducted directly through the nerve membranes.
ephebogenesis the bodily changes occurring at sexual maturity.
Ephedra [*ə-fed'rə*] plant genus in the family Ephedraceae, species of which are used as herbal remedies or as sources of ephedrine; herbal preparations of these have poisoned dogs. Includes *E. distachya (E. gerardiana), E. equisetina, E. intermedia, E. nevadensis, E. shennungiana, E. sinica* (ma huang, Chinese ephedra), *E. trifurca* (Mormon tea), *E. viridis* (desert tea).
ephedrine [*ə-fed'rin, ef'ə-drin*] an adrenergic alkaloid obtained from several species of the shrub *Ephedra* or produced synthetically; used as the hydrochloride as a bronchodilator, antiallergic, central nervous system stimulant, mydriatic, pressor agent, and for stimulation of the α-adrenergic receptors in the treatment of certain types of urinary incontinence.
ephemeral fever [*ə-fem'ər-əl*] an infectious disease of cattle caused by an arthropod-borne rhabdovirus of the genus *Ephemerovirus*, and is characterized by inflammation of mesodermal tissues. Clinically there is fever, muscle stiffness and shivering, lameness, enlargement of lymph nodes and recumbency. The disease is a nonfatal one and has an average course of 3 days—hence 3-day fever. The virus is transmitted by insect vectors, e.g. the sandfly, *Ceratopogonidae* spp. Called also 3-day sickness.
Ephemerovirus [*e-fem'ər-o-vi"rəs*] a genus in the family *Rhabdoviridae*; includes bovine ephemeral fever virus.
EPI exocrine pancreatic insufficiency.
epi- word element. [Gr.] *upon*.
epibiotic fouling fouling of external surfaces of mainly shellfish but sometimes finfish, with living organisms, principally protozoa of the genera *Zoothanium*, *Epistilis*, *Vorticella*.
epiblast [*ep'i-blast*] layer of cells roofing over the blastocoel in the avian embryo.
epibulbar [*ep"i-bul'bər*] situated upon the eye.
epicardia [*ep"i-kahr'de-ə*] the abdominal portion of the esophagus, extending from the esophageal hiatus to the cardia, the upper orifice of the stomach.
epicardial [*ep"i-kahr'de-əl*] pertaining to the visceral pericardium (epicardium) or to the epicardia.
e. receptors receptors in the left ventricle adapted to respond to stretch and chemical stimulants.
epicardium [*ep"i-kahr'de-um*] the inner layer of the serous pericardium, which is in intimate contact with the heart.
Epicauta vittata [*ep"i-kaw'tə*] an insect which may infest hay and cause colic and frequent urination in horses. Contains the vesicant substance cantharidin. Called also blister beetle.
epiceras, epikeras a thin layer of skin covering the junction between the base of a horn and the surrounding skin, similar to the periople of the hoof.
Epichloë typhina fungus found on tall fescue grass and possibly implicated in causing poisoning. See also ***Festuca***.
epichorion [*ep"i-kor'e-on*] the portion of the uterine mucosa enclosing the implanted conceptus.
epicillin [*ep-i-sil'in*] an aminopenicillin antibiotic.
epicondyle [*ep"i-kon'dil*] an eminence upon a bone, above its condyle, as in the distal extremity of the humerus and femur.
epicondylitis [*ep"i-kon"də-li'tis*] inflammation of an epicondyle or of tissues adjoining the humeral epicondyle.
epicranium [*ep"i-kra'ne-əm*] the muscle, aponeurosis and skin covering the cranium.
epicritic [*ep"i-krit'ik*] determining accurately; said of cutaneous nerve fibers sensitive to fine variations of touch or temperature.
epicyte [*ep'i-sīt*] cell membrane.
epidemic [*ep"i-dem'ik*] a level of disease occurrence in an animal population which is significantly greater than usual; only occasionally present in the population, widely diffused and rapidly spreading. The disease is clustered in space and time. The word has common usage in veterinary science in preference to the more accurate, epizootic.
common source e. see point epidemic (below).
e. curve see epidemic **curve**.

E-46: *Epicauta* spp. (blister beetle).

VetBooks.ir

e. diarrhea of infant mice (EDIM) see **murine** epizootic diarrhea.
e. hyperthermia poisoning by *Neotyphodium* (*Acremonium*) *coenophialum*; called also fescue summer toxicosis.
multiple event e. when the epidemic begins at about the same time in a number of places, e.g. when a poisoned batch of feed is supplied to a number of farms.
point e. when the epidemic begins at one central point, with a large number of animals coming in contact with the source over a short time; a very rapid form of spread with a number of cases presenting with the same stage of the disease at the one time, indicating the single source of the pathogen.
propagated e., propagative e., propagating e. outbreaks in which the disease propagates in one or more initial cases and then spreads to others, a relatively slow method of spread.
e. tremor see avian **encephalomyelitis**.

epidemicity [*ep"ĭ-də-mis'ĭ-te*] the quality of being widely diffused and rapidly spreading throughout a population.

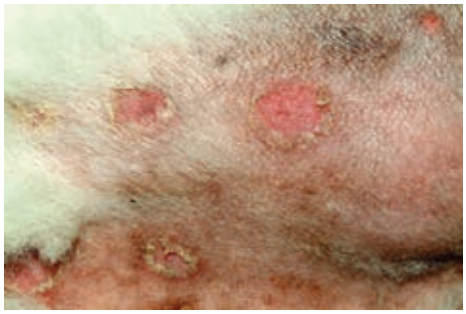
epidemiogenesis the escalation of a communicable disease to epidemic proportions.

epidemiological emanating from or pertaining to epidemiology.
e. associations the associative relationships between the frequency of occurrence of a disease and its determinants, its predisposing and precipitating causes.
e. intelligence all of the epidemiological information about a disease occurrence. Includes information gathering over a short period at the time of an outbreak and the more prolonged follow-up of surveillance afterwards.
e. techniques include **case**-control study, **clinical** trials, **cohort** studies.

epidemiologist [*ep"ĭ-de"me-ol'o-jist*] an expert in epidemiology.
clinical e. an epidemiologist who sees patients and herds in a clinical capacity but with an epidemiological viewpoint. An investigator of clinical problems affecting populations.

epidemiology [*ep"ĭ-de"me-ol'ə-je*] 1. the study of the relationships of various factors determining the frequency and distribution of diseases in a community. 2. the field of veterinary medicine dealing with the determination of specific causes of localized outbreaks of infection, toxic poisoning, or other disease of recognized etiology. 3. the field of veterinary medicine dealing with the investigation and establishment of risk factors for disease and production problems of unknown or undetermined cause. 4. the study of disease in communities. Called also epizootiology.
analytical e. statistical analysis of epidemiological data in an attempt to establish relationships between causative factors and incidence of disease.
clinical e. the application by a veterinarian who provides direct patient care of epidemiological methods to the study of diagnosis and therapeutics in order to promote efficiency in clinical care.
descriptive e. information about the occurrence of a disease, some of it mathematical, but with no attempt to establish relationships between cause and effect.
experimental e. prospective population experiments designed to test epidemiological hypotheses, and usually attempt to relate the postulated cause to the observed effect. Trials of new anthelmintics are an example.
geographic e. the effect of climate, terrain, population of humans and animals, industrial enterprises on animal disease. Includes the zoogeography of the subject species itself, plus that of carrier species, and vectors and intermediate hosts, especially mobile ones such as insects. The distribution and concentration of poisonous plants and the use of specific management techniques which put the animals at greater risk are also important.
gum-boots e. see shoe-leather epidemiology (below).
landscape e. epidemiology of a disease in relation to the entire ecosystem under study.
observational e. based on clinical and field observations, not on experiments.
quantitative e. that branch of epidemiological studies that concentrates on quantitative methods.
shoe-leather e. epidemiology conducted as a field study. Called also gum-boots epidemiology.
theoretical e. the use of mathematical models to explain and examine aspects of epidemiology, e.g. computer simulation models of outbreaks.

epidermal [*ep"ĭ-dur'məl*] pertaining to or emanating from epidermis.



E-47: Superficial pyoderma showing epidermal collarettes. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

e. appendage see **hair**, **claw**, **hoof**, **horn**, **chestnut** (1), **ergot**[2], **dewclaw**, **comb**, **wattle**, **spur** (3), **pad**, **footpad**, **beak**, frontal **process**, **feather** (1), **cere**, **scale**, **fin**, **antler**, **bristle** (1), **wool**, **mohair**, **cashmere**, **Angora**.
e. clefts slit-like discontinuities in the epidermis that do not contain fluid.
e. collarette a feature of a skin lesion, consisting of an encircling rim of epidermal scale with the free edge toward the central area. May represent the margins of an earlier bulla, vesicle or pustule. Characteristic of bullous pemphigoid.
e. crust a consolidated mass of cellular debris, dried exudate, serum, hair, epidermophytic hyphae. Usually is dry and crumbly but in parakeratosis may have a greasy feel about it.
e. cyst, epidermoid cyst an intradermal or subcutaneous cyst containing keratinizing squamous epithelium. It arises from occluded hair follicles. Called also infundibular cyst, wen.
e. dysplasia a severe disorder of keratinization. In West Highland white terriers, it is a familial skin disease characterized by marked erythema, seborrhea, pruritus, alopecia and lichenification from an early age. Infection by *Malassezia* spp. is a common feature. That it is sometimes called 'armadillo disease' is an indication of the severity and extent to which this disease can progress. See also inherited epidermal dysplasia of calves (below).
e. growth factor a potent growth factor for both epithelial and fibroblast cells.
inherited e. dysplasia of calves an hereditary disease of calves appearing at 1–2 months of age and characterized by alopecia, cracking and ulceration of skin in the axillae, flanks and at the limb joints. There is also emaciation, failure of horns to grow, elongation of the feet and hypersalivation. The calves are not viable. Called also baldy calves.
e. lacunae see epidermal clefts (above).
e. laminae structures formed of epidermal pegs; part of the interdigitating structure between the dermis and the epidermis. Called also epidermal ridges.
e. limbi the layer of soft, light-colored horn that covers the outer side of the coronary border and merges with the horn of the hoof.
e.-melanin unit a melanocyte and adjacent keratinocytes.
e. necrolysis see toxic epidermal **necrolysis**.
e. nibbles focal areas of epidermal edema, eosinophils and necrosis; suggestive of ectoparasite injury to the skin.
e. papilla a knob-like projection of the epidermis into the dermis; a touch receptor. Called also tylotrich pad and haarscheiben.
e. pegs see **rete** pegs.
e. renewal time see **keratinocyte** transit time.
e. ridge see **rete** ridge.

epidermis [*ep"ĭ-dur'mis*] the outermost and nonvascular layer of the skin, derived from the embryonic ectoderm, the thickness varying between species and in different locations on the body. There are generally five layers, from within outward: (1) *basal layer* (stratum basale), composed of columnar cells arranged perpendicularly; (2) *prickle-cell* or *spinous layer* (stratum spinosum), composed of flattened polyhedral cells with short processes or spines; (3) *granular layer* (stratum granulosum), composed of flattened granular cells; (4) *clear layer* (stratum lucidum), composed of several layers of clear, transparent cells in which the nuclei are indistinct or absent; and (5) *horny layer* (stratum corneum), composed of flattened, cornified, non-nucleated cells. The clear layer is only

present in certain areas such as the footpads of dogs and cats and the planum nasale.

limbic e. transitional epithelium between limb skin and hoof horn; covers the limbic corium.

perioplic e. see limbic epidermis (above).

tubular e. covering of the corium of the hoof coronet; produces the tubular horn of the hoof wall.

epidermitis [*ep"ĭ-dər-mi'tis*] inflammation of the epidermis.

peracute e. see **exudative** epidermitis.

epidermoid [*ep"ĭ-dur'moid*] 1. resembling the epidermis. 2. any tumor occurring at a noncutaneous site and formed by inclusion of epidermal cells.

e. carcinoma see **squamous** cell carcinoma.

e. cysts occur in dogs and humans and represent sections of epidermal tissue isolated during the closure of the neural tube.

epidermoidoma [*ep"ĭ-dur"moi-do'mə*] a cerebral or meningeal tumor formed by inclusion of ectodermal elements at the time of closure of the neural groove.

epidermolysis [*ep"ĭ-dər-mol'ə-sis*] a loosened state of the epidermis with formation of blebs and bullae either spontaneously or at the site of trauma.

e. bullosa a hereditary disease of humans, Collie dogs, Shetland sheepdogs, Suffolk, South Dorset Down and Scottish blackface sheep, Simmental and Brangus calves, Belgian horses and Quarterhorses. Characterized by epidermal bullae, particularly on areas of pressure or trauma and in sheep in the mouth and on woolless skin. There may be shedding of hooves and horns. Called also red foot disease. See also congenital bovine epidermolysis and junctional epidermolysis bullosa (below).

congenital bovine e. ulcers on lips, gums, tongue, muzzle and limb extremities at birth; skin lesions may be local alopecia without ulceration; resembles epidermolysus bullosa simplex in humans; an autosomal dominant recorded in Simmentals.

junctional e. bullosa a fatal disease inherited as an autosomal recessive in Belgian draft horse foals and other breeds with the LAMC2 mutation where a cytosine insertion creates a premature stop codon. Foals develop erosions of the skin and mucous membranes in the first few days of life and extensive erosions may be present at mucocutaneous junctions of the mouth, rectum and vulva, and along the coronary bands. Lesions are common over bony prominences and the erosions progress to deeper ulcerative lesions often with complete loss of the epidermis of the distal extremities. The central incisors and premolars are present birth and there is enamel hypoplasia with pits and serrated edges on the teeth. Called also equine epitheliogenesis imperfecta neonatorum, hereditary junctional mechanobullous disease.

epidermomycosis [*ep"ĭ-dur"mo-mi-ko'sis*] see **dermatophytosis**.

epidermophytid [*ep"ĭ-dər-mof'ə-tid*] dermatophytid.

epidermophytin a filtrate of *Epidermophyton* spp. cultures that induces a hypersensitivity reaction of the tuberculin type when used in humans.

Epidermophyton a genus of dermatophytic fungi. *E. floccosum* is a common cause of fungal skin and nail infections in humans; rare in animals.

epidermophytosis [*ep"ĭ-dur"mo-fi-to'sis*] a fungal skin infection, especially one due to *Epidermophyton floccosum*. The common form is athlete's foot in humans, but the infection has been identified in the dog, mule and goat. Called also dermatophytosis.

epidermopoiesis formation of the epidermis.

Epidermoptes a genus of parasitic mites of the family Epidermoptidae. Includes *E. bifurcatus (E. bifurcata)*, *E. bilobatus*; found on the skin of birds; capable of causing allergy in humans. May coexist with fungal infections, e.g. *Lophophyton* spp.

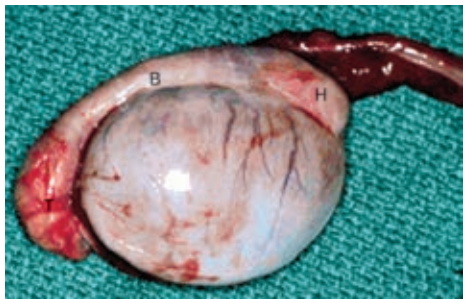
epidermotropic predilection for epidermis.

epididymal [*ep"ĭ-did'ə-məl*] emanating from or pertaining to the epididymis.

e. inflammation see **epididymitis**.

e. segmental aplasia a defect in mesonephric development in which part of the epididymis is missing. A cause of infertility in male dogs manifested by azoospermia in bilaterally affected animals. Usually unilateral in bulls and rams amd probably inherited. Associated with the polled character in male goats and causes spermatostasis.

e. sperm granulomas see sperm **granuloma**.



E-48: Lateral view of the right canine testis and epididymis with the head (H), body (B), and tail (T) of the epididymis. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

e. stagnation a condition in stallions in which peak fertility is maintained only by frequent ejaculation. Spermatozoa are usually retained in the ampullae of the vas deferens. See also plugged **ampullae** syndrome.

epididymectomy [*ep"ĭ-did"ə-mek'tə-me*] excision of the epididymis. A surgical procedure done to prepare teaser rams or bucks by removing the tail of the epididymis and rendering them sterile. Called also epididymal caudectomy or caudal epididymectomy.

epididymis [*ep"ĭ-did'ə-mis*] pl. *epididymides* [Gr.] an elongated, cordlike structure along the attached border of the testis, whose coiled duct provides for the storage, transport and maturation of spermatozoa.

epididymitis [*ep"ĭ-did"ə-mi'tis*] inflammation of the epididymis. Nonspecific epididymitis may result from an infection in the urinary tract, especially in the prostate. Rarely it may be traced to an infection elsewhere in the body. Specific epididymitides are those caused by *Actinobacillus seminis* and by *Brucella ovis*, both in rams, by *B. canis* in dogs, and the virus of epivag, bovine viral epididymitis and vaginitis in bulls.

epididymitis–orchitis [*ep"ĭ-did"ə-mi'tis-or-ki'tis*] see **epididymo-orchitis**.

epididymitis-vaginitis [*ep"ĭ-did"ə-mi'tis-vaj"ĭ-ni'tis*] inflammation of the epididymis and the tunica vaginalis.

epididymo–orchitis inflammation of the epididymis and testis.

epididymotomy [*ep"ĭ-did"ə-mot'ə-me*] incision of the epididymis.

epididymovasostomy [*ep"ĭ-did"ə-mo-və-sos'tə-me*] surgical anastomosis of the epididymis to the ductus deferens.

epidural [*ep"ĭ-doo'rəl*] pertaining to or emanating from the dura mater.

e. abscess see **brain** abscess, **spinal** abscess.

e. anesthesia see epidural **anesthesia**.

epidurography [*ep"ĭ-doo-rog'rə-fe*] radiography of the spine after a radiopaque medium has been injected into the epidural space.

epigamic attracting the opposite sex.

e. display courtship displays, for example display of tail feathers by the male peacock.

epigastralgia [*ep"ĭ-gas-tral'jə*] pain in the epigastrium.

epigastrium [*ep"ĭ-gas'tre-əm*] the cranial and middle region of the abdomen, located within the sternal angle.

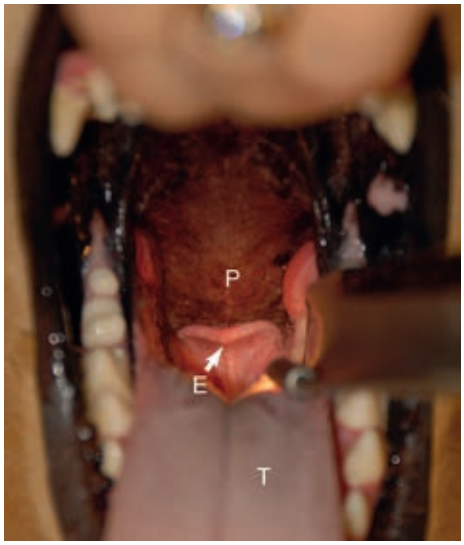
epigenetic [*ep"ĭ-jə-net'ik*] changes in phenotype or gene expression caused by mechanisms that are independent of changes in the DNA sequence or the influence of DNA-binding regulatory proteins, that may remain through many cell divisions and may be transferred vertically to progeny. Methylation of cytosines in the DNA sequence is an underlying mechanism and epigenetic changes influence cell differentiation such that totipotent stem cells become various pluripotent cell lineages in the embryo, which in turn become the cells that form the different cells and tissues of the body.

epiglottic [*ep"ĭ-glot'ik*] pertaining to or emanating from the epiglottis.

e. cartilage the leaf-shaped cartilage attached to the thyroid cartilage of the larynx by the thyroepiglottic ligament; it is the structural basis of the epiglottis composed of elastic cartilage and covered in mucous membrane and forms a lid to the laryngeal entrance during swallowing.

e. cysts see **pharyngeal** cyst.

e. entrapment the epiglottis is trapped by the arytenoepiglottic fold and fails to function normally. Affected horses show exercise intolerance, noisy breathing, coughing and a characteristic appearance of the laryngeal opening viewed through a fiberscope.



E-49: The anatomy of the pharynx and larynx: P, palate; T, tongue; E, epiglottis, which in this view is covering the glottis.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

e. hypoplasia a smaller than normal epiglottis is often associated with dorsal displacement of the soft palate in horses, resulting in respiratory embarrassment during exercise.

epiglottis [*ep"ĭ-glot'is*] the lidlike elastic cartilaginous structure guarding the entrance to the larynx (the aditus laryngis). The muscular action of swallowing involves sequential contraction of the pharyngeal constrictors and retraction of the tongue against the epiglottis which folds over the aditus laryngis (the laryngeal entrance) forming a seal with adjacent laryngeal components. This prevents food and drink from entering the larynx and trachea, directing it instead into the esophagus.

epihyoid [*ep"ĭ-hi'oid*] middle of the chain of hyoid bones; it articulates with the stylohyoid and the ceratohyoid.

epikeras see **epiceras**.

epilate [*ep'ĭ-lāt*] to remove hair.

epilation [*ep"ĭ-la'shən*] the removal of hair by the roots.

cryosurgical e. see **cryoepilation**.

electric e. see **electroepilation**.

epilemma [*ep"ĭ-lem'ə*] endoneurium.

epilepsy [*ep'ĭ-lep"se*] recurrent seizures. There are several methods for classifying the various types of epilepsy. *Primary* epilepsy is idiopathic in origin (also includes cryptogenic and genetic epilepsy). *Symptomatic* epilepsy is caused by a lesion within the prosencephalon, such as a brain tumor, injury to the brain at birth, a wound or blow to the head, inflammation or a vascular cause such as infarction. *Reactive* epilepsy is caused by disease in other parts of the body which has secondary effects on the brain, e.g. hepatic encephalopathy, electrolyte disturbances.

autonomic e. see visceral epilepsy (below).

cryptogenic e. an underlying cause is suspected but cannot be proven. In dogs, this term is most commonly applied to cases which present with seizures outwith the usual age range for idiopathic epilepsy.

idiopathic e. recurrent seizures for which no cause can be identified during life and for which no lesions are demonstrable at necropsy. The diagnosis is made by ruling out all extracranial and other intracranial causes. Amongst the domestic species, idiopathic epilepsy has been reported in dogs, cats, cattle and horses. In dogs, this disorder occurs most frequently in certain breeds, particularly German shepherd dogs, Miniature poodles, Keeshonds, Tervuren shepherds and Beagles, in which it is regarded as an inherited trait. Generalized seizures begin occurring at a young age, typically from 6 months to 5 years; the affected dog is otherwise normal. Called also true epilepsy, essential epilepsy. In affected cattle seizures occur from 2–3 months of age. A form of idiopathic epilepsy has been recorded in horses.

Jacksonian e. see **jacksonian seizures**.

myoclonic e. see **glycoproteinosis**.

reactive e. caused by disease outwith the brain, e.g. hepatic insufficiency, electrolyte disturbances.

secondary e. caused by a lesion within the brain.

visceral e. a term used to describe a syndrome of hypersalivation, vomiting, retching and apparent abdominal pain in dogs that occurs paroxysmallyand is responsive to anticonvulsant medication, usually with phenobarbitone. It is presumed that visceral epilepsy is a form of epilepsy in which the seizures are focal and cause autonomic signs only, but this is very difficult to prove. Called also autonomic epilepsy.

epileptic [*ep"ĭ-lep'tik*] 1. pertaining to or affected with epilepsy. 2. a patient affected with epilepsy.

e. seizure a seizure occurring as part of epilepsy.

epileptiform [*ep"ĭ-lep'tĭ-form*] 1. resembling epilepsy or its manifestations. 2. occurring in severe or sudden paroxysms.

epileptogenic [*ep"ĭ-lep-to-jen'ik*] causing an epileptic seizure, e.g. an epileptogenic scar in the cerebral cortex, or more significantly in the cerebrum and its proximate meningeal tissue.

epileptoid [*ep"ĭ-lep'toid*] see **epileptiform**.

epimastigote [*ep"ĭ-mas'tĭ-gōt*] a developmental stage in trypanosomes. The undulating membrane is shortened and the axoneme and the kinetoplast are anterior to the nucleus; in the previous stage, they are near the tail and behind the nucleus. This stage occurs usually in the arthropod host. Called also crithidial stage.

epimer [*ep'ĭ-mər*] one of two or more isomers which differ only in the configuration about one carbon atom.

epimerase [*ə-pim'ə-rās*] an isomerase that catalyzes the inversion of asymmetric groups in substrates (epimers) having more than one center of asymmetry.

epimere [*ep'ĭ-mēr*] the dorsal portion of a somite, from which is formed muscles innervated by the dorsal ramus of a spinal nerve.

epimerite an organelle of certain protozoa by which they attach themselves to epithelial cells.

epimerization [*ə-pim"ər-ĭ-za'shən*] the changing of one epimeric form of a compound into another, as by enzymatic action.

epimorphosis [*ep"ĭ-mor-fo'sis*] the regeneration of a piece of an organism by proliferation at the cut surface.

epimyocardial receptors [*ep"ĭ-mi"o-kahr'de-əl*] pressure receptors in the left ventricle concerned with regulation of the blood volume.

epimysial sheath see **epimysium**.

epimysium [*ep"ĭ-mis'e-əm*] the fibrous sheath around an entire skeletal muscle.

epinephrectomy see **adrenalectomy**.

epinephrine [*ep"ĭ-nef'rin*] a hormone produced by the medulla of the **adrenal** glands. Its function is to aid in the regulation of the sympathetic branch of the **autonomic** nervous system. At times when an animal is highly stimulated, as by fear, anger or some challenging situation, extra amounts of epinephrine are released into the bloodstream, preparing the body for energetic action. Epinephrine is a powerful vasopressor which increases blood pressure and increases the heart rate and cardiac output. It also increases glycogenolysis and the release of glucose from the liver. Called also adrenaline.

epineural [*ep"ĭ-noo'rəl*] situated upon a neural arch.

e. capping the surgical procedure of folding the epineurium over the proximal end of a transected nerve and suturing it in place helps to prevent the development of painful neuroma.

epineurium [*ep"ĭ-noor'e-um*] the sheath of a peripheral nerve.

epiphora [*ə-pif'ə-rə*] an abnormal overflow of tears down the face, due to excess production (secondary to painful ocular conditions) or reduced outflow through the nasolacrimal duct. Called (rarely) illacrimation.

epiphyseal [*ep"ĭ-fiz'e-əl*] emanating from or pertaining to the epiphysis.

E-50: Epiphora in a dog. Tears have stained the facial hairs brown.
From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th ed, Saunders, 2009.

VetBooks.ir

e. aseptic necrosis caused by (1) idiopathic primary necrosis of the epiphysis in growing small-breed dogs (Legg-Calvé-Perthes disease); (2) fracture of the femoral neck; or (3) epiphyseal slippage, particularly of the femoral head in young dogs, cats, pigs, calves and foals. The disease has a characteristic radiographic appearance.
e. cartilage it is located between the metaphyseal part of the diaphysis of long bones; growth at the cartilage is responsible for continuing growth in length of the bone; when growth ceases the cartilage disappears and is succeeded by an epiphyseal scar. Called also growth plate, physis.
e. detachment see **epiphysiolysis**.
e. dysplasia an inherited defect of dogs characterized by very short limbs and early degenerative arthropathy. Called also chondrodystrophia fetalis and pseudoachondroplastic dysplasia of Miniature poodles. A similar histological lesion occurs in multiple epiphyseal dysplasia in Beagles.
e. fracture one involving the epiphysis; known as Salter type I in the **Salter classification**.
e. plate the thin plate of cartilage between the epiphysis and the shaft of a long bone; it is the site of growth in length and is obliterated by epiphyseal closure. Called also growth plate, physis.
e. scar on radiographs, the radiodense band seen at the junction of the epiphysis and metaphysis, which represents the closed physis.

epiphysiolysis [*ep"ĭ-fiz"e-ol'ə-sis*] separation of the epiphysis from the diaphysis of a bone. It is a traumatic lesion originating from a defect in the growth plate, often osteochondrosis.
femoral head e. occurs in pigs 5–12 months old. There is moderate lameness in one or both hindlimbs. The onset is sudden and often precipitated by physical effort; it worsens within a few days so that the pig cannot use the limb. There is crepitus at the hip joint. There is an underlying osteochondrosis.

epiphysis [*ə-pif'ə-sis*] pl. *epiphyses* [Gr.] 1. the end of a long bone, usually wider than the shaft, and either entirely cartilaginous or separated from the shaft by a cartilaginous disk. 2. part of a bone formed from a secondary center of ossification, commonly found at the ends of long bones, on the margins of flat bones, and at tubercles and processes; during the period of growth epiphyses are separated from the main portion of the bone by cartilage.
e. cerebri pineal body.

epiphysitis [*ə-pif"ə-si'tis*] a lesion observed radiologically at the epiphyses of long bones and the ends of ribs of animals affected by osteodystrophy. Clinically there is swelling of the bone and there may be subsequent epiphysiolysis or separation of the femoral head. See also **osteodystrophy**, **physeal** dysplasia.

epipial [*ep"ĭ-pi'əl*] situated upon the pia mater.

epiplocele [*ə-pip'lo-sēl*] see **omental** hernia.

epiploenterocele [*ə-pip"lo-en'tər-o-sēl*] a hernia containing intestine and omentum.

epiplomerocele a femoral hernia containing omentum.

epiplomphalocele an umbilical hernia containing omentum.

epiploon pl. *epiploa* [Gr.] the greater omentum.

E-51: Epiphyseal (growth) plates. Radiograph of young cat pelvis and femurs. The epiphyseal plates appear dark because they are made up largely of cartilage, which is relatively transparent to X-rays.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby 2008.

E-52: Epiphysitis in a calf caused by copper deficiency.

Epipremnum pinnatum plant in family Araceae; contains calcium oxalate raphide crystals; causes stomatitis, salivation. Called also *Scindapsus aureus*, devil's ivy, money plant.

epirubicin [*ep"ĭ-roo'bĭ-sin*] an anthracycline antibiotic similar to **doxorubicin**, used as an antineoplastic agent.

episclera [*ep"ĭ-skler'ə*] the loose, highly vascular connective tissue on the surface of the sclera; blends with Tenon's capsule.

episcleral [*ep"ĭ-skler'əl*] 1. overlying the sclera. 2. pertaining to the episclera.
e. space narrow space between the deep muscular fascia and the eye.

episcleritis [*ep"ĭ-sklə-ri'tis*] inflammation of the episclera; typically the adjacent tissues such as sclera, cornea and conjunctiva are also involved and so the term episclerokeratoconjuncitivitis is sometimes used.
nodular granulomatous e. a form of episcleritis characterized by firm, usually painless, nodular non-neoplastic swelling(s) under the conjunctiva at the corneoscleral junction of the eye in dogs. Histology reveals histiocytes, fibroplasia and lymphoplasmacytic inflammation. Called also nodular fasciitis, Collie granuloma and proliferative keratoconjunctivitis.

episclerokeratoconjunctivitis [*ep"ĭ-sklə-ro-ker"ə-to-kən-junk"tĭ-vi'tis*] see **episcleritis**.

episioperineoplasty [*ə-piz"e-o-per"ĭ-ne'o-plas"te*] plastic repair of the vulva and perineum.

episioperineorrhaphy [*ə-piz"e-o-per"ĭ-ne-or'ə-fe*] suture of the vulva and perineum.

episioplasty [*ə-piz'e-o-plas"te*] plastic repair of the vulva.

episiorrhaphy [*ə-piz"e-or'ə-fe*] 1. suture of the labia majora. 2. suture of a lacerated perineum.

episiostenosis [*ə-piz"e-o-stə-no'sis*] narrowing of the vulvar orifice.

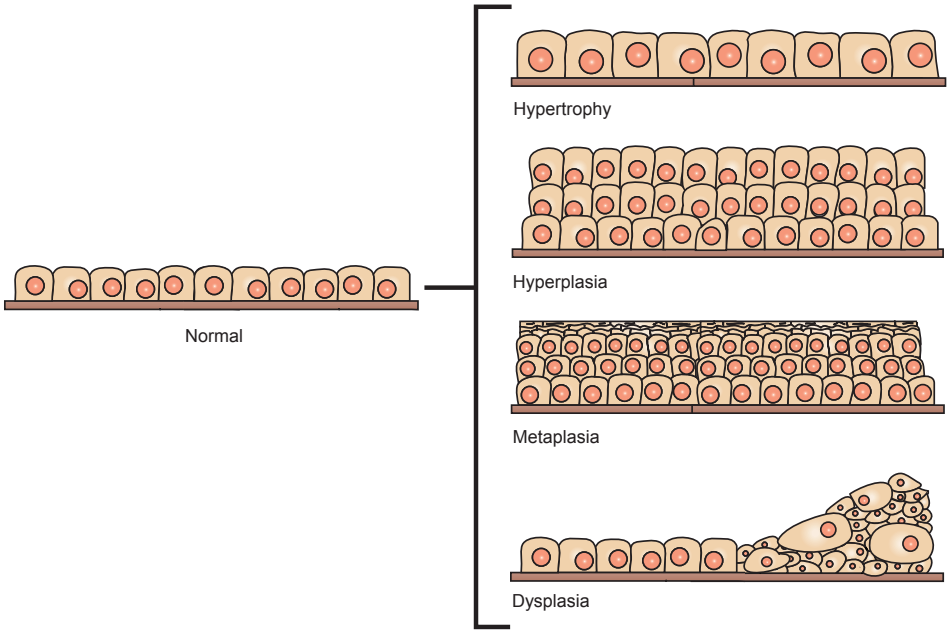
E-53: Congestion of the episclera associated with glaucoma in a dog.
From Peiffer R, Petersen-Jones S, Small Animal Ophthalmology, 4th Edition. Saunders, 2009.

episiotomy [ə-piz″e-ot′o-me] surgical incision into the perineum and vagina for obstetrical purposes.
episode [ep′ĭ-sōd] a noteworthy happening occurring in the course of a continuous series of events.
episodic sporadic; occurring in episodes.
e. dyscontrol syndrome see **rage** syndrome.
e. falling a paroxymal disorder described in Cavalier King Charles spaniels in which affected dogs, starting at an early age, experience episodes of extensor rigidity, possibly brought on by stress.
e. muscular weakness see **hyperkalemic periodic paralysis**, episodic **weakness**.
episome any accessory extrachromosomal replicating genetic element that can exist either autonomously or integrated with the chromosome. See also **plasmid**.
epispadia [ep″ĭ-spa′de-ə] see **epispadias**.
epispadias [ep″ĭ-spa′de-əs] a congenital malformation with absence of the upper wall of the urethra, occurring in both sexes, but more commonly in the male, the urethral opening being located anywhere on the dorsum of the penis.
episplenitis [ep″ĭ-splə-ni′tis] inflammation of the capsule of the spleen.
epistasis [ə-pis′tə-sis] non-allelic masking of one gene by another, e.g. the masking of the black gene by the orange gene in tortoiseshell cats.
epistatic deviation [ep″ĭ-stat′ik] deviation from normal additive gene action due to epistasis.
epistaxis [ep″ĭ-stak′sis] bleeding from the nose. This is usually from damaged vessels in the nasal mucosa but can also be due to an increased fragility of capillaries or bleeding tendencies, particularly thrombocytopenia. Injury may be due to erosion or ulceration of the mucosa by a systemic disease, e.g. glanders in the horse, or by a local disease of the mucosa, e.g. allergic rhinitis, trauma to the face or to the head generally, in which case the bleeding is likely to be due to a serious lesion, or to foreign bodies up the nose, a common cause. Bleeding from the nose originating from sites other than the nasal mucosa is a common and serious occurrence in all species but particularly in the horse because of its implication for safety while racing. The passage of large amounts of blood suddenly is usually associated with pulmonary hemorrhage and is often fatal in horses and cattle. In horses this usually occurs during hard exercise. When the bleeding in the horse occurs at rest the origin is commonly from the guttural pouch and due to mycotic erosion of the blood vessels there. See also **guttural pouch** mycosis, **pulmonary** hemorrhage, **vena** caval thrombosis, **cranial vena caval thrombosis**.

E-54: Epistaxis in a horse. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

episternal [ep″ĭ-stur′nəl] 1. situated on or over the sternum. 2. pertaining to the episternum.
episternum [ep″ĭ-stur′nəm] the manubrium, or cranial segment of the sternum.
epistropheus [ep″ĭ-stro′fe-əs] see **axis** (2).
Epistylis a genus of ciliated protozoan parasites in the phylum Ciliophora. Found commonly on the skin of freshwater fish; usually nonpathogenic.
epitendineum [ep″ĭ-tən-din′e-əm] the fibrous sheath covering a tendon.
epitenon [ep″ĭ-te′non] outer or parietal layers of tendons.
epithalamus [ep″ĭ-thal′ə-məs] the part of the diencephalon just superior and posterior to the thalamus, comprising the pineal body and adjacent structures; considered by some to include the stria medullaris.
epithelial [ep″ĭ-the′le-əl] pertaining to or composed of epithelium.
e. root sheath a fold of gingival epithelium which grows down into the dental alveolus and surrounds the tooth root.
e. tissue a general name for tissues not derived from the mesoderm.
epithelialization [ep″ĭ-the″le-əl-ĭ-za′shən] healing by the growth of epithelium over a denuded surface. See also **pulmonary** epithelialization.
adnexal e. partial-thickness loss of epidermis can be re-epithelialized by epithelial cells from the remaining portions of adnexal structures.
epithelialize [ep″ĭ-the′le-əl-īz″] to cover with epithelium.
epitheliitis [ep″ĭ-the″le-i′tis] inflammation of the epithelium.
epitheliochorial [ep″ĭ-the″le-o-kor′e-əl] see **placenta**.
epitheliocystis [ep″ĭ-the″le-o-sis′tis] disease of aquarium and marine fish caused by a *Chlamydia* or *Chlamydia*-like organism and characterized by small vesicles in the epidermal cells of the gills and skin.
epitheliogenesis [ep″ĭ-the″le-o-jen′ə-sis] development of the epithelium.
equine e. imperfecta neonatorum see junctional **epidermolysis** bullosa.
e. imperfecta congenital absence of the skin and commonly also the mucosae; an inherited defect in most animal species. It is incompatible with life. Called also aplasia cutis.
e. imperfecta linguae bovis see smooth **tongue**.
epithelioid [ep″ĭ-the′le-oid] resembling epithelium.
e. cells histiocytes with elongated or oval vesicular nuclei and finely granular eosinophilic cytoplasm; seen in epithelioid sarcoma.
epitheliolysis [ep″ĭ-the″le-ol′ə-sis] destruction of epithelial tissue.
epithelioma [ep″ĭ-the″le-o′mə] outdated and inaccurate term applied to any tumor derived from epithelium.
e. adenoides cysticum see **trichoepithelioma**.
basal cell e. see **basal** cell tumors.
benign calcifying e. see **pilomatrixoma**.
intracutaneous cornifying e. a benign skin tumor of hair follicle origin in dogs that consists of a keratin-filled cyst, usually opening to the surface of the skin through a pore. Occasionally, and particularly in some breeds, tumors may be multiple or recurring. Called also keratoacanthoma, infundibular keratinizing acanthoma.
e. of Malherbe see **pilomatrixoma**.
necrotizing e., necrotizing calcifying e. see **pilomatrixoma**.
sebaceous e. a benign tumor of sebaceous glands that is histologically similar to basal cell tumor.
epithelion [ep″ĭ-the′le-ən] see epidermal **membrane**.
epitheliosis [ep″ĭ-the-le-o′sis] proliferation of conjunctival epithelium, forming trachoma-like granules.
bovine e. see **malignant catarrhal fever**.
epitheliotropic [ep″ĭ-the-le-o-tro′pik] having a special affinity for epithelial cells.
equine multisystemic eosinophilic e. syndrome see equine multisystemic **eosinophilic** epitheliotropic syndrome.
epithelium [ep″ĭ-the′le-əm] pl. *epithelia* [Gr.] the cellular covering of internal and external surfaces of the body, including the lining of vessels and other small cavities. It consists of cells joined by small amounts of cementing substances. Epithelium is classified into types on the basis of the number of layers deep and the shape of the superficial cells. Standard classifications include ciliated (cilia attached), columnar (taller than wide), cuboidal (same

VetBooks.ir



E-55: Adaptive changes in epithelium.
From McGavin D, Zachary JF, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2007.

VetBooks.ir

height as width), pseudostratified (single layer but because of varying cell height appears to be more than one), simple (one cell layer), squamous (flattened, plate-like cells), stratified (more than one layer), transitional (variable number of layers apparent). Other types are listed below.

corneal e. epithelium on the anterior (outer) surface of the cornea.

germinal e. thickened peritoneal epithelium covering the gonad from earliest development; formerly thought to give rise to germ cells.

glandular e. that composed of secreting cells.

iris e. epithelium on the posterior surface of the iris.

lens e. cuboidal epithelium occurring immediately under the anterior lens capsule.

pigmentary e., pigmented e. that made of cells containing granules of pigment.

retinal pigment e. see **retinal** pigment epithelium.

sense e., sensory e. see **neuroepithelium** (1).

epithelization [*ep"ĭ-the"lĭ-za'shən*] epithelialization.

epitonic [*ep"ĭ-ton'ik*] abnormally tense or tonic.

epitope [*ep'ĭ-tōp*] see antigenic **determinant**.

continuous e. contiguous amino acid sequences in a linear array. Called also linear epitope.

discontinuous e. one in which amino acids are in close proximity in the folded protein, but distant when unfolded. Called also conformational epitope.

epitrichium [*ep"ĭ-trik'e-əm*] periderm.

epitympanic [*ep"ĭ-tim-pan'ik*] emanating from or pertaining to the eardrum or the part of the adjacent tympanic cavity.

e. recess see **attic**.

epitympanum [*ep"ĭ-tim'pə-nəm*] the upper part of the tympanic cavity.

epivag [*ep'ĭ-vag*] an incompletely defined venereal disease of cattle, probably caused by a herpesvirus. Cows develop a profuse purulent vaginal discharge with spread of the infection to the uterus and rendering many cows sterile because of damage to the fallopian tube and bursa. Initially in bulls there is swelling followed by fibrosis of the epididymis; associated lesions include abscess formation, ampullitis, seminal vesiculitis and degeneration of the testicles. Recorded only in Africa.

epivaginitis [*ep"ĭ-vaj-ĭ-ni'tis*] see **epivag**.

epizoic [*ep"ĭ-zo'ik*] pertaining to or caused by an epizoon.

epizoon [*ep"ĭ-zo'on*] pl. *epizoa* [Gr.] an external animal parasite.

epizootic [*ep"ĭ-zo-ot'ik*] a disease which attacks many subjects in a region at the same time but is only occasionally present in the population; when it occurs it is widely diffused and rapidly spreading. The rarely used equivalent of epidemic in veterinary medicine.

e. catarrhal enteritis (ECE) a highly contagious coronaviral enteritis in ferrets which may be mild to severe. There is profuse, bright green diarrhea. Called also green slime disease.

e. bovine infertility see bovine genital **campylobacteriosis**.

e. cellulitis see **equine** viral rhinopneumonitis.

e. cellulitis-pinkeye see **equine** viral arteritis.

e. chlamydiosis a disease of rabbits, hares, deer mice, squirrels and muskrats caused by *Chlamydophila psittaci m56 serovar* and characterized by septicemia, fever, diarrhea.

e. diarrhea of infant mice see **murine** epizootic diarrhea.

e. hematopoietic necrosis a systemic iridoviral disease of fish endemic only in Australian redfin perch and rainbow trout, but occasionally reported in other countries; characterized by massive mortalities in juvenile perch but dribbling mortalities in trout. May have originated in amphibians. A disease notifiable to the OIE (see Table 22).

e. hemorrhagic disease a disease clinically similar to bluetongue of sheep that periodically causes very heavy mortalities in wild ruminants, particularly white-tailed deer in North America. Infection also occurs in cattle, sometimes subclinically. Caused by serotypes of *Orbivirus*, transmitted by biological vectors, usually biting midges of the genus *Culicoides*. A disease notifiable to the OIE (see Table 22).

e. hemorrhagic septicemia see **hemorrhagic** septicemia.

e. lymphangitis a chronic, contagious disease of horses caused by *Histoplasma capsulatum* var *farciminosum* (or *Blastomyces*, *Cryptococcus*, *Saccharomyces*, *Zymonema*). It is characterized by suppurative lymphangitis, lymphadenitis and cutaneous ulcers. Lesions may also occur on the muzzle and nasal mucosa, in the eye causing keratitis, and also in the lungs causing pneumonia. The disease is an important one on its own account but it also has importance because of its similarity to glanders. Called also pseudoglanders.

e. pneumoenteritis see **chronic** respiratory disease.

e. ulcerative syndrome (EUS) important cause of loss in ornamental fish and foodfish; a small area of reddening spreads to become extensive ulceration with the loss of fins, tail, jaw, and ultimately penetration of the abdominal wall. There may also be cloudiness of the corneas. Caused by the pathogenic fungus *Aphanomyces invadans*. Called also Bundaberg disease, red spot disease. A disease notifiable to the OIE (see Table 22).

epizootiology [*ep"ĭ-zo-ot"e-ol'ə-je*] with reference to animal diseases is the rarely used, etymologically proper, equivalent of **epidemiology**.

EPM equine protozoal myeloencephalitis.

EPN ethyl *p*-nitrophenyl benzenethiophosphanate; a nonsystemic organophosphorus insecticide and acaricide.

EPO see **erythropoietin**.

VetBooks.ir

Epomidiostomum a genus of nematodes in the family Amidostomidae. The worms cause hemorrhage and necrosis in the proventriculus and the stomach and gizzard. Includes, in geese, ducks and swans, *E. crispinum*, *E. skrjabini*, *E. uncinatum* and *E. vogelsangi*.

eponychium [*ep"o-nik'e-əm*] 1. the narrow band of epidermis extending from the claw wall onto the claw surface; commonly called cuticle. 2. the horny fetal epidermis at the site of the future claw.

eponym a name or phrase formed from or including a person's name, e.g. Theiler's disease, Cowper's gland, Aschheim–Zondek test.

epoöphoron [*ep"o-of'ə-rən*] a vestigial structure associated with the ovary; originates from the cranial mesonephric tubules and cysts of it may resemble ovarian cysts.

epoprostenol [*e"po-pros'tə-nol*] see **prostacyclin**.

epornithic an epidemic in a population of birds.

epornithology [*ep-or"nĭ-thol'ə-je*] the scientific study of those diseases of birds which occur in a community sporadically but with high morbidity: the study of avian epidemics.

epostane an antiprogesterone agent used to terminate pregnancy in dogs and to induce farrowing in sows.

epoxide [*ə-pok'sīd*] any compound containing a three-membered ring of two carbon atoms and one oxygen atom, e.g. oxirane.

epoxy [*ə-pok'se*] 1. containing one atom of oxygen bound to two different carbon atoms. 2. a resin composed of epoxy polymers and characterized by adhesiveness, flexibility and resistance to chemical actions.

epoxyscillirosidin toxic cardiac glycoside in *Moraea glauca*.

eprinomectin an avermectin effective against nematodes and used as a pour-on for the control of ectoparasites.

epsilon [*ep'si-lon*] the fifth letter of the Greek alphabet, E or ε.

Epsilonretrovirus [*ep'stīn bahr'*] a genus of the family *Retroviridae*. Viruses infect fish and include walleye dermal sarcoma virus and walleye epidermal hyperplasia virus 1 and 2.

epsiprantel an anticestodal, similar to praziquantel used for treatment of tapeworms in dogs and cats.

Epsom salt magnesium sulfate, a cathartic.

EPSP excitatory postsynaptic potential.

Epstein–Barr virus see **Burkitt's lymphoma**.

EPTC *S*-ethyldipropylthiocarbamate; a thiocarbamate noncholinesterase inhibiting herbicide.

epulides [*ə-pu'lĭ-dēz*] see **epulis**.

epulis [*ə-pu'lis*] pl. *epulides* [Gr.] a benign tumor of mixed cell origin arising in the vicinity of the periodontal membrane. May be due to chronic irritation or to true neoplasia.

acanthomatous e. a locally invasive, sometimes recurrent, tumor of the gums of dogs and sometimes cats. Called also oral adamantinoma.

giant-cell e. see periodontal fibromatous epulis (below).

ossifying e. has a greater abundance of hard tissue, osteoid, bone and cementum than fibromatous epulides.

periodontal fibromatous e. firm, nodular benign structures on the lingual or labial gum margins, resembling normal gingiva in color and texture. Common in dogs, particularly the brachycephalic breeds. Considered by some to be hyperplastic rather than neoplastic. Called also giant-cell epulis.

epulosis [*ep"u-lo'sis*] a scarring over; cicatrization.

Eq equivalent; see chemical **equivalent**.

equatorial [*e"kwə-tor'e-əl*] the circle which divides the spherical object into equal halves.

e. region the middle piece; said of spindle muscle fibers.

equestrian a rider of horses.

equid see **Equidae**.

Equidae [*ek'wĭ-de*] a family of mammals, members of which have a single functional digit although the second and third digits persist as splint bones. Includes horses, wild horses, asses (donkeys) and zebras. Quaggas were a member of the family but are now extinct. See also **Equus**.

equilenin one of two estrogens produced by the pregnant mare which are unique to Equidae. Both have unsaturated B rings.

equilibration [*e-kwil"ĭ-bra'shən*] the achievement of a balance between opposing elements or forces.

equilibrium [*e"kwĭ-lib're-əm*] a state of balance between opposing forces or influences. In the body, equilibrium may be chemical or physical. A state of *chemical equilibrium* is reached when the body tissues contain the proper proportions of various salts and water. See also **acid–base balance** and **fluid** balance. *Physical equilibrium*, such as the state of balance required for walking or standing, is achieved by a very complex interplay of opposing sets of muscles. The labyrinth of the inner ear contains the semicircular canals, or organs of balance, and relays to the brain information about the body's position and also the direction of body motions. *Genetic equilibrium* is achieved when the allelic frequencies do not change from generation to generation.

e. dialysis a technique for determining the affinity of an antibody for an antigen.

e. disturbances see **posture**, posture **balance**.

dynamic e. the condition of balance between varying, shifting and opposing forces that is characteristic of living processes.

equilin [*ek'wil-in*] one of two estrogens produced by the pregnant mare that are unique to Equidae. They have unsaturated B rings.

equine [*e'kwīn*] pertaining to, characteristic of, or derived from the horse.

e. abortion infectious causes include equine herpesvirus 1, equine viral arteritis, bacterial placentitis, *Salmonella abortus-equi*. See also equine **viral** abortion.

acute e. respiratory syndrome see **Hendra virus disease**.

e. adenovirus see equine **adenovirus** (types 1 and 2).

e. allergic rhinitis seasonal occurrence, acute onset, sneezing, nasal discharge, nose rubbing, no mucosal lesion; common cause of head shaking.

e. alphaherpesvirus see ***Herpesviridae***.

e. arteritis see equine viral arteritis (below).

e. babesiosis see **babesiosis**.

e. biliary fever see **babesiosis**.

e. blastomycosis see **epizootic** lymphangitis.

e. chorionic gonadatropin (eCG) see **pregnant** mare serum gonadatropin.

e. coital exanthema see equine **coital exanthema**.

e. colic see equine **colic**.

contagious e. metritis called also CEM; see **contagious** equine metritis.

e. ehrlichial colitis see equine monocytic **ehrlichiosis**.

e. ehrlichiosis see equine granulocytic **ehrlichiosis**.

e. encephalitis see **Borna disease**, equine viral **myeloencephalitis**, equine herpesvirus 1 (below).

e. encephalosis insect-borne orbivirus that is transmitted by a variety of *Culicoides* spp. Seven serotypes of equine encephalosis virus infect equids of southern Africa including Kenya, Botswana and South Africa. Clinical signs include fever, lassitude, edema of the lips, acute neurologic disease, enteritis and abortion. Serological surveys suggest that most infections are subclinical.

e. eosinophilic granuloma see equine nodular collagenolytic granuloma (below).

e. epidemic cough see equine influenza (below).

e. farcy see **glanders**.

e. Hendra virus disease see **Hendra virus disease**.

e. henipavirus a virus in the family *Paramyxoviridae*, genus *Henipavirus* that causes fatal illness in horses and humans following 'natural' infection, and of guinea pigs and cats following

E-56: Periodontal fibromatous epulis in a dog.

experimental inoculation. Previously called equine morbillivirus. See also **Hendra virus disease**.

e. herpesvirus 1 (EHV1) the major cause of equine viral abortion (see also equine **viral** abortion) and a myeloencephalopathy. The latter is characterized by nervous signs varying from mild ataxia to enforced recumbency. Also causes respiratory disease (rhinopneumonitis), but the distinctly different equine herpesvirus 4, is more commonly identified as the cause of rhinopneumonitis and rarely abortion. The disease may be a transitory incoordination or a permanent recumbency necessitating euthanasia. When infection of the fetus occurs in the last week or so of pregnancy, perinatal death of the foal in the first few days of life can occur that is characterized by generalized viremia and pathology similar to that found in EHV1 aborted fetuses.

e. herpesvirus 2 (EHV2) a very common infection of horses, often asymptomatic but also associated with a variety of signs including pharyngitis, malaise and coughing. The virus is a member of the subfamily *Gammaherpesvirinae*, genus *Percavirus*. Formerly called equine cytomegalovirus or slowly growing equine herpesvirus.

e. herpesvirus 3 (EHV3) see equine **coital exanthema**.

e. herpesvirus 4 (EHV4) a major cause of equine viral rhinopneumonitis (below).

e. herpesvirus 5 (EHV5) a common infection of horses, often asymptomatic but also associated with a variety of signs including pharyngitis, malaise and coughing. The virus is classified in the subfamily *Gammaherpesvirinae*, genus *Percavirus*; distinctly different from EHV2.

e. histoplasmosis see **epizootic** lymphangitis.

e. incoordination see **enzootic** equine incoordination.

e. infectious anemia (EIA) is caused by a non-oncogenic retrovirus in the subfamily *Lentivirinae*. After an initial acute attack of fever, weakness to the point of incoordination, jaundice, petechiation of the mucosae and conjunctivae and ventral edema, there are alternating periods of normality and illness that may continue for many years. During ensuing attacks there is a gradual development of anemia, emaciation and cardiac insufficiency. The disease is contagious to all members of the family Equidae and is spread by biting flies and mosquitoes. Spread by veterinary equipment has occurred frequently in the past. A disease notifiable to the OIE (see Table 22). Called also swamp fever.

infectious e. bronchitis see equine influenza (below).

e. influenza an infectious disease of the upper respiratory tract of horses of all ages, and caused by members of the family *Orthomyxoviridae*, genus A. The identified viruses are influenza A/Equi Prague/56 (H7N7) and A/Equi-2/Miami/63 (H3N8). The clinical signs typical of the infection are a minor fever and a persistent, long-term cough which prevents the horse being exercised. Droplet infection is highly effective and the disease has the capacity to reach epidemic proportions quickly and disrupt racing and other equine activities. The course is about 3 weeks and there are usually no serious sequelae if the horse is cared for properly. Formerly called also with some degree of uncertainty equine infectious bronchitis, Hoppengarten cough, laryngotracheobronchitis, shipping fever. Effective inactivated vaccines are available although the duration of protective immunity to infection is short. The viruses do not show the same degree of antigenic change (drift and shift) evident in human influenza A viruses. A disease notifiable to the OIE (see Table 22).

e. laryngeal hemiplegia see **laryngeal** hemiplegia.

e. linear keratosis vertical linear areas of alopecia, scaling and crust formation on the sides of the neck, shoulder and chest.

e. lipemia see equine **hyperlipemia**.

e. morbillivirus see equine henipavirus (above)

e. nodular collagenolytic granuloma firm subcutaneous nodules 0.5 to 5 mm diameter on the side of the neck, withers and back. They are eosinophilic granulomas and the cause is not known.

e. papular dermatitis a transient skin disease of horses which may be caused by a virus. Begins with 0.25–1 inch diameter papules which subsequently crust over and then become alopecic. A number of horses are likely to be affected at the one time and an insect vector transmission is suspected.

e. parainfluenza 3 see ***Parainfluenzavirus*** 3.

e. plague see **African** horse sickness.

e. proliferative enteropathy see equine proliferative **enteropathy**.

E-57: Verrucose sarcoid in a horse.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

e. protozoal myeloencephalitis see equine protozoal **myeloencephalitis**.

e. recurrent ophthalmia see equine recurrent **uveitis**.

e. reovirus a member of the genus *Orthoreovirus*; uncommonly reported as a cause of upper respiratory tract disease in young horses.

e. rhinopneumonitis see equine viral rhinopneumonitis (below).

e. rhinitis A virus member of the genus *Aphthovirus,* family *Picornaviridae* that causes an upper respiratory tract infection in horses with laryngitis and a copious sometimes mucopurulent nasal discharge accompanied by viremia; formerly called equine rhinovirus 1.

e. rhinitis B viruses members of the genus *Erbovirus*, family *Picornaviridae* that cause upper respiratory tract infections in horses; formerly called equine rhinoviruses 2 and 3 .

e. sarcoid a locally aggressive, non regressing, fibroblastic skin tumors common in horses, donkeys and mules and associated with bovine papillomavirus BPV-1 and BPV-2. Single or multiple lesions that are hairless fibroid tumor masses that frequently ulcerate, look like large warts, often recur after excision, and occur most commonly on the lower legs but can occur on any part of the body. See also **sarcoid**.

e. sensory ataxia see **enzootic** equine incoordination.

e. serum hepatitis see **postvaccinal** hepatitis.

e. spinal ataxia see equine protozoal **myeloencephalitis**.

e. sports medicine all aspects of equine medicine which touch on quality of performance by show, event or racing horses; particular attention paid to diseases of the respiratory, cardiovascular and musculoskeletal systems.

e. staphylococcal dermatitis a contagious but low prevalence equine dermatitis from which *Staphylococcus aureus* can be isolated regularly. Small, painful nodules appear under the harness; subsequently become pustular and rupture. Called also saddle scab, tail pyoderma.

e. sternal granuloma see **breast** boil.

e. tropical lichen see equine **allergic** dermatitis.

e. viral abortion see equine herpesvirus 1 (above).

e. viral arteritis (EVA) is caused by a member of the family *Arteriviridae*, genus *Arterivirus*. Infection is commonly asymptomatic but clinical signs after an incubation period of 3–14 days include coughing, fever, leukopenia, depression, excessive lacrimation, anorexia, conjunctivitis, rhinitis and nasal discharge. There may be edema around the eyes, lower abdomen, scrotum and lower limbs, and abortion. The virus is transmitted horizontally by semen from carrier stallions. A disease notifiable to the OIE (see Table 22).

e. viral encephalomyelitis see equine viral **encephalomyelitis**.

E-58: Conjunctivitis in equine viral arteritis.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders. 2003.

e. viral rhinopneumonitis (EVR) predominantly caused by equine herpesvirus 4 (EHV4) but also by EHV1. Occasionally EHV4 causes abortion, but EHV1 is the predominant cause of abortion. The rhinopneumonitis is manifested by a cough, serous nasal discharge, mild conjunctivitis and fever. Abortion, when it occurs, does so in the last few months of pregnancy and the mare is not systemically ill at that time. A disease notifiable to the OIE (see Table 22).

e. zygomycosis see **swamp cancer**.

equinovalgus [*e-kwi"no-val'gəs*] a deformity of the lower limb in which the flexor tendons are contracted and the fetlock is straight or knuckled over in front.

equinovarus [*e-kwi"no-va'rəs*] talipes equinovarus; a foot deformity in which the heel is turned inward and the foot is plantar flexed.

equipotential [*e"kwĭ-po-ten'shəl*] having similar and equal power or capability.

equipotentiality [*e"kwĭ-po-ten"she-al'ĭ-te*] the quality or state of having similar and equal power; the capacity for developing in the same way and to the same extent.

Equisetum [*ek"wĭ-se'təm*] genus of the fern ally family Equisetaceae. These plants have a high content of thiaminase, and horses which eat a lot of them, usually in their hay, develop thiamine deficiency. This is characterized by incoordination, falling, bradycardia and severe cardiac irregularity. Response to treatment with thiamine is rapid and complete. Includes *E. arvense*, *E. fluviatile*, *E. hyemale*, *E. laevigatum*, *E. limosum*, *E. palustre*, *E. ramosissimum*. Called also horsetails, foxtails, marestails, scouring rush.

equitation [*ek"wĭ-ta'shən*] the art of horsemanship.

Equithesin a mixture of chloral hydrate, magnesium sulfate and pentobarbital used as an anesthetic, especially for horses. In the past, this was the preferred equine anesthetic. It was very safe, the dose rate was easy to adjust and the anesthesia was good and could be maintained for several hours. It had the disadvantage of having to be freshly mixed just before use.

equivalency [*e-kwiv'ə-len-se*] the combining power of an electrolyte. See also **equivalent**.

equivalent [*e-kwiv'ə-lent*] 1. of equal force, power, value, etc. 2. something that has equivalent properties.

chemical e. (Eq) that weight in grams of a substance that will produce or react with 1 mole of hydrogen ion or 1 mole of electrons. The concentrations of electrolytes are often specified in milliequivalents per liter (mEq/L).

epilepsy e. any disturbance, mental or physical, that may take the place of an epileptic seizure.

temperature e. see Table 3.

equol a metabolite of the phytoestrogen daidzein; an isoflavan.

equulosis [*ek"wə-lo'sis*] the disease caused by infection with *Actinobacillus equuli*.

Equus a genus in the family Equidae. Includes **horses**, **zebras**, and **donkeys** or asses. Includes *E. asinus* (donkey), *E. burchelli* (common zebra), *E. caballus* (the modern horse), *E. grevyi* (Grevyi's zebra), *E. hemionus* (Asian wild ass), *E. kiang* (Tibetan wild ass), *E. przewalskii* (**Przewalski's horse**), *E. zebra* (zebra).

equus [*ek'wəs*] the final stage of the evolution of the horse. The evolution appears to have been direct beginning with *Hyracotherium*, through *Miohippus* and *Merychippus* to *Pliohippus* and finally to *Equus*.

Er chemical symbol, *erbium*.

ER bodies erythrocyte refractile bodies; see **Heinz body**.

eradication extermination of an infectious agent so that no further cases of the related disease can occur.

virtual e. reduction of the frequency of occurrence of a disease to an arbitrary level which is considered to be not a threat to the animal population at risk.

erasion removal by scraping or curettage.

Erb–Goldflam disease [*erb' gōlt'flahm*] myasthenia gravis.

erbium (Er) [*ur'be-əm*] a chemical element, atomic number 68, atomic weight 167.26. See Table 4.

Erbovirus a genus in the family *Picornaviridae*; includes equine rhinitis B viruses.

Erb's dystrophy [*erb*] a human condition; called also pseudohypertrophic muscular dystrophy.

Erechtites see ***Senecio***.

erect position [*ə-rekt'*] the patient is held upright standing on its hindlegs.

erectile [*ə-rek'tĭl*] capable of erection.

e. tissue spongy tissue that expands and becomes firm when filled with blood, e.g. corpus cavernosum of the penis.

erection [*ə-rek'shən*] the condition of becoming rigid and elevated, as erectile tissue when filled with blood; applied especially to the swelling and rigidity that occur in the penis as a result of sexual or other types of stimulation. Impulses received by the nervous system stimulate a flow of blood from the arteries leading to the penis, where the erectile tissue fills with blood, and the penis becomes firm and erect. Erection makes possible the transmission of semen into the body of the female. See **reproduction**.

persistent e. see **priapism**.

erector [*ə-rek'tər*] [L.] a structure that erects, as a muscle that holds up or raises a part.

Eremocarpus setigerus North American plant in the family Euphorbiaceae; contains large proportion of indigestible roughage which causes abomasal impaction, regurgitation, vomiting. Called also *Croton setigerus*, turkey mullein, dove weed.

Eremophila an Australian plant genus of the Myoporaceae family; *E. maculata* (native fuchsia) can cause cyanide poisoning. *E. deserti* (*Myoporum deserti*, Ellangowan poison bush; carrot bush) contains furanosesquiterpenes and causes acute liver necrosis.

erethism excessive irritability or sensitivity to stimulation.

erethisophrenia exaggerated mental excitability.

ERG electroretinogram.

erg [*urg*] a unit of work or energy, equivalent to 1.0×10^{-7} joules, to 2.4×10^{-8} calories, or to 0.624×10^{12} electron volts.

erg- prefix meaning work.

ergasia [*ər-ga'zhə*] any mentally integrated function, activity, reaction or attitude of an individual.

ergocalciferol [*ur "go-kal-sif'ər-ol*] vitamin D_2; an oil-soluble antirachitic vitamin. See also **vitamin D**.

ergograph [*ur'go-graf*] an instrument for measuring work done in muscular action.

ergometrine [*ur"go-met'rin*] see **ergonovine**.

ergonomics [*ur"go-nom'iks*] the science of relating the physiological and anatomical characteristics of the working or racing animal to the physical aspects of its working environment.

ergonovine [*ur"go-no'vin*] one of the alkaloids from **ergot**[1] or produced synthetically, used as an oxytocic.

ergosterol [*ər-gos'tə-rol"*] a sterol occurring in the cell wall of fungi; a provitamin, which on ultraviolet irradiation, becomes a potent antirachitic substance, vitamin D_2 (ergocalciferol).

ergot[1] the dried sclerotia of the fungi *Claviceps* spp. parasitic on grass seed heads.

e. alkaloids clavine alkaloids, lysergic acid and its amides and ergot peptide alkaloids (ergotamine, ergosine, ergocristine etc.).

bulrush millet e. *Claviceps fusiformis* parasitizes bulrush millet (*Pennisetum glaucum*) and causes agalactia and piglet loss in sows. Called also munga ergot.

munga e. the seed of the bullrush millet, *Pennisetum typhoides*, which may be infested with *Claviceps fusiformis*.

paspalum e. *Claviceps paspali* is an ergot fungus that parasitizes *Paspalum* spp. Animals eating the infected plants are poisoned; the clinical syndrome consisting of gross incoordination is indistinguishable from cerebellar ataxia. Recovery is quick and complete if the animals are removed from the contaminated pasture.

rye e. *Claviceps purpurea*, the ergot of rye, infests cereal rye and other grasses including *Lolium* spp. It contains a number of alkaloids one of which, ergonovine (ergometrine), is extracted and used pharmaceutically as an oxytocin. Livestock and humans fed on contaminated grain or seed from affected crops develop chronic ergotism.

ergot[2] [*ur'got*] the small mass of horn in a small bunch of hair on the palmar or plantar aspects of the fetlock of the horse. Regarded as the vestige of the metacarpal or metatarsal pads.

e. ligament shimmering band of connective tissue connecting the fetlock ergot to the distal parts of the pastern in the horse. It is easily confused with the digital nerves during neurectomy.

ergotamine [*ər-got'ə-min*] an alkaloid derived from rye ergot; the tartrate is used as an oxytocic.

ergotherapy [*ur"go-ther'ə-pe*] treatment of disease by physical effort.

ergothioneine [*ur"go-thi"o-ne'in*] a sulfur-containing base, present in significant quantities in the semen of the boar and the stallion, which is thought to protect spermatozoa against oxidizing agents. In other species this role is played by ascorbic acid.

VetBooks.ir

E-59: Peripheral necrosis, edema and hemorrhage caused by ergot alkaloids found present in feed pellets fed to this heifer.

E-60: Ergot in horses. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians Lab Manual. Mosby, 2009.

ergotism [*ur'go-tiz-əm*] toxicity caused by ergot alkaloids in feeds which may be from *Claviceps* spp. or from endophytes. Variation in clinical manifestations between outbreaks is probably due to differences in alkaloid types in the feed. The classical manifestation is gangrene of the extremities, particularly the lower part of the hindlimbs, the tail and the tips of the ears with reddening, swelling, coldness, loss of hair or wool, and lack of sensation initially, followed by necrosis and separation from normal tissues. When large amounts are ingested there are neurologic signs characterized by initial drowsiness, incoordination and subsequently convulsions. Abortion occurs in some instances. Hyperthermia is the principal manifestation in some intoxications, and occurs in hot weather. Affected animals are hyperthermic, poorly tolerant to exercise, seek water or shade and have decreased growth rate and milk production. Exposure to high environmental temperatures may result in death. Abnormality in reproduction occurs in mares grazing endophyte infested *Festuca arundinacea* (see *Fescue toxicisi*) and in pigs where ergotism is manifested by lack of udder development and agalactia in sows, and the birth of small pigs which suffer a high neonatal mortality. See also **fescue** toxicosis, **summer slump**, **fescue** foot.

ergotoxin a mixture of alkaloids extracted from *Claviceps purpurea*. Has vasoconstrictor and ecbolic actions.

ergovaline ergot alkaloid found in *Neotyphodium coenophialum* (*Acremonium coenophialum*).

Eriobotrya japonica tree in the family Rosaceae, has edible fruits the seeds of which contain sufficient cyanide to cause poisoning if eaten in quantity. Called also loquat.

Eriocephalus ericoides, E. glaber African plant in the Asteraceae family; causes pyloric obstruction because of high content of indigestible fiber.

Eriochloa contracta a grass in the family Poaceae; has caused photosensitization of cattle in Texas. Called also prairie cupgrass.

Eristalis [*er-is'tə-lis*] a genus of flies in the family Syrphidae whose maggots breed in drains. Called filth flies, rat-tailed maggots.

ermine 1. (*Mustela erminea*) a small, aggressive member of the family Mustelidae; known also as the European stoat. Highly prized for its fur, which is brown in summer and white in winter. 2. the pelt of *Mustela erminea*.

e. marks in a horse, small brown or black spots on a white section of coat surrounding one or more coronets; resembles ermine.

Ermine Rex a rabbit; see **Rex** (2).

Erodium a plant genus in the family Geraniaceae, associated with photosensitization. Includes *E. cicutarium* and *E. moschatum* (musky storksbill). Called also storksbill.

Erophaca baetica ***Astragalus*** *lusitanicus*.

erosion [*ə-ro'zhən*] an eating or gnawing away; a shallow or superficial ulceration; in dentistry, the wasting away or loss of substance of a tooth by a chemical process that does not involve known bacterial action.

erosive stomatitis [*ə-ro'siv*] a disease of the mouth characterized by the presence of discrete, superficial ulcers or erosions of the mucosal surface, as in bovine mucosal disease, rinderpest and mucosal disease of cattle. Secondary ulcerative stomatitis is common.

endemic e. s. of cattle recorded in Africa. Similar to and may be identical with bovine **papular** stomatitis.

ERPF effective renal plasma flow.

errhine [*er'in*] promoting a nasal discharge; an agent that so acts.

Errington's disease a disease of snowshoe hare, rabbit and muskrat characterized by hemorrhagic enteritis and focal hepatic necrosis. The cause is not defined but *Clostridium perfringens*, *Francisella tularensis* and *Leptospira* spp. have all been implicated.

error [*er'ər*] the wrong answer in an experiment or result to a questionnaire.

experimental e. of two types, errors of objectivity when the experimenter knows the groups and the expected result, and errors of detection or measurement due to inadequate technique or the uneven application of measuring techniques.

random e. error which occurs due to chance, such as sampling error.

sampling e. one due to the fact that the result obtained from a sample is only an estimate of that obtained from using the entire population.

standard e. the standard deviation of an estimate.

standard e. of mean the sampling variability of the mean.

systematic e. when the error is applied to all results, i.e. those due to bias.

e. types I and II in making a statistical test, you can reject the null hypothesis when it is true (type I) or accept the null hypothesis when it is false (type II).

ERU equine recurrent uveitis.

eructate performance of the act of eructation.

eructation [*ə-rək-ta'shən*] the oral ejection of gas or air from the stomach; belching. A normal activity for ruminants who void gases, principally methane, produced by fermentation in the rumen. Interference with eructation in those species causes ruminal tympany or **bloat** (1).

eruption [*ĕ-rup'shən*] 1. the act of breaking out, appearing or becoming visible, as eruption of the teeth. 2. visible efflorescent lesions of the skin due to disease, with redness, prominence, or both; a rash.

creeping e. see cutaneous **larva** migrans.

drug e. see **drug** eruption.

grouped tooth e. permanent posterior teeth erupting side by side with no replacement horizontally.

sequential tooth e. permanent posterior teeth replaced by craniad movement of caudal teeth; seen in macropods and elephants.

tooth e. times see Table 19. Used in veterinary medicine as a guide to an animal's age.

ERV expiratory reserve volume.

erva cafe [Span.] ***Palicourea*** *marcgravii*.

erva de rato [Span.] ***Palicourea*** *marcgravii*.

Ervum see ***Vicia emilia***.

Erwinia [*ər-win'e-ə*] a genus of plant pathogens and saprophytes. See also **Enterobacteriaceae**.

Erysimum cheiranthoides toxic plant in the family Brassicaceae; contains mustard oil glucosinolates which cause stomatitis, vomiting, diarrhea. Called also wormseed mustard, treacle mustard.

erysipelas [*er"ə-sip'ə-ləs*] 1. infection with *Erysipelothrix rhusiopathiae*; occurs rarely in cattle and sheep, principally as an arthritis and laminitis, occasionally as a systemic infection. It is a common and serious infection in pigs and turkeys. In pigs it may be a septicemia with characteristic diamond-shaped skin lesions, or a chronic disease manifested principally as arthritis, sometimes as endocarditis. Turkeys are the only bird species affected at a significant level. In them the disease is manifested as a septicemia with no diagnostic signs. 2. An erythematous–edematous lesion, commonly on the hand, resulting from contact with infected meat, hides or bones; the usual lesion in humans and is called erysipeloid.

erysipelatous [*er"ə-si'-pel'ə-təs*] pertaining to or of the nature of erysipelas.

erysipeloid [*er"ə-sip'ə-loid*] an acute infection, usually of the skin but rarely systemic, in humans caused by *Erysipelothrix rhusiopathiae*.

E-61: Diamond (rhomboid) - shaped lesions on abdomen of a sow with erysipelas.

It is acquired by direct contact with infected animals or meat; an occupational hazard for farmers and abattoir workers.

Erysipelothrix [er"ə-sip'ə-lo-thriks"] a genus of bacteria containing a single species; short gram-positive rods which show remarkable longevity in alkaline soils. Once the infection appears on a farm it is likely to recur. See also **erysipeloid**.

E. rhusiopathiae the causative organism of swine **erysipelas**. Also infects sheep, turkeys and rats and causes the zoonotic disease erysipeloid in humans. Formerly called *E. insidiosa*.

erythema [er"ə-the'mə] redness of the skin caused by congestion of the capillaries in the lower layers of the skin. It occurs with any skin injury, infection or inflammation.

e. ab igne see chronic radiant heat **dermatitis**.

e. chronicum migrans the early skin rash at the site of the tick bite which infects humans with *Borrellia burgdorferi* (Lyme disease); rarely seen in dogs.

e. multiforme (EM) a necrotizing skin disease, most often related to drugs being administered, including penicillins, cephalosporins, sulfonamides, levamisole, and 5-fluorocytosine, but sometimes associated with systemic disease. It occurs in all species and is characterized by an acute onset of erythematous macules, papules, vesicles or bullae. There may also be fever, depression and anorexia. A very painful condition in young pet pot-bellied pigs where it is known as dippity pig.

e. multiforme major a rapidly fulminating, ulcerative form of erythema multiforme with involvement of oral mucosa and systemic signs.

necrolytic migratory e. an uncommon skin disease of dogs associated with glucagon-secreting tumors of the pancreas or chronic liver disease. There are pruritic crusted, ulcerated lesions, mainly on the face, mucocutaneous areas, distal limbs and feet. Called also hepatocutaneous syndrome, superficial necrolytic dermatitis, diabetic dermatopathy.

e. nodosum a rare disorder in dogs characterized by fever, depression, arthralgia and septal panniculitis.

erythematous [er"ə-them'ə-təs] characterized by erythema.

erythremia [er"ə-thre'me-ə] polycythemia vera.

erythremic myelosis [er"ə-thre'mik] a myeloproliferative disorder of cats, rarely other species, manifested by marked anemia but with marked anisocytosis without an accompanying polychromasia. Usually associated with feline leukemia virus infection. Large numbers of rubricytes can be found in the bone marrow and sometimes in the circulation. The condition has been compared to Di Guglielmo syndrome in humans.

Erythrina [er"ə-thri'nə] a plant genus in the family Fabaceae; contains isoquinoline alkaloids; suspected of poisoning horses and cattle. Called also coral tree.

erythritol [ə-rith'ri-tol] the sugar present in high concentration in the genital tract of the male and the pregnant female and enhances the growth of *Brucella abortus*, which preferentially utilizes erythritol.

erythr(o)- word element. [Gr.] *red, erythrocyte*.

erythroblast [ə-rith'ro-blast] originally, any nucleated erythrocyte, but now more generally used to designate the nucleated precursor from which an erythrocyte develops. Called also normoblast, **rubriblast**.

basophilic e. see **prorubricyte**.

orthochromatic e. metarubricyte, normoblast.

polychromatophilic e. see **rubricyte**; called also polychromatophilic normoblast.

erythroblastemia [ə-rith"ro-blas-te'me-ə] the presence in the peripheral blood of abnormally large numbers of nucleated red cells; erythroblastosis.

erythroblastic [ə-rith"ro-blas'tik] of, or relating to erythroblasts.

e. islets a bone marrow unit consisting of a central macrophage and surrounding erythroblasts and in which differentiation of erythroblasts takes place.

erythroblastoma [ə-rith"ro-blas-to'mə] a tumor-like mass composed of nucleated red cells.

erythroblastopenia [ə-rith"ro-blas"to-pe'ne-ə] abnormal deficiency of erythroblasts.

erythroblastosis [ə-rith"ro-blas-to'sis] the presence of erythroblasts in the circulating blood.

avian e. caused by the viruses of the leukosis/sarcoma group. Manifested by weakness, pallor, comb cyanosis, diarrhea and spontaneous hemorrhage.

e. fetalis, e. neonatorum see neonatal **hemorrhagic** disease, **alloimmune** hemolytic anemia of the newborn.

erythrochromia [ə-rith"ro-kro'me-ə] hemorrhagic, red pigmentation of the cerebrospinal fluid.

erythroclasia [er"ə-throk-la'zhə] splitting up of erythrocytes.

erythroclasis [er"ə-throk'lə-sis] fragmentation of the red blood cells.

erythrocuprin [ə-rith"ro-koo'prin] see **ceruloplasmin**.

erythrocytapheresis [ə-rith"ro-si"tə-fə-re'sis] the withdrawal of blood, separation and retention of red blood cells, and retransfusion of the remainder into the donor.

erythrocyte [ə-rith'ro-sīt] a red blood cell, or corpuscle; one of the formed elements in the peripheral blood. For immature forms **rubriblast**, **prorubricyte**, **rubricyte**, **metarubricyte** and **reticulocyte**. In most mammals mature erythrocytes are biconcave disks that have no nuclei. The degree of concavity varies between species, as does the size. Birds have nucleated, oval erythrocytes. The cell consists mainly of hemoglobin and a supporting framework, called the stroma. Erythrocyte formation (erythropoiesis) takes place in the red bone marrow in the adult, and in the liver, spleen and bone marrow of the fetus. Erythrocyte formation requires an ample supply of certain dietary elements such as iron, cobalt and copper, amino acids and certain vitamins. See also erythrocytic **series**.

e. antigen see blood group **antigen** and **blood** group.

e. casts see urinary **cast**.

e. count see **blood** count.

e. ghosts see **ghost cell** (1).

hypochromatic e. see **hypochromia** (2).

e. indices calculated values for the **mean** corpuscular (cell) volume (MCV), **mean** corpuscular hemoglobin (MCH), and **mean** corpuscular (cell) hemoglobin concentration (MCHC), taken from the hematocrit, hemoglobin concentration and red blood cell count. Used in determining the likely etiology of anemias and other abnormalities of the erythron. Called also mean cell constants.

matchstick e. describes the appearance of sickled deer erythrocytes containing hemoglobin II.

normochromic e. see **normochromia**.

e. refractile bodies (ERF) a term usually used to describe Heinz bodies in the erythrocytes of cats. Sometimes restricted in definition to the smaller (Heinz) bodies that are normally found in up to 10% of feline erythrocytes, as distinct from larger bodies associated with hemolytic anemia.

e. sedimentation rate (ESR) an expression of the extent of settling of erythrocytes in a column of fresh citrated or otherwise treated blood, per unit of time. Of greatest diagnostic value in dogs as horses normally have a greatly accelerated rate and ruminants show none except in very extreme circumstances. In the dog, ESR is elevated with inflammatory processes. See also **sedimentation** rate.

e. tonicity the degree of distention of the erythrocyte. This is dependent on the osmotic pressure of the cell's contents compared with that of the plasma. If it is greater, water will pass into the cell and it may rupture. If it is less, water passes out of the cell which shrinks and becomes crenated.

e. volume mean corpuscular volume (**MCV**); see erythrocyte indices (above).

erythrocythemia [ə-rith"ro-si-the'me-ə] polycythemia.

erythrocytic [ə-rith"ro-sit'ik] 1. pertaining to, characterized by, or of the nature of erythrocytes. 2. pertaining to the erythrocytic series.

VetBooks.ir

erythrocyto-opsonin [ə-rith"ro-si"to-op-so'nin] see **hemopsonin**.
erythrocytolysin [ə-rith"ro-si-tol'ə-sin] a substance that produces erythrocytolysis.
erythrocytolysis [ə-rith"ro-si-tol'ə-sis] dissolution of erythrocytes and escape of hemoglobin; hemolysis.
erythrocytorrhexis [ə-rith"ro-si"to-rek'sis] a morphological change in erythrocytes, consisting in the escape from the cells of round, shiny granules and splitting off of particles.
erythrocytosis [ə-rith"ro-si-to'sis] increase in the concentration of red blood cells in the peripheral blood; characterized by an increased hematocrit (Hct), increased packed cell volume (PCV) and increased hemoglobin (Hgb). See also **polycythemia**.
e. stimulating factor a lipid isolated from the plasma of anemic animals; distinct from erythropoietin, causes production of microcytes without increasing hemoglobin. Its role in disease is unknown.
primary e. see **polycythemia** vera.
relative e. see relative **polycythemia**.
stress e. an apparent polycythemia resulting from diminished plasma volume. Called also relative polycythemia.
erythroderma [ə-rith"ro-dur'mə] abnormal redness of the skin over widespread areas of the body.
exfoliative e. reported in a single cow and her calves; believed to be an immune-mediated disorder associated with colostrum.
lymphomatous e. widespread redness of the skin associated with lymphoma.
maculopapular e. a reddish eruption composed of maculae and papules.
erythrodermatitis [ə-rith"ro-dur-mə-ti'tis] a disease of pond fish caused by *Aeromonas salmonicida* and characterized by ulcers of the skin and a high mortality rate. Called also carp erythrodermatitis.
erythrodontia [ə-rith"ro-don'shə] reddish-brown pigmentation of the teeth.
erythrodysesthesia [ə-rith"ro-dis"es-the'zhə] see **palmar-plantar erythrodysesthesia syndrome**.
erythrogenesis [ə-rith"ro-jen'ə-sis] the production of erythrocytes; erythropoiesis.
erythrogenic [ə-rith"ro-jen'ik] 1. producing erythrocytes. 2. producing or causing erythema.
erythrogenin [ə-rith"ro-jen'in] see **erythropoietin**.
erythrogonium tissues from which red blood cells are produced.
erythrogram [ə-rith'ro-gram] includes the red blood cell count, mean corpuscular volume, hematocrit, hemoglobin concentration and erythrocyte indices.
erythroid [er'ĭ-throid] 1. of a red color; reddish. 2. pertaining to the developmental series of cells ending in erythrocytes.
e. aplasia see pure red cell **aplasia**.
burst forming unit-e. (BFU-E) produced in in vitro cultures of erythroid stem cells. It has low sensitivity to erythropoietin and gives rise to colony forming unit-erythroid which, with erythropoietin, gives rise to erythroid cells.
e. hyperplasia increased numbers of erythrocyte precursors, as seen in a regenerative response to anemia.
e. hypoplasia see hypoplastic **anemia**.
e. metaplasia see **bone marrow**.
e. leukosis see avian **erythroblastosis**.
erythrokeratodermia [ə-rith"ro-ker"ə-to-dur'me-ə] a reddening and hyperkeratosis of the skin.
e. variabilis autosomal dominant inherited epithelization/keratinization defect in humans. Rare reports in lambs and a foal.
erythrokinetics [ə-rith"ro-kĭ-net'iks] the quantitative, dynamic study of in vivo production and destruction of erythrocytes.
erythroleukemia [ə-rith"ro-loo-ke'me-ə] a neoplastic blood dyscrasia of dogs and cats; one of the myeloproliferative disorders, with atypical erythroblasts and myeloblasts in the peripheral blood.
erythroleukosis [ə-rith"ro-loo-ko'sis] see avian **erythroblastosis**.
erythrolysis [er"ə-throl'ə-sis] hemolysis.
erythromycin [ə-rith"ro-mi'sin] a broad-spectrum antibiotic produced by a strain of *Streptomyces erythreus*. It is effective against a wide variety of organisms, including gram-negative and gram-positive bacteria. The stearate can be given orally; the lactobionate is a soluble salt which can be administered intravenously.
erythron [er'ə-thron] the circulating erythrocytes in the blood, their precursors, and all the body elements concerned in their production.
erythroneocytosis [ə-rith"ro-ne"o-si-to'sis] the presence of immature erythrocytes in the blood.
erythropenia [ə-rith"ro-pe'ne-ə] deficiency in the number of erythrocytes.
erythrophage [ə-rith'ro-fāj] a neutrophil or macrophage that has ingested an erythrocyte.
erythrophagia [ə-rith"ro-fa'jə] erythrophagocytosis.
erythrophagocytosis [ə-rith"ro-fa"go-si-to'sis] engulfment of erythrocytes by erythrocytes or macrophages.
erythropheresis [ə-rith"ro-fə-re'sis] see **erythrocytapheresis**.
erythrophil [ə-rith'ro-fil] 1. a cell or other element that stains easily with red. 2. erythrophilous.
erythrophilous [er"ĭ-throf'ĭ-ləs] easily staining red.
erythrophleine alkaloid esters of diterpenoid acids, the toxic agent in the tree *Erythrophleum chlorostachys*.
Erythrophleum [ə-rith"ro-fle'əm] a plant genus of the Caesalpiniaceae family from Africa, Asia and Australia; contain diterpenoid alkaloids, e.g. erythrophleine, cause a clinical syndrome of tremor, ataxia, increased intensity of the heart sounds, dyspnea and sudden death. Includes *E. africanum* (ordeal tree, samburu), *E. chlorostachys* (Cooktown ironwood tree, camel poison), *E. guineense* (*E. suaveolens*, sassy bark).
erythrophthisis a condition characterized by severe impairment of the restorative power of the erythrocyte-forming tissues.
erythroplastid [ə-rith"ro-plas'tid] an erythrocyte without a nucleus, as seen in mammals.
erythropoiesis [ə-rith"ro-plas'tid] the formation of erythrocytes. Called also hematopoiesis.
balanced e. balanced progressive development of the nucleus and the cytosol of the erythrocytes.
ineffective e. hemopoietic production which does not result in the functional release of new erythrocytes.
erythropoietic [ə-rith"ro-poi-et'ik] emanating from or pertaining to erythropoiesis.
erythropoietin (EPO) [ə-rith"ro-poi'ə-tin] a glycoprotein hormone secreted mainly by the kidney. A profactor, erythropoietinogen, is first produced in the liver, transferred to the kidney and converted to active erythropoietin in the kidney. The erythropoietin acts on stem cells of the bone marrow to stimulate red blood cell production (erythropoiesis). This effect has given rise to illicit use for performance enhancement in sporting animals. Plasma concentrations increase in anemias, except for those caused by chronic renal disease or inflammation. Measurement may be done to differentiate primary from secondary **erythrocytosis**. Called also erythropoietin stimulating factor, erythrogenin. See also **darbepoetin alfa**.
recombinant e. produces an initial erythroid response when used to treat dogs and cats with nonregenerative anemia of renal disease, but animals develop antibodies to the human product (reHuEPO), limiting its use.
e. stimulating factor see erythropoietin (above).
erythropoietinogen precursor of **erythropoietin**.
erythrosine [ə-rith'ro-sēn] depresses thyroid function by inhibiting 5′-deiodinase.
erythrostasis [ə-rith"ro-sta'sis] the stoppage of erythrocytes in the capillaries, as in disseminated intravascular coagulation.
Erythrovirus [ə-rith'ro-vi"rəs] a genus in the family *Parvoviridae*, subfamily *Parvovirinae*.
Erythroxylum a South American genus in the family Erythroxylaceae. *E. coca* (coca), *E. novogranatense* and *E. bolivianum* are sources of cocaine. Fruits of *E. argentinum* are poisonous to sheep.
erythruria [er"ĭ-thru're-ə] excretion of red urine.
Es chemical symbol, *einsteinium*.
escape [əs-kāp'] the act of becoming free.
autoregulatory e. after prolonged tissue hypoxia of shock, sympathetic-mediated vasoconstriction gives way to vasodilation in all organs.
vagal e. the exhaustion of or adaptation to neural chemical mediators in the regulation of systemic arterial pressure.
ventricular e. extrasystole in which a ventricular pacemaker becomes effective before the sinoatrial pacemaker; it usually occurs with slow sinus rates and often, but not necessarily, with increased vagal tone.
eschar [es'kahr] a deep cutaneous slough such as that produced by a thermal burn, a corrosive action, a decubitus ulcer, a saddle gall or setfast.

E-62: Full thickness burn with eschar in a dog caused by a heating pad used for post-operative warming.

escharotic [*es"kə-rot'ik*] 1. capable of producing an eschar; corrosive. 2. a corrosive or caustic agent.

escharotomy [*es"kə-rot'ə-me*] surgical incision of the eschar and superficial fascia of a circumferentially burned limb in order to permit the cut edges to separate and restore blood flow to unburned tissue distal to the eschar. Edema may form beneath the inelastic eschar of a full-thickness burn and compress arteries, thus impairing blood flow and necessitating an escharotomy. The incision is protected from infection with the same antimicrobial agent being used on the burn wound.

Escherichia [*esh"ə-rik'e-ə*] a genus of widely distributed gram-negative bacteria in the family *Enterobacteriaceae*.

Escherichia coli [*esh"ə-rik'e-ə*] a species of bacteria in the genus *Escherichia* constituting a significant proportion of the normal intestinal flora of animals. Pathogenic strains a cause of urinary tract infections, epidemic diarrheal diseases, especially in newborn animals, pyometra in dogs and late respiratory disease in broiler chickens. Also a common opportunistic pathogen. See also **colibacillosis**, **coliform** mastitis, **coliform** gastroenteritis, avian **coliform** septicemia, **mastitis–metritis–agalactia**, **enteropathogenic**, enterotoxigenic shiga-like toxins.

***E. coli* 0157:H7** a shiga-like toxin (verotoxin) producing *E. coli* that has been responsible for outbreaks of hemorrhagic colitis, especially in children, but in all ages. Case fatality rates can be high, especially where there is the complication of the hemolytic uremic syndrome (HUS). The organism is carried by cattle who show no sign of clinical disease and many outbreaks have been epidemiologically linked to food products of bovine origin. The mass handling and marketing of minced beef allow a contaminated batch to affect a large population. The infective dose for man is estimated at a few organisms and infection can also be picked up by children visiting petting zoos or on farm visits. Also linked to hemorrhagic enteritis in dogs.

***E. coli* J5 vaccine** vaccine prepared from *E. coli* mutant; provides protection against coliform mastitis in cows.

attaching and effacing *E. coli* (AEEC) produce shiga toxin (verotoxin). Certain serotypes cause enteritis, colitis and diarrhea in a number of different animal species by expressing a virulence factor protein called intimin which allows intimate attachment of the organism to the microvillus brush border of enterocyte forming a characteristic attaching and effacing lesion. Diagnosis is by the detection of the characterisitic lesions. Called also enteropathogenic *E. coli*.

diarrheagenic *E. coli* *E. coli* that cause diarrhea. Categorized into pathotypes that include enterotoxigenic *E. coli* (ETEC), enteropathogenic *E. coli* (EPEC), enterohemorrhagic *E. coli* (EHEC), enteroinvasive *E. coli* (EIEC) and enteroaggregative *E. coli* (EAEC).

***E. coli* Shigella** a cluster of clones of *E. coli* that are unable to ferment lactose and that cause bacillary dysentery in primates, including humans, as a result of the independent acquisition of a specific virulence plasmid. Includes the organisms previously known as *Shigella dysenteriae, S. flexneri, S. sonnei* and *S. boydii* (now *E. coli* Dysenteriae, *E. coli* Flexneri, *E. coli* Sonnei and *E. coli* Boydii).

Eschscholtzia californica [*ə-shōlt'se-ə*] a North American plant in the Papaveraceae family. It could be poisonous because of its high content of isoquinoline alkaloids. Called also California poppy.

esculin [*es'ku-lin*] a hydroxycoumarin glycoside found in the bark of *Aesculus* spp. Together with ferric citrate, it is used in a broth for the identification of some bacteria which cause hydrolysis and a color change. Also causes animal poisoning; see ***Aesculus***.

escutcheon [*es-kuch'ən*] the shield-like pattern of distribution of the haircoat in the area below the vulva, down to the top of the udder, in the cow. The escutcheon itself is composed of hairs which lie vertically downwards; its edges consist of a well-demarcated ridge created when this vertically inclined hair meets the horizontally inclined hair of the lateral aspect of the thigh. Wishful-thinking herdsmen used to read predictions of milking capacity into the shape of the escutcheon of a dairy cow.

eserine [*es'ər-in*] physostigmine.

-esis word element. [Gr.] *state, condition*.

Eskimo dog a term sometimes applied to any of the Arctic breeds of dogs, such as Samoyed, Alaskan malamute and Siberian Husky, as well as the breeds, **American Eskimo dog** and **Canadian Eskimo dog**.

Esmarch [*es'mahrk*] having to do with Johann Esmarch, a 19th century German surgeon.

E's bandage an India rubber bandage applied upward around (from the distal part to the proximal) a part in order to expel blood from it; the part is often elevated as the elastic pressure is applied.

E. plaster shears, scissors see **plaster** shears.

esmolol [*es'mo-lol*] an ultrashort-acting β-receptor blocking agent, used to treat cardiac arrhythmias.

eso- word element. [Gr.] *within*.

esoethmoiditis [*es"o-eth-moi-di'tis*] inflammation of the ethmoid sinuses.

esogastritis [*es"o-gas-tri'tis*] inflammation of the gastric mucosa.

esophageal [*ə-sof"ə-je'əl*] of or pertaining to the esophagus.

e. achalasia see **megaesophagus**.

e. anomalies very rare; include atresia, duplication, segmental aplasia, esophagorespiratory fistulae, diverticula, epithelial inclusion cysts.

e. atresia congenital lack of continuity of the esophagus, commonly accompanied by tracheoesophageal fistula, and characterized by accumulations of mucus in the nasopharynx, gagging, vomiting when fed, cyanosis and dyspnea. Treatment is by surgical repair with esophageal anastomosis and division of the fistula.

e. distention may result from acute or chronic obstruction of the esophagus, or from defective innervation. See also **megaesophagus**.

e. duplication may be tubular and communicate with the effective esophagus, or cystic appearing as a cystic mass close to the functioning esophagus.

e. ectasia see **megaesophagus**.

e. enlargement clinically visible enlargement as seen in esophageal diverticulum, stenosis, paralysis, cardial obstruction.

e. fibrosis a cause of acquired megaesophagus; usually caused by trauma or spontaneous ulceration.

e. groove see **reticular**^{2} groove.

e. groove lesion includes granuloma, papilloma, foreign body lodgment; cause of obstructive bloat.

e. hyperkeratosis hyperkeratotic thickening of the esophageal mucosa due usually to hypovitaminosis A or chlorinated naphthalene poisoning.

e. hypomotility see **megaesophagus**.

e. inflammation see **esophagitis**.

e. motility disorders see **megaesophagus**.

e. neoplasm rare, but leiomyoma is most common in dogs and squamous carcinoma in cats; osteosarcoma and fibrosarcomas occur in dogs in assocation with *Spriocerca lupi* infection. Causes chronic esophageal obstruction.

e. obstruction acute obstruction is manifested by inability to swallow, regurgitation of saliva, food and water through the nose and much discomfort expressed by retching movements and pawing at the throat. Ruminants develop ruminal tympany. Chronic obstruction shows the same syndrome but with a gradual development and a tendency to develop aspiration pneumonia.

e. osteosarcoma occurs in dogs in association with the parasite *Spirocerca lupi*.

e. papilloma a cause of obstructive bloat.

e. paralysis causes esophageal obstruction.

e. patching see patch **graft**.

e. perforation generally caused by penetrating wounds or foreign bodies; causes local cellulitis and compression-obstruction of esophagus.

VetBooks.ir

e. pulsion diverticulum a diverticulum that pushes outwards causing pressure on surrounding organs and tissues.
e. segmental aplasia causes esophageal obstruction in neonates.
e. stenosis, e. stricture generally as a result of severe esophagitis or esophageal surgery; causes esophageal obstruction which may be partial, permitting passage of liquids.
e. ulcer usually associated with pressure necrosis due to prolonged obstruction and injury by a solid foreign body or, rarely equine dysautonomia or *Gasterophilus* spp. infestation.
e. varices distended veins at the gastric cardia causing dysphagia.

esophagectasia [ə-sof-ə-jek-ta'shə] dilatation of the esophagus.
esophagectomy [ə-sof"ə-jek'tə-me] excision of a portion of the esophagus.
esophagism [ə-sof'ə-jiz-əm] spasm of the esophagus.
esophagismus [ə-sof"ə-jiz'məs] see **esophagism**.
esophagitis [ə-sof"ə-ji'tis] inflammation of the esophageal mucosa and sometimes the uderlying muscularis. Primary esophagitis, caused by physical irritants, causes spasm and obstruction, with pain on swallowing or palpation, profuse salivation, regurgitation of slimy, blood-stained saliva and feed, and may lead to stricture formation. Esophagitis also occurs commonly in ruminants as a secondary lesion in diseases characterized by erosive and vesicular lesions of the alimentary tract. Gastric reflux, invasion of the esophageal wall by *Hypoderma* spp., thallotoxicosis and paraquat poisoning are other causes.
peptic e. inflammation of the esophagus due to a reflux of acid and pepsin from the stomach; occurs particularly in dogs and cats while under general anesthesia. Called also reflux esophagitis or peri-operative reflux.
reflux e. see peptic esophagitis (above).
esophagobronchial [ə-sof"ə-go-brong'ke-əl] pertaining to or communicating with the esophagus and a bronchus, e.g. esophagobronchial fistula.
esophagocele [ə-sof'ə-go-sēl"] abnormal distention of the esophagus; protrusion of the esophageal mucosa through a rupture in the muscular coat.
esophagocoloplasty [ə-sof"ə-go-ko'lo-plas"te] excision of a portion of the esophagus and its replacement by a segment of the colon.
esophagodynia [ə-sof"ə-go-din'e-ə] pain in the esophagus.
esophagoenterostomy [ə-sof"ə-go-en"tər-os'tə-me] surgical formation of an anastomosis between the esophagus and the small intestine.
esophagoesophagostomy [ə-sof"ə-go-ə-sof"ə-gos'tə-me] anastomosis between two formerly remote parts of the esophagus.
esophagogastrectomy [ə-sof"ə-go-gas-trek'tə-me] excision of the esophagus and stomach.
esophagogastric [ə-sof"ə-go-gas'trik] pertaining to the esophagus and the stomach.
e. ulcer in pigs, manifest with hyperkeratinization and ulceration in the *pars esophagea* of the stomach. If an ulcer erodes to a blood vessel, the pig can become anemic or bleed to death. In affected herds, a significant proportion of pigs develop hyperkeratosis and ulceration but only a proportion show clinical disease. Risk factors include housing and stocking density, the use of pelleted feeds and low fiber and small particle size of feed.
esophagogastroanastomosis [ə-sof-ə-go-gas"tro-ə-nas"to-mo'sis] esophagogastrostomy.
esophagogastroduodenoscopy [ə-sof"ə-go-gas"tro-doo"od-ə-nos'kə-pe] endoscopic examination of the esophagus, stomach and duodenum using a flexible endoscope.

E-63: Esophagitis.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

E-64: Esophagogram of a cat with obstruction of the esophagus caused by a neoplasm.
From Tams T, Small Animal Endoscopy, 2nd Edition. Mosby, 1999.

esophagogastroplasty [ə-sof"ə-go-gas'tro-plas"te] plastic repair of the esophagus and stomach. See also **cardioplasty**.
esophagogastroscopy [ə-sof"ə-go-gas-tros'kə-pe] endoscopic inspection of the esophagus and stomach.
esophagogastrostomy [ə-sof"ə-go-gas-tros'tə-me] anastomosis of the esophagus to the stomach.
esophagogram [ə-sof'ə-go-gram] a contrast radiograph of the esophagus.
esophagography [ə-sof"ə-gog'rə-fe] radiography of the esophagus.
esophagojejunostomy [ə-sof-ə-go-je"joo-nos'tə-me] anastomosis of the esophagus to the jejunum.
esophagomalacia [ə-sof"ə-go-mə-la'shə] softening of the walls of the esophagus.
esophagometer [ə-sof"ə-gom'ə-tər] an instrument for measuring the esophagus.
esophagomyotomy [ə-sof"ə-go-mi-ot'ə-me] incision through the muscular coat of the esophagus. See also Heller's **myotomy**.
esophagoplasty [ə-sof'ə-go-plas"te] plastic repair of the esophagus.
esophagoplication [ə-sof"ə-go-plĭ-ka'shən] infolding of the wall of an esophageal pouch.
esophagoptosis [ə-sof"ə-gop-to'sis, ə-sof"ə-go-to'sis] prolapse of the esophagus.
esophagopulmonary [ə-sof"ə-go-pool'mo-nar"e] pertaining to the esophagus and lungs, e.g. esophagopulmonary fistula.
esophagorespiratory [ə-sof"ə-go-res'-pĭ-rə-tor"e] pertaining to or communicating with the esophagus and respiratory tract (trachea or a bronchus).
e. fistula between the esophagus and trachea.
esophagorespiratory fistula [ə-sof"ə-go-res'-pĭ-rə-tor"e] congenital or acquired, the latter usually after traumatic injury; characterized by gastric inflation and aspiration pneumonia.
esophagoscope [ə-sof'ə-go-skōp] a rigid or flexible endoscope for examination of the esophagus.
esophagoscopy [ə-sof"ə-gos'ko-pe] direct visual examination of the esophagus with an esophagoscope. Esophagoscopy usually is done as a diagnostic procedure for the purpose of locating and inspecting a disorder of the esophagus. After the esophagoscope has been inserted it is possible to obtain samples of tissue for microscopic study. In some instances the esophagoscope can be used to remove a foreign object that has become lodged in the esophagus.
esophagostenosis [ə-sof"ə-go-stə-no'sis] stricture of the esophagus.
esophagostomiasis [ə-sof"ə-go-sto-mi'ə-sis] infestation with *Oesophagostomum* spp.
esophagostomosis [ə-sof"ə-go-sto-mo'sis] infestation with *Oesophagostomum* spp. worms; causes necrotic nodules in the wall of the intestine. The resulting clinical syndrome includes poor condition and the passage of soft droppings containing more than normal amounts of mucus.
esophagostomy [ə-sof"ə-gos'tə-me] the creation of an artificial opening into the esophagus.
cervical e. one performed in cervical section of esophagus, often for purposes of placing an indwelling feeding tube when oral alimentation is impossible because of injury or surgery.
esophagotomy [ə-sof"ə-got'ə-me] incision of the esophagus.
esophagotracheal [ə-sof"ə-go-tra'ke-əl] pertaining to or communicating with the esophagus and trachea, e.g. esophagotracheal fistula.
esophagram [ə-sof'ə-gram] see **esophagogram**.
esophagus [ə-sof'ə-gəs] the musculomembranous passage extending from the pharynx to the stomach, consisting of an outer fibrous coat,

a muscular layer (all striated in dogs and ruminants, plus some smooth muscle in cats, pigs and horses), a submucous layer, and an inner mucous membrane. Each end is equipped with a functional sphincter although these are not distinct anatomically. It is divided into a cervical part that extends from the pharynx to the first rib, a thoracic part that extends from the first rib to the diaphragm and a final short abdominal part between the diaphragm and stomach.

redundant e. a ventral esophageal deviation at the thoracic inlet. Seen on X-rays, mainly in brachycephalic dogs.

rhabditiform e. see **rhabditiform esophagus**.

esosphenoiditis [*es"o-sfe"noi-di'tis*] osteomyelitis of the sphenoid bone.

esotropia [*es"o-tro'pe-ə*] **strabismus** in which there is medial deviation of the visual axis of one eye toward that of the other eye, resulting in diplopia. Called also cross-eye and convergent strabismus. Commonly seen in Siamese cats.

Esox a large predatory freshwater fish in the family *Esocidae*. The two common species are *E. americanus* (pikeral) and *E. lucius* (northern pike, both popular sporting fish. Called also pike.

espichamento [Span.] see **enzootic** calcinosis.

esponja swamp cancer.

espundia [*es-p n'jah*] leishmaniasis, particularly *L. braziliensis*.

ESR erythrocyte sedimentation rate.

ESRI Environmental Systems Research Institute.

essence [*es'əns*] 1. the distinctive or individual principle of anything. 2. a mixture of alcohol with a volatile oil.

essential [*ə-sen'shəl*] 1. constituting the necessary or inherent part of a thing; giving a substance its peculiar and necessary qualities. 2. indispensable; required in the diet, as essential fatty acids. 3. idiopathic; self-existing; having no obvious external exciting cause.

Essig wiring technique a method of stabilizing alveolar fractures using wire looped around a group of teeth with secondary wires looped around individual teeth.

ester [*es'tər*] chemical combination of an alcohol and an acid. In domestic animals the most common linkage is glycerol with fatty acid to form glycerides.

esterase [*es'tər-ās*] any enzyme that catalyzes the hydrolysis of esters into its alcohol and acid.

lipid e. an enzyme found in pancreatic secretions which requires bile acids to be active.

esteratic site that part of a cholinesterase macromolecule that recognizes and binds acetylcholine. This combination results in the hydrolysis of the acetylcholine.

esterification [*es-ter"ĭ-fĭ-ka'shən*] conversion of an acid into an ester by combination with an alcohol and removal of a molecule of water.

esterify [*es-ter'ĭ-fi*] to combine with an alcohol with elimination of a molecule of water, forming an ester.

esterolysis [*es"tər-ol'ə-sis*] the hydrolysis of an ester into its alcohol and acid.

esterophilic site that part of a cholinergic receptor macromolecule which attracts the ester part of acetylcholine. Hydrolysis of the acetylcholine does not occur at this location.

esthematology [*es"them-ə-tol'ə-je*] esthesiology.

esthesi(o)- prefix meaning sensation.

esthesiogenic [*es-the"ze-o-jen'ik*] producing sensation.

esthesiology [*es-the"ze-ol'ə-je*] the scientific study or description of the sense organs and sensations.

esthesiometer [*es-the"ze-om'ə-tər*] an instrument for measuring tactile sensibility; tactometer.

esthesiometry [*es-the"ze-om'ə-tre*] measurement of sensation; used particularly in relation to the cornea.

esthesioneurosis [*es-the"ze-o-nŏŏ-ro'sis*] any disorder of the sensory nerves.

esthesiophysiology [*es-thethe"ze-o-fiz"e-ol'ə-je*] the physiology of sensation and sense organs.

esthesodic [*es"thə-zod'ik*] conducting or pertaining to conduction of sensory impulses.

estimate [*es'tĭ-mət*] a measurement which is believed likely to incorporate a degree of error.

estimated breeding value see estimated **breeding value**.

estimated transmitting ability (ETA) an estimate of an animal's ability to transmit its phenotypic value or performance—its breeding value.

estival [*es'tĭ-vəl, ə-sti'vəl*] pertaining to, or occurring in, summer.

estivation [*es"tĭ-va'shən*] the dormant state in which certain animals pass the summer or periods of high temperature or drought. The opposite of hibernation.

estivoautumnal [*es"tĭ-vo-aw-tum'nəl*] occurring in summer and autumn.

estradiol [*es"trə-di'ol, es-tra'de-ol*] the female steroid hormone produced by the mature ovarian follicle and the adrenal cortex and responsible for sexual receptivity at the time of estrus. Is the dominant estrogenic hormone in the nonpregnant animal. In the pregnant animal the dominant hormone is estrone; called also estradiol-17β; commercial products include estradiol benzoate and the cyprionate.

e. cyclopentyl propionate a pharmaceutical preparation used in dogs; recorded as a cause of hyperestrogenism.

estral pertaining to **estrus**.

e. eversion see **vaginal** prolapse.

estranes [*es'trānz*] parent structure of the estrogenic steroids.

Estrela mountain dog a large, powerful, mastiff type dog with a powerful head, small ears, short, thick neck and long tail. The coat may be short or long, and fawn, brindle or wolf gray in color. Named after the Estrela mountain range in Portugal. Called also Portuguese sheepdog.

estrin [*es'trin*] estrogen.

estrinization [*es"trin-ĭ-za'shən*] production of the cellular changes in the vaginal epithelium characteristic of estrus.

estriol [*es'tre-ol*] a relatively weak **estrogen**, being a metabolic product of estradiol and estrone found in high concentration in the urine of women.

estrogen [*es'trə-jen*] a generic term for estrus-producing compounds; the naturally occurring female sex hormones include **estradiol**, **estriol** and **estrone**. In animals the estrogens are formed in the ovary, adrenal cortex, testis and fetoplacental unit, and are responsible for female secondary sex characteristic development, and act on the female genitalia to produce an environment suitable for fertilization, implantation and nutrition of the early embryo. A very important function is the creation of a state of sexual receptivity in the female.

conjugated e's a mixture of sulfate esters of estrogenic substances, principally estrone and equilin; the uses are those of estrogens.

esterified e's a mixture of esters of estrogenic substances, principally estrone; the uses are those of estrogens.

fungal e. *Fusarium graminearum* (*F. roseum*) produces zearalenone which has estrogenic activity.

placental e. see estrogen (above).

plant e. subterranean and red clover may contain significant amounts of an isoflavone, genistein, with estrogenic activity. See also **estrogenism**.

e. poisoning see **estrogenism**.

estrogen-induced [*es'trə-jen*] stimulated by high blood concentrations of estrogen.

e.-i. transdifferentation a persistent high estrogen intake causes male behavior in ewes and secondary sex characters, e.g. mammary gland and teat hypertrophy, in wethers, and changes in the promotion of development of endometrial-type glands in the cervix.

e.-i. uroliths diets high in estrogens thought to contribute to the development of uroliths by increasing the rate of epithelial desquamation in the urinary tract, thus facilitating the formation of a nidus around which concretion of salts can then develop.

estrogenic [*es-tro-jen'ik*] estrus-producing; having the properties of, or properties similar to, an estrogen.

e. substances are used in treatment of animals for diseases of the reproductive tract. In some countries they are still used as growth promotants in food animals. They also occur naturally in cultivated plants, e.g. subterranean clover, in fungi growing on plants and plant products, e.g. *Fusarium graminearum, F. roseum.* Poisoning with estrogens can occur in any of these circumstances. The clinical signs are, in general terms, feminization of males, and in females nymphomaniac activity and infertility due to endometrial changes, prolapse of the cervix and uterus and maternal dystocia due to uterine inertia. See also ***Trifolium***, **fusariotoxicosis**, growth **promotants**.

estrogenism [*es-tro-jen'iz-əm*] the disease state caused by the continued ingestion of low but toxic concentrations of estrogens. This may be iatrogenic in origin in companion animals but the

VetBooks.ir

VetBooks.ir

most important occurrence is in farm animals pastured on plants containing phytoestrogens. The signs are those related to endometrial hyperplasia and vaginal tumefaction, including long-term infertility and rectal prolapse, especially in pigs, uterine prolapse, especially in ewes, and feminization of male castrates. Dogs are particularly susceptible to the myelotoxic effects of estrogens and high dose or prolonged administration causes severe bone marrow depression with thrombocytopenia, then leukopenia and anemia.

estrone [*es'trōn*] an oxidation product of estradiol, and androstenedione in the animal body; less active than estradiol and produced in greater quantities in the pregnant female.

e. sulfate test 1. a pregnancy diagnosis carried out in several species; has very high accuracy but impractical because of lateness of applicability, e.g. maximum at day 105 of pregnancy in cows. An important test for the viability of the fetus in equines and camelids. 2. a test using serum which detects the presence of a retained testicle in horses with no testicles in the scrotum but which are demonstrating sexual behavior.

estrophilin [*es"tro-fil'in*] a cell protein that acts as a receptor for estrogen, found in estrogenic target tissue and in estrogen-dependent tumors and metastases.

estropipate [*es'tro-pi-pāt*] a preparation of piperazine estrone sulfate used therapeutically for its estrogenic activity.

estrous [*es'trəs*] pertaining to or emanating from **estrus**.

estruation [*es"troo-a'shən*] see **estrus**.

estrum [*es'trəm*] see **estrus**.

estrus [*es'trəs*] the time during the reproductive cycle in animals when the female displays interest in mating and in most species will stand to be mounted by both sexes and mated by males. In most cases the animal is about to or has just ovulated, and is therefore pregnable, but some, including pregnant ones, may not be in true estrus. At the time of estrus there are behavioral signs and changes in the external genitalia. In cows these include the passage of very clear mucus, swelling of the lips of the vulva and hoof brush marks on the side of the rump. Mares show frequent urination with squatting, elevation of the tail, swelling and winking of the vulva and rhythmic extrusion of the clitoris. Ewes are not demonstrative other than positioning themselves close to the rams or teasers. Goat does bleat a lot, rub themselves against fixed objects and hold their tail high, urinate frequently and evert the clitoris. Bitches wander away, stand with their tails held to one side and are attractive and receptive to males. Queens may be very demonstrative, especially Siamese. They rub against anything, crawl with their belly close to the floor, roll and vocalize with a deep, throaty growl.

e. cycle one of the two types of reproductive cycles, the other is the menstrual cycle of humans and primates. Regularly occurring periods during which the female is sexually active and receptive, **estrus**, separated by periods in which there is no sexual receptivity. This period is divided, on the basis of ovarian activity into metestrus (early corpus luteum development), diestrus (mature corpus luteum) and pro-estrus (period of follicle development). The details of estral activity are summarized in Table 17.

e. detection in natural mating the male is, in most situations, the best possible detector. In artificial breeding or in hand mating the need to pick cows which are on heat is of paramount importance. Techniques available include the use of infertile teasers combined with heat mount detectors, tail paint, chin ball or siresine harnesses. In dairy herds it is usual to dispense with the teasers and depend on other cows to pick out and mount the cows that are in heat. In sheep crayon or paint marking harnesses are used. In mares individual teasing with a pony or similar manageable male is used. In the other species detection is by simple visualization. In horses, estrus detection is done by presenting the mare to a stallion, also referred to as a teaser stallion; also referred to as **teasing**. Ultrasound examination of ovaries is also used.

e. expectancy chart a wall chart for use at the dairy which points out those cows which are due to come into estrus during the next day or two and need to be observed closely.

false e. behavioral and external genital signs of estrus without ovulation occurring.

e. induction see estrus synchronization (below).

no visible e. abbreviated NVO (to accommodate the British spelling of oestrus) or NVE. Diagnosis indicating reproductive inefficiency; applied to cows which are not observed as being in estrus for a variable period, usually 50 days, after calving. Includes cows with anestrus due to various causes and failure of staff to observe or record estrus. A percentage of more than 10% of cows in a herd which have no visible estrus is an indication of a herd problem.

silent e. ovulation occurs, as detected by palpation or estrogen concentrations in the blood in the absence of behavioral signs.

split e. occurs in bitches, especially during the first heat. Early signs do not proceed and the bitch is not mated but comes on heat 6 weeks later but is likely to be infertile. Occurs sporadically also in most other species. In mares, split-heat or split-estrus occurs at the beginning of the breeding season.

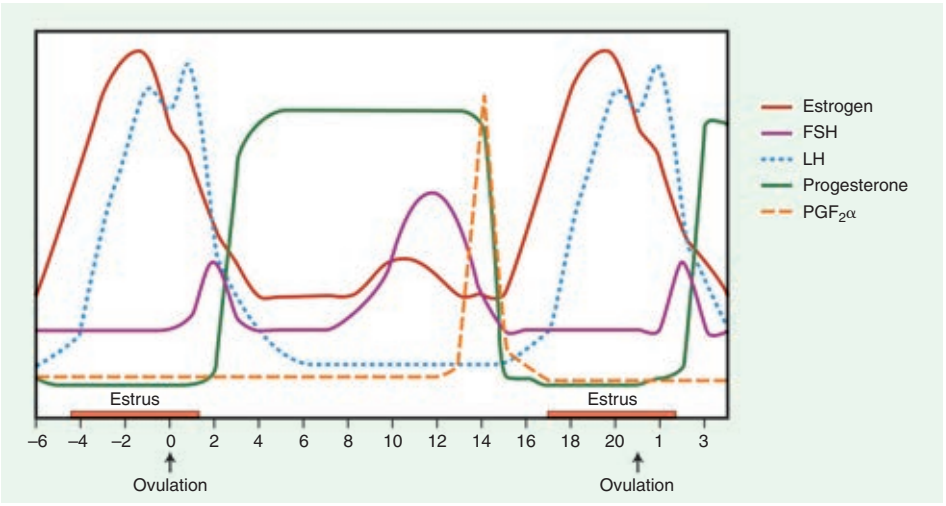
e. suppression prevention of estral activity in companion animals without spaying them is practiced frequently. A variety of progestins are available and, at times, intravaginal and intrauterine devices have been used for this purpose. See also **contraception**.

e. synchronization aimed at having all of the animals in estrus, and later calving or lambing, at the same time. Prostaglandin injection is a common technique used to induce estrus in cows. Estrus synchronization is based on several combinations of hormones, either interrupting the cycle or "creating" an artificial luteal phase. Ovulation synchronization is used now more commonly in dairy cattle for fixed-time or appointment-time artificial insemination.

unexpressed e. see silent estrus (above).

esu electrostatic unit.

ETA estimated transmitting ability.



E-65: Diagram of the estrus cycle and anestrus in the dog.
From Brinsko SP, et al, Manual of Equine Reproduction, 3rd Edition. Mosby, 2011.

eta [*a'tə*] seventh letter of the Greek alphabet, H or η.
etching [*ech'ing*] see **acid etch technique**.
ETEC enterotoxigenic *Escherichia coli*.
ethacrynic acid [*eth"ə-krin'ik*] a loop diuretic; effective in promoting sodium and chloride excretion.
ethambutol [*ə-tham'bu-tol*] a tuberculostatic agent.
ethanol [*eth'ə-nol*] the major ingredient of alcoholic beverages; called also ethyl **alcohol** and grain alcohol.
20% e. administered intravenously it can be used in the treatment of ethylene glycol poisoning in dogs. Pets may be poisoned by consumption of ethanol, usually in the form of alcoholic beverages. Signs include an initial period of excitement and incoordination, followed by stupor, coma, respiratory failure and seizures.
e. gel test used to detect the presence of fibrinogen-split products in a blood sample; based on the separation of the split products from fibrinogen by the use of ethanol.
ethanolamine [*eth"ə-nol'ə-mēn*] a colorless, moderately viscous liquid with an ammoniacal odor contained in cephalins and phospholipids, and derived metabolically by decarboxylation of serine.
e. phosphotransferase an enzyme of the endoplasmic reticulum, particularly in the liver, that catalyzes the biosynthesis of phosphatidylethanolamine.
ethaverine an analog of papaverine used as an antispasmodic and smooth muscle relaxant.
ethene see **ethylene**.
ether [*e'thər*] 1. diethyl ether: a colorless, transparent, very volatile, highly inflammable liquid with a characteristic odor; given by inhalation to produce general **anesthesia**. 2. any organic compound containing an oxygen atom bonded to two carbon atoms.
spiritus e. nit. used as a stimulant for depressed animals, both as an inhalant and in oral drenches.
vinyl e. a clear colorless liquid historically used as an inhalation anesthetic.
ethereal [*ə-thē're-əl*] 1. pertaining to, prepared with, containing or resembling ether. 2. evanescent; delicate.
e. sulfates an important detoxication process in the liver is the formation of these sulfates that are more readily excreted than the parent compounds.
etherization [*e"thər-ĭ-za'shən*] induction of anesthesia by means of ether.
ethics [*eth'iks*] rules or principles which govern right conduct. Each practitioner, upon entering a profession, is invested with the responsibility to adhere to the standards of ethical practice and conduct set by the profession.
code of e. the written rules of ethics.
veterinary e. the values and guidelines governing decisions in veterinary practice.
ethidium bromide [*ə-thid'e-əm*] a dye much used for the staining of DNA fragments after electrophoretic separation in agarose gels. The molecule intercalates across the double helix and is detected by UV illumination. See also **homidium**.
ethinamate [*ə-thin'ə-māt*] a short-acting, nonbarbiturate sedative.
ethinyl estradiol [*eth'ĭ-nəl*] see **estradiol**.
ethiofencarb a carbamate pesticide.
ethmo- prefix meaning ethmoid or sieve.
ethmocarditis [*eth"mo-kahr-di'tis*] inflammation of the connective tissue of the heart.
ethmoid [*eth'moid*] 1. sievelike; cribriform. 2. the ethmoid bone.
e. bone the sievelike bone that contributes to the roof of the nasal fossae and part of the rostral cranial fossa. See also Table 10.
e. sinus see **concha**.
ethmoidal [*eth-moi'dəl*] pertaining to the ethmoid bone.
enzootic e. tumor see **enzootic** ethmoidal tumor.
e. foramen one or two foramina in the medial wall of the orbit that transmit(s) the ethmoidal nerve as it re-enters the cranial cavity.
progressive e. hematoma hematoma in horses that arises from the ethmoid region and grows slowly in paranasal sinuses and the nasal passage. Characterized by epistaxis and nasal obstruction. Most often unilateral. Diagnosis is on clinical signs, upper respiratory endoscopy and radiographic findings. Called also hemorrhagic nasal polyp, progressive nasal hematoma.
ethmoidectomy [*eth"moid-ek'tə-me*] excision of the ethmoid cells or of a portion of the ethmoid bone.
ethmoiditis [*eth"moi-di'tis*] inflammation of the ethmoid bone or ethmoid sinuses.
ethmoidotomy [*eth"moi-dot'ə-me*] incision into the ethmoid sinus.
ethmoturbinal [*eth"mo-tur'bĭ-nəl*] relating to or consisting of the ethmoturbinates.
ethmoturbinate [*eth"mo-tur'bĭ-nāt*] the scroll-like, papyraceous parts of the ethmoid bone occupying the caudal part of the nasal fossae.
e. tumors see enzootic **nasal** adenocarcinoma, **enzootic** ethmoidal tumor.
ethnoveterinary medicine the folk beliefs, knowledge, skills, methods and practices relating to the health care of animals. Includes medicinal and spiritual aspects, but more commonly taken to mean the use of medicinal plants.
ethogram a list or catalog of types of defined behaviors or behavior patterns observed in a particular species.
ethologist [*e-thol'ə-jist*] a person skilled in ethology.
ethology [*e-thol'ə-je*] the scientific study of animal behavior, particularly in the natural state.
ethopabate [*eth"o-pab'āt*] a supplementary drug that improves the coccidiostatic effect of amprolium.
ethosuximide [*eth"o-suk'sĭ-mīd*] a succinide derivative used as an anticonvulsant. See **succinimides**.
ethoxyquin an antioxidant added to animal feeds to prevent loss of fat, vitamins A and E, and to prevent avian encephalomalacia.
ethoxzolamide [*eth"oks-zol'ə-mīd*] a carbonic anhydrase inhibitor diuretic, used mainly to reduce intraocular pressure in glaucoma. No longer used.
ethyl [*eth'əl*] the monovalent radical, C_2H_5.
e. alcohol see ethyl **alcohol**; called also ethanol and grain alcohol.
e. aminobenzoate see **benzocaine**.
e. carbamate see **urethane**.
e. chloride a local anesthetic applied topically to intact skin. It has a very low boiling point and the skin is temporarily frozen and insensitive to pain.
e. lactate an antibacterial agent used in shampoos.
ethylene [*eth'ə-lēn*] a colorless, highly flammable gas with a slightly sweet taste and odor, used as an inhalation anesthetic to induce general **anesthesia**.
e. dibromide (EDB) grain fumigant. Treated seed seriously reduces egg production when fed to hens in very small amounts.
e. dichloride industrial fumigant; causes respiratory and ophthalmic irritation, narcosis, disturbance of equilibrium.
e. glycol antifreeze; palatable enough for animals to drink in quantity. Causes ataxia, depression, coma, polydipsia, vomiting and convulsions. Death is commonly attributed to severe acidosis and acute renal failure.
e. oxide a fumigant used for foodstuffs, surgical equipment and as an agricultural fungicide. It is a gaseous, flammable alkylating agent with a broad spectrum of activity, being sporicidal and viricidal. It is used (mixed with CO_2 or fluorocarbons because it is explosive above 3%) for disinfecting and sterilizing equipment and instruments that are used in the hospital, surgery, dentistry, and pharmaceutical and other industries, and that are thermolabile or will be adversely affected by immersion in water or other media. Its optimal germicidal effect occurs after a 3-hour exposure at 86°F (30°C). Its vapor is irritating to eyes and respiratory mucosa and can cause serious pulmonary edema. Called also oxirane.
ethylenediamine [*eth"ə-lēn-di'ə-mēn*] an organic compound that is a precursor to other pharmaceuticals and chelating agents. See also **aminophylline**.
e. dihydrochloride a urinary acidifier.
e. dihydroiodide used in livestock as an expectorant, anti-inflammatory agent and iodine supplement. Can cause poisoning if taken in excess. Signs include nasal and ocular discharge, dyspnea and cough.
ethylenediaminetetraacetic acid (EDTA) [*eth"ə-lēn-di'ə-mēn-tet"rə-ə-se'tik*] see **edetate**.

ethylenimine [eth"əl-ēn'ĭ-mēn] an industrial chemical known to be a carcinogen.
ethylmercuri-toluene sulfonanilide a fungicidal agent used in agriculture. Capable of causing organic mercury poisoning.
ethylmercury [eth"əl-mur'kūr-e] an organic radical used extensively in agriculture as a basis for fungicides.
e. chloride this antifungal seed dressing is capable of causing organic **mercury** poisoning.
e. iodide used in agriculture as a fungicidal seed dressing. Can cause mercury poisoning.
e. phosphate used as a fungistatic seed dressing; seed consumed by animals or humans causes organic mercury poisoning.
ethylnoradrenaline [eth"əl-nor-ə-dren'ə-lin] ethylnorepinephrine.
ethylnorepinephrine [eth"əl-nor-ep"ĭ-nef'rin] a synthetic adrenergic brochodilator. Called also ethylnoradrenaline. See also **norepinephrine**.
ethynyl [eth'ə-nəl] the group −C=CH, when it occurs in organic compounds.
etidocaine [ə-te'do-kān] a local anesthetic of the amide type used for percutaneous infiltration anesthesia, peripheral nerve block, and caudal and epidural block.
etidronate [e-tĭ-dro'nāt] a bisphosphonate; inhibits osteoclastic bone resorption and used orally in dogs for long-term management of hypercalcemia.
etimizol a xanthine derivative; a stimulant to respiration at the brainstem level and to adrenocorticotropic function of the hypophysis.
etiological [e"te-o-loj'ĭ-kəl] pertaining to **etiology**.
e. diagnosis the name of a disease which includes the identification of the agent, e.g. *Streptococcus agalactiae* mastitis.
e. factors risk factors contributing to the occurrence of a disease.
etiology [e"te-ol'ə-je] literally the science dealing with causes of disease; common usage is the causes of diseases.
etioporphyrin [e"te-o-por'fə-rin] a synthetic porphyrin used as a basis for the classification of porphyrins.
etodolac [e-to-do'lak] a nonsteroidal anti-inflammatory COX-2 inhibitor used for its analgesic effect in dogs, primarily that associated with osteoarthritis.
etomidate [ə-tom'ĭ-dāt] an intravenous, nonbarbiturate, fast-inducing anesthetic with no analgesic effect. Also causes suppression of adrenal steroidogenesis and may be used in the treatment of hyperadrenocorticism.
etoposide [e"to-po'sid] a semisynthetic derivative of podophyllotoxin with antineoplastic activity; used in the treatment of lymphoma.
etorphine a very potent, semisynthetic analgesic usually used in heavy dosage to avoid side-effects and then reversed with diprenorphine. Used mostly as an immobilizer for free-ranging wild animals, usually in combination with hyoscine and acepromazine. Also known as M-99.
etretinate [e-tret'ĭ-nāt] a synthetic retinoid, used orally in the treatment of skin diseases, particularly keratinization disorders. Like other synthetic retinoids, it is teratogenic and has a very long half-life; largely replaced by **acitretin**.
Eu chemical symbol, *europium*.
eu- word element. [Gr.] *normal, good, well, easy*.
Eubacteria [u"bak-te're-ə] alternative name for the domain of prokaryotes classified as Bacteria. Used as a generic term to describe all the prokaryotic organisms not in the domain Archaea.
Eubacterium [u"bak-te're-əm] a genus of gram-negative, rod-shaped bacteria found in the intestinal tract as parasites, and as saprophytes in soil and water. Belong to the family *Lactobacillaceae*. Found sporadically in purulent lesions but are probably secondary invaders.
E. suis see *Actinobaculum suis*.
Eubothrium a genus of tapeworms of the family Amphicotylidae. Found in wild and captive salmonids.
eucalyptol [u"ka-lip'tol] a colorless liquid obtained from eucalyptus oil and other sources; used as an expectorant, flavoring agent and local anesthetic. Called also cineole.
Eucalyptus [u"kə-lip'təs] genus of Australian trees in the family Myrtaceae, widely planted throughout the world. Two species *E. cladocalyx* (sugar gum) and *E. viminalis* (manna gum) may contain toxic amounts of cyanogenic glycosides. Called also gum trees.
E. melanophloia host tree for larvae of Australian sawfly (*Lophyrotoma interrupta*) which may poison sheep and cattle. Called also silver-leaf ironbark.
eucalyptus oil [u"kə-lip'təs] a volatile oil from fresh leaf of species of *Eucalyptus*, the chief constituent of which is eucalyptol.
eucaryosis [u-kar"e-o'sis] eukaryosis.
Eucaryotae [u-kar"e-o'te] a kingdom of organisms that includes plants and animals, fungi, protozoa and algae (not blue-green algae, which are cyanobacteria), characterized by possession of a membrane bound nucleus.
eucaryotic [u"kər-e-ot'ik] eukaryotic.
Eucestoda [u-səs-to'də] one of the two classes of cestodes. Includes the true tapeworms identified by having a holdfast organ or scolex, usually a segmented body, and a life cycle which includes an intermediate host.
euchlorhydria [u"klor-hi'dre-ə] the presence of the normal samount of hydrochloric acid in the gastric juice.
eucholia [u-ko'le-ə] normal condition of the bile.
euchromatin [u-kro'mə-tin] that state of chromatin in which it stains lightly, is genetically active, and is considered to be partially or fully uncoiled.
Eucoleus aerophilus ***Capillaria*** *aerophila*.
Eucotylidae a family of flukes (digenetic trematodes) found in the kidney of birds. Includes genera of *Tanaisia* and *Eucotyle* spp. Neither appears to have significant pathogenicity.
eucrasia [u-kra'zhə] 1. a state of health; proper balance of different factors constituting a healthy state. 2. a state in which the body reacts normally to ingested or injected drugs, proteins, etc.
eudiemorrhysis the normal flow of blood through the capillaries.
eudipsia [u-dip'se-ə] ordinary, normal thirst.
euesthesia a normal state of the senses.
euflavine acriflavine.
eugenol [u'jən-ol] the chief constituent of clove oil; also obtained from other sources. Used as a dental topical analgesic and antiseptic. Derivatives have been used as intravenous anesthetics but the extremely short action and side-effects limit use.
euglobulin [u-glob'u-lin] one of a class of globulins characterized by being insoluble in water but soluble in saline solutions.
e. lysis test used to differentiate between types of pathological fibrinolysis.
euglycemia [u"gli-se'me-ə] a normal concentration of glucose in the blood.
eugonic [u-gon'ik] growing luxuriantly; said of bacterial cultures.
Eugonic Fermenter-4 [u-gon'ik] a group of formerly unclassified gram-negative, rod-shaped bacteria isolated from cases of multifocal interstitial pneumonia in miscellaneous Carnivora. Now classified as *Neisseria animaloris* and *N. zoodegmatis*.
Euhopllopsyllus glacialis lynx a flea that parasitizes wild felines.
eukaryon 1. a highly organized nucleus bounded by a nuclear membrane, a characteristic of cells of higher organisms. 2. eukaryote.
eukaryosis [u-kar"e-o'sis] the state of having a true nucleus.
Eukaryotae [u-kar"e-o'te] Eucaryotae.
eukaryote [u-kar'e-ōt] an organism of the Eucaryotae, whose cells have a nucleus bounded by a membrane containing the **chromosomes** and which divide by mitosis. Eukaryotic cells also contain membrane-bound organelles, such as mitochondria, chloroplasts, lysosomes and the Golgi apparatus. Plants and animals, protozoa, fungi and algae (except blue-green algae, which are cyanobacteria) are eukaryotes. Other organisms (the bacteria) are prokaryotes.
eukaryotic [u"kər-e-ot'ik] pertaining to **eukaryosis**.
e. cells see **cell**.
e. transcription see **deoxyribonucleic acid**.
eukinesia [u"kĭ-ne'zhə] normal or proper motor function or activity.
Eulaelaps a genus of laelapid mites in the family Gamasidae.
E. stabularis a parasite of small mammals found in poultry houses, feed stores and such places where they cause irritation to workers. A vector for *Francisella tularensis*.
eulaminate [u-lam'ĭ-nāt] having the normal number of laminae, as certain areas of the cerebral cortex.
eumelanin [u-mel'ə-nin] black to brown pigment produced by melanin. See also **pheomelanin**.
eumelanosome pigment granules containing eumelanin, produced within cells by melanosomes.

VetBooks.ir

eumetria [u-me'tre-ə] a normal condition of nerve impulse, so that a voluntary movement just reaches the intended goal; the proper range of movement.

eumycetoma [u"mi-se-to'mə] see **mycetoma**.

eunuchoid [u'nə-koid] an animal which resembles a human eunuch. Said of an entire male which appears to lack characteristics indicating male virility. Males with the chromosome anomaly XXY, the classical aneuploidy, are usually eunuchoid and scrotal formation may be defective.

e. syndrome a state of decreased aggression, disinterest, and loss of stamina in working dogs after ovariectomy.

eunuchoidism [u'nə-koi"diz-əm] deficiency of the testes or of their secretion, with impaired sexual power and eunuchoid signs.

hypergonadotropic e. that associated with secretion of high concentrations of gonadotropins, as in **Klinefelter's syndrome**.

hypogonadotropic e. that due to lack of gonadotropin secretion.

Euonymus europaeus plant in the family Celastraceae; contains a toxic cardiac glycoside, evonoside, with a digitalis-like action. Called also spindle tree, skewer wood.

eupancreatism [u-pan'kre-ə-tiz"əm] normal functioning of the pancreas.

Euparyphium see ***Echinostoma***.

Eupatorium [u"pə-tor'e-əm] a plant genus of the Asteraceae family; contains mostly unidentified toxins. Includes *E. wrightii*.

E. adenophorum see ***Ageratina adenophora***.

E. rugosum, E. ageratoides, E. urticaefolium poisoning causes tremor, dyspnea, paralysis and recumbency and can be fatal. The toxic alcohol that it contains is passed through the milk of cows and can poison persons who drink it. Called also white snakeroot.

eupepsia [u-pep'se-ə] good digestion; the presence of a normal amount of pepsin in the gastric juice.

Euphorbia [u-for'be-ə] a genus of the plant family Euphorbiaceae; contains diterpenes which cause enteritis and diarrhea. Some species are suspected of containing cyanogenic glycosides. Toxic species include *E. boophthona* (Gascoyne spurge), *E. characia, E. drummondii* (mat spurge, caustic creeper), *E. helioscopia* (sun spurge), *E. hydnorae, E. ingens* (candelabra tree), *E. lathyrus* (caper spurge), *E. marginata* (snow-on-the-mountain), *E. mauritanica, E. melanostica* (yellow milk bush), *E. milii* (crown-of-thorns), *E. peplus* (petty spurge), *E. phymatoclada, E. prostrata, E. pulcherrima* (poinsettia), *E. tirucalli*.

euplastic [u-plas'tik] readily becoming organized; adapted to tissue formation.

euploid [u'ploid] 1. having a balanced set or sets of chromosomes, in any number. 2. a euploid individual or cell.

euploidy [u-ploi'de] the state of being euploid.

eupnea [ūp-ne'ə] normal, quiet breathing.

eupraxia [u-prak'se-ə] intactness of reproduction of coordinated movements.

Eurasier a medium-sized spitz-type German dog with prick ears and a thick coat in all colors with a bushy tail that curls over the back. Developed from crossing a Chow Chow and a Wolfspitz.

eurhythmia [u-rith'me-ə] regularity of the pulse.

Eurogroup for animals a coalition of European animal protection organizations.

European Cooperation in Scientific and Technology (COST) an intergovernmental organization of 46 countries around the world that coordinates basic and pre-competitive, nationally funded research in Europe.

European emanating from or pertaining to Europe.

E. bat lyssavirus see ***Lyssavirus***.

E. blastomycosis see **cryptococcosis**.

E. brown hare syndrome a highly fatal necrotizing hepatitis caused by *Lagovirus*, occurs naturally and only in *Lepus europeus* (European hare) and *Lepus timidus* (northern hare). Proposed as a possible progenitor virus for **rabbit hemorrhagic disease** virus.

E. Burmese a breed of shorthaired cat separate from the more common 'American' **Burmese**; it comes in a wider range of coat colors, particularly red. Called also British Burmese.

E. cattle breeds include **Belgian** blue, **Brown Swiss**, **Central and Upper Belgian**, **Blonde D'Aquitaine**, **Charolais**, **Chiana**, **Friesian**, **Holstein-Friesian**, **Limousin**, **Maine-Anjou**, **Marche**, **Piedmont**, **Pinzgau**, **Romagna**, **Simmental**, **Steppe**.

E. feedlot see European **feedlot**.

E. swine fever see **classical swine fever**.

European Pharmacopoeia (Ph. Eur.) a reference for quality control of medicinal substances in Europe, produced by the European Pharmacopoeia Commission, of the Council of Europe.

European veterinary specialty colleges organizations approved by the European Board of Veterinary Specialisation to recognize veterinary training programs, conduct examinations and award diplomas of competence in veterinary professional specialities to graduate veterinarians. Similar to **American veterinary colleges**[2]. Recognized organizations include: European College of Animal Reproduction, European College of Animal Welfare and Behavioural Medicine, European College of Bovine Health Management, European College of Equine Internal Medicine, European College of Laboratory Animal Medicine, European College of Porcine Health Management, European College of Poultry Veterinary Science, European College of Small Ruminant Health Management, European College of Anaesthesia and Analgesia, European College of Veterinary Comparative Nutrition, European College of Veterinary Clinical Pathology, European College of Veterinary Dermatology, European College of Diagnostic Imaging, European College of Veterinary Internal Medicine, European College of Veterinary Neurology, European College of Veterinary Ophthalmology, European College of Veterinary Pathologists, European College of Veterinary Public Health, European College of Veterinary Pharmacology and Toxicology, European College of Veterinary Surgery, European College of Zoological Medicine, European Veterinary Dentistry College and European Veterinary Parasitology College.

europium (Eu) [u-ro'pe-əm] a chemical element, atomic number 63, atomic weight 151.96. See Table 4.

eury- word element. [Gr.] *wide, broad*.

euryblepharon [u"re-blef'ə-ron] horizontally elongated palpebrral fissue due to excessive eyelid length (also known as macropalpebral fissure).

congenital e. seen in brachycephalic dogs; in association with shallow orbits, the eyes are prominent and subject to exposure keratitis.

transient juvenile e. occurs in young German shepherd dogs and usually resolves in several months. It gives the appearance of exophthalmos. No other abnormalities are present.

eurycephalic [u"re-sə-fal'ik] having a wide head.

euryhaline species of fish capable of osmoregulation in waters over a range of salinities; the opposite of **stenohaline**.

Euryhelmis a genus of intestinal flukes (digenetic trematodes) in the family Heterophyidae.

E. monorchis found in mink.

E. squamula found in wild Carnivora. Causes fatal hemorrhagic enteritis in mink.

Eurytrema [u-re-tre'mə] a genus of flukes (digenetic trematodes) in the family Dicrocoeliidae.

E. brumpti ***Concinnum*** *brumpti*.

E. coelomaticum, E. pancreaticum found in pancreatic ducts of sheep and cattle.

E. fastosum found in the pancreatic and biliary ducts of carnivores.

E. ovis found in the perirectal fat of sheep.

E. procyonis ***Concinnum*** *procyonis*.

Euschongastia a genus of mites in the family Trombiculidae.

E. latchmani causes trombiculidiasis in cats.

eustachian tube [u-sta'ke-ən] see **auditory** tube.

eustachitis [u"stə-ki'tis] inflammation of the pharyngotympanic tube; not likely to be made as a clinical diagnosis in animals but is a common accompaniment of the more severe syndrome of otitis media.

Eustachys distichophylla ***Chloris*** *distichophylla*.

eustress a stress which is beneficial to the animal.

Eustrongylides a genus of nematodes in the family Dioctophymatidae. Found in birds and wild and cultured fish.

E. papillosus found in the esophagus and proventriculus of ducks and geese. Can cause extensive nodule formation.

E. tubifex found in the intestine of anatine birds.

euthanasia [u"thə-na'zhə] 1. an easy or painless death. 2. the deliberate ending of life of an animal suffering from an incurable disease; called also mercy killing, to put down, to put to sleep. In all cases,

it must be carried out in a humane manner that is reliable, free of pain or distress for the animal with a minimum period of consciousness, and safe for the operator. For the individual animal intravenous injection of a massive dose of barbiturate is best. Any narcotizing drug creates difficulties if the carcass is to be disposed of for pet meat. In those cases shooting with a bullet or captive bolt pistol is recommended because of the speed of the despatch. For large numbers of animals at a pound or shelter, injection procedures are still superior to the bulk methods which all have the fallibility of poorly managed and supervised machinery. Carbon monoxide is very fast but dangerous to the operators of the cabinet and not sufficiently reliable. Electrocution cannot be performed en masse and gassing with carbon monoxide or lowering of the atmospheric pressure are not really quick enough. Various methods are approved for small laboratory animals, but they vary for the species and age, as well as the requirements of the experiment. Generally, chemical methods using inhalant or injectable agents are used. Physical methods, including cervical dislocation or decapitation, are sometimes considered appropriate, but only in certain situations.

electrical e. uses mains electrical current passed through the subject's body via clips applied to the skin of the ear and the tail. Not much employed because of danger to human operators, likelihood of equipment failure and need for close contact with device.

euthanasiate see **euthanatize**.

euthanatize [*u'thə-nə-tiz*] to perform **euthanasia**. Called also euthanize.

euthanize [*u'thə-niz*] see **euthanatize**.

euthermic [*u-thur'mik*] characterized by the proper temperatures; promoting warmth.

euthyroid [*u-thi'roid*] having a normally functioning thyroid gland.

e. sick syndrome a euthyroid state in which extrathyroidal factors cause a reduction of serum T_3 or T_4 and elevation of reverse T_3 concentrations. Seen in patients with systemic illness, trauma, fever, starvation, treatment with glucocorticoids, etc. May be a protective metabolic effect.

euthyroidism [*u-thi'roid-iz-əm*] state of normal thyroid function.

eutocia [*u-to'shə*] normal parturition.

Eutrombicula [*u"trom-bik'u-lə*] a genus of mites in the mite family Trombiculidae. See also **chigger**.

E. alfreddugesi the common chigger of the USA; called also *Trombicula alfreddugesi*. Causes dermatitis in most species.

E. sarcina causes leg itch and black soil itch of sheep, manifested by dermatitis on the lower limbs, up to about the fetlock.

eutrophia [*u-tro'fe-ə*] a state of normal (good) nutrition.

eutrophication the accidental or deliberate promotion of excessive growth (multiplication) of one kind of organism to the disadvantage of other organisms in the same ecosystem.

eV electron volt.

EVA equine viral arteritis.

evacuant [*e-vak'u-ənt*] 1. promoting evacuation. 2. an agent that promotes evacuation.

evacuation [*e-vak"u-a'shən*] 1. an emptying or removal, especially the removal of any material from the body by discharge through a natural or artificial passage. 2. material discharged from the body, especially the discharge from the bowels.

evagination [*e-vaj"ĭ-na'shən*] an outpouching of a layer or part.

evaluation [*e-val-u-a'shən*] a critical appraisal or assessment; a judgment of the value, worth, character or effectiveness of that which is being assessed.

Evans blue [*ev'ənz*] an odorless green, bluish green, or brown powder dye, used as a diagnostic aid in estimation of blood volume. The dye is injected into the bloodstream and after a sufficient period of time samples of the blood are taken to determine the degree of dilution of the dye. Called also azovan blue.

Evans' syndrome [*ev'ənz*] immune-mediated hemolytic anemia concurrent with immune-mediated thrombocytopenia.

evaporated reduced in volume by evaporation; concentrated to a denser form.

evaporative pertaining to evaporation.

e. loss loss of body water by evaporation of water from the body to the air; a heat control mechanism and a factor in water balance studies.

Eve tonsil snare a wire loop protruding from a long, hollow tube and a three-finger operated system for closing the snare, the loop. The mechanism may have a ratchet to ensure that the closure of the loop is maintained until the tonsil is removed.

evening primrose oil one of the few plant oils containing γ-linolenic acid. Obtained from seeds of *Oenothera biennis*, it is used for its anti-inflammatory effects in the treatment of skin diseases.

evening trumpetflower see ***Gelsemium sempervirens***.

event 1. an equine contest other than a race, e.g. a 3-day event. 2. in statistics the outcome of a random experiment.

e. diary pocket diary designed for farmer use to record all events necessary to complete farm records kept for health and production surveillance purposes.

e. horse a horse suitable for use in 3-day events and similar contests.

eventration [*e"ven-tra'shən*] 1. protrusion of the bowels through the abdomen. 2. removal of the abdominal viscera.

diaphragmatic e. elevation of the dome of the diaphragm into the thoracic cavity, usually due to phrenic nerve paralysis.

evergreen chloris ***Chloris*** *distichophylla*.

evernazione a method of killing an animal for slaughter. A short two-edged knife is plunged into the neck at the atlanto-occipital joint, severing the medulla oblongata. Called also neck stab.

eversion [*e-vur'zhən*] a turning inside out; a turning outward, e.g. of the uterus, the third eyelid. See under each anatomical location.

evert [*e-vərt'*] to turn inside out; to turn outward.

evidence-based medicine [*ev'ĭ-dəns-bāst*] clinical decision-making and patient care based on critical evaluation of scientific evidence available in medical literature, as opposed to personal opinion or traditional practices not supported by medical research.

evisceration [*e-vis"ər-a'shən*] extrusion of the viscera, or internal organs; disembowelment.

ocular e. removal of the contents of the globe, leaving the fibrous outer corneoscleral shell. Done prior to placement of a silicone prosthesis.

evoked potential see **evoked response**.

evoked response a technique for the detection of low amplitude electrical activity in response to stimuli for the purpose of evaluating sensory mechanisms. Called also evoked potential.

brainstem auditory e. r. (BAER) electrodiagnostic test performed to assess hearing and brainstem function. Tones or clicks are generated at defined volumes from headphones placed within the ears, and the resultant electrical waveforms produced by the cochlear nerve, cochlear nuclei and structures within the brainstem are detected by electrodes placed on or under the skin. Called also auditory evoked potential, auditory brainstem response (ABR).

visual e. r's electrical potentials recorded over the occipital lobe region in response to light directed onto the retina.

evolution [*ev"ə-loo'shən*] the process of development in which an organ or organism becomes more and more complex by the differentiation of its parts; a continuous and progressive change according to certain laws and by means of resident forces.

convergent e. the development, in animals that are only distantly related, of similar structures or functions in adaptation to similar environment.

divergent e. the development of different characteristics in animals that were closely related in response to being placed in different environments.

evonoside a cardiac glycoside found in the plant *Euronymus europaeus*.

evulsion [*e-vul'shən*] extraction by force; see **avulsion**.

ewe a female sheep of breeding age. May be qualified as maiden ewes, not yet bred, or ewe lambs, up to one year.

dry e. 1. a ewe without milk whatever the reason. 2. female sheep of breeding age without a lamb at foot.

ewe-necked a defect in conformation in a horse. The topline of the neck is concave when viewed from the side.

ex- word element. [L.] *away from, without, outside;* sometimes used to denote *completely*.

ex vivo outside the living body; denoting removal of an organ (e.g. the kidney) for reparative surgery, after which it is returned to the original site.

exa- (E) [Gr.] *six;* a prefix used in the metric system of naming units of measurement to designate an amount 10^{18} (a million-million-

million or quintillion) times the unit specified by the root to which it is joined, as exameter.

exacerbation [eg-zas"ər-ba'shən] increase in severity of a disease or any of its clinical signs.

examination [eg-zam"ĭ-na'shən] inspection or investigation, especially as a means of diagnosing disease, qualified according to the methods used, as physical, cystoscopic, etc.

breeding soundness e. of a male usually, although it could be a practical request in a female, a standardized examination requiring ideally a physical clinical examination, a special physical examination of the reproductive system, a field and a laboratory examination of semen and for evidence of freedom from venereal disease, and a test of serving efficiency.

digital e. done with a finger of a gloved hand, usually in rectal or vaginal examinations of dogs.

hands-off e. done without handling the animal and may be from a distance; includes observation of the animal's behavior, gait or stance, responses to sound and visual stimuli and general body condition. May be a preliminary to a hands-on examination or, in the case of wild or intractable animals, all that can be achieved.

necropsy e. see **necropsy**. Called also postmortem, autopsy.

physical e. examination of the bodily state of a patient by ordinary physical means, as inspection, palpation, percussion and auscultation.

postnatal e. in cows to ensure that the uterus is clean and the ovaries cycling so that the next pregnancy can commence without delay. Called also 'fresh cow exam'. In bitches and queens, commonly done to ensure that all puppies or kittens have been delivered.

presale e. may be at any level. In horses usually a clinical physical examination, a special examination of the limbs and the gaits of the animal. Companion animals are usually examined for general health and special attention for any defect that could be heritable.

exanthem [eg-zan'thəm] in humans, a rash; typically, of viral origin in children. A term not used in veterinary medicine. See **exanthema**.

exanthema [eg"zan-the'mə] pl. *exanthemata* [Gr.]. See **vesicular** exanthema of swine, **coital exanthema**.

exanthematous [eg"zan-them'ə-təs] characterized by or of the nature of an eruption or rash.

exarticulation [eks"ahr-tik"u-la'shən] amputation at a joint; partial removal of a joint.

excavatio [eks"kə-va'she-o] see **excavation**.

excavation [eks"kə-va'shən] 1. the act of hollowing out. 2. a hollowed-out space, or pouch-like cavity.

atrophic e. cupping of the optic disk, due to atrophy of the optic nerve fibers.

optic disk e. a normally occurring depression in the center of the optic disk.

rectovesical e. the space between the rectum and bladder in the peritoneal cavity of the male.

vesicouterine e. the space between the bladder and uterus in the peritoneal cavity of the female. Called also pouch of Douglas.

excavator [eks'kə-va"tər] a scoop or gouge for surgical use.

excerebration [eks-ser"ə-bra'shən] removal of the brain.

exchange diffusion a carrier transport mechanism across a membrane. The transport is faster than can be explained by simple diffusion but does not result in net transport.

excipient [ek-sip'e-ənt] any more or less inert substance added to a drug to give suitable consistency or form to the drug; a vehicle.

excise [ek-sīz'] to remove by cutting.

excision [ek-sizh'ən] removal, as of an organ, by cutting which may be by steel scalpel, **cryosurgery** or **electrosurgery**.

e. DNA repair comprises four distinct sequential steps—incision, in which the damaged base is recognized, excision, resynthesis and ligation.

e. en bloc see en bloc **resection**.

radical e. extensive removal, usually of a tumor mass, which includes surrounding tissues which might be involved and sometimes regional lymph nodes as well.

shave e. biopsy of superficial lesions of the gingival mucosa can be performed with a scalpel blade, slicing off a thin layer from the surface, without the need for sutures to close the defect.

excitability [ek-sīt"ə-bil'ĭ-te] readiness to respond to a stimulus; irritability.

excitant [ek-sīt'ənt] stimulant.

excitation [ek"si-ta'shən] an act of irritation or stimulation; a condition of being excited or of responding to a stimulus; the addition of energy, as the excitation of a molecule by absorption of photons.

e.–conduction–contraction in the stimulation of muscle contraction this is the coupling which occurs at the sarcolemma–sarcoplasmic reticulum junction. Mediated by the release of calcium ions in the aqueous sarcoplasm.

e.–contraction coupling conversion of an excitation stimulus into contraction of the effector muscle fiber; ionic calcium is the link between the two.

indirect e. electrostimulation of a muscle by placing the electrode on its nerve.

e.–secretion in the stimulation of muscular contraction this is the stimulation of secretion of acetylcholine from the vesicles in the cholinergic nerve terminals into the synaptic cleft at the nerve–muscle junction.

e. signs see **irritation** nervous signs.

excitement [ek-sīt'ment] a mental state of greater excitation than normal, but less than frenzy. To be distinguished from, but similar to, the increased motor activity state of restlessness.

excitomotor [ek-si"to-mo'tər] tending to produce motion or motor function; an agent that so acts.

excitosecretory [ek-si"to-se-kre'to-re] producing increased secretion.

excitotoxicity [ek-si"to-tok-sis'ĭte] exaggerated and continuous stimulation by a neurotransmitter, especially in those neuronal systems which use glutamate as the transmitter.

excitovascular [ek-si"to-vas'ku-lər] causing vascular changes.

exclave [eks'klāv] a detached part of an organ.

exclusion [eks-kloo'zhən] a shutting out or elimination; surgical isolation of a part, as of a segment of intestine, without removal from the body.

competitive e. (CE) a term used to describe the protective effect of the natural or native bacterial flora of the intestine in limiting the colonization of some bacterial pathogens. Competitive exclusion products are also called probiotics, direct-fed microbials or CE cultures.

e. principle once held belief that it is possible to prove from a parentage test that a particular animal is not the true parent but it is impossible to prove that a particular animal is a parent. No longer true with DNA genetic matching.

Excoecaria Asian and Australian trees in the family Euphorbiaceae; their milky sap is very irritating and causes intense pain in the eye or on other tender parts. Cause poisoning of livestock. No specific toxin has been identified. Includes *E. agallochia* (river poison tree, milky mangrove), *E. dallychyana* (gutta-percha).

excoriation [eks-ko"re-a'shən] superficial traumatic abrasions and scratches which remove some of the skin substance. Commonly caused in animals by rubbing or scratching pruritic skin.

excrement [eks'krə-mənt] fecal matter; matter cast out as waste from the body.

excrementitious [eks"krə-mən-tish'əs] pertaining to or of the nature of excrement.

excrescence [eks-kres'əns] an abnormal outgrowth; a projection of morbid origin.

excreta [eks-kre'tə] excretion products; waste material excreted or eliminated from the body, including **feces**, **urine** and **sweat**. Mucus and carbon dioxide also can be considered excreta. The organs of excretion are the intestinal tract, kidneys, lungs and skin.

excrete [eks-krēt'] to throw off or eliminate, as waste matter, by a normal discharge.

excretion [eks-kre'shən] 1. the act, process or function of excreting. 2. material that is excreted. Ordinarily, what is meant by excretion is the evacuation of feces. Technically, excretion can refer to the expulsion of any matter, whether from a single cell or from the entire body, or to the matter excreted.

virus e. see **shedding**.

excretory [eks'krə-tor-e] pertaining to excretion.

e. behavior see elimination **behavior**.

excursion [eks-kur'zhən] a range of movement regularly repeated in performance of a function, e.g. excursion of the jaws in mastication.

VetBooks.ir

E-66: Excoriation of burnt skin by tail movements.

excystation [ek"sis-ta'shən] escape from a cyst or envelope, as in that stage in the life cycle of parasites occurring after the cystic form has been swallowed by the host.

exencephaly [ek"sən-sef'ə-le] a congenital defect in which the brain is completely exposed or protrudes through a defect in the cranial vault.

exenteration [ek-sen"tər-a'shən] surgical removal of all of the internal organs, for example of the eye or pelvic cavity.

ocular e. surgical removal of the globe, adnexa and all orbital contents. Done for ocular and periocular neoplasia. Compare with **enucleation** and **evisceration**.

exercise [ek'sər-sīz] performance of physical exertion to obtain food or to achieve normal functions such as reproduction, for pleasure and for improvement of health or correction of physical deformity.

active e. motion imparted to a part by voluntary contraction and relaxation of its controlling muscles.

e. conditioning repeated exercise to condition an animal for a better performance at another time depends on an improvement in cardiovascular responses, splenic contraction and muscle, ligament and tendon responses.

corrective e. therapeutic exercise.

e. fatigue poor exercise tolerance.

e.-induced pulmonary hemorrhage see exercise-induced **pulmonary** hemorrhage.

e. intolerance manifested by a disinclination to move quickly in the absence of any apparent physical lameness or incoordination and respiratory distress on exercise, but other clinical signs may be present; a feature of some cardiovascular or neuromuscular diseases.

passive e. motion imparted to a segment of the body by a therapist, machine or other outside force.

e. physiology includes the integrated physiological responses to exercise plus physical conditioning by training.

e. testing a technique for evaluating circulatory response to physical stress; called also stress testing. The procedure involves continuous electrocardiographic monitoring during physical exercise, the objective being to increase the intensity of physical exertion until a target heart rate is reached or signs of cardiac ischemia appear.

therapeutic e. the scientific use of bodily movement to restore normal function in diseased or injured tissues or to maintain a state of well-being. Called also corrective exercise.

e. tolerance one of the ways to measure cardiac and circulatory system efficiency is to measure the response of the cardiac and respiratory systems to graded exercise. In most animals such tests must be subjective because no data are available on normal responses. In horses tests are available for assessment of cardiopulmonary disease and as a measure of fitness.

exercising [ek'sər-sīz"ing] exercise as part of a training program. See **exercise** conditioning.

exeresis [ek-ser'ə-sis] surgical removal, or excision.

exergonic [ek"sər-gon'ik] accompanied by the release of free energy.

exertional emanating from or pertaining to exertion.

exflagellation [eks-flaj"ə-la'shən] the protrusion or formation of flagelliform microgametes from a microgametocyte in some apicomplexan protozoa.

exfoliation [eks-fo"le-a'shən] a falling off in scales or layers.

exhalation [eks"hə-la'shən] 1. the giving off of watery or other vapor, or of an effluvium. 2. a vapor or other substance exhaled or given off. 3. the act of breathing out.

exhaust fumes [eg-zawst'] fumes given off by vehicles; contain some carbon monoxide, the amount varying with the efficiency of combustion in the particular engine. In most engines the use of exhaust fumes for euthanasia is not recommended because it operates partly on the carbon dioxide content, and if the content is high the animal dies slowly of asphyxia. Car exhaust fumes may contain significant amounts of lead if the petrol/gasoline is still leaded, and foliage receiving a lot of exhaust deposit can cause lead poisoning in animals eating it.

exhausted horse syndrome see **exhaustion** syndrome.

exhaustion [eg-zaws'chən] privation of energy with consequent inability to respond to stimuli; lassitude.

physical e. occurs most commonly in horses engaged in endurance or marathon events. Also in males engaged in territorial combats; bulls and boars are the usual combatants. There are some lacerations but exhaustion is the main problem. Manifested by lethargy, dehydration, hyperthermia, hyperpnea, tachycardia, muscle tremor and some muscle spasm, restlessness, anal relaxation, unwillingness to stand, fidgeting while down, pale cyanotic mucosa and poor capillary refill time.

e. syndrome in a fit horse normal levels of function in the cardiopulmonary system should be regained within 30–60 minutes of stopping work. This is unlikely with horses that are exhausted and which have the following clinical signs—lethargy, dehydration, hyperthermia, hyperpnea, tachycardia, muscle tremor, restlessness, relaxation of the anal sphincter, reluctance to stand, pale mucosa, poor capillary refill and a respiratory to cardiac rate ratio of greater than 2:1. Called also exhausted horse syndrome.

Exmoor pony English riding pony. Bay, brown or mousy dun, with no white markings; 12.2–12.3 hands high.

exo- word element. [Gr.] *outside of, outward*.

exocardia [ek"so-kahr'de-ə] congenital displacement of the heart; ectocardia.

exocardial [ek"so-kahr'de-əl] situated, occurring, or developed outside the heart.

exocolitis [ek"so-ko-li'tis] inflammation of the outer coat of the colon.

exocrine [ek'so-krin] 1. secreting externally via a duct. 2. denoting such a gland or its secretion.

exocytosis [ek"so-si-to'sis] 1. the discharge from a cell of particles that are too large to diffuse through the plasma membrane; the opposite of endocytosis. 2. the aggregation of migrating leukocytes in the epidermis as part of the inflammatory response.

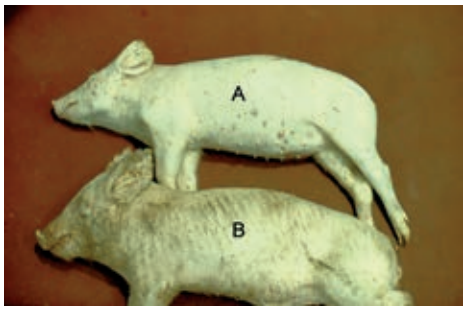
E-67: Exmoor pony. From Sambraus HH, Livestock Breeds. Mosby, 1992.

exodeviation [ek"so-de"ve-a'shən] a turning outward; in ophthalmology, a turning outward of the eyes; exotropia.
exodontia [ek"so-don'shə] removal of teeth.
exodontics [ek"so-don'tiks] that branch of dentistry dealing with extraction of teeth.
exoenzyme [ek"so-en'zīm] an enzyme that acts outside the cell that secretes it.
exoerythrocytic [ek"so-ə-rith"ro-sit'ik] occurring or situated outside the red blood cells (erythrocytes); a term applied to a stage in the development of protozoan parasites that takes place in cells other than erythrocytes (e.g. in *Plasmodium*).
exogamy [ek-sog'ə-me] protozoan fertilization by union of elements that are not derived from the same cell.
exogenous [ek-soj'ə-nəs] originating outside or caused by factors outside the organism.
e. fecal contents e.g. calcium taken in with the diet but not absorbed; is distinct from endogenous calcium which is contributed by the body.
exome the entire set of exons (protein coding regions) transcribed by an organism; estimated to be encoded by about 1.5% of the genome.
exomphalos [ek-som'fə-los] 1. hernia of the abdominal viscera into the umbilical cord. 2. congenital umbilical hernia.
exon [ek'son] regions of a primary RNA transcript in eukaryotic cells that are coding and are joined together when introns are spliced-out, to make the functional mRNA.
exonuclease [ek"so-noo'kle-ās] a nuclease that cleaves single mononucleotides from the end of a polynucleotide chain.
e. III one from *E. coli* that removes nucleotides from the 3′ ends of double-stranded DNA.
exopeptidase [ek"so-pep'tī-dās] a proteolytic enzyme whose action is limited to terminal peptide linkages.
Exophiala [ekof"so-fi'ə-lə] a genus of dematiaceous fungi that cause mycetomas and pheohyphomycosis including cutaneous and systemic lesions, in fish and captive frogs and toads. Includes *E. pisciphilia, E. salmonis*.
exophthalmometry [ek"sof-thal-mom'ə-tre] measurement of the extent of protrusion of the eye in exophthalmos.
exophthalmos [ek"sof-thal'mos] abnormal forward protrusion of the globe from within the orbit. Can be conformational or result from a retrobulbar mass/swelling.
conformationall e. seen in brachycephalic animals (especially dogs) with shallow orbits.
inherited e. see bilateral convergent **strabismus** with exophthalmus.
ophthalmoplegic e. inability to move the eye because of exophthalmos.
pulsatile e. one in which the degree of exophthalmos varies with the pulse; due to an arteriovenous fistula/varix within the orbit.
exophytic [ek"so-fit'ik] growing outward; in oncology, proliferating externally or on the surface epithelium of an organ or other structure in which the growth originated.
exoplasm [ek'so-plaz"əm] the plasma membrane.
e. face the side of a membrane facing away from cytosol.
exorbitism [eg-sor'bī-tiz-əm] exophthalmos.
exormia a papular skin eruption.
exoserosis [ek"so-se-ro'sis] an oozing of serum or exudate.
exoskeleton [ek"so-skel'ə-ton] an external hard framework, as a crustacean's shell, that supports and protects the soft tissues of lower animals, derived from the ectoderm. In vertebrates the term is sometimes applied to structures produced by the epidermis, as hair, claws, hoofs, teeth, etc.
exosmosis [ek"sos-mo'sis] osmosis or diffusion from within outward.
exostosis [ek"sos-to'sis] pl. *exostoses* [Gr.] a benign new growth projecting from a bone surface and characteristically capped by cartilage.
e. cartilaginea a variety of osteoma consisting of a layer of cartilage developing beneath the periosteum of a bone.
inherited multiple e. a benign hereditary disorder in horses. The lesions are visible externally but appear to cause little inconvenience. Similar to multiple cartilaginous exostoses (see below) in dogs and cats.
multiple cartilaginous e's multiple bony exostoses in bones formed by enchondral ossification; a developmental disease in dogs and hereditary predispostion is suspected. Single or multiple lesions are usually on vertebrae, ribs and long bones. In cats, lesions occur in adults, mainly on the axial skeleton. There is frequently an association with feline leukemia virus infection. The bony enlargements are painless, but may cause musculoskeletal or neurological dysfunction. Neoplastic transformation has been reported. Called also diaphyseal aclasis, metaphyseal aclasis, osteochondromatosis, and in horses, inherited multiple exostosis (see above). See also **osteophyte**.
periarticular e. occurs in any joint injury, commencing as cartilaginous osteophytes within a few days of the injury occurring.
exothermal, exothermic [ek"so-thur'məl, ek"so-thur'mik] marked or accompanied by the evolution of heat; liberating heat or energy.
exotic [eg-zot'ik] not native, not indigenous.
Exotic shorthair a cat breed derived from crossing American shorthair cats with Persians. It closely resembles the Persian ancestors, with small ears, large round eyes, and a short nose. It has a medium-length coat in many different colors.
exotoxigenic [ek"so-tok"sī-jen'ik] caused by an exotoxin.
e. organism those capable of producing exotoxins, e.g. *Clostridium* spp.
exotoxin [ek'so-tok"sin] a potent toxin formed and secreted by the bacterial cell, and found free in the surrounding medium. Exotoxins are generally heat labile, and are protein in nature. Many can be detoxified with retention of antigenicity by treatment with formaldehyde (toxoid). Many are important virulence factors in pathogenic bacteria.
exotropia [ek"so-tro'pe-ə] **strabismus** in which there is permanent lateral deviation of the visual axis of one eye away from that of the other, resulting in diplopia. Called also divergent strabismus or walleye.
expanded see **gelatinize**.
expander [ek-span'dər] something that enlarges or prolongs; extender.
plasma volume e. a substance that can be transfused to maintain fluid volume of the blood in event of great necessity, supplemental to the use of whole blood and plasma. Called also artificial plasma extender and plasma volume extender.
expectation of life an epidemiological expression of the probability of dying between one age and the next. Based on the human cohort life table which describes the actual mortality experience of a group of animals which were all born at the same time.
expected [ek-spek'ted] in statistics refers to the expectation as predicted by the relevant formula or model.
e. frequency see expected **frequency**.
e. value see expected **value**.
expectorant [ek-spek'tə-rənt] 1. promoting expectoration. 2. an agent that promotes expectoration.
liquefying e. an expectorant that promotes the ejection of mucus from the respiratory tract by decreasing its viscosity.
expectoration [ek-spek"tə-ra'shən] 1. the coughing up and swallowing of material from the lungs, bronchi and trachea. In humans the coughed up material is discarded by spitting. 2. sputum.
expeller process use of a screw press to extract oil from seeds. Alternatives are extraction by hydraulic press and chemical extraction.
experiment [ek-sper'ī-mənt] a study involving a comparison group in which the investigator intentionally alters one or more risk factors in order to discover or demonstrate some fact or general truth.
blind e. the identities of the animals that are in the treatment and the control groups are unknown to the experimenter until the end of the trial.
control e. one made under standard conditions, to test the correctness of other observations.
controlled e. one in which an exact replica of the animals experimented on are kept without any treatment in order to show what changes occurred in normal animals, reinforcing the view that the observed changes in the experimental animals were in fact the result of the treatment administered.
double blind e. an experiment in which the identity of the animals in the treatment and control groups and the assessment of the results is done without the animals' identities being known to the experimenter or the animal's owner. Called also blind study.
factorial e. one set up in such a way that all levels of each intervention or treatment occur with each level of response.

VetBooks.ir

field e. one carried out in normal circumstances and environment, e.g. on the farm or in the cattery rather than in an experimental institution where many of the factors affecting the occurrence or severity of a disease may not operate.
laboratory e. carried out in a laboratory where conditions can be almost completely controlled.
latin square e. a method of laying out a field experiment in such a way as to avoid bias by physical location.
natural e. occurs by chance when all variables for a population are constant except one, which is different for one large part of the population compared with the other, e.g. when half of a flock comes from one climate and the other half is a local resident in another climate.
prospective e. those carried out to see what happens if certain influences are applied to an animal or a group of animals. Retrospective experiments are those which set out to explain events that have already been observed.

experimental emanating from or pertaining to experiment.
e. animals animals kept expressly for the purposes of conducting experiments on them. Called also **laboratory** animals.
e. design the method of allocating experimental units to treatment groups in an experiment; many complicated and sophisticated designs are available, e.g. balanced, unbalanced, crossover, factorial, randomized, non-random, split-plot.
e. model experiment carried out using a model of a real system which contains some of the risk factors which apply in the real state; the model is a simplification of real life.
e. study a study in which all of the risk factors are under the direct control of the investigator.
expert systems computer programs designed to capture the non-numeric knowledge and reasoning methods through a set of rules or tree type decision networks that are not easily represented in traditional computing approaches. Known also as knowledge-based expert systems.
expirate exhaled air or gas.
single e. the gas exhaled at a single expiration.
expiration [*ek"spĭ-ra'shən*] 1. the act of breathing out, or expelling air from the lungs. 2. termination, or death.
e. date the calendar date on the packaging of a pharmaceutical or food that indicates the last date the item should be used.
expiratory [*ek-spi'rə-tor"e*] relating to or employed in the expiration of air from the lungs.
e. center the nerve center in the descending reticular formation which terminates inspiration and triggers the commencement of expiratory movements.
e. groan a groan with each expiration; usually an expression of severe pain or extreme fatigue.
e. reserve volume the volume of air which the patient can still exhale after the tidal volume has been exhaled.
expire [*ek-spīr'*] 1. to breathe out. 2. to die.
explant [*eks'plant*] 1. to take from the body and place in an artificial medium for growth. 2. tissue taken from the body and grown in an artificial medium.
exploration [*ek"splə-ra'shən*] investigation or examination for diagnostic purposes.
explorer [*ek-splor'ər*] a sharp-ended dental instrument for probing defects in the enamel or dentin and the subgingival tooth surfaces. See **sheperd's hook explorer**
explosive [*ek-splo'siv*] substance used for causing explosions. They may be accessible to animals and cause poisoning.
plastic e. poisoning see **cyclonite**. Called also PE4.
exponential growth [*ek"spə-nen'shəl*] strictly speaking that of a population where rate of growth is proportional to its population size, but is often used to mean an ever increasing growth.
export to transport, secrete or excrete protein out of the cell.
exportin a protein that binds to a 'cargo' protein in the nucleus of a cell and with the aid of Ran, a member of the GTPase superfamily, transports the cargo through the nuclear pore complex to the cytoplasm.
exposure [*ek-spo'zhər*] 1. the act of laying open, as surgical exposure. 2. the condition of being subjected to something, as to infectious agents or extremes of weather or radiation, which may have a harmful effect. 3. in radiology, a measure of the amount of ionizing radiation at the surface of the irradiated object, e.g. the body.



E-68: Pigs that have died of exsanguinations as a result of hemorrhage from esophogastric ulcer. The loss of blood and resultant death in pig A was relatively rapid but in pig B was over many days and the pig has a characteristic runt conformation.

e. button of an X-ray machine. Usually on a 4–5 ft cable so that the operator can stand at a distance away from the primary beam. Combined with a timing device that is preset and controls the exposure time. The button is usually a two-stage mechanism, the first causing preheating of the cathode filament and/or rotating the anode, the second closing the electrical circuit and the creation of the X-ray beam.
e. chart a chart set up after a preliminary trial that sets out the best arrangement of exposure factors for a particular set of radiological equipment in order to obtain the best results.
climatic e. exposure to the weather without provision of shelter. See **hypothermia**, **hyperthermia**.
e. error under- or overexposure in radiography causing inferior contrast and detail.
e. factors the milliampere-seconds and kilovoltage for radiography of a particular animal. The factors are influenced by the speed of the film to be used, the anode to film distance, the grid to be used and the size of the subject. The exposure factors should be kept constant as far as possible.
e. latitude degree of over- or underexposure tolerable in a correctly developed film to still produce an acceptable radiographic image.
provocative e. in testing for possible hypersensitivity, the exposure to a suspected offensive agent to see if there is a recurrence of clinical signs.
e. time in radiography variable but fastest is best with animals because of the difficulty of holding the animal quite still or of delaying its breathing for any length of time. The milliamperage used should be as high as possible to keep the exposure time short.
expression [*ek-spresh'ən*] 1. the aspect or appearance of the face as determined by the physical or emotional state. 2. the act of squeezing out or evacuating by pressure. 3. the manifestation of a heritable trait in an individual carrying the gene or genes which determine it.
e. library a DNA library cloned into an expression vector.
e. vector a cloning vector capable of carrying a gene into the host cell and promoting its expression.
expressivity [*ek"sprĕ-siv'ĭ-te*] the extent to which a heritable trait is manifested by an individual carrying the principal gene or genes that determine it. Called also genetic expressivity.
expulsive [*ek-spul'siv*] driving or forcing out; tending to expel.
exsanguination [*ek-sang"wĭ-na'shən*] extensive blood loss due to internal or external hemorrhage.
exsection [*ek-sek'shən*] see **excision**.
Exserohilum rostratum [*ek"sər-o-hi'ləm*] a dematiaceous fungus which causes **phaeohyphomycosis**.
exsheathing fluid [*eks-shēth'ing*] fluid secreted by strongylid larvae preparatory to shedding the current larval stage sheath.
exsheathment [*eks-shēth'mənt*] shedding of the retained sheath of the third larval stage of strongylid nematodes before the parasitic stage of its existence can begin.
exsiccation [*ek"sĭ-ka'shən*] the act of drying out; in chemistry, the deprival of a crystalline substance of its water of crystallization.
exstrophy [*ek'stro-fe*] the turning inside out of an organ.
bladder e. congenital absence of a portion of the abdominal wall and bladder wall, the bladder appearing to be turned inside out, with the internal surface of the posterior wall showing through the opening in the anterior wall.

cloaca e. a developmental anomaly in which two segments of bladder (hemibladders) are separated by an area of intestine with a mucosal surface, which appears as a large red tumor in the midline of the lower abdomen.
ext. external; extract.
extender [*ek-sten'dər*] something that enlarges or prolongs; expander.
artificial plasma e. see plasma volume **expander**.
Kenny's e. common skim milk-based extender used for cooling and shipping stallion semen.
semen e. a diluent for semen. Two types of diluents exist, those for fresh or cooled semen (egg yolk or skim milk based) and those for freezing semen, which contain a cryoprotectant, generally glycerol. The commonest one for bull semen is skim or homogenized milk containing 7% glycerol. New, chemically defined media have been developed to prevent the addition of biological fluids and reduce risks of disease transmission.
extensibility index a measure of the ability of skin to stretch, calculated by lifting a fold of skin over the lumbar spine to its maximum distance. This distance is divided by the body length, times 100. Used to evaluate cutaneous asthenia in dogs and cats.
extension [*ek-sten'shən*] 1. the movement by which the two ends of any jointed part are drawn away from each other. 2. a movement bringing the members of a limb into or toward a straight condition.
nail e. extension exerted on the distal fragment of a fractured bone by means of a nail or pin (Steinmann pin) driven into the fragment.
extensor [*ek-sten'sor*] [L.] any muscle that extends a joint. See Table 13 for list of all muscles.
crossed e. reflex see **crossed extensor reflex**.
e. postural thrust a postural reflex reaction tested in small animals by lifting the patient off the ground, then lowering it to see whether the hindlegs are extended to make contact and support weight and several short steps are taken to maintain posture. Called also extensor reaction.
e. process disease see **pyramidal** disease.
e. reaction see **extensor** postural thrust.
e. rigidity see upper **motor neuron**.
exteriorize [*ek-stēr'e-ə-rīz"*] to transpose an internal organ to the exterior of the body.
extermination mass killing of animals or other pests. Implies complete destruction of the species or other group.

E-69: Extensor postural thrust response.
From Sharp NJH, Small Animal Spinal Disorders, 2nd Edition. Mosby, 2004.

extern [*ek'stərn*] one who undertakes an **externship**.
external [*ek-stur'nəl*] situated or occurring on the outside, toward or near the outside; lateral.
external ear [*ek-stur'nəl*] the outer ear; it includes the **auricle** (1) the external auditory meatus and the tympanic membrane.
e. e. canal the external auditory meatus.
e. e. canal inflammation see **otitis** externa.
e. e. hematoma see **auricular** hematoma.
externalize see **exteriorize**.
externship a short off-site educational period, usually a month but can be more, taken by veterinary students, usually at the end of the third year of the veterinary course, and spent in private or other non-university veterinary practices. Common in North American curricula and required for graduation by many. Most veterinary schools have list of possible externship programs which might be species or discipline or internationally oriented. The American Veterinary Medical Association provides a computer program to help veterinary students find externship opportunities.
externus [*ek-stur'nəs*] external; denoting a structure farther from the center of an organ or cavity.
exteroceptor [*ek"stər-o-sep'tər*] a sensory nerve ending stimulated by the immediate external environment, such as those in the skin and mucous membranes.
exterofective [*ek"stər-o-fek'tiv*] responding to external stimuli; a term applied to the cerebrospinal nervous system.
extima [*ek'stĭ-mə*] outermost; the outermost coat of a blood vessel; the adventitia.
extinction [*ek-stink'shən*] the disappearance of a conditioned response as a result of nonreinforcement.
extirpation [*ek"stər-pa'shən*] complete removal or eradication of an organ or tissue.
extorsion [*ek-stor'shən*] rotation of the pupil, observed only in animals with horizontal pupils such as cattle and sheep. Caused by paralysis of the dorsal oblique muscle, as seen in polioencephalomalacia of ruminants.
extra- word element. [L.] *outside, beyond the scope of, in addition*.
extra-articular [*eks"trə-ahr-tik'u-lər*] situated or occurring outside a joint.
extra-label use of a drug in a way or for a purpose not specified on the label, or more practically the documents provided by the manufacturer. In the case of an adverse reaction the responsibility for any loss incurred rests with the veterinarian, not the manufacturer. Extra-label use is common in veterinary practice because of the large number of animal species being treated and because many of the diseases encountered in companion animals require drugs which have been registered for use only in humans.
extra-ocular muscles [*eks"trə-ok'u-lər*] the muscles within the orbit but outside the eye that include the four rectus m's (superior, inferior, medial and lateral); the two oblique m's (superior and inferior), the retractor bulbi, and the levator palpebrae superioris. See Table 13.1F.
extra points most acupuncture points are found along the meridians; a few, called *extra* points, are not on meridians but have special effects on nearby organs.
extracapsular [*eks"trə-kap'su-lər*] situated or occurring outside a capsule.
e. cataract extraction removal of the lens, together with a central window of anterior lens capsule, but sparing the posterior capsule.
open sky e. extraction one in which the intact lens is removed through a large anterior capsulectomy and corneal incision.
extracellular [*eks"trə-sel'u-lər*] situated or occurring outside a cell or cells.
e. constituents all of the constituents of the body outside the cells; include water, electrolytes, protein, glucose, enzymes, hormones.
e. fluid all of the body fluid lying outside the cells. Includes intravascular fluid or plasma and the interstitial fluid. That part of the extracellular fluid that is in special cavities which have special characteristics, e.g. synovial fluid, urine, aqueous humor of eye, are called **transcellular fluids**.
e. matrix the network of proteins and carbohydrates that surround a cell or fill the intercellular spaces.
e. space see **intercellular**.
extracorporeal [*eks"trə-kor-por'e-əl*] situated or occurring outside the body.

VetBooks.ir

VetBooks.ir

e. circulation the circulation of blood outside the body, as through a **hemodialyzer** for removal of substances usually excreted in the urine, or through an extracorporeal circulatory support unit for carbon dioxide–oxygen exchange (see below).

e. circulatory support unit a heart–lung machine. In animals used mainly in the investigation of cardiac prosthetic devices.

extracorticospinal [*eks"trə-kor"ti-ko-spi'nəl*] outside the corticospinal tract.

extracranial [*eks"trə-kra'ne-əl*] external to the cranial vault.

extract [*ek'strakt*] a concentrated preparation of a vegetable or animal drug.

allergen e. an extract usually containing protein of any substance (plant, food, insect, etc.) to which an animal may be allergic.

cell-free e. the solution obtained by rupturing cells and removing all particulate matter.

crude e. usually of cells when they are suspended in buffer and broken up and nothing is removed.

extraction [*ek-strak'shən*] 1. the process or act of pulling or drawing out. 2. the preparation of an extract.

breech e. extraction of a fetus from the uterus in cases of breech presentation.

vacuum e. removal of the contents of a body cavity by application of a vacuum.

extractive [*ek-strak'tiv*] any substance present in an organized tissue, or in a mixture in a small quantity, and requiring extraction by a special method.

extractor [*ek-strak'tər*] an instrument for removing a calculus or foreign body.

extradural [*eks"trə-doo'rəl*] situated or occurring outside the dura mater. See also **epidural**.

extraembryonic [*eks"trə-em"bre-on'ik*] external to the embryo proper, as the extraembryonic celom or the extraembryonic membranes.

e. membranes the fetal membranes, chorion, amnion, allantois, yolk sac; term used mostly in the early embryonic period.

extrafusal [*eks"trə-fu'zəl*] situated outside a striated muscle spindle.

extragenic [*eks"trə-jen'ik*] occurring outside a gene, or in a gene other than the one in question.

extra-label drug use (ELDU) use of any drug in an animal in a manner not in accordance with the approved label use. Used by veterinarians for drugs that may be registered for human use but have limited registration for veterinary use. When used in food-producing animals, veterinarians must determine appropriate withdrawal times and be confident that the client will adhere to these. In the USA, this use is permitted only under the supervision of a veterinarian where there is a valid Veterinarian/Client/Patient Relationship and is only allowed for FDA approved animal and human drugs. It can only be used for therapeutic purposes. ELDU in feed is prohibited. Called also off-label use.

extralemniscal system a secondary (besides the lemniscal system) spinothalamic sensory system which conveys information from peripheral sensors to the thalamus, on cruder levels of touch and pressure, pain and temperature.

extramastoiditis [*eks"trə-mas"toi-di'tis*] inflammation of tissues adjoining the mastoid process.

extramedullary [*eks"trə-med'u-lar"e*] situated or occurring outside any of the medullas including the medulla oblongata and the medullary cavities of the bones.

e. hematopoiesis see extramedullary **hematopoiesis**.

extramural [*eks"trə-mu'rəl*] situated or occurring outside the wall of an organ or structure.

extraocular [*eks"trə-ok'u-lər*] situated or occurring outside the eye.

extraosseous [*eks"trə-os'e-əs*] occurring outside a bone or bones.

extraplacental [*eks"trə-plə-sen'təl*] outside of or independent of the placenta.

extrapleural [*eks"trə-ploor'əl*] situated or occurring outside the pleural cavity.

extrapolation [*ek-strap"o-la'shən*] inference of a value on the basis of that which is known or has been observed; usually applied to estimation beyond the range of observed data as opposed to interpolation between data points.

extrapulmonary [*eks"trə-pool'mo-nar"e*] not connected with the lungs.

extrapyramidal [*eks"trə-pĭ-ram'ĭ-dəl*] outside the pyramidal tracts.

e. disease, e. syndrome any of a group of clinical disorders marked by abnormal involuntary movements, alterations in muscle tone, and postural disturbances.

e. motor system see extrapyramidal system (below).

e. system a functional, rather than anatomical, unit comprising the nuclei and fibers (excluding those of the pyramidal tract) involved in motor activities; they control and coordinate especially the postural, static, supporting and locomotor mechanisms. It includes the corpus striatum, subthalamic nucleus, substantia nigra and red nucleus, along with their interconnections with the reticular formation, cerebellum and cerebrum; some authorities include the cerebellum and vestibular nuclei. Called also extrapyramidal motor system.

extrascleral [*eks"trə-sklēr'əl*] situated or occurring outside the sclera of the globe.

e. prosthesis see ocular **prosthesis**.

extrasystole [*eks"trə-sis'to-le*] a premature cardiac contraction that is independent of the normal rhythm and arises in response to an impulse outside the sinoatrial node.

atrial e. premature beat arising from stimuli discharged in atrial wall ectopic to atrial pacemaker and may or may not initiate cardiac irregularity.

atrioventricular e. one in which the stimulus is thought to arise in the atrioventricular node.

interpolated e. a contraction taking place between two normal heartbeats.

nodal e. atrioventricular extrasystole.

retrograde e. a premature ventricular contraction followed by a premature atrial contraction, due to transmission of the stimulus backward, usually over the bundle of His.

triggered e. cardiac ectopic beats triggered by afterdepolarizations.

ventricular e. one in which either a pacemaker or a re-entry site is in the ventricular structure.

extratubal [*eks"trə-too'bəl*] situated or occurring outside a tube.

extrauterine [*eks"trə-u'tər-in*] situated or occurring outside the uterus.

e. pregnancy ectopic pregnancy.

extravasation [*ek-strav"ə-sa'shən*] 1. a discharge or escape, as of blood, from a vessel into the tissues; blood or other substance so discharged. 2. the process of being extravasated.

extravascular [*eks"trə-vas'ku-lər*] situated or occurring outside a vessel or the vessels.

extraversion [*ek"strə-vur'zhən*] see **extroversion**.

extremitas [*ek-strem'ĭ-təs*] pl. *extremitates* [L.] extremity.

extremity [*ek-strem'ĭ-te*] 1. the distal or terminal portion of elongated or pointed structures. 2. the limb, tail, ear.

extrinsic [*ek-strin'zik*] of external origin.

e. factor a hematopoietic vitamin that combines with intrinsic factor for absorption from the intestine and is needed for erythrocyte maturation; called also cyanocobalamin and vitamin B_{12}.

e. pathway see **coagulation** pathways.

extroversion [*ek"stro-vur'shən*] a turning inside out; exstrophy.

urinary bladder e. failure of development of ventral abdominal wall so that the bladder and pelvic urethra are exposed.

extrude [*eks-trood'*] to force out, or to occupy a position distal to that normally occupied. In feed preparation to force through a die under pressure.

extrusion [*ek-stroo'zhən*] displacement of a tooth in which it is dislocated vertically partially out of the alveolus. The tooth appears higher than normal and there is mobility.

extubation [*eks"too-ba'shən*] removal of a tube used in intubation.

exuberant [*eg-zoo'bər-ənt*] copious or excessive in production; showing excessive proliferation.

exudate [*eks'u-dāt*] a fluid with a high content of protein and cellular debris which has escaped from blood vessels and has been

E-70: Pigs with greasy pig disease (exudative epidermitis) showing the grease-like appearance of the seborrheic dermatitis that gives rise to its colloquial name.

deposited in tissues or on tissue surfaces, usually as a result of inflammation. It may be septic or nonseptic. See also **exudative**.

exudation [*eks"u-da'shən*] 1. the escape of fluid, cells or cellular debris from blood vessels and deposition in or on the tissue. 2. exudate.

exudative [*ek-soo'də-tiv*] of or pertaining to a process of exudation.

e. diathesis a disease of young pigs and chickens caused by a nutritional deficiency of vitamin E. Characterized by severe edema of the subcutaneous tissues.

e. epidermitis a disease of young pigs caused by *Staphylococcus hyicus* (*S. hyos*) and characterized by an acute generalized seborrheic dermatitis. Called also greasy pig disease.

e. muscle see **porcine** stress syndrome.

exumbilication [*ek"səm-bil"ĭ-ka'shən*] 1. marked protrusion of the navel. 2. umbilical hernia.

exuviae the shed skin, e.g. of a snake or other reptile.

exuviate to cast off or shed skin.

eyas a nestling raptor bird to be trained as a hawking bird.

eye one of the paired organs of vision; sometimes called the globe. In the embryo the eye develops as a direct extension of the brain. To protect the eye the bones of the skull are shaped so that an orbital cavity protects most aspects of each globe. Anteriorly, the conjunctival sac covers the space between the orbital rim and the eye and lines the upper and lower eyelids. Tears from the lacrimal glands are constantly secreted over the ocular surface to maintain hydration, lubricate and remove foreign objects from the corneal and conjunctival surfaces. The eye is also protected by the eyelids with their sensitive eyelashes. The eye has three coats: The outer fibrous tunic, composed of the cornea (the clear transparent layer on the front of the eye) and the sclera (the white of the eye). Together, this tough outer coat helps protect the delicate mechanisms of the eye. The middle vascular (or uveal) layer is composed of the choroid posteriorly and the iris and ciliary body anteriorly. The innermost neurosensory layer comprises the retina with its specialized light-sensitive rods and cones is present only in the posterior aspect of the globe. Behind the cornea and in front of the lens is the iris, the circular pigmented band around the pupil. The iris works much like the diaphragm in a camera, widening or narrowing the pupil to adjust to different light conditions. Nerve fibers from the retina leave the back of the eye as the optic nerve and transmit nerve impulses to the occipital cortex of the brain where they are interpreted as vision.

almond-shaped e. observed with dehydration in birds, where the eye is sunken, particularly in raptors which normally have a prominent, round globe. Also used to describe a feature of some dog or cat breeds such as the British shorthair cat.

blue e. a common term for corneal edema. See also **blue eye**.

cancer e. common lay term for ocular **squamous** cell carcinoma in cattle.

cherry e. see **cherry eye**.

china e. one with a blue iris.

cross-e. esotropia.

diamond-shaped e. seen in various dog breeds, such as St. Bernards, Mastiffs and Newfoundland with deep orbits, loose eyelid skin, and deformities of the tarsal plate such that their upper and lower eyelids have folds along their length creating a diamond-shaped eyelid aperature. Usually associated with combined entropion and ectropion.

e. drop 1. vestibular nerve lesion will cause the eye on the affected side to deviate downward more than the opposite eye when the head is lifted. 2. ophthalmic solution for topical application.

dry e. see **keratoconjunctivitis** sicca.

equator of the e. an imaginary line drawn around the eye at its widest point, approximately midway between the poles.

fatty e. lipid accumulation in the inferior conjunctiva and causing protrusion or swelling of the lower conjunctival sac in guinea pigs; noted in guinea pigs on a high nutritional plane.

fundus of the e. see ocular **fundus**.

meridians of the e. imaginary lines drawn round the eye joining the two poles. The principal meridians are those taking vertical (parasagittal) and horizontal (coronal) paths around the globe.

merle e. the iris has brown and blue flecks.

mirror e. lay term for congenital cataracts in guinea pigs.

oscillation of the e. see **nystagmus**.

E-71: Sunken eye due to dehydration.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

pink e. pinkeye; see **infectious** bovine keratoconjunctivitis of cattle, due to *Moraxella bovis*; in humans, used as a more generic term for any infectious cause of conjunctivitis.

e. preservation response see **menace response**.

protective e. cup a tent-like, miniature aluminum and canvas shield applied to an injured eye in a horse to prevent self-mutilation.

rapid e. movement see **sleep**.

red e. an eye showing dilation of conjunctival or episcleral blood vessels.

e. size, abnormal see **macrophthalmia**, microphthalmia.

e. specialist see **ophthalmologist**.

sunken e. sinking or depression of globe into the eye socket; a sign of dehydration.

e. teeth see canine **teeth**.

wall e., walleye see **walleye**.

e. wash various medicated solutions used to flush the eye; called also collyria.

watch e. lay term for **walleye**.

e. white percentage an estimate of the startle response and an indicator of fear in dairy cattle.

e. worm see ***Thelazia***, ***Onchocerca***.

eyeball [*i'bawl*] eye; called also globe.

eyeground [*i'ground*] the fundus of the eye as seen with an ophthalmoscope.

eyehooks [*i'hooks*] obstetrical instruments which provide an attachment to the head for purposes of traction. The hook may be a single with a long (3 ft) handle manipulated from outside the cow or mare, for which these instruments are designed. There are also small (2–3 inch) hooks used in pairs hung facing each other on a loop of cord. Each hook is placed in the medial canthus of one of the eyes and traction applied; the traction serves to pull the hooks together and deeper into the eye sockets.

eyelash [*i'lash*] cilium; one of the hairs growing on the edge of an eyelid.

eyelid [*i'lid*] a movable cutaneous fold lined by conjunctiva that protects the eye. Typically, upper, lower, and third eyelids are present. However the third eyelid is absent in primates. Some animals such as snakes and eblepharine lizards have no eyelids. Instead, the eye is protected by a **spectacle**.

e. abnormality includes **entropion**, **ectropion**entropion, **ptosis** and others listed below.

e. coloboma a congenital, full thickness defect of varying degrees involving the eyelid margin.

e. drooping see **ptosis**.

e. eversion see **ectropion**.

e. inflammation see **blepharitis**.

e. inversion see **entropion**.

premature opening e. opening of eyelids before the usual postnatal period of physiologic ankyloblepharon ends (in puppies and kittens approximately 7–10 days). May result in exposure keratitis because of inadequate tear production.

e. tacking a method of eyelid eversion using sutures or surgical staples to temporarily resolve entropion until definitive surgical correction is performed.

third e. see **membrana** nictitans.

eyepiece [*i'pēs*] the lens or system of lenses of a microscope (or telescope) nearest the user's eye, serving to further magnify the image produced by the objective.

VetBooks.ir

F

VetBooks.ir

F chemical symbol, *fluorine*; Fahrenheit; field of vision; formula; French (catheter size); statistical symbol for variance ratio (sometimes written as f).

F-2 toxin **zearalenone**.

F distribution the distribution of the ratio of two independent quantities each of which is distributed like a variance in a normally distributed sample. Called also variance ratio distribution.

F–J hybrid see **Jersian**.

F_1 first filial generation, a term used in genetics. See also **first cross**.

F_2 second filial generation, the progeny produced by the mating of F_1 generations.

F and R force and rhythm (of pulse).

F_{cells} factor the ratio of total body hematocrit to venous hematocrit; increased when the spleen is engorged with erythrocytes and decreased when the spleen has contracted, discharging erythrocytes into the circulation.

F4 see **K88 antigen**.

F5 see **K99 antigen**.

f symbol, *femto-*.

FA fluorescent antibody. See **immunofluorescence**.

FAB Felline Advisory Bureau.

Fab fragment a portion of an immunoglobulin molecule usually obtained by papain digestion, containing one light chain and part of a heavy chain with a single antigen-combining site.

$F(ab)_2$ fragment a portion of an IgG molecule, produced by pepsin digestion, that contains two Fab fragments, that is two light chains and portions of two heavy chains, joined by disulfide bonds in the hinge region. Contains two antigen-combining sites.

faba beans see ***Vicia faba***.

fabella [*fə-bel'ə*] pl. *fabellae* [L.] a sesamoid bone in the origin of the gastrocnemius muscle. Present in carnivores; most species have two that articulate just proximal to the femoral condyles. See Table 10.

fabrication [*fab"rĭ-ka'shən*] breaking down of a carcass of meat into consumer cuts or boned meat.

Fabricius [*fə-bris'e-əs*] an Italian anatomist and surgeon. See **bursa** of Fabricius.

F-1: Distal displacement of the medial fabella (arrow) of the left stifle of a 2-year-old male West Highland White Terrier. From Thrall DE, Textbook of Veterinary Diagnostic Radiology, 5th Edition. Saunders, 2007.

face [*fās*] 1. the anterior aspect of the head from the forehead to the chin, inclusive. 2. any presenting aspect or surface.

concave f. of the Golgi complex in the developing embryo is associated with maturing secretory vesicles.

facet [*fas'ət, fə-set'*] a small, plane surface on a hard body such as a bone.

facetectomy [*fas"ə-tek'tə-me*] excision of the articular facet of a vertebra.

facial [*fa'shəl*] of or pertaining to the face.

f. abscess see **malar** abscess.

f. cleft very uncommon congenital defect of failure of closure at various facial sites, e.g. cleft from corner of mouth to ear on the same side.

f. dermatitis 1. lesions on cheeks and face of pigs caused by trauma from needle teeth of other piglets in the litter. May predispose to contagious porcine pyoderma. A major reason for clipping the needle teeth following birth. 2. idiopathic facial dermatitis of Persian cats (see below).

f. eczema hepatopathy and hepatogenous photosensitization with high case fatality in sheep and cattle, caused by ingestion of sporidesmin from the fungus *Pithomyces chartarum*. It grows best on litter in pasture composed of plants with heavy leaf growth, e.g. perennial rye and white clover, and outbreaks occur in warm, moist periods when pasture is short and livestock are eating plant litter. Occurs mainly in New Zealand with limited occurrence in Australia, western North America and Europe.

f. fold dermatitis see fold **dermatitis**.

f. hyperostosis see **hyperparathyroidism**.

idiopathic f. dermatitis of Persian cats inflammation of the periocular and perioral skin and sometimes chin associated with the accumulation of black waxy material matting the skin. External ear canals may also become involved. Secondary bacterial and *Malassezia* infections are common. The cause is unknown.

f. nerve the seventh cranial nerve; its motor fibers supply the muscles of facial expression. These are a complex group of cutaneous muscles that move the eyebrows, eyelids, ears, corners of the mouth, and other parts of the face. The sensory fibers of the facial nerve provide a sense of taste in the forward two-thirds of the tongue, and parasympathetic fibers also supply the submaxillary, sublingual and lacrimal glands for secretion. The facial and vestibulocochlear nerves arise close together at the lateral border of the trapezoid body and leave the cranium via the internal acoustic meatus. The facial nerve runs within the facial canal and leaves the skull at the stylomastoid foramen. Called also intermediofacial nerve. See also Table 14.

f. nerve root granuloma chronic, inflammatory disease in calves characterized by space-occupying, granulomatous lesions on the

F-2: Severe ulcerative facial dermatitis. From August JR, Consultations in Feline Internal Medicine, Volume 5. Saunders, 2005.

F-3: Facial eczema. Skin sloughing because of damage from photosensitivity.

facial and vestibulocochlear nerves and clinical signs of facial paralysis and balance abnormalities.

f. paralysis characterized by unilateral signs related to facial movements and asymmetry of the face. There is droopiness of the ear and an inability to move it, drooping of the eyelid, sagging and drooping of the lower lip and deviation of the nose to the normal side. May occur as a result of lesions within the brainstem, tympanic bulla, or as an idiopathic condition in dogs, similar to Bell's palsy in humans.

f. sinus see **malar** abscess.

f. sinusitis infection and inflammation occurs secondarily to rhinitis or to damage to a horn or dehorning. Neoplasia of a horn core may extend into the sinus.

f. tumor disease see **Tasmanian devil** facial tumor disease.

facies [*fa'she-ēz*] facial expression.

facilitation [*fə-sil"ĭ-ta'shən*] hastening or assistance of a natural process; the increased excitability of a neuron after stimulation by a subthreshold presynaptic impulse. The resistance is diminished so that second application of the stimulus evokes the reaction more easily.

F-4: Facial paralysis in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

facilitative [*fə-sil'ĭ-ta"tiv*] in pharmacology, denoting a reaction arising as an indirect result of drug action, such as development of an infection after the normal microflora has been altered by an antibiotic.

faci(o)- word element. [L.] *face*.

faciobrachial [*fa"she-o-bra'ke-əl*] pertaining to the face and upper front limbs.

faciocervical [*fa"she-o-sur'vĭ-kəl*] pertaining to the face and neck.

faciolingual [*fa"she-o-ling'wəl*] pertaining to the face and tongue.

facioplasty [*fa'she-o-plas"te*] restorative or plastic surgery of the face.

facioplegia [*fa"she-o-ple'jə*] see **facial** paralysis.

FACS commonly used abbreviation for **fluorescence**-activated cell sorting, but is a trademark for an cell sorting instrument marketed by Becton Dickinson.

facteur thymique sérique (FTS) a peptide secreted by thymic epithelial cells.

factitial [*fak-tish'əl*] artificially produced; produced unintentionally.

factitious [*fak-tish'əs*] artificial; not natural.

factor [*fak'tər*] 1. an agent or element that contributes to the production of a result. In epidemiology and statistics called also a **variable** because the factor may have a number of values. In an experiment a factor is a type of treatment and in the experiment the factor will be represented in different groups by different values. Such a factor may originate spontaneously or be introduced by an investigator. 2. see **clotting** factors.

f's I to XIII see **clotting** factors and names of individual factors.

f. VII proconvertin.

f. VIII activity a test for **hemophilia** A; activity is measured in biological assays using factor VIII-deficient plasma as the substrate.

f. VIII-related antigen von Willebrand antigen.

f. IX complex a sterile, freeze-dried powder containing coagulation factors II, VII, IX and X.

f. IX deficiency plasma **thromboplastin** component (PTC). See also **hemophilia** B.

f. X deficiency see **Stuart factor**.

f. XI deficiency see plasma **thromboplastin** antecedent (PTA).

f. XII deficiency see **Hageman trait**.

f. analysis a statistical method for analyzing the correlations between several variables.

antihemorrhagic f. vitamin K.

antinuclear f. antinuclear antibody.

antirachitic f. vitamin D.

f. B a complement component (C3 proactivator) that participates in the alternate complement pathway.

C3 nephritic f. an autoantibody that binds and stabilizes the alternative pathway C3 convertase enzyme; in humans, associated with mesangiocapillary glomerulonepharitis and partial lipodystrophy.

citrovorum f. folinic acid.

clotting f's, coagulation f's factors essential to normal blood clotting, whose absence, diminution or excess may lead to abnormality of the clotting mechanism. See also **clotting** factors.

f. D a factor that, when activated, serves as a serine esterase in the alternate complement pathway.

extrinsic f. see **extrinsic** factor.

F f., fertility f. the plasmid that determines the mating type of conjugating *E. coli*, being present in the donor (male) bacterium and absent in the recipient (female).

fibrin stabilizing f. factor XIII, one of the blood clotting factors that converts soluble fibrin monomer to insoluble, stable fibrin polymer.

f. H see **complement** regulatory proteins.

homologous restriction f. (HRF) a complement regulatory protein, which is a member of the self-recognition system that protects against complement-mediated self-injury. Called also CD59.

intrinsic f. see **intrinsic** factor.

labile f. proaccelerin; one of the **clotting** factors.

LE f. an immunoglobulin (a 7S antibody) that reacts with leukocyte nuclei, found in the serum in systemic lupus erythematosus.

f. loading a relationship between observable manifestations (or variables) and the underlying factors affecting the variables.

lymph node permeability f. (LNPF) a substance from normal lymph nodes which produces vascular permeability.

VetBooks.ir

osteoclast activating f. substance produced by lymphocytes which facilitates bone resorption.
platelet f's factors important in hemostasis that are contained in or attached to the platelets. See also **platelet** factors.
platelet-activating f. (PAF) a substance produced by inflammatory cells which leads to clumping and degranulation of blood platelets.
R f., resistance f. a bacterial plasmid (R plasmid) which carries genes for antimicrobial resistance; it can be transmitted to other bacterial cells by conjugation, as well as to daughter cells.
release f. a protein that binds directly to any stop **codon** that reaches the A site on the ribosome.
releasing f's factors elaborated in one structure (as in the hypothalamus) that effect the release of hormones from another structure (as from the anterior pituitary gland), including corticotropin releasing factor, melanocyte-stimulating hormone releasing factor and prolactin releasing factor. Applied to substances of unknown chemical structure, while substances of established chemical identity are called *releasing hormones*.
transfer f. (TF) a term for a supposed dialyzable factor released from sensitized lymphocytes with the capacity to transfer delayed hypersensitivity to a normal (nonsensitized) animal. No substance with such activity has been confirmed to exist.
transforming growth f.-β (TGF-β) a cytokine that inhibits the proliferation and activation of lymphocytes and other leukocytes.

factory farming a poorly defined term; a farming system in which industrial procedures are utilized, e.g. animals in crates moving past a fixed feeding point at prearranged intervals, battery accommodation, debeaking, single animal accommodation with no physical contact between animals. Often used by some as a derogatory and generic term for any large farm despite the fact that these might use traditional farming practices.

facultative [*fak'əl-ta"tiv*] not obligatory; pertaining to or characterized by the ability to adjust to particular circumstances or to assume a particular role. See also **accumulator plants**.

faculty [*fak'əl-te*] 1. a normal power or function, especially of the human mind. 2. the teaching staff and the facilities of an institute of learning, especially a university department.
f. in the field members of the veterinary profession who are formally associated with the university faculty so that they participate in the instruction of undergraduates who see practice with them. This supplements the somewhat narrower education provided by the university teaching hospital.

FAD 1. oxidized form of **flavin** adenine dinucleotide. 2. flea allergy dermatitis. 3. Foreign Animal Disease.

fadge a horse gait. See **foxtrot**.

$FADH_2$ reduced form of **flavin** adenine dinucleotide.

fading [*fād'ing*] 1. fading skin coloring. See Arabian fading syndrome (below). 2. declining in body condition, general health, activity and productivity.
Arabian f. syndrome (1) general health is unimpaired. Affected horses, usually Arabians, gradually lose their skin coloring on round, depigmented macules and multiple patches, most obviously around the muzzle and the perineum. It is a noninflammatory leukoderma. The cause is unknown. See also **vitiligo**. Called also pinky syndrome.
f. chick syndrome (2) in ostriches, used to describe any chick that is failing to gain weight and grow.
f. horse syndrome (1) see Arabian fading syndrome (above).
f. kitten/puppy syndrome (2) apparently normal young are born, but within the first week or two of life individuals within the litter gradually weaken and die. Not a specific disorder, but generally applied to infectious causes.
ostrich f. syndrome (2) (OFS) a syndrome of unknown etiology causing wasting of chicks 1 week to 5 months of age with high morbidity and mortality.
f. pig syndrome (2) see **neonatal** hypoglycemia.

Fadogia homblei a South African plant, member of the family Rubiaceae, and contains the polyamine toxin, pavetamine, which causes myocarditis and sudden death (gousiekte). Called also *F. fragrans*, *F. monticola*, *F. oleoides*, wild date, bosluisbessie, wildedadel.

fagopyrin a red, fluorescent pigment of the helianthrone family, present in *Fagopyrum esculentum* (buckwheat), and causing primary photosensitization.

fagopyrism [*fag-op'ī-riz-əm*] see ***Fagopyrum esculentum***.

F-5: Arabian fading syndrome.
From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

Fagopyrum esculentum [*fag"o-pi'rəm*] a plant of the Polygonaceae family; contains fagopyrin which causes primary photosensitization. Called also *F. sagittatum*, *F. syggitum*, *Polygonum sagittatum*, buckwheat.

Fagus a genus of trees in the family Fagaceae; the residue (or mast) of the fruits or beech nuts are made into a cake after their oil is expressed. The cake and the nuts may cause poisoning, manifested by severe abdominal pain, convulsions and death (beechmast poisoning). Includes *F. grandifolia* (American beech), *F. sylvaticus* (European beech).

Fahrenheit [*far'ən-hīt*] pertaining to Daniel Gabriel Fahrenheit, German physicist (1686–1736).
F. scale a temperature scale with the ice point at 32 degrees (32°F) and the normal boiling point of water at 212 degrees (212°F). For equivalents of Fahrenheit and Celsius temperatures, see Table 3.
F. thermometer one employing the Fahrenheit scale, that is, with the ice point at 32 degrees (32°F) and the normal boiling point of water at 212 degrees (212°F).

FAIDS feline acquired immune deficiency syndrome. See **feline** leukemia virus.

failure inability to perform or to function properly.
f. of passive transfer see maternal **immunity**.
f. to thrive used generally to describe young animals which are not gaining weight or growing; can be due to disease or management problems. In llamas, used to describe a syndrome in which the young are normal in early age, but later stop growing. Has no single cause.

faint [*fānt*] temporary loss of consciousness due to generalized cerebral ischemia; **syncope**. The term is not generally applied to animals. See also inherited congenital **myotonia** (fainting goats).

fairy clubs ***Ramaria*** macrofungi.

fairy grass ***Lachnagrostis filiformis***.

faking [*fāk'ing*] improper alteration of the appearance of a horse for purpose of fraud. Refers usually to teeth. See also **bishoping**.

Falabella Argentine miniature horse, less than 7 hands high, with a spotted coat color in most animals; a curiosity.

falcial [*fal'shəl*] pertaining to a falx.

falciform [*fal'sī-form*] sickle-shaped.
f. ligament a sickle-shaped sagittal fold of peritoneum that helps to attach the liver to the diaphragm and separates the right and left lobes of the liver. In carnivores it forms a fat-filled supporting and protective depot interposed between the xiphoid process and the overlying liver. It helps highlight the ventral boundary of the liver on radiographs.

F-6: Falabella (Argentinian dwarf pony).
From Sambraus HH, Livestock Breeds. Mosby, 1992.

Falco a genus of the family Falconidae (birds of prey). Includes *F. biarmicus*—lanner falcon, *F. columbaris*—kestrel, pigeon hawk or merlin, *F. mexicanus*—prairie falcon, *F. peregrinus*—peregrine falcon, *F. rusticolus*—gyrfalcon, *F. sparverius*—American kestrel, *F. tinnunculus*—Old World kestrel.

falcon a bird of prey. See ***Falco***.

falconiform a strong, fierce and large, diurnal bird of prey, of the order Falconiformes. Prey is warm-blooded vertebrates, fish, reptiles and amphibians; some eat carrion. With the nocturnal predators, the falconiforms comprise the raptors. The group includes Old World and New World vultures, hawks, harriers, eagles, sea-eagles, buzzards, osprey, falcons and secretary bird.

falconry the sport of hunting with trained raptors.

falcular [*fal'ku-lər*] see **falciform**.

Falculifer a genus of the family of mites Dermoglyphidae.

F. clornutus, F. rostratus feather mite of pigeons.

fall [*fawl*] in dog conformation, hair that hangs over the face.

fall fever [*fawl*] see **leptospirosis**.

falling [*fawl'ing*] while walking is a common clinical sign in severe ataxia and incoordination due to any cause.

f. disease severe nutritional deficiency of copper in cattle which causes sudden death due to myocardial degeneration.

f. to one side involuntary falling down, always to one side.

Fallopia convolvulus plant in the family Polygonaceae; contains an unidentified toxin which causes hepatogenous photosensitization; called also *Polygonum convolvulus*, cornbind, black bindweed.

fallopian tube [*fə-lo'pe-ən*] see **uterine** tube. Called also oviduct.

Fallot's tetralogy [*fə-lōz'*] see **tetralogy** of Fallot.

fallow a pale cream, light fawn, or pale yellow coat color in dogs.

false [*fawls*] said of diseases or plants that have a superficial resemblance to another plant or disease.

f. blusher see ***Amanita pantherina***—a mushroom.

false-negative [*fawls' neg'ə-tiv*] when the result of a test in a patient is negative when the disease or condition which is the subject of the search is present.

false-positive [*fawls'pos'ĭ-tiv*] 1. denoting a test result that wrongly assigns a patient to a diagnostic or other category. 2. a patient so categorized. 3. an instance of a false-positive result.

falsification [*fawl"sĭ-fĭ-ka'shən*] a deliberate misstatement or misrepresentation.

falx [*falks*] pl. *falces* [L.] a sickle-shaped structure.

f. cerebelli the fold of dura mater separating the cerebellar hemispheres.

f. cerebri a sickle-shaped fold of dura mater in the longitudinal fissure, which separates the two cerebral hemispheres.

familial [*fə-mil'e-əl*] occurring in or affecting members of a closely related group of animals more than would be expected by chance.

f. aggregations groups of diseased animals concentrated in related groups of animals. Called also familial clusters.

f. cluster see familial aggregations (above).

f. convulsions and ataxia of cattle an inherited, congenital disease of Aberdeen Angus calves characterized by intermittent tetanic convulsions which are replaced as the calf gets older by incoordination and then paralysis in older animals. The characteristic lesion is a selective cerebellar cortical degeneration.

f. disease diseases which occur at a higher than expected frequency in closely related groups of animals, where the relationship is a shared environment or an inheritance.

f. renal disease includes familial glomerulonephritis, nephropathy, juvenile nephropathy, all of dogs, familial glomerulonephritis of Finnish-Landrace sheep, progressive renal fibrosis of mutant Southdown sheep.

family [*fam'ĭ-le*] 1. a group of animals related by blood or their inheritance. 2. a taxonomic category below an order and above a genus.

famophos see **famphur**.

famotidine [*fam-o'tĭ-dēn*] a histamine H_2-receptor antagonist, similar to **cimetidine**.

famphur an organophosphorus insecticide used in cattle, sheep and goats. Called also famophos.

Fanconi syndrome [*fahn-ko'ne*] 1. a rare hereditary disorder in humans, characterized by hypoplasia of the bone marrow, and patchy brown discoloration of the skin due to the deposition of melanin, and associated with multiple congenital anomalies of the musculoskeletal and genitourinary systems. 2. a general term for a group of diseases marked by dysfunction of the proximal renal tubules with multiple defects in reabsorption. Occurs as an inherited disorder in Basenji dogs, but has been described in Norwegian Elkhounds and rarely in other breeds. There is increased urinary excretion of glucose (in the absence of diabetes mellitus), phosphorus, sodium, uric acid and amino acids, and metabolic acidosis.

F.-like syndrome a reversible renal tubular dysfunction reportedly induced by outdated tetracycline antibiotics.

fancy [*fan'se*] in the name of canary breeds, refers to a special, cultivated show type of bird, rather than the ordinary type. In dog and cat circles, it refers to the entire following of breeders, owners and admirers.

fang [*fang*] 1. a sharp or pointed tooth. See also fighting **teeth**. 2. a root of a tooth.

f. hole see **dental** star.

Fannia [*fan'e-ə*] a genus of flies in the family Muscidae that pupate in feces.

F. australis may cause tertiary blowfly strike.

F. benjamini cause insect worry.

F. canicularis, F. scalaris may cause urogenital myiasis.

fantail [*fan'tāl*] a horse's tail cut and pulled so that it protrudes only a few inches beyond the end of the butt.

fanweed [*fan'wēd*] see ***Thlaspi arvense***.

FAO Food and Agriculture Organization.

Far Eastern tick-borne encephalitis a human disease but transmissible to animals; caused by a *Flavivirus* closely related antigenically to the louping ill virus. Includes Russian spring-summer **encephalitis**.

Farabeuf retractor [*fahr"ə-boof'*] a hand- and finger-held surgical instrument with flat blades, one each end, designed for holding back tissues in deep cavities.

FARAD Farm Animal Residue Avoidance Database.

farad (F) the unit of electric capacity; capacity to hold 1 coulomb with a potential of 1 volt.

faradic currents [*fə-rad'ik*] see **faradism**.

faradism [*far'ə-diz-əm*] a method of passive exercise which can be applied locally to stimulate nerves and muscles. The faradic current applied can be varied as to pulse, wave form, voltage and location.

farcin-de-boeuf see bovine **farcy**.

farcy [*fahr'se*] the skin form of **glanders**. Called also glanders.

bovine f. a purulent lymphadenitis and lymphangitis of cattle in parts of tropical Africa, caused by *Mycobacterium farcinogenes* with *Nocardia farcinica* also playing a role. The lesions are mostly on the lower limbs but in occasional cases spread to the lungs. The animal's general health is not usually impaired but it may react positively to the tuberculin test.

f. buds cutaneous nodules seen in equine glanders.

f. cords see farcy pipes (below).

Japanese f. epizootic lymphangitis.

Neapolitan f. see **epizootic** lymphangitis.

f. pipes the enlarged subcutaneous lymphatic vessels seen in equine glanders. Called also farcy cords.

FARM Farm Animal Reform Movement.

farm [*fahrm*] agricultural enterprise based on land use.

f. animal animals used for the production of human and animal food and feed, fiber, skin and hide and, to the extent that they are used in farm work, bullocks and horses used in the hauling of freight and for transport.

f. chemical includes fertilizers, insecticides, herbicides, medicines, bird repellents, poison baits: a common source of poisoning for farm animals.

VetBooks.ir

dry f. a farm dependent on rainfall as its water resource—no irrigation is available.
family f. traditional basis of agriculture being gradually overcome in developed countries by amalgamation into larger farms dedicated to business efficiency.
irrigation f. a farm with a significant part of its area under irrigation.
pasture f. a farm whose principal resource is pasture for grazing animals.
f. profile a description of the resources and practices on a farm drawn up so that an assessor can estimate the financial viability and potential of the unit.
f. visits see **veterinary** farm visits.

Farm Animal Reform Movement (FARM) an American animal welfare group that is opposed to corporate farming and veal production.

Farm Animal Welfare Council (FAWC) an independent advisory body in the UK, whose terms of reference are to keep under review the welfare of farm animals on agricultural land, at market, in transit and at the place of slaughter; and to advise the Government of any legislative or other changes that may be necessary.

farm-unit surveillance system a surveillance system set up on a farm in which the farmer records specifically requested types of data relating to health and productivity.

farmer–feeder a farmer with his or her own feedlot or other fattening facility in which he/she fattens cattle or sheep reared on the home farm. Numbers are small, usually less than 1000 head of cattle at a time.

farmer's lung a subacute, immediate immune complex, hypersensitivity pneumonitis of humans caused by inhalation of dust from moldy hay, particularly the organism *Micropolyspora faeni*. The disease has some similarity to **atypical interstitial pneumonia** in cattle. See also **bird** -fancier's lung.

farmyard pox a general term used to describe the several pox-type lesions humans may acquire while working with animals; includes vaccinia, cowpox, goatpox, pseudocowpox, bovine papular stomatitis, horsepox, contagious viral pustular dermatitis (contagious ecthyma, orf).

Farquharson operation a technique for submucous resection of the prolapsed vagina which excises devitalized tissues and takes a tuck in the length of the vagina. A transverse, crescent-shaped piece of mucosa is stripped away and the edges of the incision sown together.

Farr test [*fahr*] a radioimmunoassay for DNA antibodies in the context of autoimmune disease. Obsolete.

farrier a person skilled in the techniques of making, fitting and remodeling horseshoes, including hot and cold fitting, orthopedic shoeing. The Worshipful Company of Farriers is the 650 year old governing body of farriers in England where it is responsible for setting standards and training of farriers.

farriery the techniques used by a farrier. Part of the occupation of blacksmith.

farrow see **farrowing**.

farrow-to-finish a pig raising system in which piglets are born, reared, weaned, grown, fattened in the one unit. Contrast with piglets moving to other operators at each major stage of their development.

farrow-to-wean a pig raising system in which piglets are born and reared up to weaning in the one unit, then moved to the care of specialist growers and fatteners.

farrowing the act of parturition in the sow; giving birth to a litter of piglets at term, average the 115th day after conception.
batch f. a group of sows due to farrow at about the same time are moved into the farrowing facility at the same time and kept there until all are farrowed; they are then moved out; the facility is then thoroughly sanitized ready for the next batch.
f. crate cage-like, open pipework unit large enough to hold a sow but too narrow to permit it to turn around. Maximizes use of space and mechanical services, minimizes labor and feed wastage, reduces crushing losses.
f. fever see **mastitis–metritis–agalactia**.
f. house a specialist accommodation unit devoted to the care of sows at farrowing.
f. hysteria affected gilts restless at farrowing savage piglets without cannibalizing them. Mortality rate very high. Likely to recur at next farrowing and gilt or sow should be culled.
induced f. hormonal initiation of parturition before full term, usually with a prostaglandin.
f. interval interval between litters; 6 months is the minimal objective and the interval depends on age of piglets at weaning and the farrowing to conception interval.
f. index the number of times a sow (herd) farrows in a 365 day period. It, along with litter size and mortality from birth to marketing, determines the number of pigs marketed per sow per year (PMSY). Weaning at 8 weeks of age potentially allows a farrowing index of 2. Weaning at 3 weeks of age potentially allows a farrowing index of 2.5.
isolated f. program sows are farrowed in isolation as a means of preventing the spread of enzootic diseases, especially atrophic rhinitis and enzootic pneumonia.
f. rate the number of sows that farrow divided by the number mated.

Fartlek training a form of physical training used in humans and applicable to Greyhounds and horses. Involves exercising over long distances continuously but with variation in the speed of movement.

fascia [*fash'e-ə*] pl. *fasciae* [L.] a sheet or band of fibrous tissue such as lies deep to the skin or invests muscles and various body organs.
f. adherens one of the methods of attachment of actin filaments to the sarcolemma in cardiac muscle; a continuous zone of attachment.
aponeurotic f. any broad, sheet-like tendon; see **aponeurosis**.
f. cribrosa the superficial fascia of the human thigh covering the saphenous opening; it does not have an obvious homologous counterpart amongst domestic animals.
croup and thigh f. extensive sheets between muscle masses giving appearance of distinct molding of muscles, especially amongst horses in hard training; gives extensive attachments to muscle fascicles and serves as an energy store.
crural f. the investing fascia of the leg.
deep f. a general term that refers to a fibrous membrane of variable thickness that invests and separates individual muscles, divides them into groups, forms sheaths for nerves and vessels, becomes specialized around joints, and generally binds regions into compact wholes. See also specific fasciae here.
endothoracic f. the fascia that supports and lies 'beneath' (superficial to) the serous lining of the thoracic cavity.
extrapleural f. a prolongation of the endothoracic fascia found at the root of the neck, important as possibly modifying the auscultatory sounds at the apex of the lung.
iliac f. covers the iliopsoas muscle below the wing of the ilium.
f. lata the external fascia of the thigh. An implant of this fascia is used in operation to correct penile deviation in the bull and for reconstruction of a ruptured cranial cruciate ligament in dogs.
leg f. a colloquial, non-anatomic term for the extensive fascia, especially in horses, which converts the upper limb into a series of osteofascial compartments. Consists of a superficial layer

F-7: Sow in a farrowing crate.

continuous with the thigh fascia, a middle layer formed by extensive aponeuroses, e.g. tensor faciae latae, biceps, semitendinosus, gracilis, sartorius muscles, and a deep layer between muscles and attaching them to the tibia.

orbital f. the faciae of the orbit, made up of the periorbita, orbital septum, fasciae of extraocular muscles and the fascial sheath of the eye, layers that connect muscles to bone, invest the eye and extend to the eyelids.

spermatic f. dense fascia surrounding the spermatic cord and testes; internal to the tunica dartos; in layers corresponding to the layers of abdominal muscle; an internal layer is adherent to the parietal layer of tunica vaginalis and an external layer adherent to the skin. Internal and external layers can be pulled apart manually during surgical exposure of the testis.

superficial f. 1. a loose fascial sheet lying directly beneath the skin. 2. subcutaneous tissue that may be fat-filled and contain cutaneous muscle.

thyrolaryngeal f. the fascia covering the thyroid gland and attached to the cricoid cartilage.

transverse f. that between the transversalis muscle and the peritoneum.

fascial sling [*fash'e-əl*] see **colposuspension**.

fascicle [*fas'ĭ-kəl*] a small bundle or cluster, especially of nerve, muscle, or tendon fibers.

fascicular [*fə-sik'u-lər*] clustered together; pertaining to or arranged in bundles or clusters; pertaining to a fascicle.

f. block see **hemiblock**.

fasciculated [*fə-sik'u-lāt-əd*] clustered together or occurring in bundles, or fasciculi.

fasciculation [*fə-sik"u-la'shən*] 1. the formation of fascicles. 2. a small local involuntary muscular contraction visible under the skin, representing spontaneous discharge of a number of fibers innervated by a single motor nerve filament.

fasciculus [*fə-sik'u-ləs*] pl. *fasciculi* [L.] fascicle.

f. arcuatus a tract of nerve fibers joining the frontal area with the temporal, occipital and parietal regions of the cerebrum.

f. atrioventricularis see atrioventricular **bundle** of His.

central nervous system f. a tract of nerve fibers of a common origin but usually identifiable only by experimental means.

f. cuneatus of medulla oblongata the continuation into the medulla oblongata of the fasciculus cuneatus of the spinal cord.

f. cuneatus of spinal cord the lateral portion of the dorsal funiculus of the spinal cord, composed of ascending fibers that end in the nucleus cuneatus.

f. gracilis of medulla oblongata the continuation into the medulla oblongata of the fasciculus gracilis of the spinal cord.

f. gracilis of spinal cord the medial portion of the dorsal funiculus of the spinal cord, composed of ascending fibers that end in the nucleus gracilis.

f. lenticularis a nerve bundle that connects the pallidum with the cerebrum and the brainstem.

f. longitudinalis the dorsal and medial part of this bundle of nerve fibers connects the vestibular apparatus with the oculomotor and trochlear motor nuclei as well as the medullary and spinal neurons responsible for the movements of the head and neck.

f. occipitofrontalis ventralis a nerve tract which connects the frontal cortex with the occipital lobe.

uncinate f. a tract of nerve fibers that connects the frontal and temporal lobes of the cerebral cortex.

fasciectomy [*fas"e-ek'tə-me*] excision of fascia.

fasciitis [*fas"e-i'tis*] inflammation of a fascia.

necrotizing f. a gas-forming, fulminating, necrotic infection of the superficial and deep fascia, resulting in thrombosis of the subcutaneous vessels and gangrene of the underlying tissues. It is usually caused by multiple pathogens.

nodular f., proliferative f. see nodular granulomatous **episcleritis**.

pseudosarcomatous f. see nodular granulomatous **episcleritis**.

fasciodesis [*fas"e-od'ə-sis*] suture of a fascia to skeletal attachment.

Fasciola [*fə-si'o-lə*] a genus of flukes (digenetic trematode) in the family Fasciolidae.

F. gigantica found in the liver of domestic livestock and is the common liver fluke in Africa and Asia. Similar anatomically to *F. hepatica* but much larger. Causes **fascioliasis**.

F-8: Necrotic skin lesion with underlying discoloration at elbow of dog with streptococcal necrotizing fasciitis. From Greene CE, Infectious Diseases of the Dog and Cat, 3rd Edition. Saunders, 2008.

F. hepatica found in the liver parenchyma and bile ducts of sheep, cattle and most other domesticated species and humans. In humans and horses, the unusual hosts, the flukes may be in lungs or other unusual sites and they are often in the lungs of cattle. Causes **fascioliasis**.

F. jacksoni found in elephants. Causes a disease similar to ovine **fascioliasis**.

fasciola [*fə-si'o-lə*] pl. *fasciolae* [L.] 1. a small band or striplike structure. 2. a small bandage.

fascioliasis [*fas"e-o-li'ə-sis*] the disease caused by infestation with **fasciola**. Called also distomatosis, distomiasis.

hepatic f. acute or chronic hepatic insufficiency results. Acute fascioliasis in sheep is characterized by sudden death due to blood loss from the liver. Chronic fascioliasis in sheep and cattle causes anemia, weight loss, submandibular edema and mucosal pallor. The livers are badly damaged due to fibrosis and cholangitis and are a cause of loss at abattoirs. See also **infectious** necrotic hepatitis, **bacillary** hemoglobinuria.

f.–ostertagiasis complex a disease of cattle in which the diarrhea of ostertagiasis is accompanied by the anemia of fascioliasis.

fasciolicidal [*fas"e-o-lĭ-sī'dəl*] lethal for *Fasciola* spp.

f. drugs includes drugs effective against mature flukes, including halogenated hydrocarbons, e.g. carbon tetrachloride, the substituted salicylanilides, e.g. bromsalans, closantel, rafoxanide, oxyclozanide, the substituted phenols, e.g. nitroxynil, and the benzimidazoles, e.g. albendazole, and drugs affecting immature flukes, e.g. diamphenethide and trichlorbendazole.

fasciolicide [*fas"e-o'lĭ-sīd*] fasciolicidal.

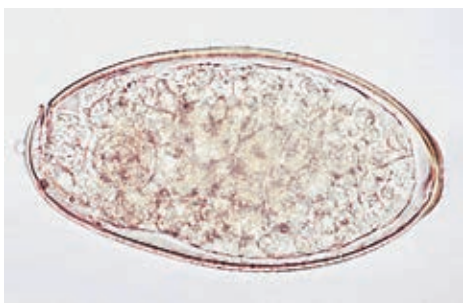
Fascioloides [*fas"e-o-loi'dēz*] a genus of flukes (digenetic trematode) of the family Fasciolidae.

F. magna found in the liver and rarely the lungs of cattle, sheep, deer, pig and horse and in many wild ruminants in North America and Europe. Sheep are the only species which appear to suffer ill effects because of damage to the liver by the unrestricted migration of the flukes in this species. In the other host species the flukes are enclosed in cysts.

fasciolopsiasis [*fas"e-o-lop-si'ə-sis*] infection with *Fasciolopsis* spp. Principally a disease of humans manifested by intestinal inflammation and ulceration.

Fasciolopsis [*fas"e-o-lop'sis*] a genus of trematodes of the family Fasciolidae.

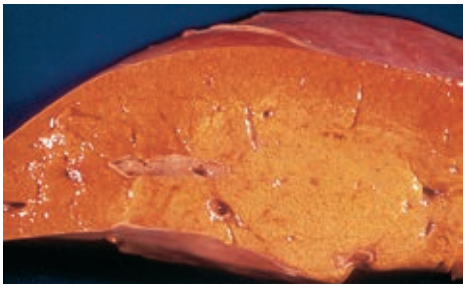
F. buski the largest of the intestinal flukes; found in the small intestines of humans and pigs throughout Asia. Causes **fasciolopsiasis**.



F-9: *Fasciola hepatica*. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

VetBooks.ir

fascioplasty [*fash'e-o-plas"te*] plastic repair of a fascia.
fasciorrhaphy [*fash"e-or'ə-fe*] repair of a lacerated fascia.
fasciotomy [*fash"e-ot'ə-me*] incision of a fascia.
fast [*fast*] 1. immovable or unchangeable; resistant to the action of a specific drug, stain or destaining agent. 2. quick.
f. death factor in blue green algal poisoning caused by cyanobacteria of water bloom; microcystin, a cyclic decapeptide.
fastigium [*fas-tij'e-əm*] [L.] 1. the highest point in the roof of the fourth ventricle of the brain. 2. the acme, or highest point. For example in fever: the high point of constant temperature between the increment and the decrement.
fasting [*fast'ing*] abstaining from eating; animals do not voluntarily abstain from food and cannot be said to fast. The closest similarities are in highly strung animals such as Merino weaners when under stress, and the food aversion created by some fungal toxins.
fatal f. syndrome a syndrome seen in obese macques, but the term may be used in reference to hepatic **lipidosis** in cats.
preoperative f. that imposed for some hours before surgery to minimize the risk of aspiration of food from the stomach.
fat [*fat*] 1. the adipose or fatty tissue of the body. 2. neutral fat; a triglyceride (or triacylglycerol) which is an ester of fatty acids and glycerol (a trihydric alcohol). Each fat molecule contains one glycerol residue connected by ester linkages to three fatty acid residues, which may be the same or different. The fatty acids may have no double bonds in the carbon chain (saturated fatty acids), one double bond (monounsaturated), or two or more double bonds (polyunsaturated). See also **adipose**.
f. absorption test assesses the absorptive capacity of the small intestine, quantitatively by measuring serum lipid concentrations or qualitatively by **plasma** turbidity, at timed intervals after the oral administration of fats.
animal f. a most important abattoir by-product providing edible fat for the human food chain. Products include oleo oil and oleo stearin used in margarine manufacture and dripping or lard for commercial baking. Nonedible fats go to leather dressings, glycerol manufacture and lubricants. Beef and pork fat are the valuable ones, mutton fat having too strong a flavor for edible fat.
boiling (burning) f. see **acrolein** poisoning.
f. cow syndrome a syndrome of anorexia and ketonuria that occurs in well-conditioned beef cattle in late pregnancy when energy intake suddenly decreases. Precipitated by events that interfere with the cow's feed intake for even short periods. Similar to fatty liver syndrome in dairy cattle except with fat cow syndrome there is a poor response to treatment and many cows die.
crude f. that part of a feed that is extractable by ether. Includes fat, oil, wax, resin and some pigments.
dietary f. a rich source of energy for carnivores and omnivores and to a limited extent ruminants. Are usually too expensive for widespread use other than as excipients. They aid in the formation of pellets and in reducing dustiness. Their problem is a tendency to rancidification unless an antioxidant is added.
f. embolism lesion created by a fat embolus.
f. embolus globules of fat; sufficient to act as emboli occur usually after trauma or surgery, but can also occur in hyperlipemia, myositis and atherosclerosis.
f. ewe pregnancy toxemia occurs when there is a voluntary restriction of food intake in late pregnancy associated with lack of ruminal expansion potential caused by excess abdominal fat and multiple fetuses. It is common in hobby sheep farms where it is thought that ewes should lamb with body condition scores greater than 4 rather than less than 3.5.
fecal f. increased amounts of fecal fat are present in disorders of maldigestion and malabsorption. Staining thin fecal smears with Sudan III is a semiqualitative test for fat content. Quantitative methods are also available, but other tests are used more commonly for diagnosing exocrine pancreatic insufficiency in dogs.
leaf f. the best edible fat from a pig carcass, from under the peritoneum.
f. marbling deposition of fat between muscle fibers. A highly desirable characteristic in beef. Is a guarantee of a carcass from a young animal.
f. necrosis necrosis in which fat is broken down into fatty acids and glycerol, usually occurring in subcutaneous tissue as a result of trauma. See also **lipomatosis**.
orbital f. fat located between the eye and the orbit; provides shock-absorbent surroundings.
f. phanaerosis conversion in the tissues of invisible fatty substances into fat which can be stained and thus become visible.
f. sheep a class of meat sheep of any age but usually greater than one year, well-covered and judged ready for slaughter to provide prime cuts of mutton.
soft f. unpleasant soft fat occurs in pigs fed for too long on kitchen swill.
toxic f. syndrome see **chicken** edema disease.
fat-granule cell see **gitter cells**.
fat hen ***Chenopodium album***.
fat lazy cat syndrome a lay term arising from early epidemiological studies of **feline** lower urinary tract disease, which indicated that decreased activity and obesity, leading to urinary retention, particularly in indoor cats, were risk factors in the development of this disease.
fat-rumped sheep a class of sheep, mostly Russian, similar to fat-tailed sheep but the large depot of fat is on the rump instead of the tail and although most of them are carpetwool sheep some are of Merino type with fine wool. Some breeds are Chuntuk, Kazakh, Jaidara.
fat-soluble said of substances that occur naturally in fats and are soluble in fat solvents but not in water.
fat-tailed sheep a class of carpetwool sheep with large deposits of fat in the tail and on the posterior thighs; heavyweight (rams weigh up to 400 lb), with high productivity of meat and tallow and a capacity to walk long distances on nomadic treks. Their fat tails may be either broad or S-shaped and weigh as much as 80 lb. Many breeds of this type exist in Europe, Asia and Africa. Popular breeds are Gissar (syn. Hissar), Edil'baev, Tadzhik, Saradzhin.
fatal [*fa'təl*] causing death; deadly; mortal; lethal.
fatality rate see **case** fatality rate.
fatigability [*fat"ĭ-gə-bil'ĭ-te*] easy susceptibility to fatigue.
fatigue [*fə-tēg'*] a state of increased discomfort and decreased efficiency resulting from prolonged exertion; a generalized feeling of tiredness or exhaustion; loss of power or capacity to respond to stimulation. Fatigue is a normal reaction to intense physical exertion, emotional strain or lack of rest. Fatigue that is not relieved by rest may have a more serious origin. It may be a sign of generally poor physical condition or of specific disease.
fattening operations farm animal enterprises in which animals in store or light body condition are fed intensively so as to produce carcasses carrying a good proportion of fat.
fatty [*fat'e*] pertaining to or characterized by fat. See also **adipose**.
f. acyl CoA generic term for long hydrocarbon chains, generally between C12 and C20, linked via thioester to coenzyme A.
f. acyl CoA:cholesterol acyltransferase (ACAT) enzyme catalyzing the transfer of fatty acyl group to cholesterol, irreversible physiologically. Its action regulates the number of LDL receptors by converting excess cholesterol (which inhibits LDL receptors) to cholesterol esters.
f. change deposition of greater than normal amounts of fat in a tissue.
f. tissue connective tissue made of fat cells in a meshwork of areolar tissue.
fatty acid organic compounds of carbon, hydrogen and oxygen that are esterified with glycerol to form fat. All fats are esters of fatty acids and glycerol, the fatty acids accounting for 90% of the molecule of most natural fats. A fatty acid consists of a long chain of carbon atoms with a carboxylic acid group at one end. *Saturated* fatty acids have no double bonds in the carbon chain. The medium and long chain fatty acids are solid at room temperature and are the components of the common animal fats, such as butter



F-10: Fatty liver in fat cow syndrome.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

VetBooks.ir

and lard. *Unsaturated* fatty acids contain one or more double bonds. The unsaturated fatty acids are liquid at room temperature and are found in oils such as olive oil and linseed oil. *Polyunsaturated* fatty acids have two or more double bonds. *Volatile fatty acids* (VFAs) including acetic, butyric and propionic acids are produced in large quantities in the rumen by the fermentative digestion of cellulose. Much of the energy consumption of ruminants comes from these VFAs in the situation in which other animals use glucose. See also 3-omega fatty acids (below).

branched chain f. a's. fatty acids usually containing a methyl branch; lowers the melting point compared with the equivalent straight chain fatty acid.

essential f. a's. (EFAs) the unsaturated fatty acids, linoleic and α-linolenic, cannot be synthesized by animals but are essential nutrients that must be supplied in the diet.

essential f. a. deficiency in dogs and cats, there is scaling, alopecia and seborrhea. Poor wound healing, immunosuppression and infertility have also been reported.

free f. a's. see non-esterfied fatty acids (below).

non-esterified f. a's. (NEFA) result from hydrolysis of triglycerides in adipose tissue and used as an energy source by many tissues or converted into triglycerides or ketones by hepatocytes. Increased concentrations in the blood are a biomarker of negative energy balance where there is insufficient glucose to meet energy needs. Used most often in assessment of periparturient dairy cows and to detect negative energy balance in camelids.

f.a. nutritional deficiency a secondary deficiency occurs in pigs on high-calcium diets. This may have a connection with parakeratosis of pigs caused by zinc deficiency and calcium excess in the diet. Requirements for dietary fat in dogs and cats are usually expressed as the essential **linoleic acid** and **arachidonic acid**.

omega-3 (n-3) f. a's. polyunsaturated fatty acids with the final double bond at the third bond from the methyl end (n-3). Examples are α-linolenic acid, eicosapentaenoic acid, docosahexaenoic acid. High concentrations found in cold water marine (fish) oils.

omega-6 (n-6) f. a's. polyunsaturated fatty acids with the final double bond at the sixth bond from the methyl end (n-6). Found in terrestrial plants, including safflower oil, corn oil and evening primrose oil, which is a rich source of linoleic and arachidonic acids.

f. a. synthase in bacteria, a multiprotein complex; in mammals, consists of two identical multifunctional polypeptides, each containing six enzyme activities and an acyl carrier protein. Important in the synthesis of palmitate as a major source of fatty acids.

volatile f. a's. short-chain, soluble in water and steam-distillable; acetic, butyric, propionic acids.

fatty liver-hemorrhagic syndrome a disorder that occurs as sporadic outbreaks in laying hens, especially those in cages. Hens are found dead with pale heads; large clots of blood in the abdomen have originated from the fatty liver; cause unknown.

fatty liver/kidney syndrome a biotin-responsive condition in broiler chickens characterized by slow growth, hypoglycemia and fatty infiltration of liver and kidney.

fauces [*faw'sēz*] the passage from the mouth to the pharynx, the throat.

faucitis [*faw-si'tis*] inflammation of the fauces.

faveira plant poisoning caused by ***Dimorphandra*** *mollis*.

faveolate [*fa-ve'o-lāt*] honeycombed; alveolate.

faveolus [*fa-ve'o-ləs*] see **foveola**.

favoring an animal is said to be favoring a leg when it avoids putting all of its weight on the limb, as in lameness.

favus [*fa'vəs*] a disease of fowls caused by *Microsporum gallinae*. Small white patches appear on the comb, then coalesce and thicken. If lesions spread to feathered parts typical favus shield-like scabs are formed. In long-standing cases scabs on the skin of the neck may be packed close together and, with their depressed centers, give a honeycomb appearance, hence the name honeycomb ringworm.

FAWC Farm Animal Welfare Council.

fawn [*fawn*] young of the small deer species. See also Table 16.

fawn calf syndrome inherited, congenital muscle contracture in Angus cattle, resulting in restricted movement of proximal leg joints, particularly those of the hind limbs. Affected cattle have poor hind-limb conformation with poor muscle mass. More severe cases have scoliosis or kyphosis. Less severe cases may survive to maturity.

fawn Irish setter syndrome see color dilution **alopecia**.

fazadinium bromide a nondepolarizing neuromuscular blocking agent which has some undesirable side-effects in dogs and cats and is not recommended.

FAZD Center National Center for Foreign Animal and Zoonotic Disease Defense.

Fc fragment a portion of an immunoglobulin molecule, produced by papain digestion, with parts of two heavy chains. It has no antigen-combining sites, but contributes to a number of effector functions such as the binding of antibody to Fc receptors on a variety of cells, the transfer of antibody from the circulation into colostrum, the transfer across the gut of the newborn, and the binding of complement.

5FC 5-flucytosine.

FCA Freund's complete adjuvant.

FCI Fédération Cynologique Internationale (World Canine Organisation).

FCR feed conversion rate.

FCV feline calicivirus.

FD fatal (lethal) dose; focal distance.

FDA Food and Drug Administration.

FDP fibrin(ogen) degradation products.

FE_{Ca} fractional excretion of calcium.

FE_{K} fractional excretion of potassium.

FE_{Na} fractional excretion of sodium.

FE_{P} fractional excretion of phosphorus.

FE_{urea} fractional excretion of urea.

Fe chemical symbol, *iron* (L. *ferrum*).

fear [*fēr*] a normal emotional response to consciously recognized external sources of danger such as those often associated with loud noises, threatening gestures, strange people and thunderstorms; it is manifested in animals by flight, by attack or by cringing.

feather 1. skin appendages of all birds. Comprise a central shaft with a flat vane on either side. The shaft consists of the calamus, embedded in the feather follicle, and the rachis which is outside the follicle. The calamus has an opening at each end, the superior and inferior umbilicus. The inferior umbilicus contains the dermal papilla which produces the pulp which continues up the interior of the calamus to end at and pass out through the superior umbilicus. Each feather has two parts, the mainfeather and a small afterfeather which is attached at the superior umbilicus. Barbs and barbules form the bulk of the vane. *Contour* feathers are large feathers that give the bird its shape. *Down* feathers are very small feathers. Semiplume feathers are intermediate in size between contour and down. Filoplume feathers are hairlike and remain after other feathers are plucked. They have only one small tuft of barbs. Specialized additional feathers include auricular feathers, around the ear lobes, oil gland feathers, at the oil gland on the tail, bristle feathers on the eyelids and powder feathers in aquatic birds. Remiges are the large flight feathers of the wing and rectrices the very long contour feathers coming from the side of the tail. These are the longest feathers of all in the domestic fowl. The feather coat consists of feather tracts (see below) or pterylae that are well defined and carry contour feathers and semiplumes. They are separated by unfeathered tracts called apteria. The distribution of special feathers of particular colors in particular pterylae is what gives the breeds their distinctive appearance. The feather coat is divided up into regions that include hackle, cape, cushion, saddle, wing bars, wing fronts and wing bows. 2. long hairs on the fetlocks of draft breeds of horses and in dogs, on the ventral body, caudal aspect of the legs, and ventral tail of spaniels and setters. 3. hairstreams that produce feather-like marks, in the haircoat of an animal. Called also cow-licks.

blood f. a growing feather, which has a rich blood supply. If broken, there can be significant blood loss.

f. clipping clipping the flight feathers will prevent flight for several months.

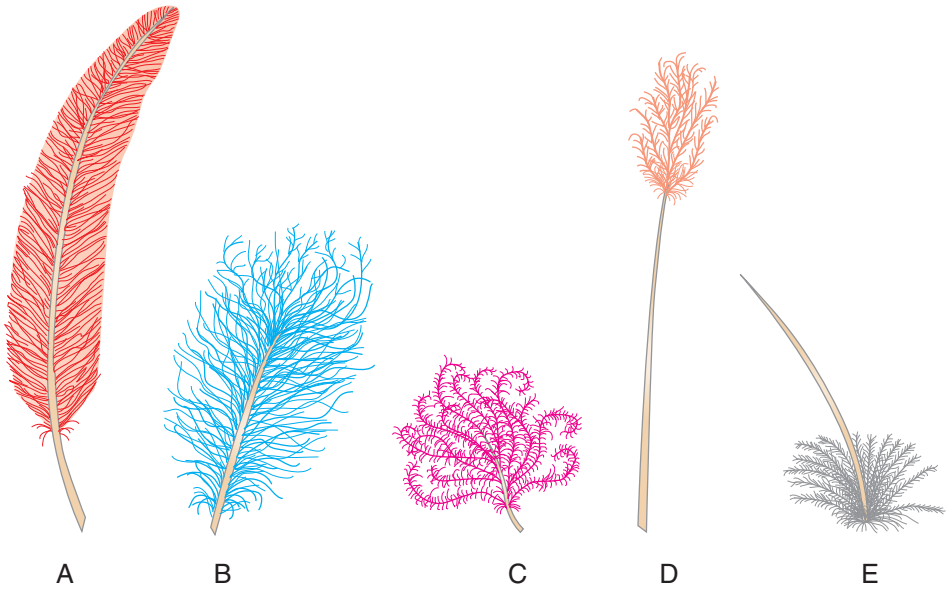
f. coat the total feather covering of a bird. Called also ptilosis.

contour f. the externally visible feathers which determine the bird's silhouette and the contours of the wings, body and tail.

f. cushion the plumage from the pelvic tract of the hen, forming the back cover.

f. cysts contain unerupted feathers and keratinous debris that may form large cutaneous lumps; occur most commonly on the wings of canaries.

VetBooks.ir

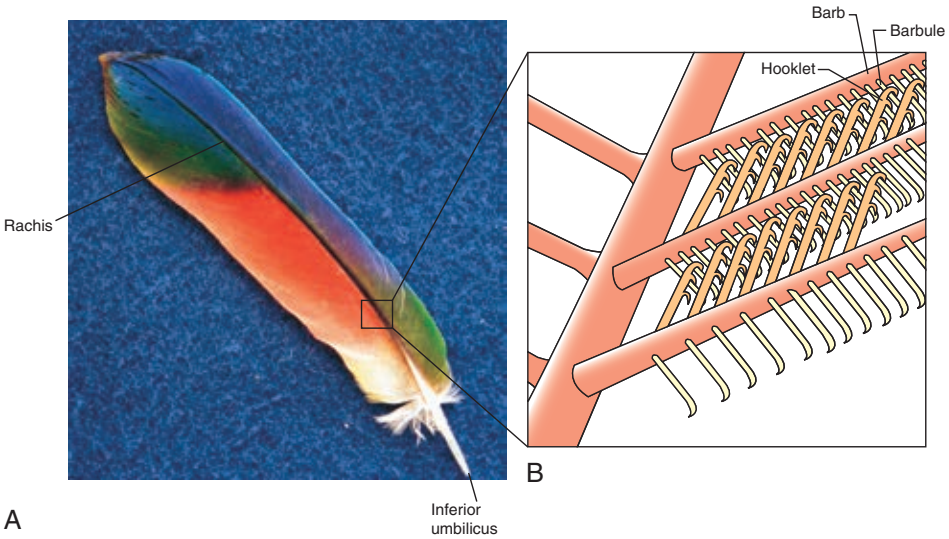


F-11: Types of feathers. (A) Contour. (B) Semiplume. (C) Down. (D) Filoplume. (E) Bristle.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

VetBooks.ir

F

f. disease an idiopathic disease of all varieties of cockatoos, lovebirds and budgerigars as young birds and characterized by a chronic, progressive, symmetrical loss of feathers, elongation of toenails and upper beak, which later becomes necrotic and sloughs off. Called also **psittacine** beak and feather syndrome.
filoplume f. hairlike feathers, commonest on neck, head that remain after plucking and which are thought to perform a mechanoreceptor role.
flight f. the strong feathers on the wings (remiges) and tail (rectrices) of birds used in flight. Called also remex (singular).
f. follicle a small tubular invagination of the skin with a fleshy dermal papilla at the bottom from which the feather grows. The papilla is inserted in the opening at the end of the quill.
f. muscles similar to erector pili muscles of mammals; attached to the sides of the follicle; capable of elevating or lowering entire groups of feathers.
f. picking a very common vice in pet birds; thought to be due to insecurity and manifested by the bird pecking off its own feathers. If blood is drawn cannibalism may develop.
pin f. newly emerging feathers, still in a keratin sheath.
primary f. flight feathers on the wings of birds born on the metacarpals and digits.
psittacine beak and f. disease see **psittacine** beak and feather disease.
f. pulling see feather picking (above).
f. pulp remnants of vascular tissue contained in the core of each feather.
saddle f. the plumage covering the back of male birds.
sex f's. the two or three top, curved feathers in the tail of a drake by which the sex can be determined (except in Muscovy ducks).
f. syndrome see **psittacine** beak and feather disease.
f. tract area of the skin of a bird in which feathers grow. They are well defined and separated by unfeathered areas called apteria. Called also pterylae.
feathered edge the trailing edge of a blood film (smear) where the film is thinnest; artifacts are most likely to appear in this region, but microfilaria, platelet clumps and unusually large cells may be deposited here.
feathering 1. a digital stroking of the vagina, done in whelping bitches to stimulate contractions and straining. 2. the emergence of feathers in avian young.
false f. (2) at one day of age, chicks with the gene K+ at the Z-linked feathering locus have longer primary feathers than those with the K^s gene. The difference can be used to determine sex at an early age. See also **Z-linked sexing**.
febantel [*feb'an-tal*] an imidazothiazole anthelmintic used in sheep, cattle and horses. Converted to fenbendazole in the body. Has a wide spectrum of efficiency against nematodes and is safe for use in all stages of pregnancy but should not be used within 7 days of bromsalans.



F-12: Contour feather. (A) General structure. (B) Microstructure of vane.
From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

febricide [*feb'rĭ-sīd*] lowering bodily temperature; an agent that so acts; an antipyretic.
febrifacient [*feb"rĭ-fa'shənt*] producing fever.
febrifuge [*feb'rĭ-fūj*] an agent that reduces body temperature in fever; antipyretic.
febrile [*feb'rĭl*] pertaining to fever; feverish.
fecal [*fe'kəl*] pertaining to or of the nature of feces.
f. bilirubin bilirubin in feces should be reduced to urobilinogen and its presence is suggestive of abnormality. See also **bilirubin**.
f. consistency classified as watery, soft, normal, dry and firm, scybalous.
f. eating see **coprophagy**.
f. egg count see **egg** count.
f. examination for worms adult worms in anthelmintic trials are collected in sieves after sampling of fecal output. Fecal larvae are counted or identified by special techniques, e.g. **Baermann technique**.
f. marking see **marking** (2).
f. output see fecal volume (below).
f. pellets an indication of normal health in sheep and goats, most rodents and wild ruminants. Horse balls are an equine approximation of pellets.
f. porphyria abnormally high concentrations of porphyrin in feces are indicative of the presence of porphyria or protoporphyria.
f. smudge pattern the pattern of feces wiped on the buttocks of calves by their tails is used as an indication of the type of abnormality of the feces and of the gut.
f. softeners agents that act against excessive drying of feces in the colon, aiding defecation. Psyllium hydrophilic mucilloid, methylcellulose and dioctyl sodium succinate are examples.
total f. fat a determination of the amount of fat found in a 24-hour sample. Used to identify maldigestion or malabsorption of fat.
f. volume varies a great deal depending on food and water intake. Otherwise is an indicator of digestive efficiency. Also expressed as fecal volume.
f. water varies with water intake and composition of feed, especially in herbivores. Otherwise an indicator of absorptive capacity of intestine, or enteropathy or use of purgatives.
fecalith [*fe'kə-lith*] a mass of very hard feces requiring surgical removal. Strictly speaking is a mineralized concretion around a fecal mass.
fecaloid [*fe'kəl-oid*] resembling feces.
fecaloma [*fe'kə-lo'mə*] a tumor-like accumulation of feces in the rectum; stercoroma.
fecaluria [*fe"kəl-u're-ə*] the presence of fecal matter in the urine; can occur with a rectovaginal fistula.
feces [*fe'sēz*] [L.] plural of *faex*; body waste discharged from the intestine; called also stool, excreta or excrement. The feces are formed in the colon and pass down into the rectum by the process of peristalsis. When the rectum is sufficiently distended, nerve endings in its wall signal a need for evacuation, which is made possible by a voluntary relaxation of the sphincter muscles around the outer part of the anus.
acholic f. see **acholia**.
black f. is usually **melena** due to the presence of digested blood pigments. Caused also by black pigments such as iron preparations and charcoal used in the treatment of diarrhea and poisonings.
bloody f. see **melena**.
night f. see **cecotroph**.

F-13: Fecalith in a horse at necropsy.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

watery f. diarrheic feces with a high water content.
Fechner's law a natural law relating the frequency of discharge from a nerve receptor to the strength of the stimulus. This law states that the response, or sensation, is linearly related to the logarithm of the stimulus.
feculent [*fek'u-lənt*] 1. having dregs or sediment. 2. fecal.
fecundity [*fə-kun'dĭ-te*] the ability to produce offspring frequently and in large numbers. In demography, the physiological ability to reproduce, as opposed to fertility.
f. gene as found in the Booroola strain of Merino sheep; causes increased ovulation rate.
FECV feline enteric coronavirus.
Federal Food, Drug and Cosmetic Act a regulation in the USA which requires all drugs used in animals to be approved by the Food and Drug Administration.
Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) regulations administered by the (US) Environmental Protection Agency which regulate dispensing and use of pesticides.
Fédération Cynologique Internationale (FCI) (World Canine Organisation); an authority representing numerous countries, mainly in Europe, which sets standards and recognizes dog breeds.
Fédération Dentaire Internationale System numbers are used to record the quadrant, the position of teeth and whether they are primary or secondary teeth.
Fédération Équestre Internationale an organization that produces a set of rules for the conduct of equestrian contests.
feed [*fēd*] materials of nutritional value fed to animals. Each species has a normal diet composed of feeds or feedstuffs which are appropriate to its kind of alimentary tract and which are economically sensible as well as being nutritious and palatable. Agricultural animals at pasture have a diet which is very variable and subject to naturally occurring nutritional deficiencies. See also **ration**.
acidification of f. used to enhance the stomach acidity, reducing pH and salmonella infection as well as improving pig performance.
f. additives see **food** additive.
f. as is basis feed sold or analyzed 'as is' with no adjustment for moisture content.
f. beets varieties of *Beta vulgaris* developed specifically to provide feed for cattle.
f. blocks nutritional materials pressed into a block form which animals lick or nibble. Used usually as a vehicle for protein and mineral–vitamin mixes with a variable amount of carbohydrate in the form of cereal grain or molasses.
botanical f. supplement herbs added to the diet as feed additives for flavoring, or at higher concentrations for a believed therapeutic effect.
f. budget comparison of feed required with feed available and likely to be grown during the time of the budget projection.
f. bunk see **feedbunk**.
compound f. a mixture of macro- and micronutrients in appropriate concentrations to be added to grain or concentrate mixtures to provide an adequate diet for high producing animals.
compounded f. feed produced by an animal feed manufacturer.
f. concentrates one method of supplying supplements and additives is to prepare a mix of these substances which is added to the basic ration. These mixes are called concentrates and, because they usually have a high content of cereal grains, mixes that contain only grain are also called concentrates.
f. conversion units of production (e.g. lb or kg weight gain) per unit of feed fed (lb or kg weight of feed fed) during a specified time period.
f. conversion rate (FCR) the number of pounds or kilograms of the ration needed to produce 1 pound or kilogram of animal under standard conditions.
f. deprivation complete or partial withholding of feed.
forage f. hay, ensilage, green chop. Any feed with a high fiber content relative to other nutrients.
f. grade said of a consignment of grain. Suitable for animal feed but not for human consumption.
f. grain cereal and other grains used as animal feed. Includes wheat, barley, oats, rye, corn, sorghum.
f. hopper a funnel shaped bin used to store grain or pelleted feed.
pelleted f. concentrated foods made into pellets. Have the advantages of ease of handling, lack of dust and waste, and a

VetBooks.ir

standard composition of the pellets. They have the disadvantage of additional cost and the potential danger of destruction of vitamins by heat or compression during processing. A common feeding technique in poultry and rabbits. See also ruminal **parakeratosis**.

f. poisoning a group of acute illnesses due to ingestion of contaminated food. It may result from allergy, toxemia from foods such as those inherently poisonous or those contaminated by poisons, foods containing poisons formed by bacteria or blood-borne infections. Food poisoning usually causes inflammation of the gastrointestinal tract (gastroenteritis).

f. refusal the patient is hungry but refuses to eat the particular feed.

f. residues materials left over from some treatment of pasture or crop, or of animal material from animals that have been treated with for example a chlorinated hydrocarbon. The residues may be toxic to the animals or their risk may be that of subsequent passage to the human food chain.

f. standards a set of tables which include the amounts of each dietary constituent required by each age and class of animal for maintenance and for different levels of production. When complemented by tables of composition of feeds it is then possible to accurately formulate rations for individual or groups of animals, a process essential for operation of a least-cost ration feeding program.

f. supplements nutritive materials which are feedstuffs in their own right and which are added to a basic diet such as pasture to supplement its deficiencies. Includes trace elements and macrofeeds such as protein supplements.

f. antibiotic supplement antibiotics fed to supply undefined growth promotion factors to farm animals.

f. probiotic supplement see **probiotic**.

f. utilization proportion of a feed which can be utilized by the patient for bodily functions; abnormality may be a characteristic of the feed or of the patient's digestive or metabolic processes.

Feed Ban Enhancement regulations introduced in the USA in 2009 to provide additional protections against BSE. It extends the prohibition of inclusion feedstuffs of BSE-high risk cattle material, including brain and spinal cord from cattle 30 months-of-age and older, from feed for ruminants to feed for all animals.

feedback [*fēd'bak*] the return of some of the output of a system as input so as to exert some control in the process. Feedback controls are a type of self-regulating mechanism by which certain activities are sustained within prescribed ranges. For example, the serum concentration of oxygen is affected in part by the rate and depth of respirations and is, therefore, an output of the respiratory system. If the concentration of oxygen drops below normal, this information is transmitted as *input* to the respiratory control center. The control center is thereby stimulated to increase the rate of respirations in order to return the oxygen concentration in the blood to within normal range. This series of events is an example of *negative feedback*, which always causes the controller to respond in a manner that opposes a deviation from the normal level (setpoint). It is, therefore, a corrective action that returns a factor within the system to a normal range. *Positive feedback* tends to increase a deviation from the setpoint. In other words, positive feedback reinforces and accelerates either an excess or deficit of a factor within the system. See also **homeostasis**.

feedbunk a bulk store of feed from which the herd or group can eat, thus avoiding rehandling. Requires a suitable means of controlling the amount to be eaten per day and avoiding wastage.

feeder [*fēd'ər*] 1. abbreviation for self-feeders. Used in feeding groups of animals at intervals of several days. Feed has to be dry and comminuted so that it will run down the spouts from the hopper into the troughs. 2. cattle feeder; a feedlot operator. In some US states feedlot operators are represented by a state cattle feeders association.

magnetic f. a self-feeding device in which a feed hopper is triggered to deliver a particular quantity of feed depending on the signal received from a transponder worn by an individual cow. The feeders are normally closed and will open only for cows carrying the transponder, and deliver either a set amount of feed to all cows or an amount specified in the particular cow's signal.

feeder livestock cattle, lambs or pigs being prepared for entry to or being fattened in a feedlot. Where livestock are fattened on pasture the term refers to castrated males, spayed heifers and cull animals offered for sale to farmers who will put them on good pasture for 3 to 9 months until they fatten. Called also store.

feedforward [*fēd-for'wərd*] the anticipatory effect that one intermediate in a metabolic or endocrine control system exerts on another intermediate further along in the pathway; such effect may be positive or negative.

feeding [*fēd'ing*] the taking or giving of food.

animal f. unit (AFO) see **AFO/CAFO**.

artificial f. feeding of a neonate with food other than its dam's milk.

f. behavior difficulty in prehension, quidding, regurgitation through the nostrils, coughing and aspiration are all abnormalities of feeding behavior of clinical importance.

challenge f. animals are fed more feed than their present production or growth justifies in an attempt to elicit higher production still.

dry f. the entire ration is made up of dried stored grain or hay.

enteral f. see **enteral** feeding.

floor f. used in large-scale pig-raising enterprises where many pigs must be fed during a short period. Requires that pigs be trained to defecate only in their dunging area and not recommended before pigs are 100 days of age. Probably increases the chances of disease spread through fecal/oral cycling of pathogens, even in minimal disease herds.

force f. administration of food by force to animals who cannot or will not receive it, e.g. anorexic animals or weak neonates.

intravenous f. administration of nutrient fluids through a vein. See also **intravenous** infusion.

lead f. see challenge feeding (above).

limit f. occurs where grower finisher pigs are fed a specific amount of food in a specific time period versus free access to feed. Limit feeding is common in Europe but not in the USA, except for gestating sows.

f. module a concentrated source of one type of nutrient, e.g. carbohydrate, fat or protein.

orphan f. diets for newborn animals which have lost their dams; milk replacers.

f. pattern 1. the procedure adopted by an animal while eating a meal. May consist of eating concentrates before roughage. Includes nibbling, gorging and sham feeding. See also feeding behavior (above). 2. the program of feeding adopted by the animal's custodian. Includes single, large meals, frequent, small snacks.

phase f. a poultry feeding strategy based on varying the amount and kind of feed fed with varying egg production levels, body weight, age, environmental temperature and cost of feed ingredients.

pellet f. the ration is converted into pellets, logs or bricks. Has the advantage of reducing wastage and facilitating feeding especially with automatic feeders. There is the additional cost of manufacturing.

restricted f. used in times of shortage, e.g. during a drought or as a management tool to modify the carcass, especially its fat content, or the milk yield at drying off. Restraint in feeding for animals that receive only stored feeds is simple. There are difficulties in animals that are at pasture or in feedlots on self-feeders. For pastured animals strip **grazing** is the accepted strategy. In feedlots it is customary to add a feed-aversion agent such as salt or flowers of sulfur to grain ration.

silo f. feed stored in a silo is augered out to surrounding troughs. May be grain or ensilage.

supplementary f. supplied to animals at pasture to supplement a shortfall due to inadequate supply of feed. In housed or lotted animals refers to supplements for special needs such as growth, pregnancy, lactation, flushing for fertility.

f. trial assessment of the performance of a particular feed, determined by any of several parameters, e.g. body weight (loss or gain), digestibility, growth rate, palatability, of the feed being fed over a set period of time.

tube f. feeding of liquids and semisolid foods through an esophageal or gastric tube.

feedlot a management system in which naturally grazing animals are confined to a small area which produces no feed and are fed on stored feeds. Called also feed yards. See also **dry** lot.

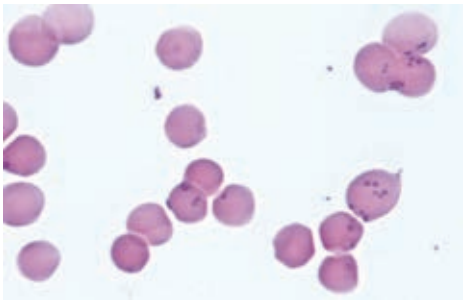
backgrounding f. a feedlot for the purpose of introducing young cattle to feedlot feeding.

backup f. one that is not always in use but which is established to utilize sporadic overruns of grain which are not economic to sell as food grain.

F-14: Tube feeding a neonatal puppy. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

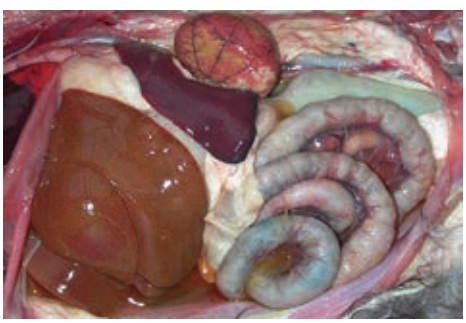
beef f. for the fattening of cattle. Many systems are used depending on feedlot costs, feed costs, availability of cattle, age at which cattle are available, value of output.
f. capacity common terminology used by commercial and custom feedlots for the maximum number of cattle that a feedlot can feed at any one time during the year.
f. consultant specialist, paid advisors in areas such as nutrition, health, milling, feed mixing, environment protection.
custom f. the feedlot operator does not own the cattle but charges a daily per head rate for accommodating and feeding cattle that belong to someone else.
European f. completely housed, usually over a cesspit, often completely controlled climatically and feeding a ration franchised by a central feed compounder. Based on veal calf and bull beef production.
farm f. a temporary feedlot maintained on a grain farm and used only when the prices of cattle and grain make feedlotting the most profitable option.
open pen f. the animals in the lot are without shelter.
permanent f. outdoor, large-scale feedlot utilizing steers from 6 to 18 months of age in short or long keep systems. Feed is cereal grain 75% and roughage 25% although programs vary enormously. Based on utilization of large volumes of cheap grain or other similar feeds such as brewer's or distiller's grains, beet pulp, orange pulp. A popular management unit in North America.
f. placements cattle placed in feedlots with the intent that they will be shipped for slaughter with a carcass grading select or better.
f. pneumonia see pneumonic **pasteurellosis**.
feedlotted the processing of animals through a feedlot.
feedstuff see **feed**.
fees [*fēz*] veterinarians' charges rendered to clients for services. They include charges for such things as hospitalization, mileage, drugs supplied and materials and services used. These are quite separate from, and should be recorded so, the professional fees charged for examination, diagnosis, advice on prognosis and prevention and treatment including surgery and obstetrics. Justifiable professional fees are based on the amount of time spent on the case, with a varying fee per hour depending on the difficulty and complexity of the problem, and on the specialist superiority of the veterinarian. Most veterinarians charge on a fee for service basis, including procedure-based fees for individual surgical procedures, but large animal practices sometimes arrange fees with individual clients on a contractual basis with agreement on an hourly fee or a fee per head per year.
common f. the fee for professional services agreed to formally or informally by a local group of the veterinary profession, usually determined by an interpractice survey of fees actually charged.
nil f. provision of a service by a veterinarian for which no fee is charged. The procedure does not diminish in any way the responsibility of the veterinarian for the patient's welfare.
feet [*fēt*] see **foot**.
FEF forced expiratory flow rate.
feg aftermath.
Fehling's solution [*fa'ling*] a solution used in clinical pathology as a test for glucose in solutions such as urine. (1) 34.66 g cupric sulfate in water to make 500 mL; (2) 173 g crystallized potassium and sodium tartrate and 50 g sodium hydroxide in water to make 500 mL; mix equal volumes of (1) and (2) at time of use.
FEI Fédération Équestre Internationale.
fel abbreviation for feline.
f. d I allergen airborne feline saliva allergen.
felbamate [*fel'bə-māt"*] a dicarbamate anticonvulsant shown to be useful in the treatment of focal seizures.
Felicola subrostratus [*fel-ĭ-ko'lə*] a biting louse of the superfamily Ischnocera. Found on cats.
Felidae the family of cats; includes the domestic **cat** (*Felis catus*) and feral cats of approximately the same dimensions. There are a large number of breeds of the former (see under **cat**) and a larger number of genera of the latter. See also **lion**, **tiger**, **leopard**, **lynx**, mountain **lion**, **jaguar**, **ocelot**, **cheetah**.
felids cats.
feline [*fe'līn*] of, or pertaining to, members of the family Felidae. See also **cat**.
f. agranulocytosis see feline panleukopenia (below).
f. actinic dermatitis see solar **dermatitis**.
f. astrovirus causes a mild, self-limiting diarrhea.
f. ataxia called also feline cerebellar ataxia; see feline panleukopenia (below).
f. atypical mycobacterial granulomas see opportunist **mycobacterial** granuloma.
f. autonomic polyganglionopathy see **dysautonomia**.
f. calicivirus see feline **calicivirus** infection.
f. cerebellar ataxia see feline panleukopenia (below).
f. corneal necrosis see **corneal** sequestrum.
f. cowpox infection a poxvirus infection of cats in the UK and Europe, caused by the cowpox virus, characterized by multiple nodules and ulcerated lesions of the skin, mainly on the head, face, ears, neck and forelimbs. Occasionally there is conjunctivitis and oral ulceration and rarely generalized infection with fatal respiratory involvement. Usually acquired by hunting small rodents, but cattle have been implicated, rarely. Cat-to-human transmission has been recorded as a rare event.
f. distemper see feline panleukopenia (below).
f. dysautonomia see **dysautonomia**.
f. endocrine alopecia see feline acquired symmetric **alopecia**.
f. enteric coronavirus (FECV) a cause of mild enteritis in kittens, but capable of mutating to the feline infectious peritonitis virus.
f. enteritis see feline panleukopenia (below).
f. granulomatous disease see feline infectious peritonitis (below).
f. herpesvirus the cause of feline viral **rhinotracheitis**.
f. immunodeficiency virus (FIV) a common lentivirus infection of cats considered to share many features in common with human immunodeficiency virus and human AIDS. Initial infection is accompanied by fever and lymphadenopathy which is followed by a long (several years) incubation period and then the gradual onset of a wide range of clinical signs that include fever, lymphadenopathy, anemia, lethargy, weight loss and nonspecific behavioral changes. Secondary bacterial, fungal and protozoal infections are common in more advanced stages. Cat bite wounds and saliva contribute to horizontal spread; there is a higher incidence of FIV antibody in male than female cats.
f. inappropriate elimination see elimination **behavior**.
f. infectious anemia (FIA) a hemolytic anemia caused by the red blood cell parasite, *Mycoplasma haemofelis*. Transmitted by fleas and ticks; infected cats experience a progressive, usually cyclic, decrease in numbers of red blood cells, weight loss, splenomegaly and occasionally icterus. The causative agent is found in blood smears in coccoid or ring shapes. Called also hemoplasmosis and previously hemobartonellosis.
f. infectious peritonitis (FIP) a progressive disease of the domestic cat and other Felidae caused by feline coronavirus (FCoV). Seroprevalence is high, but clinical disease does not always occur with young cats and those in colonies or multiple cat households at increased risk. The disease is characterized by an insidious onset, fever, weight loss, and any of a wide variety of clinical signs reflecting the highly variable distribution of vasculitis, granulomatous lesions and effusions. Immune complexes are believed to be important in the pathogenesis of this disease. In the effusive (*wet*) form, there are peritoneal or pleural effusions, or both. In the noneffusive (*dry*) form, typical pyogranulomas occur in almost any location. Anemia, hypergammaglobulinemia and elevated antibody titer to coronavirus assist in making a diagnosis. Called also feline granulomatous disease, feline infectious vasculitis.
f. infectious vasculitis see feline infectious peritonitis (above).
f. influenza see feline viral respiratory disease complex (below).

VetBooks.ir



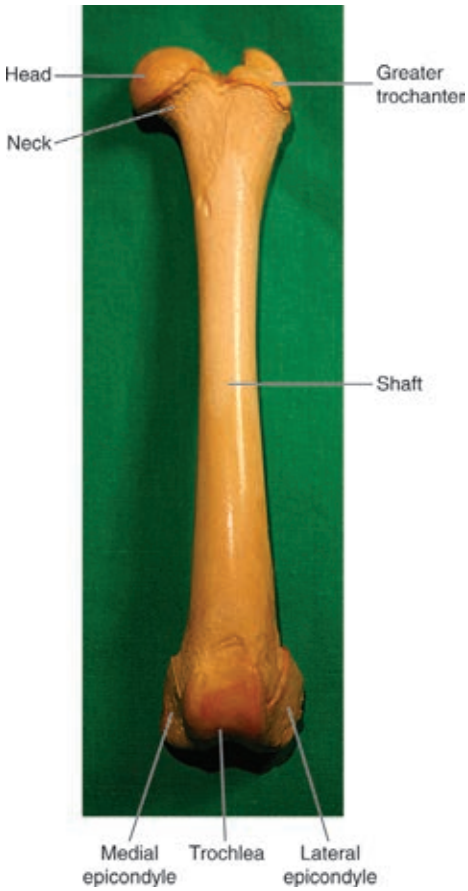
F-15: Blood smear from a domestic cat with feline infectious anemia showing a high proportion of the RBCs with single scattered or short chains of basophilic cocci or faint rings on the cell membrane that are characteristic of *Mycoplasma haemofelis* organisms.
From Cowell RL, Diagnostic Cytology and Hematology of the Dog and Cat, 3rd Edition. Mosby, 2007.

f. keratitis nigra see **corneal** sequestrum.
f. lentivirus infection see feline immunodeficiency virus (above).
f. leprosy see feline **leprosy**.
f. leukemia virus (FeLV) an oncornavirus, antigenically related to other leukemia viruses; exists in three subtypes, A, B and C. Subclinical infection occurs in many cats, but some become persistently viremic carriers, shedding the virus in saliva and urine. The virus causes neoplastic (lymphosarcoma and other lymphoid tumors and myeloproliferative disease) and many non-neoplastic (bone marrow suppression, including nonregenerative anemia, thymic atrophy and immunosuppression) diseases and is associated with reproductive failure, glomerulonephritis and autoimmune hemolytic anemia. The immunosuppression predisposes to a very wide spectrum of disease, particularly the infectious agents of feline infectious anemia, feline infectious peritonitis, viral respiratory disease, stomatitis, abscess, etc.
f. lower urinary tract disease (FLUTD) a collection of clinical signs which typically includes hematuria, dysuria, and partial or complete obstruction of the urinary tract, microcalculi or excessive amounts of struvite crystals. The cause is unknown but appears to be multifactorial, with mineral and water content of the diet, urinary pH and water turnover having some effect on the development of the disease. Recognized risk factors are being overweight or inactive, low water intake and indoor housing. Called also the fat, lazy cat syndrome. See also interstitial **cystitis**.
f. mammary fibroadenomatous hyperplasia see feline **mammary** hyperplasia.
f. mammary hyperplasia. see feline **mammary** hyperplasia.
f. obstructive uropathy mucous or mucocrystalline plugs in the distal urethra, most often the penis in males, secondary to feline lower urinary tract disease, causing partial or complete obstruction to urine flow. There are frequent attempts to urinate with straining, sometimes resulting in passage of small amounts of blood stained urine, licking of the perineal area, and evidence of discomfort. Often undetected for several days by which time there is dehydration, metabolic acidosis and serious electrolyte abnormalities, particularly hyperkalemia. As well as treatment to relieve the obstruction, long-term management is required to reduce the risk of recurrence.
f. oncornavirus cell membrane antigen (FOCMA) see feline oncornavirus cell membrane **antigen**.
f. panleukopenia (FPL) an acute disease, particularly of young cats, caused by feline parvovirus (FPV). Clinical signs are depression, vomiting, diarrhea and marked dehydration. There is a panleukopenia of varying severity that aids in diagnosis. Intrauterine or perinatal infection may cause fetal death, abortion, neonatal deaths, and a degeneration of the external layer of the cerebellum that results in a cerebellar ataxia in surviving kittens. Most infections are subclinical, but in clinical cases mortality is high. The disease can be prevented by vaccination at an early age. All felids, mustelids and procyonids are also susceptible to feline panleukopenia virus infection. See also **cerebellar** hypoplasia.
f. parvovirus see feline panleukopenia (above).
f. picornavirus see feline **calicivirus** infection.
f. pneumonitis infection by *Chlamydophila felis* causes a chronic, often recurrent, conjunctivitis and infrequently lower respiratory disease. See also feline viral respiratory disease complex (below).
f. restraint bag a bag made of heavy canvas, about 12 in × 6 in with zippers at strategic points so that a cat can be popped in, with its head free, and one limb at a time exteriorized.
f. retroviral test tests for feline leukemia virus and feline immunodeficiency virus; combined tests are available.
f. rhinotracheitis see feline viral **rhinotracheitis**.
f. rotavirus causes a mild, self-limiting enteritis, usually in very young kittens. Infections are often subclinical.
f. sarcoma virus (FeSV) a recombinant virus in the family *Retroviridae* formed from feline leukemia virus and cat cellular DNA *onc* gene sequences. It is the cause of multicentric fibrosarcomas in cats.
f. spongiform encephalopathy (FSE) the counterpart of **bovine spongiform encephalopathy** (BSE) and caused by the same agent. Infection occurs by ingestion of cat food containing specified **risk** materials. The mean age at onset is 6 (2–10) years with a gradual onset of clinical signs including behavioral changes (particularly hyperexcitability), hindlimb ataxia, inability to judge distances, hypermetria, hyperesthesia and altered grooming.
f. syncytia-forming virus (FeSFV) see foaming **virus**, ***Retroviridae***.
f. T-lymphotropic virus an earlier name for feline immunodeficiency virus (above).
f. ulcerative stomatitis an inflammatory disease of the oral mucosa, particularly the fauces, hard palate, gingiva and gums. The cause is unknown, but feline calicivirus is sometimes isolated, and immunosuppression may predispose.
f. upper respiratory disease (FURD) see feline viral respiratory disease complex (below).
f. urological syndrome (FUS) see feline lower urinary tract disease (above).
f. viral respiratory disease complex mild to severe upper respiratory infection characterized by a high morbidity, low mortality, fever, ocular and nasal discharges, sneezing, coughing and ulcerations of the tongue. Feline herpesvirus-1 (FHV) and feline calicivirus (FCV) are the most common etiological agents, occurring with about equal frequency; less often, *Chlamydophila felis* or mycoplasmas are involved. It is often not possible to identify the causative agent on the basis of clinical signs, but in general calicivirus is associated with a milder illness, marked by ulcerations of the tongue, lips, nasal philtrum, and sometimes skin, while feline herpesvirus causes a more severe disease with sneezing, coughing and ocular lesions that include chemosis, keratitis and corneal ulceration. Lower respiratory disease occasionally occurs, most often in kittens. Vaccines are available to prevent these infections. See also feline **calicivirus** infection, feline viral **rhinotracheitis**. Called also cat flu, feline influenza.
f. viral rhinotracheitis (FVR) see feline viral **rhinotracheitis**.
Feline Advisory Bureau (FAB) a charitable organization in the United Kingdom promoting the health and welfare of cats.
felinine an amino acid in the urine of cats. Precursor of 3-mercapto-3-methylbutan-1-ol (MMB) a putative cat pheromone that gives cat urine its typical odor.
Felis a genus of cats in the family Felidae; includes the domestic cat (*F. catus*).
Fell pony an English riding pony similar to the Dales pony but smaller. Black, brown, bay and occasionally gray; 13–14 hands high.
F. p. syndrome a congenital, eventually fatal disease that manifests with a profound anemia and immunodeficiency associated with a B-lymphopenia and a failure to produce immunoglobulins. Most die before 3 months of age from infections.
fellmonger strictly a person who harvests wool from hides or dead sheep; common usage is person who deals in hides or skins of animals, especially sheepskins.



F-16: Feline infectious peritonitis showing fluid in the peritoneal cavity and fibrinous deposits on viscera.
From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

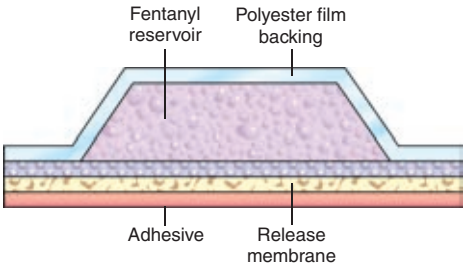
fellmongering removal of wool from hides by bacterial action or treatment with chemicals. Called also sweating.
felt [*felt*] woollen fabric used as lining for harness.
felting [*felt'ing*] the property of wool by which fibers interlock and form a compact mass.
feltwork [*felt'wərk*] a complex of closely interwoven fibers, as of nerve fibers.
FeLV feline leukemia virus.
female [*fe'māl*] 1. an individual of the sex that produces ova or bears young. 2. feminine.
f. genital system anomalies includes hermaphroditism, freemartinism, ovarian hypogenesis and aplasia, imperforate hymen, segmental aplasia of the paramesonephric duct, including uterus unicornis, uterus didelphys double cervix, cervical diverticula.
f. pseudohermaphrodite see **pseudohermaphroditism**.
feminine [*fem'ĭ-nin*] pertaining to the female sex, or having qualities normally characteristic of the female.
feminism [*fem'ĭ-niz-əm*] the appearance or existence of female secondary sex characters in the male.
feminization [*fem"ĭ-nĭ-za'shən*] 1. the normal induction or development of female sex characters. 2. the induction or development of female secondary sex characters in the male, e.g. in testicular **Sertoli cell** tumor.
testicular f. a condition in which the subject is phenotypically female and is of XY chromosomal sex.
feminizing syndrome [*fem'ĭ-nīz"ing*] recognized rarely in dogs and usually caused by Sertoli cell tumors. Some cases caused by Sertoli cell tumor of a testicle. Manifested by attractiveness to other males, symmetrical alopecia, atrophy of the penis and unaffected testis, mammary enlargement, swelling of the prepuce and prostate, and lack of libido.
femoral [*fem'or-əl*] pertaining to the femur or to the thigh.
f. artery the chief artery of the thigh. See Table 9.
f. canal the passage that conducts the femoral vessels from the abdomen to the thigh bounded cranially and caudally by the sartorius and pectineus muscles.
f. head rounded proximal articulating extremity of the femur; participates in the hip joint.
f. head necrosis see **Legg–Calvé–Perthes disease**.
f. hernia protrusion of a loop of intestine into the femoral canal, a tubular passageway that carries nerves and blood vessels to the thigh.
f. ligament properly called the ligament of the femoral head which runs from the depths of the acetabulum (hip socket) to the pit (fossa) in the head of the femur. See Table 12. Formerly called the round ligament of the hip-joint.
f. nerve the largest branch of the lumbar plexus. It innervates the iliopsoas and quadriceps femoris muscles and gives off the saphenous nerve. See Table 14.
f. slipped head see **femoral** epiphyseolysis.
f. vein the chief vein of the thigh. See Table 15.
femorocele [*fem'o-ro-sēl"*] see **femoral** hernia.
femoropatellar [*fem'o-ro-pə-tel'ər*] pertaining to or emanating from the femur and the patella.
femorotibial [*fem"o-ro-tib'e-əl*] pertaining to or arising from the femur and the tibia.
f. osteoarthrosis a degenerative joint disease of cattle affecting especially the stifle joint. See also inherited **osteoarthritis**.
femto- (f) [Danish] *fifteen*; a prefix used in the metric system of naming units of measurement to indicate one-thousand-million-millionth (10^{-15}) of the unit designated by the root with which it is combined.
femur [*fe'mər*] pl. *femora* [L.] 1. the thigh bone, extending from the pelvis to the stifle. The greater and lesser trochanters are the two processes (prominences) at the proximal end of the femur. See Table 10. 2, the thigh.
fenbendazole [*fən-ben'də-zōl*] a broad-spectrum, benzimidazole anthelmintic for use against nematodes in sheep, cattle and horses; can be acutely poisonous in cattle if administered with or within a few days of bromsalans (Fascol), having been administered as a treatment for liver fluke.
fence [*fens*] an outdoor partition effective in keeping animals apart, with usually three types on a farm. A perimeter fence that must be secure to keep animals in and out and generally constructed of wood, stone, barb wire, or high tensile wire. Permanent subdivisions may be constructed of the same materials and allow subdivision of animals, rotational grazing, arable farming areas, etc. More flexibility is provided by portable fencing such as electric fencing.
electric f. temporary, usually one or two strands of wire, electrified by low voltage batteries, used to confine cattle, pigs or horses to specified sections of a pasture. Similar wires are added to wooden and other fences to prevent animals rubbing against them. Provides a psychological, rather than a physical, barrier and animals must be trained to the fence under controlled conditions so that they develop an aversion to challenging the fence. The fence may be a single wire energizer grounded system, but better control is obtained with a two wire earth-return system. Power is from a battery, which often is solar powered, or from mains electricity. This operates the energizer which sends out a high voltage, low amperage current in a pulse. When an animal comes in contact with a live wire, it shorts the current to the ground and the animal receives a shock. Electric fencing is portable and can be key to pasture management as it allows the rancher to easily establish pastures for rotation or strip grazing. Perimeter fencing and permanent fencing can be electric fence, but is best done with electrified 12.5 gauge high tensile wire.
introductory f. one that will keep animals apart but which is pervious enough, e.g. made of wire netting, that there is plenty of opportunity for visual, olfactory and licking contact of new introductions before actually co-mingling them.
fenchlorphos an organophosphorus insecticide suitable for use as a systemic treatment for warble fly larvae. Is an anticholinesterase and capable of being poisonous.
fenestra [*fə-nes'trə*] pl. *fenestrae* [L.] a window-like opening.
f. cochleae a round opening in the inner wall of the middle ear covered by the secondary tympanic membrane; called also round window.
sternal f. large openings in the caudal edge of the sternum of birds.
f. vestibuli an oval opening in the inner wall of the middle ear, which is closed by the stapes; called also oval window.
fenestrate [*fen'əs-trāt*] to pierce with one or more openings.



F-17: Femur of the dog. From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

VetBooks.ir

fenestration [*fen"əs-tra'shən*] 1. the act of perforating or the condition of being perforated. 2. the surgical creation of a new opening in the labyrinth of the ear for the restoration of hearing in otosclerosis.
aortopulmonary f. aortic septal defect.
f. heart valves naturally occurring fenestrations are common in horses. They appear to be congenital and to exert no significant deleterious effect.
fenitrothion an organophosphorus contact insecticide used in agriculture. Has a low toxicity for animals.
Fenn effect the proportionality between work done by a muscle contraction and the shortening heat (heat produced by the muscle contraction).
fennec (*Vulpes zerda*) small, large-eared, nocturnal desert fox from North Africa and Arabia. It is a sandy buff-color and has hairy soles on its feet to facilitate walking on sand.
fenoprofen [*fen"o-pro'fən*] a nonsteroidal anti-inflammatory drug.
fenoprop a phenoxyacid herbicide of very low direct toxicity but capable of causing indirect nitrite poisoning by altering the metabolism of treated plants.
fenoxycarb a carbamate insecticide, with ovicidal and larvicidal activity against fleas.
fenprostalene a prostaglandin $F_{2\alpha}$ analogue used to cause abortion and synchronize estrus in cattle.
fentanyl [*fen'tə-nəl*] a piperidine derivative; the citrate salt is used as a narcotic analgesic, and in combination with droperidol or butyrophenone as a neuroleptanalgesic.
f. patch cutaneous patches containing a reservoir of fentanyl for continuous, controlled release for absorption through the skin.
fenthion an organophosphorus insecticide previously used as a pour-on, dust or spray to control grubs, and in dogs to control fleas.
fenugreek [*fen'u-grēk*] see ***Trigonella foenum-graecum***.
fenuron a phenylurea type herbicide with very low toxicity for animals.
fenvalerate a synthetic pyrethroid insecticide used in ear tags for the control of head fly and ear ticks on cattle and topically on many species for control of fleas, flies, tick and lice.
fer-de-lance virus a paramyxovirus isolated from snakes with respiratory disease.
feral [*fe'rəl*] untamed; often used in the sense of having escaped from domesticity and run wild.
Ferguson's reflex [*fur'gə-sən*] abdominal muscle contraction stage of parturition initiated by stretching of pelvic soft tissues, primarily the cervix.
Fergusson angiotribe [*fur'gə-sən*] heavy duty scissor-type forceps with ratchet handles and blade faces that are cross-hatched and have a matching longitudinal male-female groove running their length. Designed for hemostasis and prevention of subsequent bleeding.
ferkelgrippe [Ger.] see **swine** influenza.
ferment [*fər-ment'*] 1. to undergo fermentation. 2. any substance that causes fermentation.
fermentation [*fur"mən-ta'shən*] the anaerobic enzymatic conversion of organic compounds, especially carbohydrates, to simpler compounds, especially to lactic acid or ethyl alcohol, producing energy in the form of ATP. An essential part of the digestion that goes on in the rumen and in the colon and cecum of horses. Used commercially in the preparation of alcoholic beverages and the generation of by-products used as animal feed. Also the basic process in the manufacture of antibiotics.
batch f. one of the methods used in the industrial production of microorganisms, where the sterile growth medium is inoculated with the microorganisms and no additional growth medium is added.



F-18: Fentanyl patch.
From Boothe DM, Small Animal Clinical Pharmacology and Therapeutics, 2nd Edition. Saunders, 2000.

F-19: Ferguson angiotribe forceps: curved.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

fermium (Fm) [*fur'me-əm*] a chemical element, atomic number 100, atomic weight 253. See Table 4.
fern [*fərn*] a terrestrial vascular plant of the order Filicales; reproduction is through spores. A few ferns are poisonous. See ***Pteridium Equisetum***, ***Cheilanthes***, ***Dryopteris***, ***Marsilea***. Called also pteridophyte.
bracken f. see ***Pteridium***.
buckle f. ***Dryopteris***.
bungwall f. ***Blechnum***.
Byfield f. ***Bowenia*** *serrulata*; a cycad, not a fern.
cloak f. ***Cheilanthes***.
jimmy f. *Cheilanthes sinnata*.
male f. *Dryopteris filix-mas*.
mulga f. *Cheilanthes sieberi*.
nardoo f. see ***Marsilea***.
necklace f. see ***Asplenium flabellifolium***.
rock f. ***Cheilanthes sieberi***.
rusty male f. *Dryopteris borreri*.
ferning [*fərn'ing*] the appearance of a fernlike pattern in a dried specimen of cervical mucus, an indication of the presence of estrogen.
-ferous word element. [L.] *bearing, producing*.
ferredoxin [*fer"ə-dok'sin*] a nonheme iron-sulfur protein having a very low redox potential; the ferredoxins participate in electron transport in photosynthesis, nitrogen fixation and various other biological processes.
ferret a member of the family Mustelidae (the weasels). The common ferret (*Mustela putorius furo*) is a domesticated relative of the European **polecat** (*M. putorius putorius*). They are very popular as pets and have been selected to produce a variety of coat colors and patterns. Ferrets are also kept for the sport of **ferreting**, but the sport and ferret ownership generally are illegal in some jurisdictions, including some states in the USA. The female ferret is called a *jill*, the male a *hob*, and the offspring, kittens. Ferrets are highly susceptible to infection by the canine distemper virus and human influenza viruses. See also **ferret-polecat hybrid**.
black-footed f. (*Mustela nigripes*) the only ferret native to North America, it is an endangered species.
f. kit disease a rotavirus infection of young kits causing diarrhea with high mortality.
f.-polecat hybrid ferrets and polecats can interbreed, usually in feral or wild populations, as has occurred extensively in New Zealand where both species were introduced.

VetBooks.ir

F-20: Domestic ferret.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

ferreting regarded by some as a field sport, ferrets are used to flush rabbits out of their warrens so they can be netted and killed, which is illegal in some places.

ferric [*ferʹik*] containing iron in its plus-three oxidation state, Fe(III) (sometimes designated Fe^{3+}).
f. chloride $FeCl_3$, used as a reagent and topically as an astringent and antiseptic.
f. cyanoferrate, f. hexacyanoferrate see **Prussian blue**.
f. oxide see **saccharated iron**.

ferritin [*ferʺi-tin*] the iron–apoferritin complex, one of the forms in which iron is stored in the body.
serum f. species-specific mmunologic assays are used to detect ferritin concentrations in the serum of dogs and cats. Low serum ferritin (hypoferritinemia) does not correlate closely with low body stores in dogs and, since ferritin is an acute-phase protein, an increase in concentration (hyperferritinemia) associated with inflammation may obscure underlying iron deficiency.

ferrochelatase [*ferʺo-keʹlə-tās*] an enzyme involved in the incorporation of elemental iron in the final step in the biosynthesis of heme. Called also heme synthetase.

ferrocyanide [*ferʺo-siʹə-nīd*] an organic compound used in industry that is reputed to be virtually harmless in spite of its cyanide content.

ferrokinetics [*ferʺo-kĭ-netʹiks*] the turnover or rate of change of iron in the body.

ferroprotein [*ferʺo-proʹtēn*] a protein combined with an iron-containing radical; ferroproteins are respiratory carriers.

ferrotherapy [*ferʺo-therʹə-pe*] therapeutic use of iron and iron compounds.

ferrous [*ferʹəs*] containing iron in its plus-two oxidation state, Fe(II) (sometimes designated Fe^{2}+).
f. fumarate the anhydrous salt of a combination of ferrous iron and fumaric acid; used as a hematinic.
f. gluconate a hematinic that is less irritating to the gastrointestinal tract than other hematinics, and generally used as a substitute when ferrous sulfate cannot be tolerated.
f. selinite is insoluble and soils rich in iron oxide tend to be nontoxic because of the formation of this compound.
f. sulfate the most widely used hematinic for the treatment of iron-deficiency anemia. It is believed to be less irritating than equivalent amounts of ferric salts and is more effective.

ferroxidase [*fer-okʹsĭ-dās*] a substance that oxidizes iron thus facilitating the transfer of iron to transferrin.

ferruginous bodies [*fə-rooʹjĭ-nəs*] fine fibers coated with amorphous protein and ferritin, found in lungs, and usually taken as evidence of exposure to asbestos inhalation. May be associated with the occurrence of mesotheliomas.

ferrum (Fe) [L.] *iron*.

fertility [*fər-tilʹĭ-te*] the capacity to conceive or to induce conception. In commercial animals includes the ability to reproduce prolifically which can be defined in terms of expectations for each species; there is a continuous spectrum from very high to very low or absent fertility. See also **infertility**.
f. index takes into account pregnancy rate to first service, services per conception, calving to conception interval, culling rate.

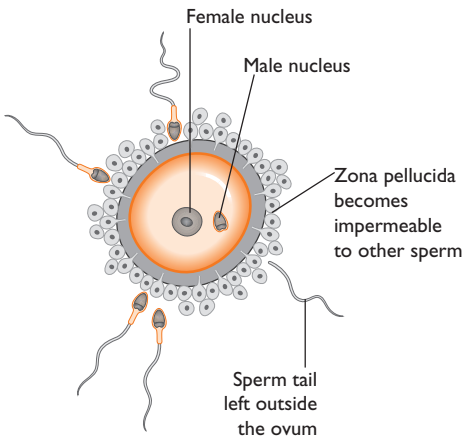
fertilization [*furʹtĭ-lĭ-zaʹshən*] in animal reproduction, the process by which the spermatozoon unites with the ovum. By this event, also called conception, the male and female gametes unite to form a single-celled zygote. When one spermatozoon penetrates the ovum a reaction occurs which prevents any further spermatozoa entering. The nuclei of the spermatozoon and the ovum fuse in a process called syngamy and fertilization is complete. Spermatozoa lodged in the female reproductive tract maintain their fertility for 5 days in mares, up to 90 hours in bitches and for 24–48 hours in cow, ewe, sow. In the female, the ovulated ovum remains viable in the tract for 12–18 hours.
in vitro f. (IVF) process of production of embryos by fertilization of oocytes by spermatozoa in the laboratory; test tube embryos. See also in vitro **maturation**.

fertilizer [*furʹtĭ-līzʹər*] material added to soil to improve its fertility by adding to its chemical composition. Usually infers an inorganic chemical agent such as urea nitrogen or superphosphate but organic material such as manure, blood and bone meal and kelp humus are also included. Some of them, e.g. calcium cyanamide, ammonium sulfate, urea, can cause poisoning.

Ferula [*fə-rooʹlə*] a plant genus in the family Apiaceae; contain coumarin and cause hemorrhagic diathesis; includes *F. asafoetida*, *F. communis* (giant fennel *F. communis* var. *brevifolia*).

fervescence [*fər-vesʹəns*] increase of fever or body temperature.

fescue [*fesʹku*] see ***Festuca***.
Chewing's f. *Festuca nigrescens (F. rubra commutata)*.



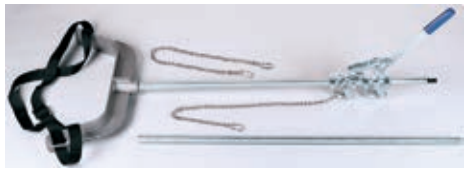
F-21: Fertilization.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

VetBooks.ir

f. foot caused under conditions of low ambient temperature by interference with the peripheral vasculature by ergot alkaloids produced by ***Neotyphodium*** *coenophialum* (*Acremonium coenophialum*) infesting tall fescue grass; characterized by dry gangrene of the extremities, especially the feet, causing severe lameness, often commencing as long as several weeks after ingestion of infected grass. Infestation with *Claviceps purpurea*, or possibly other related fungi may also cause the disease.
tall f. *Festuca arundinacea*.
f. toxicosis occurs in mares grazing endophyte infested *Festuca arundinacea* and manifest by early embryonic mortality, abortions, prolonged gestation, dystocia, edematous or retained placental membranes, agalactia, depressed plasma concentrations of prolactin and increased rates of newborn mortality.
FeSFV feline syncytia-forming virus. See also ***Retroviridae***.
fesselo see **fistulous** withers.
fester [*fes'tər*] to suppurate superficially.
festoon [*fes-t n'*] a dermal papilla denuded of epithelial cells protruding into a vesicle or bulla. Seen in bullous pemphigoid and drug eruptions.
Festuca [*fes-too'kə*] pasture grasses, members of the family Poaceae; toxic when infested with endophytic fungi or grass nematodes carrying *Rathayibacter toxicus*. Includes *F. arundinacea* (*F. elatior* var. *arundinacea*, tall fescue) with ***Neotyphodium*** *coenophialum* (*Acremonium coenophialum*) (causes fescue summer toxicosis and fescue foot); *F. nigrescens* (*F. rubra commutata*) (Chewing's fescue) + Anguina agrostis nematodes + *Rathayibacter toxicus* causes tunicaminyluracil poisoning.
FeSV feline sarcoma virus.
fetal [*fe'təl*] of or pertaining to a fetus or to the period of its development.
f. age age of the fetus; this may be determined by its crown to rump length, and various other surface features such as hair follicles and eyelids.
f. alcohol syndrome in humans and laboratory animals; in laboratory animals manifested by small head and nose, narrow forehead, short palpebral fissures, long thin upper lip.
f. circulation the circulation of blood through the body of the fetus and to and from the placenta through the umbilical cord. Oxygenated blood from the placenta is carried to the fetus by the umbilical vein. The blood from the fetus is returned to the placenta by two umbilical arteries. Oxygenation of the fetal blood and disposal of its waste products is carried on through the placenta. When the lungs begin to function at birth some of the fetal vessels, such as the ductus arteriosus, and the fetal passages, such as the foramen ovale, begin to fall into disuse. This is a gradual process of fibrosis that takes place in the period after birth.

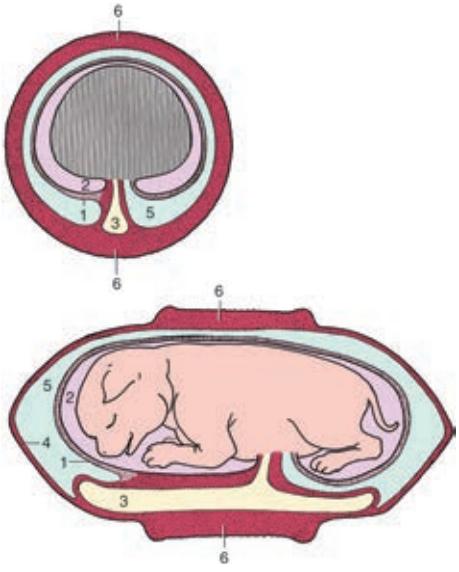
F-22: Chronic fescue foot showing gangrene of lower foot with line of granulating tissue separating this from the more healthy tissue above.

f. crowding too much fetal tissue in the uterus. May cause fetal retardation in some; also papyraceous fetus. Thought to cause some of the minor congenital deformities, e.g. carpal flexion in calves, facial distortion in foals.
f. death results in resorption, mummification or discharge to the exterior.
f. death ratio see fetal death **ratio**.
f. dimensions crown to rump (tail head) length; varies with species; useful as a guide to pregnancy duration.
f. disease disease of the fetus in utero.
f. dystocia dystocia caused by some characteristic of the fetus, e.g. size, monstrosity, dropsy.
f. early death see early **embryonic** mortality.
early f. recovery the use of embryo transfer in test matings to increase the speed of the program and reduce the time required in gestation to determine the constitution of the fetus.
f. extractor a device consisting of a breech bar that fits across the back of the cow's thighs below the vulva, with a 6 ft long rod with a ratchet running its length. A small tractor is levered along the ratchet and exerts traction on the calf via obstetric chains fitted to its feet. Has the advantages of a block and tackle but with the mobility of being fixed to the cow.
f. fluids the amniotic and allantoic fluids.
f. giantism due to **prolonged gestation**, although all prolonged gestations are not giants. Inherited in Holstein cows.
f. hepatitis focal or diffuse lesions in the fetal liver caused by bacteria or viruses, e.g. Tyzzer's disease, equine herpesvirus 1.
f. maceration sterile necrosis and dissolution of the fetus. May be ejected in this form or go on to mummification.
f. malposition presentation of the fetal parts in inappropriate positions for the easiest passage through the cervix, e.g. retention of the head, breech presentation.
f. maternal rotation alteration of the longitudinal relationship of the fetus to the dam effected per vagina by manipulation with the hand or an obstetric crutch, or externally by casting the dam and rolling her from side to side while the fetus is held in position via a hand in the vagina.
f. membranes the membranes which protect the embryo and provide for its nutrition, respiration and excretion; the yolk sac (umbilical vesicle), allantois, amnion, chorion, decidua and placenta. See also extraembryonic **membranes**, epidermal **membrane**, **placenta**.
f. membrane expulsion occurs usually at the birth or less commonly within 12 hours, but this varies with the species; expulsion is by means of separation of the uterine attachment and contraction and involution of the uterine wall.
f. membrane retention see retained **placenta**.
f. membrane slip the sensation of a thread or edge of tissue slipping through the fingers when the uterine horn in an early pregnant bovine is grasped between the thumb and forefinger; the best indicator in a manual diagnosis for pregnancy from 33 days until the time when cotyledons can be palpated.
f. mobility fetal movements during pregnancy.
f. mole see **mole**.
f. monitoring used to assess fetal viability, by ultrasound measurement of the fetal heart rate and variability, fetal movement, fetal size, amniotic fluid quality and uteroplacental integrity.
f. monstrosities see **monster**, **monstrosity**.
f. position position of the fetus within the dam, described in terms of the dorsum of the fetus and the sector of the circumference of the dam's pelvis, e.g. dorsosacral, dorsoventral.
f. posture relationship of the movable extremities or appendages of the fetus to each other and the rest of the fetus, e.g. flexed neck.
f. presentation see **presentation**.



F-23: Calving jack (fetal extractor) for use in a cow.
From Noakes DE, Parkinson TJ, England GCW, Arthur's Veterinary Reproduction and Obstetrics, 8th Edition. Saunders, 2001.

f. rotation a method of correcting uterine torsion in cows; the fetus is reached manually via the vagina and the fetus rotated around its long axis using a firm grasp on the upper part of a limb as a handle; the uterus, clinging to the fetus, rotates with it, undoing the torsion. Requires a fresh parturition, a slim but strong forearm and a nice appreciation of the physical law of torque.
f. resorption early death of the embryo during the fetal period with lysis and complete resorption of all of the products of the conception. The dam resumes normal estral cyclicity after a period of anestrus while there is maternal recognition of the pregnancy. See also early **embryonic** mortality.
f. sex diagnosis the karyotype of the fetus can be determined from fetal cells collected from the amniotic fluid by amniocentesis. Determination can also made by untrasonographic examination based on genital tubercule location and visualization of specific organs, e.g. scrotum, mammary gland, prepuce, vulva.
fetal age estimation [*fe'təl*] see **aging**.
fetalization [*fe"təl-ĭ-za'shən*] 1. continuation into extrauterine life of fetal characteristics. 2. changes to the alveolar epithelium causing changes to the lung giving it the appearance of fetal lung.
fetation [*fe-ta'shən*] 1. development of the fetus. 2. pregnancy.
feterita a variety of grain sorghum used as feed.
feticide [*fe'tĭ-sīd*] death or destruction of the fetus.
fetid [*fe'tid*] having a rank, disagreeable smell.
fetlock [*fet'lok*] a term used for the metacarpo- and metatarsophalangeal joint of large animals and sometimes dogs.
f. flexion test passive flexion of the fetlock to determine if there is limitation of movement or pain with passive movement or lameness on susequent walking or trotting.
f. knuckling fetlock flexes when the patient puts weight on the limb.
fetography [*fe-tog'rə-fe*] radiography of the fetus in utero.
fetology [*fe-tol'ə-je*] the study of the fetus in utero.
fetomaternal disproportion a condition in which the fetus is too large, relative to the diameter of the dam's pelvic canal.
fetometry [*fe-tom'ə-tre*] measurement of the dimensions of the fetus; used for estimation of age of the pregnancy.
fetopelvic [*fe-to-pel'vik*] pertaining to both the fetus and the pelvis, especially at the time of parturition.
f. disproportion the pelvis is unusually small or the fetus unusually large. Causes dystocia, in the absence of any obstruction from the cervix or vagina.
fetoplacental [*fe"to-plə-sen'təl*] pertaining to the fetus and placenta.
f. unit the fetus and the placenta as a single physiological unit; the conceptus.
α-fetoprotein alpha-fetoprotein.
fetor [*fe'tor*] stench or offensive odor.
f. oris halitosis.



F-24: Feline fetal membranes in transverse and longitudinal section, schematic. 1, Amnion; 2, amniotic cavity; 3, yolk sac; 4, chorioallantois; 5, allantoic cavity; 6, zonary placenta.
From Dyce KM, Textbook of Veterinary Anatomy, 4th Edition. Saunders, 2010.

fetoscope [*fe'to-skōp*] 1. a specially designed stethoscope for listening to the fetal heartbeat. 2. an endoscope for viewing the fetus in utero. This is not used in veterinary medicine.
fetoscopy [*fe-tos'kə-pe*] viewing of the fetus in utero by means of the fetoscope.
fetotome an instrument designed for use in cows and mares for the purpose of dissecting a dead fetus in utero when normal delivery is impossible and cesarean section inadvisable. There are a number of special instruments all based on fetotomy wire saws passed through metal tubes about 3 ft long. These are threaded external to the cow by passing the wire saw out of the end of one tube, into the uterus and around the part to be amputated, out of the uterus and into the other tube. The two ends of the saw are brought out of the far ends of the tubes and special handles are attached. The tubes are inserted into the uterus and pushed hard up against the skin. Rapid see-sawing with the saw completes the task.
fetotomy dissection of a dead fetus in utero. Applicable particularly to cows and mares because of the size of the uterus and the opportunity to introduce instruments to the full depth of the fetus.
percutaneous f. the fetus is dissected through the skin using first a knife to open the skin followed by a fetotome. It is faster than a subcutaneous approach but offers more risk to the uterine wall.
subcutaneous f. the fetus is entered between the first ribs and the thoracic cage destroyed within the skin. The fetus is extracted when its mass has been reduced by this internal demolition and removal.
fetotoxic [*fe"to-tok'sik*] ability of a substance to cause harm to the developing fetus. See also **teratogenic**.
fetus [*fe'təs*] [L.] the developing young in the uterus, specifically the unborn offspring in the postembryonic (see also **embryo**) period, after major anatomical structures have been outlined.
anomalous f. a fetus with one or more congenital defects.
calcified f. lithopedion; a fetus that has become calcified.
emphysematous/putrescent f. due usually to death of the fetus at parturition; the fetus has been dead for several days, decomposition has occurred and gas has been produced and can be palpated as subcutaneous crepitus; presents a major obstetrical difficulty because of the increased size of the fetus and its extreme dryness due to lack of fetal fluids. The conceptus has a putrid and persistent odor.
f. in fetu a small, imperfect fetus, incapable of independent life, contained within the body of another fetus.
mummified f. see **mummification**.
oversized f. commonly the result of very good feeding in the last trimester of pregnancy and often the cause of dystocia in beef heifers. See also fetal **giantism**.
f. papyraceus a fetus flattened by being pressed against the uterine wall by a living twin.
parasitic f. an incomplete minor fetus attached to a larger, more completely developed fetus, or autosite.
FEV forced expiratory volume.
fever [*fe'vər*] 1. an abnormally high body temperature; pyrexia. See also **hyperthermia**. 2. any disease characterized by marked increase of body temperature. See body temperature. For diseases characterized by fever, see the eponymic or descriptive name: e.g. **African** swine, **bovine** petechial, **canicola**, **cat-scratch disease**, **desert, ephemeral**, equine monocytic **ehrlichiosis**, **classical swine fever** (hog cholera), **malignant catarrhal fever**, **Malta**, **Mediterranean**

F-25: Fetotome.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

coast, Q, rift valley, Rocky Mountain spotted, Russian spring–summer encephalitis, tickborne, tularemia, and undulant.

aseptic f. fever associated with aseptic wounds, presumably due to the disintegration of leukocytes or to the absorption of avascular or traumatized tissue.

atypical f. a fever in which temperature variations are irregular.

central f. sustained fever resulting from damage to the thermoregulatory centers of the hypothalamus.

chemical f. fever caused by the intake of a sterile substance, e.g. the injection of a foreign protein, the administration of dinitrophenols.

continued f., continuous f. persistently elevated body temperature, showing no or little variation and never falling to normal during any 24-hour period.

harvest f. a disease of humans caused by *Leptospira* spp.

intermittent f. an attack of fever, with recurring paroxysms of elevated temperature separated by intervals during which the temperature is normal.

local infection f. fever associated with local infection such as abscess, empyema, cellulitis.

remittent f. elevated body temperature showing fluctuation each day, but never falling to normal.

recurrent f. relapsing fever.

septic f. see **septic** fever.

Shar pei f. a syndrome of unprovoked episodes of fever, with or without inflammation involving major joints, particularly the hocks. Occurs relatively frequently in Shar pei dogs and predisposes to the development of reactive system AA amyloidosis and subsequent kidney or renal failure. See also familiar renal **amyloidosis** of Shar pei dogs.

streptobacillary f. see ***Streptobacillus*** *moniliformis*.

f. of unknown origin (FUO) a recognized clinical syndrome of persistently (>2 weeks) elevated body temperature (>104˚F) and without other signs. Causes include infections, neoplasia, immune-mediated diseases, and drug reactions.

fever tree [fe'vər] ***Albizia*** *tanganyicensis* or *A. versicolor*.

feverfew [fe'vər-fu"] ***Tanacetum*** (*Chrysanthemum*) *parthenium*.

FFD film-focal distance.

FIA feline infectious anemia.

fiber[1] [fi'bər] an elongated threadlike anatomical structure.

A f's myelinated fibers of the somatic nervous system having a diameter of 1–22 μm and a conduction velocity of 5–120 meters per second.

accelerating f's, accelerator f's adrenergic fibers that transmit the impulses which accelerate the heartbeat.

adrenergic f's nerve fibers that liberate epinephrine-like substances at the time of passage of nerve impulses across a synapse.

alpha f's motor and proprioceptive fibers of the A type having conduction velocities of 70–120 meters per second and ranging from 13–22 μm in diameter.

arcuate f's any of the bow-shaped fibers in the brain, such as those connecting adjacent gyri in the cerebral cortex, or the external or internal arcuate fibers of the medulla oblongata.

association f's nerve fibers that interconnect portions of the cerebral cortex within a hemisphere. Short association fibers interconnect neighboring gyri; long fibers interconnect more widely separated gyri and are arranged into bundles or fasciculi.

B f's myelinated preganglionic autonomic axons having a fiber diameter less than 3 μm and a conduction velocity of 3–15 meters per second.

beta f's touch and temperature fibers of the A type having conduction velocities of 30–70 meters per second and ranging from 8–13 μm in diameter.

binding f's the fibers holding staples of wool in a fleece together so that the fleece can be handled as a unit.

f. boy a male alpaca (usually castrated) that is kept as a pet and for fleece.

C f's unmyelinated postganglionic fibers of the autonomic nervous system; also, the unmyelinated fibers at the dorsal roots and at free nerve endings having a diameter of 0.3–1.3 μm and a conduction velocity of 0.6–2.3 meters per second.

cholinergic f's nerve fibers that liberate acetylcholine at the synapse.

collagen f's, collagenic f's, collagenous f's the soft, flexible, white fibers that are the most characteristic constituent of all types of connective tissue, consisting of the protein collagen, and composed of bundles of fibrils that are in turn made up of smaller units (microfibrils) that show a characteristic crossbanding with a major periodicity of 65 nm.

depressor f's nerve fibers which, when stimulated reflexly, cause a diminished vasomotor tone and thereby a decrease in arterial pressure.

elastic f's yellowish fibers of elastic quality traversing the intercellular substance of connective tissue.

gamma f's fibers that conduct touch and pressure impulses and innervate the intrafusal fibers of the muscle spindle; they conduct at velocities of 15–40 meters per second and range from 3–7 μm in diameter.

gray f's unmyelinated nerve fibers found largely in the sympathetic nerves.

intrafusal f's modified muscle fibers which, surrounded by fluid and enclosed in a connective tissue envelope, compose the muscle spindle.

James f's auxiliary conduction fibers from the atrium to the ventricle that bypass the A-V bundle. See also **Mahaim fibers**.

light f's muscle fibers poor in sarcoplasm and more transparent than dark fibers.

Mahaim f's see **Mahaim fibers**.

medullated f's myelinated fibers.

motor f's nerve fibers transmitting motor impulses to a muscle.

muscle f. see **muscle**.

myelinated f's grayish-white nerve fibers encased in a myelin sheath.

nerve f. a slender process of a neuron, especially the prolonged axon which conducts nerve impulses away from the cell; classified on the basis of the presence or absence of a myelin sheath as myelinated or unmyelinated.

nerve f. layer one of the more inner layers of the neurosensory retina composed of ganglion cell axons as they run radially toward the optic nerve head where they turn approximately at right angles and exit the globe to pass through the orbit and enter the brain. Visible as a waxy sheen on funduscopic exam on some species, especially primates.

nonmedullated f's unmyelinated fibers.

osteogenetic f's, osteogenic f's precollagenous fibers formed by osteoblasts and becoming the fibrous component of bone matrix.

postganglionic f's nerve fibers passing to involuntary muscle and gland cells, the cell bodies of which lie in the autonomic ganglia.

preganglionic f's nerve fibers passing to the autonomic ganglia, the cell bodies of which lie in the brain or spinal cord.

pressor f's nerve fibers which, when stimulated reflexly, cause or increase vasomotor tone.

projection f's bundles of axons that connect the cerebral cortex with the subcortical centers, brainstem and spinal cord.

Purkinje's f's modified cardiac muscle fibers in the subendothelial tissue concerned with conducting impulses in the heart.

radicular f's fibers in the roots of the spinal nerves.

reticular f's immature connective tissue fibers, staining with silver, forming the reticular framework of lymphoid and myeloid tissue, and occurring in interstitial tissue of glandular organs, the papillary layer of the skin, and elsewhere.

Sharpey's f's 1. collagenous fibers that pass from the periosteum and are embedded in the outer circumferential and interstitial lamellae of bone. 2. terminal portions of principal fibers that insert into the cementum of a tooth.

spindle f's the microtubules radiating from the centrioles during mitosis and forming a spindle-shaped configuration.

unmyelinated f's nerve fibers that lack a myelin sheath.

zonular f. fine fibrous extensions between the ciliary processes and the equatorial lens capsule responsible for suspending the lens and transferring from the ciliary body to the lens the forces required for accommodation.

fiber[2] dietary fiber; that portion of ingested foodstuffs that cannot be broken down by intestinal enzymes and juices of monogastric animals and, therefore, passes through the small intestine and colon undigested. It is composed of cellulose, which is the 'skeleton' of plants, hemicellulose, gums, lignin, pectin and other carbohydrates indigestible by members of animal species other than Equidae and ruminants. Dietary fiber is not to be confused with 'crude fiber', which is the term used in tables listing the composition of foods. Crude fiber is mainly lignin and cellulose and is

the residue remaining after a food has been subjected to a standardized treatment with dilute acid and alkali. Crude fiber measurements usually underestimate actual total dietary fiber by at least 50%. Plant fiber is essential in the diet of herbivores. Too much causes impaction of horse intestines and cattle rumens. Too little causes faulty ruminal function including ruminal tympany and ruminal lactic acidosis; a deficiency also causes an unacceptably low concentration of fat in cow's milk. See also impaction **colic**, **ileocecal** valve impaction, **ruminal** tympany, low-fat **milk**, **phytobezoar**.

acid-detergent f. (ADF) a modification of the procedure used to estimate crude fiber in animal feeds; it omits the alkali step, reducing loss of carbohydrates and giving a more accurate estimation. Estimates the proportion of dry matter which is insoluble in acid detergent, i.e. the cellulose and lignin in the sample. The fibrous, least-digestible portion of roughage. The normal range in farm animal feeds is 250–450 g/kg DM. The target for high quality grass silage is 350 g ADF/kg DM.

f. balls see **phytobezoar**, **phytotrichobezoars**.

crude f. a laboratory estimate of the cellulose, hemicellulose and lignin content of a feed. It gives no indication of the digestibility of the feed. The sample is boiled gently in weak acid, then in weak alkali and the residue washed.

insoluble f. has little water-holding capacity and is not degraded in the intestine; includes celluloses, some hemicelluloses and lignin. Wheat bran and other cereal grains, and vegetables are sources.

neutral-detergent f. (NDF) a measure of fiber after digestion in a non-acidic, non-alkaline detergent as an aid in determining quality of forages. Contains the fibers in acid-detergent fiber, plus hemicellulose.

physically effective f. presentation to ruminants of sufficient fibrous food at a length to stimulate mastication and promote rumen fermentation. Correct particle size distribution of feeds is an important part of ration formulation. Where length is insufficient, the cows spend less time chewing, decreasing the volume of saliva produced that is needed to buffer the rumen and can result in decreased milk fat, and increased risk for abomasal displacement, increased incidence of rumenitis, acidosis and laminitis. See also **Penn State particle separator**.

soluble f. forms viscous solutions in water because of its great water-holding capacity and it is easily degraded by intestinal bacteria; includes pectin, vegetable gums and some hemicelluloses. In dogs and cats, used in the diet for management of gastrointestinal disease, particularly chronic colitis. In large animals, important in ration formulation because they reflect the amount of forage the animal can consume and as NDF percentages increase, dry matter intake will generally decrease.

fiber-illuminated transmitting light by means of bundles of glass or plastic fibers, utilizing a lens system to transmit the image; said of endoscopes of such design.

fibercolonoscope [*fi"bər-ko-lon'o-skōp*] a fiberscope for viewing the colon.

fibergastroscope [*fi"bər-gas'tro-skōp*] a fiberscope for viewing the stomach.

fiberglass cast [*fi'bər-glas*] a cast made of a water activated polyurethane resin incorporated into a bandage; used for fractured limbs. Has the virtues of very light weight, great strength and very quick setting.

fiberoptic [*fi"bər-op'tik*] pertaining to fiberoptics; coated with flexible glass or plastic fibers having special optical properties and orientation.

fiberoptics [*fi"bər-op'tiks*] the transmission of an image along flexible bundles of glass or plastic fibers each of which carries an element of the image.

fiberoptiscope [*fi"bər-op'ti-skōp*] see **fiberscope**.

fiberscope [*fi'bər-skōp*] a flexible endoscope whose lumen is coated with fiberoptic glass or plastic fibers having special optical properties. Called also fiberoptiscope.

fibra [*fi'brə*] pl. *fibrae* [L.] fiber.

fibre [*fi'bər*] see **fiber**[1].

fibril [*fi'bril*] a minute fiber or filament.

fibrillar center [*fi'brĭ-lər*] of a nucleolus; contains DNA not undergoing transcription.

fibrillation [*fĭ-brĭ-la'shən*] 1. a small, local, involuntary, muscular contraction, due to spontaneous activation of single muscle cells or muscle fibers. 2. the quality of being made up of fibrils. 3. the initial degenerative changes in osteoarthritis, marked by softening of the articular cartilage and development of vertical clefts between groups of cartilage cells.

atrial f. a self-sustaining re-entry tachyarrhythmia consisting of multiple meandering depolarization waves that sweep across the atrial myocardum. Regular P waves are not detected in the ECG and are replaced by f (fibrillation) waves. Some are conducted through the AV node to result in a totally irregular, often rapid, ventricular rate. The heartbeat is irregular, the pulse is irregular in rhythm and amplitude. Horses appear predisposed to this arrhythmia because of high vagal tone and large atrial mass. It can establish in horses at low ventricular rates and with no evidence of underlying cardiac disease. These commonly respond to medical cardioversion and return to their previous athletic ability once sinus rhythm is restored. May also occur in horses with enlarged atria secondary to heart disease and is then commonly a terminal development. In cattle, occurs in association with electrolyte imbalance, intestinal accidents and self-corrects if the underlying problem is corrected. Occurs in dogs in association with cardiac disease, particularly idiopathic congestive cardiomyopathy, and electrolyte disturbances.

ventricular f. a cardiac arrhythmia marked by fibrillatory contractions of the ventricular muscle due to rapid repetitive excitation of myocardial fibers without coordinated ventricular contraction. Ventricular fibrillation is a frequent cause of cardiac **arrest**. An apparatus called a defibrillator sometimes is used to alleviate fibrillation. The defibrillator delivers an electric shock to the heart muscle, depolarizing the muscle and ending the irregular contractions. The heart is then able to resume normal, regular contractions.

fibrillogenesis [*fi-bril"o-jen'ə-sis*] the formation and development of fibrils.

fibrin [*fi'brin*] an insoluble protein that is essential to **clotting** of blood, formed from fibrinogen by action of thrombin.

f.–fibrinogen degradation products (FDPs) the breakdown products of fibrin and fibrinogen, resulting from activation of the fibrinolytic system, they inhibit fibrin formation and platelet adherence. Elevated concentrations are found in the blood and urine in association with disseminated intravascular coagulation and detection is a test for that condition.

f.–fibrinogen split products see fibrin–fibrinogen degradation products (above).

f. foam a clot promoting surgical material for application to oozing surfaces. Strips of fine white sponge to be soaked in thrombin solution before application.

f. glue a mixture of bovine thrombin and concentrated fibrinogen. It may be used topically or by injection in management of hemostasis.

f. plate method a method of measuring fibrinolytic activity by incubating a fibrin clot with test serum in a Petri dish.

soluble f. monomers a stage in the clot formation process of producing insoluble fibrin monomers.

f. stabilizing factor see fibrin stabilizing **factor**.

fibrinocellular [*fi"brĭ-no-sel'u-lər*] made up of fibrin and cells.

fibrinogen [*fi-brin'o-jən*] a high-molecular-weight protein in the blood plasma that by the action of thrombin is converted into fibrin; called also clotting factor I. In the **clotting** mechanism, fibrin threads form a meshwork for the basis of a blood clot. Most of the fibrinogen in the circulating blood is formed in the liver. One of the acute phase proteins and an indicator of inflammation.

f. deficiency may be due to **afibrinogenemia**, **hypofibrinogenemia** or **dysfibrinogenemia**.

f. degradation products (FDPs) see **fibrin**–fibrinogen degradation products.

f. split products see **fibrin**–fibrinogen degradation products.

fibrinogenemia [*fi-brin"o-jə-ne'me-ə*] hyperfibrinogenemia.

fibrinogenolysis [*fi"brĭ-no-jə-nol'ə-sis*] the proteolytic destruction of fibrinogen in the circulating blood.

fibrinogenopenia [*fi-brin"o-jen"o-pe'ne-ə*] hypofibrinogenemia.

fibrinohemorrhagic [*fi-brin"o-hem"ə-raj'ik*] a combination of fibrinous and hemorrhagic; said of discharge or exudate.

fibrinoid [*fi'brin-oid*] 1. resembling fibrin. 2. a homogeneous, eosinophilic, relatively acellular refractile substance with some of the staining properties of fibrin.

fibrinoligase [*fi-brin"o-li'gās*] clotting factor XIIIa, associated with fibrin-stabilizing factor (factor XIII) in the conversion of soluble fibrin monomer to insoluble, stable fibrin polymer.
fibrinolysin [*fi"brĭ-nol'ə-sin*] 1. plasmin. 2. a preparation of proteolytic enzyme formed from profibrinolysin (plasminogen) by action of physical agents or by specific bacterial kinases; used to promote dissolution of thrombi.
fibrinolysis [*fi"brĭ-nol'ə-sis*] the dissolution of fibrin by enzymatic action.
pathological f. see primary fibrinolysis (below).
primary f. occurs with an excess of activators or decreased plasma inhibitors that cause hyperplasminemia, as in severe liver disease, heat stroke and malignancy.
secondary f. is a response to the widespread formation of microthrombi as in disseminated intravascular coagulation.
fibrinolytic [*fi"brĭ-no-lit'ik*] pertaining to or emanating from fibrinolysis.
f. agent substances that stimulate or inhibit fibrinolysis.
f. inhibitors include ε-aminocaproic acid and antiplasmin-α_1.
f. mechanism an ordered sequence of interactions between an enzyme and a cofactor on a specific substrate; the components of the process include plasminogen, tissue plasminogen activator, urokinase and kallikrein.
f. stimulators includes hormones (e.g. corticosteroids), enzymes (e.g. streptokinase) and others such as epinephrine.
f. system tests ways of examining the system include clot lysis time, euglobulin lysis time, fibrin plate test.
fibrinopenia [*fi"brĭ-no-pe'ne-ə*] deficiency of fibrinogen in the blood.
fibrinopeptide [*fi"brĭ-no-pep'tīd*] either of two peptides (A and B) split off from fibrinogen during blood **clotting** by the action of thrombin.
fibrinoscopy [*fi-brĭ-nos'kə-pe*] see **inoscopy**.
fibrinous [*fi'brin-əs*] pertaining to or of the nature of fibrin.
fibrinuria [*fi"brĭ-nu're-ə*] presence of fibrin in the urine.
fibr(o)- word element. [L.] *fiber*, *fibrous*.
fibroadenoma [*fi"bro-ad"ə-no'mə*] adenoma containing fibrous elements. See also feline **mammary** hyperplasia.
fibroadipose [*fi"bro-ad'ĭ-pōs*] both fibrous and fatty.
fibroameloblastoma [*fi"bro-am"ə-lo-blas-to'mə*] see ameloblastic **fibroma**.
fibroangioma [*fi"bro-an"je-o'mə*] an angioma containing much fibrous tissue.
fibroareolar [*fi"bro-ə-re'o-lər*] both fibrous and areolar.
Fibrobacter succinogenes one of the predominant anaerobic gram-negative bacteria species in ruminal contents.
fibroblast [*fi'bro-blast*] an immature fiber-producing cell of connective tissue capable of differentiating into a chondroblast, collagenoblast or osteoblast. Called also fibrocyte.
fibroblastoma [*fi"bro-blas-to'mə*] any tumor arising from fibroblasts; now classified as fibromas and or fibrosarcomas.
perineural f. schwannoma.
fibrocalcific [*fi"bro-kal-sif'ik*] pertaining to or characterized by partially calcified fibrous tissue.
fibrocarcinoma [*fi"bro-kahr"sĭ-no'mə*] scirrhous carcinoma.
fibrocartilage [*fi"bro-kahr'tĭ-ləj*] cartilage made up of thick, compact collagenous bundles, separated by narrow clefts containing the typical cartilage cells (chondrocytes).
f. embolic myelopathy see fibrocartilaginous **embolism**.
middle phalangeal complementary f. forms a bearing surface for the deep flexor tendon on the proximo-palmar surface of the middle phalanx of horses. Called also middle scutum, scutum medium.
parapatellar f. medial extension of the patella.
fibrochondritis [*fi"bro-kon-dri'tis*] inflammation of fibrocartilage.
fibrochondroma [*fi"bro-kon-dro'mə*] chondroma containing areas of fibrosis.
fibrocollagenous [*fi"bro-ko-laj'ə-nəs*] both fibrous and collagenous.
fibrocyst [*fi'bro-sist*] cystic fibroma.
fibrocystic [*fi"bro-sis'tik*] characterized by an overgrowth of fibrous tissue and the development of cystic spaces, especially in a gland.
fibrocystoma [*fi"bro-sis-to'mə*] cystic fibroma.
fibrocyte [*fi'bro-sīt*] a cell that produces fibrous tissue; called also **fibroblast**.
fibrodysplasia [*fi"bro-dis-pla'zhə*] fibrous dysplasia.
f. ossificans see **myositis** ossificans.
fibroelastic [*fi"bro-e-las'tik*] both fibrous and elastic.
fibroelastosis [*fi"bro-e"las-to'sis*] overgrowth of fibroelastic elements.
endocardial f. see **endocardial** fibroelastosis.
fibroenchondroma [*fi"bro-en"kon-dro'mə*] enchondroma containing fibrous elements.
fibroepithelioma [*fi"bro-ep"ĭ-the"le-o'mə*] a tumor composed of both fibrous and epithelial elements.
fibroglia [*fi-brog'le-ə*] border fibrils in close relation to the surface of fibroblasts.
fibroglioma [*fi"bro-gli-o'mə*] a glioma containing excessive fibrous tissue.
fibrohistiocytic [*fi"bro-his"te-o-sit'ik*] having fibrous and histiocytic elements.
reactive f. nodule small, solitary or multiple cutaneous nodules in young dogs. The cause is unknown.
fibroid [*fi'broid*] 1. having a fibrous structure; resembling a fibroma. 2. fibroma.
f. tumor fibroma.
fibroleiomyoma [*fi"bro-li"o-mi-o'mə*] mixed fibrous and smooth muscle tumors of the lower reproductive tract of intact females.
fibrolipoma [*fi"bro-lĭ-po'mə*] a lipoma containing excessive fibrous tissue.
fibroma [*fi-bro'mə*] a tumor composed mainly of fibrous or fully developed connective tissue. Their common association with particular sites, e.g. nasal, genital, laryngeal, falx cerebri, results in some well-identified clinical syndromes. See also **interdigital** fibroma, **myxomatosis**.
ameloblastic f. an odontogenic fibroma, marked by simultaneous proliferation of both epithelial and mesenchymal tissue, without formation of enamel or dentin. A rare tumor recorded in calves and young cats. It behaves like an ameloblastoma. Called also fibroameloblastoma.
cementifying f. cementoblastoma; a tumor usually occurring in the mandible consisting of fibroblastic tissue containing masses of cementum-like tissue.
chondromyxoid f. of bone a benign slowly growing tumor of chondroblastic origin, usually affecting the long bones.
cystic f. one that has undergone cystic degeneration.
f. myxomatodes myxofibroma; a fibroma containing myxomatous tissue.
nonossifying f. a rare benign tumor of bone derived from fibrous tissue in the bone cortex.
nonosteogenic f. a degenerative and proliferative lesion of the medullary and cortical tissues of bone.
odontogenic f. a benign tumor of the jaw arising from the embryonic portion of the tooth germ, the dental papilla, or dental follicle, or later from the periodontal membrane.
ossifying f., ossifying f. of bone a benign, relatively slow-growing, central bone tumor, usually of the jaws, especially the mandible, which is composed of fibrous connective tissue within which bone is formed.
Shope rabbit f. a transmissible disease of rabbits caused by a poxvirus found only in the tumors. The virus is closely related to that of myxomatosis. Clinically there are one or more subcutaneous tumors which grow rapidly and then regress in the domestic rabbit but grow very slowly in the cottontail rabbit. Fibroma virus has been used as a vaccine against myxomatosis. See also **Berry–Dedrick phenomenon**.
soft f. see fibrovascular **papilloma**.
squirrel f. see **squirrel** fibroma.
fibromatoid [*fi-bro'mə-toid*] resembling fibroma; fibroma-like.
fibromatosis [*fi-bro"mə-to'sis*] 1. the presence of multiple fibromas. 2. the formation of a fibrous, tumor-like nodule arising from the deep fascia, with a tendency to local recurrence.
f. gingivae, gingival f. see **epulis**.
musculoaponeurotic f. see **desmoid**.
fibromatous [*fi-bro'mə-təs*] pertaining to or of the nature of fibroma.
f. epulis see **epulis**.
fibromuscular [*fi"bro-mus'ku-lər*] both fibrous and muscular.
fibromyitis [*fi"bro-mi-i'tis*] inflammation of muscle with fibrous degeneration.
fibromyoma [*fi"bro-mi-o'mə*] a myoma containing fibrous elements, a leiomyoma.
fibromyomectomy [*fi"bro-mi"o-mek'tə-me*] excision of a fibromyoma (leiomyoma).

fibromyositis [*fi"bro-mi"o-si'tis*] inflammation of fibromuscular tissue.
fibromyxoma [*fi"bro-mik-so'mə*] a fibroma containing myxomatous tissue; myxofibroma.
fibromyxosarcoma [*fi"bro-mik"so-sahr-ko'mə*] a sarcoma containing fibrous and mucous elements.
fibronectin [*fi"bro-nek'tin*] an adhesive glycoprotein; one form circulates in plasma, acting as an opsonin, another is a cell-surface protein which mediates cellular adhesive interactions.
fibroneuroma [*fi"bro-nŏŏ-ro'mə*] see **neurofibroma**.
fibropapilloma [*fi"bro-pap"i-lo'mə*] the common wart composed of epithelial and connective tissue caused by species-specific papillomaviruses. See also **papilloma**, **fibroma**, ***papillomavirus***.
genital f. see genital **papillomatosis**.
transmissible f. caused by bovine papillomavirus 2 on the penis of the bull; transmitted by coitus.
fibroplasia [*fi"bro-pla'zhə*] the formation of fibrous tissue, as in the healing of a wound.
fibropruritic nodule [*fi"bro-proo-rit'ik*] multiple, small cutaneous nodules located mainly over dorsal lumbosacral area in dogs with chronic flea bite hypersensitivity.
fibrosarcoma [*fi"bro-sahr-ko'mə*] a sarcoma arising from collagen-producing fibroblasts. They occur in many organs and cause well-identified syndromes, e.g. oral, nasal, gastric.
odontogenic f. a malignant tumor of the jaws, originating from one of the mesenchymal components of the tooth or tooth germ.
fibroserous [*fi"bro-se'rəs*] composed of both fibrous and serous elements.
fibrosis [*fi-bro'sis*] formation of fibrous tissue; fibroid degeneration.
diffuse interstitial pulmonary f. see interstitial **pneumonia**.
nodular subepidermal f. fibroma.
postfibrinous f. that occurring in tissues in which fibrin has been previously deposited.
proliferative f. that in which the fibrous elements continue to proliferate after the original causative factor has ceased to operate.
fibrothorax [*fi"bro-thor'aks*] adhesion of the two pleural layers, the lung being covered by thick nonexpansible fibrous tissue.
fibrous [*fi'brəs*] composed of or containing fibers.
f. bone see **woven bone**.
cardiac f. skeleton includes a ring around each of the atrioventricular valves and each of the great arteries leaving the heart; between the rings are the right and left fibrous trigones.
f. dysplasia localized overgrowth of fibrous tissue in bone.
f. feeds feeds high in fiber, cellulose and lignin.
f. growth plates growth plates composed of fibrocartilage such as that for the tibial tubercle.
f. histiocytoma see **malignant** fibrous histiocytoma.
f. hyperplasia indistinguishable clinically from fibromatous epulis.
f. joint 1. a joint whose bony elements are united with fibrous tissue. See **suture** (1), **syndesmosis**. 2. stiffness in a joint due to fibrous tissue reaction in the joint capsule and other supporting structures.
f. osteodystrophy see **osteodystrophia fibrosa**.

F-26: Maxillary fibrosarcoma. From Henry CJ, Cancer Management in Small Animal Practice. Saunders, 2009.

f. rings bands of fibrous tissue surrounding the semilunar valves of the aorta and pulmonary artery and the atrioventricular valves.
f. tissue the common connective tissue of the body, composed of yellow or white parallel elastic and collagen fibers.
fibrovascular [*fi"bro-vas'ku-lər*] both fibrous and vascular.
f. papilloma see fibrovascular **papilloma**.
fibroxanthoma [*fi"bro-zan-tho'mə*] a xanthoma with a significant accumulation of fibrous elements.
fibula [*fib'u-lə*] the lateral and smaller of the two bones of the hind shank. In the horse, ox and sheep, the shaft is vestigial or not present and the ends are fused with the tibia. In the pig, the bone is complete but the ends are free until several years of age when they fuse with the tibia. See also Table 10.
fibular [*fib'u-lər*] pertaining to the fibula.
f. nerve see **peroneal** nerve and Table 14.
f. nerve block see peroneal **block**.
f. tarsal bone see Table 10. Called also calcaneus.
ficain [*fi'kān*] a highly active, crystallizable proteinase from the sap of fig trees, which catalyzes the hydrolysis of many proteins at acid (4.1) pH, the clotting of milk, and digestion of some living worms, e.g. whipworms. Ficin is used as a protein digestant and to enhance the agglutination of red blood cells by IgG. It also shows esterase activity.
ficin [*fi'sin*] ficain.
Fick principle [*fik*] the amount of a substance taken up by the circulation per unit of time equals the arterial concentration of the substance minus the venous concentration multiplied by the blood flow. Used to measure cardiac output.
Fick's first law of diffusion [*fik*] an equation describing the rate of movement of solutes by diffusion from a higher to a lower concentration.
Ficus [*fi'kəs*] a genus in the plant family Moraceae; some species can contain furanocoumarins and cause primary photosensitization. Includes *F. carica* (common fig), *F. cordata, F. ingens*.
F. tsiela Indian tree; contains an unidentified toxin which causes hepatitis and hepatic encephalopathy. Called also *F. amplissima*, chela.
fiddle front in dogs, front legs with the elbows and feet turned out, but carpi close together. Called also Chippendale legs, French front.
fiddle-head large, plain, coarse head on a horse.
fiddleneck see ***Amsinckia***.
fido, phideaux term of endearment addressed to a dog.
field [*fēld*] 1. an area or open space, such as an operative field or visual field. 2. a range of specialization in knowledge, study or occupation. 3. in embryology, the developing region within a range of modifying factors.
auditory f. the space or range within which stimuli will be perceived as sound.
f. beans see ***Phaseolus***.
f. experiments experiments conducted on large groups of animals in conditions thought to be average for the particular type of commercial operation.
f. fever leptospirosis.
high-power f. the area of a slide visible under the high magnification system of a microscope.
individuation f. a region in which an organizer influences adjacent tissue to become a part of a total embryo.
low-power f. the area of a slide visible under the low magnification system of a microscope.
morphogenetic f. an embryonic region out of which definite structures normally develop.
sequential f. trial a trial to which additional segments are added as results are obtained in original segments, e.g. concentrating efforts on aspects of the work which appear to be promising.
f. trial see field experiments (above).
visual f. the area within which stimuli will produce the sensation of sight with the eye in a straight-ahead gaze.
Field spaniel [*fēld*] a medium-sized, muscular gun dog with the general spaniel characteristics of pendulous ears, docked tail, and flat or wavy coat with feathering on the legs, ears and under the body, in solid colors, usually liver or black. The nose is characteristically very long, which supposedly gives it great scenting ability.
fiery dragon guinea worm. See ***Dracunculus*** *insignis*.

VetBooks.ir

Fife fancy a miniature version of the Border fancy canary (maximum 4.5 inches long).
FIFRA Federal Insecticide, Fungicide and Rodenticide Act.
fig [*fig*] see ***Ficus tsiela***.
Figge's model a mathemetical formula, used to estimate nonrespiratory acid–base disorders, using serum electrolyte concentrations and Pco_2.
figging, fidding see **gingering**.
fight-or-flight reaction coordinated result of increased secretion of adrenal medullary hormones and of stimulation and resulting increased activity of the sympathetic nervous system. Creates the optimum situation for the survival of the individual by fighting the adversary or fleeing from it. The reaction comprises constriction of the blood vessels of alimentary tract and skin but dilatation of those to skeletal muscles; increased cardiac rate and output, and coronary dilatation occur; also elevation of the blood sugar concentrations and metabolic rate, dilatation of the pupils, evacuation of blood from the spleen, bronchodilatation, piloerection and decrease in coagulation time.
fighting [*fī'ting*] often a problem of animal welfare and of financial loss in animals kept in close confinement. Due partly to boredom but also to overcrowding, incorrect sex ratios and lack of amenities. May result in deaths, septic wounds and subsequent amyloidosis.
Fighting bull a special breed of black or dark brown, rarely gray, red or pied, horned cattle, bred in some parts of Spain and Portugal. Called also toro de lidia and ganado bravo.
FIGLU formiminoglutamic acid.
figworts see ***Scrophularia aquatica***.
fila [*fī'lə*] [L.] plural of *filum*.
filaceous [*fī-la'shəs*] composed of filaments.
filaggrin an intermediate filament-associated protein which is involved in cross-linking of keratin; the main constituent of keratohyalin in the granular layer of the epidermis.
filament [*fil'ə-mənt*] a delicate fiber or thread.
beard f. structures of the beard of the male turkey are neither hairs nor feathers but have some of the characteristics of both.
f. control in an X-ray machine this controls the filament current in the X-ray tube. The size of the current and its duration are controlled in this way.
f. current in an X-ray machine the strength of the current to the filament is varied by the use of a filament or stepdown transformer.
f. focal spot size the focal spot of the X-ray beam should be as small as possible to give maximum sharpness and clarity. Its size is determined by the size of the filament opposite that generates the beam, the anode angle and other factors.
intermediate f. non-contractile elements in the supportive structure of cytoplasm.
filamentous [*fil"ə-men'təs*] composed of long, threadlike structures.
f. body see **colloidal** body.
Filaria [*fī-lar'e-ə*] genus of nematodes in superfamily Filarioididea. Includes *F. haemorrhagica* (syn. *Parafilaria multipapillosa*), *F. taxidea*.
F. taxidea a nematode worm reputed to cause filarial dermatitis in the badger.
filaria [*fī-lar'e-ə*] pl. *filariae* [L.] a nematode of the superfamily Filarioididea.
filarial [*fī-lar'e-əl*] pertaining to or emanating from filariae.
f. dermatitis see cutaneous **stephanofilarosis**.
f. dermatosis see **elaeophoriasis**.
filariasis [*fil"ə-ri'ə-sis*] infection with filarial nematodes. See also **filarial**.
hemorrhagic f. see ***Parafilaria multipapillosa***.
ocular f. the occurrence of filariae, particularly of *Dirofilaria immitis* in dogs, in the anterior chamber or vitreous body.
filaricide [*fī-lar'ī-sīd*] an agent that destroys filariae.
filarid any filarial nematode.
filariform [*fī-lar'ī-form*] resembling filariae; threadlike.
Filarinema species of trichostrongylid nematodes in free-living kangaroos.
Filaroides [*fil"ə-roi'dēz*] a genus of nematodes in the family Filaroididae and the superfamily Metastrongyloidea. They are parasites of the respiratory tract of mammals.
F. bronchialis occurs in mink and polecats.
F. cebus, F. gordius found in the lungs of capuchin and squirrel monkeys.

F-27: *Dirofilaria immitis* in the anterior chamber of the eye.
From Hendrix CM, Robinson E, Diagnostic Parasitology for Veterinary Technicians, 4th Edition. Mosby, 2012.

F. hirthi found in the lungs of dogs.
F. martis found in the lungs and blood vessels of mink and other Mustelidae.
F. milksi found in the lungs of dogs.
F. osleri see ***Oslerus osleri***.
F. pilbarensis found in Australian marsupials.
F. rostratus may cause tracheobronchitis in cats.
filial pertaining to offspring. See filial **generation**.
Filicollis a genus of small cylindrical worms (acanthocephalans) in the family Polymorphidae and the order Palaeacanthocephala.
F. anatis found in the intestine of wild and domestic aquatic birds. Causes emaciation and some deaths due to peritonitis as a result of perforation of the bowel wall. Called also thorny-headed worm.
filiform [*fil'ī-form, fī'lī-form*] 1. threadlike. 2. an extremely slender bougie.
filing teeth [*fil'ing*] filing or rasping the sharp points off the molar teeth of a horse.
fill [*fil*] see **gutfill**.
filled legs minor edema of the lower limbs of a horse due to lack of exercise. A peculiarity of some horses.
fillet [*fil'et*] 1. a loop, as of cord or tape, for making traction. 2. in the nervous system, a long band of nerve fibers. 3. the psoas major and iliacus muscles.
f. technique a surgical procedure for subtotal prostatectomy in which the prostatic urethra is preserved and postsurgical complications from urinary incontinence are minimized.
filly young female horse up to first breeding or 4 years, then a maiden mare. Called filly foal up to weaning, then weanling filly to 1 year, then yearling filly to 2 years.
film [*film*] 1. a thin layer or coating. 2. a thin sheet of material (e.g. gelatin, cellulose acetate) specially treated for use in photography or radiography; used also to designate the sheet after exposure to the energy to which it is sensitive.
f. badge a radiographic film worn as a badge and used for detection and approximate measurement of radiographic exposure of personnel. Called also dosimeter or dosimetry badge.
blood f. see **blood** film.
f. changing device enables the radiographer to change films quickly when a series of shots is being used, e.g. angiography.
copy f. film with a special reversal emulsion so that a contact print can be made with white light. Called also duplicating film.
dark f. X-ray film that has been overexposed, or grossly overdeveloped.
f. dark spots caused by developer splashing on the X-ray film causing prolonged local development.
dental f. nonscreen film used in dental radiography.
f. digitzer a device that scans a radiograph with a light source, measures the transmitted light, and forma a digital image depicting the image of the radiograph. See also **digital radiography**.
duplicating f. see copy film (above).
flat f. a film lacking in radiographic contrast.
focal-f. distance the distance between the anode of the X-ray tube and the film; an important exposure value.
gelatin f. a sterile, nonantigenic, absorbable, water-insoluble coating used as an aid in surgical closure and repair of defects in the dura mater and pleura and as a local hemostatic.

VetBooks.ir

f. label details of the animal examined and when and where the examination took place. Usually made on the X-ray by photographic means or by using radiopaque tape.
f. marker any device, usually lead letters, placed on the film to indicate which part of the animal was examined and the projection used.
nonscreen f. film for getting very fine detail, used without a cassette and requiring long exposure time. This film is now banned in some parts of the world.
plain f. an X-ray film taken without contrast medium or other special effects. Often an exploratory or scout film.
spot f. a radiograph of a small anatomic area obtained (1) by rapid exposure during fluoroscopy to provide a permanent record of a transiently observed abnormality, or (2) by limitation of radiation passing through the area to improve definition and detail of the image produced.
standard f. fine-grain, medium-speed with wide tolerance for exposure times.
X-ray f. film sensitized to X-rays, either before or after exposure.
Filobasidiella neoformans [*fi"lo-bə-sid"e-el'ə*] a fungus in the class *Basidiomycetes;* the perfect state of *Cryptococcus neoformans*.
filoplume hairlike feathers with only one small tuft of barbs; they remain after other feathers are plucked.
Filoviridae [*fi"lo-vir'ĭ-de*] a family of viruses that are long, up to 970 nm × 80 nm, filamentous rods; sometimes more compact convoluted forms are recognized, which are enveloped and have a helical nucleocapsid and a single-strand RNA genome. The two viruses in the family, Marburg and Ebola, are endemic in certain African countries and produce highly fatal hemorrhagic fevers in humans, including laboratory workers handling infected monkeys, which are believed to be the reservoirs.
filovirus [*fi'lo-vi"rəs*] members of the family *Filoviridae*.
filter [*fil'tər*] a device for eliminating certain elements, as (1) particles of certain size from a solution, (2) bacteria and fungi from suspensions of virus, or (3) rays of certain wavelength from a stream of radiant energy.
bacteria-proof f. see **Berkefeld's filter**, **Pasteur–Chamberland filter**, **millipore filter**.
Wood's f. a nickel-oxide filter that holds back all but a few violet rays and passes ultraviolet rays of about 365 nm. See also **Wood's light**.
X-ray f. see **grid** (1).
filterable, filtrable [*fil'tər-ə-bəl, fil'trə-bəl*] capable of passing through the pores of a filter.

F-28: *Filoviridae.* Colorized negative stained transmission electron micrograph of Marburg virus virion. Courtesy of CDC/Frederick Murphy.

filtrable [*fil'trə-bəl*] filterable.
filtrate [*fil'trāt*] a liquid that has passed through a filter.
glomerular f. the filtrate that passes from the lumen of the glomerular capillary to the space of Bowman's capsule.
filtration [*fil-tra'shən*] passage through a filter or through a material that prevents passage of certain molecules, e.g. capillary wall, blood–brain barrier, radiographic grid.
f. angle see iridocorneal **angle**.
f. barrier the physiological function which limits the passage of small molecules through the renal corpuscle.
glomerular f. see **glomerulus**.
inherent f. attenuation of the primary X-ray beam as a result of its passage out of the X-ray tube through the insulating medium and tube window.
f. membrane the membrane which stretches across the filtration slits in the renal corpuscle.
f. pressure the net driving force which pushes fluid into tissue spaces and out of vascular sites; the net result between capillary osmotic pressure and intravascular hydrostatic pressure.
f. slits openings in the glomerular corpuscle which are part of the filtration process in the renal glomerulus.
filum [*fi'ləm*] pl. *fila* [L.] a threadlike structure or part.
f. durae matris spinalis encloses the filum terminale (see below).
f. olfactoria fibers that pass from the olfactory lobe of the brain to the ethmoid plate through which they pass.
f. reticulare fibers of the dorsal nerve root which spread out in a fanlike pattern to enter the spinal cord along a dorsolateral groove.
f. terminale a slender, threadlike prolongation of the spinal cord from the conus medullaris to the sacrum and tail.
fimbria [*fim'bre-ə*] pl. *fimbriae* [L.] 1. a fringe, border or edge; a fringelike structure. 2. one of the filamentous appendages of certain bacteria; associated with antigenic properties of the cell surface. Frequently involved in adhesion and sometimes with twitching motility. See also **pilus**, **adhesin**.
f. hippocampi the band of white matter along the medial edge of the ventricular surface of the hippocampus.
ovarian f. occur together with the fimbriae of the uterine horn. Located in the ovulation fossa.
uterine tube f. the numerous divergent fringelike processes on the distal part of the infundibulum of the uterine tube.
fimbrial pertaining to or emanating from fimbriae.
f. cysts cysts in the region of the ovulation fossa; appear to cause no impediment to fertility except in very old mares where they may obstruct ovulation. If the cysts are in ovarian tissue they are known as ovarian cysts; if they are in the connective tissue at the base of the fimbriae they are called fimbrial or paraovarian cysts.
Fimbriaria [*fim"bre-ar'e-ə*] a genus of tapeworms that belong to the family Fimbriariidae.
F. fasciolaris an unusual tapeworm found in the small intestine of chickens and anserine birds.
fimbriate [*fim'bre-āt*] fringed.
fimbriated [*fim'bre-āt"əd*] fringed; bordered by slender processes.
fin [*fin*] winglike structure attached to the body of fish and cetaceans; used for steering and propulsion during progress through the water.
f. rot a common disease of aquarium fish characterized by thickening followed by necrosis of the fin and tail tissues, commencing at the edges; usually caused by bacteria, particularly *Aeromonas* spp. May be bracketed with fin rot/tail rot/snout erosion. Often associated with suboptimal cultural conditions. Also descriptive of signs associated with various other diseases; sometimes used as a synonym for columnaris disease.
finasteride [*fi-nas'tər-id*] an inhibitor of 5-α reductase, which is responsible for conversion of testosterone to dihydrotestosterone in the prostate; used in the treatment of canine benign prostatic hyperplasia.
finch [*finch*] a bird in the family Fringillidae; includes about 125 species, many of them companion birds such as the common canary, linnets, goldfinches, the zebra and Bengalese finches.
fine-wool a class of wool sheep, only Merinos qualify, characterized by fiber diameter of 19 microns, spinning quality of 70's, yield of 6 lb.
fines particles that will pass through a sieve of mesh size smaller than that specified.

F

finfish [*fin'fish*] fish with fins, that is teleosts, elasmobranchs, holocephalids, agnathids and cephalochordates; also a fish marketer's term used to include that section of marketable fish which is neither shellfish nor molluscs.
finger grass [*fing'gər*] see ***Dactyloctenium radulans***.
finger hakea [*fing'gər*] see ***Hakea***.
finger plakkie [*fing'gər*] ***Cotyledon orbiculata***.
fingerling young fish.
fingerprint [*fing'gər-print*] see **restriction fragment length polymorphism (RFLP)**.
finish [*fin'ish*] said of animals offered for sale prior to slaughter; is the degree of fatness short of obesity.
finite population see finite **population**.
Finney's pyloroplasty [*fin'e*] enlargement of the pyloric canal by establishment of an inverted U-shaped anastomosis between the stomach and duodenum after longitudinal incision.
Finnish Ayrshire developed from Scottish Ayrshires imported 100 to 150 years ago and bred to local cattle. Now the most common cattle breed in Finland. Claimed to have superior milk production and udder conformation compared to Scottish Ayrshires.
Finnish-Landrace sheep (Finnsheep) dual-purpose, short-tailed sheep; polled, white, occasionally black, brown or gray with high fecundity.
F.-L. glomerulopathy an inherited disease found in lambs less than 4 months old. Many are found dead. Enlarged kidneys are palpable and there is a high BUN concentration and proteinuria. Most cases are in purebred Finnish-Landrace lambs but cases have occurred in crossbred lambs. The pathogenetic basis of the disease is a mesangiocapillary glomerulitis caused by the deposition of immune complexes in the walls of the renal capillaries. Called also F.-L. glomerulonephritis.
Finnish Lapphund a medium-sized spitz-type dog with a profuse, long coat of any color. The tail is curved over the back. Very similar to, but smaller than, the Swedish Lapphund.
Finnish spitz a small (25–35 lb), lively dog with alert, fox-like expression, narrow muzzle, small, pointed, erect ears, and a red to gold colored double coat that is medium length on the body but long and dense on the shoulders, thighs and tail. The national dog of Finland.
Finochietto rib spreader [*fe-no"ke-et'o*] two broad, curved-outward blades which are mounted on a ratcheted bar. Spreading of the ribs can be achieved by inserting the blades through the thoracotomy incision and spreading them manually.
fins see **frilled**.
FIP feline infectious peritonitis.
fipronil a reversible GABA-receptor inhibitor that acts on the nervous system of insects. Used topically in flea control programs.
FIPV feline infectious peritonitis virus.
fire [*fīr*] naked flame.
f. ant *Solenopsis invicta*; bites can cause severe conjunctivitis and corneal ulcers and dermal inflammation.
f. brand see **brand**.
f. engine practice see fire engine **practice**.
f. fish members of the fish family Scorpaenidae, or scorpion fish which cause intense skin irritation.
f. injury see **burn**, **bushfire injury**.
f. retardant chemicals used to proof timber or fabric against fire. Many of these agents are poisonous. The best known are polybrominated and polychlorinated **biphenyls**.
firehouse dog see **Dalmatian**.
fireweed *Senecio* spp., e.g. *S. brigalowensis*, *S. linearifolius*, *S. madagascariensis*.
Australian f. *Senecio bipinattisectus*.
cotton f. *Senecio quadridentatus*.
Mexican f. see ***Kochia scoparia***.
firing [*fir'ing*] an oldfashioned technique for applying long-term counterirritation to a part, usually a lower limb, in an attempt to encourage healing of a damaged ligament or tendon. A red hot iron is applied to an area of anesthetized skin and a pattern of holes of lines drawn over the area. The firing could be deep, point firing, or superficial, line firing. Enforced rest results because of the soreness of the part, but the benefits and humaneness of this method of treatment are questionable and it is now seldom used.
f. irons specially designed irons, including those for pin and line firing, to be used on a horse's limbs.
firocoxib a nonsteroidal anti-inflammatory in the coxib subclass; used in the management of osteoarthritis in horses, dogs and cats.
first aid [*fərst ād*] emergency care and treatment of an injured patient before complete medical and surgical treatment can be secured.
first-calf said of heifers aged about 2 years usually, with their first calf just born.
first cross the F_1 generation; the first generation of crosses between animals of two pure breeds.
first-lactation female livestock during their first lactation; a term reserved usually for cattle.
first law of thermodynamics law dealing with the transformation of energy. States that energy can neither be created nor destroyed, only converted from one form to another.
first-opinion cases patients making their first visit to a veterinarian for a current disease problem. Difficult cases may be passed to a consultant for a second opinion. See also **consultation**.
first-pass effect the metabolism of orally administered drugs by gastrointestinal and hepatic enzymes, resulting in a significant reduction of the amount of unmetabolized drug reaching the systemic circulation.
first-set reaction, phenomenon rejection of a first allograft is slow, taking about 10 days, in contrast to a second-set reaction. See also **rejection**.
first-stage said of larva; the first of several larval stages.
Firth classification a system of classifying equine neonatal infectious polyarthritis, based on radiographic features and the focus of infection. The five types are P (physeal), E (epiphyseal), S (synovium), T (tarsus) and C (carpal).
Fischoederius a genus of digenetic trematodes in the family Paramphistomatidae.
F. cobboldi, F. elongatus found in the rumen of cattle and other bovids.
fish [*fish*] members of the classes Agnatha (hagfish and lampreys), Cephalochordata (lancelets), Cephalopoda (cephalopods), Crustacea (crustaceans), Elasmobranchii (sharks and rays), Gastropoda (gastropods), Holocephali (ghost sharks), Osteichthyes (bony fish), Pelecypoda (bivalves).
f. handler's disease erysipeloid.
f. liver oils used in animal diets because of their high content of vitamin A and D. Should be stabilized to avoid loss of vitamins in storage and need an antioxidant to avoid rancidification and loss of vitamin E. May also cause tainting of animal foods. See also **cod liver oil**, omega-3 **fatty acids**.
f. meal a protein feed supplement rich in calcium, phosphorus and having a good iodine content. Made from inedible fish residues from the canning and fresh fish industries. May taint animal products. Toxic amines produced by bacterial spoilage cause gizzard erosion and fatal hemorrhage in birds.
f. mouth used to describe gaping wounds of the skin.
f. mouthing a surgical technique for anastomosing two pieces of bowel when one is moderately larger in diameter than the other. The smaller diameter is made wider by slitting it longitudinally down the sides so that it opens like a fish's mouth.
f. poisoning see **Diodontidae**, **Tetraodontidae**.
f. scale disease, f. skin disease see inherited congenital **ichthyosis**.
f. solubles dehydrated fishwater from oil extraction and fishmeal industries.
f. viruses fish are infected by viruses of several families, including herpesviruses, reoviruses, birnaviruses, rhabdoviruses, orthomyxoviruses and retroviruses.
fish kill mass death of many fish, usually in a restricted area.
Fisher's exact test [*fish'ər*] a statistical test for association in a two-by-two table based on the exact hypergeometric distribution of the frequencies within the table.
fissalo see **fistulous** withers.
fission [*fish'ən*] 1. the act of splitting. 2. asexual reproduction in which the cell divides into two (binary fission) or more (multiple fission) daughter parts, each of which becomes an individual organism. 3. nuclear fission; the splitting of the atomic nucleus, with release of energy.
multiple f. a method of reproduction in protozoa. See **schizogony**.
fissiparous [*fi-sip'ə-rəs*] propagated by fission.
fissula [*fis'u-lə*] pl. *fissulae* [L.] a small cleft.

fissura [*fis-u'rə*] pl. *fissurae* [L.] fissure.

fissure [*fish'ər*] 1. a narrow slit or cleft, especially one of the deeper or more constant furrows separating the gyri of the brain. 2. in dermatology a deep crack in the skin, often through a scab, which penetrates into the subcutis.

abdominal f. a congenital cleft in the abdominal wall.

anal f., f. in ano a painful linear ulcer at the margin of the anus.

f. of Bichat transverse fissure (2).

branchial f. branchial cleft.

central f. fissure of Rolando, a double, S-shaped fissure on the lateral surface of each cerebral hemisphere at the boundary between the frontal and parietal lobes.

collateral f. a longitudinal fissure on the ventral surface of the cerebral hemisphere between the fusiform gyrus and the hippocampal gyrus.

dorsal median f. 1. a shallow vertical groove in the closed part of the medulla oblongata, continuous with the dorsal median sulcus of the spinal cord. 2. a shallow vertical groove dividing the spinal cord throughout its whole length in the midline dorsally. Called also dorsal median sulcus.

ear f. a split in the margin of the pinna which can gradually become larger from continued trauma.

hippocampal f. one extending from the splenium of the corpus callosum almost to the tip of the temporal lobe; called also hippocampal sulcus.

interhemispheric f. the fissure between the two cerebral hemispheres in birds.

interincisive f. fissure between the two incisive bones at the rostral end of the pig's face.

laryngeal f. the dorsal laryngeal furrow.

ligamentum teres f. on the diaphragmatic surface of the liver; houses the ligamentum teres and marks the boundary between right and left liver lobes.

f. lines in radiology, the variation in radiodensity indicating the division between lobes of the lung.

longitudinal f. the deep fissure between the cerebral hemispheres.

macropalpebral f. an enlarged palpebral fissure.

optic f. a ventral fissure in the developing optic cup through which blood vessels pass to the enclosed mesenchyme.

orbital f. see orbital **foramen**.

palatine f. a pair of fissures perforating the rostral extremity of the palate.

palpebral f. the opening between the eyelids.

perianal f. see **perianal** fistula.

petrotympanic f. the **chorda** tympani, on its way to merge with the lingual branch of the mandibular nerve, passes across the tympanic cavity and emerges at the petrotympanic fissure.

portal f. porta hepatis.

presylvian f. the ventral branch of the fissure of Sylvius.

reverse f. mediastinal fluid dissects into fissures between lung lobes causing fissure lines on radiographs to appear wide centrally and narrower peripherally.

Rolando's f., f. of Rolando a groove running obliquely across the superolateral surface of the cerebral hemisphere, separating the frontal from the parietal lobe. Called also central fissure and central sulcus.

round ligament f. one on the visceral surface of the liver, lodging the round ligament in the adult.

sylvian f., f. of Sylvius one extending laterally between the temporal and frontal lobes, and turning dorsally between the temporal and parietal lobes of the brain.

transverse f. the transverse cerebral fissure between the diencephalon and the cerebral hemispheres; called also fissure of Bichat.

tympano-occipital f. on the ventral surface of the skull, near the confluence of the osseous bulla and the occipital bone, this pair of fissures serves as conduits for the glossopharyngeal, vagal and accessory nerves in species without a jugular foramen.

ventral median f. a longitudinal furrow along the midline of the ventral surface of the spinal cord and medulla oblongata.

zygal f. a cerebral fissure consisting of two branches connected by a stem.

fistula [*fis'tu-lə*] pl. *fistulae, fistulas;* any abnormal, tubelike passage within body tissue, usually between two internal organs, or leading from an internal organ to the body surface. Some fistulae are created surgically, for diagnostic or therapeutic purposes; others occur as a result of injury or as congenital abnormalities. See also **arteriovenous** fistula.

blind f. one open at one end only, opening on the skin (external blind fistula) or on an internal surface (internal blind fistula).

branchial f. a persisting branchial cleft.

bronchoesophageal f. may be congenital or acquired, most commonly as a result of a penetrating injury from an esophageal foreign body. Aspiration of esophageal contents causes coughing and recurrent pneumonia.

complete f. one extending from the skin to an internal body cavity.

craniosinus f. one between the cerebral space and one of the sinuses, permitting escape of cerebrospinal fluid into the nose.

crop f. the crop communicates with the skin on the neck of the bird.

enterocutaneous f. one in which there is communication between the intestinal tract and the skin. Some fistulae are created surgically, with gastrostomy, esophagostomy or colostomy. Others may result from surgical trauma, breakdown of an intestinal anastomosis, or erosions around a surgical drain or tube.

esophageal f. communication between the esophagus and some portion of the respiratory tract, e.g. trachea, bronchi or pulmonary tissue. May be congenital or acquired as a result of trauma or inflammatory lesions, particularly esophageal foreign bodies.

fecal f. a colonic fistula opening on the external surface of the body and discharging feces.

foreign body f. remnant of a foreign body impalation or a grass seed are the common causes. Fistula drains continuously.

gastric f. an abnormal passage communicating with the stomach; often applied to an artificially created opening, through the abdominal wall, into the stomach.

horseshoe f. a semicircular fistulous tract about the anus, with both openings on the skin.

incomplete f. blind fistula.

lateral cervical f. see **branchial** cyst.

oroantral f. between the oral cavity and a sinus. In dogs, usually involves the maxillary sinus and is caused by periodontal disease of the fourth premolars and first molars.

oronasal f. between the nasal and oral cavities. Occurs most commonly in dogs with advanced periodontal disease of the maxillary canine tooth, but can result from disease of canines and premolars. It may also occur after tooth extraction, particularly in dogs, leading to the passage of food into the nasal cavity and a secondary chronic rhinitis and nasal discharge.

ruminal f. created surgically in left upper flank. May occur accidentally due to persistence of trocar puncture for treatment of bloat.

salivary f. usually discharges saliva on to the side of the face but may discharge into the mouth. Usually due to laceration of the duct by trauma.

umbilical f. an abnormal passage communicating with the gut or the urachus at the umbilicus.

urachal f. persistence of the urachal canal with communication between the urinary bladder and umbilicus. See also persistent **urachus**.

fistulae-in-ano see **perianal** fistula.

fistulation [*fis"tu-la'shən*] see **fistulization**.

fistulectomy [*fis"tu-lek'tə-me*] excision of a fistula.

fistulization [*fis"tu-lĭ-za'shən*] 1. the process of becoming fistulous. 2. surgical creation of a fistula.

fistulogram [*fis'tu-lo-gram*] radiograph after infusion of the sinus tract with radiopaque material.

fistulography [*fis"tu-log'rə-fe*] contrast study of a fistula.

fistulotomy [*fis"tu-lot'ə-me*] incision of a fistula.

F-29: Esophageal fistula. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

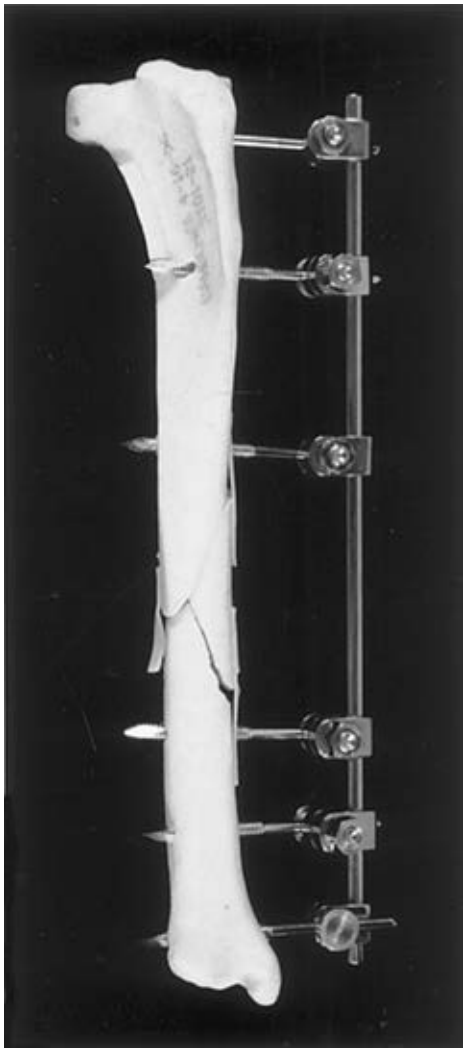
VetBooks.ir

F-30: Fistulous withers in a horse.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

VetBooks.ir

fistulous [*fis'tu-ləs*] pertaining to or of the nature of a fistula.
f. withers one or more sinuses discharge at the withers from an infected supraspinous bursa between the ligamentum nuchae and the tips of the dorsal spinous processes of the anterior thoracic vertebrae. *Brucella abortus (bovis)* is a common cause of the bursitis. *Actinomyces bovis* is a common accompaniment to the brucellosis.

fit [*fit*] 1. an episode characterized by inappropriate and involuntary motor activity. In humans there are similar psychic disturbances as well. The most common manifestation is a seizure; similar involuntary movements of restricted parts of the body would also fit this description. Called also convulsion. 2. the quality of similarity between two sets of data.
goodness of f. the degree of similarity between two sets of data, e.g. the frequencies of two attributes; a test for the significance of the similarity.
FITC fluorescein isothiocyanate; used as a fluorescent label for proteins, especially antibodies.
fitch [*fitch*] 1. the European polecat, *Mustela putorius*; farmed for its fur. 2. pelt of the polecat.
fitness [*fit'nis*] good health; equine and canine sports medicine devote much enthusiasm to the measurement of fitness, the ability to perform work, or physical activity, well. Besides actual tests of performance there are biochemical, hematological and electrocardiographic tests which can be of assistance. Radiographic examination of skeletal features has special application to racing animals. Includes fitness for performing, racing or for draft work.
physical f. quality of being able to perform physically, to turn in a good physical performance. Best tested by performance but historically in horses has been vaguely predicted by a series of tests including hemoglobin content of blood, heart size, duration of the QRS interval on an ECG, and low concentrations of muscle enzymes in blood.
f. prediction the art of predicting whether a horse will win a particular race; a combination of knowing the horse's racing form, fitness, owner and trainer intentions, jockey competence, suitability of the track.
fitted curve see fitted **curve**.
fitting [*fit'ing*] preparation of animals for special occasions of stress, e.g. parturition, exhibition at fairs and shows. Includes additional feed, exercise, grooming, handling.
fitweed see ***Corydalis***.
Fitzgerald factor a high-molecular-weight kininogen; a blood clotting factor.
FIV feline immunodeficiency virus.
Five Element theory a conceptual foundation of traditional Chinese medicine; the theory is that everything in the universe is the product of change and movement of the five elements, wood, fire, earth, metal, water, as concepts not as objects. See also **Sheng cycle**, **ko cycle**.
five-gaited said of a horse capable of performing five gaits, i.e. walk, trot, canter, **foxtrot** and **rack**.
five point program see NIRD **mastitis** control program.
Five Rights a principle of safe medication practice: administering the Right Medication, in the Right Dose, at the Right Time, by the Right Route, to the Right Patient.
five tastes pungent, sweet, sour, bitter and salty; a classification for Chinese herbal medicines.
fixation [*fik-sa'shən*] 1. the act or operation of holding, suturing or fastening in a fixed position, e.g. in orthopedic surgery. 2. the condition of being held in a fixed position. 3. in microscopy, the treatment of material so that its structure can be examined in detail with minimal alteration from the normal state, and also to provide information concerning the chemical properties (as of cell constituents) by interpretation of fixation reactions. 4. in chemistry, the process whereby a substance is removed from the gaseous or solution phase and localized. 5. in film processing, the chemical removal of all undeveloped salts of the film emulsion, as on X-ray films. 6. in genetic terms means the attainment, by selection, of homozygosity in a population with respect to one or more favorable genes.
bilateral-bipolar f. (Type III) a combination of Type II and Type I with three connecting bars on three planes.
bilateral-unipolar f. (Type II) full pins are applied to fracture fragments and connected on both sides so it can only be used on the radius or tibia.
circular external skeletal f. see **Ilizarov external ring skeletal fixation**.
complement f., f. of complement see **complement** fixation tests.
external skeletal f. a method of immobilizing fracture fragments using percutaneous pins that penetrate the bone and are stabilized, one to the other, by one or more external connecting rods.
internal skeletal f. immobilization of fractured bones by internal appliances as distinct from casts or external fixation. Includes intramedullary pins which run the length of the medullary cavity, transfixing pins that penetrate across the medullary cavity and are maintained in position by external bars or casts, and compression plating based on the use of special screws and plates.
unilateral-bipolar f. (Type 1b) usually applied to the radius or tibia; half pins and connectors are placed in two planes.



F-31: External fixation.
From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

unilateral-unipolar f. (Type 1a) half pins and external connector are placed usually on the medial radius and tibia and the lateral femur or humerus.

fixative [*fik'sə-tiv*] an agent such as formalin used in preserving a histological or pathological specimen so as to maintain the normal structure of its constituent elements. Alcohols such as 100% ethanol or methanol are used as fixatives for blood films and cytological smears.

fixator, fixateur [*fik'sa-tər*] a device for holding fragments in a fixed position, e.g. for a fractured bone or luxated joint.

fixed costs the costs which are not affected by the size and the output of the enterprises in a business, such as a farm. Called also overhead costs. Includes interest on mortgage, rates, taxes.

fixed-dose combination drugs commercially available drug preparations containing several remedies. Veterinary therapeutic supply lists contain many examples of combinations of antibiotics. These preparations contain their drugs in fixed combinations and therefore have some advantages and some disadvantages. The advantages are that a broad spectrum of antibiotic activity can be achieved, an important feature in veterinary work because so many infections are mixed ones, and the possibility of resistant bacterial populations emerging is reduced. One disadvantage is that the drugs in the combination may be antagonistic. The antibiotics most likely to demonstrate this activity are the tetracyclines, the macrolides and chloramphenicol. The principal disadvantage is that the dose rate of each of the component drugs is dictated by the content of the other drugs present, a serious matter if the causative bacteria and its sensitivity are known.

fixed model see **model** 1.

fixer in the processing of a radiological film the developed image is put into fixer (sodium or ammonium thiosulfate) to dissolve the unexposed silver halide and to harden the film.

f. fog careless or inefficient handling of the fixer bath will seriously compromise the clarity of the film being taken by creating a fog effect.

fixing removal of the undeveloped silver halide from the emulsion on a radiographic film after the exposed crystals have been developed.

Fjord pony Norwegian pony, dun with dark mane, back stripe and tail; 13–14.2 hands high. Descendant of the Mongolian wild horse.

flaccid [*flak'sid*] weak, lax, soft; applied especially to muscles.

flaccidity quality of lack of tone of muscular or vascular organ or tissue.

flag[1] a common name for plants in many different genera, but particularly **Iris**. Includes blue flag (*I. versicolor*), butterfly flag (*Diplarrhena moraea*), flag iris (*I. missouriensis*), yellow flag (*I. pseudacorus*).

flag[2] see **udder** edema.

flag[3] a behavior displayed by bitches during estrus in which the tail is elevated and deviated to one side, indicating receptiveness to the male.

flagella [*flə-jel'ə*] see **flagellum**.

flagellar [*flə-jel'ər*] of or pertaining to a flagellum.

Flagellaria indica plant in family Flagellariaceae; can cause cyanide poisoning.

flagellate [*flaj'ə-lāt*] 1. any microorganism having one or more flagella. 2. any protozoan of the subphylum Mastigophora. 3. having a flagellum (sing.) or flagella (pl.).

flagelliform [*flə-jel'i-form*] shaped like a flagellum or lash.

flagellosis [*flaj"ə-lo'sis*] infection with flagellate protozoa.

F-32: Fjord pony.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

flagellum [*flə-jel'əm*] pl. *flagella* [L.] a long, mobile, whiplike appendage arising from a basal body at the surface of a cell, serving as a locomotor organelle; the only known example in biology of a rotatory motion. In eukaryotic cells, flagella contain nine pairs of microtubules arrayed around a central pair; in bacteria, they contain tightly wound strands of flagellin.

flail [*flāl*] exhibiting abnormal or pathological mobility, as flail chest or flail joint.

f. chest a loss of stability of the chest wall due to multiple rib fractures or detachment of the sternum from the ribs as a result of a severe crushing chest injury. The loose chest segment moves in a direction which is the reverse of normal; that is, the segment moves inward during inspiration and outward during expiration (**paradoxical** respiration). Other manifestations of flail chest include shortness of breath, cyanosis, and extreme pain in the area of trauma.

f. joint an unusually movable joint.

f. segment the portion of skin, chest-wall or other structure lacking stability.

flake [*flāk*] an epidermal scale.

flaked grain see flaked **grain**.

flame [*flām*] 1. the luminous, irregular appearance usually accompanying combustion, or an appearance resembling it. 2. to render sterile by exposure to a flame.

f. cell the excretory cell in cestodes and trematodes; their number and arrangement is a basis for identification.

f. figure in skin lesions such as insect bite reactions, eosinophilic granulomas; characterized by areas of altered collagen surrounded by eosinophils and eosinophilic cytoplasmic granules.

f. retardants see **fire** retardant.

flank [*flank*] the side of the body between the ribs and ilium.

f. fat thickness of the flank fold; a measure favored by cattle buyers as an indicator of the probable level of fat in the animal.

f. laparotomy a common procedure for exploration of the abdomen in cattle. Also a preliminary to resection of intestine, rumenotomy. Has the virtue that surgery can be performed with the animal standing.

f. sucking 1. a vice in dairy calves being reared on bucket or nipple feeders when sucking time does not satisfy sucking reflex. 2. a vice in dogs, particularly common in Doberman pinschers, once believed to be due to whipworm infestation but now considered a psychogenic disorder, possibly a manifestation of psychomotor epilepsy.

f. watching the patient spreads all four limbs and turns the head and neck into one flank; posture adopted, especially by horses, in cases of subacute abdominal pain; the tendency is for the patient to look repeatedly at the one side.

flanking [*flank'ing*] method of restraint in calves. The animal is thrown by the operator reaching across the animal's back, grasping the loose flank and lifting it off its feet.

flanking regions [*flank'ing*] noncoding sequences on either side of the coding region of a gene that contain various regulatory sequences (motifs).

flap [*flap*] 1. a mass of tissue for **grafting** (1), usually including skin, only partially removed from one part of the body so that it retains its own blood supply during transfer to another site. See also specific sites, such as **conjunctival**. 2. an uncontrolled movement.

advancement f. release of a portion of tissue and reattachment at an advanced position.

F-33: Flank watching in a horse, an indication of abdomonal pain.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

antral f. in circumcostal gastropexy or belt loop gastropexy a seromuscular flap from the pyloric antrum is passed under a rib or strip of abdominal wall muscle and sutured back to its position on the stomach.
axial pattern f. pedicle flaps with a direct cutaneous artery and vein are transferred to defects within their radius with a high chance of survival.
bipedicle f. the space created by undermining skin between two parallel incisions can be used to reconstruct skin defects, usually onto a distal limb which is inserted into the space. Called also pouch flap.
bone f. a surgical procedure in which a flap is created in a flat bone by leaving one side of a rectangle cut in the bone intact. Used for gaining access to a cavity, e.g. a sinus, with minimum disfigurement.
buccal f. a section of mucosa released from mucosa of the gum and lip used to close oronasal fistulas.
cartilage f. a detached piece of cartilage as a result of osteochondrosis dissecans, seen particularly in the shoulder of dogs.
composite f. skin with muscle, bone or cartilage.
conjunctival f. see **conjunctival** grafts.
cranial sartorius muscle f. the muscle is dissected free, severed at its insertion on the tibia and used to repair prepubic tendon ruptures or femoral hernias.
cross-lid f. a skin flap from a the upper eyelid used to fill a defect in the lower eyelid, or vice versa. Called also Cutler-Beard or bucket-handle flap.
external abdominal oblique muscle f. can be used to repair defects in the abdominal wall or caudal thoracic wall.
free f. an island flap detached from the body and reattached at the distant recipient site by microvascular anastomosis.
ischial-pubic f. to increase exposure for surgery in the colorectal region, osteotomies of the pubic and ischial bones may be required. The bone flap created is reflected and replaced at the conclusion of the surgical procedure.
island f. a flap consisting of skin and subcutaneous tissue, with a pedicle made up of only the nutrient vessels.
mucoperiosteal f. a section of oral mucosa, gingiva and underlying periosteum in periodontal surgery and tooth extractions.
mucosal f. used in repair of defects in the oral cavity such as oronasal fistula and those created by excision of tumor and bone.
myocutaneous f. a compound flap of skin and muscle with adequate vascularity to permit sufficient tissue to be transferred to the recipient site.
pedicle f. see pedicle **graft**.
omental f. transposed through subcutaneous tunnels and used to cover soft tissue defects, stimulate granulation and control adhesion.
overlapping f. a technique for repair of cleft soft palate with two flaps, one on the oral side and one on the nasal side, and with the assistance of relaxing incisions these are overlapped to ensure an adequate seal.
rope f. one made by elevating a long strip of tissue from its bed except at its two ends, the cut edges then being sutured together to form a tube. Called also tubed graft.
rotary door f. a myocutaneous flap in which an island of skin is rotated to fill the airway defect created by laryngeal resection.
rotation f. see pedicle **graft**.
skin f. a standard technique in skin grafting; based on the part isolation of a graft by creation of a flap which retains its original circulation while becoming established at the new site on the new blood supply. Many types of flap are used, e.g. axial pattern, bipedicle, composite, delayed tube, direct, interpolating, reverse saphenous conduit. See also skin **graft**.
sliding f. technique for closing skin wounds where there is a large deficiency of skin. Includes sliding-H flap and Z-flap or Z-plasty. Skin around the defect is separated from its subcutis and the defect repaired by strategic additional incisions and the use of tension sutures.
tracheal f. a method of placing a tracheostomy tube which will minimize the subsequent formation of excessive granulation tissue. The opening is made by cutting a flap across two tracheal rings and reflecting it to permit entry of the tube. After extubation, the flap is replaced.
transposition f. rectangular flap of skin repositioned to fill a defect.
tube f., tunnel f. rope flap.

flare [*flār*] a diffuse area of redness on the skin around the point of application of an irritant, due to vasomotor reaction.
flashing [*flash'ing*] erratic swimming; said of fish in aquaria.
flask [*flask*] a laboratory vessel, usually of glass and with a constricted neck.
flat billy buttons [*flat*] see ***Leiocarpa brevicompta***.
flat cat syndrome a term descriptive of the extreme depression and reluctance to rise, seen in cats from different causes, but usually those involving dehydration or shock such as feline panleukopenia or snake bite.
Flat-coated retriever a medium-sized, black or liver colored dog with a flat, long coat, but feathered legs and tail. The ears are pendulous and the tail is long.
flat feet lack of flexor tone in the paw of a dog so that the phalanges are flatter to the ground; said particularly of Greyhounds.
flat puppy syndrome dorsoventral compression of the thorax with legs spread to the sides, sometimes with rotation of the humeral, radial and femoral articulations; observed in puppies of 2 to 4 weeks of age. The cause is unknown, but rapid weight gain, as occurs in offspring of bitches with abundant milk and few puppies, may account for some cases. An hereditary predisposition has been suggested in some breeds. Many affected puppies recover with normal conformation and use of the legs with only minimal therapy. Called also swimmer pups.
flat race a race without obstacles for the horses to jump.
flat sour see ***Bacillus*** *circulans*.
flat-topped thorn ***Acacia*** *sieberana*.
flatfish fish with severely flattened bodies, having both eyes on one side and swim on one side; includes halibut, flounder, sole; generally considered to mean members of the order Pleuronectiformes.
flatness [*flat'nis*] 1. a peculiar sound lacking resonance, heard on percussing an abnormally solid part. 2. lack of contrast on a radiograph.
flatulence [*flat'u-ləns*] excessive formation of gases, many malodorous, in the stomach or intestine and released through the anus; of particular concern to owners of household companion animals. May be the result of poorly digested and fermentable ingredients in the diet, or intestinal tract disease.
flatulent [*flat'u-lənt*] characterized by flatulence; distended with gas.
flatus [*fla'təs*] 1. gas or air in the gastrointestinal tract. 2. gas or air expelled through the anus.
flatweed see ***Hypochaeris radicata***.
flatworm [*flat'wərm*] any worm of the phylum Platyhelminthes—the flukes or trematodes, and the cestodes or tapeworms of animals.
Flaujeac factor a high-molecular-weight kininogen, a blood clotting factor.
flavin [*fla'vin*] any of a group of water-soluble yellow pigments widely distributed in animals and plants, including riboflavin and yellow enzymes.
f. adenine dinucleotide (FAD) a coenzyme that is a condensation product of riboflavin phosphate and adenylic acid; it forms the prosthetic group of certain enzymes, including D-amino acid oxidase and xanthine oxidase, and is important in electron transport in mitochondria.
f.-linked dehydrogenases class of dehydrogenases with prosthetic groups containing either flavin mononucleotide or flavin adenine dinucleotide tightly bound to the enzyme structure. Example is succinate dehydrogenase of the TCA cycle.
f. mononucleotide (FMN) a derivative of riboflavin consisting of a three-ring system (isoalloxazine) attached to an alcohol (ribitol); it acts as a coenzyme for a number of oxidative enzymes, including L-amino acid oxidase and cytochrome C reductase.
Flaviviridae [*fla"vi-vir'i-de*] a family of viruses comprising three genera, *Flavivirus*, *Pestivirus*, and *Hepacivirus*. They are single-stranded, plus sense RNA viruses. The type species of the genus *Flavivirus*, which are arthropod borne viruses, is yellow fever virus of humans (flavi=yellow); other viruses cause encephalitis in humans and some cause encephalitis in animals. Amongst the viruses in the genus which affect animals are: West Nile virus, St. Louis encephalitis—a disease of humans but the virus has been isolated from animals; **Japanese encephalitis virus**; California encephalitis of humans, but viremia detectable in feral animals;

louping ill; Central European tickborne fever and Murray Valley encephalitis, both diseases of humans and the viruses that occur in small ruminants; **Wesselsbron disease**, Israeli turkey **meningoencephalitis**; Powassan disease; and the Tahyna virus. The genus *Pestivirus* includes classical swine fever (hog cholera), bovine virus diarrhea–mucosal disease and ovine border disease viruses. The genus *Hepacivirus* includes human hepatitis C virus. Pestiviruses and hepaciviruses are not arthropod borne.

flavivirus [*fla'vĭ-vi"rəs*] a virus in the family *Flaviviridae*.

flav(o)- word element. [L.] *yellow*.

Flavobacterium [*fla"vo-bak-tēr'e-əm*] a genus of glucose-nonfermenting gram-negative bacteria characteristically producing yellow, orange, red or yellow-brown pigmentation, found in soil and water; some species are pathogenic.

F. branchiophilum cause of chronic proliferative inflammation in the gills of salmonid fish. Called also bacterial gill disease.

F. columnare the cause of **columnaris disease** in salmonid fish, associated with increased water temperature. Characterized by white necrotic plaques overlaying skin ulcers. Previously called *Flexibacter columnaris, Cytophaga columnaris*.

F. johnsoniae see false **columnaris disease**. Previously called *Cytophaga johnsonae*.

F. psychrophilum causes peduncle or **coldwater disease** of Brook trout. Predisposed to by subnormal water temperature. Previously called *Cytophaga psychrophila*.

flavoenzyme [*fla"vo-en'zīm*] any enzyme containing a flavin nucleotide (FMN or FAD) as a prosthetic group.

flavokinase [*fla"vo-ki'nās*] see **riboflavin kinase**.

flavoprotein (Fp) [*fla"vo-pro'tēn*] a conjugated protein containing a flavin nucleotide.

flavoxate [*fla-voks'āt*] a smooth muscle relaxant; the hydrochloride is used as a urinary tract spasmolytic.

flax [*flaks*] common name for plants in a number of genera, but especially ***Linum***.

bastard toad f. see ***Comandra pallida***.

common f. *Linum usitatissimum*. Called also cultivated flax, linseed.

dwarf bay f. ***Daphne*** *mezereum*.

fairy f. *Linum catharticum*.

purging f. *Linum catharticum*.

spurge f. ***Daphne*** *mezereum*.

toad f. ***Linaria vulgaris***.

wild f. ***Pimelea*** *trichostachya*.

flaxweed ***Pimelea*** *simplex, P. trichostachya*.

flay [*flā*] to strip off the skin.

fl dr fluid dram.

flea [*flē*] a small, wingless, blood-sucking insect. Many fleas are ectoparasites and may act as disease carriers. They are members of the order Siphonaptera. The common recorded species and their principal hosts include: *Archaeopsylla erinacei*—hedgehogs; *Ceratophyllus gallinae*—chickens (European chicken flea); *C. columbae*—pigeons; *C.* (*Nosopsyllus*) *fasciatus*—rat, house mouse; *C. garei*—water fowl; *C. niger* (Western chicken flea); *Ctenocephalides felis*—cat, dog, rarely humans, primates, rodents; *C. canis*—dog, fox; *Dasypsyllus gallinulae*—wild birds; *Echidnophaga gallinacea*—chickens (stickfast or sticktight flea); *E. myrmecobii* and *E. perilis*—rabbits; *Leptopsylla segnis*—house mouse, rat, wild rodents; *Pulex irritans*—humans, chickens, pigs; *Spilopsyllus cuniculi*—rabbit, hare; *Tunga penetrans*—humans; *Vermipsylla, V. alacurt, V. dorcadia, V. ioffi, V. perplexa*—ruminants and horses; *Xenopsylla cheopis*—rodents (the plague flea).

f. allergy dermatitis the inflammatory lesions and self-trauma caused by a hypersensitivity to flea bites. In dogs, this is usually centered on the back over the lumbosacral spine, around the tail base, and inside the hindlegs. Secondary infection is common. See also feline miliary **dermatitis**.

f. antigen see flea **antigen**.

bird f. see ***Ceratophyllus***.

cat f. ***Ctenocephalides*** *felis*.

f. collar a collar (or tag) impregnated with insecticide, hung around the animal's neck. There is a slow release of the active compound, either as a vapor or powder, to kill ectoparasites on the body. With the development of new, more effective types of topical flea control, this form of flea control has lost favor.

f. collar dermatitis a contact dermatitis in dogs and cats caused by the insecticide-impregnated polyvinyl chloride collars marketed for flea control. Although the initial and most severe skin reaction occurs where direct contact is made, surrounding skin may also become involved. Correct use of the collars minimizes this risk.

F-34: Flea allergy dermatitis.

f. dip any of the external parasiticides applied to dogs as a rinse; dipping is not a practical form of application in most companion animals.

dog f. ***Ctenocephalides*** *canis*.

European chick f. ***Ceratophyllus*** *gallinae*.

European rabbit f. ***Spilopsyllus cuniculi***.

poultry f. ***Echidnophaga*** *gallinacea*.

rat f. ***Leptopsylla segnis***.

sand f. ***Tunga*** *penetrans*.

stickfast f. ***Echidnophaga*** *gallinacea*.

water f. ***Cyclops, Diaptomus gracilis***.

Western chicken flea ***Ceratophyllus*** *niger*.

Western hen f. ***Ceratophyllus*** *niger*.

flea-bite dermatitis see **flea** allergy dermatitis.

flea-bitten a coat color marking seen in horses; a gray coat is flecked with hairs of another color.

fleawort ***Inula*** *conyza*, ***Senecio*** *integrifolius*, ***Plantago*** *psyllium*.

flecainide [*flə-ka'nīd*] an antiarrhythmic drug that blocks Na+ conduction; used in the treatment of ventricular arrhythmias.

fledgling an immature bird at the time it is feathered and learns to fly; the period varies widely from pigeons at 10–35 days to the Californian condor at 180–210 days.

fleece [*flēs*] 1. the wool covering of the sheep shorn off as one piece, except for the scraps at the legs, face and crutch. 2. the hair covering of alpacas consisting of both unmedullated and medullated fibers.

character of f. described as strong, moderate, fair, poor and used to indicate crimp definition and staple formation.

density of f. number of fibers per square measurement of skin.

double f. two-year growth of wool in the one fleece.

fineness of f. thickness of the fleece fiber measured in microns. See **micron** count.

f. fly strike see cutaneous **myiasis**.

f. histogram graph with fleece fiber diameter measured in microns on the X axis and the percentage of fibers per micron on the Y axis. Usually the histogram reflects the measurement of 2000 fibers.

f. luster subjective description of the amount of light reflected from the fleece of sheep, goats and camelids. Described as silver for fine wool Merino, silk for longwool breeds of sheep and glass for mohair.

VetBooks.ir

VetBooks.ir

f. rot a dermatitis of sheep caused by prolonged wetting of the skin leading to exudation, the formation of crusts and the matting together of the wool fibers. The growth of toxigenic strains of *Pseudomonas aeruginosa* is believed to be the major cause of the dermatitis, and the green fleece coloration associated with production of pyocyanin that usually accompanies it. Other discolorations may occur depending upon the predominance of a particular chromogenic bacterium, many which belong to *Pseudomonas* spp. *Ps. maltophilia* can result in yellow coloration, and *Ps. indigofera*, blue coloration. The damaged fleece loses much of its commercial value.
skirted f. a fleece from which the skirtings have been removed.
tender f. a staple of the wool will break easily across the fibers with only moderate tension having been applied.
f. weight the weight of wool produced by a sheep in a year.
f. worm see cutaneous **myiasis**.

flehmen the ritual of urine sniffing; a behavioral component of libido in the male animal. The animal appears to be carrying out a test for odor in the urine. He sniffs the urine or the perineum, then extends the head, dilates the nostrils, and lifts and curls the upper lip. See also **gape**.

Flemish giant largest of the rabbit breeds; it can weigh in excess of 20 lb. Gray is the most common of many colors; the body is broad, long and heavy-boned.

fleroxacin [*flə-rok'sə-sin*] a broad-spectrum fluoroquinolone antibiotic, similar to ciprofloxacin.

flesh [*flesh*] the soft muscular tissue of the animal body.
f. marks patches on a horse's skin where there is no normal skin pigment.
milky f. myoliquefaction observed at necropsy in teleosts; caused by infection with myxosporeans of the genera *Chloromyxum*, *Henneguya*, *Kudoa*, *Unicapsula*. Also thought to be sometimes associated with infections by microsporidia.
proud f. exuberant amounts of soft, edematous, vascular granulation tissue developing during healing of large surface wounds.
f. side the rough side of leather or skin; the side that was undermost in the live state.

Fletcher factor a prekallikrein involved in blood coagulation; acts by enhancing the activity of Hageman factor (factor XII).
F. f. deficiency a rare coagulation disorder in dogs and cats.

flews a term used to describe the fleshy, pendulous upper lip of some dogs such as the Bloodhound.

flex [*fleks*] to bend or put in a state of flexion.

Flexibacter [*flek'si-bak"tər*] long, flexuous, gram-negative bacteria; common cause of superficial infections in fish. Includes *F. columnaris* (now called *Flavobacterium columnare*), the cause of **columnaris disease** and *F. maritimum* , the cause of **marine flexibacter disease**, now called *Tenacibaculum maritimum*.

flexibilitas [*flek"si-bil'i-təs*] [L.] *flexibility*.

flexibility [*flek"si-bil'i-te*] the state of being unusually pliant.

flexion [*flek'shən*] the act of bending or the condition of being bent.
f. reflex see **flexor** reflex.

Flexispira rappini highly motile, flagellar, rod-shaped bacterium closely related to *Helicobacter* spp. In pregnant ewes causes fetal mummification, abortion (but not outbreaks), weak lambs, and lambs with hepatitis. Not yet a fully classified organism.

flexor [*flek'sor*] any muscle that flexes a joint. See Table 13.
f. reflex a spinal reflex in which a painful (pressure) stimulus applied to a toe, coronary band or heel bulb, results in flexion, or withdrawal, of the leg. A test of the integrity of the reflex arc and sensory pathways. Called also withdrawal reflex.
f. retinaculum any bracelet-like band of fibrous tissue on the flexor surface of a joint, e.g. transverse palmar carpal ligament.
f. spasm see **myoclonus**.
f. tendon tendons of the superficial and deep digital flexor muscles, situated behind the metacarpal or metatarsal bones.

flexuose [*flek'su-ōs*] winding or wavy.

flexura [*flek-shoo'rə*] pl. *flexurae* [L.] see **flexure**.
f. centralis central flexure of the spiral colon of ruminants.
f. portalis the first curve in the duodenum.

flexural [*flek'shər-əl*] pertaining to the flexure of a joint.
f. deformity fixation of joints in flexion. In the newborn called contracted calves or foals.
f. laxity term for common condition in newborn foals manifest with lax ligaments, wobbly legs and mildly abnormal leg angles and stances. Generally self-corrects within a few days of birth. Bandaging, casts and splints may aid in correction. Of concern when the condition prevents a foal from rising or standing.
f. seborrhea dermatitis with heavy outpouring of sebaceous exudate. If allowed to stay wet becomes rancid and develops offensive odor. Common sites for lesion are between halves of udder, between udder and medial aspect of thigh and in axilla; may progress to ulcerative mammary dermatitis. Common only in freshly calved cows.

flexure [*flek'shər*] a bend or fold; a curvation.
brain f. as head folding occurs in the developing embryo midbrain; cervical and pontine flexures also occur in the brain.

F-35: Flexural deformity in a puppy.
From Slatter D, Textbook of Small Animal Surgery, 3rd Edition. Saunders, 2002.

F-36: Flexor laxity of the hindlimbs.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

caudal f. the bend in the sacral region of the embryo.
cephalic f. the curve in the midbrain of the embryo.
cervical f. a bend in the neural tube of the embryo at the junction of the brain and spinal cord.
cranial f. the anterior of the two ventral flexures of the developing embryo.
diaphragmatic f. the flexure between the left and right dorsal colons in the horse.
pelvic f. the band in the great colon where the left ventral colon in the horse is flexed upward to become the left dorsal colon; there is a sharp reduction in the diameter of the colon at this flexure and the contents become much firmer, less fluid.
sigmoid f. the flattened loop of colon, immediately succeeding the cecum in ruminants.
sternal f. where the right ventral colon in the horse turns to become the left ventral colon.

flight control [*flīt*] see **deflighting**.

flight range the distance that an insect or bird is capable of flying. An important factor in the spread of disease by vectors or mechanical spreaders.

flightless see **ratite**.

flipover see **acute** death syndrome of chickens.

flippase a protein that facilitates the movement of membrane lipids from one leaflet to the other of a phospholipid bilayer of a cell.

flipper fin-like structures of pinnipeds.

float [*flot*] 1. an instrument used in the filing or rasping of a horse's premolar and molar teeth to remove sharp edges (points) that develop on the buccal side of the upper cheek teeth and the lingual side of the lower. Handles are 24–28 in (60–70 cm) with a broad head into which an interchangeable rasp can be screwed. Some rasps work when pulled toward the operator, others work only when pushed away. Short-handled floats with the heads set at an angle are used for the front upper molars. There are also power assisted grinding floats. 2. in British countries, the term for a road vehicle used for the transport of large animals, usually horses or cattle. A low-level float may be an independent unit towed behind another vehicle. A high-level float is standard-truck height and an integral part of the vehicle.

floater [*flō'tər*] a small opacity in the vitreous. See **vitreous** floaters.

floating [*flōt'ing*] vernacular for filing or rasping a horse's molar teeth.

floccose [*flok'ōs*] see **flocculent**.

flocculation [*flok"u-la'shən*] a colloid phenomenon in which the disperse phase separates in discrete, usually visible, particles rather than in a continuous mass, as in coagulation.

flocculent [*flok'u-lənt*] woolly, containing downy or flaky shreds; said of bacterial growth composed of short, curved chains, variously oriented.

flocculonodular lobe posterior lobe of the cerebellum, comprising the nodulus and the paired lateral flocculi; involved in the maintenance of balance.

flocculus [*flok'u-ləs*] pl. *flocculi* [L.] 1. a small tuft or mass, as of wool or other fibrous material. 2. a small mass on the lower side of each cerebellar hemisphere, continuous with the nodule of the vermis.

flock [*flok*] 1. a group of one species of animal or bird which eats or travels or is kept together, e.g. flock of sheep, of wild geese. 2. to move into a single group.
f. ewe not a stud ewe; a ewe kept for breeding or wool production.
f. ram a ram mated to flock ewes.

flocking [*flok'ing*] 1. counterpart of herding but for a flock. 2. precipitation, usually by the addition of a chemical, of protein in a solution for the purpose of clarifying it.

Flomasta ventilator used in anesthetizing smaller animals. It is operated by the gas-flow from the anesthetic apparatus to which it is attached.

flood [*flud*] natural disaster important in the spread of animal disease and insects and disruption of quarantine areas.
f. fever see **leptospirosis**.
f. plain staggers Australian (north western New South Wales) syndrome caused by tunicaminyluracils produced in seedhead galls on the grass *Lachnagrostis filiformis*, the galls produced by *Anguina funesta* (grass nematodes) and infected by *Rathayibacter toxicus*. Clinically the disease is characterized by convulsions precipitated by driving and often death during the convulsion. Hypermetric ataxia is characteristic in less severe cases. Cattle are most affected, sheep and horses less frequently. See also **corynetoxicosis**.

flooding [*flud'ing*] a technique of training or behavior modification in which an extreme version of a feared stimulus is applied and continued until the fear response is diminished.

floor [*flor*] physical qualities which make a floor good for animals include non-slipperiness, warmth, freedom from abrasiveness with resulting injuries to hooves and the skin of the lower limbs, ease of cleaning and disinfection. The amount of floor space that each animal needs is importnat in the design of animal accommodation because of the need to economize on building costs, mechanical services and maintenance while meeting the welfare needs of the animals.
f. sweepings in feed mills and feed mixing and processing plants this is the floor residue. Collected periodically. Most likely to be contaminated with rodent droppings, weed seeds, rodent control agents and such like.

flora [*flor'ə*] the collective plant organisms of a given locality.
intestinal f. the microorganisms normally residing within the lumen of the intestine. Ecology is influenced by age, physiological state and environment of the host.
rumen f. includes bacteria and protozoa in about equal volumes but the bacteria in much greater numbers, and fungi. The important protozoa are ciliated anaerobes.

Florestina tripteris North American plant in the family Asteraceae; can cause cyanide poisoning.

florfenicol an antimicrobial agent, closely related to chloramphenicol, but free of the ability to induce aplastic anemia in humans. Used particularly in cattle in the treatment of bovine respiratory disease and footrot.

Florida arrowroots ***Zamia integrifolia***.

Florida spots multifocal white-gray corneal opacities without evidence of inflammation seen in dogs and cats in tropical and subtropical areas of the Americas; attributed to a number of infectious and non-infectious causes but still of unknown etiology. Called also acid-fast keratopathy.

flotation tank a once-popular, but now little used, technique of suspending a horse in a harness in a tank filled with water for long periods while a limb bone fracture healed; still used for brief periods of several days for lesser injuries.

flounder [*floun'dər*] members of the families Bothidae and Pleuronectidae; flatfish with eyes on the same side of the head and often designated as right eye or lefteye flounder.
greenback flounder see ***Rhombosolea tapirina***.
summer f. a lefteye flounder, native to the southern coastal waters of the Eastern USA.
f. ulcer disease progressive and sometimes fatal ulceration in greenback flounder and probably other species of flatfish. Caused by *Aeromonas salmonicida*. See also atypical ***Aeromonas salmonicida***.
winter f. a righteye flounder, native to coastal waters of Northeastern North America. Called also black back.

Flourensia cernua an American plant in the family Asteraceae; may contain sesquiterpenes which cause abdominal pain, respiratory distress, enteritis and liver damage. Called also tarbush.

flow cytometry [*flo*] a technique used to identify and separate different types of cells based on detecting and measuring the fluorescence emitted with a laser light beam. See also **fluorescence**-activated cell sorting.

flow receptors [*flo*] bursts of impulses fired by flow receptors in urethra when urine commences to flow, initiating reflexes which contract the bladder and further relax its sphincter.

flower essence therapy [*flou'ər*] a complementary therapy in which flower essences are administered orally used to treat the mental, emotional and physical balance of the patient and indirectly physical illness.

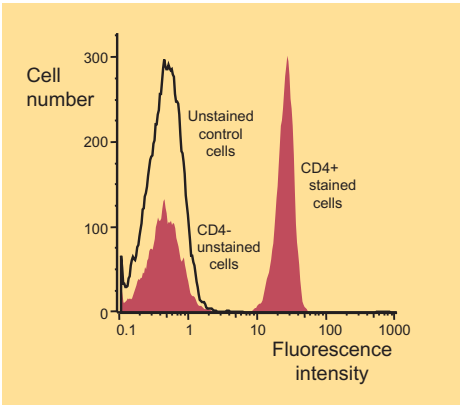
flower spray endings [*flou'ər*] afferent secondary nerve endings attached to muscle fibers; function uncertain but probably to transmit information about muscle length to the CNS.

flowers of sulfur [*flou'ərz*] commercial grade sulfur, commonly used by animal owners as a parasiticide dressing; also administered orally for the same purpose; overdosing causes gastroenteritis. Called also sublimed sulfur.

flowload [*flo'lōd*] the load placed on the heart by the need for an increase in the volume of blood discharged per minute, e.g. A-V valve insufficiency. Called also pressure load.

F

VetBooks.ir



F-37: A typical flow cytometer readout from labelling a cell population with antiequine CD4.
From Tizard IR, Veterinary Immunology An Introduction, 6th Edition. Saunders, 2001.

VetBooks.ir

F

flowmeter [*flo'me-tər*] an apparatus for measuring the rate of flow of liquids or gases, particularly anesthetic gases. Called also rotameter.
Bourdon f. based on the straightening of a flexible metal tube as gas pressure increases. Has limitations, especially at very low flow rates.
floxacillin [*flok"sə-sil'in*] an antibiotic analog of **cloxacillin**. Called also flucloxacillin (INN).
floxuridine (FUDR) [*floks-ūr'ī-dēn*] an analog of 5-fluorouracil used as an antiviral and antineoplastic agent.
Floydia praealata Australian rainforest tree in the family Proteaceae. Kernels of the nuts on this tree may contain toxic amounts of cyanogenic glycosides.
fl oz fluid ounce.
fluanisone a butyrophenone tranquilizer used in combination with fentanyl for neuroleptanalgesia in animals.
flubendazole [*floo-ben'də-zōl*] an analog of mebendazole with similar effects.
flucloxacillin [*floo-klok"sə-sil'in*] floxacillin.
fluconazole [*floo-kon'ə-zōl*] a triazole antifungal agent, used particularly in the treatment of cryptococcosis.
fluctuation [*fluk"choo-a'shən*] 1. a variation, as about a fixed variation or mass. 2. a wavelike motion in a fluid-filled cavity.
flucytosine [*floo-si'to-sēn"*] a fluorinated cytosine analog used as a systemic antifungal agent in the treatment of severe candidal and cryptococcal infections.
fludrocortisone [*floo"dro-kor'tī-sōn*] a synthetic adrenal corticoid used for its mineralocorticoid replacement activity in the treatment of hypoadrenocorticism.
fludroxycortide see **flurandrenolone**.
flue see **underflue**.
flufenamic acid an anti-inflammatory, analgesic, serotonin antagonist; little used in animals because of toxic effects.
flugestone acetate, flurogestone acetate a synthetic fluorinated progestational steroid used in the synchronization of estrus in ewes and goats; used in impregnated vaginal pessaries or tampons.
fluid [*floo'id*] 1. a liquid or gas; any liquid of the body. 2. composed of molecules which freely change their relative positions without separation of the mass.
ascitic f. see **ascites**.
body f's the fluids within the body, composed of water, electrolytes and nonelectrolytes. The volume and distribution of body fluids vary with age, sex and amount of adipose tissue. Throughout life there is a slow decline in the volume of body fluids; obesity decreases the relative amount of water in the body. Although the body fluids are continuously in motion, moving in and out of the cells, tissue spaces and vascular system, physiologists consider them to be 'compartmentalized'. Fluid within the cell membranes is called *intracellular* fluid and comprises about two-thirds of the total body fluids. The remaining one-third is outside the cell and is called *extracellular* fluid. The extracellular fluid can be further divided into tissue fluid (*interstitial* fluid), which is found in the spaces between the blood vessels and surrounding cells, and intravascular fluid, which is the fluid component of blood. In certain circumstances, a theoretical *third* compartment is formed with significant effects on the distribution of fluid and electrolytes to the other two compartments. This can occur in displaced abomasum and extensive burns. The maintenance of a proper balance between the intracellular and extracellular fluid volumes is essential to health. In patients with **heart failure** and renal failure the balance becomes upset, producing either localized or generalized **edema**. Excessive fluid loss produces fluid volume deficit causing cellular dehydration and impaired cellular function.
Bouin's f. a histological fixative.
f. extract a liquid preparation of a vegetable drug, containing alcohol as a solvent or preservative, or both, of such strength that each milliliter contains the therapeutic constituents of 1 gram of the standard drug it represents.
fetal f. allantoic plus amniotic fluids.
free f. fluid in the body, other than in the alimentary or urinary tracts, which is not part of tissue fluid but free in a body cavity or as a discrete mass in an organ.
interstitial f. the extracellular fluid bathing the cells in most tissues, excluding the fluid within the lymph and blood vessels.
isotonic f. having the same tonicity or osmotic pressure as blood.
lacrimal f. tears.
f. line in radiographs, the interface between fluid and gas, as in the gastrointestinal tract, will show as a straight line.
f. loss by vomiting, diarrhea, polyuria, water deprivation. See **dehydration**.
f. mosaic model the modern concept of the structure of a biological membrane developed by S.J. Singer and G.L. Nicolson. In it the membrane consists of protein molecules partly embedded in a discontinuous bilayer of phospholipids that form the matrix of a mosaic of functional cell units.
pericardial, pleural, peritoneal f. normally present in amounts sufficient only to lubricate the movement of viscera within the respective cavities. Composition similar to blood serum.
f. replacement see fluid therapy (below).
f. restriction the limitation of oral fluid intake to a prescribed amount for each 24-hour period.
f. retention see **edema**.
spinal f. see **cerebrospinal** fluid.
f. splashing sounds audible when gas and fluid are free in a cavity, e.g. abomasum in cases of abomasal displacement; can be elicited by shaking a small animal or part of a large animal (i.e. succussion) or by simultaneous percussion and auscultation.
synovial f. synovia.
f. therapy aims to replace fluids lost by disease process or by restriction of intake, or to maintain a high rate of fluid excretion to ensure removal of toxins, or to administer therapeutic or anesthetic agents slowly over a long period. The amounts and route of administration vary with the need of the patient. Normal solutions include 5% dextrose and Ringer's solution; alkalinizing fluids include lactated Ringer's and 1.3% sodium bicarbonate; acidifying solutions include isotonic saline and 1.9% ammonium chloride.
f. volume deficit an imbalance in fluid volume in which there is loss of fluid from the body not compensated for by an adequate intake of water. The major causes are: (1) insufficient fluid intake; and (2) excessive fluid loss from vomiting, diarrhea, suctioning of gastric contents, or drainage through operative wounds, burns or fistulae. Decreased volume in the intravascular compartment is called *hypovolemia.* Because water moves freely between the compartments, extracellular fluid deficit causes intracellular fluid deficit (cellular dehydration), which leaves the cells without adequate water to carry on normal function.
f. volume excess an overabundance of water in the interstitial fluid spaces or body cavities (edema) or an excess of fluid within the blood vessels (hypervolemia) and water intoxication. Factors that contribute to the accumulation of edematous fluid are: (1) dilatation of the arteries, as occurs in the inflammatory process; (2) reduced effective osmotic pressure, as in hypoproteinemia, lymphatic obstruction and increased capillary permeability; (3) increased venous pressure, as in congestive heart failure, thrombophlebitis and cirrhosis of the liver; and (4) retention of sodium due to increased reabsorption of sodium by the renal tubules.
fluid–electrolyte disturbance see **dehydration**, **water** intoxication.
fluke[1] [*flook*] a helminth organism of the subclass Digenea (class Trematoda) in the phylum Platyhelminthes, characterized by a body that is usually flat and often leaf-like. Trematodes can infect

the blood vessels, liver, intestines and lungs. All of the species that infect domestic animals are in the subclass Digenea, that is they are digenetic flukes. Members of the subclass Monogenea (monogenetic trematodes) occur on the gills or scales of fish.

blood f. see ***Schistosoma***.
capsalid f. see ***Neobenedenia***.
Chinese liver f., oriental liver f. ***Clonorchis*** *sinensis*.
common liver f. see ***Fasciola*** *hepatica*.
conical f. ***Paramphistomum***, *Cotylophoron*, ***Calicophoron***.
f. exhaust see parasite **hematin**.
eye f. *Diplostomum* spp. larvae in the eyes of freshwater fish.
giant liver f. see ***Fasciola*** *gigantica*.
gill f. *Dactylogyrus* spp.
lanceolate f. see ***Opisthorchis*** *tenuicollis*.
lancet f. see ***Dicrocoelium*** *dendriticum*.
large liver f. see ***Fascioloides*** *magna*.
lens f. see ***Diplostomum*** *spathaceum*.
lesser liver f., small liver f. see ***Dicrocoelium*** *dendriticum*.
liver f. ***Fasciola*** *hepatica*, *F. gigantica*, ***Fascioloides*** *magna*, ***Dicrocoelium*** *dendriticum*.
lung f. see ***Paragonimus***; includes also *Dasymetra*, *Stomatrema*, etc., which infest the mouths of reptiles and can be found in the lungs.
o. avian eye fluke see ***Philophthalmus*** *gralli*.
oriental blood f. ***Schistosoma*** *japonicum*.
oriental lung f. see ***Paragonimus*** *westermani*.
pancreatic f. see ***Eurytrema***.
stomach f. ***Paramphistomum***, *Cotylophoron*, ***Calicophoron***.

fluke[2] each half of the tail of a whale or dolphin.
fluke disease see hepatic **fasciliasis**, **paramphistomiasis**.
flukicide an agent that destroys flukes.
flumazenil [*floo'ma-zə-nil"*] a potent benzodiazepin antagonist, used to reverse the effects of diazepam or climazolam sedation.
flumen [*floo'mən*] pl. *flumina* [L.] a stream. See also **flumina pilorum**.
flumequine [*floo'mə-kwin*] a first generation quinolone antibiotic effective against Enterobacteriaceae.
flumethasone [*floo-meth'ə-sōn"*] a long-acting, potent glucocorticoid.
flumethrin a synthetic pyrethroid insecticide.
flumina pilorum [*floo'mĭ-nə*] hair streams; the direction of the hair flow.
flunixin meglumine [*floo-nik'sin*] a prostaglandin inhibitor; a nonsteroidal anti-inflammatory agent with potent analgesic and antipyretic activity; particularly effective in visceral pain and is used in the treatment of equine colic.
fluocinolone acetonide [*floo"ə-sin'ə-lōn*] a corticosteroid anti-inflammatory used topically in the treatment of skin diseases and inflammation of anal sacs.
fluocinonide [*floo"ə-sin'ə-nīd*] an ester of fluocinolone acetonide used topically in the treatment of certain dermatoses.
fluopromazine triflupromazine.
fluorapatite [*flŏŏ-rap'ə-tīt*] a fluorine-bearing mineral in rock phosphate. Contributes to local fluorine poisoning and also to distant sites if the rock phosphate is mined for livestock feeding as a dietary phosphorus supplement.
fluorescein [*flŏŏ-res'ēn*] a fluorescent dye, an acid fluorochrome; the sodium salt has multiple uses in ophthalmic diagnostic testing, especially the detection of corneal ulcers, patency of the nasolacrimal duct, fluorophotometry and chorioretinal fluorescein angiography. The isothiocyanate derivative (FITC) is used for labeling of immunoglobulins in various **immunofluorescence** techniques.
f. strips sterilized applicators impregnated with fluorescein for use in testing of ophthalmic surface structures, especially corneal epithelial integrity.
f. passage test fluorescein dye placed in the conjunctival sac should drain through the nasolacrimal duct and be detected at the external nares (or rarely the nasopharynx); a test of nasolacrimal duct patency. Called also Jones test.
fluorescence [*flŏŏ-res'əns*] the property of emitting light while exposed to light, the wavelength of the emitted light being longer than that of the absorbed light.
f.-activated cell sorting (FACS) a technique for analysis and separating mixed populations of cells after labeling individual cell-specific surface antigens with fluorescent antibody. The individual cells in droplets are passed through a laser beam; the droplet is deflected into one of two or more collection vessels depending upon which fluorescent antibody is bound to its surface. Two or more different fluorescent antibodies are used.

F-38: Fluorescin staining of a corneal ulcer associated with infectious keratoconjunctivitis in a Hereford heifer.

fluorescent [*flŏŏ-res'ənt*] having the quality of fluorescence.
f. antibody see fluorescence **microscopy**.
f. antibody test see fluorescence **microscopy**.
f. bone marker tetracycline is used experimentally to mark bone for procedures such as measuring rate of growth of bone.
f. crystals phosphors used in radiographic intensifying screens. A fine grade of crystals improves the definition of the image obtained but significantly slows the speed of the film. Calcium tungstate was commonly used as the phosphor but is gradually being replaced by rare earths.
f. dye see **fluorescein** and fluorescence**microscopy**.
f. screen used as a fluoroscopic screen.
f. staining use of a fluorescent dye linked to an antibody forms the basis for fluorescence **microscopy**.
fluoridation [*floor"ĭ-da'shən*] treatment with fluorides; the addition of fluorides to drinking water as a measure to reduce the incidence of dental caries in humans.
fluoride [*floor'īd*] any binary compound of fluorine. See also **fluorine**.
fluorimeter [*flŏŏ-rim'ə-tər*] fluorometer.
fluorimetry [*flŏŏ-rim'ə-tre*] see **fluorometry**.
fluorinated material to which a fluoride has been added, e.g. water for human consumption treated as a prophylaxis against tooth decay.
fluorine (F) [*floor'ēn*] a chemical element, atomic number 9, atomic weight 18.998. See Table 4.
f. poisoning see **fluorosis**.
fluorite a fluorine-bearing rock mineral. Called also fluorspar, calcium fluoride.
fluoroacetamide (1081) [*floor"o-ə-set'ə-mīd*] a rodenticide, also used in control of rabbits, opposums and coyotes. Odorless, tasteless and soluble in water and has excellent credentials as a rodenticide but is dangerous for other species including farm livestock, raptors and even humans. Signs of poisoning in dogs include extreme excitation, hyperirritability, crazy running and tonic–clonic convulsions. In horses and ruminants there are no signs of nervous excitation, death occurring as a result of cardiac failure manifested by tachycardia and cardiac arrhythmia.
fluoroacetate, fluoroacetic acid (1080) [*floor"o-as'ə-tāt, floor"o-ə-se'tik*] see **sodium** fluoroacetate.
fluoroapatite [*floor"o-ap'ə-tīt*] see **apatite**.
fluorochrome [*floor'o-krōm*] a fluorescent compound, as a dye, used to mark protein with a fluorescent label. See also **fluorescein**.
fluorocitrate [*floor'o-sit'rāt*] a metabolic product of fluoroacetic acid which inhibits aconitase and causes the tissue build-up of citrate, the pathogenesis of fluoroacetate poisoning.

VetBooks.ir

fluorocitric acid [*floor'o-sit'rik*] see **fluorocitrate**.
fluorocytes [*floor'o-sīts*] nucleated cells of the erythrocyte series present in the bone marrow. They fluoresce under the fluorescence microscope because of the presence of porphyrin in the nuclei.
5-fluorocytosine see **flucytosine**.
fluorodeoxyuridine see **floxuridine**.
fluorography [*flŏŏ-rog'rə-fe*] see **photofluorography**.
fluorometer [*flŏŏ-rom'ə-tər*] the instrument used in fluorometry, consisting of an energy source (e.g. a mercury arc lamp or xenon lamp) to induce fluorescence, monochromators for selection of the wavelength, and a detector.
fluorometholone [*floor"o-meth'ə-lōn*] a topical anti-inflammatory glucocorticoid.
fluorometry [*flŏŏ-rom'ə-tre*] an analytical technique for identifying minute amounts of a substance by detection and measurement of the characteristic wavelength of the light it emits during fluorescence.
fluoro-oleic acid the toxin in the seeds of the plant ***Dichapetalum toxicarium*** (ratsbane).
fluorophotometry [*floor"o-fo-tom'ə-tre*] the measurement of light given off by fluorescent substances.
aqueous f. measurement of fluorescence within the anterior chamber following intrravenous injection of fluorescein; done to detect breakdown of the blood-aqueous barrier.
vitreous f. measurement of fluorescence within the vitreous body following intravenous injection of fluorescein; done to detect the breakdown of the blood–retinal barrier.
fluoroquinolone [*floor"o-kwin'o-lōn*] a class of synthetic agents in the family of **quinolone** antibiotics which exert their antimicrobial effects by inhibiting bacterial DNA gyrase. They are effective primarily against gram-negative organisms. They include **ciprofloxacin**, a 2nd generation fluoroquinolone and those for veterinary use, **danofloxacin**, **difloxacin**, **enrofloxacin**, **marbofloxacin**, **orbifloxacin**, **sarafloxacin**, and **flumequine**.
fluororadiography [*floor"o-ra"de-og'rə-fe*] see **photofluorography**.
fluoroscope [*floor'o-skōp*] an instrument for visual observation of the form and motion of the deep structures of the body by means of X-ray. The patient is put into position so that the part to be viewed is placed between an X-ray tube and a fluorescent screen. The X-rays from the tube pass through the body and project the bones and organs as shadowy images on the screen. Examination by this method is called fluoroscopy, but the image is viewed on a separate television monitor and not on the fluorescent screen. See also **image** intensification. The advantage of the fluoroscope is that the action of joints, organs and entire systems of the body can be observed directly. The use of radiopaque media aids in this process. See also **barium** study.
fluoroscopy [*flŏŏ-ros'kə-pe*] examination by means of the fluoroscope, a fluoroscopic screen set up to produce a visual image.
fluorosis [*flŏŏ-ro'sis*] a condition due to ingestion of excessive amounts of fluorine or its compounds. Fluorine poisoning usually takes a chronic form in animals which are exposed to excessive amounts in their drinking water or food over long periods. Clinical signs include excessive wear and mottling of developing teeth, lameness due to osteoporosis and unthriftiness. Acute fluorosis caused by factory effluent is characterized by gastroenteritis, tetany and death.
5-fluorouracil an antimetabolite used as an antineoplastic agent in the treatment of gastrointestinal carcinomas in dogs, and topically for superficial squamous cell carcinomas, also in dogs. Contraindicated in cats.
fluorspar see **fluorite**.
fluoxetine [*floo-ok'sə-tēn*] a serotonin inhibitor, used as an antidepressant; used in the treatment of feline idiopathic cystitis, acral lick dermatitis, and sensory mutilation. Popularly known as Prozac.
fluoxymesterone [*floo-ok"se-mes'tər-ōn*] an anabolic androgenic steroid.
fluphenazine [*floo-fen'ə-zēn*] a piperazine-phenothiazine tranquilizer; similar to chlorpromazine.
fluprostenol [*floo-pros'tə-nol*] a prostaglandin $F_{2\alpha}$ analog used in mares to synchronize estrus and in bitches for pregnancy termination. It has fewer side effects than natural $PGF_{2\alpha}$.
flurandrenolone, flurandrenolide [*floor"ən-dren'ə-lōn, floor"ən-dren'ə-lid*] a glucocorticoid used topically in the treatment of certain skin diseases. Called also fludroxycortide.
flurazepam [*flŏŏ-raz'ə-pam*] a benzodiazepine hypnotic and sedative.
flurbiprofen [*floor-bi'pro-fen*] a nonsteroidal anti-inflammatory agent used in musculoskeletal disorders and topically in ocular inflammation.
Flury strain a high egg passage of rabies virus used in some vaccines for animals.
flushing [*flush'ing*] a sudden increase in flow.
f. agents water under pressure, sterile saline and Ringer's solution are used to irrigate and cleanse wounds. Various antiseptic compounds, in dilute solutions, have the added advantage of antibacterial effects and some, with detergent action, are more efficient in removing necrotic tissues and debris, but they may be irritating and delay healing.
nutritional f. an abrupt and sizable increase in nutritional status practiced as a management tactic, usually prior to the mating period in order to improve semen characteristics in the male and ovulation and conception rates in the female. Most attention is given to the protein concentration of the ration.
flutamide [*floo'tə-mīd*] a nonsteroidal drug with antiandrogen effects; used in the treatment of benign prostatic hyperplasia in dogs.
FLUTD feline lower urinary tract disease.
fluticasone [*floo-tik'ə-sōn"*] a synthetic corticosteroid more potent than dexamethasone; used topically on airway mucosa. Used in inhalers to treat canine bronchitis and feline bronchial asthma.
flutter [*flut'ər*] a rapid vibration or pulsation.
atrial f. cardiac arrhythmia in which the atrial contractions are rapid (200–320 per minute), but regular.
diaphragmatic f. peculiar wavelike fibrillations of the diaphragm of unknown cause. See also synchronous **diaphragmatic** flutter.
mediastinal f. abnormal mobility of the mediastinum during respiration. See also **mediastinal** flutter.
f. valve in an intravenous infusion apparatus, a floating bead in the fluid chamber that allows air to enter the system but prevents fluid from escaping. Its movement is often viewed as an indicator of the speed of fluid infusion, but it is inaccurate.
ventricular f. a possible transition stage between ventricular tachycardia and ventricular fibrillation, the electrocardiogram showing rapid, uniform, and virtually regular oscillations, 250 or more per minute.
flutter–fibrillation [*flut'ər-fib"rĭ-la'shən*] impure flutters that vary from moment to moment in their resemblance to flutter or fibrillation, respectively.
fluvoxamine [*floo-vok'sə-mēn*] a selective serotonin reuptake inhibitor (SSRI), used to treat urine spraying, obsessive-compulsive disoirders, anxiety and aggression in dogs and cats.
flux [*fluks*] 1. an excessive flow or discharge. 2. matter discharged.
bloody f. dysentery.
fly [*fli*] members of the order Diptera. See black fly (below), **blowfly**, **bot fly**, ***Chrysops***, ***Cnephia***, ***Cordylobia***, ***Cuterebra***, ***Eristalis***, **flesh** flies, ***Haematobia***, ***Hippobosca***, ***Hydrotoea***, ***Hypoderma***, ***Musca***, ***Phormia***, **pigeon** fly, **sandfly**, **screw-worm**, ***Simulium***, ***Stomoxys calcitrans***, ***Tabanus***, **torsalo grub**, **tsetse**, **warbles**.
f. agaric a mushroom. See ***Amanita***.
autumn f. see ***Musca*** *autumnalis*. Called also face fly.
f. biting behavior by dogs that looks like an attempt to catch a nonexistent flying object, hence the name. When repeated or continual, believed to be a form of partial seizure or, rarely, due to **vitreous** floaters.
black f. a term which covers a number of genera and species. In some areas in the summer months they cause a great deal of insect worry to animals. The annoyance may be sufficiently severe to result in animals being injured or even killed while stampeding. They also play a part in the transmission of *Onchocerca* spp. Called also buffalo gnat, sandfly, ***Cnephia***, *Austrosimulium pestilens*, *A. bancrofti*. See also ***Simulium*** *articum*, *S. ornatum*.
blister f. see ***Cantharis vesicatoria***.
bomb f. see ***Hypoderma***.
breeze f. see ***Tabanus***.
buffalo f. see ***Haematobia*** *exigua*.
bush f. see ***Musca***.
calliphorid f's. see **blowfly**.
Chinese blister f. see ***Mylabris phalerata***.
cluster f. see ***Pollenia*** *rudis*.
f. control limitation of fly population by disposal of rotting animal tissue, use of insecticides in sprays, back applicators, impregnated ear tags or pet collars, liberation of sterilized males, fly traps.

F-39: Fly bite dermatitis on the ear tip of a dog. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

deer f. see ***Chrysops***.
f. dermatitis biting flies will inflict skin damage on the face and particularly ear tips of outdoor dogs, causing bleeding, dried crusts and moderate irritation that sometimes leads to the development of auricular hematomas. Also reported to be a common problem in zoo bears.
ear tip f. bite see fly dermatitis (above).
elephant throat bot f. see ***Pharyngobolus***.
face f. ***Musca*** *autumnalis*, a vector for infectious bovine keratoconjunctivitis in the USA.
filth f. see ***Eristalis***.
flesh f. large blowflys of the subfamily Sarcophaginae and the genera *Sarcophaga* and *Wohlfahrtia*.
forest f. see ***Hydrotoea*** *irritans*.
gad f. see ***Hypoderma***, ***Oestrus***.
gray meat f. see ***Sarcophaga*** *carnaria*.
green bottle f. see ***Lucilia***.
head f. see ***Hydrotoea*** *irritans*.
heel f. see ***Hypoderma***.
hippoboscid f. see ***Hippobosca***, ***Lipoptena***, ***Pseudolynchia***, ***Melophagus***.
horn f. see ***Haematobia***.
horse f. see ***Tabanus***.
house f. see ***Musca*** *domestica*.
Lund's f. see ***Cordylobia*** *rodhaini*.
louse f. see ***Hippobosca***.
march f. see ***Tabanus***.
nasal bot f. infestation causes sneezing and constant nasal discharge. The presence of the flies in the flock causes some insect worry. See also ***Oestrus*** *ovis*.
New Forest f. see ***Hippobosca*** *equina*.
nostril f. see ***Oestrus*** *ovis*.
paragle f. see ***Paragle redicum***.
pigeon f. a member of the parasitic fly family Hippoboscidae or louse fly and an important parasite of domestic pigeon. Called also *Pseudolynchia canariensis*.
plantation f. see ***Hydrotoea*** *irritans*.
f. poison see ***Amianthium muscaetoxicum***.
reindeer warble f. see ***Oedemagena*** *tarandi*.
Russian gad f. see ***Rhinoestrus*** *purpureus*.
sand f. see ***Phlebotomus***.
screw-worm f's. the flies that produce screw-worms.
sheep-head f. see ***Hydrotoea*** *irritans*.
skin-maggot f. see ***Cordylobia*** *anthropophaga*.
Spanish blister f. see ***Epicauta vittata***.
stable f. see ***Stomoxys calcitrans***.
f. strike see cutaneous **myiasis**.
sweat f. *Morrelia aenescens*, *M. hortorum*, *M. simplex*.
tumbu f. see ***Cordylobia*** *anthropophaga*.
warble f. see ***Hypoderma***. See also **warbles**.
f. 'worry' all fly infestations cause 'worry' to their host animals. Heavy infestations with black flies in horses and buffalo flies in cattle may cause deaths from 'worry', blood loss, interference with grazing and intercurrent disease. See also fly dermatitis (above).
fly poison [*fli*] see ***Amianthium muscaetoxicum***.
flyblown infested with fly maggots, usually blowfly larvae. See also **myiasis**.
flying fox fruit bats in the genus *Pteropus*; see **bats**.
flying fox lyssavirus disease see Australian **bat** lyssavirus disease.
Fm chemical symbol, *fermium*.
FMD foot-and-mouth disease.
FMDV foot-and-mouth disease virus.
FMN oxidized form of flavin mononucleotide.
$FMNH_2$ reduced form of flavin mononucleotide.
fMRI functional **magnetic resonance imaging**.
FNA fine needle aspiration.
foal [*fōl*] a junior horse from birth to one year. May be filly foal, colt foal.
f. ataxia see **enzootic** equine incoordination.
f's bread see **hippomanes**.
contracted f. congenital flexion contracture of the distal limb joints, plus torticollis, scoliosis, skull distortion; cause unknown.
f. hemolytic disease see **alloimmune** hemolytic anemia of the newborn.
f. heat the first estrus after foaling. Usually commences at the 7th–15th day.
f. heat diarrhea a transient attack of diarrhea in the foal at the time of the mare's foaling heat, ascribed to excitement and subtle changes in composition of the milk.
lavender f. a poorly characterized lethal disorder of Arabian foals which remain recumbent after birth, and demonstrate neurological signs, including opisthotonus, paddling, seizures and blindness. Affected foals have a characteristic purple to lavender sheen to their coat.
lethal white f. syndrome lethal autosomal recessive disorder occurring in white foals. Affected foals fail to pass meconium and develop abdominal distention and colic within 12–24 hours of birth due to an absence of submucosal and myenteric innervation (congenital intestinal aganglionosis). They also lack melanocytes in the skin. Occurs mainly in, but not limited to, the American Paint Horses breed, and most often observed in foals from matings of horses with the overo coat color pattern. Associated with a single amino acid substitution at codon 118 on the endothelin-B receptor (EDNRB) gene located on chromosome 17. A high percentage of frame overo horses are heterozygous for this mutation, which also occurs in American miniature horses, half-Arabians, Thoroughbreds, and Quarter horses. Called also white foal disease, ileocolonic aganglionosis, congenital intestinal aganglionosis, congenital megacolon, aganglionic megacolon.
f. MAC test a field test on blood to detect low blood concentrations of immunoglobulins (IgG) in foals.
f. mortality deaths in foals as a group; include congenital defects, immaturity, foaling injury, septicemia, joint ill, enteritis, barkers and wanderers, isoimmune hemolytic anemia.
f. restraint generally achieved by holding against a wall and using one arm under the neck and the other hand lifting the tail.
f. septicemia common causes, usually from intrauterine infection contracted through the cervix of the dam, are *Actinobacillus equuli*, *Escherichia coli*, *Klebsiella pneumoniae*, *Pseudomonas aeruginosa*, *Staphylococcus aureus* and β-hemolytic streptococci.
sleepy f. disease see ***Actinobacillus*** *equuli*.
f's tongue see **hippomanes**.
foaling [*fōl'ing*] parturition in the mare.

F-40: Foal heat diarrhea. Note soiling of the hindquarters. From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

F-41: Lethal white foal showing colic.
From McAuliffe SB, Slovis NM, Color Atlas of Diseases and Disorders of the Foal. Saunders, 2008.

VetBooks.ir

F

f. induction bringing on the birth of the foal, usually via the injection of oxytocin.
f. injuries includes first-degree injury to the perineum, involving the mucosa of the roof of the vestibule and the dorsal commissure of the vulva. Second-degree injuries involve disruption of the musculature of the vulva and vaginal vestibule but there is no rectal lesion. Third-degree lacerations are those where the rectal wall is ruptured creating either a rectovaginal fistula, or a complete rupture of the rectovaginal septum out to and including the perineal skin.

foam [*fōm*] frothy liquid, e.g. from the nostrils of an animal with terminal pulmonary edema, in the rumen of the cow with frothy bloat.
f. cell vacuolated histiocytes.
f. cell pneumonia see endogenous lipid **pneumonia**.
f. test fresh urine is shaken vigorously. A yellow-green foam is indicative of bilirubinuria.

focal [*fo'kəl*] 1. limited to a small area or volume. 2. pertaining to or emanating from focus.
f. distance see focal–film **distance**.
f. length the distance between a lens and an object from which all rays of light are brought to a focus.
f. liver disease widely disseminated micro-abscesses or abscesses, migration paths of helminth larvae.

focal spot [*fo'kəl*] the area on the target of the X-ray tube which the electron stream strikes and from which X-rays are emitted. Called also focus. The larger the area of the focal spot, the poorer is the detail in the X-ray image.
actual f. s. the actual area of the focal spot on the radiographic target as viewed at right angles to the plane of the target.
broad f. s. a relative term which refers to the effective dimension of the X-ray focal spot usually greater than 1 mm^2. See also fine focal spot (below).
effective f. s. the face of the anode that carries the target in an X-ray tube is slanted from the vertical to increase the volume of the target but to reduce the size of the origin of the X-ray beam.
f. s.–film distance see focal–film **distance**.
fine f. s. a focal spot of less than 1 mm^2 which is used in radiography studies where high detail is required.
f. s.–skin distance distance from the film spot to the skin of a patient receiving radiation therapy.

FOCMA feline oncornavirus-associated cell membrane **antigen**.

focus [*fo'kəs*] pl. *foci* [L.] 1. the point of convergence of light rays, X-rays or sound waves. See also **focal spot**. 2. the chief center of a morbid process.
line f. utilization of a broad beam of electrons for the generation of X-rays by a rotating anode so that the area of the target on which the electrons fall is spread over a line instead of a point.

focusing [*fo'kəs-ing*] the act of converging at a point.
isoelectric f. electrophoresis in which the protein mixture is subjected to an electric field in a gel medium in which a pH gradient has been established; each protein then migrates until it reaches the site at which the pH is equal to its isoelectric point.

fodder feed for herbivorous animals, usually used to describe dried leafy material such as hay. See also **forage**.
f. beet a root crop grown solely as a source of feed for cattle, possibly sheep. Lactic acidosis, **oxalate** and **nitrite** poisoning are all possible with fodder beet feeding. See also ***Beta** vulgaris*, **carbohydrate engorgement**.
f. crop crops being grown for hay, e.g. oats, barley, wheat. Can also be used for grazing and may cause hypomagnesemia or nitrite poisoning. The group of diseases is known as **cereal** crop poisoning.
f. poisoning an all-embracing term used with reference to sickness occurring in animals being fed hay which is often moldy or damaged in some way. See also **mycotoxicosis**.
f. sorghum **Sorghum** *bicolor*.

fog [*fog*] 1. a colloid system in which the dispersion medium is a gas and the dispersed particles are liquid. 2. regrowth after harvesting of a cereal crop. Called also aftermath, feg. 3. obscuring opacity on an X-ray film.
f. fever see **atypical interstitial pneumonia**.
X-ray f. local or general exposure to extraneous radiation, light or chemical action which is additional to the true photographic image. Leads to spoiling of the X-ray image.

foggage aftermath; stubble regrowth or grass grown for winter feed.

foie gras a food item produced from the liver of poultry that have been force fed by an esophageal feeder. While regarded as a gourmet food item, it is considered by many an animal welfare issue.

folacin [*fo'lə-sin*] see **folic acid**.

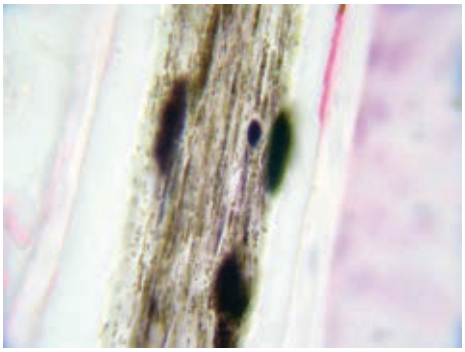
folate [*fo'lāt*] the generic term for **folic acid** and related compounds. Dietary folate is absorbed predominantly in the proximal small intestine and decreased serum folate concentration may be found with small intestine disease in dogs and cats.
H_4 f. see **tetrahydrofolate**.

fold[1] [*fōld*] 1. in anatomical terms a plica; a thin, recurved margin or doubling. 2. the big skin folds down the front of a Merino ram's neck.
alar f. see **alar** fold.
amniotic f. the folded edge of the amnion where it rises over and finally encloses the embryo.
anal f. in the developing embryo the cloacal folds divide into the dorsal anal folds, forming the rectum and anus, and the urogenital folds.
cecocolic f. connects the right ventral colon with the cecum in the horse.
circular f's the permanent transverse folds of the luminal surface of the small intestine.
coprourodeal f. annular fold separating the coprodeum from the urodeum in the cloaca of birds.
f. dermatitis see fold **dermatitis**.
duodenocolic f. in the horse connects the small colon with the terminal part of the duodenum.
facial f. the deep wrinkles of skin over the nose of brachycephalic dogs and cats. A distinctive feature of the breeds concerned, but often a site of fold dermatitis. The hairs also become a source of irritation to the cornea.
flank f. skin fold from the lower, lateral abdominal wall to the hindlimb at the region of the stifle.
gastric f's see **gastric** folds.
gastropancreatic f. in the horse connects the stomach and duodenum to the liver, vena cava and pancreas.
genital f. a transverse peritoneal fold in the pelvis that supports the vas deferens in the male and is the broad ligament of the uterus in the female. Called also *plica genitalis*.
glossoepiglottic f. extends from the root of the tongue to the base of the epiglottis.
gluteal f. the deep furrow that separates the buttocks from the thigh; evident in humans and some domestic animal breeds, such as the Belgium blue, Piedmontese and Duroc, and in individual animals with high muscle mass.
head f. a fold of blastoderm at the cephalic end of the developing embryo.

F-42: Facial fold in an English bulldog.
From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

ileocecal f. a short mesenteric fold connecting the ileum and the cecum, and which is used to define the ileum in domestic animals.
lacrimal f. a fold of mucous membrane at the rostral opening of the nasolacrimal duct.
lateral body f's. folds which commence at the head, then at the tail eventually meeting at the umbilicus; the folds gradually separate the embryo from the extraembryonic tissues.
mucosal f., mucous f. a fold of mucous membrane.
nail f. the fold of palmar skin around the base and sides of the nail or claw.
neural f. one of the paired folds lying on either side of the neural plate that form the neural tube in the developing embryo.
preputial f. the telescopic fold of preputial skin which invests the glans of the stallion's unengorged penis. In the mare, a mucosal fold covering most of the clitoris.
pterygomandibular f. the dorso-ventral fold of mucosa between the palate and mandible, caudal to the last molar tooth. Called also *plica pterygomandibularis*.
rumenoreticular f. the fold on the internal ventral wall of the rumenoreticulum that separates the atrium of the rumen from the reticulum. Called also *plica ruminoreticularis*.
tail f. 1. a fold of the blastoderm at the caudal end of the developing embryo. 2. the skin, usually on an obese dog, around the very short tail such as seen on British bulldogs. May be the site of fold **dermatitis**. 3. site for injection of tuberculin in SID test for tuberculosis in cattle. See also **caudal** tailfold.
urogenital f. the transverse peritoneal fold which, in the male, carries the seminal vesicles, the deferent duct and the uterus masculinus. See genital fold (above).
uroproctodeal f. in the bird separates the urodeum from the proctodeum.
ventricular f., vestibular f. a false vocal cord.
vesical f. paired lateral folds of peritoneum containing the bladder's round ligaments.
vestigial f. a pericardial fold enclosing the remnant of the embryonic left anterior cardinal vein.
vocal f's the composite of mucous membrane covered muscle and vocal ligament that forms the ventral half of the boundary to the rima glottidis. Called also vocal cords.
fold[2] a pasture management system in which animals are run at pasture during the day and locked up at night in a portable pen or shed in the pasture. Also used to mean temporary subdivision of a paddock.
fold-back DNA a single strand of DNA, folded back upon itself, resulting in a hydrogen-bonded region. Also referred to as hairpin structures.
Foley catheter [*fo'le*] a soft rubber retention catheter with an inflatable bulb on the end.
folia cerebelli [*fo'le-ə*] the small folded surface divisions of the cerebellar cortex.
foliar [*fo'le-ər*] pertaining to or having the quality of leaves.
folic acid [*fo-lin'ik*] one of the vitamins of the B complex. Folic acid is involved in the synthesis of amino acids and DNA; its deficiency causes megaloblastic anemia. Folic acid is supplied in adequate amounts by natural pasture plants and most diets for dogs and cats. Possibly required in greater amounts in racing horses confined to stables. See also **folate**. Called also vitamin B_c, pteroylmonoglutamic acid.
f. a. antagonist a compound such as trimethoprim or methotrexate which acts as an antimetabolite of folic acid, interfering with DNA replication and cell division by inhibiting the enzyme dihydrofolate reductase.
folinic acid [*fo'lik*] leucovorin.
folium [*fo'le-əm*] pl. *folia* [L.] a leaflike structure, especially one of the leaflike subdivisions of the cerebellar cortex.
folivore [*fol'ĭ-vor*] eats foliage; includes arboreal folivores—animals whose diet consists largely of tree foliage.
follicle [*fol'ĭ-kəl*] a sac or pouch-like depression or cavity. See also **follicular**.
anovulatory hemorrhagic f. encountered in mares during the ovulatory season (fall or autumn); on ultrasound examination, they have characteristic free-floating echoic specks in the follicle antrum. Called also persistent anovulatory follicles, autumn follicles.
atretic f. an involuted (regressing or degenerating) ovarian follicle.
conjunctival f. focal accumulation of lymphoid tissue normally present in conjunctiva as part of the mucosal-associated lymphoid tissue (MALT); if numerous or enlarged, indicative of chronic conjunctivitis but not suggesting a specific etiologic diagnosis. See follicular **conjunctivitis**.
cystic f. ovarian follicle that has not ruptured, is grossly enlarged, may be multiple and on both ovaries. Caused by insufficient luteinizing hormone. Affected cows may be nymphomaniac in behavior, but most are anestrous and anovulatory. See also **cystic** ovarian degeneration.
dental f. the structure within the substance of the jaws enclosing a tooth before its eruption; the dental sac and its contents.
dominant f. in the ovary, hormones secreted (inhibin) by the largest follicle will cause others to regress.
flame f. inactive hair follicles with excessive trichilemmal keratinization.
gastric f. lymphoid masses in the gastric mucosa.
graafian f. see **graafian follicle**.
hair f. see **hair** follicle.
hemorrhagic f. large non-ovulatory or anovulatory follicle that continues to grow past its maturity. The blood vessels within its wall rupture and the cavity becomes hemorrhagic, forming sometimes strands of fibrin that can be visible on ultrasonography. Commonly found in mares and camelids.
lymph f., lymphatic f 1. a small collection of actively proliferating lymphocytes in the cortex of a lymph node. 2. a small collection of lymphoid tissue in the mucous membrane of the gastrointestinal tract; such collections may occur singly (solitary lymphatic follicle) or closely packed together (aggregated lymphatic follicles).
ovarian f. the ovum and its encasing cells, at any stage of its development.
primary ovarian f. an immature ovarian follicle consisting of an immature ovum and the few specialized epithelial cells surrounding it.
primordial f. an ovarian follicle consisting of an ovum enclosed by a single layer of cells.
sebaceous f. a hair follicle with a relatively large sebaceous gland, producing a relatively insignificant hair.
solitary f. 1. areas of concentrated lymphatic tissue in the mucosa of the colon. 2. small lymph follicles scattered throughout the mucosa and submucosa of the small intestine. Called also solitary glands.
thyroid f. discrete cyst-like units filled with a colloid substance, constituting the lobules of the thyroid gland.
vesicular ovarian f. graafian follicle.
wool f. site of origin of wool fiber.
follicle-stimulating hormone (FSH) one of the gonadotropic hormones of the anterior lobe of the **pituitary** gland that stimulates the growth of graafian follicles in the ovary, and stimulates spermatogenesis in the testis.
f.-s. h. and luteinizing-hormone releasing h. (FSH/LH-RH) gonadotropin releasing hormone (GnRH).
follicle-stimulating hormone releasing hormone (FSH-RH) a hormone produced in the hypothalamus and transported by the pituitary portal circulation to the anterior lobe of the pituitary gland where it stimulates the secretion of FSH or LH. Called also luteinizing-hormone releasing hormone, gonadotropin releasing hormone (GnRH). See also **follicular**.
follicular [*fə-lik'u-lər*] pertaining to or emanating from an ovarian or hair follicle.

VetBooks.ir



F-43: Pigmentary clumping in hair shafts seen in black hair follicular dysplasia. From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

f. antrum spaces formed by the confluence of small lakes of follicular liquid in the ovary.
canine f. dysplasias a group of disorders in which there is abnormal hair follicle development or structural abnormalities, often of genetic origin, occurring in many different breeds. See also color dilution **alopecia**, recurrent flank **alopecia** and black hair follicular dysplasia (below).
canine black hair f. dysplasia large clumps of melanin within melanocytes of the hair follicle and the hair shaft are associated with breakage and loss of black hairs, often starting at a very early age; inherited as an autosomal recessive trait.
cyclic f. dysplasia see recurrent flank **alopecia**.
f. cyst 1. see cystic **follicle**; **cystic** ovarian degeneration. 2. retention cysts in the hair follicles are common, resembling pustules.
f. hyalinosis see **intrafollicular** hyalinosis.
f. lipidosis a follicular dysplasia in young Rottweilers characterized by loss of hair in the red-brown areas of the face and feet. There are intracytoplasmioc lipid-filled vacuoles within cells of the hair follicle.
f. mange see **demodectic mange**.
f. mucinosis see follicular **mucinosis**.
f. pharyngitis chronic disease in young racing horses; of importance as a disruption of training; characterized by frequent cough, dyspnea with exercise, poor exercise tolerance.
f. phase a stage of the estrus cycle when the dominant active structure(s) on the ovary is the follicle(s). See also **proliferative** phase.
f. plug formed by excessive keratin in an inactive hair follicle.
f. wave the successive follicular recruitment and growth pattern during the estrus cycle; follicular dynamics.
folliculi ovarici vesiculosi [*fə-lik'u-li*] a follicle containing oocytes, the early stage of ovarian follicles.
folliculitis [*fə-lik"u-li'tis*] inflammation of a follicle(s); used ordinarily in reference to hair follicles, but sometimes in relation to follicles of other kinds.
eosinophilic f. a feature of hypersensitivity reactions in the skin.
mural f. inflammation of the wall of the hair follicle.
nasal f. see nasal **pyoderma**.
pyotraumatic f. see acute moist **dermatitis**.
sterile eosinophilic f. usually nonpruritic, papular, crusted lesions with alopecia on the head, neck and trunk. The cause is unknown. In dogs, lesions occur mainly on the ears. In horses and cats, it is believed to be a hypersensitivity reaction to insect bites or other allergens.
folliculogenesis [*fə-lik"u-lo-jən'ə-sis*] growth and development of the primordial follicle in the ovary. The maximal number of oocytes that the female will ever have are present in the ovary at birth.
folliculoma [*fə-lik"u-lo'mə*] granulosa–theca cell tumor.
folliculosis [*fə-lik"u-lo'sis*] see follicular **conjunctivitis**.
folliculostatin [*fə-lik"u-lo-stat'in*] a hormone produced by the ovarian granulosa cells; has a negative feedback influence on FSH production.
folliculus [*fə-lik'u-ləs*] pl. *folliculi* [L.] follicle.
follistatin [*fol'i-stat"in*] a gonadal peptide hormone isolated from the ovarian follicular fluid. Suppresses FSH secretion.
follow-up subsequent.
f. plan plan of action subsequent to the initial procedure, e.g. course of therapy, surgical procedure preventive program.
f. studies ascertaining what happened to a particular patient or group after a significant lapse of time.
followers see **dairy** herd.
fomentation [*fo"mən-ta'shən*] treatment by warm, moist applications; also, the substance thus applied. Hosing down with cold water is referred to as cold fomentation.
fomepizole [*fo-mep'i-zōl*] an inhibitor of alcohol dehydrogenase, used in the treatment of ethylene glycol poisoning.
fomes [*fo'mēz*] pl. *fomites* [L.] an inanimate object or material on which disease-producing agents may be conveyed, e.g. feces, bedding, harness.
fomites [*fo'mī-tēz*] see **fomes**.
F-O-N-S therapy plan a standard hospital treatment plan for treatment of acute heart failure in dogs; consists of *F*urosemide, *O*xygen, *N*itroglycerin or nitroprusside and *S*edation.
Fonsecaea [*fon-se-se'ə*] a genus of fungi that causes **chromomycosis** in humans and rarely animals.
Fontan procedure [*fawn-tah'*] a method for repair of pulmonic stenosis in which a valved conduit is placed between the right atrium and the pulmonic artery.
fontanelle, fontanel [*fon"tə-nel'*] a soft spot; skin and membrane-covered spaces remaining at the junction of the sutures, especially between the frontal and parietal bones in the incompletely covered skull of the fetus or neonate. This fontanelle usually closes after birth but in hydrocephalus and in some miniature breeds of dogs, particularly Chihuahuas, it may remain open. Called also fonticulus, molera.
fonticulus [*fon-tik'u-ləs*] see **fontanelle**.
food [*fōōd*] materials taken into the body by mouth which provide nourishment in the form of energy or in the building of tissues. Common usage is to use the term in relation to humans and dogs and cats and to use feed for the other animals but the rule is not absolute. See also **diet**, **ration**, **feed**.
f. additive pharmaceutical or nutritional substances that are not natural feedstuffs are added to made-up and stored feeds for various purposes, chiefly to control infectious disease or to promote growth. Improper use may cause poisoning in the subject animals or undesirable residues in food for human consumption produced by the animals. The use of additives in this way is strictly controlled by legislation in most countries. Some of them require a prescription by a veterinarian to comply with local poisons laws. See also mass **medication**, **growth**growth promotants.
f. allergy an immune-mediated reaction to a food or food additive; clinical signs are most commonly demonstrated in the alimentary tract or skin but may affect any system and in any hypersensitivity mode. Commonly diagnosed in dogs, occasionally in horses, but rarely in the other species. Called food hypersensitivity. See also **dermatitis**, **pruritus**, **angioedema**, **urticaria**, **gastroenteritis**.
f. anaphylaxis an acute allergic response to a food or food additive, with systemic signs typical of anaphylaxis in the species concerned. See also systemic **anaphylaxis**.
f. animals animals used in the production of food for humans. Includes, in common usage, the species and breeds that also supply fiber and hides for human use. Use of this term has spawned a rash of new knowledge disciplines such as food animal medicine, food animal ophthalmology, and new service areas such as food animal practice.
f. chain the path taken by a raw food product from the farm or other producing unit to the table of the consumer. Includes sale, transport, storage, processing, packaging and retail sale and all of the points of risk at which the food may become contaminated or spoiled or corrupted in some way.
f. contaminants include bacteria, parasites and toxic residues.
f. conversion ratio efficiency in converting the food into energy or tissue; a characteristic of the food relating largely to digestibility.
f. exchanges foods of approximately equivalent levels of energy, proteins, fats and carbohydrates, which may be exchanged or substituted in a diet without significant alteration to its nutritional balance.
generic f. see **generic** pet food.
f. hypersensitivity see food allergy (above).
f. idiosyncrasy an adverse reaction to ingested food by an individual, not mediated by immune mechanisms; may be due to an enzyme defect.
f. intake amount of food taken in a unit of time, usually daily.
f. intolerance an abnormal physiologic response to food which is not immune-mediated.

f. legislation the content, purity and public health connotations of animal foods are usually controlled by local legislation.
manufactured f. those commercially formulated and prepared; includes stock feeds, particularly supplements and pellets, canned and dry dog and cat foods.
f. marker inert material included in food to measure speed of passage of food through alimentary tract.
natural f. food that has few or no synthetic ingredients, but the claim is not tightly defined.
pet f. see **petfood**.
plant-based f. usual in livestock, but in carnivores it refers to mixed-source diets with a high plant-origin carbohydrate content; a common formula in commercially prepared pet foods.
f. poisoning a group of acute illnesses due to ingestion of a specific toxin in the food. Usually causes gastroenteritis and vomiting and diarrhea.
f. preferences controlled by dietary cues, for example flavor, associatively conditioned by the food's post-ingestive actions. The senses of smell, taste, and sight enable animals to discriminate among foods. Post-ingestive feedback calibrates sensory experiences—like or dislike—in accord with past and present experiences with a food's utility to the body. Herbivores select diets from an array of plant species that vary in nutrients and plant secondary metabolites (PSM). The outcome is a diet higher in nutrients and lower in PSM than the average available in the environment.
f. refusal syndrome observed mostly in pigs; refusal to eat a particular feed or meal but willing to eat other feeds. See also **food refusal factor**, **deoxynivalenol**, **vomitoxin**.
f. rewards the many types of food items owners and trainers use to reward their dogs or cats for behavior that pleases them; may be a part of training and behavior modification programs, but is often done simply as a result of the owner's affection for the pet. Can be an important factor in dog and cat obesity and often under reported in efforts to establish a weight control diet.
f. safety term and concept that recognizes the integrated nature of the food chain and encompasses all aspects of food production 'from farm to the fork' covering animal feed and animal health, animal welfare and animal health measures and veterinary checks, plant health checks and the preparation and hygiene of foods.
f. security access to adequate and sustainable food supplies.
f. specific dynamic action see **specific** dynamic action.
table f. sometimes used to describe food from the owner's dining table that is fed to dogs and cats.
f. toxicity may be the result of toxins or microorganisms contaminating the food or excessive concentrations of a nutrient, such as vitamin A.
Food and Agriculture Organization (FAO) an instrumentality of the United Nations coordinating activities in the fields of food animal health and production and in agriculture generally. For the most part its activities have been directed to carrying the agricultural technology of developed countries to developing ones.
Food and Drug Administration (FDA) a USA regulatory agency responsible for regulating the safety of foods and drugs.
Food Animal Residue Avoidance Database (FARAD) a computer-based decision support system designed to provide practical information on how to avoid drug, pesticide and environmental contaminant residue problems. A USA national food safety project administered through the US Department of Agriculture Cooperative State Research, Education, and Extension Service (CSREES) with cooperation by North Carolina State University, University of California-Davis and the University of Florida. It has a comprehensive compendium of food animal drugs including withdrawal time for all drugs approved for use in food animals and advice on withholding periods required for extra label drug use can be obtained by phone or email.
food-producing animals see **food** animals.
food refusal factor one or more factors in mycotoxins, especially from *Fusarium* spp., which cause affected pigs to refuse to eat without other signs of illness. See **deoxynivalenol**, **vomitoxin**.
foodborne infection or other damaging agent transmitted via the animal's (or human's) food chain.
f. borne disease a disease with food as the source of infection. An example is *Escherichia coli* 0157:H7 infection of humans via hamburger meat.

F-44: Foot abscess in a sheep.

fool's a look-alike; commonly mistaken for.
f. mushroom ***Amanita*** *verna*.
f. watercress ***Sium*** *angustifolium*.
foot [*foot*] the distal part of the primate leg, upon which the individual stands and walks. Used loosely also instead of hoof, paw.
f. abscess in all species has characteristics of local inflammation. Special disease in sheep—abscess under horn either at toe or heel. Caused by *Fusobacterium necrophorum*. Severe lameness with pus discharging at coronet. Slow outbreaks occur in wet years. Footrot in pigs is really a foot abscess. See also porcine **footrot**. Called also toe abscess, heel abscess.
at f. used to describe a female of breeding age accompanied by its unweaned offspring, e.g. ewe with a lamb at foot.
f. bath used in the control of footrot and other foot diseases in sheep and cattle. Made of concrete or metal, preferably not metal because of the corrosive nature of copper sulfate solution. Deep enough to accommodate a 4 inch depth of solution, wide enough so that animals can stand on all four hooves in comfort, with a side fence to ensure that they do actually stand in the bath, and long enough to accommodate five to 10 animals, which need to stand in the footbath solution for long periods of time. Solutions used include copper sulfate or formalin, zinc sulfate or some antibiotics. In dairy cattle the foot bath may be at the exit to the milking parlor so that cows walk through it twice each day.
hare f. in dogs, describes a foot where the central toes are much longer than those on either side.
f. licking although it can result from various causes of irritation through contact, this is a common clinical feature of **atopy** in dogs.
Madura f. see **maduromycosis**.
f. maggot the larvae of the fly ***Booponus***.
f. mange see ***Chorioptes***.
f. processes large cytoplasmic processes extending from the internal lining epithelium of the glomerular capsule of the kidney and terminate on the basement membrane.
f. rot see **footrot**.
f. scald dermatitis of the skin of the sheep's interdigital cleft. There is minor lifting of horn at the horn–skin junction but there is no underrunning and no odor. Avirulent strains of *Dichelobacter nodosus* are the cause; the introduction of virulent *D. nodosus* will result in severe footrot. Called also benign footrot.
slew f. in dog conformation, a turned out foot.
slipper f. in dogs, a long, oval foot. Called also boat foot. See also **laminitis**.
f. stomping gerbils stomp their rear feet to signal territorialism; sheep do it with their front hooves as a threatening gesture, especially to flocking dogs.

F-45: Footbath. Walk through foot bath for dairy cattle.

VetBooks.ir

VetBooks.ir

f. trimming a routine procedure with barn-housed or loose-housed dairy herds and conducted by veterinarians and trained (hopefully) lay hoof trimmers. Lameness is a major cause of culling and loss of production in dairy cattle. Veterinarians are mainly involved with therapeutic foot trimming and foot trimmers with routine foot trimming of the herd to correct foot overgrowth and maintain foot conformation. Feet are trimmed with cattle restrained in chutes and the feet lifted and restrained mechanically by ropes or by more complicated restraint such as restraint tables that mechanically or hydraulically place the cow in lateral recumbency for easy access to the feet. Trimming equipment includes hoof knives and manual or electrically driven rasps. See also **chute**, restraint **table**.

foot and mouth disease (FMD) an extremely contagious, acute disease of all cloven-footed animal species. It is caused by members of the genus *Aphthovirus* in the family *Picornaviridae* which has seven serotypes and at least 80 subserotypes. Clinically there is a syndrome of fever and vesicular lesions in the mouth and around the coronets. The first sign is often lameness. Lesions in sheep are less severe. Spread is very rapid and the virus is very resistant so that the infection is readily transmitted on inanimate objects. The virus can also be transmitted over several miles by wind-borne carriage of aerosol infection from respiratory excretion of the virus. Survives in meat and meat products. It is not fatal except occasionally in calves and young piglets, where it also produces a myocarditis, but herd productivity is reduced disastrously. Controlled with a slaughter eradication policy in most countries, but the outbreak in the United Kingdom in 2001 indicates that this policy has limited public support. Called also aftosa. A disease notifiable to the OIE (see Table 22).

f. m. d. virus (FMDV) member of the family *Picornaviridae*, genus *Aphthovirus*; there are seven serotypes, at least 80 subtypes, affecting all ruminants, pigs, hedgehogs and elephants. The virus is extremely acid-labile but survives well in offal, particularly glandular tissue and bone marrow which were commonly fed as garbage to pigs resulting in outbreaks of disease.

foot–nape fetus posture a cause of dystocia in mares; the foal's front feet are displaced dorsally so that they come to lie over the top of the neck.

foot-pound the amount of energy necessary to raise 1 pound of mass a distance of 1 foot.

foothill abortion epizootic bovine abortion.

footpad the pads or tori, found on the feet of digitigrade animals are composed of a thick layer of stratum corneum supported on a fibro-fatty pad of tissue or pulvinus; digital pads are found beneath the distal interphalangeal joints, metapodial pads beneath the metapodio-phalangeal joints. Carpa and tarsal pads are found in more proximal parts of the limb. The skin is thickened, tough, and may be hyperpigmented and is well supplied with sweat glands. Important in birds, in which they are commonly damaged.

f. abscess caused by wound infection in fowls; painful and swollen. See also **bumblefoot**.

collagen f. disorder see **collagen** footpad disorder.

f. hyperkeratosis see nasodigital **hyperkeratosis**, **hardpad**.

split f's. see **split** pawpad disease.

footplate [*foot'plāt*] the flat portion of the stapes, which is set into the oval window on the medial wall of the middle ear.

footprinting [*foot'print-ing*] a technique for identification of protein-binding regions on DNA, based on the principle that segments with bound protein are resistant to endonuclease activity and these can be demonstrated as missing bands in gel electrophoresis.

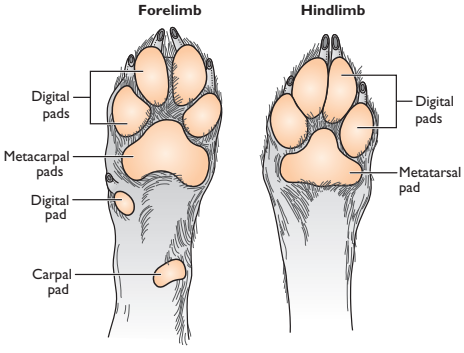
footrot [*foot'rot*] 1. a name for different diseases of the foot of cloven hoofed farm animals, with different causes and pathogeneses between species. Caused by bacteria and prominent environmental risk factors; warm and wet conditions underfoot and abrasive footing being predominant. Called also pododermatitis. 2. in ferrets, the common name given to a form of **sarcoptic mange** in which there is intensely pruritic inflammation, crusting and swelling of the feet.

bovine f. *Fusobacterium necrophorum* subsp. *necrophorum* (biovar/biotype A) is the more common type isolated and is usually present in pure culture, but *F. necrophorum* subsp. *funduliforme* (biovar/biotype B) is also isolated in some cases, usually with other bacterial species. There is severe dermatitis in the cleft of the foot initially and severe lameness. Further spread to deep structures of the foot, requiring amputation of a claw, may occur. Called also foul-in-the-foot, fouls.

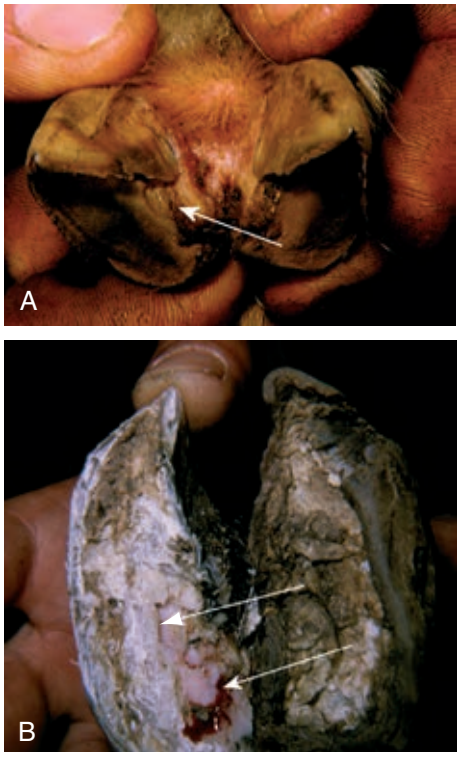
benign sheep f. occurs under very wet conditions. Caused by *Dichelobacter nodosus* of low virulence. There is dermatitis of the interdigital skin and minimal underrunning of horn at the heel. See also **interdigital** dermatitis.

intermediate sheep f. less underrunning of horn and less likelihood of resulting in chronic lesions than in virulent footrot.

ovine and caprine f. a highly contagious inflammation of the skin–horn junction followed by underrunning of the horn and inflammation of the sensitive laminae of the foot. Lameness is severe and may affect all four feet. *Dichelobacter (Bacteroides) nodosus* is the essential causal pathogen. It is a highly specialized organism in the small taxonomic group, the *Cardiobacteriaciae*. *F. necrophorum* aids *D. nodosus* in the invasion of the foot and contributes in the inflammatory reaction. Two other bacteria, *Spirochaeta (Treponema) penortha* and a motile fusiform bacillus, are commonly present in affected feet but are believed to have no primary etiological importance. *D. nodosus* does not survive more than 2 weeks in the environment and carrier sheep are the source of introduction to a flock and the cause of continuing ingection in a flock. The disease is the subject of eradication programs in some regions. In others, controlled by vaccination or treatment with bactericides using footbaths. Called also progressive footrot, virulent footrot.



F-46: Footpads on the dog.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.



F-47: (A) Early ovine virulent footrot showing under-running (arrow) of the horn at the skin horn junction. (B) Chronic ovine virulent footrot which is the carriage state for the disease. The soles of the digits are chalky in consistency and that on the left side has been pared away to expose the under-run sole and the site of persistent infection.

porcine f. a noncontagious infection of the sensitive tissues of the foot caused by abrasive wearing of the horn, usually on the lateral aspect of the lateral digit, and the introduction of a mixed infection. There is abscess formation with scanty pus discharging at the coronet. Can cause severe lameness and a permanently deformed claw in some. Common in pigs housed on abrasive floors. A nutritional deficiency of biotin is thought by some to play a predisposing role or at least that provision of the vitamin has a preventive effect. See also **foot** abscess.
progressive f. see ovine footrot (above).
stable f. *Bacteroides* spp. are the probable cause of minor outbreaks of this horn junction dermatitis which occurs in housed cattle. There is a bad odor, underrunning of the horn and a sebaceous exudate. Secondary infection of the deep structures may occur.
strawberry f. is a proliferative dermatitis of the skin of the back of the pastern of sheep caused by *Dermatophilus congolensis* (*D. pedis*). It does not resemble any of the other footrots. Called also proliferative dermatitis.
virulent f. see ovine and caprine footrot (above).

forage 1. strictly speaking, dried winter feed, usually hay. Used also to include ensilage and even pasture so that the term becomes synonymous with roughage. See also **bunk** forage. 2. to drill small holes in the subchondral bone in the treatment of osteochondrosis dissecans.
f. poisoning the forage contains a toxic agent. See **food** poisoning.

foramen [*fo-ra'mən*] pl. *foramina* [L.] a natural opening or passage, especially one into or through a bone.
alar f. a foramen which perforates the wing of the atlas in some species and transmits the vertebral artery; appears as a notch in dogs.
apical f. the opening at or near the apex of the root of a tooth and into the dental cavity.
auditory f. (external) the opening of the bony part of the external acoustic meatus. Called also *porus acusticus externus*.
auditory f. (internal) the opening for the passage for the auditory (vestibulocochlear) and facial nerves from the brain into the pars petrosa of the temporal bone. Called also internal acoustic meatus, *porus acusticus internus*.
caudal palatine f. the caudal opening into the greater palatine canal.
caval f. one of the three openings in the diaphragm; situated in the central tendinous part of the diaphragm; called also vena caval foramen, foramen venae cavae.
cecal f., f. cecum a blind opening between the frontal crest and the crista galli.
condyloid f. (anterior) an opening in the lateral part of the occipital bone near the base of the condyle for transmission of the hypoglossal nerve. Called also hypoglossal canal.
condyloid f. (posterior) the canal for the sinus condylaris in the lateral part of the occipital bone; absent in pigs and horses. Called also condylar canal.
epiploic f. an opening connecting the omental bursa with the rest of the abdominal cavity; situated on the visceral surface of the liver dorsal to the portal fissure. Called also foramen of Winslow.
incisive f. one of the openings of the incisive canals into the incisive fossa of the hard palate.
infraorbital f. the facial opening of the infraorbital canal, a prominent feature of the lateral aspect of the face; provides a point of emergence for the infraorbital vessels and nerve.
interventricular f. a passage from the third to the lateral ventricle of the brain.
intervertebral f. a passage for a spinal nerve and vessels formed by notches on the pedicles of adjacent vertebrae.
jugular f. an opening formed by the jugular notches of the temporal and occipital bones. It conducts veins, arteries and the vagal group of nerves (IX, X, XI).
f. lacerum the irregular gap between the basioccipital, petrous temporal and sphenoid wing bones, making up a large, membrane-covered foramen in horses, but reduced to a slit in other domestic mammals.
f. magnum a large opening in the occipital bone, between the cranial cavity and spinal canal.
f. magnum herniation see transtentorial **herniation**.
mandibular f. in the medial surface of the mandible where the inferior alveolar vessels and nerve enter.
maxillary f. one of the foramina ventral to the orbit that leads to the infraorbital canal.
mental f. foramina on the lateral aspect of the mandible from which the inferior alveolar nerve and blood vessels emerge to supply the chin.
mastoid f. an opening in the temporal bone behind the mastoid process.
f. of Monro interventricular foramen.
nutrient f. the entrance for the nutrient artery of a bone.
obturator f. the large opening between the pubic bone and the ischium.
optic f. the opening in the depths of the orbit into the optic canal.
orbital f. located between the wings of the pre- and basisphenoid bones that transmits ophthalmic branch of trigeminal, oculomotor, abducent and trochlear nerves in carnivores and horses. Called also orbital fissure, fissura orbitalis.
orbitorotundum f. the fusion of the orbital fissure and foramen rotundum in pigs and ruminants.
f. ovale 1. the septal opening in the fetal heart that provides a communication between the right and left atria. The opening closes at birth; failure to close results in **atrial** septal defect. 2. an aperture in the great wing of the sphenoid for vessels and the mandibular nerve in carnivores and ruminants.
palatine f. (anterior) greater and lesser foramina in the hard palate for conduction of palatine vessels.
pneumatic f. apertures in avian bones which connect with air sacs making pneumatization of bone marrow cavities possible.
f. primum opening in the septum primum between the two atria of the embryonic heart; called also ostium primum.
retroarticular f. the external opening of the temporal canal just caudal to the zygomatic arch; this foramen provides an exit for a large vein, the transverse sinus which drains the cranial cavity.
rostral alar f. one of a group of foramina in the caudal part of the orbit.
f. rotundum, round f. a round opening in the great wing of the sphenoid for the exit of the maxillary branch of the trigeminal nerve from the cranial cavity; in ruminants it is combined with the orbital fissure.
round f. see foramen rotundum (above).
sacral f. (dorsal) passage on the dorsal surface of the sacrum for the dorsal branches of the sacral nerves.
sacral f. (ventral) passage on the pelvic surface of the sacrum for the ventral branches of the sacral nerves.
Scarpa's f. a human anatomical term for the interincisive fissure of pigs and ruminants; an opening behind the upper medial incisor for the nasopalatine nerve.
sciatic f. either of two foramina, the greater and the lesser sciatic foramina, formed by the sacrotuberal and sacrospinous ligaments in the sciatic notches of the hip bone.
f. secundum the second of the two orifices to perforate the septum primum between the cardiac atria of the fetal heart; forms through cell death. Called also ostium secundum.
sphenopalatine f. a space between the orbital and sphenoidal processes of the palatine bone, opening into the nasal cavity and transmitting the sphenopalatine artery and the nasal nerves.
spinous f. a hole in the great wing of the sphenoid for the middle meningeal artery.
stylomastoid f. the opening of the facial canal, adjacent to the ear from which the facial nerve emerges.
supracondylar f. a fissure in the mediodistal part of the humerus in cats through which the median nerve and vessels pass.
supraorbital f. passage in the frontal bone for the supraorbital vessels and nerve; often present as a notch bridged only by fibrous tissue.
thebesian f. minute openings in the walls of the heart through which the smallest cardiac veins (thebesian veins) empty into the cardiac chambers.
transverse f. the passage in either transverse process of a cervical vertebra that, in the first six vertebrae, transmits the vertebral vessels.
f. triosseum the hole between the ends of the avian clavicle, coracoid and scapula that transmits the tendon of the supracoracoid muscle and serves as a fulcrum to lever the wing upwards.

vena cava f. an opening in the diaphragm for the caudal vena cava.
vertebral f. 1. the large opening in a vertebra formed by its body and its neural arch. 2. transverse foramen.
f. of Vesalius an occasional opening medial to the foramen ovale of the sphenoid, for passage of a vein from the cavernous sinus.
f. of Winslow epiploic foramen.

foraminotomy [*fo-ram"i-not'ə-me*] removal of the roof of the intervertebral foramen.

forb [*forb*] native, nongrass, broadleaf, herbaceous range plants eaten by livestock. Responsible for a great deal of animal production in arid and semiarid regions. Includes saltbush, sage, shinoak.

Forbes' disease [*forbz*] glycogenosis type III.

force [*fors*] energy or power; that which originates or arrests motion or other activity.
reserve f. energy above that required for normal functioning. In the heart it is the power that will take care of the additional circulatory burden imposed by bodily exertion.
shearing f. a force exerted perpendicularly to a horizontal surface.

forceps [*for'seps*] pl. *forcipes* [L.] a two-bladed instrument with a handle for compressing or grasping tissues in surgical operations, and for handling sterile dressings, etc.
alligator f. strong toothed forceps having a double clamp. Long-handled with short jaws at the end of a long shank. Designed for grasping in an enclosed space, e.g. removing grass seeds from ear canals.
bayonet f. a forceps whose blades are offset from the axis of the handle.
bone-cutting f. have cutting blades and may be double-action.
bone-holding f. designed to grip bones or fragments.
capsule f. a forceps for removing the lens capsule during cataract surgery.
clamp f. a forceps-like clamp with an automatic lock, for compressing arteries, etc.
DeBakey f. see **DeBakey** tissue forceps.
Doyen intestinal f. see **Doyen forceps**.
dressing f. finger- and thumb-operated spring forceps used for general grasping of tissues, dressings; there is a great variety of tips available to the blades. Called also thumb forceps.
English f. heavy duty, thumb-operated standard tissue forceps with large, strong teeth at the blade tips.
extraction f. concave beaks to grasp teeth.
Ferris–Smith f. thumb forceps; the tips of the blade faces are cross-hatched with grooves and have several prominent teeth for secure grasping of tissues.
Foerster sponge f. used to hold swabs or sponges for mopping up the site. Scissor-type operation with ratcheted handles. The blades are loops with serrated opposing faces. May be straight or, for better visibility of the site, curved.
Glassman intestinal f. non-crushing forceps used in holding sections of viable bowel during anastomosis procedures.
Glock f. large, ratchet-handled, scissor-action uterine forceps with large round blades for grasping and holding up an exteriorized bovine uterus.
grasping f. includes tissue, sponge, towel, vulsellum forceps.
hemostatic f. used to clamp the ends of vessels and establish hemostasis or to cross clamp a vascular pedicle. See also **Crile hemostatic forceps**, **Halsted** mosquito forceps, **Kelly–Murphy forceps**, **Rochester–Carmalt forceps**.
Hobday f. obstetrical forceps for use in dogs and cats. Scissor-type forceps without ratchets, with slightly incurving loops instead of blades, to grasp a fetal head.
Knowles f. long-handled tissue forceps with ratcheted handles suitable for grasping the cervix of the mare and drawing it back into the vagina for suturing or other surgical treatment.
mosquito f. see **Halsted** mosquito forceps.
obstetric f. forceps for extracting the fetal head from the maternal passages.
Rampley f. obstetrical forceps for use in dogs and cats. Scissors type with ratchet handles and blades which end in loops suitable for grasping a fetal head.
rightangle f. surgical tissue forceps or hemostats with a rightangle turn at the tip which permits an alternative approach to some sites that are inaccessible with the more common straight or gently curved forceps.
rongeur f. a forceps designed for use in cutting bone.
Schroeder vulsellum f. long, scissor type forceps with ratchet handles and long, thin, sideways curved blades that have inward facing, double-pointed claws. Designed for grasping the uterus.
Schubert f. designed for collecting a biopsy of uterine wall. Scissor type instrument with blades designed to pick up and punch out a piece of mucosa when the handles are closed.
sponge f. see **Foerster sponge forceps**.
thumb f. for holding tissue with the left hand while using another instrument in the right hand (or vice versa for the sinistral surgeon). Called also tissue forceps.
tissue f. **Adson tissue forceps**; includes alligator forceps (see above), **Allis tissue forceps**, **Babcock forceps**, **Knowles forceps**, **right-angle forceps**, **vulsella**.
towel f. spring clips with middle crossover and spring at end. Inward curving, sharp pointed tips. Used to fix drapes to tissue with minimal trauma. Also usable as light tissue forceps or rib approximators in small animals.
transfer f. a sterile grasping instrument, used to move surgical instruments, blades, needles and suture material to the instrument table at surgery.

Ford suture pattern an interlocking suture pattern; modification of the simple continuous stitch. The emerging, across-the-wound lap goes back through the preceding beside-the-wound lap before continuing to the next entry point for another across-the-wound lap.

fore [*for*] front, e.g. forelimb.
f. cannon the third metacarpal bone of the horse.

forearm [*for'ahrm*] the part of the forelimb supported by the radius and ulna, between the elbow and the carpus.

forebrain [*for'brān*] see **prosencephalon**.

foregut [*for'gət*] the endodermal canal of the embryo cephalic to the junction of the yolk stalk, giving rise to the pharynx, lung, esophagus, stomach, liver and most of the small intestine.

forehand [*for'hand*] the head, neck, shoulders, withers and forelimbs of the horse.

forehead [*for'hed*] the region between the eyes and the ears; supported by the frontal and parietal bones.
domed f. forehead bulges; may be soft and fluid-filled; a problem only in neonates.

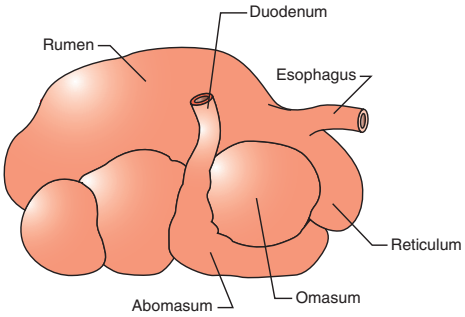
Foreign Animal Disease (FAD) a disease exotic to the country using the term but the term also implies a disease that is highly transmissible and potentially devastating if it gained entry to that country.

foreign body [*for'ən*] plant or mineral matter which finds its way into organs and tissues. The syndromes caused are described elsewhere under the specific organ or cavity, e.g. oral, gastric, corneal.
constricting f. b. elastic bands, cords and collars that have become too small which may become embedded in skin and subcutaneous tissues to the point of disappearing. Some objects are placed maliciously on the scrotum, tail, neck, ears or muzzle of dogs and cats.
esophageal f. b. causes complete, where obstruction is by a solid object, blockage of ingesta or regurgitus, or partial, e.g. wire lodged across lumen, when fluid and gas may pass unimpaired.
linear f. b. twine, fishing line, and mane hair has the effect of telescoping/pleating a length of intestine and causing obstruction without compromising the blood supply to the part but with the probability of cutting into the mucosa and possibly through the bowel wall. The characteristic radiographic appearance of intestinal pleating assists in diagnosis.
penetrating f. b's long thin foreign bodies, e.g. those penetrating the reticular wall in traumatic reticuloperitonitis, or the sole of the horse's foot.
rectal f. b. objects passing through the intestinal tract may cause proctitis and difficulties in passing through the anus with straining and blood in the feces. Malicious insertion may cause penetration of the rectal wall and death from peritonitis.

foreign dyes dyes introduced into the body, usually for the purpose of making a physiological measurement, e.g. bromsulfthalein (BSP), Evans blue, indocyanine green, rose bengal, phenoltetrachlorphthalein, occasionally as treatment, e.g. methylene blue for nitrite poisoning.

foreignness a characteristic required for antigens, to be recognized as not a normal self constituent.

forelegs [*for'legz*] see **forelimb**.



F-48: Stomach and forestomachs of cow. Location of reticulum, rumen, omasum, and abomasum as seen from right side of cow. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

inherited thick f. juvenile **hyperostosis** (inherited thick forelegs) of pigs.

forelimb [*for'limz*] the front limb.

f. paralysis see **brachial** paralysis.

f. restraint hold restraint of a horse by holding a forelimb tightly flexed at the knee, either manually using an assistant, or by a tightly buckled strap; suitable only for simple procedures.

forelock [*for'lok*] in maned animals the most anterior part of the mane, hanging down between the ears and onto the forehead. In sheep refers to the wool in a similar situation.

foremilk [*for'milk*] the first few streams of milk at any milking time. After the first squirt of milk is discarded the rest of the foremilk is suitable as a source of material for laboratory examination for the presence of mastitis organisms.

forensic [*fə-ren'zik*] pertaining to, or applied in legal proceedings in courts of law.

forepaw [*for'paw*] the distal part of the front limb, including the carpus, metacarpals and phalanges, as in dogs and cats.

forequarter [*for'kwor'tər*] the quarter of an animal carcass that includes a forelimb; in the live animal refers to the part of the animal forward of the elbow, excluding the neck and head.

forest pertaining to or emanating from the forest.

f. fire injury see **bushfire injury**.

f. primrose ***Hypericum*** *revolutum*.

forestomachs [*for'stum-ək*] the first three compartments of the ruminant stomach, namely the reticulum, rumen and omasum; the gut compartment in which the major part of digestion in ruminants takes place, largely by fermentation. Called also proventriculus.

forge [*forj*] the fire equipped with forced-draft bellows used by a farrier for rapid heating of horseshoes for hot-shoeing.

forging [*forj'ing*] an abnormality of gait in the horse in which the toe of a hind hoof hits the opposite front hoof while the horse is moving at the trot. Called also clicking or cross-firing.

formaldehyde [*for-mal'də-hīd*] the simplest aldehyde; chemical formula CH_2O, it is a gas with strongly disinfectant properties. It is used in aqueous solution (formol, formalin) for fixation of tissues for histology, disinfection of utensils and also in the preparation of toxoids from toxins, and as a gas for the fumigation of hatching eggs.

f. hypersensitivity causes an allergic contact dermatitis.

f.-malachite green a treatment for external parasites in aquarium fish.

formalin [*for'mə-lin*] a saturated (37%) solution of formaldehyde in water is 100% formalin; dilutes to 10% it is used as a histological fixative and as a disinfectant and treatment for ovine footrot. Also used for the treatment of fungal diseases of fish but may be toxic if contaminated with paraformaldehyde.

f. ether sedimentation of feces a method of flotation of *Giardia* cysts.

f. treated grain fed to cows to produce dairy foods with a high concentration of polyunsaturated fats by reducing the amount of hydrogenation of dietary polyunsaturated fats in the rumen. May cause rumenitis and diarrhea if improperly prepared.

formamidase [*for-mam'ĭ-dās*] an enzyme which catalyzes the deamination of formamide and similar amides to produce formate; e.g. kyneurenine formylase, which catalyzes the hydrolysis of formylkynurenine to kynurenine and formate in tryptophan metabolism.

formamidines a group of acaricidal compounds, used as plant sprays and topically on animals. See also **amitraz**.

formatio [*for-ma'she-o*] pl. *formationes* [L.] formation.

formation [*for-ma'shən*] 1. the process of giving shape or form; the creation of an entity, or of a structure of definite shape. 2. a structure of definite shape.

formic acid [*for'mik*] a colorless, pungent liquid with vesicant properties, from nettles and ants and other insects; derivable from oxalic acid and from glycerin and from the oxidation of formaldehyde.

Formica fusca [*for-mi'kə*] an ant, second intermediate host for *Dicrocoelium dendriticum*.

formiciasis [*for"mĭ-si'ə-sis*] a morbid condition caused by ant bites.

formiminoglutamic acid (FIGLU) [*for-mim"ĭ-no-gloo-tam'ik*] a product of histidine metabolism. High levels in ruminant urine suggest possibility of nutritional deficiency of cobalt.

formol [*for'mol*] formaldehyde solution, formalin.

f. cresol antiseptic solution used in endodontics.

formononetin an isoflavone found in clovers which is converted in the rumen into a potent estrogen, equol. Formononetin itself has no estrogenic potency.

formula [*for'mu-lə*] pl. *formulae, formulas* [L.] an expression, using numbers or symbols, of the composition of, or of directions for preparing, a compound, such as a medicine, or of a procedure to follow to obtain a desired result, or of a single concept.

chemical f. a combination of symbols used to express the chemical components of a substance.

dental f. see **dental** formula.

empirical f. a chemical formula that expresses the proportions of the elements present in a substance.

gait f. sets out the times that the feet are individually in contact with the ground while the animal is moving.

molecular f. a chemical formula expressing the number of atoms of each element present in a substance, without indicating how they are linked.

spatial f., stereochemical f. a chemical formula giving the numbers of atoms of each element present in a molecule of a substance, which atom is linked to which, the types of linkages involved, and the relative positions of the atoms in space.

structural f. a chemical formula showing the spatial arrangement of the atoms and the linkage of every atom.

vertebral f. sets out the number of vertebrae in each of the sections of the spinal column.

formula-fed 1. veal calves fed a liquid milk diet indoors, >3 weeks old, weigh 150–400 lb (68–182 kg). 2. any neonate fed on reconstituted milk products or replacer by bucket or bottle.

formulary [*for'mu-lar"e*] a collection of formulae.

National F. (NF) a book of standards for certain pharmaceuticals and preparations not included in the USP; revised every 5 years, and recognized in the USA as a book of official standards by the Pure Food and Drug Act of 1906.

formulation [*for"mu-la'shən*] a fixed recipe for the preparation of a medicine or a commercial feed.

formyl [*for'məl*] the radical, HCO or H·C:O−, of formic acid.

***N*-formyl loline alkaloids** suspected of vasoconstrictive toxicity in seeds of *Festuca arundinacea*.

fornical [*for'nĭ-kəl*] pertaining to a fornix.

fornix [*for'niks*] pl. *fornices* [L.] an archlike structure or the vault-like space created by such a structure.

cerebral f. either of a pair of arched fiber tracts that unite under the corpus callosum, so that together they comprise two columns, a body, and two crura.

conjunctival f. the fold formed by the reflection of the conjunctiva from the eyelid to the globe of the eye.

hippocampal f. a thick bundle of nerve fibers leaving the hippocampus to enter the hypothalamus, terminating in the mamillary body.

telencephalic f. see cerebral fornix (above).

vaginal f. the annular recess within the depths of the vagina that surrounds the protruding part of the cervix.

Forssell technique [*for'səl*] either of two equine surgical procedures. One is for the correction of rectovaginal fistula, the other for the correction of the crib-biting/windsucking vice.

Forssman antigen [*fors'mən*] see Forssman **antigen**.

Fort Bragg fever [*fōrt' brag'*] leptospirosis.

Fort William disease a name given to infection by the **mink** enteritis virus.

forward a term used in animal husbandry to mean close to, usually close to parturition, e.g. forward ewes are those close to lambing.

F

forward-motility protein present in the epididymis; confers motility on the spermatozoon.
foscarnet a pyrophosphate analog used as an antiviral agent against herpesviruses.
fosfomycin [fos-fo-mi'sin] a phosphonic acid compound with broad spectrum antibacterial activity; used in pigs, poultry and fish.
fosmidomycin a phosphonic acid compound, similar to fosfomycin, produced by *Streptomyces lavendulae*, with antibacterial activity. Also used in the treatment of malaria.
fossa [fos'ə] pl. *fossae* [L.] a trench or channel; a hollow or depressed area.
acetabular f. the nonarticular part of the acetabulum.
amygdaloid f. the depression in which the palatine tonsil is lodged in some species.
cerebral f. any of the depressions on the floor of the cranial cavity.
lateral cerebral f. see **vallecula** sylvii.
f. clitoridis the cavity in which the glans clitoridis resides.
condylar f., condyloid f. either of depressions lateral to the occipital condyles.
coronoid f. a depression in the distal end of the humerus that accommodates the coronoid process of the ulna. Called also radial fossa.
cranial f. any one of the three hollows (rostral, middle and caudal) in the base of the cranium for the lobes of the brain.
ethmoid f. the hollow in the cribriform plate of the ethmoid bones, for the olfactory bulb.
f. glandis depression at the end of the stallion glans penis, housing the urethral process; it harbors smegma and potential pathogens.
glenoid f. mandibular fossa.
hyaloid f. a depression in the front of the vitreous body, lodging the lens.
hypophysial f., hypophyseal f. a depression in the sphenoid lodging the pituitary gland; called also pituitary fossa.
infraspinous f. a depression caudal to the spine of the scapula.
infratemporal f. an irregularly shaped cavity medial or deep to the zygomatic arch.
intercrural f. the fossa between the cerebral peduncles.
interpeduncular f. a triangular depression between the *crura cerebri*.
ischiorectal f. a potential space between the pelvic diaphragm, the ischium and the skin.
lacrimal sac f. excavated from the lacrimal bone and housing the lacrimal sac.
lingual f. the transverse groove on the dorsum of the bovine tongue between the torus and the tip.
mandibular f. a depression in the pars squamosa of the temporal bone at the base of the zygomatic process, in which the condyle of the mandible rests; called also glenoid fossa.
nasal f. the right or left half of the nasal cavity.
f. nudatae see synovial fossa (below).
olecranon f. the deep space between the epicondylar crests at the distal end of the humerus that receives the olecranon and anconeal processes of the ulna. In some dogs it may communicate with the coronoid fossa to form a *supratrochlear foramen*, making the humerus vulnerable to 'Y'-fractures.
f. ovalis cordis a fossa in the right atrium of the heart; the remains of the fetal foramen ovale.
ovarian f. a shallow depression on the surface of the mare's ovary. Called also ovulation fossa.
paralumbar f. the hollow of the flank, bounded dorsally by the transverse processes of the lumbar vertebrae, cranially by the last rib and caudally by the muscles of the thigh.
pituitary f. hypophysial fossa.
radial f. see coronoid fossa (above).
rhomboidal f. floor of the fourth ventricle.
supracondylar f. the depression between the condyles of the femur.
supraspinous f. a depression cranial to the spine of the scapula.
synovial f. depressed, cartilage-free islands in large articular cartilages; no function has been determined for them. Called also fossa nudatae.
temporal f. an area on the side of the cranium bounded by the temporal line and the zygomatic arch, lodging the temporal muscle.
tonsillar f. the recess that houses a tonsil such as that which partly conceals the palatine tonsils of the dog.
trochanteric f. the deep fossa at the proximal end of the femur between the greater and lesser trochanters.
fossette [fos-et'] 1. a small depression. 2. a small, deep corneal ulcer.
fossula [fos'u-lə] pl. *fossulae* [L.] a small fossa.
foster standing in for, surrogate.
f. mother an adoptive dam that accepts the offspring of another for purposes of feeding. Usually planned because of the death or lack of milk in the natural dam.
f. practice associated with a university veterinary school as a teaching practice.
fostering practice of putting newborn to suck on a lactating female, not the neonate's natural mother. Common practice in pig units where piglets from a sow with too many piglets to feed adequately are fostered to a sow that has a lower litter size. Also done to even out piglet size within litters of sucking piglets so as to give small birth weight piglets a better chance of survival. Sows tolerate fostering of the young with much greater acceptance than other species.
Fouchet's test a test for bile pigments, suitable for use on serum or urine.
foul [foul] a recognized classification of markings in canaries; it refers to a pattern of white feathers among the flight feathers and otherwise dark plumage.
foulbrood [foul'br d] bacterial infections of honeybee larvae which cause high mortality in hives and colonies. There are two diseases with different causes. American foulbrood and European foulbrood are described below. Both are diseases notifiable to the OIE (see Table 22).
American f. a highly contagious disease caused by *Paenibacillus larvae*subspecies *larvae* which infects honey bee larvae up to 3 days old. It is spread by highly resistant spores. There is high morality with collapse of colonies and hives.
European f. an infection of the larval and pupal stages of honey bees by *Melissococcus plutonius* that causes high brood mortality and a reduction in the life span of queens. The disease occurs world-wide and, even though the organism does not form spores, contamination results in reinfection and spread. Oxytetracycline is used in treatment.
foul-in-the-foot see **footrot**. Called also foul-of-the-foot.
foulage [Fr.] kneading and pressing of the muscles in massage.
foulfoot see **footrot**.
fouls see **footrot**.
found dead a classification that means that the animal was found dead but may not have been attended for some time. It signifies that no signs of illness were observed—a very different category from **sudden death**.
Foundation for Biomedical Research [foun-da'shən] an organization opposed to animal rights activists which seeks to educate the public on the importance of animal research in the treatment of human disease.
founder [foun'dər] see **laminitis**.
g. founder laminitis.
road f. a result of concussion to the hoof as occurs when working on a hard surface. See **laminitis**.
founder effect [foun'dər] extreme genetic drift that occurs when a new population is based on only a few individuals ('founders'). Called also founder principle.
founder principle see **founder effect**.
four-chamber method a method of postmortem dissection of the heart in which it is bisected from apex to base, exposing all chambers. Good for visualizing the ventricular septum and ventricular free wall in dogs and cats with cardiomyopathy.
four-in-hand a special coach harness for driving four horses accurately and with minimum coach sway. The front horses are harnessed to the centerpole, the back horses are hitched to the forepart of the carriage proper. The driver has four sets of reins arranged so that a change of direction is signaled to both lead horses at once and not by one horse pulling the other.
four-letter genetic code alphabet the genetic code is 'written' in a linear sequence in four letters corresponding to two purines, A and G (adenine and guanine), and two pyrimidines, C and T (cytosine and thymine); in mRNA, U (uracil) replaces T. The words of the alphabet comprise 3 letters, thus there are 4^3=64 permutations or words which are called codons. 61 of the 64 codons code for 1 of 20 amino acids. Since more than one codon

codes for a particular amino acid the code is said to be redundant. Four of the 64 codons punctuate the message; one, AUG, is the start signal and three, UAG, UAA and UGA, are stop signals.

four-stitch interrupted suture an old term for interrupted horizontal **mattress suture pattern**.

four tooth young sheep with four permanent central incisors erupted; approximately two years old.

four-way cross the mating of the crossbred progeny of two separate lots of two-way cross parents to produce a marketable line of progeny.

fovea [*fo've-ə*] pl. *foveae* [L.] a small pit or depression, usually in a bone, e.g. in the center of the articular surface of the head of the femur; often used alone to indicate the central fovea of the retina.

central f. of retina, f. centralis retinae small pit in the retina of some species, composed of slim, elongated cones and responsible for the clearest vision (highest visual acuity). Found in the center of the macula lutea in primate retinas; also present in some avian retinas, especially the raptors, some of which are bifoveate.

foveate [*fo've-āt*] pitted.

foveation [*fo"ve-a'shən*] formation of pits on a surface, as on the skin; a pitted condition.

foveola [*fo-ve'o-lə*] pl. *foveolae* [L.] a minute pit or depression.

fowl [*foul*] domestic fowl. A member of the genus *Gallus* of the family Phasianidae, the pheasant family. Characterized by a fleshy comb, earlobes below the eyes and wattles from below the beak, long, drooping hackle feathers on the neck of the cock, pendent, lancet-shaped covert feathers on the wings, upward curving sickle feathers in the tail of the male, jointed spurs on the legs of the cock bird and well-marked sexual dimorphism. There are many breeds of domestic fowl but they have diminished in importance with the expansion of the broiler and egg industries, most enterprises carrying their own genetic strains identified by code numbers. Some of the more common breeds are identified under the headings: **Brahma**, **Cochin**, **Cornish**, **English game**, **Langshan**, **Minorca**, **Orpington** (Buff and Black), **Plymouth rock**, **Rhode Island red**, **Silkie**, **Sussex**, **White leghorn**, **Wyandotte** and many breeds of **bantam**. For most entries relating to fowls see under **avian**.

f. cholera a contagious widespread disease of fowls caused by *Pasteurella multocida* and manifested by septicemia with sudden onset, rapid spread, short course and high mortality. There may be diarrhea and dyspnea. A disease notifiable to the OIE (see Table 22).

f. coryza a serious, widespread, respiratory disease of fowls caused by ***Avibacterium*** *paragallinarum* and characterized by acute inflammation of the upper respiratory tract and air sacs. It is characterized by an acute onset of mucoid or serous nasal discharge, facial edema and conjunctivitis, swollen wattles, diarrhea, reduced feed intake and a heavy culling rate.

f. paralysis see **Marek's disease**.

f. paratyphoid an important cause of wastage in commercial birds, especially turkeys occurring as outbreaks of severe enteritis in young birds caused by *Salmonella* spp. including over 100 species.

f. pest see **Newcastle disease**.

f. plague see **avian** influenza.

f. pox see **fowlpox**.

f. tick see ***Argas*** *persicus*.

f. typhoid a disease of fowl and turkeys caused by *Salmonella gallinarum*. It affects only adult hens and is rare in modern, hygienically managed commercial flocks. There is weakness, diarrhea and anemia. The course is short and case mortality is high. A disease notifiable to the OIE (see Table 22).

Fowler's solution [*fou'lər*] an old-time tonic of potassium arsenite solution, composed of arsenic trioxide, potassium bicarbonate, hydroxide or carbonate, and water.

fowlpox [*foul'poks*] a slow-spreading disease of fowl and turkeys caused by the avian poxvirus and characterized by pox lesions on the skin of the head, and on the neck in turkeys. Involvement of eyelids causes lacrimation and accumulation of caseous material in the conjunctival sac. Lesions may also be present in the mouth, esophagus and upper respiratory tract. Transmitted by mosquitoes or by contact.

fox [*foks*] a member of the same family as dogs, wolves and jackals, the family Canidae, but has characteristic long body and short legs, pointed snout, big, erect ears, oval pupils and long bushy tail. The type species is the Old World red fox (*Vulpes vulpes*). See also **kit**, **fennec**.

arctic f. (*Alopex lagopus*; *Vulpes lagopus*) native to the Arctic tundra, it is farmed for the fur. In winter months, the fur is white; in the summer it changes to brown or gray. Called also polar fox.

f. encephalitis see infectious canine **hepatitis**.

gray f. (*Urocyon cinereoargenteus*) widely distributed in North America; the fur is not valuable commercially.

kit f. (*Vulpes macrotis*) small, yellow-gray fox with very large ears, native to arid regions of southwestern USA and Mexico. They can be infected with plague, carried by the fleas that infest them.

Old World red f. see red fox (below).

f. rabies the fox is an important reservoir host for rabies, particularly in eastern and western Europe where it is endemic.

red f. (*Vulpes vulpes*) the common, sandy to red brown fox with black legs and backs of ears, white underparts, sharp muzzle, and large erect ears. It has a large native habitat and was been introduced into Australia with very serious adverse effects on native fauna. Called also Old World red fox, European red fox. In North America, they are common in fur farming. A domesticated color variant, the silver fox, is prized for its more valuable fur.

silver f. see red fox (see above).

South American f. (*Lycalopex griseus*) pelts from this small canid are exported from South American countries; not in the genus of true foxes (*Lupus*).

Fox terrier a number of small terrier-like dogs have been called fox terriers and and recognition of specific breeds varies from country to country. The American Kennel Club recognizes two breeds, differing only in their coats. Both are small (16–18 lb), active dogs with narrow heads, ears that fold over, and a tail docked to three-quarters its original length. The Smooth Fox Terrier or the UK Fox Terrier (Smooth) has a short, haircoat in white with other markings. The Wire Fox Terrier (or Fox Terrior (Wire) in the UK) is similar, but the short coat has a wiry texture. Called also 'Foxies'. The breed(s) is predisposed to atopic dermatitis, glaucoma, lens luxation and an hereditary ataxia. See also **Toy fox terrier**

foxglove ***Digitalis*** *purpurea*.

small yellow f. ***Lathyrus*** *splendens*.

woolly f. ***Digitalis*** *lanata*.

Foxhound a medium- to large-sized muscular dog with pendulous ears, long tapered tail and short coat, in the usual hound colors of black, brown and white. Shortening of the ears in English foxhounds by surgical removal of the distal edges ('rounding') is specified in the breed standard of the American Kennel Club. English and American varieties are recognized as separate breeds in the USA. The American variety is leggier and much lighter in weight.

foxtail grass see ***Setaria***[2] *lutescens*, ***Hordeum***.

foxtails 1. a name given to plant awns of the ***Hordeum*** in the western USA. 2. *Equisetum* spp.

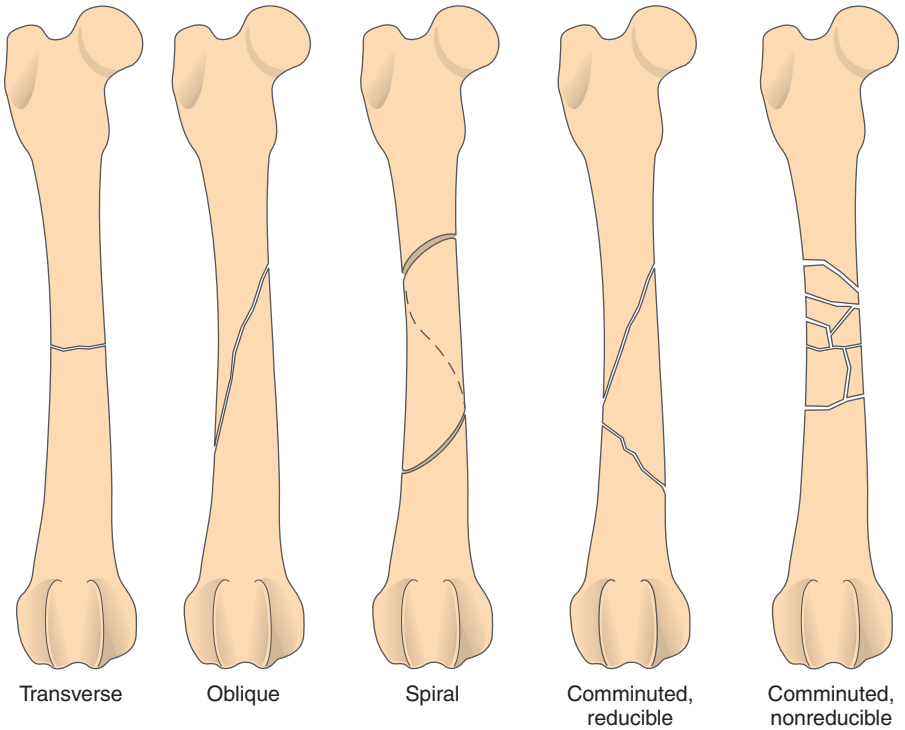
foxtrot one of the two artificial gaits of the **five-gaited** horse. A four-beat gait midway in speed between a walk and a trot. There is a great deal of similarity with several other gaits such as amble, fadge, slow pace, stepping pace, running walk, jog, hound jog. A breed of pleasure horse which is highly proficient at the foxtrot is the Fox Trotting Horse.

Fox trotter an American breed of horse with a natural four-beat, diagonal gait, the fox trot. Called also Missouri Fox Trotter.

Fp flavoprotein.

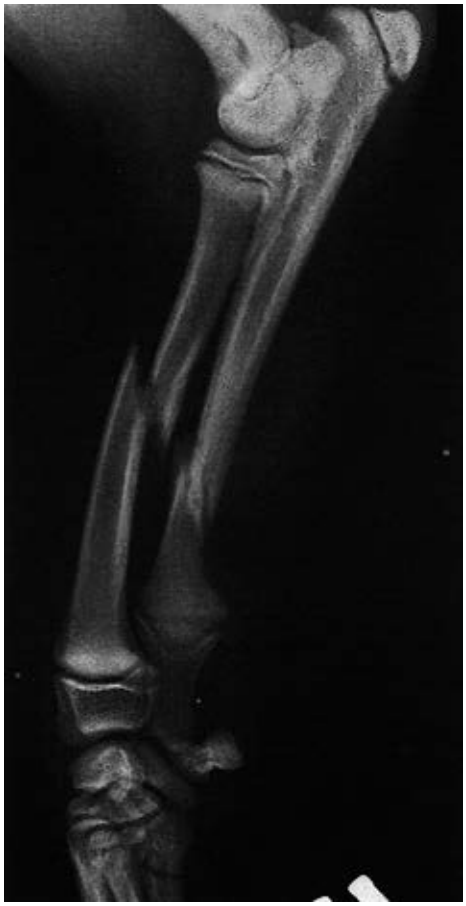
F-49: Smooth fox terrier.

FPL feline panleukopenia.
fPLI feline pancreatic lipase immunoreactivity; an immunoassay that specifically measures the concentration of feline pancreatic lipase in the serum; used in the diagnosis of exocrine pancreatic disease in cats.
FPV feline panleukopenia virus.
FR framework region.
Fr chemical symbol, *francium.*
fraction [*frak'shən*] size expressed as a relative part of a unit.
attributable f. the proportion of disease in the exposed group which is caused by the factor.
fractional excretion (FE) tests [*frak'shən-əl*] measures urine electrolyte clearance ratios to assess renal function. They express the proportion of the electrolyte excreted in the urine, compared with the amount filtered by the glomerulus and entering the filtrate. Calculations require measurements of serum and urine concentrations of the electrolyte and of creatinine, using the forumula: $FE_x = (U_x/P_x) \times (P_{cr}/U_{cr}) \times 100$ % This has the advantage of not requiring 24-hour collection of urine. Most often, includes fractional excretion of sodium (FE_{Na}), potassium (FE_K), phosphorus (FE_P) and calcium (FE_{Ca}).
fractionation [*frak"shən-a'shən*] 1. in radiotherapy, division of the total dose of radiation into small doses given at intervals. 2. in chemistry, separation of a substance into components, as by distillation or crystallization. 3. in histology, isolation of components of living cells by differential centrifugation.
fracture [*frak'chər*] 1. the breaking of a part, especially a bone. 2. a break in the continuity of bone. Fractures may be caused by trauma, by twisting due to muscle spasm, or indirect loss of leverage or by disease that results in decalcification of the bone.
avulsion f. separation of a small fragment of bone cortex at the site of attachment of a ligament or tendon.
Birkeland f. articular fractures of the proximal first phalanx in horses, exclusively Standardbreds.
blow-out f. fracture of the orbital floor caused by a sudden increase of intraorbital pressure due to traumatic force; the orbital contents herniate into the maxillary sinus so that the inferior rectus or inferior oblique muscle may become incarcerated in the fracture site.
capillary f. one that appears on a radiograph as a fine, hairlike line, the segments of bone not being separated; sometimes seen in fractures of the skull.
closed f. one that does not produce an open wound.
comminuted f. one in which the bone is splintered or crushed.
complete f. one involving the entire cross-section of the bone.
compound f. see open fracture (below).
compression f. one produced by compression.
contaminated f. see open fracture (below).
depressed f. fracture of the skull in which a fragment is depressed. See also **depression** fracture.
direct f. one at the site of injury.
dislocation f. fracture of a bone near an articulation with concomitant dislocation of that joint.
double f. fracture of a bone in two places.
fatigue f. see stress fracture (below).
fissure f. a crack extending from a surface into, but not through, a long bone.
greenstick f. one in which one side of a bone is broken, the other being bent.
hairline f. incomplete, non-displaced fracture; sometimes used incorrectly as synonymous with stress or fatigue fracture.
impacted f. fracture in which one fragment is firmly driven into the other.
incomplete f. one that does not involve the complete cross-section of the bone.
indirect f. one at a point distant from the site of injury.
interperiosteal f. greenstick or incomplete fracture.
intrauterine f. fracture of a fetal bone incurred in utero.
lead pipe f. one in which the bone cortex is slightly compressed and bulged on one side with a slight crack on the other side of the bone.
malunion f. a large space between the displaced ends of the bone has been filled by new bone.
nonunion f. there is still a wide translucent space between the ends of the broken bone.
oblique f. a common type, usually seen in the shaft of a long bone, such as the femur, tibia or humerus.
open f. one in which a wound through the adjacent or overlying soft tissues communicates with the site of the break; called also compound fracture. A classification system has been used which is based on the mechanism of injury and the extent of tissue damage. In *type I*, a bone fragment was briefly forced through the skin leaving a communicating wound; *type II* fractures are caused by impact and there is damage to overlying tissues and exposure of the bone; in *type III*, there is extensive damage and loss of overlying tissues, including shearing and degloving wounds, with loss of vascular supply.
pathological f. one due to weakening of the bone structure by pathological processes, such as neoplasia, osteomalacia or osteomyelitis.



F-50: Types of fractures.
From Fossum TW, Small Animal Surgery, 3rd Edition. Mosby, 2007.

F-51: Comminuted fracture of the tibia in a dog.
From Seaman JA, Simpson AM: Tibial fractures. Clin Tech Sm Anim Pract 19:151-167, 2004. Elsevier.



F-52: Oblique fractures of the radius and ulna.
From Lamb CR, Diagnostic Imaging of the Dog and Cat. Mosby, 1993.

pertrochanteric f. fracture of the femur passing through the greater trochanter.
Salter f. see **Salter classification**.
saucer f. creates a saucer-shaped fragment; caused usually by direct trauma at midshaft in a long bone. Likely to create a sequestrum.
simple f. closed fracture.
slab f. one in which a flat piece of underlying bone or tooth is separated or lost. Common in carpal bones of horses and in teeth.
spiral f. one in which the bone has been twisted apart.
spontaneous f. pathological fracture.
sprain f. the separation of a tendon from its insertion, taking with it a piece of bone. See also avulsion fracture (above).
stellate f. one with a central point of injury, from which radiate numerous fissures.
stress f. fracture produced by the stress created by the pull of muscles without the intervention of trauma or extreme weight-bearing.
tooth f. see **tooth** fracture.
trabecular f. there is no discontinuity of the bone as a whole but microscopic examination shows fractured trabeculae.
transverse f. one at right angles to the axis of the bone.
trophic f. one due to a nutritional (trophic) disturbance. See also pathological fracture (above).
unstable f. having a tendency to disrupt, e.g. unstable chemicals.
fracture–dislocation [*frak'chər-dis"lo-ka'shən*] a fracture of a bone near a joint, also involving dislocation.
fragiligraph an instrument that records the results of a mechanical **osmotic** fragility test for erythrocytes.
fragilitas [*frə-jil'ĭ-təs*] [L.] *fragility*.
f. crinium a brittleness of the hair. See **trichorrhexis**.
f. ossium congenita osteogenesis imperfecta.
fragility [*frə-jil'ĭ-te*] susceptibility, or lack of resistance, to influences capable of causing disruption of continuity or integrity.
f. of blood see erythrocyte fragility (below).
capillary f. abnormal susceptibility of capillary walls to rupture.
erythrocyte f. susceptibility of erythrocytes to hemolysis when subjected to mechanical trauma (mechanical fragility) or when exposed to increasingly hypotonic saline solutions (**osmotic** fragility). A test of erythrocyte osmotic fragility is used in diagnosing hemolytic anemia. Called also fragility of blood.
fragmentation [*frag"mən-ta'shən*] division into small pieces.
framework region (FR) [*frām'wərk*] less variable sequences in the variable regions of immunoglobulin molecules which are located between the hypervariable or complementary determining regions (CDRs).
framycetin [*frə-mi'sə-tin*] an aminoglycoside antibiotic derived from *Streptomyces decaris*, which is a major component of neomycin. Used, usually in combination with other antibacterial agents, in topical preparations. Called also neomycin B.
Francisella [*fran-sĭ-sel'ə*] a genus of very small gram-negative bacteria.
F. tularensis biotype A (*F. tularensis* biovar *tularensis*) is the etiological agent of tularemia; biotype B (*F. tularensis* biovar *holarctica* (*palaearctica*)) is less virulent. Formerly called *Pasteurella tularensis*.
francisia *Brunsfelsia* spp.
francium (Fr) [*fran'se-um*] a chemical element, atomic number 87, atomic weight 223. See Table 4.
francolin large game birds resembling partridges: called also *Francolinus*.
Francolinus see **francolin**.
Frangula alnus* *Rhamnus *frangula*.
Frank–Starling mechanism [*frahngk' stahr'ling*] an intrinsic adaptive response which serves to adjust each ventricular output to its inflow by increasing the force of contraction of the myocardium proportionally to any increase in the length of the muscle fibers.
Franklin–Silverman biopsy needle used for obtaining biopsy specimens of the liver, kidney, prostate. Consists of a stylet that fits inside a needle split along its length and which spreads open when not confined within the third part of the appliance, the cannula. The split needle and stylet are longer than the cannula, and are protruded beyond it in the suspect tissue and withdrawn into it to harvest the specimen.
Franseria see ***Ambrosia***.
Fratercula the genus of **puffins** in the family Alcidae.
Fraxinus excelsior [*frak-si'nəs*] European tree in the plant family of Oleaceae; contains an indigestible fiber which causes ruminal

VetBooks.ir

impaction, abdominal pain, incoordination and collapse in cows. Called also common or European ash.

Frazier–Ferguson suction tube an instrument for removing fluid or blood from a surgical site. It has a compression hole near the handle which can be covered to modify the degree of suction.

Frazier retractor an instrument designed for use in spinal laminectomies. Consists of two opposed sets of curled hands which slide along a bar to which they can be fixed by thumbscrews.

FRC see **functional** residual capacity.

Fredet–Ramstedt operation see **Ramstedt operation**.

free [*fre*] not tied; unconfined.

f. electricity the presence of uncontrolled electrical current in solid materials at low amperages and voltages, usually due to faulty wiring and poor earthing (grounding) of the electrical power system. It causes restlessness, and failure of letdown of milk. In some cases when the circumstances are suitable there may be stunning of animals and rarely fatal electrocution.

f. hormone hypothesis the unbound fraction of hormone is the indicator of what is available to tissues, available for metabolism and excretion. See also free **thyroxine**.

f. return a return of service for a mare to the same stallion in the next season if she does not produce a live foal.

free catch urine sample collected while the animal is voiding, usually in mid-stream.

free-choice the animals are free to eat as much as they like of two or more feeds which are available.

free-living, free-ranging running uncontrolled on range.

freemartin [*fre'mahr-tin*] a sterile female born co-twin with a male. Occurs most commonly in cattle, very rarely in sheep; been described in goats and camelids, elk and deer. Male hormones produced by the male calf share the common circulation and inhibit the normal development of genitalia of the female. The female is also an erythrocytic chimera and can be diagnosed as a freemartin by this means. It can also be diagnosed by cytogenetic techniques. It produces white cells with XY as well as cells with XX chromosomes. Structural changes of nonpatent vagina, small vulva, cordlike uterus and hypoplastic ovaries are diagnostic but inconsistent. Some freemartins are quite normal clinically but all are sterile.

freemartinism the state of being a **freemartin**.

Freer periosteal elevator a double-ended instrument used in orthopedic surgery.

freeway space space between opposing premolars when the mouth is closed.

freeze branding branding animals by depigmentation of the haircoat with supercooled instruments. The carefully gauged degree of cold application causes selective destruction of the pigment-producing cells, the melanocytes.

freeze-drying [*frēz-dri'ing*] 1. a method of tissue preparation in which the tissue specimen is frozen and then dehydrated at low temperature in a high vacuum. See also **lyophilization**. 2. a process of removing water from frozen foods or vaccines. The material must be powdered, sliced or diced and be stored in moisture-proof containers.

freeze-etching [*frēz-ech'ing*] a method used to study unfixed cells by electron microscopy, in which the object to be studied is placed in 20% glycerol, frozen at −148°F (−100°C), and then mounted on a chilled holder.

freeze-fracturing [*frēz-frak'chər-ing*] a method used to examine cell structure in electron microscopy in which the specimen is frozen in liquid N_2 (−196°C) in the presence of a cryoprotectant (antifreeze) to prevent distortion; the frozen block is then cracked such that the fracture line passes through the hydrophobic middle of the lipid bilayers, thereby exposing the interior of the cell membranes. The resulting structure is then shadowed with platinum, the organic matter is dissolved away, and the replica is floated off and viewed in the electron microscope. A closely related technique is freeze-etch electron microscopy.

F-53: Bovine freemartins. From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

freeze frame a facility on an ultrasound machine which permits an image to be held on a screen.

freeze-substitution [*frēz-sub"stĭ-too'shən*] a modification of freeze-drying in which the ice within the frozen tissue is replaced by alcohol or other solvents at a very low temperature.

freeze–thaw cycle in cryosurgery, the process of rapid freeze and slow thaw that results in cell death. Often repeated a set number of times according to the size and nature of lesion being treated.

freezer [*frēz'ər*] the compartment in which meat and offal are stored at freezing temperatures of 10–16°F (−12 to −9°C) although there is a trend to lower temperatures of 0–−22°F (−18 to −30°C).

f. burn discoloration of offal due to dehydration at very low temperatures. The tissue is withered, yellow and unpalatable and is condemned.

sharp f. operates at lower temperatures than the average freezer, i.e. at 0°F (−18°C).

freezing [*frēz'ing*] reducing the temperature of materials to the freezing point of water so that they are frozen solid. Used in the preservation of food, the preparation of material for histopathological examination and in cryosurgery.

f. point the temperature at which a liquid begins to freeze; for water, the freezing point is 32°F (0°C).

quick f. greatly improves the quality of meat because of reduced ice crystal formation.

skin f. see **cryosurgery**.

Freibank system a German system of handling meat products of inferior quality from a health point of view. Similar provisions apply in many countries. Meat from carcasses of late pregnant or recently calved cows, from carcasses affected by local lymph node involvement with tuberculosis or caseous lymphadenitis or tissue parasites not communicable to humans is released under special licenses that require its treatment by heat before sale.

fremitus [*frem'ĭ-təs*] a vibration perceptible on palpation or auscultation, e.g. palpable in the middle uterine artery in late pregnant cows, palpable in a grossly enlarged thyroid gland affected by goiter.

French Alpine goat polled, mostly chamois-colored, dairy goat.

French brown cattle French brown dual purpose cattle originated from Brown Swiss.

French bulldog a small, compact dog with large, domed head, very short nose, prominent 'bat' ears (broad based and erect), and a small, short tail that is straight or kinked. The hair is short and fawn, brindle or pied (brindle with white). The breed is predisposed to hemivertebrae and factor IX deficiency.

French front see **fiddle front**.

French gauge a standard set of diameters for round objects such as needles, catheters, rubber tubing. Range from gauge 3 (1 mm) to gauge 34 (11.3 mm). Each gauge unit is approximately equivalent to 0.33 mm diameter.

French honeysuckle, French lilac see ***Galega officinalis***.

French molt a disease of companion birds, especially budgerigars, characterized by breaking of flight and tail feathers of immature birds about to leave the nest. May be the result of polyomavirus infection (**budgerigar fledgling disease)** or **psittacine** beak and feather disease.

French poodle see **Poodle**.

French scale see **French gauge**.

French shorthaired shepherd see **Beauceron**.

French straws 0.25–0.5 mL diameter plastic straw to contain extended semen and to be used in a special inseminating device.

French water dog see **Barbet**.

frenectomy [*fre-nek'tə-me*] excision of a frenum (frenulum).

mandibular f. releases the frenulum attaching the lower lip to the mandibular gingiva near the first premolar tooth; performed to reduce food accumulation in the vicinity.

Frenkelia a genus of protozoa in the family Sarcocystidae. Cysts are found in the brain and spinal cord of birds of prey; the intermediate hosts are the prey, such as rodents.

F. clethrionomyobuteonis the definitive and intermediate hosts are *Buteo* (buzzard) and *Microtus* (vole), respectively.

F-54: Lingual frenulum of the dog.
From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

F-55: Friesian dairy cow.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

frenoplasty [*fre'no-plas"te*] the correction of an abnormally attached frenum by surgically repositioning it.
frenotomy [*fre-not'ə-me*] the cutting of a frenum (frenulum).
frenulum [*fren'u-ləm*] pl. *frenula* [L.] a small fold of integument or mucous membrane that limits the movements of an organ or part.
clitoridal f. a fold from the clitoridal fossa to the clitoris.
f. linguae frenulum of tongue.
lingual f. the vertical fold of mucous membrane under the tongue, attaching it to the floor of the mouth; called also frenulum linguae.
f. of lip a median fold of mucous membrane connecting the inside of each lip to the corresponding gum.
penile preputial f. thin ventral sheet of preputial skin and connective tissue forming a fold under the penis and connecting its ventral raphe with the preputial mucosa. Normally breaks down at the approach of puberty. May occur in cats neutered at an early age. Persistence of a part of the frenulum causes deviation and incomplete protrusion of the penis and inability to mate, is suspected to be an inherited defect in cattle. Most cases can be satisfactorily corrected surgically.
superior medullary velum f. a band lying in the superior medullary velum at its attachment to the inferior colliculi in the brain.
frenum [*fre'nəm*] pl. *frena* [L.] a restraining structure or part; see **frenulum**.
frenzy [*fren'ze*] the most severe of the excitation mental states. The animal's movements are violent and uncontrolled and are dangerous to attendants and other animals, and to the affected animal, which often injures itself. There may be aggressive physical attacks.
Freon trademark for a series of fluoridated hydrocarbons used primarily in refrigeration.
F. 112 a flukicide in sheep. See **tetrachlorodifluorethane**.
frequency [*fre'kwən-se*] 1. the number of occurrences of a periodic process in a unit of time. 2. in statistics, the number of occurrences of a determinable entity per unit of time or of population.
cumulative f. the graph of its cumulative frequencies.
f. distribution see frequency **distribution**.
expected f. the expected number of occurrences.
observed f. the actual frequency; as opposed to the expected frequency.
relative f. the number of observations of a particular, nominated value expressed usually as a proportion of the total frequency.
total f. the total number of observations in the set of data.
ultrasound f. see **ultrasound**.
frescon see **4-tritylmorpholine**.
fresh cows cows recently calved and still in their first flush of lactation, that is within 2 weeks, possibly 4 weeks since calving.
freshening term for dairy cattle that have bagged up and are close to calving.
freshness the degree to which meat, or other biological material, approximates the state it was in at the time of slaughter or harvest. In meat freshness is determined by the developing acidity due to proteolytic degeneration of the muscle fibers and the oxidation of the fat.
f. meters several commercial instruments are available. They depend on the measurement of the pH of the surface of the meat.
Freund's complete adjuvant [*froind*] a water-in-oil emulsion with killed mycobacterial organisms. See also **muramyl dipeptide**.
Freund's incomplete adjuvant [*froind*] Freund's adjuvant without the mycobacteria component.
Freyana a genus of mites in the family Dermoglyphidae.
F. chanayi found on the feathers of turkeys.
FRF follicle-stimulating hormone releasing factor.
friable [*fri'ə-bəl*] easily pulverized or crumbled.
Friar's balsam a complex mixture of natural medicaments including benzoin, storax, balsam of Peru, balsam of Tolu, aloe, myrrh, angelica and alcohol. Called also balsam traumatic. See also **balsam**.
fribby fleece wool containing an excessive number of sweat points.
fribs small pieces of wool, e.g. second cuts, on the outside of the main fleece.
friction [*frik'shən*] the act of rubbing.
f. injury caused most commonly by automobile trauma in dogs and cats in which the animal has been dragged along the road or pavement, causing avulsion of tissue, from skin through to ligaments, tendons, muscles and bone. See also friction **burn**.
f. rub sound heard on auscultation caused by rubbing together of two inflamed surfaces, e.g. pleuritic friction rub. See also **pleural** friction rub.
Friedman test a modification of the **Aschheim-Zondek test** test for pregnancy in the mare based on the use of a rabbit instead of mice. Little used because of the cost of the rabbit.
friendly neighbor ***Bryophyllum*** *delagoense*.
Friesian a breed of dairy cattle. See **Holstein–Friesian**.
F. horse Dutch light horse used for driving and riding. Black with no markings, 15 hands high. A muscular horse with feather on the lower limbs.
Friesland cattle a South African adaptation of Friesian cattle.
fright disease see canine **hysteria**.
frigorific [*frig"o-rif'ik*] producing coldness.
frijolito *Sophora* spp. See ***Sophora secundiflora***.
frilled a mutation producing a specific form of feathering in different areas of the body of canaries. There may be curled feathers on the shoulders and wings (mantle), on the breast (jabot), or on the flanks (fins). Frilled breeds include the North Dutch frill, South Dutch frill, Parisian frill, Milan frill, Swiss frill, Gibber Italicus, and Gibboso Espagnole.
frilling separation of the photographic emulsion from the film base commencing at the edges of the film. Usually caused by prolonged immersion in a liquid at too high a temperature.
frills see **frilled**.
Fringillidae see **finch**.
Fritillaria meleagris toxic plant in the family Liliaceae; reputed to contain a poisonous alkaloid similar to those in *Veratrum*. Called also fritillary, snake's head.
fritillary see ***Fritillaria meleagris***.
frog [*frog*] 1. amphibious, poikilothermic animal in the order Anura. They are tailless, have long legs suited for jumping and have a three-chambered heart. Some species produce toxin in their parotid glands, similar to toads. See also **bullfrog**. 2. v-shaped pad of soft horn between the bars on the sole of the horse's hoof.
African clawed f. (*Xenopus laevis*); used to test for pregnancy as it responds to an injection of urine from pregnant women by forming oocytes. Very popular as pets in home aquaria, but has become an environmental pest when released in countries outside its native habitat. Called also African clawed toad.
green f. (*Rana clamitans*) a small North American frog, popular in the commercial pet trade.
horned f. (*Ceratophrys* spp.) a genus of frogs popular as pets. They have a large abdomen and large mouth, which causes them to be called Pacman frogs.
f. legs ***Bryophyllum*** *delagoense*.
f.-leg position one of the positions used when X-raying dogs for hip dysplasia. The dog is in dorsal recumbency and the hindlegs are held in a fully flexed, abducted position.

VetBooks.ir

leopard f. (*Rana pipiens*) in the family Ranidae; green with prominent black spots. Widely distributed in North America, although populations are declining. The frog commonly dissected in biology classrooms.
f. mouth see ***Philydrum languinosum***.
f. pad leather pad nailed onto horse hoof above the shoe to protect the frog.
poison dart f. small, brightly colored frogs in the family Dendrobatidae; from Central and South America and popular as pets. Poisonous alkaloids are secreted through their skin. Called also poison arrow frog.
f. posture the hindlimbs trail behind in a recumbent animal that scrambles forwards with the front limbs. Characteristic of bilateral hip luxation and compression of the lumbar spinal cord.
frog-stay an internal spine of hoof horn projecting from the frog upward into the digital cushion.
Fröhlich's syndrome [*frur'lik*] see **adiposogenital dystrophy**.
front *Mu* points see **alarm points**.
frontad [*frun'tad*] toward a front, or frontal aspect.
frontal [*frun'təl*] 1. pertaining to the face and forehead. 2. an ambiguous term that is better avoided for formal use denoting a plane passing through the body from side to side. In quadrupeds it is synonymous with a transverse plane while in bipeds it is synonymous with a coronal plane.
f. abscess in cattle usually results from infection of a dehorning wound, in sheep from infection by *Oestrus ovis*.
f. bone the paired bones constituting the upper part of the face. See also Table 10.
f. lobe the rostral (anterior) portion of the cerebral hemisphere.
f. nerve block see supraorbital **block**.
f. plane see dorsal **plane**.
f. process see **comb**.
f. sinus see frontal **sinus**.
f. sinusitis inflammation of the frontal sinus; commonly a sequel to infection of a dehorning wound. Occurs as a chronic disease of unknown origin in bighorn sheep running at range in the wild.
frontalis [*frən-tal'is*] [L.] *frontal*.
f. muscle cutaneous muscle stretching over the forehead into the upper eyelid.
frost [*frost*] 1. a deposit of frozen dew. 2. a deposit resembling frozen dew or vapor.
f. (1) studs large-headed horseshoe nails that protrude below the horseshoe, or special studs fitted to the shoe itself, that give better grip on the ice. Called also calks, calkins, cogs.
urea f. (2) the appearance on the skin of salt crystals left by evaporation of the sweat in urhidrosis.
frostbite [*frost'bīt*] injury to tissues due to exposure to extreme cold. Not a common occurrence in free-living animals in the wild but is observed in poorly housed captive animals and birds. May cause whole-body freezing or gangrene of extremities including deer antlers. Deer forms are probably the most susceptible animals. Gangrene of the extremities, especially in pigs, and of the comb in chickens does occur in the domestic species but only if they are in poor condition and are caught outside in a storm.
frosting [*frost'ing*] the slight graying of the haircoat around the face, particularly muzzle, in dogs with aging and as a regular feature of some breeds such as the Belgian shepherd dog.
frosty face sheep's face covered by harsh, chalky white hairs.
frothing at mouth profuse salivation, frothed with air, during jaw champing as part of involuntary movements. Contrast with an outpouring of fine froth from the nostrils and mouth in the terminal stages of pulmonary edema.
frounce casous accumulations in the throat of hawks. See also avian **trichomoniasis**.
frozen [*fro'zən*] said of material kept at less than 0°C. Biological materials are frozen solid because of their high water content.
f. embryo see **embryo** transfer.
f. section a specimen of tissue that has been quick-frozen and cut with a freezing microtome or a microtome in a cryostat. Can yield rapid histological diagnosis and, because it need not have been fixed, retains undenatured enzymes and antigens whose distribution may yield useful information.
f. semen see **semen**.
fructofuranose [*frook"to-fu'rə-nōs*] the combining and more reactive form of fructose, containing a furanose ring structure.

F-56: Ear necrosis from frostbite.
From Blowey RW, Weaver AD, Diseases and Disorders of Cattle. Mosby, 1997.

β-fructofuranosidase an enzyme occurring in yeasts and other organisms that catalyzes the hydrolysis of sugars with a terminal unsubstituted β-D-fructofuranosyl residue.
fructokinase [*frook"to-ki'nās*] an enzyme that catalyzes the transfer of a high-energy phosphate group to D-fructose, to form fructose-1-phosphate.
fructolysis [*frook"to-li'sis*] the conversion of fructose to lactate.
fructooligosaccharide a naturally occurring fructan sugar used as a prebiotic in petfoods. It acts like as a soluble fiber, passing undigested to the large intestine where it is extensively fermented by colonic bacteria. Incorporated into low-caloried foods for dogs to assist in weight loss; in addition, a reduction of fecal odors is claimed.
fructosamine a glycated serum protein complex which reflects average blood glucose concentration over the previous 1–3 weeks; used in the management of insulin therapy for diabetes mellitus in dogs and particularly cats, because blood concentration is not affected by the stress of blood collection. Increased blood concentration can be cause by sustained hyperglycemia from any cause, including hyperadrenocorticism and administration of drugs such as corticosteroids and progestins.
fructose [*frook'tōs*] a hexose sugar found in honey and many sweet fruits; called also levulose and fruit sugar. A component (with glucose) of the disaccharide sucrose (table sugar). It is used in solution as a fluid and nutrient replenisher.
f. 1,6-bisphosphatase key regulatory enzyme of gluconeogenesis that converts fructose 1,6-bisphosphate to fructose 6-phosphate.
f. 1,6-bisphosphate aldolase cleavage enzyme taking hexose-phosphates to triose-phosphates.
f. 1,6-diphosphatase a pacemaker or rate-limiting enzyme in the liver; participates in the control of the rate of hepatic metabolism.
f. 2,6-bisphosphatase part of multifunctional enzyme that regulates the concentration of the key positive allosteric effector of glycolysis, fructose 2,6-bisphosphate by catalyzing its dephosphorylation.
f. 1-phosphate aldolase cleaves fructose 1-phosphate to dihydroxyacetone phosphate; sometimes called aldolase B.
f. 6-phosphate key intermediate of glycolysis.
f. tolerance test a little used test of liver function.
fructosemia [*frook"to-se'me-ə*] the presence of fructose in the blood, as in fructose intolerance.
fructoside [*frook'to-sīd*] a compound which bears the same relation to fructose as a glucoside does to glucose.
fructosuria [*frook"to-su're-ə*] the presence of fructose in the urine.
fructosyl [*frook'to-səl*] a radical of fructose.
frugivorous [*froo-jiv'ə-rəs*] fruit-eating.
frusemide [*frus'ə-mīd*] furosemide.
FRV feline rhinotracheitis virus.
fry [*frī*] newly hatched fish. Called also larvae.
advanced f. young fish in the post-yolk stage. Called also alevin.

VetBooks.ir

FSE 1. feline spongiform encephalopathy. 2. focal symmetrical encephalomalacia.
FSH see **follicle-stimulating hormone**.
FSH/LH-RH follicle-stimulating hormone releasing hormone and luteinizing hormone releasing hormone.
FSH-RH follicle-stimulating hormone releasing hormone.
FSP fibrin/fibrinogen split products.
FTC failure to conceive.
fT_3 free tri-iodothyronine (T_3).
fT_4 free thyroxine (T_4).
fTLI feline trypsin-like immunoreactivity.
FTLV feline T-lymphotropic virus.
FTS facteur thymique sérique.
***fu* organs** see **yang organs**.
fuchsin [*fūk'sin*] any of several red to purple dyes.
acid f. a mixture of sulfonated fuchsins; used in various complex stains.
basic f. a histological stain, a mixture of pararosaniline, rosaniline and magenta II. Also, a mixture of rosaniline and pararosaniline hydrochlorides used as a local anti-infective.
fucose [*fu'kōs*] a monosaccharide occurring as L-fucose in a number of mucopolysaccharides and mucoproteins.
fucosidase [*fu-ko'sĭ-dās*] an enzyme occurring in two forms that catalyzes the hydrolysis of fucoside to an alcohol and fucose. See also **fucosidosis**.
fucoside [*fu'ko-sīd*] an acetal derivative of fucose.
α-fucosidosis [*fu"ko-sĭ-do'sis*] an hereditary disease of humans and English springer spaniel dogs, due to deficient activity of the enzyme α-L-fucosidase and resulting in accumulation of fucose in all tissues; marked by progressive cerebral degeneration, various neurological defects, and emaciation within the first 2 years of life.
FUDR floxuridine.
fuel oils see **oil**.
-fugal word element. [L.] *driving away, fleeing from, repelling*.
fuh see ***Onychium contiguum***.
Fulani a cattle-owning tribe in West Africa. Many varieties of zebu cattle are included in the general category of Fulani. See **Sudanese Fulani cattle**.
fulgurate [*ful'gu-rāt*] 1. to come and go like a flash of lightning. 2. to destroy by contact with electric sparks generated by a high-frequency current.
fulguration [*ful"gu-ra'shən*] destruction of living tissue by electric sparks generated by a high-frequency current.
full-feed the level of feeding at which the animals are eating as much feed as they can safely eat.
full mouth the stage of development of an animal that has all of its incisors erupted and in wear, e.g. 6 years on the average in horses, 5 years in cattle, 4 years in sheep.
full-sib full brother or full sister; individuals with both parents in common.
full text reports unabridged versions; raw data plus analyses.
full-thickness graft see full-thickness **graft**.
fullered said of a horseshoe with one or more grooves in the length of the shoe's ground surface. The nail holes are made in these grooves.
fullering the groove in the ground surface of the horseshoe. The nail holes are punched in it.
fuller's earth an absorbent, containing magnesium aluminum silicate, commonly used in dusting powders.
fulminate [*ful'mĭ-nāt*] to occur suddenly with great intensity.
fulminating [*ful'mĭ-nāt-ing*] see fulminant **disease**.
fulvine one of the toxic pyrrolizidine alkaloids in *Crotalaria* spp.
fumagillin an antibiotic produced by *Aspergillus fumigatus*. Used in bees to control the parasite, *Nosema*.
fumarase [*fu'mə-rās*] an enzyme that catalyzes the interconversion of fumarate and malate.
fumarate [*fu'mə-rāt*] a salt of fumaric acid.
Fumaria plant genus in the family Fumariaceae; reputed to cause poisoning in farm livestock through isoquinoline alkaloids causing cardiac dysfunction. Includes *F. densiflora, F. officinalis*. Called also fumitory.
fumaric acid [*fu-mar'ik*] an unsaturated dibasic acid; it is the *trans*-isomer of maleic acid and an intermediate in the tricarboxylic acid cycle.
fumarin a coumarin analog used as an anticoagulant rodenticide. Called also coumafuryl. See also **warfarin**.
fumatory, fumitory ***Corydalis***, ***Fumaria*** spp.
fumes odorous gases and other volatile materials; inhalation of irritating fumes causes coughing and, if sufficiently severe, irreversible pulmonary edema.
fumigation [*fu"mĭ-ga'shən*] exposure to disinfecting fumes, e.g. formaldehyde.
fumitoxin [*fu"mĭ-tok'sin*] toxic substance found in *Aspergillus fumigatus*.
fumitremorgen toxic substance isolated from *Aspergillus fumigatus*. Causes ataxia, lethargy, hypersensitivity and frenzy in horses.
fumonisin [*fu-monĭ-sin*] neurotoxic, pneumotoxic and hepatotoxic mycotoxins in *Fusarium moniliforme*.
function [*funk'shən*] 1. the special, normal or proper action of any part or organ. 2. a variable quantity whose value at any time can be determined by the value at that time of some other variable because there is a fixed mathematical relationship between them. The first variable is said to be a function of the second.
f. abnormality the basis of all disease; structural abnormalities are important only insofar as they impede normal function.
f. tests tests which assess the efficiency of functions of the organ, e.g. liver function, renal function tests, glucose tolerance, xylose absorption tests.
functional [*funk'shən-əl*] pertaining to or fulfilling a function; affecting the function but not the structure. A common qualification when no lesion is found to explain or justify a diagnosis.
f. disease a disease involving body functions but having no known organic basis.
f. residual capacity (FRC) the amount of air remaining in the lungs at the end of a normal expiration.
f. tumors those usually derived from endocrine tissue that produce a hormone or homone-like secretion and, because such activity is autonomous and not subject to the normal feedback mechanisms, a syndrome resembling hyperactivity of the gland results, e.g. primary hyperparathyroidism, hyperthyroidism.
f. magnetic resonance imaging (fMRI) see **magnetic resonance imaging**.
fundament [*fun'də-mənt*] 1. a base or foundation, as the breech or rump. 2. the anus and parts adjacent to it.
fundamental number [*fun"də-men'təl*] the total number of major chromosome arms; is constant across most species.
fundectomy [*fun-dek'tə-me*] excision of the fundus of an organ, as of the stomach.
fundiform [*fun'dĭ-form*] shaped like a loop or sling.
fundoplication [*fun"do-plĭ-ka'shən*] mobilization of the lower end of the esophagus and plication of the fundus of the stomach up around it, in the treatment of gastroesophageal reflux disease. Two modifications of this procedure are the Belsey and Nissen fundoplication techniques.
fundus [*fun'dəs*] pl. *fundi* [L.] the bottom, depths, or base of an organ, or the part of a hollow organ farthest from its mouth.
f. of bladder the depths or cranial part of the urinary bladder.
f. camera camera used to photograph the ocular fundus.
f. of eye see ocular fundus (below).
f. of gallbladder the dilated portion of the gallbladder.
nasal f. the caudal extremity of the nasal cavity, occupied by the ethmoid bone.
nontapetal f. that portion of the ocular fundus not lined by the reflective tapetum.
ocular f. the posterior 'bowl' of the eye containing the retina, choroid, optic nerve head, and (when present) tapetum, all of which can be examined with an ophthalmoscope; bordered posteriorly by the sclera.
f. reticuli sulci floor of the reticular groove.
f. of stomach the part of the stomach to the left and above the level of the opening between the stomach and esophagus.
subalbinotic f. relative lack of melanin in the ocular fundus permitting larger choroidal blood vessels to be seen on funduscopic examination. Seen frequently in Siamese cats, dogs with merle coat color, and Appaloosa horses.
tapetal f. that portion of the ocular fundus lined by the reflective tapetum.
tigroid f. ocular fundus with sufficiently reduced melanin that underlying choroid vessels are visible as radial orange-red stripes against the inner aspect of the posterior sclera.
f. tympani the floor of the tympanic cavity.

F-57: Typical canine fundus.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

f. uteri the part of the uterus between the cervix and the horns of the uterus.

funduscope [*fun'də-skōp*] see **ophthalmoscope**.

funduscopy [*fən-dus'kə-pe*] ophthalmoscopy.

fundusectomy [*fun"də-sek'tə-me*] excision of the fundus of the stomach.

fungal [*fung'gəl*] pertaining to or caused by a fungus.
f. disease the four principal manifestations are the skin infections, the dermatophytoses, systemic infections such as coccidioidomycoses, localized subcutaneous infections such as phaeohyphomycosis, and the mycotoxicoses, the fungal poisonings.
f. hyphae see **hypha**.
f. infection see **mycosis**.
f. mastitis prevalence is low, but common causes include *Aspergillus fumigatus, A. nidulans, Coccidioides immitis, Cryptococcus neoformans, Fusarium* spp., *Paecilomyces* spp., *Pichia* spp., *Trichosporon* spp.
f. slide culture a method of culturing fungi that allows good visualization of conidia for identification purposes.
f. toxins there are a large number of known poisonous fungi, some of which grow on living plants, many of them visible on the outside of the plant, many of them growing inside the plant and therefore not visible. Many more grow on stored feed such as grain and hay. The best known fungal toxins include aflatoxins, citrinin, ergotamine, fumonisins, ergovaline, ochratoxins, phomopsin, slaframine, sporidesmin, trichothecenes (e.g. satratoxin, deoxynivalenol), zearalenone.

fungate [*fung'gāt*] to produce fungus-like growths; to grow rapidly, like a fungus.

fungemia [*fən-je'me-ə*] the presence of fungi in the bloodstream.

fungi [*fun'ji*] [L.] plural of *fungus*.

Fungi Imperfecti also called Deuteromycota. Fungi in this group have septate hyphae but their sexually reproductive form has not been seen.

fungicide [*fun'jĭ-sīd*] an agent that destroys fungi.

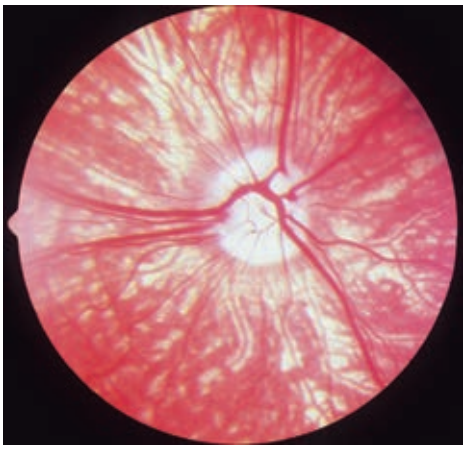
fungiform [*fun'jĭ-form*] shaped like a fungus, or mushroom.

fungistasis [*fun-jĭ-sta'sis*] inhibition of the growth of fungi.

fungistat [*fun'jĭ-stat*] a substance that checks the growth of fungi.

fungitoxic [*fun'jĭ-tok"sik*] exerting a toxic effect upon fungi.

fungoid [*fun'goid*] resembling a fungus.



F-58: Subalbinotic fundus of a dog.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

chignon f. a nodular growth on the hair.

fungosity [*fəng-gos'ĭ-te*] a fungoid growth or excrescence.

fungous [*fung'gəs*] of the nature of, caused by, or resembling a fungus.

fungus [*fung'gəs*] pl. *fungi* [L.] a general term for a group of eukaryotic organisms (mushrooms, yeasts, molds) marked by the absence of chlorophyll, the presence of a rigid cell wall in some stage of the life cycle, and reproduction by means of spores. Fungi are present in the soil, air and water, but only a few species can cause disease. Among the fungal diseases (mycoses) are **histoplasmosis**, **coccidioidomycosis** and **ringworm** or dermatophytosis. Although the fungal diseases develop slowly, are difficult to diagnose, and are resistant to treatment, they are rarely fatal. Another important part of the disease spectrum caused by fungi are the mycotoxicoses, e.g. **facial** eczema, **ryegrass** staggers, mushroom poisoning—***Amanita***, ***Ramaria***, ***Clavaria***, ***Cortinarius***, ***Clitocybe***, ***Inocybe***, ***Psilocybe***, sclerodermia.
dimorphic f. those with two growth forms, molds or yeasts, depending on whether they are grown on artificial media or occur in the environment or in tissues or alternatively, depending on the incubation temperature. Included are *Sporothrix schenckii*, *Blastomyces dermatitidis*, *Histoplasma capsulatum*, *Coccidioides immitis* and *Paracoccidioides brasiliensis*. These organisms typically cause deep or systemic mycoses in animals and humans.
ray f. branched filamentous appearance of the bacterium *Actinomyces bovis* in granules in pus.
rot f. *Ceratocystis* spp. on parsnip (*Pastinaca* spp.).

funicle [*fu'nĭ-kəl*] a small cord, diminutive of funis funiculus.

funiculi [*fu-nik'u-li*] plural of funiculus.

funiculitis [*fu-nik"u-li'tis*] 1. inflammation of the spermatic cord. 2. inflammation of that portion of a spinal nerve root which lies within the intervertebral canal.

funiculoepididymitis [*fu-nik"u-lo-ep"ĭ-did"ĭ-mi'tis*] inflammation of the spermatic cord and the epididymis.

funiculus [*fu-nik'u-ləs*] pl. *funiculi* [L.] a cord; a cordlike structure or part, especially one of the large bundles of nerve tracts making up the white matter of the spinal cord.
dorsal f. the white substance of the spinal cord lying on either side between the dorsal median septum and the dorsal root.
lateral f., f. lateralis the lateral mass of fibers on either side of the spinal cord, between the dorsolateral and ventrolateral sulci.
f. spermaticus see **spermatic** cord.
f. spinalis see **spinal cord**.
ventral f the white substance of the spinal cord lying on either side between the ventral median fissure and the ventrolateral sulcus.

funiform [*fu'nĭ-form*] resembling a rope or cord.

funisitis [*fu"nĭ-si'tis*] inflammation of the umbilical cord.

funnel chest [*fun'əl*] see **pectus** excavatum.

Funtumia latifolia an African wood. When the fungus *Fusarium solani* grows on the shavings of this wood androgens are produced, and chickens housed on the shavings and sawdust have undergone sex changes.

FUO fever of unknown origin.

fur [*fər*] short, very fine and soft hair. Valuable as pelts for use in cold climate and high fashion garments.
f. animal animals bred or trapped in the wild for their pelts. Includes mink, sable, otter, lapin, ermine, marten.
f. ball accumulations of fur, swallowed during the natural grooming procedures of cats, can be a cause of vomiting, enteritis and uncommonly intestinal obstruction. Most troublesome in longhaired cats and those with skin disease that prompts more grooming.
f. chewing a vice in chinchillas kept as pets; sometimes believed to have an hereditary basis, but can also be a result of poor husbandry such as overcrowding, stress or boredom.
f. clipping chewing of fur by captive mink rendering the pelt useless. A vice apparently caused by cage boredom.
f. slip hair loss observed in chinchillas in which areas of fur are 'released' from the follicles as tufts, leaving quite bare, but otherwise normal looking, skin; may occur during rough handling or due to stress. The hair grows back.

furaltadone [*fu-ral'tə-dōn*] a nitrofuran antibiotic, used locally in the treatment of mastitis and in ear drops.

furanosesquiterpenes toxic essential oils, e.g. ngaione, myodesmone, from *Myoporum* spp. plants; a cause of hepatotoxicity in sheep, cattle, horses and pigs.

furanocoumarin see ***furocoumarin***.

furanosesquiterpenoid pertaining to furanosesquiterpenes.
furazolidone [*fu"rə-zol'ĭ-dōn*] a nitrofuran antibiotic, used as a local antibacterial and antiprotozoal. Used in poultry and swine as a feed additive to treat bacterial and protozoal intestinal infections, but not legal in some countries. Calves fed low concentrations of furazolidone over long periods develop a leukopenia, petechial hemorrhages everywhere and are susceptible to infection. It is usually a sequel to prophylactic feeding of antibiotics. See also **granulocytopenic** calf disease.
furcal [*fur'kəl*] forked.
furcation [*fər-ka'shən*] the area where roots join the crown in a tooth with multiple roots.
f. exposure a classification of the degree of exposure accessible with a periodontal probe. Used in periodontal charting.
furcula [*fur'ku-lə*] the united clavicles in birds; a spring-like connection between the two shoulder joints; called also wishbone.
furfuraceous [*fur"fu-ra'shəs*] fine and loose; said of scales resembling dandruff or bran.
furious rabies see **rabies**.
furlong 220 yards, 0.125 of a mile.
furnishings in dogs, the extra type or quantity of hair on the head, tail, ears or legs, specified for a particular breed. For example, the feathers in setters, the beard in Bearded collies, the eyebrows in Schnauzers.
furocoumarin, furanocoumarin [*fu"ro-koo'mə-rin*] photosensitizing substances which occur normally in some plants such as *Ammi* and *Cymopterus* spp., in the family Apiaceae and in others in the family only if they are infected with bacteria or fungi, such as parsley and parsnips. Plants in families Moraceae (*Ficus* spp.), Fabaceae (*Cullen* spp.) and Rutaceae (*Citrus* spp., *Ruta graceolens*) also contain these compounds. Include psoralen, xanthotoxin (8-methoxypsoralen), alloimperatorin (8-hydroxy-5-prenylpsoralen) and bergapten (5-methoxypsoralen). The furocoumarins cause primary photosensitization, including keratoconjunctivits (blue eye) and vesicular lesions in the skin of pigs that require differential diagnosis from viral vesicular diseases. See also ***Phytoallexin***.
furosemide [*fu-ro'sə-mīd*] a diuretic that acts by blocking reabsorption of sodium and chloride in the ascending loop of Henle. Called also frusemide.
furrow [*fur'o*] a groove or trench.
atrioventricular f. the transverse groove marking off the atria of the heart from the ventricles.
gluteal f. the furrow that separates the human buttocks.
Furstenberg's rosette see **rosette** of Furstenberg.
furuncle [*fu'rung-kəl*] a focal suppurative inflammation of the skin and subcutaneous tissues, enclosing a central slough or 'core'; called also boil. Often involves primary infection of a hair follicle.
furunculoid [*fu-rung'ku-loid*] resembling a furuncle or boil.
furunculosis [*fu-rung"ku-lo'sis*] 1. the persistent sequential occurrence of furuncles over a period of weeks or months. 2. the simultaneous occurrence of a number of furuncles.
anal f. see **perianal** fistula.
muzzle f. see nasal **pyoderma**.
post-grooming f. a deep pyoderma in dogs, particularly those with short, stiff haircoats, that occurs soon after bathing or grooming. Hair follicles may be damaged by vigorous brushing, rubbing or back-combing and bacterial infection develops rapidly.
salmonid f. caused by *Aeromonas salmonicida*; characterized by bacteremia, septicemia and sometimes accompanied by deep necrotic lesions on the sides and backs of fish.
furze see ***Ulex europaeus***.
FUS feline urological syndrome.
fusaric acid mycotoxin produced by *Fusarium moniliforme*; causes depression and vomiting in pigs.
fusariomycosis infection by fungi in the genus *Fusarium*.
fusariotoxicosis [*fu-sar"e-o-tok"sĭ-ko'sis*] poisoning caused by ingesting feed contaminated by the fungi ***Fusarium*** spp. or their toxins. Includes loss of appetite and milk production, diarrhea, staggers.
Fusarium [*fu-sar'e-əm*] a genus of fungi; some species are plant pathogens and some are opportunistic infectious agents of humans and animals. Many also produce trichothecene toxins which cause poisoning of animals if the infected material, usually stored feed, is eaten.
F. acuminatum, F. culmorum, F. equiseti on corn crop causes inappetence, food rejection, diarrhea and incoordination in cattle.
F. graminearum* (*Gibberella zeae*), *F. semitectum associated with moldy corn or barley grain and produces an estrogenic mycotoxin, zearalenone, which may cause signs of estrogenism, especially vulvovaginitis, in pigs.
F. javanicum now classified as *F. solani*.
F. moniliforme cause leukoencephalomalacia in horses, pulmonary edema in pigs.
F. roseum now classified as *F. semitectum*. See *F. graminearum* (above).
F. scirpi causes diarrhea, staggers and food rejection in cattle.
F. solani 1. growing on sweet potatoes this fungus produces bovine atypical interstitial pneumonia. 2. as an environmental fungus causing melanized granulomas (black gill disease) in shrimps, especially *Penaeus japonicus*.
F. sporotrichiella now classified as *F. sporotrichoides*.
F. sporotrichioides 1. causes poor weight gain, necrotic mouth lesions and deaths in turkeys and chickens. 2. causes a hemorrhagic syndrome in cattle and pigs, similar to stachybotrytoxicosis. 3. causes a fatal hemorrhagic disease of sheep.
F. tricinctum now classified as *F. sporotrichoides*.
fusarochromanone a lethal mycotoxin found in *Fusarium roseum*; causes dyschondroplasia in broiler chickens.
fuschia bush see ***Eremophila***.
fuscin [*fu'sin*] a brown pigment of the retinal epithelium.
fusidic acid [*fu-sid'ik*] a lipophilic steroid antibioitic, the product of *Fusidium coccineum*; mainly active against gram-positive bacteria.
fusiform [*fu'zĭ-form*] spindle-shaped.
Fusiformis see ***Fusobacterium***.
fusimotor [*fu"sĭ-mo'tər*] denoting motor nerve fibers (of gamma motoneurons) that innervate intrafusal fibers of the muscle spindle.
fusion [*fu'zhən*] 1. the act or process of melting. 2. the merging or coherence of adjacent parts or bodies. 3. the operative formation of an ankylosis or arthrosis.
diaphyseal–epiphyseal f. operative establishment of bony union between the epiphysis and diaphysis of a bone.
nerve f. nerve anastomosis done to induce regeneration for resupplying empty tracts of a nerve with new growth of fibers.
spinal f. surgical creation of ankylosis between contiguous vertebrae; spondylosyndesis.
fusional [*fu'zhən-əl*] marked by fusion.
f. defects congenital defects marked by incomplete fusion of body parts, e.g. spina bifida.
Fusobacterium [*fu"zo-bak-tēr'e-əm*] a genus of anaerobic non-spore-forming, gram-negative bacteria found as normal flora in the mouth and large bowel, and often in necrotic tissue, probably as secondary invaders. Some species are associated with dental plaque.
F. equinum contributes to necrotizing pneumonia and pleurisy in horses.
F. necrophorum found in abscesses of the liver, lungs and other tissues and in chronic ulcer of the colon. A common major participant in bovine footrot, calf diphtheria, ruminal necrobacillosis, hepatic abscesses and thrush in horses. Synergistic with *Dichelobacter nodosus* in ovine footrot. Divided into subspecies *necrophorum*, formerly biotype A, which is especially found in liver abscesses of cattle, and subspecies *funduliforme*, formerly biotype B, which is particularly found in ruminal abscesses and in ruminal contents.
F. nodosus see ***Dichelobacter nodosus***.
F. nucleatum isolated from cat and dog bite wounds. Divided into subspecies *animalis, fusiforme, nucleatum, polymorphum* and *vincentii*.
F. russii isolated from cat and dog bite wounds.
fusocellular [*fu"so-sel'u-lər*] having spindle-shaped cells.
fusospirochetal [*fu"so-spi"ro-ke'təl*] of or caused by fusiform bacilli and spirochetes.
fusospirochetosis [*fu"so-spi"ro-ke-to'sis*] see **Vincent's angina**.
futures quantities of a specified product at a specified level of quality guaranteed for delivery at a specified future date, and as specified in a contract tradable in a futures market. By purchasing at today's prices it is possible to make big profits in the future if the estimate is correct. There is the equivalent danger that prices will fall. The attractiveness in futures trading is that only a small proportion of the original purchase price needs to be paid immediately.
fuzzy lamb disease see **border disease**.
FVC forced vital capacity.
FVIII-C factor VIII-coagulant.
FVR feline viral rhinotracheitis.

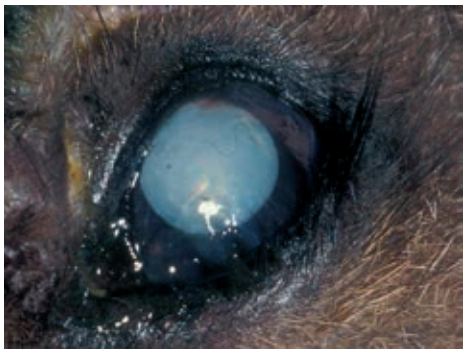
VetBooks.ir

G

G symbol for *giga*; gingival; glucose; gonidial; guanine.
g 1. gravity; the unit of force exerted upon a body during acceleration and deceleration. 2. gram (or grams).
γ gamma, small letter; third letter in the Greek alphabet.
G banding the technique of demonstrating **g bands**.
G bands in cytogenetics the pattern of bands produced by staining the chromosomes with Giemsa after fixing the proteins to prevent them binding with dye.
G-CSF granulocyte-colony stimulating factor.
G protein a regulatory protein which becomes activated when bound to GTP and is involved in signal transduction.
G. p. coupled receptor a member of a large class of cell-surface signaling receptors that contain seven transmembrane a helices; ligand binding results in activation of a coupled trimeric G protein that then initiates intracellular signal transduction pathways.
G_1 phase, G_1 period see **cell** cycle.
G_2 phase, G_2 period see **cell** cycle.
G6PD glucose-6-phosphate dehydrogenase.
Ga chemical symbol, *gallium.*
GABA γ-aminobutyric acid.
gabapentin [*gab"ə-pen'tin*] anticonvulsant and analgesic. Originally designed to be a structural analog of gamma-aminobutyric acid, although its anticonvulsant properties are now known to be unrelated to this property. When used as an analgesic, gabapentin seems to be particularly useful in the treatment of pain of neurogenic origin.
Gadd technique a modification of the episioplasty procedure for second degree perineal lacerations. A triangular piece of mucous membrane is removed from the dorsal vestibule. The vestibular mucosa is then apposed, then the perineal body is reconstructed with a series of interrupted absorbable sutures, before the skin is closed.
gadding [*gad'ing*] restlessness and excitement in horses, to a lesser extent cattle, because of the presence of biting flies, more specifically warble flies in cattle and bot flies in horses.
gadolinium (Gd) [*gad"o-lin'e-əm*] a chemical element, atomic number 64, atomic weight 157.25. See Table 4.
Gaertner's canal see **Gartner's ducts**.
gag [*gag*] 1. a device for holding the mouth open. See also **mouth** speculum. 2. to retch, or strive to vomit.
mouth g. (1) see **Drinkwater mouth gag**, **Haussman gag**, spring gag (below), **Varnell gag**, **probang**.
g. (2) reflex elevation of the soft palate and retching elicited by touching the back of the tongue or the wall of the pharynx; called also pharyngeal reflex.
spring g. a gag used in dogs to keep the mouth open during treatment of teeth. It consists of two bars which run up and down a curved pillar. The bars have perforated disks at their ends, into which a canine tooth can be positioned. Pressure on the disks jams the sliding action of the bars.
***gag* gene** [*gag*] a gene which encodes precursors of internal virion proteins found in the retroviral genome.
Gage excavator [*gāj*] a long, thin, handheld instrument consisting of a handle, a thin neck and a slightly curved, rounded blade that slips between the vertebrae and scoops out degenerated disk material. Used in the fenestration of intervertebral disks in dogs.
gagging [*gag'ing*] the swallowing–vomiting activity of the gag reflex.
gaggle collective noun for a group of geese.
GAGs glycosaminoglycans.
Gaigeria [*ga-je're-ə*] a genus of hookworms in the family Ancylostomatidae.
G. pachyscelis occurs in the duodenum of the goat and sheep. A voracious blood-sucker and an infestation of as few as 24 can be fatal.
gain [*gān*] increase in body weight. See also growth **rate**, gain **ratio**.
average daily g. (ADG) the average gain in bodyweight of the animal. Usually expressed in kg, g, or lb/day. ADG stated for bulls at sale are for measured gains in tests of 140 or 160 days in length.
feed cost of g. total feed cost divided by total pounds of gain.
gait [*gāt*] the manner or style of locomotion. Often used in assessing horses and dogs. See also **ataxia**, **dysmetria**, **incoordination**, **spastic**, **stringhalt**, **walk**, **trot**, **canter**, gallop (2), **cadence**, **five-gaited**.
g. analysis evaluation of the manner or style of walking, usually done by observing the animal as it walks or trots in a straight line. The normal forward step consists of two phases: the *stance phase*, during which one or more legs and feet are bearing most or all of the body weight, and the *swing phase*, during which the other feet are not touching the walking surface and the body weight is borne by the others. In a complete two-step cycle all feet are in contact with the ground at the same time for about 25% of the time. This part of the cycle is called the *double-support phase*. An analysis of each component of the three phases of ambulation is an essential part of the diagnosis of various neurological disorders and the assessment of patient progress during rehabilitation and recovery from the effects of a neurological disease, a musculoskeletal injury or disease process, or amputation of a lower extremity.
antalgic g. a limp adopted so as to avoid pain on weight-bearing structures, characterized by a very short stance phase.
asymmetric g. refers to right-left symmetry of leg movements; in the horse, canter and gallop.
ataxic g. an unsteady, uncoordinated walk, employing a wide base.
base-wide g. feet are wider apart than normal, suggesting instability. Seen with cerebellar **ataxia**.
diagonal g. one in which a forelimb is moved in unison with its opposite hindlimb, e.g. trot.
double-step g. a gait in which there is a noticeable difference in the length or timing of alternate steps.
high stepping g. may be normal in some fancy gaited horses. In others it may be a sign of blindness or poor proprioception, usually because of a defect in the sensory nervous system. It may also be a manifestation of hypermetria.

G-1: Spring gag.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

horse g. there are three natural gaits, **walk**, **trot**, **canter** and two artificial gaits, the **foxtrot**, **rack**. There are a number of other less well-defined gaits similar to foxtrot.
spastic g. a walk in which the legs move in a stiff manner, the toes seeming to drag and catch.
symmetric g. leg movements on one side are repeated on the other side; in the horse, walk, trot, pace.
waddling g. exaggerated alternation of lateral trunk movements with an exaggerated elevation of the hip, suggesting the gait of a duck.
gaited [gāt'əd] see **five-gaited**.
Gal galactose.
GAL virus Gallus adeno-like virus; the *Aviadenovirus* genus.
galactagogue [gə-lak'tə-gog] 1. promoting the flow of milk. 2. an agent that promotes the flow of milk.
galactans [gə-lak'tənz] an ingredient of the toxins of some *Mycoplasma* spp.
galactemia [gal"ak-te'me-ə] the presence of milk in the blood.
galactic [gə-lak'tik] 1. pertaining to milk. 2. galactagogue.
galactischia [gal"ak-tis'ke-ə] suppression of milk secretion.
galact(o)- word element. [Gr.] *milk*.
galactoblast [gə-lak'to-blast] a colostrum corpuscle in the acini of the mammary gland.
galactobolic [gə-lak"to-bol'ik] of or relating to the action of neurohypophyseal peptides which contract the mammary myoepithelium and cause ejection of milk.
galactocele [gə-lak'to-sēl] 1. a milk-containing, cystic enlargement of the mammary gland. 2. hydrocele filled with milky fluid.
galactocerebrosidase an enzyme that catalyzes the hydrolytic cleavage of galactose from galactocerebroside. Deficiency results in accumulation of galactocerebroside in tissues (globoid cell **leukodystrophy**). Called also galactosylceramidase, galactosylceramide β-galactosidase.
galactocerebroside [gə-lak"to-sə-re'bro-sīd"] a glycosphingolipid with a galactose unit. Called also galactolipid. See globoid cell **leukodystrophy**.
galactocerebrosidosis see globoid cell **leukodystrophy**.
galactography [gal"ak-tog'rə-fe] radiography of the mammary ducts after injection of a radiopaque substance into the duct system.
galactokinase [gə-lak"to-ki'nās] an enzyme that catalyzes the first step in the metabolism of galactose, the transfer of a phosphate group from ATP to galactose, producing galactose-1-phosphate.
g. deficiency see **galactosemia**.
galactolipid, galactolipin [gə-lak"to-lip'id, gə-lak"to-lip'in] see **galactocerebroside**.
galactoma [gə-lak"to'mə] **galactocele** (1).
galactophore [gə-lak'to-for] 1. galactophorous. 2. a milk duct.
galactophoritis [gə-lak"to-for-i'tis] inflammation of the milk ducts.
galactophorous [gal"ak-tof'o-rəs] conveying milk.
galactophygous [gal"ak-tof'ə-gəs] arresting the flow of milk.
galactoplania secretion of milk in some abnormal part.
galactopoiesis [gə-lak"to-poi-e'sis] the production of milk by the mammary glands.
galactopoietic [gə-lak"to-poi-et'ik] 1. pertaining to, marked by, or promoting milk production. 2. an agent that promotes milk flow.
galactorrhea [gə-lak"to-re'ə] excessive or spontaneous milk flow; persistent secretion of milk irrespective of nursing; lactorrhea. May occur in dogs with severe hypothyroidism due to hyperprolactinemia, pseudocyesis, or trauma to the mammary gland.
galactosamine [gal"ak-to'sə-mēn] an amino derivative of galactose.
galactose [gə-lak'tōs] a monosaccharide epimer of glucose. D-galactose is found in lactose, cerebrosides of the brain, raffinose of the sugar beet, and in many gums and seaweeds; L-galactose is found in flaxseed mucilage.
g. 1-phosphate uridylyl transferase enzyme involved in the metabolism of galactose to glycogen. Congenital galactosemia of humans and macropods is associated with a deficiency of this enzyme.
g. tolerance test a laboratory test done to determine the liver's ability to convert the sugar galactose into glycogen. Not much used in animals.
galactosemia [gə-lak"to-se'me-ə] a biochemical disorder in which there is a deficiency of enzymes necessary for proper metabolism of galactose. The condition is inherited in humans in two forms, due to deficiency of either galactokinase or galactose-1-phosphate uridyltransferase. Adult macropods are normally deficient in these enzymes. Normally the sugar derived from lactose in milk is changed by enzymatic action into glucose. When the conversion of galactose to glucose does not take place, the galactose accumulates in the tissues and blood, typically causing cataract formation; commonly seen in young macropods reared on cow's milk.



G-2: Cataract in a young kangaroo fed cow's milk that resulted in galactosemia.
From Maggs DJ, Miller PE, Ofri R, Slatter's Fundamentals of Veterinary Ophthalmology, 4th Edition. Saunders, 2008.

galactosidase [gə-lak"to-si'dās] an enzyme that catalyzes the conversion of galactoside to galactose; it occurs in two forms: α-galactosidase (melibiase) and β-galactosidase (lactase). In deficiency states gangliosides (galactose-containing cerebrosides) accumulate in tissues. See also GM_1 **gangliosidosis**.
β-galactosidase [gə-lak"to-si'dās] a lysosome hydrolase catalyzing the β-gangliosides into monosaccharides.
galactoside [gə-lak'to-sīd] a glycoside containing galactose.
galactosis [gal"ak-to'sis] the formation of milk by the lacteal glands.
galactostasis [gal"ak-tos'tə-sis] 1. cessation of milk secretion. 2. abnormal collection of milk in the mammary glands.
galactosuria [gə-lak"to-su're-ə] the presence of galactose in the urine.
galactosylceramidase [gə-lak'to-səl"sə-ram'ī-dās] see **galactocerebrosidase**.
galactosylceramide [gə-lak'to-səl"ser'ə-mīd] see **galactocerebroside**.
galactosyl transferase [gə-lak'to-səl"trans'fər-ās] an enzyme which contributes to glycolization.
galactotherapy [gə-lak'to-ther'ə-pe] treatment of sucking neonates by medication given to the dam.
galacturia [gə-lak"to-u're-ə] chyluria; the discharge of urine with a milky appearance.
galah Australian bird, gray above, pink below. Noisy and a pest in grain crops because of large numbers. Called also *Cacatua roseicapilla*, roseate cockatoo.
Galanthus nivalis European plant in the family Liliaceae; bulbs cause salivation, vomiting and diarrhea. Called also snowdrop.
Galba the host snail genus for the intermediate stages of *Fasciola hepatica* in North America.
galea [ga'le-ə] pl. *galeae* [L.] a helmet-shaped structure.
g. aponeurotica aponeurosis connecting the frontal and occipital bellies of the primate occipitofrontal muscle.
g. capitis the cap over the head of the spermatozoon. Called also acrosomal vesicle.
g. glandis the diminutive caplike glans of the ruminant penis.
Galega officinalis European plant in the legume family Fabaceae; contains galegine, which causes sudden death from hydrothorax and pulmonary edema. Called also goats' rue, French lilac or honeysuckle.
galena a mineral containing lead.
Galenia genus of African plants in family Aizoaceae; includes *G. africana* (geelbos, kraalbos)—contains an unidentified cardiotoxin which causes waterpens, a cardiomyopathy, liver fibrosis and ascites, and *G. pubescens* (green galenia)—may cause nitrate–nitrite poisoning.
galenicals [gə-len'ī-kəlz] medicines prepared according to the formulae of Galen. The term is now used to denote standard preparations containing one or several organic ingredients, as contrasted with pure chemical substances.
Galeopsis a European genus of the plant family Lamiaceae. Seeds of these plants contain an unidentified toxin which causes anorexia, anasarca and jaundice. Includes *G. ladanum*. Called also hedge nettle, hemp nettle.

VetBooks.ir

galeta grass *Hilaria jamesii*, commonly infested with *Claviceps cinerea*, which causes poisoning.

Galiceno small, solid-colored (any color) pleasure horse of Mexican origin.

Galician Blond cattle Spanish cream to red-brown meat cattle.

Galician sheep prolific Spanish meat and medium-wool sheep, mostly polled.

gall [*gawl*] 1. bile. 2. a sore caused by chafing; said commonly of horses. 3. an excrescence on a plant, e.g. on the seedheads of *Lolium rigidum*, caused by plant nematodes and causing poisoning. 4. an extract of galls. Used in medicine as a bitter.

girth g. see **girth** gall.

saddle g. see **saddle** sore.

g. sickness see **anaplasmosis**.

gallamine [*gal'ə-mēn*] a competitive neuromuscular blocking agent used as a muscle relaxant. Used as the triethiodide. It competes with acetylcholine for the cholinergic receptors at the postsynaptic membrane.

gallate [*gal'āt*] antioxidant used in food preservation, especially in foods containing oils and fats. Includes propyl, octyl and dodecylgallate.

gallbladder [*gawl'blad"ər*] the pear-shaped reservoir for bile attached to the visceral surface of the liver or in a hollow between the quadrate and right medial lobes of the liver in all domestic animals except the horse. It serves as a storage place for bile. The gallbladder may be subject to such disorders as inflammation and the formation of **gallstone**.

g. cystic mucosal hyperplasia hyperplasia of the mucus-secreting glands in the gallbladder and larger bile ducts. See also gallbladder **mucocele**.

g. edema a gross lesion in many cases of infectious canine hepatitis.

g. inflammation cholecystitis.

g. paralysis an abnormality seen consistently in lantadene poisoning. The gallbladder is paralyzed, grossly distended and full of viscid, pale bile.

porcelain g. intramural mineralization of the gallbladder.

g. radiography see **cholecystography**.

Gallibacterium genus of gram-negative bacteria associated with disease in birds.

G. anatis a cause of septicemia, peritonitis and salpingitis in chickens. Previously called *Pasteurella anatis*.

G. melopsittaci bacterial species isolated from cases of septicemia in parakeets and budgerigars and salpingitis in a parakeet.

G. salpingitidis bacterial species isolated from cases of salpingitis, peritonitis, airsacculitis and pneumonia in birds, and a case of pericarditis in a cat. Previously called *Pasteurella salpingitis, Actinobacillus salpingitidis* and atypical *A. lignierisii*.

G. trehalosiformentans bacterial species isolated from a case of septicemia in a budgerigar.

galliform see **gallinaceous**.

gallinaceous, galliform belonging to the genus *Gallus,* hence domestic and wild fowl.

gallium (Ga) [*gal'e-əm*] a chemical element, atomic number 31, atomic weight 69.72. See Table 4.

g.-67 a radioisotope of gallium having a half-life of 78.1 hours; used in the imaging of soft tissue tumors.

g. nitrate used in the treatment of hypercalcemia.

g. scan a nuclear medicine procedure using the radioisotope gallium-67 in the form of gallium citrate. Gallium has a high affinity for certain tumors and also for non-neoplastic lesions, such as abscesses. Gallium scans are particularly useful in the staging of lymphomas, and in localizing occult abscesses.

gallon [*gal'on*] a unit of liquid measure; the American gallon equals 4 quarts (3.785 liters) and the Imperial gallon equals 4.546 liters.

gallop [*gal'op*] 1. a disordered rhythm of the heart. See also gallop **rhythm**. 2. the horse's fastest gait. All four hooves are off the ground at the one time and the rhythm is one of four beats. The sequence of contact by the hooves is near hind, off hind, near fore, then off fore (when the off fore is the leading limb).

diastolic g. see gallop **rhythm**.

gallotannic acid [*gal"o-tan'ik*] tannic acid.

Galloway a polled, black-brown breed of dairy cattle originating in Scotland. See also **Belted Galloway**.

G. pony a now extinct Scottish pony. Nowadays the term is used to identify a show class of pony which is greater than 14 hands high but not more than 14.2 hands high.

G-3: Galloway beef bull. From SambrausHH, Livestock Breeds. Mosby, 1992.

gallstone [*gawl'stōn*] a stonelike mass that forms in the gallbladder. See **cholelithiasis**.

Gallus a genus of birds of the pheasant family Phasianidae. Includes the domestic fowl. See also **fowl**.

G. domesticus see *Gallus gallus* (below).

G. gallus the Red Junglefowl, the progenitor of the domestic fowl. Also the domestic fowl, itself sometimes called *G. domestica.*

GALT gut-associated **lymphoid** tissue.

Galt trephine a 0.75 inch cylinder with a saw-toothed cutting edge at one end and grinding ridges down the outside with a crossbar handle at the other end for excision of a plate of bone. The center of the cutting circle has a sharp-pointed pin which prevents the trephine from moving laterally while cutting and fixes the trephined bone disk so that it does not fall into a cavity.

Galtonia clavata see ***Pseudogaltonia clavata***.

galtonian inheritance based on a multilocal system of character definition so that progeny present a continuous series of a characteristic rather than specific classes, e.g. a range of body weights rather than giants and dwarfs.

Galumna oribatid mites which act as intermediate hosts for *Moniezia* spp. (tapeworms).

galvanic current [*gal-van'ik*] a steady direct electric current.

galvanocontractility [*gal"və-no-kon"trak-til'ĭ-te*] contractility in response to stimulation by galvanic current.

galvanometer [*gal"və-nom'ə-tər*] an instrument for measuring current by electromagnetic action.

galvanopalpation [*gal"və-no-pal-pa'shən*] testing of nerves of the skin by means of galvanic current.

Galvayne's groove a vertical goove in the labial surface of the upper corner permanent incisor tooth in the horse. It appears at the gum margin at 10 years of age, is halfway to the end of the tooth at 15 years, has reached the end at 20 years, has disappeared from the top of the tooth at 25 years and has disappeared completely at 30 years. The ages quoted are subject to variation.

Galway sheep polled, Irish meat and longwool sheep.

Gambardella technique a modification of the lateral imbrication approach to extra-articular reconstruction of the cranial cruciate ligament in dogs. Nonabsorbable sutures are placed between the distal patellar tendon and the proximal femorofabellar fascia and the lateral collateral ligament.

Gambee suture pattern a rapidly inserted, interrupted suture used to close a bowel anastomosis with one layer of stitches. The suture goes from serous to mucosal surface, back into the mucosa on the same side of the incision, out into the middle of the cut surface to be approximated, across the incision into the wound edge opposite, down into gut lumen, back through the mucosa and through the wall to the serous surface and a tie with the tail of the suture across the incision.

Gambian sleeping sickness [*gam'be-ən*] see ***Trypanosoma*** *gambiense.*

Gambierdiscus toxicus [*gam"be-ər-dis'kəs*] marine dinoflagellate; the main source of toxins responsible for **ciguatera**.

gambrel the bracket-shaped piece of iron rod on which a sheep carcass is traditionally hung to cool and set.

Gambusia [*gam-boo'se-ə*] small, 1 inch long, pale fish which eat mosquito larvae and are used in their control. Called also topminnows or mosquitofish.

Game broad-breasted, brightly colored breed of table poultry used widely in breeding hybrid table poultry.

game [*gām*] birds or animals hunted and killed in the chase, i.e. for sport. Used also in respect of animals hunted for provisions and skins. Said of animals and birds, hence game birds, etc.

g. animals includes deer and other similar large ruminants, wild pig and the group of largely African animals classed as 'big game'. Game fish are marlin, tuna and other big marine fish rather than the smaller freshwater fish of rod and reel devotees.
g. birds birds originally hunted but nowadays also farmed. Includes pheasants, quail, partridge, francolin, jungle fowl, guinea fowl.
g. farm farm dedicated to keeping game animals, usually exotic ones, in the wild in conditions as nearly natural as possible. In most instances they are a hobby or for relaxation and entertainment. They are really private zoos or zoological gardens.
g. fish fish hunted for sport.
g. meat meat from slaughtered game animals.
g. ranch see game farm (above).
Game cock closest domestic fowl variety to the ancestral Red Junglefowl. Used in cockfighting. A tall, upright, gaudily colored bird with a fearsome hooked beak and spurs. The head and neck and tail coverts are bright yellow, the back and the wings are brown, the breast is black. The beak is brown and the feet are slate-colored.
game theory a branch of mathematical logic which deals with all of the possible reactions to a particular strategy used mainly in systems analysis.
gamefowl [*gām'foul*] see **game cock**.
gamete [*gam'ēt*] a haploid germ cell; one of two cells, male (spermatozoon) and female (ovum), whose union is necessary in sexual reproduction to initiate the development of a new individual.
gametocyte [*gə-me'to-sīt*] an oocyte or spermatocyte; a cell that produces gametes.
gametogenesis [*gə-me"to-jen'ə-sis*] the development of the male and female sex cells (gametes).
gametogony [*gam"ə-tog'ə-ne*] 1. the development of merozoites into male and female gametes, which later fuse to form a zygote. 2. reproduction by means of gametes.
gamma [*gam'ə*] 1. the third letter of the Greek alphabet, Γ or γ. 2. used in names of chemical compounds to distinguish one of three or more isomers or to indicate the position of substituting atoms or groups.
g. benzene hexachloride see **chlorinated hydrocarbons**.
g. delta T lymphocyte see **T lymphocyte**.
gamma camera see **scintillation** camera.
Gamma–Gandy body, Gandy–Gamma nodule an organizing, minerlizing focus of stagnant blood, deposited usually on the margins of a chronically congested spleen. Called also siderotic nodule.
gamma subunit third-named chain (or subunit) occurring in the functional organization of macromolecules, usually proteins, containing three or more chains.
gammaglobulinopathy [*gam"ə-glob"u-lin-op'ə-the*] see **gammopathy**.
Gammaherpesvirinae [*gam"ə-hur"pēz-vir-i'ne*] one of three subfamilies within the family ***Herpesviridae***, comprising the following genera: *Lymphocryptovirus, Macavirus, Percavirus, Rhadinovirus,* and many unassigned viruses.
Gammaretrovirus [*gam"ə-ret'ro-vi"rəs*] a genus of the family *Retroviridae*. Many species contain oncogenes and cause sarcomas and leukemias. Examples are murine leukemia virus, feline leukemia virus, feline sarcoma virus, and avian reticuloendotheliosis viruses. Many endogenous retroviruses, closely related to exogenous gammaretroviruses, are present in the DNA of mammals (including humans), birds, reptiles and amphibians.
Gammarus water crustaceans; intermediate hosts for *Tetrameres* spp. nematodes.
gammexane see **lindane**.
gammopathy [*gam-op'ə-the*] abnormal proliferation of the B lymphocytes resulting in abnormal concentrations of immunoglobulin production; the gammopathies include multiple myeloma, macroglobulinemia and Hodgkin's disease. Called also gammaglobulinopathy.
biclonal g. characterized by two narrow-based peaks, usually in the γ region; may indicate a neoplastic production of immunoglobulin.
monoclonal g. an increased production of one type of immunoglobulin by a single clone of cells. The abnormal protein produced is called *paraprotein* or *M component* and may be composed of whole immunoglobulin molecules or subunits, light-chains (Bence Jones proteins) or heavy-chains. Occurs in myelomas, lymphoproliferative neoplasms, and occasionally chronic inflammatory or immune-mediated diseases. Greatly elevated serum concentrations of protein may result in a hyperviscosity syndrome.
polyclonal g. a hypergammaglobulinemia resulting from an increased production of several different immunoglobulins and usually attributable to persistent, high level exposure to antigens; occur in a wide variety of infectious, inflammatory, and immune-mediated diseases. Examples in animals are feline infectious peritonitis, canine ehrlichiosis, Aleutian mink disease and equine infectious anemia.
gamogenesis [*gam"o-jen'ə-sis*] sexual reproduction.
gamont [*gam'ont*] gametocyte.
ganado bravo [Span.] see **fighting bull**.
ganciclovir [*gan-si'klo-vir*] a synthetic nucleoside analog of guanine with antiviral activity against herpesviruses, especially cytomegalovirus.
gander [*gan'dər*] a male goose.
ganglial [*gang'gle-əl*] pertaining to a ganglion.
gangliated [*gang'gle-āt"əd*] provided with ganglia; ganglionated.
gangliectomy [*gang"gle-ek'tə-me*] excision of a ganglion; ganglionectomy.
gangliform [*gang'glĭ-form*] having the form of a ganglion.
gangliitis [*gang"gle-i'tis*] see **ganglionitis**.
gangli(o)- word element. [Gr.] *ganglion*.
ganglioblast [*gang'gle-o-blast"*] an embryonic cell of the cerebrospinal ganglia.
gangliocyte [*gang'gle-o-sīt"*] a ganglion cell.
gangliocytoma [*gang"gle-o-si-to'mə*] see **ganglioneuroma**.
ganglioform [*gang'gle-o-form"*] gangliform.
ganglioglioma [*gang"gle-o-gli-o'mə*] a glioma rich in mature neurons or ganglion cells.
ganglioglioneuroma [*gang"gle-o-gli"o-nŏŏ-ro'mə*] see **ganglioneuroma**.
ganglioma [*gang"gle-o'mə*] see **ganglioneuroma**.
ganglion [*gang'gle-on*] pl. *ganglia, ganglions* [Gr.] 1. a knot or knotlike mass; a general term to designate a group of nerve cell bodies, located outside the central nervous system. Occasionally applied to certain nuclear groups within the brain or spinal cord, e.g. basal ganglia. 2. simple ganglion.
aorticorenal g. small sympathetic ganglia supplying nerve fibers to the kidneys.
Arnold's g. see otic ganglion (below).
autonomic g. aggregations of cell bodies of neurons of the autonomic nervous system; the parasympathetic and the sympathetic ganglia combined.
basal g. subcortical masses of gray matter embedded in each cerebral hemisphere, comprising the corpus striatum (caudate and lentiform nuclei), amygdaloid body and claustrum. Other structures such as the substantia nigra have also been considered to be part of the basal ganglia. Called also basal nuclei.
cardiac g. ganglia of the superficial cardiac plexus found close to the aortic arch.
celiac g. two large sympathetic ganglia, found on either side of the celiac artery, supplying nerve fibers to the viscera supplied by that artery; sensory and parasympathetic fibers also pass through the ganglia.
cephalic g. parasympathetic ganglia in the head, consisting of the ciliary, otic, pterygopalatine and submandibular ganglia.
cerebrospinal g. those associated with the cranial and spinal nerves.
cervical g. 1. any of the three ganglia (cranial, middle and caudal) of the sympathetic trunk found near the base of the skull and inside the thoracic inlet. 2. one near the cervix uteri.
cervicothoracic g. a ganglion on the sympathetic trunk formed by a union of the caudal cervical and one or more thoracic ganglia. Called also stellate ganglion.
ciliary g. a parasympathetic ganglion in the posterior part of the orbit supplied by the oculomotor nerve.
Corti's g. spiral ganglion.
dorsal root g. spinal ganglion.
false g. an enlargement on a nerve that does not have a true ganglionic structure.
gasserian g. trigeminal ganglion.
geniculate g. the sensory ganglion of the facial nerve, on the geniculum of the facial nerve.

g. impar the single ganglion commonly found where the caudal limits of the sympathetic trunks of the two sides unite.
jugular g. 1. the proximal ganglion of the vagus nerve. 2. the proximal (superior) ganglion of the glossopharyngeal nerve.
lumbar g. the ganglia on the lumbar part of the sympathetic trunk.
otic g. a parasympathetic ganglion next to the medial surface of the mandibular nerve, just ventral to the foramen ovale. Its postganglionic fibers supply the parotid gland. Called also Arnold's ganglion.
parasympathetic g. aggregations of cell bodies of cholinergic neurons of the parasympathetic nervous system; these ganglia are located near to or within the wall of the organs being innervated.
petrous g. the distal ganglion of the glossopharyngeal nerve.
pterygopalatine g. a parasympathetic ganglion in a fossa in the sphenoid bone, formed by postganglionic cell bodies that synapse with preganglionic fibers from the facial nerve via the nerve of the pterygopalatine canal. Called also sphenopalatine ganglion.
sacral g. those of the sacral part of the sympathetic trunk.
semilunar g. trigeminal ganglion.
sensory g. any of the ganglia of the peripheral nervous system that transmit sensory impulses; also, the collective masses of nerve cell bodies in the brain subserving sensory functions.
simple g. a cystic tumor in a tendon sheath.
sphenopalatine g. pterygopalatine ganglion.
spinal g. ganglia on the dorsal root of each spinal nerve.
spiral g. the ganglion on the cochlear nerve, located within the modiolus, sending fibers peripherally to the organ of Corti and centrally to the cochlear nuclei of the brainstem. Called also Corti's ganglion.
stellate g. cervicothoracic ganglion.
sympathetic g. aggregations of cell bodies of adrenergic neurons of the sympathetic nervous system; these ganglia are arranged in chainlike fashion on either side of the spinal cord.
thoracic g. the ganglia on the thoracic portion of the sympathetic trunk.
trigeminal g. a ganglion on the sensory root of the fifth cranial nerve. Called also gasserian ganglion and semilunar ganglion.
tympanic g. an enlargement on the tympanic branch of the glossopharyngeal nerve.
vestibular g. the sensory ganglion of the vestibular part of the eighth cranial nerve, located in the dorsal part of the lateral end of the internal acoustic meatus.
Walther's g. ganglion impar.
Wrisberg's g. cardiac ganglia.

ganglion blocking [*gang'gle-on*] blocking of transmission through the autonomic ganglia.
autonomic g. b. agents substances such as nicotine which block transmission across sympathetic ganglia by blocking the nicotinic receptors in the ganglion, reducing transmission to about 20% of normal.
synthetic g. b. agents include methonium compounds (e.g. hexamethonium, trimethidinium) and other unrelated compounds, e.g. mecamylamine. Have the advantage of avoiding side-effects of nicotine.

ganglionated [*gang'gle-ə-nāt"əd*] provided with ganglia; gangliated.
ganglionectomy [*gang"gle-ə-nek'tə-me*] excision of a ganglion; gangliectomy.
ganglioneuritis [*gang"gle-o-nŏŏ-ri'tis*] see **ganglionitis**.
ganglioneuroma [*gang"gle-o-nŏŏ-ro'mə*] a rare benign neoplasm composed of nerve fibers and ganglion and Schwann cells. Generally, these occur in dogs, intracranially in the brain or cranial nerve ganglia, or rarely in the adrenal medulla or autonomic ganglia. See also **neuroblastoma**.
ganglionic [*gang"gle-on'ik*] pertaining to a ganglion.
g. blockade inhibition by drugs of nerve impulse transmission at autonomic ganglionic synapses.
g. blocking agent see **ganglion blocking**.
ganglionitis [*gang"gle-ə-ni'tis*] inflammation of a ganglion; gangliitis.
myoenteric g. causes chronic intestinal pseudoobstruction in horses.
ganglionostomy [*gang"gle-ə-nos'tə-me*] surgical creation of an opening into a cystic tumor on a tendon sheath or aponeurosis.
ganglioplegic [*gang"gle-o-ple'jik*] 1. blocking transmission of impulses through the sympathetic and parasympathetic ganglia. 2. an agent that so acts.
ganglioradiculitis [*gang"gle-ə-rə-dik"u-li'tis*] inflammation of spinal ganglia and nerve roots. Clinical signs in affected dogs include sensory deficits, ataxia, hypermetria, megaesophagus, dysphonia and Horner's syndrome. Siberian huskies are predisposed.
ganglioside [*gang'gle-o-sīd"*] a class of galactose-containing cerebrosides found in central nervous system tissues; they are glycolipids of the basic composition ceramide-glucose-galactose-*N*-acetyl neuraminic acid. The form GM_1 accumulates in tissues in generalized **gangliosidosis** as observed in Friesian cattle, dogs and cats. The form GM_2 accumulates in a similar disease of Yorkshire pigs, dogs and cats.
gangliosidosis [*gang"gle-o-si-do'sis*] a group of inherited lipid storage disorders marked by accumulation of gangliosides in tissues due to an enzyme defect. Characterized by progressive neuromuscular dysfunction and impaired growth from an early age.
GM_1 g. a defect of β-galactosidase which causes accumulation of galactoside GM_1. Identified in Friesian cattle, Suffolk sheep, dogs and cats.
GM_2 g. a defect of hexosaminidase A in dogs and pigs, and hexosaminidase A and B in cats. Analogous to the similar diseases in humans, which are called also Sandhoff's disease, Tay–Sachs disease and Bernheimer–Seitelberger disease. In Burmese cats, a mutation of hexoaminadase β-subunit (*HEXB*) gene is an autosomal recessive trait. Affected cats show mild tremors and progressive neurological dysfunction starting at an early age.
gangrene [*gang'grēn*] the death of body tissue, generally in considerable mass, usually associated with loss of vascular (nutritive) supply, and followed by bacterial invasion and putrefaction. Although it usually affects the extremities, gangrene sometimes may involve the internal organs. Signs depend on the site and include fever, pain, darkening of the skin, and an unpleasant odor. If the condition involves an internal organ, it is generally attended by pain and collapse.
dry g. occurs only in the extremities, and usually because of gradual diminution of the blood supply. Signs include gradual shrinking of the tissue, which becomes cold and lacking in pulse, and turns first brown and then black. Bacterial decomposition is slowed by the dryness of affected tissue. A sharp line of demarcation is formed where the gangrene stops, owing to the fact that the tissue above this line continues to receive an adequate supply of blood.
gas g. results from dirty lacerated wounds infected by anaerobic bacteria, especially species of *Clostridium*. It is an acute, severe, painful condition in which muscles and subcutaneous tissues become filled with gas and a serosanguineous exudate.
internal g. in strangulated **hernia**, a loop of intestine is caught in the bulge and its blood supply is cut off; gangrene may occur in that section of tissue. Thrombosis of the mesenteric artery may

G-4: Gangrene of the ear tips and snout in a pig with erysipelas.

result in gangrene of a section of intestine. Gangrene can be a rare complication of lung abscess in pneumonia.
moist g. occurs rapidly in deep tissues that cannot dry out; a result of ischemic necrosis followed by saprophytic bacterial putrefaction.
segmental g. gangrene of a section of an organ, e.g. of part of an elephant's ear, as a result of sectional compromising of blood supply.
gangrenous [*gang'rə-nəs*] pertaining to, marked by, or of the nature of gangrene.
g. cellulitis gangrenous necrosis of the skin of the thorax and thighs of chickens of 1–4 months of age caused by *Clostridium septicum* and other clostridia. Most affected birds die and the mortality rate in a flock may be as high as 60%. Called also necrotic dermatitis, gangrenous dermatitis.
g. coryza see **malignant catarrhal fever**.
g. dermatitis see gangrenous cellulitis (above).
g. ergotism see **ergotism**.
Ganjam virus a member of the family *Bunyaviridae*, genus *Nairovirus* causing a tickborne virus infection of sheep and goats in India.
ganskweek see ***Lasiospermum bipinnatum***.
gantho metho ***Senecio*** *raphanifolius*.
gantho metho ajang ***Senecio*** *biligulatus*.
gap junctions [*gap*] regions of high and special ionic permeability between closely apposed cells. They are places at which cells exchange molecules of large size and provide an avenue by which developing cells can influence each other. Called also nexus.
neuronal g. j. very tight contacts between some neurons permitting the almost instant transmission of impulses from one neuron to the other; structural elements extend across the gap conferring a continuity of cytoplasm between the cells.
gape [*gāp*] a behavioral response shown by cats in recognition of urine odor. After sniffing, the cat flicks the tongue against the hard palate, opens its mouth, licks the nose, and has a fixed gaze. This may be similar to the **flehmen** reaction.
gapes [*gāps*] see ***Syngamus*** *trachea*.
gapeworm [*gāp'wərm*] see ***Syngamus*** *trachea*.
garbage-eating scavenging by dogs and cats involving ingestion of spoiled food, excessive quantities of unusual foods, and bones, resulting in gastroenteritis.
garbancillo ***Astragalus*** *wootoni*.
garbanzo [*gahr-bahn'zo*] see **chickpea**.
gare long, hairy, non-serrated fibers in the fleece of some crossbred sheep; usually in breech wool; the fibers cannot be dyed or spun.
gargaloo ***Parsonsia*** *eucalyptophylla*.
garget [*gahr'gət*] 1. mastitis. 2. ***Phytolacca*** *americana*.
gargoylism [*gahr'goil-iz-əm*] **mucopolysaccharidosis** I; Hurler's syndrome.
garland flower [*gahr'lənd*] see ***Daphne***.
garlic [*gahr'lik*] ***Allium*** *sativum*.
Canada g. *Allium canadense*.
crow g. *Allium vineale*.
false g. *Allium vineale*.
three-cornered g. *Allium triquetrum*.
wild g. *Allium ursinum*, *A. vineale*.
wood g. *Allium ursinum*.
garron a type of large, sturdy pony bred in Scotland; originated in cross between Percheron and Highland pony. Also used generally to describe the native ponies of Scotland and Ireland.
Gartner's ducts [*gahrt'nər*] remnants of the embryonic mesonephric ducts, sometimes found on the floor of the vagina, which often open into the vestibule.
cystic G. d. cystlike structures in the floor of the vagina.
gas [*gas*] any elastic aeriform fluid in which the molecules are widely separated from each other and so have free paths.
alveolar g. the gas in the alveoli of the lungs, where gaseous exchange with the capillary blood takes place. See also **oxygen**, **carbon dioxide**.
blood g. see **blood gas analysis**.
g. bubble disease a disease of fish in tanks in which the water is supersaturated with oxygen or nitrogen. Gas embolism develops in the gills. Air bubbles can be seen in the gills, eyes and under the skin and the fish show bizarre neurological behavior.
g. cap a cap of gas above fluid or solid contents in a hollow viscus, e.g. in a static rumen. Seen radiologically in distended intestinal loops in paralytical ileus.
g. edema disease see **blue wing disease**.
g. exchange gases move by simple diffusion in response to pressure differences; net diffusion occurs from areas of high pressure to areas of lower pressure irrespective of whether the gas is present as a gas or in solution or gases moving from gas to solution or vice versa. The rate of exchange of gases in body tissues, e.g. between alveolar space and erythrocyte, is influenced by many other factors, especially the diffusion distance and the solubility of the gas.
laughing g. nitrous oxide.
g. transport relates to the efficiency of transport of gas, e.g. oxygen, by the patient as a whole. The efficiency of gas transport varies widely between normal individuals and between species, e.g. athletic breeds of horses and dogs have much faster gas transport systems than human athletes; the efficiency of gas transport in the individual depends largely on the rapidity of increase in minute ventilation, plus a similar rate of increase in cardiac output.
g. tube see **Crookes' tube**.
gaskin [*gas'kin*] the muscular portion of the hindleg between the stifle and hock, corresponding to the human calf. The term is used in horses and sometimes dogs.
gasoline poisoning see **oil** products.
gasping disease [*gas'ping*] see avian infectious **bronchitis**.
gasserian ganglion [*gə-se're-ən*] see trigeminal **ganglion**.
gaster [*gas'tər*] [Gr.] see **stomach**.
gasterophiliasis gasterophilosis.
gasterophilosis the disease caused by infestation with *Gasterophilus* spp. Sporadic cases of abscess formation, even rupture of the stomach wall with local peritonitis, occur but the infestation, though dramatic, is virtually nonpathogenic.
Gasterophilus [*gas"tər-of'i-ləs*] a genus of flies, the horse bot flies, the larvae of which develop in the gastrointestinal tract of horses and may sometimes infect humans. A member of the family Gasterophilidae.
G. equi see *G. intestinalis* (below).
G. haemorrhoidalis eggs are laid around the mouth and on the cheeks; the larvae are found in the mucosa of the tongue and establish finally in the stomach.
G. inermis eggs are laid around the mouth and on the cheeks; the larvae are found in the cheek mucosa and settle finally in the rectum.
G. intestinalis **(syn. *G. equi*)** the eggs are laid near the front fetlocks and up the legs as far as the shoulder; the larvae are found in the mucosa of the tongue and subsequently at the gastric cardia.
G. nasalis **(syn. *G. veterinus*)** the larvae are laid in the intermandibular space; larvae are found at the pylorus and in the duodenum.
G. nigricornis an uncommon horse bot fly.
G. pecorum the eggs are laid on plants; larvae are found in the mucosa of the cheeks and eventually gastric pylorus.
G. veterinus see *G. nasalis* (above).
gasteropod see **gastropod**.
Gasterosteus a genus of fish, commonly known as sticklebacks. studied extensively in the fields of evolutionary biology, ecology, behavior and genomics.
gastradenitis inflammation of the gastric glands.
gastralgia [*gas-tral'jə*] pain in the stomach; gastric colic.
gastrectasis distention of the stomach.
gastrectomy [*gas-trek'tə-me*] excision of the stomach (total gastrectomy) or a portion of it (partial or subtotal gastrectomy).
gastric [*gas'trik*] pertaining to, affecting, or originating in the stomach.
g. acid see gastric juice (below).
g. atony a large distended stomach lacking in tone as seen in a horse that is a windsucker and continuously swallows air. Predisposes to chronic indigestion.
g. cicatricial contraction in horses causes constriction of the stomach and subsequent dilatation of the dorsal sac.
g. dilatation see gastric dilatation **colic**.
g. dilatation–displacement see gastric dilatation–volvulus (below).

G-5: Gastric dilatation-volvulus in a dog. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

VetBooks.ir

g. dilatation–volvulus (GDV) a syndrome of gastric dilatation leading to volvulus, seen most often in deep-chested, large breed dogs. The etiology is unclear, but aerophagia or overeating are important factors. Gastric hemorrhage and ulceration, hypotensive, hypovolemic shock, and severe electrolyte disturbances contribute to the high mortality. Surgical intervention is often required, cardiac dysrhythmias complicate recovery, and recurrences are common. Called also gastric dilatation–displacement, bloat.

g. distention in pigs commonly results in vomiting.

g. edema an accompaniment of edema in most organs in cases where edema is widespread; as a sole lesion is significant in the abomasum in cases of arsenic poisoning, ostertagiasis and in edema disease in pigs.

g. emptying time the time taken for the stomach to begin to empty of contents; demonstrated in contrast radiography. Delayed in gastric retention due to dysfunction of the pylorus, abnormalities of gastric motility, foreign bodies and systemic diseases.

g. fluid see gastric juice (below).

g. folds folds in the gastric mucosa and part of the submucosa oriented in the direction of the long axis of the stomach, as they are in the abomasum; they may be few and simple or numerous and tortuous, as in the dog.

g. foreign body occurs most commonly in dogs, causing vomiting. Occasionally it may pass into the small intestine, causing partial or complete obstruction with more severe signs of dehydration, shock, and sometimes perforation with peritonitis. A variety of objects may be swallowed, e.g. needles, balls, children's toys, bones, fish hooks and socks, to name a few.

g. habronemiasis see **habronemiasis**.

g. hemorrhage caused by gastric ulcer or foreign body. May cause sudden death due to exsanguination, as in pigs with esophagogastric ulcer, or anemia with melena.

g. hormones see **gastrointestinal** hormones.

g. impaction in horses fed a diet of coarse indigestible roughage; a cause of subacute colic.

g. inhibitory polypeptide (GIP) a tentative gut hormone secreted by the mucosa of the small intestine and playing a part in controlling gastric (inhibition) and intestinal (stimulation) secretion and insulin release (stimulation).

g. intubation see **intubation**.

g. invagination a technique for gastric resection in which areas of nonviable gastric wall are folded inward and the remainder sutured together so the necrotic tissue sloughs into the gastric lumen.

g. juice the secretion of glands in the walls of the stomach for use in digestion. Its essential ingredients are pepsin, an enzyme that breaks down proteins in food, and hydrochloric acid, which destroys bacteria and is of assistance in the digestive process.

g. motility varies between the three regions of the stomach, being most active in the antrum, has a basic slow wave motility and a capacity to increase in response to the fullness of the stomach and to decrease with a rise in acidity of the duodenal contents.

g. mucosa secretes pepsin (as pepsinogen), hydrochloric acid.

g. neoplasia includes adenocarcinoma (most common in dogs), carcinoma, benign adenomatous polyps, leiomyomas, plasmacytoma, squamous cell carcinoma and lymphosarcoma (most common in cats).

g. outlet obstruction see **pyloric** obstruction, **pyloric** outflow failure, gastric **retention** syndrome.

g. peptidases includes pepsin A, trypsin, chymotrypsin, elastase, carboxypeptidase A, carboxypeptidase B.

g. perforation in horses occurs secondarily to lesions of the stomach wall, especially squamous cell carcinoma; causes a local peritonitis, often with extension to the spleen; in calves as a result of abomasal ulceration. Peritonitis inevitably follows.

g. pits multiple, densely distributed small depressions or crevices over most of the stomach mucosa; a gastric gland opens into the bottom of each pit.

g. protectant a substance used to protect gastric mucosa from injury, usually the risk of ulceration due to underlying disease or the effects of medication such as aspirin or nonsteroidal anti-inflammatory drugs. Includes sucralfate and the histamine H_2-receptor antagonists.

g. rotation rotations of the stomach in the embryonic abdomen between its first appearance and its final disposition. In simple-stomached animals such as dogs two rotations are recognized, from the axial tube ventrally and to the left.

g. rupture causes sudden cessation of abdominal pain caused by distention; acute endotoxic shock and peracute, diffuse peritonitis kill the animal within a few hours.

g. squamous-cell carcinoma the commonest gastric neoplasm in horses. Seen usually in the advanced stages of anorexia and weight loss. Characterized by a fungating mass in the pars esophagea often with secondary implants locally, sometimes widespread in other organs.

g. torsion in sows, predisposed by large, sloppy meal and great excitement at feeding time leading to very fast eating. There is a short course with death due to shock and infarction of the stomach wall. See also gastric dilatation–volvulus (above).

g. ulcer an ulcer of the inner wall of the stomach. It occurs in all species at a low level but causes little disease. There is a high prevalence in horses racing and in training and is thought to result in impaired appetite. In horses, also caused by nonsteroidal anti-inflammatory drugs. Called also gastric mucosal ulceration. Gastric ulcer is a common disease in housed pigs, manifest with hyperkeratinization and ulceration in the *pars esophagea* of the stomach. If an ulcer erodes to a blood vessel, the pig can become anemic or bleed to death. In affected herds, a significant proportion of pigs develop hyperkeratosis and ulceration but only a proportion show clinical disease. Risk factors include housing and stocking density, the use of pelleted feeds and low fiber and small particle size of feed.

g. venous infarction occurs in many septicemias, viremias and toxemias in horses and especially pigs; called also gastric mucosal infarction.

g. waves peristaltic waves, the pacemakers for antral peristalsis.

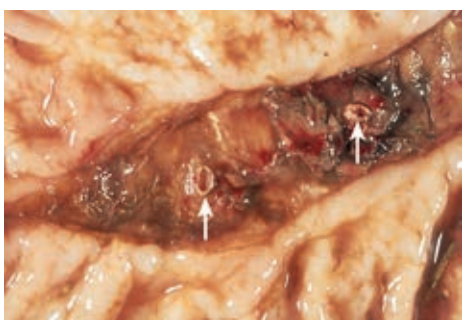
gastricism gastric disorder.

gastricsin [*gas-trik'sin*] a proteolytic enzyme isolated from gastric juice; its precursor is pepsinogen but differs from pepsin in molecular weight and in the N terminal amino acid.

gastrin [*gas'trin*] a polypeptide hormone secreted by certain cells of the pylorus, which strongly stimulates secretion of gastric acid and pepsinogen, and weakly stimulates secretion of pancreatic enzymes and gallbladder contraction.

g. assay serum concentration is elevated in dogs and cats with gastrinomas, other gastronintestinal disease and chronic renal failure.

gastrinoma [*gas"trĭ-no'mə*] a gastrin-secreting, non-beta islet cell tumor of the pancreas, seen mainly in aged dogs and cats, associated with **Zollinger–Ellison syndrome**.



G-6: Gastric ulceration in the abomasum of a cow. From van Dijk JE, Gruys E, Mouwen JMVM, Color Atlas of Veterinary Pathology, 2nd Edition. Saunders, 2007.

gastritis [*gas-tri'tis*] inflammation of the lining of the stomach. Gastritis is one of the most common stomach disorders, and occurs in acute, chronic and toxic forms. Its clinical manifestation is vomiting. In veterinary medicine, the pathogenesis, clinical findings and postmortem lesions are poorly defined and are, in many cases, based on functional rather than on structural changes.
acute g. severe gastritis caused by food poisoning, overeating or bacterial or viral infection, and often accompanied by enteritis. The outstanding sign of acute gastritis is abdominal pain.
atrophic g. an immune-mediated disorder described in dogs with systemic lupus erythematosus; associated with antiparietal antibodies.
chronic g. an inflammation of the stomach that may occur repeatedly or continue over a period of time.
chronic atrophic g. rare in dogs; associated with mucosal thinning, loss of parietal cells, mucosal metaplasia and atrophy of gastric glands.
emphysematous g. inflammation of the gastric wall by *Clostridium perfringens*.
eosinophilic g. diffuse infiltration or discrete nodules of eosinophils in the stomach wall occur rarely in dogs. May be immune-mediated, due to allergy or parasites. May be associated with hypereosinophilic syndrome in cats.
giant hypertrophic g. excessive proliferation of the gastric mucosa, producing diffuse thickening of the wall; inflammatory changes may be associated. Weight loss, vomiting, diarrhea, hematemesis and hypoalbuminemia occur. Occurs in humans, dogs (particularly Basenjis), mice and nonhuman primates. Called also Ménétrier's disease.
granulomatous g. see gastric **habronemiasis**.
histiocytic g. rare cases occur in dogs in association with amyloidosis.
hypertrophic glandular g. see giant hypertrophic gastritis (above).
infarctive g. seen rarely in dogs, usually associated with fungal infection.
toxic g. gastritis resulting from ingestion of a corrosive substance such as a strong acid or poison. There is cramping stomach pain, accompanied by diarrhea and vomiting. The vomitus may be bloody. The victim may collapse.
gastr(o)- word element. [Gr.] *stomach*.
gastroanastomosis [*gas"tro-ə-nas"to-mo'sis*] see **gastrogastrostomy**.
gastrocamera [*gas"tro-kam'ə-rə*] a small camera which can be passed down the esophagus to photograph the inside of the stomach.
gastrocardiac [*gas"tro-kahr'de-ak*] pertaining to the stomach and the heart.
gastrocele [*gas'tro-sēl*] hernial protrusion of the stomach or of a gastric pouch.
gastrocentesis [*gas"tro-sen-te'sis*] percutaneous, transabdominal needle puncture of the stomach to temporarily relieve gastric dilatation prior to more permanent correction of the displacement.
gastrocnemius muscle [*gas"tro-ne'me-əs*] a large, fleshy muscle of the calf (crus) that serves mainly as an extensor of the hock. In some species it is multipennate ensuring that hock and stifle joints work in synchrony. It arises by two heads from the supracondyloid tuberosities of the distal femur and inserts on the tuber calcanei as a major contributor to the common calcaneal (Achilles) tendon. See also Table 13, **Achilles tendon**, **tendo** calcaneo communis.
g. m. rupture, g. m. avulsion the muscle may have torn away from its insertion, in which case the tendon will be slack, or it may be a complete or partial separation of the belly of the muscle, when the muscle will be swollen and hard. There is a special case in the cow at calving. The cow may be unable to rise. If it does get up the hock is much closer to the ground than normal and the cow may be able to take weight on the leg only if the point of the hock reaches the ground.
slipped g. m. tendon see **tendon** luxation.
g. m. tendon the principal component of the **Achilles tendon** and the major part of the common calcaneal tendon. See also **tendo** calcaneo communis.
g. m. tendon rupture see gastrocnemius muscle rupture (above). A high incidence may occur in flocks of meat birds but rarely in turkeys.
gastrocnemius reflex [*gas"tro-ne'me-əs*] a spinal reflex, elicited by tapping the gastrocnemius tendon. A normal response is extension of the hock. Depressed by lesions in the spinal cord from L6 to S2 and of the sciatic and peroneal nerves; increased in spinal cord lesions above L6.
gastrocolic [*gas"tro-kol'ik*] pertaining to or communicating with the stomach and colon.
g. ligament tension usually the result of displacement of the left dorsal colon so that it lies across the ligament; causes reflex dilation of the stomach.
g. reflex distention of the stomach leads to rectal contractions and defecation.
gastrocolitis [*gas"tro-ko-li'tis*] inflammation of the stomach and colon.
gastrocolopexy [*gas"tro-ko'lo-pek"se*] greater curvature of the stomach is sutured to the transverse colon; a means of preventing recurrence of gastric dilatation-volvulus.
gastrocolostomy [*gas"tro-kə-los'tə-me*] surgical anastomosis of the stomach to the colon.
gastrocolotomy [*gas"tro-ko-lot'ə-me*] incision into the stomach and colon.
gastrocutaneous [*gas"tro-ku-ta'ne-əs*] pertaining to the stomach and skin, or communicating with the stomach and the cutaneous surface of the body, as a gastrocutaneous fistula.
gastrodiaphany external examination of the stomach by transillumination of its walls with a light source passed down the esophagus into the lumen of the stomach.
gastrodidymus [*gas"tro-did'ə-məs*] symmetrical conjoined twins joined in the abdominal region.
Gastrodiscoides [*gas"tro-dis-koi'dēz*] a genus of intestinal flukes (digenetic trematodes) in the family Paramphistomatidae.
***G. hominis* (syn. *Gastrodiscus hominis*)** a natural parasite of the colon of the pig but found also in the human cecum.
Gastrodiscus [*gas"tro-dis'kəs*] a genus of intestinal flukes (digenetic trematodes) in the family Paramphistomatidae.
G. aegyptiacus found in the intestines of horse, pig and wart hog.
G. hominis see ***Gastrodiscoides hominis***.
G. secundus found in the colon of horse and elephant.
gastroduodenal [*gas"tro-doo"o-de'nəl*] pertaining to the stomach and duodenum.
g. anastomosis may be required when lesions in the region of the lesser curvature of the stomach, pyloric antrum and pylorus are surgically removed. Two techniques used are the Billroth type I procedure, when the pancreatic and bile ducts are not involved, and Billroth type II, in which the pancreatic ducts are ligated, the gallbladder is anastomosed to the duodenum, and the stomach is anastomosed to the duodenum or jejunum.
g. junction occurs at the pyloric sphincter.
gastroduodenitis [*gas"tro-doo"o-də-ni'tis*] inflammation of the stomach and duodenum.
gastroduodenoscopy [*gas"tro-doo"o-də-nos'kə-pe*] endoscopic examination of the lumen of the stomach and duodenum.
gastroduodenostomy [*gas"tro-doo"o-də-nos'tə-me*] anastomosis of the stomach to a formerly remote part of the duodenum. See **gastroduodenal** anastomosis (Billroth type I).
gastrodynia [*gas"tro-din'e-ə*] pain in the stomach.
gastroenteralgia [*gas"tro-en"tər-al'jə*] pain in the stomach and intestines.
gastroenteric [*gas"tro-ən-ter'ik*] pertaining to the stomach and intestines.
gastroenteritis [*gas"tro-en"tər-i'tis*] inflammation of the lining of the stomach and intestine. The clinical manifestations are vomiting and diarrhea. See also **gastritis**.
hemorrhagic g. (HGE) an acute syndrome in dogs of vomiting and bloody diarrhea with dehydration and marked hemoconcentration. If not treated vigorously, it may lead to circulatory failure and death in a short time. The cause is unknown.
eosinophilic g. a chronic segmental disease of the alimentary tract characterized by a variety of signs depending on the location of the lesion but including vomiting, or diarrhea or melena or hematochezia. Occurs in dogs and in horses. In cats, it may be part of the hypereosinophilic syndrome. Diarrhea, weight loss and a protein-losing enteropathy result. A hypersensitivity to ingested allergens is the suggested cause, but many cases are idiopathic. The diagnostic lesion is the aggregation of eosinophils in the intestinal wall. See also eosinophilic **gastritis**.
transmissible viral g. of pigs see **transmissible** gastroenteritis.
gastroenteroanastomosis [*gas"tro-en"tər-o-ə-nas"to-mo'sis*] surgical anastomosis of the stomach to the small intestine.

VetBooks.ir

gastroenterocolitis [gas"tro-en"tər-o-ko-li'tis] inflammation of the stomach, small intestine and colon.
gastroenterologist [gas"tro-en"tər-ol'ə-jist] a veterinarian specializing in gastroenterology.
gastroenterology [gas"tro-en"tər-ol'ə-je] the study of the stomach and intestine and their diseases.
gastroenteropancreatic [gas"tro-en"tər-o-pan"kre-at'ik] the unity of the gut and the pancreas.
g. cells produce peptide hormones which help coordinate the physiological processes of digestion and carbohydrate metabolism. The cells are located in the intestinal mucosa and in the islets of Langerhans in the pancreas. The hormones produced include insulin, serotonin, glucagon, somatostatin.
gastroenteropathy [gas"tro-en"tər-op'ə-the] any disease of the stomach and intestine.
protein-losing g. see protein-losing **enteropathy**.
gastroenteroptosis [gas"tro-en"tər-op-to'sis] downward displacement or prolapse of the stomach and intestine.
gastroenterostomy [gas"tro-en"tər-os'tə-me] surgical anastomosis of the stomach to the intestine.
gastroenterotomy [gas"tro-en"tər-ot'ə-me] incision into the stomach and intestine.
gastroepiploic artery [gas"tro-ep"i-plo'ik] see Table 9.
g. a. rupture may be caused by foreign body perforation in traumatic reticulitis in cattle. Causes death due to acute hemorrhagic anemia.
gastroesophageal [gas"tro-ĕ-sof"ə-je'əl] pertaining to the stomach and esophagus. See also **ulcer**.
g. reflux see peptic **esophagitis**.
gastroesophagitis [gas"tro-ə-sof"ə-ji'tis] inflammation of the stomach and esophagus.
gastroesophagostomy [gas"tro-ə-sof"ə-gos'tə-me] surgical anastomosis between the stomach and esophagus.
gastroferrin an iron-binding protein found in gastric juice.
gastrofiberscope [gas"tro-fi'bər-skōp] a fiberscope for viewing the stomach.
gastrogastrostomy [gas"tro-gas-tros'tə-me] surgical creation of an anastomosis of two previously remote portions of the stomach, such as anastomosis between the pyloric and cardiac ends of the stomach.
gastrogavage [gas"tro-gə-vahzh'] artificial feeding through a tube passed through the esophagus into the stomach.
gastrogenic [gas"tro-jen'ik] originating in the stomach.
gastrogram [gas'tro-gram] gastric X-ray. See also **pneumogastrogram**.
gastrograph [gas'tro-graf] an instrument for registering motions of the stomach.
gastrography [gas-trog'rə-fe] contrast radiography of the stomach.
double contrast g. radiography of the stomach taken after administration of barium, then air. Useful in evaluating details of the gastric mucosa.
gastrohepatic [gas"tro-hə-pat'ik] pertaining to the stomach and liver.
gastrohepatitis [gas"tro-hep-ə-ti'tis] inflammation of the stomach and liver.
gastroileac [gas"tro-il'e-ak] pertaining to the stomach and ileum.
gastroileitis [gas"tro-il-e-i'tis] inflammation of the stomach and ileum.
gastroileostomy [gas"tro-il"e-os'tə-me] surgical anastomosis of the stomach to the ileum.
gastrointestinal [gas"tro-in-tes'tĭ-nəl] pertaining to the stomach and intestine.
g. foreign body see **intestinal** obstruction.
g. hormones hormones secreted by the gastrointestinal epithelium that affect the function of the tract itself and of its allied organs, e.g. gastrin, glucagon, enteroglucagon, somatostatin, secretin, cholecystokinin-pancreozymin, motilin, gastric inhibitory polypeptide, vasoactive intestinal polypeptide.
g. series a radiological examination of the upper gastrointestinal tract using barium as the contrast medium for a series of X-ray films. Called also a barium meal. See **barium** study.
g. tract the stomach and intestines in continuity. See also **digestive** system.
gastrojejunal [gas"tro-jə-joo'nəl] pertaining to the stomach and jejunum.
g. constipation constipation occurring reflexly as a result of disease somewhere in the alimentary tract.
gastrojejunocolic [gas"tro-jə-joo"no-kol'ik] pertaining to the stomach, jejunum and colon.
gastrojejunostomy [gas"tro-jə-joo-nos'tə-me] anastomosis of the stomach to a formerly remote part of the duodenum. See **gastroduodenal** anastomosis (Billroth type II).
gastrolienal [gas"tro-li'ən-əl] pertaining to the stomach and spleen; gastrosplenic.
gastrolith [gas'tro-lith] a calculus in the stomach.
gastrolithiasis [gas"tro-lĭ-thi'ə-sis] the presence or formation of gastroliths.
Gastrolobium [gas"tro-lo'be-um] a genus of Australian plants in the Fabaceae family, with numerous toxic species. All but two (*G. grandiflora, G. brevipes*) occur in southwestern Australia. The toxic principle is monofluoroacetic acid and all species cause sudden death due to cardiomyopathy and heart failure. *G. appressum, G. bennettsianum, G. bilobum, G. brevipes, G. brownii, G. callistachys, G. calycinum, G. crassifolium, G. densifolium, G. floribundum, G. forrestii, G. glaucum, G. grandiflorum, G. graniticum, G. hamulosum, G. heterophyllum, G. laytonii, G. microcarpum, G. ovalifolium, G. oxyloboides, G. parviflorum, G. parvifolium, G. polystachyum, G. propinquum, G. pycnostachyum, G. racemosum, G. rotundifolium, G. spathulatum, G. spectabile, G. spinosum, G. stenophyllum, G. tetragonophyllum, G. tomentosum, G. trilobum, G. velutinum* and *G. villosum* are shrubs of various heights and habits. All have a common name including the word poison, e.g. heart-leaf poison bush. Several were previously classified as *Oxylobium* or *Nemcia* spp.
gastrology [gas-trol'ə-je] study of the stomach and its diseases.
gastrolysis [gas-trol'ə-sis] surgical division of perigastric adhesions to mobilize the stomach.
gastromalacia [gas"tro-mə-la'shə] softening of the wall of the stomach.
gastromegaly [gas"tro-meg'ə-le] enlargement of the stomach.
gastromycosis [gas"tro-mi-ko'sis] fungal infection of the stomach.
gastromyxorrhea [gas"tro-mik-so-re'ə] excessive secretion of mucus by the stomach.
gastroparalysis [gas"tro-pə-ral'ə-sis] paralysis of the stomach; gastroplegia.
gastropathy [gas-trop'ə-the] any disease of the stomach.
chronic hypertrophic pyloric g. a syndrome of pyloric obstruction in dogs. See also giant hypertrophic **gastritis**.
gastropexy [gas'tro-pek"se] surgical fixation of the stomach, most commonly to the abdominal wall as a means of preventing recurrence of gastric volvulus.
belt-loop g. a modification of the circumcostal technique in which the seromuscular gastric flap is passed around a loop of transverse abdominal muscle instead of a rib.
circumcostal g. fixation by a flap of gastric serosa and muscularis anchored around a rib.
permanent incisional g. edges of an incision into the seromuscular layers of the pyloric antrum are sutured to an incision into the peritoneum and internal fascia of the rectus abdominal or transverse abdominal muscles.
tube g. a method using a Foley catheter placed in the pyloric antrum and through the abdominal wall in the right paracostal area during the postsurgical period.
Gastrophilus [gas-trof'ĭ-ləs] see ***Gasterophilus***.
gastrophrenic [gas"tro-fren'ik] pertaining to the stomach and diaphragm.
g. ligament part of the greater omentum that binds the left crus of the diaphragm to the fundus of the stomach.
gastroplasty [gas'tro-plas"te] plastic repair of the stomach.
gastroplegia [gas"tro-ple'jə] gastroparalysis.
gastroplication [gas"tro-pli-ka'shən] treatment of gastric dilatation by stitching a fold in the stomach wall.
gastropod [gas'tro-pod] members of the class Gastropoda; slugs and snails.
gastroprotectant [gas"tro-pro-tek'tənt] see **gastric** protectant.
gastroptosis [gas"trop-to'sis, gas"tro-to'sis] downward displacement of the stomach.
gastropulmonary [gas"tro-pool'mo-nar-e] pertaining to the stomach and lungs.
gastropylorectomy [gas"tro-pi"lə-rek'tə-me] excision of the pyloric part of the stomach.
gastropyloric [gas"tro-pi-lor'ik] pertaining to the stomach and pylorus.

VetBooks.ir

gastrorrhagia [*gas"tro-ra'jə*] hemorrhage from the stomach.
gastrorrhaphy [*gas-tror'ə-fe*] suture of the stomach.
gastrorrhea [*gas"tro-re'ə*] excessive secretion by the glands of the stomach.
gastroschisis [*gas-tros'kĭ-sis*] a congenital fissure of the abdominal wall.
gastroscope [*gas'tro-skōp*] a rigid or commonly flexible endoscope especially designed for passage into the stomach to permit examination of its interior.
gastroscopy [*gas-tros'kə-pe*] inspection of the interior of the stomach with a gastroscope.
gastrospasm [*gas'tro-spaz"əm*] spasm of the stomach.
gastrosplenic [*gas"tro-splen'ik*] pertaining to the stomach and spleen; gastrolienal.
gastrostaxis [*gas"tro-stak'sis*] the oozing of blood from the stomach mucosa.
gastrostenosis [*gas"tro-stə-no'sis*] contraction or shrinkage of the stomach.
gastrostogavage [*gas-tros"to-gə-vahzh'*] feeding through a gastric fistula.
gastrostolavage [*gas-tros"to-lə-vahzh'*] irrigation of the stomach through a gastric fistula.
gastrostomy [*gas-tros'tə-me*] the creation of an opening into the stomach.
blind g. placement of a gastric feeding tube without laparotomy or endoscope, simply by manipulating the end of the tube through the stomach and body wall.
low profile g. tube (device) consists of an internal mushroom or balloon tip, a short shaft connecting to an external stabilizer and a one-way antireflux valve with a connector for the feeding equipment. It avoids the long, external tube that is less well accepted by the dog and owner.
percutaneous endoscopic g. (PEG) used for placement of a gastric feeding tube. An endoscope is used to position an incision through the body wall and stomach wall, to grasp and withdraw a suture inserted through the opening and to guide the placement of the tube which is pulled back into the stomach and through the opening by traction on the suture which has been attached to the distal end of the tube.
tube g. as part of the surgical correction of gastric dilatation–volvulus, an inflatable catheter can be used to maintain traction on the stomach, provide fixation, and allow decompression.
gastrothoracopagus [*gas"tro-thor"ə-kop'ə-gəs*] symmetrical conjoined twins joined at the abdomen and thorax.
Gastrothylax a genus of stomach flukes (digenetic trematodes) in the family Paramphistomatidae.
G. crumenifer an elongate, circular fluke found in the rumen and reticulum in sheep, cattle, zebu and buffalo.
gastrotomy [*gas-trot'ə-me*] incision into the stomach.
gastrotropic [*gas"tro-tro'pik*] having affinity for or exerting a special effect on the stomach.
gastrotympanites [*gas"tro-tim"pə-ni'tēz*] tympanitic distention of the stomach.
gastrula [*gas'troo-lə*] an embryo in the stage following the blastula stage; the simplest type consists of two layers of cells, the ectoderm and endoderm, which have invaginated to form the archenteron and an opening, the blastopore.
gastrulation [*gas"troo-la'shən*] the process by which a blastula becomes a gastrula or, in forms without a true blastula, the process by which three germ cell layers are acquired.
gat see ***Catha edulis***.
gate control [*gāt*] a theory of physiological control of pain based on the proposal that pain impulses are mediated in the substantia gelatinosa of the spinal cord and the dorsal horns act as 'gates' that control the entry of pain signals into the central pain pathways.
gathered nail a nail gathered up and penetrating the sole of the horse's hoof. See **hoof** abscess, **tetanus**. Called also nail prick.
gatifloxacin [*gat"i-flok'sə-sin*] a fourth generation fluoroquinolone antibiotic; used in topical ophthalmic solutions.
gating [*gāt'ing*] alteration of the transport function through a mucosa; can be effected by means of a chemical agent (chemical gating) or because of a change in electrical potential (electrical gating).
Gaucher's cells [*go-sha'*] large, foamy macrophages characteristic of Gaucher's disease which accumulate in many tissues; they result from accumulated glucocerebroside due to deficiency in **β-glucocerebrosidase**.
Gaucher's disease [*go-sha'*] a hereditary disorder of glucocerebroside metabolism, marked by the presence of Gaucher's cells in many tissues. Occurs in dogs (Australian silky terriers), sheep, pigs and mice. See also **glucocerebroside**, **Gaucher's cells**.
gaunt [*gawnt*] thin plus obvious diminution in abdominal size, indicative of reduced feed intake leading to reduced gut fill.
Gaur see ***Bos gaurus***.
gauze [*gawz*] a light, open-meshed fabric of muslin or similar material.
absorbent g. white cotton cloth of various thread counts and weights, supplied in various lengths and widths and in different forms (rolls or folds).
g. mask see **surgical** mask.
petrolatum g. a sterile material produced by saturation of sterile absorbent gauze with sterile white petrolatum.
zinc gelatin impregnated g. absorbent gauze impregnated with zinc gelatin.
gavage [*gə-vahzh'*] [Fr.] 1. forced feeding or irrigation through a tube passed into the stomach. See also tube **feeding**, gastric **lavage**. 2. superalimentation.
gavial (*Gavialis gangeticus*); a member of the crocodile family; an extremely threatened species. Called also gharial.
gazehound a sight-hunting hound such as the Greyhound. See also **hound**.
Gazella the genus of gazelles in the subfamily Antilopinae. See **gazelle**.
gazelle very fast-moving, sandy-colored, small, wild ruminant with white rump and lyre-shaped, long horns. There are many species including impala and springbok. Called also *Gazella* spp.
g. hound see **Saluki**.
dorcas g. (*Gazella dorcas*) a small North African gazelle especially adapted to life in an arid environment.
Waller's g. see **gerenuk**.
GBED glycogen branching enzyme deficiency.
GCP **Good Clinical Practice**.
GD glutamate dehydrogenase.
Gd chemical symbol, *gadolinium*.
GDP guanosine diphosphate.
GDV gastric dilatation/volvulus.
Ge chemical symbol, *germanium*.
gecko small lizards in the family Gekkonidae; some species have immovable eyelids. Well known in many warmer climates for their indoor, nocturnal activities that include vocalization, running up walls and clinging to ceilings with their specialized foot pads. They are popular as pets.
Gedoelstia a genus of flies of the family Oestridae.
G. cristata larvae are deposited in the eye and pass via a vein to the cardiovascular system. Larvae migrate up the trachea to the nasal cavity. Aberrant infection occurs in domestic ruminants; the usual hosts are wild ruminants.
G. hassleri larvae of this fly are deposited in the conjunctival sac and migrate to the nasal cavity via blood vessels, meninges and subdural space in hartebeeste and wildebeeste, but without causing clinical illness. Aberrant infection occurs in domestic ruminants, causing severe ocular and neural disease. Called also ophthalmomyiasis, uitpeuloog, gedoelstial myiasis.
gedoelstial myiasis infestation with the larvae of the fly *Gedoelstia* spp.
geeldikkop [Af.] yellow **bighead**.
geese [*gēs*] domestic geese which were derived from the wild goose *Anser anser*. There are many other species in this genus and in the other genus of geese, the *Branta* spp. of which *Branta canadensis* is typical.
Geiger counter, Geiger–Müller counter [*gi'gər*] an amplifying device that indicates the presence of ionizing particles emitted by a substance; used as a means of determining the presence of radioactivity.
Geigeria a genus of plants in the family Asteraceae. Contain sesquiterpene lactones which cause vermeersiekte—degeneration of skeletal muscles manifested as stiffness and paralysis, plus brain and spinal cord damage. There is also esophageal dilation and vomition. Includes *G. aspera* var. *aspera*, *G. burkei* subsp. *burkei* var. *zeyheri*, *G. filifolia*, *G. ornativa* (*G. africana*), *G. passerinoides*, *G. pectidae*.

VetBooks.ir

Geisha girl *Duranta repens*.
geilsiekte [Af.] plant-associated cyanide poisoning; literal translation = lush pasture sickness.
gel [*jel*] a colloid that is firm in consistency, although containing much liquid; a colloid in a gelatinous form. Gels of agarose in water are frequently used in immunology for *in vitro* detection of immunoprecipitation reactions.
coupling g. see **coupling**.
g. diffusion technique see **immunodiffusion**.
gelatin [*jel'ə-tin*] a substance obtained by partial hydrolysis of collagen derived from skin, white connective tissue, and bones of animals; used as a suspending agent for various drugs or in manufacture of capsules and suppositories; suggested for intravenous use as a plasma substitute, and has been used as an adjuvant protein food. In absorbable film and sponge, it is used in surgical procedures.
g. digestion test a tube test for the presence of fecal proteases. Feces are mixed with melted gelatin and incubated. If there is insufficient protease activity, the gelatin will solidify; used in the diagnosis of exocrine pancreatic insufficiency.
g. liquefaction test a biochemical test used for the identification of several bacterial species. Detects the ability of the organism to produce substances which hydrolyze gelatin.
gelatinize [*jə-lat'ĭ-nīz*] to convert into a jelly, or to become converted into gelatin. Feed grains are said to be gelatinized when they are treated by a combination of moisture, heat and pressure so as to rupture their starch granules. Process also called expanded.
gelatinoid [*jə-lat'ĭ-noid*] resembling gelatin.
gelatinous [*jə-lat'ĭ-nəs*] like jelly or softened gelatin.
gelation [*jə-la'shən*] conversion of a sol into a gel.
Gelbvieh cream to red and yellow dual-purpose breed of cattle. Called also German Yellow, Austrian Yellow. The breed is affected by a syndrome of peripheral neuropathy and glomerulopathy.
geld [*geld*] see **alter**.
gelding [*gel'ding*] castrated male horse.
gelosis a hard, swollen lump in a tissue, especially in muscle.
Gelpi retractor a self-retaining, small spreader suitable for small sites such as for perineal surgery in dogs or laryngotomy in horses. Two blades, hinged in the middle, separate as the handles are closed and are held open by a rachet. The blades turn down at right angles at their tips, and are bowed towards each other so that they push the edges of the incision apart and retain themselves in it.
gelsemine [*jel'sə-mēn*] a toxic indole alkaloid in the plant *Gelsemium sempervirens*; has similar pharmacological actions to nicotine.
Gelsemium sempervirens [*gel-sem'e-um*] temperate zone garden plant in the family Loganiaceae; poisoning by the plant is manifested by incoordination, pupillary dilatation and convulsions. The toxin is the indole alkaloid gelsemine. Called also yellow jessamine, Carolina jessamine, evening trumpetflower.
Gély's suture pattern [*zha-le'*] a continuous series of cross stitches for wounds of the intestine, made with a thread having a needle at each end.
gemastocyte [*jə-mas'to-sīt"*] see gemistocytic **astrocyte**.
gemcitabine [*jem-sit'ə-bēn*] a pyrimidine analog of deoxycytidine used in cancer chemotherapy.
gemellology [*jem"əl-ol'ə-je*] the scientific study of twins and twinning.
geminate [*jem'ĭ-nāt*] paired; occurring in twos.
gemination [*jem"ĭ-na'shən*] the abnormal tooth formation as a result of an unsuccessful attempt at forming two separate teeth. There is usually a longitudinal groove.
gemistocyte [*jə-mis'to-sīt"*] plump astrocyte produced as a reaction to severe injury.
gemmation [*jə-ma'shən*] development of a new organism from a protuberance on the cell body of the parent, a form of asexual reproduction; called also budding.
gemmule [*jem'ūl*] 1. a reproductive bud; the immediate product of gemmation. 2. any of the little spinelike processes on the dendrites of a nerve cell.
gemsbok (*Oryx gazella*) a large African antelope with a gray or tan body and attractive black markings on the face, neck and legs. Their very long, mostly straight horns are highly prized; popular on game ranches and in the USA where they have been successfully introduced.
-gen word element. [Gr.] *an agent that produces*.
genal [*je'nəl*] pertaining to the cheek; buccal.
GenBank an on-line database of publicly available DNA sequence data maintained by the National Center for Biotechnology Information (NCBI), a part of the National Institutes of Health (NIH). GenBank exchanges data daily with two other large sequence databases, the DNA DataBank of Japan (DDBJ) and the European Molecular Biology Laboratory (EMBL).
gender [*jen'dər*] sex; the category to which an individual is assigned on the basis of sex.
gene [*jēn*] the unit of heredity most simply defined as a specific segment of DNA, usually in the order of 1000 nucleotides, that specifies a single polypeptide. Many phenotypic characteristics are determined by a single gene, while others are multigenic. Genes are specifically located in linear order along the single DNA molecule that makes up each chromosome. All eukaryotic cells contain a diploid (2n) set of chromosomes so that two copies of each gene, one derived from each parent, are present in each cell; the two copies often specify a different phenotype, i.e. the polypeptide will have a somewhat different amino acid composition. These alternative forms of gene, both within and between individuals, are called alleles. Genes determine the physical (structural genes), the biochemical (enzymes), physiological and behavioral characteristics of an animal. The formation of gametes (sperm, ova) involves a process of meiosis, which allows crossing over between four pairs of chromosomes, two derived from each parent, which means that new forms of a particular chromosome are created. Gamete formation also results in cells (gametes) with a haploid (n) set of chromosomes that in fertilization creates a new individual, which is a recombinant of 2n chromosomes, half derived by way of the ovum from the mother and half via the spermatozoa from the father. Changes in the nucleotide sequence of a gene, either by substitution of a different nucleotide or by deletion or insertion of other nucleotides, constitute mutations which add to the diversity of animal species by creating different alleles and can be used as a basis for genetic selection of different phenotypes. Some mutations, be they a single base change in a single gene or a major deletion, are lethal.
g. action the way in which genes exert their effects on tissues or processes, e.g. by being dominant or recessive, or partially so, being absent, being sex-linked, being involved in chromosomal aberrations.
allelic g's different forms of a particular gene usually situated at the same position (locus) in a pair of chromosomes.
g. amplification see gene duplication (below).
g. bank see gene library (below).
barring g. responsible for the barred pattern on the feathers of Barred Plymouth Rock birds.
g. box see **box** (4).
g. clone see **clone**.
g. cluster a group of related genes derived from a common ancestral gene, located closely together on the same chromosome. Called also multigene family.
complementary g's two independent pairs of nonallelic genes, neither of which is functional without the other.
g. construct a sequence of genetic information (DNA) coding for a desired molecule or part of a molecule.
g. conversion a non-reciprocal exchange of DNA elements which results in a functional rearrangement of chromosomal DNA.
***dhfr* g.** dihydrofolate reductase gene; an enzyme required to maintain cellular concentrations of H_2 folate for nucleotide biosynthesis, and which has been used as a 'selective marker'; cells lacking the enzyme only survive in media containing thymidine, glycine and purines; mutant cells (dhfr) transfected with DNA that is dhfr' can be selectively grown in medium lacking these elements.
diversity (D) g. genes located in diversity (D) segment; contribute to the hypervariable region of immunoglobulins.
dominant g. one that produces an effect (the phenotype) in the organism regardless of the state of the corresponding allele. Examples of traits determined by dominant genes are short hair in cats and black coat color in dogs.
g. duplication as a result of non-homologous recombination, a chromosome carries two or more copies of a gene.
g. expression see **expression (3)**.

g. frequency the proportion of the substances or animals in the group which carry a particular gene.
early g's genes expressed during early development of the fetus.
holandric g's genes located on the Y chromosome and appearing only in male offspring.
immune response (Ir) g's genes of the major histocompatibility complex (MHC) that govern the immune response to individual immunogens.
joining g. segment genes located in the jolining (J) segment linking the variable and constant regions of immunoglobulins; contribute to the hypervariable region of immunoglobulins.
jumping g. see mobile **DNA**.
g. knock-in a mutated DNA sequence is exchanged for the endogenous sequence without any other disruption of the gene, as in knock-out mice.
g. knockout replacement of a normal gene with a mutant allele encoding a non-functional product, as in gene knockout mice.
lethal g. one whose presence brings about the death of the organism or permits survival only under certain conditions.
g. library a collection of bacterial cells carrying diverse DNA fragments encoded in a cloning vector, which cumulatively represents the entire genome of an organism.
g. locus see **locus**.
mutant g. one that has undergone a detectable mutation.
non-protein encoding g. a gene that encodes a non-protein product; most often, an RNA molecule.
overlapping g's when more than one mRNA is transcribed from the same DNA sequence; the mRNAs may be in the same reading frame but of different size or they may be in different reading frames.
g. pool total of all genes possessed by all members of the population which are capable of reproducing during their lifetime.
g. probe see **probe** (2).
recessive g. one that produces an effect in the organism only when it is transmitted by both parents, i.e. only when the individual is homozygous.
regulator g., repressor g. one that synthesizes repressor, a substance which, through interaction with the operator gene, switches off the activity of the structural genes associated with it in the operon.
reporter g. one that produces products which can be measured and therefore used as an indicator of whether a DNA construct has successfully been transferred and expressed.
sex-linked g. one that is carried on a sex chromosome, especially an X chromosome.
g. splicing see **splicing**.
split g's. genes which contain coding segments (exons) interrupted by non-coding segments (introns); found in eukaryotes but not in prokaryotes.
structural g. genes encoding proteins.
g. therapy the insertion of functional genes into cells of the host in order to alter its phenotype, usually used to treat an inherited defect.
g. transcription see **transcription**.
g. transfer see **recombination**.
tumor suppressor g's a class of genes that encode proteins that normally suppress cell division; when mutated these genes allow cells to continue unrestricted cell division and may result in a tumor.

genera [*jen'ər-ə*] [L.] plural of *genus*.

general [*jen'ər-əl*] in a clinical context means whole of body.

general adaptation syndrome the syndrome described in humans as a consequence of continued stress. There is no identified counterpart in animals.

generalization [*jen"ər-əl-ĭ-za'shən*] forming general propositions from particular cases or clinical signs.

generalized Shwartzman-like reaction [*jen'ər-əl-īzd*] a reaction characterized by disseminated intravascular coagulation; caused by oliguric renal failure in cases of septicemia or endotoxemia in parturient cows; see also **Shwartzman phenomenon**.

generalized tremor syndrome [*jen'ər-əl-īzd*] see **shaker dog disease**.

generation [*jen"ər-a'shən*] 1. the process of reproduction. 2. a class composed of all individuals removed by the same number of successive ancestors from a common predecessor, or occupying positions on the same level in a genealogical (pedigree) chart. Said also of antibiotics or other chemicals derived from parent compounds.
alternate g. reproduction by alternate asexual and sexual means in an animal or plant species.
asexual g. production of a new organism not originating from union of gametes. Called also direct generation.
direct g. see asexual generation (above).
filial g. (first) the first generation offspring of two parents; symbol F_1.
filial g. (second) all of the offspring produced by two individuals of the first filial generation; symbol F_2.
g. interval the mean age of the parents when the animals that are to replace them are born.
parental g. the generation with which a particular genetic study is begun; symbol P_1.
sexual g. production of a new organism from the zygote formed by the union of gametes.
spontaneous g. the discredited concept of continuous generation of living organisms from nonliving matter.
g. time 1. in epidemiological terms the time required between infection occurring and the patient reaching full infectivity. 2. in histological terms the time required to complete one full cell cycle; average of 20 hours for mammalian cells.

generative [*jen'ər-ə-tiv"*] pertaining to reproduction.

generator [*jen'ər-a"tər*] something that produces or causes to exist; a machine that converts mechanical to electrical energy.
pulse g. the power source for a cardiac pacemaker system, usually powered by a lithium battery, supplying impulses to the implanted electrodes, either at a fixed rate or in a programmed pattern.

generic [*jə-ner'ik*] 1. pertaining to a genus. 2. nonproprietary; denoting a drug name not protected by a trademark, usually descriptive of the drug's chemical structure.

genesiology [*jə-ne"ze-ol'ə-je*] the study of reproduction.

genesis [*jən'ə-sis*] creation; origination; used as a word termination joined to an element indicating the thing created, e.g. carcinogenesis.

genet 1. (*Genetta* spp.) cat-like African carnivore in the family Viverridae with a long, slim body and a very long tail. The coat is light colored with dark spots. Popular as pets. 2. jennet; see **jenny**.

genetic [*jə-net'ik*] 1. pertaining to reproduction or to birth or origin. 2. inherited.
g. abnormality inherited defect, which may or may not be congenital.
g. analysis analysis of breeding and pedigree records to establish degrees of relationship between single animals and groups of animals. Segregation analysis with full-sibling families is an obvious technique.
g. code the manner in which the arrangement of nucleotides in the polynucleotide chain of a chromosome is translated into a protein amino acid sequence, i.e. determines the sequence of amino acids in the polypeptide chain making up each protein synthesized by the cell. Genetic information is coded in DNA by means of four bases (two purines: adenine and guanine; and two pyrimidines: thymine and cytosine). Each adjacent sequence of three bases (a triplet codon) determines which of the 20 amino acids will be inserted into the nascent polypeptide. See also **four-letter genetic code alphabet**.
g. complementation see **complementation**.
g. control of inherited disease consists of preventing carrier animals from contributing their genes to succeeding generations of the population of which they are members.
g. correlation a change in an unselected character resulting from selection of another character during a breeding program.
g. defects defects of function or structure passed on from parents to offspring. Inherited defects.
g. determination see broad-sense **heritability**.
g. disease resistance inherited resistance to diseases caused by non-hereditary risk factors.
g. dominance see **dominance** (2).
g. drift see **antigenic** drift.
g. engineering the manipulation of genes by recombinant DNA technologies to produce chromosomal combinations that are unlikely to occur by natural means, for example the introduction of genes for insulin into a yeast cell which then produces insulin

VetBooks.ir

which can be purified and used as a therapeutic substance. See also **recombinant** DNA technology.

g. etiology disease caused by inheritance of specific disease without the intervention of other risk factors; established by strongly positive relationship in terms of genes held in common between the affected patient and other affected individuals.

g. evaluation assessment, for predictive purposes, of productive improvement or conformational characteristics, of the gain to be derived by the use of the animal in question in a breeding program.

g. expressivity see **expressivity**.

g. heterogeneity demonstrated by the way in which more than one disease with identical clinical signs can be inherited.

g. immunization use of a cloned genetically engineered gene to immunize the host against the antigen encoded by the gene. See also DNA **vaccine**.

g. map the linear arrangement of genes along a chromosome. Called also linkage map.

g. merit inherited productivity or performance qualities.

mobile g. elements see transposable genetic elements (below).

g. penetrance see **penetrance**.

g. production potential inherited productivity but still influenced by environmental risk factors.

g. resistance genetically determined resistance to specified infectious agents.

g. selection selection of animals as breeding stock on the basis of known inherited characteristics.

transposable g. elements pieces of DNA found in both prokaryotic and eukaryotic cells, varying in length from a few hundred to tens of thousands of base pairs, that are capable of moving from place to place in the chromosome within a single cell; some are viruses. Called also mobile genetic elements or transposons.

g. variance that portion of the phenotypic variance of a trait in a population which can be attributed to genetic difference amongst individuals.

geneticist [*jə-net'ĭ-sist*] a specialist in genetics.

genetics [*jə-net'iks*] the branch of biology dealing with the phenomena of heredity and the laws governing it. Expressed in other definitions, e.g. **population** genetics.

biochemical g. the science concerned with the chemical and physical nature of genes and the mechanism by which they control the development and maintenance of the organism. The field of biochemical or molecular genetics is relatively new and is increasingly used to define the cause of many inherited diseases. These diseases usually result from defective protein synthesis, such as **hemophilia** A and **immunodeficiency**, and more than 200 so-called 'inborn errors' of metabolism identified thus far in animals, such as **mannosidosis** and **galactosemia**, in which lack or alteration of a specific enzyme prohibits proper metabolism of carbohydrates, proteins or fats and thus produces clinical signs.

clinical g. the study of the possible genetic factors influencing the occurrence of a pathological condition. In addition to the diseases mentioned under biochemical genetics, other aspects of clinical genetics include the study of chromosomal aberrations (such as those that cause testicular hypoplasia) and immunogenetics, or the genetic aspects of the **immune** response and the transmission of genetic factors from generation to generation.

molecular g. the study of the molecular structure of genes, involving DNA and RNA. See also **deoxyribonucleic acid**.

genetotrophic disease [*jə-net"o-tro'fik*] caused by the inheritance of a higher requirement than normal for a specific metabolite.

genial [*jə-ni'əl*] pertaining to the chin.

genic [*jen'ik*] pertaining to or caused by the genes.

-genic word element. [Gr.] *giving rise to, causing*.

geniculate [*jə-nik'u-lər*] pertaining to the knee.

geniculate [*jə-nik'u-lāt*] bent, like a knee.

g. body see geniculate **body** (lateral).

g. ganglion see geniculate **ganglion**.

geniculum [*jə-nik'u-ləm*] pl. *genicula* [L.] a little knee; a sharp kneelike bend in a small structure or organ.

genioplasty [*je'ne-o-plas"te*] plastic surgery of the chin.

Genista see ***Cytisus***.

genistein an isoflavone with estrogenic properties and found in subterranean and other clovers.

genital [*jen'ĭ-təl*] pl. *genitalia* 1. pertaining to reproduction, or the **reproductive** organs. 2. *genitals*, the **reproductive** organs, especially the external genital organs.

g. bursatti see **swamp cancer**.

g. campylobacteriosis see bovine genital **campylobacteriosis**.

g. ducts male—contorted seminiferous tubules, stright seminiferous tubules, rete testis, efferent ductules, ductus epididymis, ductus deferens, ejaculatory duct, preprostatic urethra, prostatic urethra, penine urethra; female—uterine tubes (fallopian tubes, oviducts), uterus, vagina, vestibule, vulva.

g. lock the joining together of the dog and the bitch during coitus in which the enlarged penile bulb of the dog is held tightly in the bitch's vagina. The dog normally dismounts and stands back-to-back with the bitch, with the penis still locked in the vagina. Called also the 'tie'.

g. mycoplasmosis see **granular** vaginitis.

g. organs see **penis**, **vulva**, etc.

g. ridge bilateral thickenings in the roof of the embryo's celom which are the primordia of the gonads.

g. squamous cell carcinoma squamous cell carcinoma of the penis and prepuce and of the vulva.

g. system the reproductive system including ovaries, ovarian bursa, uterine tubes, uterus, cervix, vagina, vulva, vestibular glands of the female and testicles, epididymis, vas deferens, penis, prostate, seminal vesicles, bulbourethral glands, prepuce and scrotum of the male.

g. tract from the ovaries to the vulva, from the testicles to the external urethral meatus.

g. tubercle the eminence in the embryo which develops into the clitoris or penis.

g.–urinary system the combined urinary and reproductive systems.

g. warts see genital **papillomatosis**.

genitalia [*jen"ĭ-tāl'e-ə*] see **genital** system.

external g. vulva of the female, testes, penis of the male.

genit(o)- word element. [L.] relating to the organs of reproduction.

genitocrural pertaining to the genitalia and the leg or shank.

genitofemoral [*jen"ĭ-to-fem'or-əl*] pertaining to the genitalia and the thigh.

genitoplasty [*jen'ĭ-to-plas"te*] plastic surgery on the reproductive (genital) organs.

genitourinary [*jen"ĭ-to-u'rĭ-nar-e*] pertaining to the genitalia and urinary apparatus; urogenital.

g. system the organs of reproduction, together with the organs concerned with production and excretion of urine; called also urogenital, genitourinary system.

genocopy [*je'no-kop"e*] an animal whose phenotype mimics that of another genotype but whose character is determined by a distinct assortment of genes.

genodermatosis [*je"no-dur"mə-to'sis*] a genetic disorder of the skin, usually generalized.

genome [*je'nōm*] all of the genes of an organism encoded by DNA and by RNA for some viruses.

diploid g. having two genetically identical RNA molecules of RNA, characteristic of retroviruses.

integrated g. the integration of the viral DNA into the cellular DNA of the host, as occurs in some kinds of persistent infections and the induction of tumors.

segmented g. the genome is composed of separate segments. A characteristic of some viruses, e.g. influenza virus and bluetongue virus.

genomic [*je-no'mik*] pertaining to a genome.

g. clone see **clone**.

g. DNA the DNA sequences making up the genome of an individual.

g. library see **gene** library.

genomics [*je-no'miks*] the science that broadly deals with understanding the genome at the cellular and organism levels.

genotype [*je'no-tīp*] 1. the entire genetic constitution of an individual; also, the alleles present at one or more specific loci. 2. the type species of a genus.

g. frequency the proportion of the population which have the same genetic constitution.

genotypic [*je"no-ti'pik*] emanating from or pertaining to genotype.

g. selection selection of breeding stock on the basis of known inherited characteristics.

g. value value of the effect of all the individual's genes which affect the trait in question.
g. variance the measure of the differences in genotype between individuals, i.e. the differences between individuals in factors which are determined the moment they are conceived.
-genous word element. [Gr.] *arising or resulting from, produced by.*
gentamicin [*jen"tə-mi'sin*] an antibiotic complex elaborated by fungi of the genus *Micromonospora*, effective against many gram-negative bacteria, especially *Pseudomonas* species, as well as certain gram-positive bacteria, especially *Staphylococcus aureus.* As with other aminoglycoside antibiotics gentamicin is ototoxic and nephrotoxic. Used as the sulfate.
gentian [*jen'shən*] the dried rhizome and roots of *Gentiana lutea*; has been used as a bitter tonic.
g. violet an antibacterial, antifungal and anthelmintic dye, derived from triphenylmethane; applied topically in the treatment of infections of the skin and mucous membranes associated with gram-positive bacteria and molds, and at one time administered orally for the treatment of pinworm and liver fluke infections in humans. Called also crystal violet, methylrosaniline chloride.
gentianophilic [*jen'shən-o-fil'ik*] staining readily with gentian violet.
gentianophobic [*jen"shən-o-fo'bik*] not staining with gentian violet.
gentle to accustom a young horse to be caught, handled, haltered and led but not broken in to saddle or harness.
genu [*je'nu*] pl. *genua* [L.] the knee.
g. extrorsum bowleg.
g. of facial nerve the bend in the facial nerve at the lateral end of the internal acoustic meatus.
g. introrsum knock-knee.
g. recurvatum hyperextensibility of the knee joint.
g. valgum knock-knee.
g. varum bowleg.
genus [*je'nəs*] pl. *genera* [L.] a taxonomic category (taxon) subordinate to a tribe (or subtribe) and superior to a species (or subgenus).
geo- word element. [Gr.] *the earth, the soil.*
geode [*je'ōd*] a dilated lymph space.
geodetic datum mathematical model designed to best fit part or all of the world's shape. It is defined by an ellipsoid and the relationship between the ellipsoid and a point on the topographic surface established as the origin of datum. There are numerous datum, for example NAD-83 (North American Datum, 1983, based on GRS-80 ellipsoid) and NAD-27 (North American Datum, 1927, based on Clark's spheroid of 1866). Different countries may use different datum, the same coordinates applied to each will give a slightly different location and so it is essential to determine the datum being used.
geographic information system (GIS) [*je"o-graf'ik*] an organized system of hardware, software, geographic data and people designed to capture, store and update, analyze and display all forms of geographically referenced data. Powerful decision supporting tools capable of performing spatial analysis of disease and disease determinants to determine relationships and trends. This includes information on specific locations (spatial data), maps (geographical coverage) and attributes (descriptive data of the area) in the form of a relational database associated with the mapped features. It allows the overlapping of several maps, for example meteorological data, vegetation, soil type, transport routes, farm locations, waterways, human and wildlife populations, to facilitate the identification of factors that might contribute to the spatial and temporal distribution of a particular disease. Combining agricultural animal health and environmental data in a GIS can provide insights that lead to enhanced animal health and productivity, environmental quality and public health. GIS in disease surveillance typically involves the recording and reporting of disease status, animal inventory and demographic information on a geographical basis, allowing the spatial distribution of a disease to be monitored over time. Also used to study the epidemiological characteristics of a disease by examining the point patterns of outbreaks to look for clusters that might indicate the presence of a common risk factor or point source, and for analyzing the presence of various determinants of disease and disease incidence or prevalence on a geographical basis.
geomedicine [*je"o-med'ĭ-sin*] the branch of medicine dealing with the influence of climatic and environmental conditions on health. See also geographic **epidemiology**.
geometric mean see geometric **mean**.
geophagia, geophagism [*je-o-fa'jə, je-of'ə-jiz-əm*] the habit of eating clay or earth (soil); chthonophagia.
geophilic [*je"o-fil'ik*] soil-loving; said of certain fungi found in soil.
Georgina gidgee, Georgina gidyea see ***Acacia*** *georginae*.
geotaxis [*je"o-tak'sis*] see **geotropism**.
Geotrichia see ***Microcystis***.
geotrichosis [*je"o-trĭ-ko'sis*] a candidiasis-like infection due to *Geotrichum candidum*, which may attack the bronchi, lungs, mouth or intestinal tract.
Geotrichum [*je-ot'rĭ-kəm*] a genus of yeasts. See **hyalohyphomycosis**.
G. candidum a species found in feces and in dairy products. Causes pneumonic and systemic infections, especially in animals in captivity, and has been associated with necrosis of the scales in snakes. May be associated with bovine mastitis. See also **geotrichosis**.
geotropism [*je-ot'ro-piz-əm*] a tendency of growth or movement toward or away from the earth; the influence of gravity on growth.
GEP gastroenteropancreatic.
ger(o)- word element. [Gr.] *old age, the aged.*
geratic [*jə-rat'ik*] pertaining to old age.
geratology [*jer"ə-tol'ə-je*] gerontology.
gerbil [*jur'bəl*] small rodent in the subfamily Gerbillinae. The Mongolian gerbil (*Meriones unguiculatus*) is a popular pet.
gerenuk (*Litocranius walleri*) an unusual looking, tall antelope with a small head, very long, thin legs and a long, thin neck which it uses to maximum effect while browsing. Popular as a game animal. Called also Waller's gazelle and giraffe-necked antelope.
Gerhardt's test [*zher-hahrt'*] a test for ketone bodies in the urine, using ferric chloride.
geriatric [*jer"e-at'rik*] pertaining to or emanating from geriatrics.
canine g. syndrome see canine idiopathic **vestibular** syndrome.
geriatrician [*jer"e-ə-trish'ən*] a specialist in gerontology.
geriatrics [*jer"e-at'riks*] the branch of medicine dealing with the problems of aging and diseases of the older animal; usually dealing with companion animals. Aging agricultural animals are usually culled because of reduced productivity.
GERL Golgi apparatus, smooth *e*ndoplasmic *r*eticulum and *lysosomes*; a spatially closely related group of organelles devoted to synthesizing and condensing activity of the Golgi apparatus.
Gerlach needle [*ger'lahk*] a needle designed for inserting buried, perivaginal sutures in cows. Consists of a loop large enough to fill the palm, a shank about 4 inches long and a slightly scooped, flattened point with an eyehole large enough to take tape. Reminiscent of a bagneedle.
germ [*jərm*] 1. a lay term for a pathogenic microorganism. 2. living substance capable of developing into an organ, part or organism as a whole; a primordium. Commonly used to refer to the embryos of wheat grains which are removed during milling and sold separately as wheat germ.
g. cell tumor may refer to dysgerminoma arising in the ovary.
g. line the genetic material as it is transferred via the gametes, before being modified by somatic recombination or mutation.
g. line cells gametes.
g. line transmission a mode of transmission, particularly of retroviruses, whereby the genome of the virus is integrated into the chromosomal DNA and transmitted via gametes to offspring.
g. plasma evaluation program a planned investigative, large scale breeding program aimed at accumulating comparative information on the relative performance of various breeds and crossbreeds of agricultural animals.
g. theory 1. all organisms are developed from a cell. 2. infectious diseases are of microbial origin.
g. tube a tube-like structure that develops during the growth of some fungi and becomes a hypha; a feature of the yeast, *Candida albicans*.
germ free animal [*jərm*] see **axenic**.
German black pied cattle German adaptation of Friesian dairy cattle.
German blackheaded mutton sheep polled, meat, shortwool German sheep originated from British downs breeds sheep.
German brown cattle German adaptation of Brown Swiss cattle.
German longhaired pointer a medium sized, dual purpose gundog, similar to the German shorthaired pointer but with a close lying, slightly wavy coat, 1–2 inches long, and feathering on the

VetBooks.ir

legs and tail. Recognized as a breed in the UK, Canada, Australia and many other countries.

German mastiff see **Great Dane**.

German pinscher a medium-sized (25–35 lb), compact dog with a short, smooth coat in black or shades of gray, red or brown. The ears may be erect or dropped, but usually cropped, and the tail is docked to a short length. Called also Standard pinscher.

German roller a breed of canaries descended from the Hartz Mountain Roller canary. See **Roller**.

German shepherd dog a large muscular dog with medium length, double coat of tan and black, erect ears and a bushy tail. One of the most popular breeds in many countries, it also has been used widely as a working dog in police and military activities, as a guide dog for the blind and in television and movie productions. It is predisposed to epilepsy, giant axonal neuropathy, pituitary dwarfism, hip dysplasia, pyoderma, anal furunculosis, pancreatic insufficiency, pannus, persistent right aortic arch, subaortic stenosis, eosinophilic myositis and von Willebrand disease. Called also Alsatian.

German shorthaired pointer a medium- to large-sized all-purpose gun dog with pendulous ears, docked tail and very short haircoat that is liver- or black-colored in solid, spotted or ticked patterns. Recognized as a breed distinct from the German wirehaired pointer and the German longhaired pointer. The breed is affected by an inherited GM_2 gangliosidosis.

German spitz a spitz-type dog with a broad head, small, triangular erect ears, a curled tail and an abundant coat that stands out. Several sizes are recognized, often as separate breeds. The Kennel Club (UK) recognizes German spitz (Mittel) at 12–15 inches and (Klein) at 9–11 inches.

German whiteheaded mutton sheep polled, meat sheep originated from British Cotswold and Marsh sheep plus Texel.

German wirehaired pointer a medium- to large-sized gun dog, similar to, but recognized as a breed distinct from, the German shorthaired pointer. It has a distinctive harsh, wiry, flat coat in solid liver or with white spots or ticking. There are pronounced eyebrows, whiskers and a beard. The ears are pendant and the tail is docked.

German yellow see **Gelbvieh**.

germanium (Ge) [*jər-ma′ne-əm*] a chemical element, atomic number 32, atomic weight 72.59. See Table 4.

germicidal [*jur″mĭ-sī′dəl*] destructive to pathogenic microorganisms.

germicide [*jur′mĭ-sīd*] an agent that destroys pathogenic microorganisms.

germinal [*jur′mĭ-nəl*] pertaining to or of the nature of a germ cell or the primitive stage of development.

g. crescent the region of development of primary germ cells in the avian embryo.

external g. layer the superficial layer of proliferating neuroepithelial cells on the surface of the embryonic cerebellum.

g. inclusion cyst see **ovarian** serous inclusion cyst.

germination [*jur″mĭ-na′shən*] the sprouting of a seed or spore or of a plant embryo.

germinative [*jur′mĭ-na″tiv*] pertaining to germination or to a germ cell.

germinoma [*jur″mĭ-no′mə*] a neoplasm of germ tissue (testis or ovum), e.g. a dysgerminoma or seminoma, respectively.

geroderma, gerodermia [*jer″o-dur′mə, jer″o-dur′me-ə*] dystrophy of the skin and genitals, giving the appearance of old age.

geromarasmus [*jer″o-mə-raz′məs*] the emaciation sometimes characteristic of old age.

gerontal [*jer-on′təl*] pertaining to old age.

geront(o)- word element. [Gr.] *old age, the aged.*

gerontology [*jer″on-tol′ə-je*] the science dealing with old age. See also **geriatrics**.

gestagen [*jes′tə-jen*] any hormone with progestational activity.

gestation [*jes-ta′shən*] the period of development of the young in viviparous animals, from the time of fertilization of the ovum to birth. See also **pregnancy**.

g. period the duration of pregnancy in the domestic animal species are: cow, 273–292 days (*Bos taurus*), 271–310 days (*Bos indicus*); mare, 333–346 days; South American camelids, 314–372 days, mean 345 days, longer in spring mated alpacas than in autumn mated; dromedary, 332–402 days, mean 377; ass, 365–375 days; ewe, 143–147 days (meat sheep), 147–155 days (Merino); goat doe, 146–155 days; sow, 111–116 days; bitch, 58–68 days; queen, 61–70 days. In laboratory and pocket pet animals: guinea pig, 59–72 days; gerbil, 24–26 days; ferret, 41–42 days; Syrian hamster, 15.5–16 days; mouse, 19–21 days; rat, 21–23 days; rabbit, 29–35 days.

perpetual g. chart a table based on the average gestation period of the particular species, e.g. 63 days for bitches, that plots the anticipated date of parturition against the breeding (conception) date. Designed to be independent of the year so it is valid indefinitely.

prolonged g. see **prolonged gestation**.

gestational [*jes-ta′shun-al*] pertaining to or emanating from gestation.

g. age the age of the fetus in terms of time lapse, e.g. three month fetus, or in terms of proportion of total gestational duration, e.g. first trimester fetus.

g. failure termination by fetal death and resorption, abortion, miscarriage.

minimum viable g. age the minimal gestational age at which the fetus can survive independently (horse, 300 days; cattle, 240 days; sheep, 138 days; pig, 108 days).

gestosis [*jes-to′sis*] any toxemic manifestation in pregnancy.

get the total offspring of an individual male; refers usually to a stallion.

Getah virus a member of the family *Togaviridae*, genus *Alphavirus*, transmitted by mosquitoes. It causes a highly infectious disease of horses manifested clinically by fever, mucosal exanthema and edema of the limbs.

GeV gigaelectron volt.

GFP green fluorescent protein.

GFR glomerular filtration rate.

GGT γ-glutamyltransferase.

GH growth hormone.

GH-RH growth hormone releasing hormone.

gharial see **gavial**.

gherkin ***Cucumis sativus***.

Ghon complex [*gon*] named after Anton Ghon, an Austrian pathologist (1866–1936). See primary **complex**.

ghost cell [*gōst*] 1. a very lightlty staining erythrocyte with little hemoglobin in the cytoplasm; occur in hemolytic anemias or as an artifact in making a blood smear. 2. see **shadow cell**.

ghost weed [*gōst*] ***Euphorbia marginata***.

ghrelin [*grel′in*] an eneteric peptide produced mainly in the fundus of the stomach; increases food intake.

GI gastrointestinal; globin (zinc) insulin.

giant breeds [*ji′ənt*] in dogs this includes the very largest breeds, generally in excess of 100 lb body weight, e.g. Great Dane, Irish wolfhound, Mastiff, Saint Bernard, Deerhound, Great Pyrenees and Borzoi. See also **dog**.

giant fennel [*ji′ənt*] ***Ferula communis***.

giant cell [*ji′ənt*] 1. very large cells in normal tissue, e.g. megakaryocytes in bone marrow. 2. multinucleate macrophages found around foreign bodies and in granulomas. Three variants of multinucleated giant cells are recognized—Langhans, Touton and foreign body. Differentiation is based on the distribution of their nuclei.

extraskeletal g. c. tumor see **malignant** fibrous histiocytoma.

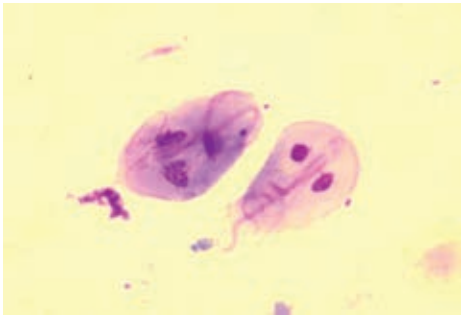
epidermal multinucleated g. c. found in viral infections and chronic, pruritic dermatoses characterized by epidermal hyperplasia or dyskeratosis.

giant-cell tumor 1. a rare bone tumor of dogs and cats with benign and malignant variants arising from primitive stromal elements of the bone marrow, composed of a spindle cell stroma containing multinucleated giant cells resembling osteoclasts. 2. carcinoma of the thyroid, a highly malignant undifferentiated neoplasm derived from poorly differentiated thyroid follicular cells. 3. giant cell epulis. See peripheral giant cell reparative **granuloma**.

giantism [*ji′ənt-iz-əm*] 1. gigantism. 2. excessive size, as of cells or nuclei.

fetal g. occurs in one of the inherited forms of **prolonged gestation** in cattle.

Giardia [*je-ahr′de-ə*] a genus of flagellate protozoa parasitic in the small intestines of most animals. They are capable of causing protracted, intermittent diarrhea suggestive of malabsorption, sometimes dysentery, but some infections may be nonsymptomatic. Different species and assemblages have been defined by molecular means. Presently includes *G. duodenalis*



G-7: Giemsa-stained fecal smear showing two *Giardia* trophozoites exhibiting the characteristic pear, or teardrop, shape with bilateral symmetry when viewed from the top, two nuclei, and fibrils running the length of the parasite.
From Bowman DD, Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

(syn. *G. intestinalis, G. lamblia*; including assemblages A–G) in a wide range of mammals, including humans (assemblages A and B); *G. agilis* in amphibians; *G. microti* and *G. muris* in rodents; *G. ardeae* in birds; *G. psittaci* in birds.

giardiasis [*je"ahr-di'ə-sis*] infection with ***Giardia*** protozoa. Infection in dogs and cats is common with subclinical to severe disease resulting. There may be profuse watery diarrhea with borborygmus. Chronic small bowel diarrhea can also result, with weight loss and signs of malabsorption. High individual and farm infection prevalence rates occur in the young of all agricultural animals but there is limited evidence for significant clinical disease. Transmission to humans can occur. Called also beaver fever, backpacker's dsease.

gibata ***Arrabidaea*** *bilabiata*.

Gibber Italicus a closely inbred Italian canary breed. It has a distinctive stance, erect with stiff legs and the head thrust forward, forming a figure seven. The plumage is scanty with frills on the shoulders, breast and flanks. The breast bone is exposed and the thighs largely unfeathered.

gibberellins tremorgen toxins produced by *Fusarium* spp.

gibbon member of the family Hylobatidae, the lesser apes, native to tropical areas of Southeast Asia and southern China. They are medium-sized and have very long arms and no tails.

Gibbose Espagnole a canary breed similar to the Gibber Italicus, with an even more exaggerated posture. The neck is very long and the head is held very low.

gibbosity [*gĭ-bos'ĭ-te*] the condition of being humped; kyphosis.

gibbous [*gib'əs*] humped; protuberant.

Gibbs–Donnan equilibrium [*gibz' don'ən*] see **Donnan's equilibrium**.

Gibbs–Donnan phenomenon [*gibz' don'ən*] see **Donnan's equilibrium**.

gibbus [*gib'əs*] a hump.

Giberella the fungal genus containing the sexually reproductive state of some *Fusarium* species.

Gibraltar fever see **brucellosis**.

gid [*gid*] see **coenurosis**.

false g. see ***Oestrus*** *ovis*.

Giemsa stain [*gēm'sə*] a solution containing azure II-eosin, azure II, glycerin and methanol; used for staining protozoan parasites, *Leptospira*, *Borrelia*, viral inclusion bodies and *Rickettsia*.

Gierke's disease, von Gierke's disease see **glycogenosis** type I.

gifappel ***Solanum*** *incanum*.

gifblaar fluoroacetate poisoning caused by the ingestion of *Dichapetalum* spp.

gifbossie ***Thesium*** *namaquense*.

gig see **sulky**.

giga- (G) [Gr.] *giant*; a prefix used in the metric system of measurement to designate an amount 10^9 (a thousand million) times the size of the unit to which it is joined, e.g. gigameter (10^9 meters).

gigantism [*ji-gan'tiz-əm, ji'gan-tiz-əm*] abnormal overgrowth of the body or a part; excessive size and stature. The condition results from overproduction of growth hormone before the epiphyseal plates have closed. The opposite condition, **dwarfism**, is caused by underproduction of the same hormone. Overproduction of growth hormone in adults causes **acromegaly**.

Gigantobilharzia a genus of blood flukes in the family Schistosomatidae which inhabit the blood vessels of their hosts. Found in birds.

G-8: Gigli wire saw and handles.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide. 2nd Edition. Mosby, 2011.

Gigantocotyle a genus of flukes (digenetic trematodes) in the family Paramphistomatidae.

G. explanatum found in the duodenum, bile ducts and gallbladder of cattle and buffalo.

Gigli wire saw [*jēl'ye*] a very strong wire saw used in orthopedics. Also suited to performing fetotomies on fetal calves and foals. Used to remove horns and digits in digital amputations in ruminants.

GIH growth hormone release inhibiting hormone; see **somatostatin**.

Gila monster (*Heloderma suspectum*) a poisonous, legged lizard, colored brown with orange spots and a skin covered with large beadlike tubercles. Venom injected by bites causes local pain and swelling that is soon followed by vomiting, shock and depression of the central nervous system, but is usually not fatal.

Gilbert's syndrome [*zhēl-bār'*] benign hereditary hyperbilirubinemia of humans marked by mild intermittent jaundice and often by fatigue, weakness and abdominal pain. A comparable disease has been identified in mutant Southdown sheep. See inherited **photosensitization**.

Gilchrist's disease [*gil'krist*] see North American **blastomycosis**.

gill [*gil*] external breathing apparatus of fish. Very susceptible to a wide range of diseases.

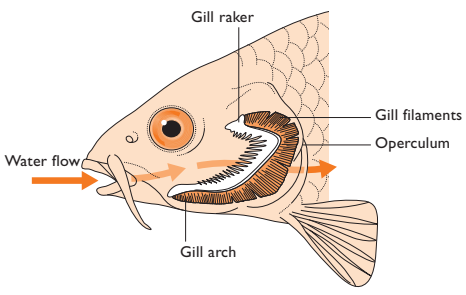
amebic g. disease caused by *Paramoeba* spp.; important disease in sea-caged salmonids; manifested by lethargy, flared opercula, rapid death; encouraged by high temperatures.

g.-associated virus member of the family *Roniviridae*, genus *Okavirus* that infects crustaceans, mostly prawns.

bacterial g. disease an infectious disease of aquarium and salmonid species of fish caused by *Flavobacterium bronchiophilum*. Also in *Crassostrea angulata* caused by an iridovirus and in larval shrimp caused usually by a *Leucothrix* spp. bacterium. Chronic, proliferative inflammation causes the gill filaments to be swollen and they may be clubbed or fused.

nutritional g. disease caused by a nutritional deficiency of pantothenic acid. The gills of affected fish hypertrophy, show

G-9: Gila monster.
From Cooper JE,Sainsbury AW, Exotic Species. Mosby, 1994.



G-10: Gill system of fish.
From Aspinall V, O'Reilly M, Introduction to Veterinary Anatomy and Physiology. Butterworth Heinemann, 2004.

clubbing and fuse together causing interference with gaseous exchange.

g. parasites the following external parasites are commonly found on the gills, and elsewhere on the skin, in aquarium fish: *Diplozoon barbi*, *D. paradoxum*—monogenetic flukes; *Ergasilus sieboldi*—crustaceans; *Gyrodactylus elegans*—a monogenetic fluke. Freshly caught seahorses may carry the crustacean *Argulus* spp. Pond fish may carry the anchor worm *Lernaea* spp. These are all visible with the naked eye and can be removed manually.

gill-flirter see **rectovaginal** fistula.

Gillies needle holder a needle holder with scissors incorporated into the blades.

gilt [*gilt*] a female breeding pig that has not yet had a litter of piglets.

g. anestrus failure of gilts to show the first estrus at a sufficiently early age. Being confined and with no boar in the environment plus failure of the attendant to recognize estrus behavior are significant contributors.

Gimenez stain a carbol fuschin stain, counterstained with malachite green, to demonstrate rickettsiae and chlamydia.

gimmer a ewe that has not yet borne a lamb.

ginger [*jin'jər*] produced from the rhizomes of *Zingiber officinale*; used as a carminative, stimulant and antiemetic.

gingering [*jin'jər-ing*] the practice of putting something irritating in the vagina of a mare at sale time to ginger her up; causes an elevation of the tail and a smarter appearance generally. In males the same effect may be attempted by putting the irritant in the rectum but the rapid evacuation from that site would reduce the severity of the irritation. Substances used are a clove of ginger or onion, pepper, etc. Done with some discretion it should not do a great deal of harm but would be considered to be an act of cruelty in any civilized community.

Gingin rickets see **enzootic** ataxia.

gingiva [*jin'jī-və, jin-ji'və*] pl. *gingivae* [L.] the gum.

attached g. tightly adherent to the periosteum of the alveolar process.

free g. the portion that surrounds the tooth and is not directly attached to the tooth surface. The margin forms the sulcus, an invagination between the tooth and the gingiva.

marginal g. free margin of the gingiva around the tooth.

gingival [*jin'jī-vəl*] pertaining to or emanating from the gum.

g. hypertrophy, g. hyperplasia general or local gingival overgrowth which may be severe enough to cover the crowns of the teeth and prevent the mouth from being closed. Common only in dogs and cats. May be localized to one or several teeth, resulting in discrete, tumorlike masses (epulis), or diffuse, affecting the gums at all teeth locations. The latter form is familial in Boxer dogs and inherited as a recessive trait in Swedish silver foxes.

g. index a graded assessment of gingival health used in periodontal charting.

g. line 1. a line determined by the level to which the gingiva extends on a tooth; called also gum line. 2. any linear mark visible on the surface of the gingiva.

g. pocket see **periodontal** pocket.

g. recession the free gingival margin may recede towards the tooth root in association with resorption of alveolar and supporting bone in periodontal disease in dogs and cats. The cemento-enamel junction and root surface become exposed contributing to progression of dental disease.

g. sulcus see gingival **sulcus**.

gingivalgia [*jin"jī-val'jə*] pain in the gingiva.

gingivectomy [*jin"jī-vek'tə-me*] surgical excision of all loose infected and diseased gingival tissue to eradicate periodontal infection and reduce the depth of the gingival sulcus.

gingivitis [*jin"jī-vi'tis*] a general term for inflammation of the gums, of which bleeding is one of the primary signs. Other signs include swelling, redness, pain and difficulty in chewing. There are numerous causes for this condition, and it can lead to a more serious disorder, **periodontitis**. One of the most common causes of gingivitis is the accumulation of food particles in the crevices between the gums and the teeth.

feline lymphocytic-plasmacytic g.–stomatitis a chronic inflammatory disease of the mouth in cats, characterized by proliferative and ulcerative lesions of the gums and palatine fossa. There is often anorexia, drooling, difficulty eating, pain on opening the mouth and a fetid odor to the breath. The underlying cause is often not known, but calicivirus is recovered from many and cellular infiltrates are consistent with an immune mediated reaction.

G-11: Gingivitis in a dog. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

necrotizing ulcerative g. a gingival infection marked by redness and swelling, necrosis, pain, hemorrhage, a necrotic odor and often a pseudomembrane. Extension to the oral mucosa is called necrotizing ulcerative gingivostomatitis.

gingiv(o)- word element. [L.] *gingival*.

gingivoglossitis [*jin"jī-vo-glos-i'tis*] inflammation of the gingiva and tongue.

gingivolabial [*jin"jī-vo-la'be-əl*] pertaining to the gums and lips.

gingivoplasty [*jin'jī-vo-plas"te*] surgical remodeling of the gingiva.

gingivosis [*jin"jī-vo'sis*] a chronic, diffuse inflammation of the gums, with desquamation of the papillary epithelium and mucous membrane.

gingivostomatitis [*jin"jī-vo-sto"mə-ti'tis*] inflammation of the gingiva and oral mucosa. Most commonly occurs in cats where there is focal or diffuse, chronic inflammation of the gingivae and oral mucosa; there is often a hyperglobulinemia. Oral inflammation is a common clinical feature of feline immunodeficiency virus infection, as well as feline calicivirus infection, but in many cases an underlying cause cannot be identified. See also feline lymphoctyic-plasmacytic **gingivitis**-stomatitis.

ginglymus [*jin'glī-məs*] a joint that allows movement in one plane, as does a door hinge; called also hinge joint.

ginseng [*jin'seng*] a mixture of saponins from the dried root of *Panax* sp; reputed to have a wide range of pharmacologic properties. Used variously as a stimulant, a sedative and to increase stamina and resistance to disease. Called also Ren Shen in Chinese herbal medicine.

GIP gastric inhibitory polypeptide.

gir cattle Indian, mottled red and white multi-purpose cattle.

giraffe (*Giraffa camelopardalis*) the long-necked ruminant member of the family Giraffidae which it shares with the okapi. Its horns are bony outgrowths covered with skin.

giraffid member of the Giraffidae family; includes giraffes and okapi.

girdle [*gur'dəl*] an encircling or confining structure.

pelvic g. the bony ring formed by the pair of hip bones fused at the symphysis and their firm articulation with the sacrum, and in some species one or two coccygeal vertebrae.

shoulder g. the incomplete bony ring made up of the scapulae, clavicles and coracoids (when present) sometimes incorporating the manubrium of the sternum. Called also pectoral or thoracic girdle.

Girella nigricans opal-eye fish, carrier of the SMSV-7 strain of the San Miguel sea lion virus, capable of producing lesions identical to those of vesicular exanthema disease when injected into pigs.

girth [*gurth*] 1. the greatest circumference of the chest in horses and dogs, just behind the withers, shoulder and elbow. 2. the leather strap that completes the enclosure of the horse's girth by the saddle and keeps the saddle in place. There are a multitude of patterns all designed to prevent slipping and avoid causing girth galls.

g. (2) gall a skin abrasion on the chest just behind the elbow of a horse caused by pressure or movement of the girth while being ridden. Caused by sharp edges of the girth, girth adjusted too tightly or too loosely or a poor conformation of the horse.

GIS geographic information system.
gitalin [*jit'ə-lin*] amorphous gitalin; a mixture of digitalis glycosides once used as a cardiotonic in congestive heart failure and cardiac arrhythmias.
githagenin a toxic saponin found in the plant *Agrostemma githago*.
gitoxigenin [*jī-tok'sī-jən-in*] a steroid aglycone, the hydrolysis product of gitoxin in the body.
gitoxin [*jī-tok'sin*] one of the cardiac glycosides of *Digitalis purpurea*.
giving set fluid administration apparatus, usually including the plastic bag containing the mixture to be infused and a long, flexible clear plastic tube to be connected to the needle or catheter. There is also usually a chamber built into the line where a pool of fluid collects and maintains a steady flow, free of air bubbles.
gizzard [*giz'ərd*] the muscular stomach of the bird, separated from the more cranial proventriculus or glandular stomach by a constriction. Called also ventriculus.
green g. gizzard stained by a dye used in feed wheat that makes it unsaleable as human food.
g. impaction can cause heavy mortality in young turkey poults; the gizzard is impacted with fibrous material, thought due to eating litter.
g. myopathy occurs as part of a vitamin E–selenium nutritional deficiency.
g. strongyles see **Amidostomum** *anseris*.
g. worms *Habronema incertum* causes sudden death or chronic watery diarrhea in companion birds.
gizzerosine toxic amino acid in heated fish meals that causes hemorrhage and erosions in the gizzard and proventriculus of poultry by enhancing gastric acid secretion.
glabrous [*gla'brəs*] smooth and bare.
gladdon ***Iris*** *foetidissima*.
Gladiolus [*glə-di'o-ləs*] a genus decorative floral plants in the family Iridaceae of which the corms may be poisonous, possibly through cardiac glycosides, and cause diarrhea. Called also gladiolus.
glairy [*glār'e*] slimy, resembling white of an egg.
gland [*gland*] an aggregation of cells specialized to secrete or excrete materials not related to their ordinary metabolic needs. Glands are divided into two main groups, endocrine and exocrine. Specific glands will be found under their individual names.
accessory genital g's glands other than the gonads, intimately associated with the reproductive organs, especially of the male, in which they include vesicular glands (seminal vesicles), ampullary glands, prostate, bulbourethral glands, coagulating glands. Called also **accessory** sex glands.
accessory sex g. see accessory genital glands (above).
acinous g. one made up of one or more oval or spherical sacs (acini).
alveolar g. one whose secretory units consist of saclike dilatations with a distinct lumen.
alveolar-tubular g. gland composed of a mixture of alveolar and tubular structures.
ampullary g. fusiform enlargement of the deferent duct, as it passes across the bladder wall, due to proliferation of glandular tissue in the regionally folded mucosa.
anal g's small glands in the anal columnar mucosal cells plus larger and more numerous circumanal glands in the surrounding skin.
apocrine g. one whose discharged secretion contains part of the secreting cells.
avian stomach g's mucosal and submucosal glands in the stomach of birds; the submucosal glands are thought to secrete both acidic and enzymic substances.
bronchial g's glands which contain a mixture of serous and mucus-secreting cells found in the bronchial mucosa.
buccal g's buccal salivary glands lying in the submucosal tissues of the cheek and sometimes the orbit and whose ducts secrete directly into the buccal cavity.
cardiac g. one of the three (the other two are the pyloric and proper gastric or fundic) types of gland in the stomach wall and capable of secretion into the gastric juices; this gland secretes only mucus.
carpal g's cutaneous, 'marking' glands found on the medial aspect of the carpus in the pig; although present in both sexes are thought to be used to mark mated females.
circumoral g's large glands in the lips of cats; used to mark territory either directly by the familiar fawning head rub, or indirectly by rubbing the secretion of the gland onto the fur during grooming.
ceruminous g's cerumin-secreting sebaceous glands in the skin of the external auditory canal.
compound g. one made up of a number of smaller units whose excretory ducts combine to form ducts of progressively higher order.
deep (lacrimal) g., g. of the third eyelid an additional lacrimal gland found in the mucous membrane covering the cartilaginous support of the third eyelid.
ductless g's endocrine glands.
eccrine g. a gland that secretes its product without loss of cytoplasm, such as the sweat glands on dog footpads or human skin.
endocrine g's or ductless glands, discharge their secretions (hormones) directly into the blood; they include the adrenal, pituitary, thyroid and parathyroid glands, the islets of Langerhans in the pancreas, the gonads and the pineal body.
exocrine g's discharge through ducts opening on an external or internal surface of the body; include the salivary, sebaceous and sweat glands, the liver, the gastric glands, the pancreas, the intestinal, mammary and lacrimal glands, and the prostate.
fundic g's, fundus g's numerous, tubular glands in the mucosa of the stomach that contain the cells which produce acid and pepsin. According to the species, they are usually found in the body and occasionally in the fundus.
gustatory g. branched, tubuloalveolar serous glands which open into large lingual papillae.
hematopoietic g. glandlike body, e.g. the spleen, that takes a part in blood formation.
hemolymph g. small node resembling lymph node but red or brown in color and containing blood sinuses instead of or alongside lymph spaces. Common in ruminants and some rodents and typically located along the large arteries. See **hemal** nodes.
Harderian g. see **Harderian gland**.
haversian g. fold on synovial surface regarded as secretor of synovia.
holocrine g. one whose discharged secretion contains the entire secreting cells as in sebaceous glands.
horn g. a scent gland found caudomedial to the horn base in goats of both sexes that increase in size and activity in breeding season. Produce the pungent secretion so characteristic of goats, described best as the distilled essence of reek.
infraorbital g's special sebaceous glands which line the infraorbital sinus (pouch) in sheep.
inguinal g's the collection of special tubular and sebaceous glands which line the inguinal pouch (sinus) in sheep.
interdigital g's special sebaceous and tubular glands in the interdigital sinus (pouch) in sheep.
intestinal g's microscopic tubular glands which lie in the mucosa of the gut and secrete intestinal juice into the lumen of the small intestine.
labial g's minor salivary glands; mucous in small ruminants, serous in others.
lateral nasal g's a local glandular thickening of the mucosa lining the maxillary sinus of dogs and some other species; this tissue is largely responsible for the continually wet nose of the dog and probably aids evaporative cooling in the panting dog.
lingual g. minor salivary glands, mixed serous and mucous in cattle and horses, mucous in sheep, cats, dogs.
lymph g's a misnomer for lymph nodes.
male sex g. see **testis**, accessory genital glands (above).
mammary g. the milk-secreting organ of female mammals, existing also in a rudimentary state in the male. See also **udder**, **breast**.
mandibular salivary g's major salivary glands; large and with long salivary ducts to deliver secretion into the mouth.
marrow-lymph g. a type of hemal node having marrow-like structure and assumed function.
meibomian g. see **tarsal** gland.
mental g. a focal specialization of glands in the skin of the pig, caudal to the mandibular symphysis. It is a round raised nevus-like structure composed of sebaceous and apocrine glands with coarse bristles.
merocrine g. one whose discharged secretion contains no part of the secreting cells.

mixed g's 1. seromucous glands. 2. glands that have both exocrine and endocrine portions.
molar salivary g. unique gland in felids; predominantly mucoid cells with a few serous.
Moll's g's, g's of Moll see **Moll's glands**.
multicellular g's glands which occur as sheets of epithelial cells with secretory function, e.g. gastric and intestinal mucosae.
multilobular proventricular g's in the glandular stomach of the bird these glands appear to secrete both pepsin and hydrochloric acid.
nasal g's small glands scattered throughout the nasal mucosa.
nasolabial g. see **nasolabial** gland.
olfactory g's seromucous glands located beneath the olfactory epithelium; their secretion keeps the local mucosa moist.
palatine salivary g. a minor salivary gland containing serous or mucoid or mixed secretory cells.
palpebral g. see tarsal gland (below), glands of Zeis (below) and Moll (above).
parotid salivary g. a major salivary gland usually containing serous secretory cells; in carnivores there may also be a few mucus-secreting cells. In dogs, its duct typically opens in the cheek near the fourth upper premolar tooth.
preen g. see uropygial gland (below).
preputial g's sebaceous and apocrine sweat glands within the prepuce; sometimes aggregated into discrete sacs (musk deer) or diverticula (pigs); their secretions combine with desquamated epithelial cells to produce smegma.
proctodaeal g's mucous glands containing lymphoid tissue located in the proctodeum of male and female birds.
proper gastric g. the main digestive glands of the stomach; found in different parts of the stomach in different species but usually in the body of the stomach; secrete pepsin and hydrochloric acid; open into microscopic pits and clefts.
scent g. secrete pheromones which play such a large part in olfactory communication between animals. Located in a variety of places, e.g. in the elephant they are behind the eyes, in the musk deer they are in the belly wall.
seminal g. see seminal **vesicle**.
sentinel g. an enlarged lymph node, considered to be pathognomonic of some pathological condition elsewhere. Better called sentinel node.
sex g's, sexual g's gonads. See **ovary**, **testis**.
shell g. the caudal portion of the uterus in the female bird in which the egg is held while the shell is secreted.
simple g. one with a nonbranching duct.
sine ductibus g. ductless gland.
solitary g's solitary lymphoid nodules.
sperm host g. in the vagina of birds; store and nourish visiting spermatozoa which are released when oviposition occurs.
splenolymph g's hemolymph glands having more of the splenic type of tissue.
sublingual salivary g. a major salivary gland; predominantly mucous cells in ruminants, swine, rodents; mixed serous and mucoid cells in small carnivores and horses.
submental g's a group of sebaceous glands in the intermandibular space in cats.
submucosal intestinal g's simple, branched, tubuloacinar glands; mucous in ruminants and dogs, mixed serous and mucous in cats and serous in horses and dogs; in carnivores and small ruminants confined to the proximal or middle parts of the duodenum, extend to jejunum in large ruminants, horses, pigs.
submucosal stomach g. large, numerous, branched, compound, tubular gland in birds; thought to secrete both acid and enzymatic products.
sudoriferous g's, sudoriparous g's sweat glands.
supracaudal g. scent producing cells found only in dogs and cats; in dogs confined to a small area at the base of the tail, in cats extend along the dorsal surface of most of the tail; called also tail gland.
suprarenal g. see **adrenal gland**.
tail g. see supracaudal gland (above).
target g. one specifically affected by a hormone.
tarsal g. sebaceous glands embedded in the tarsal plate of each eyelid which discharge their oily secretion at the posterior border of the lid and serve to prevent tears from spilling over the lid margins and also to contribute to the tear film itself. Called also meibomian gland.
third eyelid g. a secondary lacrimal gland; a second, deeper gland occurs in pigs and cattle.
tubular g. any gland made up of or containing a tubule or tubules.
ultimobranchial g. tissue from the fourth pharyngeal pouch which in mammals is absorbed into the thyroid gland. In fish, amphibians, reptiles and birds the tissue forms separate glands containing calcitonin.
unicellular g. a single cell that functions as a gland, e.g. a goblet cell.
urethral g's accessory sex glands in males; secrete serous and mucoid liquids into the urethra that may serve to cleanse the urethra of urine and to nourish and activate spermatozoa.
uropygial g. the oil or preen gland of birds is attached to the tail and consists of a bilobed simple tubular, holocrine gland.
vesicular g. see seminal **vesicle**.
vestibular g's major and minor mucus-producing glands in the vestibule of the vagina.
Wolfring g's small tubuloalveolar glands in subconjunctival tissue above the upper border of the tarsal plate; open onto conjunctiva.
g's of Zeis, Zeis g's prominent sebaceous sweat glands on the eyelid margins, associated with hair follicles of cilia. See also external **hordeolum**.
Zuckerkandl g. two small masses of chromaffin tissue found near the sympathetic ganglia along the abdominal aorta. Called also para-aortic bodies, corpora para-aortica.
zygomatic salivary g. a unique salivary gland in small carnivores; contains mainly mucous cells with a few serous cells; a modified dorsal buccal gland.

glanders [*glan'dərz*] a contagious disease of all solipeds caused by *Burkholderia (Pseudomonas) mallei* and transmissible to humans. It occurs in a chronic or acute form, both of which are inexorably fatal. It is characterized by the development of ulcers or nodules on the skin and in the respiratory tract. In the acute form the critical lesion is bronchopneumonia. A disease notifiable to the OIE (see Table 22). See also **farcy**.
glandilemma [*glan"dĭ-lem'ə*] the capsule or outer envelope of a gland.
glandula [*glan'du-lə*] pl. *glandulae* [L.] gland.
glandular [*glan'du-lər*] pertaining to or of the nature of a gland.
g. organs organs consisting principally of glands.
glandular therapy a form of traditional medicine in which purified extracts of animal glands or organs, administered orally, are used for a therapeutic effect on the corresponding organ or tissue of the patient. Called also tissue therapy, organotherapy and cell therapy.
glandule [*glan'dūl*] a small gland.
glans [*glanz*] pl. *glandes* [L.] a small, rounded mass or glandlike body.
g. clitoridis the erectile tissue on the free end of the clitoris.
g. penis the cap-shaped expansion of the corpus spongiosum at the end of the penis.

G-12: Uropygial gland of a barred owl (*Strix varia*). From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby 2008.

VetBooks.ir

glanular [*glan'u-lər*] pertaining to the glans penis or to the glans clitoris.

Glandularia aristigera weedy plant in the family Verbenaceae associated with probable primary photosensitization in sheep in Australia; unidentified toxin. Called also *Verbena tenuisecta*, Mayne's pest.

Glanzmann disease [*glahnts'mən*] named after Eduard Glanzmann, a Swiss pediatrician (1887–1959); thrombasthenia.

glargine see glargine **insulin**.

Glasgow Coma Scale [*glas'go*] clinical scoring system for assessing degree of consciousness in patients. The score varies from 3 (deep unconsciousness) to 15 (normal) and was originally developed to provide an objective assessment of brain function following head trauma. A modified Glasgow coma scale has also been used in dogs.

glass [*glas*] 1. a hard, brittle, often transparent material, usually consisting of the fused amorphous silicates of potassium or sodium, and of calcium, with silica in excess. 2. a container, usually cylindrical, made from glass.

g. embolism small particles of glass from a vial may be injected suspended in a fluid.

ground g. may be used in an attempt to poison animals maliciously but has little effect. May cause transient enteritis.

g. housing glass cover of the X-ray tube; contains the anode and cathode and the vacuum that makes generation and control of the X-ray beam possible.

soluble g. glass in which the magnesium and calcium content have been modified from that in normal glass so that it is much more soluble in water or ruminal contents. Used in the form of a reticular retention bolus as a vehicle for therapeutic agents such as antibiotics or anthelmintics which are delivered to the animal over a period of weeks or months.

glass-eye a lay term for **walleye** (3).

Glässer's disease a contagious disease of young pigs caused by *Haemophilus* spp. and occurring in outbreaks with an acute syndrome characterized by polyarthritis, pericarditis, pleurisy and peritonitis.

glassy membrane [*glas'e*] basement membrane in hair follicles, separating connective tissue and follicular epithelium.

Glauber's salt [*glou'ber*] sodium sulfate; used as a saline purgative.

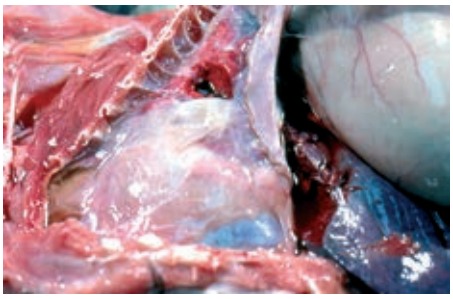
Glaucium corniculatum plant in the family Papaveraceae; may cause nitrate–nitrite poisoning.

glaucoma [*glaw-, glou-ko'mə*] a group of ocular diseases characterized by increased intraocular pressure, resulting in pathological changes in the retina and optic nerve and eventually blindness if not treated successfully. Occurs as a primary disease, where there is failure of aqueous humor outflow, or may occur secondary to other intraocular conditions such as acute or chronic anterior uveitis, intumescent cataract, aqueous misdirection, lens dislocation, intraocular mass, hyphema, iridocorneal neovascularization, etc. In domestic species, primary glaucoma is most common in dogs where several breeds are predisposed. Glaucoma in cats and horses is most commonly seen secondary to chronic anterior uveitis.

absolute g. end-stage glaucoma with buphthalmos and blindness due to marked retinal and optic nerve atrophy.

angle closure g. see closed-angle glaucoma (below).

aphakic g. form seen following surgical removal of the lens; may be caused by any combination of a number of mechanisms due to the original disease for which lensectomy was indicated, or sequelae to the surgery.



G-13: Postmortem of a pig with Glasser's disease showing serofibrinous pleuritis and peritonitis.

closed-angle g. a form of primary glaucoma in which the iridocorneal angle is bilaterally narrowed or obstructed (pectinate ligament dysplasia or **goniodysgenesis**). Other risk factors are assumed to be involved since the onset of signs is often delayed many years postnatally despite the congenital presence of the iridocorneal angle malformation. At least eight times more common dogs than is primary open-angle glaucoma.

congenital g. that present at birth due to defective development of the structures in and around the anterior chamber of the eye, and resulting in impairment of aqueous humor outflow.

narrow-angle g. see closed-angle glaucoma (above).

open-angle g. a form of glaucoma in which the iridocorneal angle is bilaterally open and unobstructed when viewed gonioscopically. Although there is no detectable abnormality of the iridocorneal angle, drainage is believed to be obstructed by glycosaminoglycan accumulation deep in the trabecular meshwork. Uncommon in dogs compared to closed-angle glaucoma. Predisposed breeds include Beagles and Norwegian elkhounds.

phacolytic g. leakage of lens material from a hypermature cataract causes anterior uveitis that impedes aqueous outflow.

phacomorphic g. glaucoma secondary to an intumescent cataract. As the lens swells, it causes pupillary block as well as displacing the iris forward and narrowing the iridocorneal angle. Intumescent cataracts also typically cause anterior uveitis which may hasten onset or progression of glaucoma.

primary g. one occurring in an eye with no other consistent or obvious antecedent ocular disease (such as uveitis, intumescent cataract, lens luxation or retinal detachment) that might have caused secondary glaucoma.

secondary g. one occurring in an eye with obvious antecedent primary ocular disease (such as uveitis, intumescent cataract, lens luxation, retinal detachment) known to cause glaucoma.

Glc glucose.

GLDH glutamate dehydrogenase.

Glechoma hederacea toxic plant in the family Lamiaceae; contains an unknown toxin which causes pulmonary edema and emphysema. Called also *Nepeta hederacea*, creeping charlie, ground ivy.

gleet [*glēt*] a chronic discharge, especially one that is mucoid or purulent, e.g. vent gleet of fowls, nasal gleet.

Glen of Imaal terrier a medium-sized, active dog with short bowed legs, broad head, folded ears, and a harsh, medium-length blue, brindle or wheaten coat.

glenohumeral [*gle"no-hu'mər-əl*] pertaining to the glenoid cavity and the humerus.

g. instability shoulder subluxation.

glenoid [*gle'noid, glen'oid*] resembling a pit or socket.

g. cavity the shallow depression in the ventral angle of the scapula for articulation with the head of the humerus.

g. cavity dysplasia may be a contributing cause of scapulohumeral luxations, particularly in small and toy breeds of dogs.

g. fossa the depression in the temporal bone which houses the condyle of the lower jaw; called also mandibular fossa.

g. lip a ring of fibrocartilage joined to the rim of the glenoid cavity. Called also glenoid labrum.

Gleotrichia see ***Gloeotrichia***.

GLEWS Global Early Warning and Response System for Major Animal Diseases, including Zoonoses

glia [*gli'ə*] neuroglia; the supporting cells of the central nervous system, made up of astrocytes, oligodendrocytes and microglia.

gliacyte [*gli'ə-sīt*] a cell of the glia or neuroglia.

glial [*gli'əl*] of or pertaining to glia or neuroglia.

g. limitans a dense network of glial processes at the pia mater.

g. nodule foci of microglia about degenerating neurons.

g. shrubbery an accumulation of glial nodules around degenerating Purkinje cells in the molecular layer of the cerebellum.

glibenclamide [*gli-ben'klə-mīd*] see **glyburide**.

glicentin [*gli-sen'tin*] a hormone, function unknown, in the intestinal wall of chickens.

glider [*gli'dər*] arboreal marsupial equipped with lateral skin folds connecting the fore and hindlimbs that allows them to glide from tree to tree; includes the sugar glider (*Petaurus breviceps*), feathertail glider (*Acrobates pygmaeus*).

glioblast [*gli'o-blast*] spongioblast.

glioblastoma [*gli"o-blas-to'mə*] an undifferentiated malignant astrocytoma.

g. multiforme the most malignant form of astrocytoma; in humans categorized by the World Health Orgnaization system of classification as a grade IV tumor.

Gliocladium a common fungal contaminant.

glioma [*gli-o'mə*] tumor proposed to arise from neuroglial cells, occurring predominantly in the brain or spinal cord. In dogs and cats, the most common reported gliomas are oligodendrogliomas and astrocytomas.

g. retinae see **retinoblastoma**.

gliomatosis [*gli"o-mə-to'sis*] excessive development of the neuroglia, especially of the spinal cord, in certain cases of syringomyelia.

gliosis [*gli-o'sis*] an excess of glial cells, usually focal, in damaged areas of the central nervous system.

glipizide [*glip'ĭ-zīd*] a second generation sulfonylurea derivative, used as an oral hypoglycemia agent in the treatment of diabetes mellitus, most commonly in cats.

Gliricola [*gli-rik'o-lə*] a genus of biting lice of the suborder Amblycera.

G. pistoi found on New World primates.

G. porcelli found on guinea pigs and rodents.

Glischrocaryon genus of Australian plants in the Haloragidaceae family; contains cyanogenetic glucosides. Includes *G. aureum*, *G. roei*. Called also *Loudonia* spp., yellow pop flower.

glissonian pertaining to the capsule of the liver—Glisson's capsule, e.g. glissonian cirrhosis.

glissonitis [*glis"o-ni'tis*] inflammation of Glisson's capsule.

Glisson's capsule [*glis'ən*] the connective tissue sheath enclosing the outer surface of the liver that is continuous internally with the connective tissue enclosing the hepatic artery, hepatic duct and portal vein. In pigs it is continuous with the septa that divide the parenchyma into lobules.

Gln glutamine.

Global Early Warning and Response System for Major Animal Diseases, including Zoonoses (GLEWS) a joint FAO, OIE and WHO program that aims at improving global early warning of important diseases through sharing its complementary and overlapping sources of information and avoiding duplication of efforts. In dealing with zoonoses, it proposes a shift from independence to interdependence of the involved agencies and professions.

Global Positioning System (GPS) a constellation of 31 satellites orbiting the earth at a very high altitude that transmit signals that can be recognized by GPS receivers on earth. A GPS receiver contains a computer that 'triangulates' its own position by getting bearings from at least three satellites and establishes its longitude, latitude and, with four or more satellite receptions, its vertical position. Used to determine point locations, boundaries, movement of animals or vehicles or for any appliction where precise positioning is necessary. WGS-84 (World Geodetic System 1984) is the mathematical ellipsoid used by GPS since 1987.

globe [*glōb*] see **globus**.

optic g. see **eye**.

globeflower [*glōb'flou"ər*] see ***Trollius europaeus***.

globi [*glo'bi*] plural of *globus*.

globidiosis [*glo-bid"e-o'sis*] a name formerly given to a disease thought to be caused by ***Globidium***. Abomasal and cutaneous forms were described. These are now classified as ***Eimeria*** and ***Besnoitia*** respectively.

Globidium [*glo-bid'e-əm*] a poorly defined genus of protozoa; nowadays classified as ***Eimeria***.

G. gilruthi in goats, sheep.

G. leuckarti infestation with this parasite may cause diarrhea, but is not considered pathogenic. Called also *Eimeria leuckarti*.

globin [*glo'bin*] the protein constituent of hemoglobin; also, any member of a group of proteins similar to the typical globin.

Globocephaloides a genus of nematodes in the trichostrongyloid family Herpetostrongyloidae.

G. trifidospicularis a blood-sucking parasite in the small intestine of the gray kangaroo, *Macropus giganteus*.

Globocephalus [*glo"bo-sef'ə-lus*] a genus of blood-sucking nematodes in the subfamily Ancylostominae; occur in the intestine of pigs and probably cause anemia if the infestation is heavy. Includes *G. longemucronatus*, *G. samoensis*, *G. urosubulatus* and *G. versteri*.

globoid cell leukodystrophy [*glo'boid*] see globoid cell **leukodystrophy**.

globular [*glob'u-lər*] resembling a globe.

g. heart a spherical cardiac silhouette, usually greatly enlarged and lacking the detailed outline of the right and left atria and apex. Characteristic of pericardial effusion and cardiomyopathy.

g. nematode see ***Tetrameres*** *americana*.

globule [*glob'ūl*] a small spherical mass; a little globe or pellet, as of medicine.

g. leukocyte mononuclear cell with large eosinophilic cytoplasmic granules found in the intestinal epithelium.

Morgagnian g. proteinaceous globule produced from the degeneration of optic lens fibers.

globulin [*glob'u-lin*] a general term for proteins that are insoluble in water or highly concentrated salt solutions but soluble in moderately concentrated salt solutions. All plasma proteins except albumin and prealbumin are globulins. The plasma globulins can be separated into five fractions by serum protein electrophoresis (SPE). In order of decreasing electrophoretic mobility these fractions are the $alpha_1$, $alpha_2$, $beta_1$ and $beta_2$, and gamma globulins. The globulins include carrier proteins, which transport specific substances; acute phase reactants, which are involved in the inflammatory process; clotting factors; complement components; and immunoglobulins. Examples are transferrin, a $beta_1$ globulin that transports iron, and $alpha_1$-antitrypsin, an acute phase reactant that inhibits serum proteases. The gamma globulin fraction is almost entirely composed of immunoglobulins.

accelerator g. a substance present in plasma, but not in serum, that functions in the formation of intrinsic and extrinsic thromboplastin; called also **clotting** factor V.

antihemophilic g. (AHG) **clotting** factor VIII.

antilymphocyte g. (ALG) an antiserum used as an immunosuppressive agent in organ transplantation, usually in combination with immunosuppressive drugs; it is the gamma globulin fraction of **antilymphocyte serum**.

gamma g. a class of plasma proteins composed almost entirely of **immunoglobulins**, the proteins that function as antibodies. Gamma globulins, immunoglobulins, antibodies and antiserum are often used synonomously and interchangeably. See also **antibody**. Commercial preparations of gamma globulin are derived from blood serum of several species and are used for prevention, modification and treatment of various infectious diseases. This type of gamma globulin, which is an immune serum, contains a wide range of antibodies, depending on its method of production, and it provides passive immunity for several weeks. In cattle, its most common use is in the newborn orphan which receives no colostrum. In dogs and cats, it has been used in the prophylaxis, and occasionally treatment, of viral infections. The production of gamma globulin may be increased in the body by the invasion of harmful microorganisms. An abnormal amount of gamma globulin in the blood, a condition known as hypergammaglobulinemia, may be indicative of a chronic infection or certain malignant blood diseases. There is also a rare inherited condition, agammaglobinemia, in which the body is unable to produce gamma globulin. Animals suffering from this condition are extremely susceptible to infection.

immune g. a sterile solution containing antibodies normally present in blood, derived from donor animals, sometimes after immunization with certain microorganisms; used for passive immunization against some infectious diseases and in the treatment of gamma globulin deficiency.

serum g. the fraction of proteins precipitated from blood serum by half saturation with ammonium sulfate; the principal groups include the α-, β- and γ-globulins.

globulinuria [*glob"u-lĭ-nu're-ə*] the presence of globulins in the urine.

globus [*glo'bəs*] pl. *globi* [L.] a sphere or ball; a spherical mass.

g. pallidus the smaller and more medial part of the lentiform nucleus of the brain.

Gloeotrichia [*glo"e-o-trik'e-ə*] a genus of Cyanobacteria including toxic species which contain microcystins.

glomangioma [*glo-man"je-o'mə*] a painful, benign tumor developing as a result of hypertrophy of a **glomus**.

glomectomy [*glo-mek'tə-mē*] excision of a glomus.

glomera [*glom'ər-ə*] plural of *glomus*.

glomerular [*glo-mer'u-lər*] pertaining to or of the nature of a glomerulus, especially a renal glomerulus.

g. basement membrane the structure located between endothelial cells of renal capillaries and the visceral epithelial cells of the

glomerulus. It functions as a barrier to filtration of large molecules.

g. capsule the expanded beginning of a nephron; the inner, visceral layer consists of cells called podocytes that surround a tuft of capillaries (the glomerulus), while the outer, parietal layer is a simple squamous epithelium; called also Bowman's capsule, Malphighian capsule.

g. crescent see glomerular **crescent**.

g. diseases see **glomerulonephritis**, **glomerulonephropathy**, **glomerulopathy**.

g. filtrate the acellular low-protein ultrafiltrate of plasma that passes the glomerulus.

g. filtration see **glomerulus**.

g. filtration rate (GFR) the rate at which fluid is filtered by the renal glomerulus; an indicator of renal function. Various methods are used for measuring or estimating GFR in dogs and cats, including urinary clearance of **inulin**, or plasma clearance of radionucleides, the radiographic contrast agent, iohexol, or creatinine, the most commonly used marker.

g. lipidosis characterized by the presence of large foam cells in glomerular tufts in dogs. They appear to have no disease significance.

g. permeability in normal subjects the capillary endothelium of the glomerulus, by virtue of its fenestration, is permeable to all blood constituents except blood cells and colloids so that the glomerular filtrate has a close similarity to plasma and interstitial fluid but has a lower protein concentration than both of them.

glomeruli [*glo-mer'u-li*] plural of *glomerulus*.

glomerulitis [*glo-mer"u-li'tis*] inflammation of the glomeruli of the kidney.

glomerulocystic disease [*glo-mer"u-lo-sis'tik*] a disease of newborn animals characterized by minute cysts present in Bowman's capsules. In puppies they may be the cause of uremia; in foals their pathogenesis is unknown and their significance appears to be nil.

glomerulonephritis [*glo-mer"u-lo-nə-fri'tis*] a variety of **nephritis** characterized by inflammation of the capillary loops in the glomeruli of the kidney with secondary tubulointerstitial and vascular changes. It occurs in acute, subacute and chronic forms and may be secondary to infection or immune mechanisms.

familial g. of Doberman pinschers characterized by development of signs in dogs less than a year old but cases may survive for some years; the histopathological lesion is a membranoproliferative glomerulonephritis.

immune-mediated g. caused by deposition of immune complexes on the glomerular basement membrane or autoantibodies against the glomerular basement membrane.

lobular g. a form in which all glomeruli are affected, with accentuation of the lobulation of the glomerular tufts; it is marked by constant proteinuria and microscopic hematuria.

membranoproliferative g., mesangiocapillary g. a chronic, slowly progressive glomerulonephritis in which the glomeruli are enlarged as a result of proliferation of mesangial cells and irregular thickening of the capillary walls, which narrows the capillary lumina; the onset is sudden, with hematuria, proteinuria or nephrotic syndrome and a persistent reduction in serum complement concentrations and deposition of activated complement components in the glomerular capillaries. Occurs in Finnish-Landrace sheep and is the most common glomerulopathy seen in different breeds of dogs.

membranous g. diffuse and irregular thickening of the basement membrane where there is diffuse granular deposition of immunoglobulin and complement. The most common type of glomerular disease in cats. See also immune-mediated glomerulonephritis (above).

mesangioproliferative g. see membranoproliferative glomerulonephritis (above).

proliferative g. glomerular changes are principally those of cellular proliferation.

glomerulonephropathy [*glo-mer"u-lo-nə-frop'ə-the*] any noninflammatory disease of the renal glomeruli with secondary changes in the rest of the renal parenchyma.

glomerulopathy [*glo-mer"u-lop'ə-the*] any disease, especially any noninflammatory disease, of the renal glomeruli.

Finnish-Landrace g. see membranoproliferative **glomerulonephritis**.

Samoyed hereditary g. inherited as an X-linked dominant trait it affects males more severely and earlier than females with death at an early age; wasting and proteinuria are characteristic.

glomerulopressin hepatic-derived renal vasodilator.

glomerulosa the outer layer of the adrenal cortex, the zona glomerulosa.

glomerulosclerosis [*glo-mer"u-lo-sklə-ro'sis*] progressive hyalinization such that glomeruli become shrunken, eosinophilic and hypocellular masses.

intercapillary g. see **Kimmelstiel–Wilson syndrome**.

glomerulotubular [*glo-mer"u-lo-too'bu-lər*] pertaining to the glomeruli and the tubules.

g. imbalance when the rate of tubular resorption does not balance the glomerular filtration rate, so that there is polyuria or oliguria and possibly electrolyte loss.

glomerulus [*glo-mer'u-ləs*] pl. *glomeruli* [L.] a small tuft or cluster.

cerebellar g. termination sites for dendrites and axons of cerebellar and medullary and spinal nerve fibers.

olfactory g. termination points of olfactory nerves in the olfactory lobes.

renal g. a small convoluted mass of capillaries, a network of vascular tufts, encased in the malpighian or Bowman's capsule. The glomerulus is an integral part of the **nephron**, the basic unit of the **kidney**. Each nephron is capable of forming urine by itself, and each kidney has many nephrons. The specific function of each glomerulus is to bring blood (and the waste products it carries) to the nephron. As the blood flows through the glomerulus, about one-fifth of the plasma passes through the glomerular membrane, collects in the malpighian capsule, and then flows through the renal tubules. Much of this fluid passes back into the blood via the small capillaries around the tubules (peritubular capillaries). The continuous filtration of fluid from the glomeruli and its reabsorption into the peritubular capillaries is made possible by a high pressure in the glomerular capillary bed and a low pressure in the peritubular bed. Any disease of the glomeruli, such as acute or chronic glomerulonephritis, must be considered serious because it interferes with the basic functions of the kidneys; that is, filtration of liquids and excretion of certain end products of metabolism and excess sodium, potassium and chloride ions that may accumulate in the blood.

glomoid [*glo'moid*] resembling a glomus.

glomus [*glo'məs*] pl. *glomera* [L.] a small histologically recognizable body composed primarily of fine arterioles connecting directly with veins, and having a rich nerve supply.

g. caroticum a small sensory body located just cranial to the bifurcation of the common carotid artery on each side. It receives fibers from the glossopharyngeal nerve and is a chemoreceptor organ sensitive to excess carbon dioxide, reduced oxygen and increased hydrogen ion concentration. Called also carotid body.

g. cell a specialized cell of the carotid body.

g. choroideum an enlargement of the choroid plexus of the lateral ventricle.

g. tumor neoplasm of one of the chemoreceptors. Tumors of the glomus jugulare have been reported in a dog.

Gloriosa genus of garden plant of the family Liliaceae; contains a colchicine-like toxin which causes excitement, diarrhea and alopecia. Includes *G. carsoni*, *G. simplex*, *G. superba*. Called also glory lily, flame lily.

glossal [*glos'əl*] pertaining to the tongue.

glossalgia [*glos-al'jə*] pain in the tongue.

glossectomy [*glos-ek'tə-me*] excision of all or a portion of the tongue.

Glossina [*glŏ-si'nə*] a genus of biting flies in the family Glossinidae. It includes the tsetse flies, which serve as vectors of trypanosomes causing various forms of **trypanosomiasis** in humans and animals. Listed species of tsetse flies are *G. brevipalpis*, *G. fusca* (forest tsetse), *G. longipalpis*, *G. morsitans* (savannah tsetse), *G. pallidipes*, *G. palpalis* (riverine tsetse), *G. tachinoides*.

glossitis [*glos-i'tis*] inflammation of the tongue.

foreign body g. due to penetration or laceration by a foreign body.

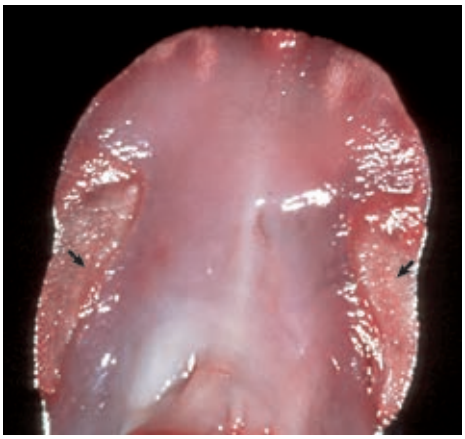
gloss(o)- word element. [Gr.] *tongue*.

glossocele [*glos'o-sēl*] swelling and protrusion of the tongue.

glossodynia [*glos"o-din'e-ə*] pain in the tongue.

glossology [*glos-ol'ə-je*] 1. the sum of knowledge regarding the tongue. 2. a treatise on nomenclature.

VetBooks.ir



G-14: Ulcerative glossitis in a uremic cat. Bilaterally symmetrical ulcers (arrows) are present on the rostrolateral borders of the ventral surface of the tongue.
From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

VetBooks.ir

G

glossopathy [*glos-op'ə-the*] any disease of the tongue.

glossopharyngeal [*glos"o-fə-rin'je-əl*] pertaining to the tongue and pharynx.

g. nerve the ninth cranial nerve; it supplies the carotid sinus, mucous membrane, muscles of the pharynx, soft palate and caudal part of the tongue, and the taste buds in the caudal part of the tongue. By serving the carotid sinus, the glossopharyngeal nerve provides for reflex control of the heart. It is also responsible for the swallowing reflex, for stimulating secretions of the parotid glands, and for the sense of taste in the caudal part of the tongue. Lesions of the nerve cause dysphagia or inability to swallow, regurgitation through the nostrils and sometimes abnormality of the voice and interference with respiration. See also Table 14.

glossoplasty [*glos'o-plas"te*] plastic surgery of the tongue.

glossoplegia [*glos"o-ple'jə*] paralysis of the tongue.

glossorrhaphy [*glos-or'ə-fe*] suture of the tongue.

glossospasm [*glos'o-spaz"əm*] spasm of the tongue.

glossotomy [*glos-ot'ə-me*] incision of the tongue.

glossotrichia [*glos"o-trik'e-ə*] hairy tongue; elongation of papillae because of improper keratinization or desquamation of epithelial cells.

Gloster fancy a recently developed, very popular canary. The breed occurs in a crested variety, known as Corona, and a plain, smooth head variety, called Consort.

glottic [*glot'ik*] pertaining to (1) the glottis, or (2) the tongue.

g. stenosis see **laryngeal** stenosis.

Glottidium vesicarium ***Sesbania*** *vesicaria*.

glottis [*glot'is*] pl. *glottides* [Gr.] the vocal apparatus of the larynx, consisting of the true vocal cords (vocal folds) and the opening between them.

g. stenosis may follow trauma, including tissue damage associated with use of an endotracheal tube, and leads to the formation of granulation tissue, scarring and laryngeal stenosis.

Gloucester Old Spot pig rare, black and white, spotted meat pig from UK; almost extinct.

glove a covering garment for the hand with a separate sheath for each finger.

lead g. for protection of the animal holder during radiography. Fabric gloves lined with thin lead/rubber sheet with a minimum lead equivalent of 0.25 mm.

g. powders are used to assist in the wearing of surgical gloves but materials used may cause foreign body reactions in tissues. For this reason talcum powder has largely been replaced by less irritating corn starch and rice starch.

surgical g. latex rubber, sterilized or capable of sterilization, thin enough not to interfere with touch sensation or digital dexterity, disposable or reusable.

Glover bulldog clamp for temporary occlusion of vascular structures, this type of clamp has a tension-adjusting screw so pressure can be controlled.

gloving the procedure of donning sterile rubber gloves, in such a way as to preserve asepsis of the operator, before each surgical procedure.

assisted g. a gowned, sterile assistant holds the gloves open to allow the surgeon to insert their hands.

closed g. working from within the cuffs of the surgical gown the hands never touch the outside of the gown or gloves.

open g. the surgeon's hands touch only the interior surface of the gloves, including that on the folded over cuff.

gloxazone [*glok'sə-zōn*] a dithiosemicarbazone used as an anaplasmacide in cattle.

GLP **Good Laboratory Practice**.

Glu glutamate.

glucagon [*gloo'kə-gon*] a polypeptide hormone secreted by the alpha cells of the islets of Langerhans in response to hypoglycemia or to stimulation by growth hormone. It increases blood glucose concentration by stimulating glycogenolysis in the liver and is administered to relieve hypoglycemic coma from any cause, especially hyperinsulinism.

g. diabetes glucagon elevates blood glucose concentrations and may contribute to the severity of diabetes if there is already an insulin deficit but it is not necessary to, nor sufficient for, the development of diabetes.

g. stimulation test a provocative test of growth hormone (GH) function in which the fasting serum concentration of GH is measured before and after administration of glucagon.

g. tolerance test evaluates the insulin response to elevation of blood glucose induced by administration of glucagon. Used in diagnosing hyperinsulinism.

glucagonoma [*gloo"kə-gon-o'mə*] a glucagon-secreting tumor of the alpha cells of the islets of Langerhans.

gluc(o)- word element. [Gr.] *sweetness, glucose;* see also words beginning *glyco-*.

glucoamylase [*gloo"ko-am'ə-lās*] see **amylase**.

β-glucocerebrosidase [*gloo"ko-ser"ə-bro-si'dās*] an enzyme that catalyzes the hydrolytic cleavage of glucose from glucocerebroside. A deficiency results in accumulation of glucocerebroside in tissues (**Gaucher's disease**). Called also glucosylceramidase, cerebroside β-glucosidase.

glucocerebroside [*gloo"ko-sə-re'bro-sīd"*] a cerebroside containing a glucose sugar; it accumulates in the tissues in **Gaucher's disease** (glucocerebrosidosis).

glucocerebrosidosis [*gloo"ko-ser"ə-bro"sĭ-do'sis*] see **Gaucher's disease**.

glucocorticoid [*gloo"ko-kor'tĭ-koid*] any corticoid substance that increases gluconeogenesis, raising the concentration of liver glycogen and blood sugar, i.e. cortisol (hydrocortisone), cortisone and corticosterone. These substances are widely used as anti-inflammatory agents; they are effective at terminating pregnancy if it is in the late stages and they are used as a management tool in cattle for that purpose.

glucocorticosteroid [*gloo"ko-kor"tĭ-ko-ster'oid*] glucocorticoid.

glucofuranose [*gloo"ko-fu'rə-nōs*] a form of glucose in which carbon atoms 1 and 4 are bridged by an oxygen atom.

glucogenesis [*gloo"ko-jen'ə-sis*] the formation of glucose by the breakdown of glycogen.

glucogenic [*gloo"ko-jen'ik*] giving rise to or producing glucose.

glucokinase [*gloo"ko-ki'nās*] an enzyme that in the presence of ATP catalyzes the conversion of glucose to glucose-6-phosphate.

glucokinetic [*gloo"ko-kĭ-net'ik*] mobilizing glucose so as to maintain its concentration in the body.

gluconate [*gloo'ko-nāt*] the salts of gluconic acid; used as alkalinizing agents in fluid therapy. They have the virtue of being metabolized to bicarbonate slowly and having a prolonged effect.

gluconeogenesis [*gloo"ko-ne"o-jen'ə-sis*] the synthesis of glucose from noncarbohydrate sources, such as lactate, glucogenic amino acids, propionate and glycerol. It occurs primarily in the liver and kidneys whenever the supply of carbohydrates is insufficient to meet the body's metabolic demands or in the rumen by the action of bacteria in well-fed ruminants. Gluconeogenesis is stimulated by glucagon and cortisol and other **glucocorticoids**. Formerly called glyconeogenesis.

gluconeogenic [*gloo"ko-ne"o-jən'ik*] pertaining to gluconeogenesis.

glucophore [*gloo'ko-for*] the group of atoms in a molecule that gives the compound a sweet taste.

glucoprivation [*gloo"ko-prī-va'shən*] a lack of utilizable glucose.

glucopyranose [*gloo"ko-pir'ə-nōs*] the principal form of glucose in which carbon atoms 1 and 5 are bridged by an oxygen atom.

glucosamine [*gloo-kōs'ə-mēn*] an amino derivative of glucose occurring in many glycoproteins and mucopolysaccharides. A precursor for glycosaminoglycans, which are a major component of

articular cartilage. Used in various combinations, particularly with chondroitin sulfate, for oral medication of small animals, or included in feed supplements as either the hydrochloride or sulfate salt as a nutraceutical for osteoarthritis.

***N*-acetyl-β-glucosaminidase** enzyme that contributes to the hydrolysis of connective tissue GAGs.

glucose, D-glucose [*gloo'kōs*] a simple sugar, a monosaccharide in certain foodstuffs, especially fruit, and in normal blood; the major source of energy for many living organisms. See also **dextrose**. Glucose, whose molecular formula is $C_6H_{12}O_6$, is the end product of carbohydrate digestion; other monosaccharides (fructose and galactose) are largely converted into glucose. Glucose is the only monosaccharide present in significant amounts in the body fluids. The oxidation of glucose produces energy for the body cells; the rate of metabolism is controlled by a number of hormones the most important of which are insulin and glucagon. Glucose that is not needed for energy is stored in the form of glycogen as a source of potential energy, readily available when needed. Most of the glycogen is stored in the liver and muscle cells. When these and other body cells are saturated with glycogen, the excess glucose is converted into fat and stored as adipose tissue. See also **hypoglycemia**, **hyperglycemia**.

[1-^{14}C]-g. radioactive glucose used experimentally.

g. absorption test oral administration of glucose, followed by multiple, timed blood samples to determination the blood glucose concentrations, tests the capacity of mucosa in the duodenum and proximal jejunium to absorb monosaccharides. Used mainly in horses.

g. curve a graphic display of serial blood glucose concentrations, usually taken every 2 hours, over a 12-hour period. A means of evaluating control of blood glucose in the management of diabetes mellitus. Of particular interest are the maximum and minimum concentrations and the duration of effect after insulin is administered. Useful in establishing the optimal dose and frequency of administration of insulin.

liquid g. a thick syrupy, sweet liquid, consisting chiefly of dextrose, with dextrins, maltose and water, obtained by incomplete hydrolysis of starch; used as a flavoring agent, as a food.

g.-1-phosphate an intermediate in carbohydrate metabolism.

g.-6-phosphatase a liver (and kidney) enzyme that irreversibly cleaves glucose-6-phosphate to free glucose and phosphate; important in glucose homeostasis.

g.-6-phosphate an intermediate in carbohydrate metabolism.

g.-6-phosphate dehydrogenase (G6PD) a regulatory enzyme in the metabolism of pentose phosphate pathway that converts glucose-6-phosphate into 6-phosphogluconolactone. A deficiency of the enzyme in the erythrocyte results in a hemolytic anemia; an inherited abnormality in humans, rats and mice and acquired in animals in phenothiazine toxicity and ingestion of kale.

g. -6-phosphate isomerase converts glucose-6-phosphate to fructose-6-phosphate in the second step of glycolysis and the reverse reaction.

g. suppression test suppression of blood concentrations of growth hormone by the intravenous administration of glucose is used to diagnose acromegaly.

g. tolerance factor (GTF) a naturally occurring substance containing chromium which potentiates the effects of insulin.

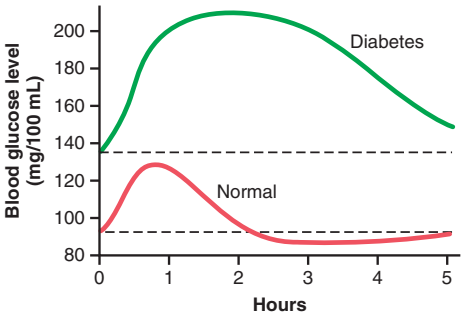
g. tolerance test a test of the body's ability to utilize carbohydrates. It is often used to detect abnormalities of carbohydrate metabolism such as occur in diabetes mellitus, hypoglycemia, and liver and adrenocortical dysfunction. Glucose is administered orally or intravenously, serial blood samples are collected for glucose analysis and the results plotted to demonstrate the peak concentration and rate of decline. If administered orally, it may also be used to assess the absorptive capacity of the small intestine.

true g. reducing substances in the blood less aldose sugars, galactose, mannose.

glucosidase [*gloo-ko'sĭ-dās*] an enzyme of the hydrolase class that cleaves the glucosidic bond between two glucose molecules, occurring as α-, β- and α-1,3-glucosidase; α-glucosidase (maltase) occurs in intestinal juice, and β-glucosidase (cellobiase) in the kidney, liver and intestinal mucosa.

1,6-glucosidase [*gloo-ko'sĭ-dās*] an intestinal mucosal digestive enzyme concerned in the digestion of 1,6-glucosides.

α-glucosidase deficiency [*gloo-ko'sĭ-dās*] see **glycoproteinosis**.



G-15: Glucose tolerance curve.
From Hall J, Guyton and Hall Textbook of Medical Physiology, 12th Edition. Saunders, 2010.

glucosidic [*gloo"ko-sid'ik*] pertaining to glucoside.

glucosinolates glycosides of β-D-thioglucose in the family Brassicaceae including *Brassica* spp. crops; they are degraded in the rumen to thiocyanates which may cause congenital goiter by interfering with the absorption of iodine, rumenitis, and interstitial pneumonia in cattle. They may be important in perosis and fatty hemorrhagic liver syndromes of poultry.

glucosteroid [*gloo"ko-ster'oid*] glucocorticoid.

glucosuria [*gloo"ko-su're-ə*] the presence of glucose in the urine. Glucose is filtered through the glomerulus, but normally resorbed in the proximal renal tubules. Glucosuria occurs when the blood glucose concentration exceeds the capacity for resorption or renal tubular resorption is impaired, either from renal failure or congenital tubular dysfunction. Glucosuria should be interpreted in conjunction with blood glucose concentration. See also **Fanconi syndrome**.

glucosylceramidase [*gloo"ko-səl-sə-ram'ĭ-dās*] see **β-glucocerebrosidase**.

glucosylceramidosis glucocerebrosidosis. See **Gaucher's disease**.

glucuronate pathway [*gloo-ku'ro-nāt*] one of the alternatives to the Embden–Meyerhof pathway of glycolysis for the oxidation of glucose-6-phosphate which does not lead to the formation of ATP. See also the pentose phosphate **pathway**.

glucuronic acid [*gloo"ku-ron'ik*] a uronic acid formed by oxidation of C-6 of glucose to a carboxy group; it occurs in proteoglycans (mucopolysaccharides), and is conjugated in the liver with many natural and foreign compounds or their metabolites, forming glucuronides, which are excreted in the urine.

g. a. pathway see **glucuronate pathway**.

β-glucuronidase [*gloo"ku-ron'ĭ-dās*] an enzyme which attacks glycosidic linkages in natural and synthetic glucuronides; occurs in the spleen, liver and endocrine glands.

g. deficiency is the basis for **mucopolysaccharidosis** type VII in humans, dogs and inbred mice.

glucuronide [*gloo"ku-ron'īd*] any glycosidic conjugate of glucuronic acid; glucuronides, which are generally inactive, constitute the major proportion of the metabolites of many phenols, alcohols and carboxylic acids.

Glugea [*gloo'je-ə*] a genus in the phylum Microsporea, which are spore-forming unicellular parasites. Found in the tissues of fish. They cause large cysts, called glugea-cysts or xenomas, which result in deformity or intestinal obstruction. Includes *G. anomala*, *G. hertwigi* and *G. stephani*.

glutamate (Glu) [*gloo'tə-māt*] the anionic form of glutamic acid; in biochemistry, the term is often used interchangeably with glutamic acid.

g. dehydrogenase (GLDH, GMD, GD) see glutamate **dehydrogenase**.

glutamic acid [*gloo-tam'ik*] a dibasic nonessential amino acid occurring in proteins. It is also an inhibitory neurotransmitter in the central nervous system. Its hydrochloride salt is used as a gastric acidifier. The monosodium salt (sodium glutamate; SMG) is used in treating encephalopathies associated with hepatic disease, and to enhance the flavor of foods and tobacco.

glutamic-oxaloacetic transaminase (GOT) [*gloo-tam'ik oks"ə-lo-ə-se'tik trans-am'ĭ-nās*] see **aspartate aminotransferase**.

glutamic-pyruvic transaminase (GPT) [*gloo-tam'ik pi-roo'vik trans-am'ĭ-nās*] see **alanine aminotransferase**.

glutaminase [*gloo-tam'ĭ-nās*] an enzyme that hydrolyzes the splitting of glutamine into glutamate and ammonia.

VetBooks.ir

glutamine (Gln) [gloo'tə-mēn] an amide of glutamic acid, an amino acid occurring in proteins; it is an important carrier of ammonia to the liver and kidney where it is released by glutaminase.
g. synthetase enzyme catalyzing the synthesis of the amino acid, glutamine from glutamate and ammonia utilizing ATP. Major means of detoxifying ammonia from amino acid catabolism in peripheral tissues and then transporting the ammonia as the amido-N in glutamine to the liver of kidney.
β-(γ-L-glutamyl) aminopropionitrile [gloo'tə-məl] the form in which the toxin of lathyrism—β-aminopropionitrile—is found in plants.
L-glutamyl-β-cyanoalanine a lathyrogen.
γ-glutamyl cycle [gloo'tə-məl] a mechanism involved in the transport of amino acids into cells in such tissues as the intestine, brain and kidney.
γ-glutamyl transpeptidase [gloo'tə-məl] see **γ-glutamyltransferase**.
glutaral [gloo'tə-rəl] see **glutaraldehyde**.
glutaraldehyde [gloo"tə-ral'də-hīd] a disinfectant used in aqueous solution for sterilization of non-heat-resistant equipment; also used topically as an anhidrotic and as a tissue fixative, particularly for electron microscopy. Recognized as an occupational health hazard requiring limited exposure and personal protective equipment.
g. coagulation test a test used for the detection of hypogammaglobulinemia in calves.
glutathione [gloo"tə-thi'ōn] reduced glutathione (GSH), a tripeptide containing glutamic acid, cysteine and glycine, which serves as a reducing agent in many biochemical reactions, being converted to oxidized glutathione (glutathione disulfide, GSSG) in which the cysteine residues of two glutathione molecules are connected by a disulfide bridge. Reduced glutathione is important in protecting erythrocytes from oxidation and hemolysis; deficiency causes sensitivity to oxidant drugs.
g. peroxidase (GPx) a selenium-containing enzyme family that helps to protect against oxidative damage by reducing hydrogen peroxide to water or lipid hydroperoxides to their alcohols. Reduced glutathione (GSH) is oxidized to glutathione disulfide (GSSG) in the reaction. Blood concentration is a good indicator of the selenium status of the animal; occurs in a plasma form, an enzyme with specificity for phospholipids, and an intracellular form. All are antioxidant enzymes that reduce potentially damaging reactive oxygen species.
g. reductase (GR) a flavin enzyme that reduces glutathione disulfide (GSSG) to reduced glutathione (GSH). Involved in the defense of the erythrocyte against hemolysis. A partial deficiency occurs relatively frequently but is due to a deficiency of riboflavin.
glutathionuria [gloo"tə-thi"on-u're-ə] the excretion of excessive amounts of glutathione in the urine.
gluteal [gloo'te-əl] pertaining to the buttocks.
g. muscles three muscles which extend, abduct, and rotate the thigh; the superficial, middle and deep gluteals. See also Table 13.
g. nerves nerves that innervate the gluteal muscles. See also Table 14.
gluten [gloo'tən] the protein of wheat and other grains that gives dough its tough, elastic character.
g. sensitivity called also gluten enteropathy. See wheat-sensitive **enteropathy**.
glutinous [gloo'tĭ-nəs] adhesive; sticky.
glutitis [gloo-ti'tis] inflammation of the gluteal muscles.
L-glutamate dehydrogenase an enzyme that catalyzes the oxidative deamination of glutamate to form α-ketoglutarate and ammonia and the reverse reaction. Is found inside mitochondria and is widespread in animal tissues.
γ-glutamyltransferase (GGT) a transmembrane enzyme which transports amino acids across cell membranes; found in the cell membrane in most tissues, but particularly high concentrations are present in liver (bile duct cells, hepatocytes) and kidney (renal convoluted tubular cells). Increased serum levels occur primarily with cholestatic disease, except in birds.
GGT/creatinine ratio loss from damaged renal tubular epithelial cells into the urine is compared with the constant excretion of creatinine in the urine; provides an evaluation of acute renal tubular epithelial injury in dogs, cats and horses.
Gly glycine.
glyburide [gli'būr-īd] a second generation sulfonylurea used as an oral hypoglycemic agent in the treatment of diabetes mellitus in cats.
glycan [gli'kan] polysaccharide.
glycemia [gli-se'me-ə] the presence of glucose in the blood.
glycemic [gli-se'mik] pertaining to the concentration of glucose in the blood.
g. control indicators in addition to periodic measurement of blood glucose concentrations, management of diabetes mellitus can be assessed by measurement of glycosylated **hemoglobin** or **fructosamine**.
g. index the area under the curve in a blood glucose response test.
glyceraldehyde [glis"ər-al'də-hīd] a compound, glyceric aldehyde, formed by the oxidation of glycerol.
g. phosphate dehydrogenase an enzyme of the glycolytic pathway that converts glyceraldehyde-3-phosphate into 1,3-bisphosphoglycerate.
Glyceria genus of grasses of the Poaceae family; cause cyanide poisoning. Includes *G. grandis* (tall manna grass), *G. maxima* (*G. aquatica*, reed sweet grass), *G. striata* (fowl manna grass).
glyceride [glis'ər-īd] an organic acid ester of glycerin, designated, according to the number of ester linkages, as a mono, di- or triglyceride.
glycerin [glis'ər-in] a clear, colorless, syrupy liquid, used as a humectant and as a solvent for drugs; it is a trihydric sugar alcohol, being the alcoholic component of triglycerides. Called also glycerol.
glycerine see **glycerin**.
glycerokinase hepatic enzyme catalyzing the phosphorylation of glycerol to glycerol-3-phosphate which can then enter the glycolysis pathway, or more usually gluconeogenesis.
glycerol [glis'ər-ol] a trihydric sugar alcohol, $CH_2OH{\cdot}CHOH{\cdot}CH_2OH$, which is a component of triglycerides. Pharmaceutical preparations are called glycerin.
g. guaiacolate see **glyceryl** guaiacolate.
g. 3-phosphate dehydrogenase two enzymes, an NAD+-dependent form in the cytosol and an FAD-dependent form present in the inner mitochondrial membrane. These two enzymes complete the transfer of reducing power generated as NADH+H+ during glycolysis through to $FADH_2$ which can enter complex II of the oxidative phosphorylation sequence. This process is called the glycerophosphate shuttle.
g. phosphate shuttle main means for the transfer of reducing power generated in the cytosol as NADH+H+ to the mitochondrion as $FADH_2$ so that ATP can be generated in oxidative phosphorylation. There is the loss of one potential ATP as a consequence of this shuttle. Commonly found in the brain.
glycerolipid [glis"ər-o-lip'id] one of the two dominant 'families' of lipids, derived from a glycerol base.
glycerolize [glis'ər-ol-īz"] to treat with or preserve in glycerol, as in the exposure of red blood cells to glycerol solution so that glycerol diffuses into the cells before they are frozen for preservation.
glycerophosphatase [glis"ər-o-fos'fə-tās] see **alkaline phosphatase**.
glyceryl [glis'ər-əl] the mono-, di- or trivalent radical formed by the removal of hydrogen from one, two or three of the hydroxy groups of glycerol.
g. guaiacolate a centrally acting muscle relaxant very popular as an additive in anesthesia, especially in horses.
g. trinitrate see **nitroglycerin**.
g. trioleate see **olein**.
glycine (Gly) [gli'sēn] a nonessential amino acid, $H_2N{\cdot}CH_2{\cdot}COOH$, occurring as a constituent of proteins and functioning as an inhibitory neurotransmitter in the central nervous system; used as a gastric antacid and dietary supplement, and in the treatment of various myopathies. Called also aminoacetic acid.
[^{15}N]-g. radioactive glycine used experimentally.
g. tolerance test has been used as a liver function test in cows but not a generally used one.
Glycine max [gli'sēn] a leguminous crop plant in the family Fabaceae; can cause nitrate-nitrite poisoning; raw seeds contain a trypsin inhibitor. Called also **soybean**.
glyc(o)- word element. [Gr.] *sweetness, glucose*; see also words beginning *gluco-*.
glycoaldehyde [gli"ko-al'də-hīd] an intermediate stage in the metabolism of ethylene glycol to oxalate, the toxic end product of poisoning by the glycol.
glycobiarsol an organic arsenic derivative with anthelmintic and antiprotozoal activity. Previously used in the treatment of

whipworm (*Trichuris vulpis*) infections in dogs. Called also bismuth glycollylarsanilate.

glycocalyx [*gli"ko-kal'iks*] the glycoprotein–polysaccharide covering (literally sugar coat) that surrounds many cells.

glycocholate [*gli"ko-ko'lāt*] a salt of **glycocholic acid**.

glycocholic acid [*gli"ko-ko'lik*] a conjugated form of one of the bile acids that yields glycine and cholic acid on hydrolysis.

glycoconjugates [*gli"ko-kon'jə-gəts*] secondary bile acids linked to glycine in the liver and secreted into bile.

glycogen [*gli'ko-jən*] a polysaccharide, the chief carbohydrate storage material in animals. It is formed and stored in the liver and muscles and mobilized by phosphorylytic cleavage to glucose-1-phosphate. Called also animal starch.

g. branching enzyme deficiency (GBED) a lethal, autosomal recessive metabolic disease of Quarter horse and Paint horse breeds. Affected foals are usually aborted or stillborn or weak and hypothermic at birth with flexural limb deformities. Due to mutation at the GBE1 gene encoding glycogen branching enzyme.

g. granules bead-like structures in which glycogen is stored in the liver and muscles. Granules contain glycogen molecules and the enzymes and proteins required for glycogen metabolism.

g. nephrosis deposition of glycogen in the renal tubules in diabetes mellitus but without apparent effect on renal function.

g. phosphorylase the major enzyme in glycogenolysis, catalyzing the release of glucose-1-phosphate from glycogen. Activated by phosphorylation using ATP as the donor by glycogen phosphorylase kinase, which is in turn activated by cAMP-dependent protein kinase or by Ca^2+ via calmodulin. Inhibited by hydrolysis of the phosphate by glycogen phosphorylase phosphatase.

g. synthase an enzyme that catalyzes the formation of glycosidic bonds in glycogen synthesis. An existing glycogen primer formed on the protein glycogenin is required for glycogen synthase activity.

glycogen storage disease [*gli'ko-jən*] any of a group of genetically determined disorders of glycogen metabolism, marked by abnormal storage of glycogen in the body tissues. Includes Pompe's disease, Cori's disease, phosphofructokinase deficiency. See also **glycogenosis**.

glycogenase an enzyme that splits glycogen into dextrin and maltose.

glycogenesis [*gli"ko-jen'ə-sis*] the conversion of glucose to glycogen for storage in the liver and muscle.

glycogenic [*gli"ko-jen'ik*] pertaining to, characterized by, or promoting glycogenesis; pertaining to glycogen.

glycogenin [*gli"ko-jen'in*] protein primer required for the formation of the glycogen primer in glycogen synthesis. Found in glycogen granules in the liver and muscle.

glycogenolysis [*gli"ko-jə-nol'ə-sis*] the breakdown of glycogen in the liver or muscle, yielding glucose-1-phosphate.

muscle g. metabolic process under the regulatory control of adrenergic hormones or calcium ions for providing a rapid supply of ATP for muscle contraction and movement, particular for type II fibers. See also **glycogen** phosphorylase.

glycogenosis [*gli"ko-jə-no'sis*] pl. *glycogenoses*; any genetically determined disorder of glycogen metabolism, marked by abnormal storage of glycogen in the tissues of the body. See also **glycogen storage disease**.

bovine generalized g. an inherited glycogen storage disease of Shorthorn and Brahman cattle resembling glycogenosis type II (Pompe's disease) of humans, caused by a deficiency of acid maltase (α-1,4-glucosidase). Widespread accumulation of glycogen occurs in the nervous system and muscles, leading to poor growth, incoordination, muscle weakness and eventually recumbency. There is also cardiomyopathy and often left-sided heart failure. Onset is at 2–3 months of age with death at 3–5 months. A late onset form with a short clinical course is described in 8–9 month old Brahman cattle.

g. type I in humans, a deficiency of the hepatic enzyme glucose-6-phosphatase resulting in liver and kidney involvement, with hepatomegaly, hypoglycemia, hyperuricemia and gout. A similar condition has been observed in young dogs with hypoglycemia that does not respond to glucagon. Called also Gierke's disease or von Gierke's disease.

g. type II see bovine generalized glycogenosis (above). Also reported in sheep, cats, dogs and quail. Called also Pompe's disease.

g. type III an inherited deficiency of amylo-1,6-glucosidase causing neurological deterioration, hepatomegaly and retarded growth in German shepherd dogs from an early age. Called also Cori's disease, Forbes' disease, limit dextrinosis.

g. type IV an inherited deficiency of glycogen branching enzyme activity resulting in storage of abnormal glycogen, especially in the liver and spleen. Reported in Norwegian forest cats. Called also Andersen disease, amylopectinosis.

g. type V an inherited deficiency of myophosphorylase which results in muscle cramping with exercise. Reported in Charolais calves where it has autosomal recessive inheritance. Called also McArdle disease.

g. type VII see **6-phosphofructokinase 1** deficiency.

glycohemoglobin [*gli"ko-he"mo-glo'bin*] see glycosylated **hemoglobin**.

glycol [*gli'kol*] see **ethylene**, **polyethylene**, **propylene glycol**.

glycolic acid [*gli-kol'ik*] the primary toxic metabolic product of ethylene glycol.

glycolipid [*gli"ko-lip'id*] a lipid containing carbohydrate groups, often galactose but also glucose, inositol or others; the glycolipids include the cerebrosides.

glycolysis [*gli-kol'ə-sis*] the pathway for the enzymatic conversion of glucose to lactate or pyruvate that results in the release of free energy which is captured as ATP. Occurs in all tissues.

glyconeogenesis [*gli"ko-ne"o-jen'ə-sis*] see **gluconeogenesis**.

glyconucleoprotein [*gli"ko-noo"kle-o-pro'tēn*] nucleoprotein bearing carbohydrate groups.

glycopenia [*gli"ko-pe'ne-ə*] a deficiency of sugar in the tissues.

glycopeptide [*gli"ko-pep'tīd*] any of a class of peptides that contain carbohydrates, including those that contain amino sugars.

glycopexis [*gli"ko-pek'sis*] fixation or storing of sugar or glycogen.

glycophilia [*gli"ko-fil'e-ə*] a condition in which a small amount of glucose produces hyperglycemia.

glycophorin [*gli"ko-for'in*] membrane spanning of erythrocytes that is rich in sialic acid and heavily glycosylated; it is attached to oligosaccharides at the outer cell membrane surface and to contractile proteins (spectrin and actin) at the cytoplasmic surface.

glycoprotein [*gli"ko-pro'tēn*] protein containing co-valently-linked oligosaccharide chains.

g. deficiency an inherited disorder in dogs in which there is defective phagocytic function. Affected dogs have a marked, persistent neutrophilia and are susceptible to infections.

alpha-2HS g. protein synthesized in liver and found in bone matrix. Important in bone formation and resorption and in immune responses.

p-g. (permeability glycoprotein); a glycosylated membrane-associated protein, which has an integral role in maintenance of the blood-brain barrier and other tissues. The **MDR1 gene** mutation is responsible for drug sensitivities seen in some dog breeds and individuals.

placenta associated g. (PAG) see **placental** lactogen.

glycoproteinosis [*gli"ko-pro"tēn-o'sis*] intracytoplasmic accumulations of a complex of glycoprotein and acid mucopolysaccharide in the central nervous system (PAS positive Lafora bodies), associated with seizures in familial progressive myoclonic epilepsy (Lafora's disease) in humans, and also reported in some breeds of dogs, particularly miniature longhaired Dachshunds. Affected dogs have two copies of a mutation in the canine *Epm2b gene*.

glycoptyalism [*gli"ko-ti'əl-iz-əm*] see **glycosialia**.

glycopyrrolate [*gli"ko-pir'o-lāt*] an anticholinergic used to reduce gastric acid secretion and hypermotility. Called also glycopyrronium bromide.

glycopyrronium [*gli"ko-pir-o'ne-əm*] see **glycopyrrolate**.

glycorrhachia [*gli"ko-ra'ke-ə*] the presence of glucose in the cerebrospinal fluid.

glycorrhea [*gli"ko-re'ə*] any sugary discharge from the body.

glycosamine [*gli-ko'sə-mēn*] an amino sugar found in glycoproteins and glycolipids.

glycosaminoglycan [*gli"kōs-ə-me"no-gli'kan*] any of the carbohydrates containing amino sugars and uronic acids occurring in proteoglycans, e.g. hyaluronan, heparin, dermatan sulfate, keratan sulfate and chondroitin sulfate. These substances are secreted in very much greater quantities in the urine of achondroplastic dwarf calves than in other urines. This suggests that the disease is an inherited defect of metabolism similar to the mucopolysaccharidoses of humans. See also **glycogenosis**.

VetBooks.ir

polysulfated g. promotes cartilage preservation through stimulation of proteoglycan synthesis and inhibition of degradation. Used in the treatment of osteoarthritis in dogs

glycosaminolipid [*gli"kōs-ə-me"no-lip'id*] any of a class of lipids that contain amino sugars.

glycosecretory [*gli"ko-se-kre'to-re*] concerned in secretion of glycogen.

glycosialia [*gli"ko-si-a'le-ə*] glucose in the saliva; glycoptyalism.

glycosialorrhea [*gli"ko-si"ə-lor'e-ə*] excessive flow of saliva containing sugar.

glycosidase [*gli-ko'sĭ-dās*] any of a large group of hydrolytic enzymes acting on glycosyl compounds.

glycoside [*gli'ko-sīd*] any compound containing a carbohydrate moiety (sugar), particularly any such natural product in plants, convertible, by hydrolytic cleavage, into a sugar and a nonsugar component (aglycone), and named specifically after the sugar contained, as glucoside (glucose), pentoside (pentose), fructoside (fructose), etc.

cardiac g. any one of a group of glycosides occurring in certain plants (e.g. *Digitalis*) having a characteristic action on the contractile force of the heart muscle, now largely produced synthetically. See also **cardenolide**, **bufadienolide**.

glycosidic bond the covalent bond between two monosaccharides to form a disaccharide.

***N*-g. b., linkage** a type of carbohydrate–protein covalent linkage between an asparagine side chain amide and a sugar; type I linkage.

***O*-g. b., linkage** a type of carbohydrate–protein covalent linkage between a serine or threonine hydroxyl side chain amide and a sugar; type II linkage.

glycosphingolipid [*gli"ko-sfing"o-lip'id*] a sphingolipid containing the sugar glucose or galactose.

glycostatic [*gli"ko-stat'ik*] tending to maintain a constant sugar concentration.

glycosuria [*gli"ko-su're-ə*] glucosuria.

glycosyl [*gli'ko-sil"*] a radical derived from a carbohydrate.

g. transferases enzymes catalyzing the transfer of a monosaccharide unit from a nucleotide-linked sugar to the non-reducing end of an oligosaccharide chain, or to an appropriate functional group on a protein.

glycosylation [*gli-ko"sə-la'shən*] the formation of linkages with glycosyl groups.

***N*-linked g.** attachment of oligosaccharides, synthesized on a dolichol-lipid platform to proteins through the amino acid asparagine spaced close to threonine or serine in the polypeptide sequence. Involved in the folding of some proteins.

***O*-linked g.** attachment of groups of oligosaccharides directly to proteins through the hydroxyl group of threonine.

glycotropic [*gli"ko-tro'pik*] having an affinity for sugar; causing hyperglycemia.

glycuresis [*gli"ku-re'sis*] the normal increase in the glucose content of the urine that follows an ordinary carbohydrate meal.

glycylglycine [*gli'səl-glis'in*] the simplest peptide consisting of two glycine molecules linked by a peptide bond; used in the synthesis of more complicated peptides.

Glycyphagus [*gli-sif'ə-gəs*] a genus of mites in the family Acaridae.

G. destructor a cause of hay itch.

G. domesticus very common as a parasite in stored food products and as a cause of dermatitis (grocer's itch) in humans.

glycyrrhetinic acid an extract of liquorice root. Reputed to have anti-inflammatory properties. Called also enoxolone.

glyoxylate [*gli-ok'sə-lāt*] salt or ester of glyoxylic acid, the smallest alpha-keto acid with a ketone group on the carbon atom adjacent to the carboxylic acid group. Functionally both a carboxylic acid and an aldehyde. An intermediate of the glyoxylate pathway or cycle for the conversion of fatty acids into carbohydrates in plants and micro-organisms.

g. pathway a pathway for the direct incorporation of acetate into a glucose precursor using glyoxylate as an intermediate; operates in plants but not identified as an animal process.

glyphosate [*gli-fos'āt*] herbicide and desiccant for grains. Heavy doses to birds cause soft shells on their eggs.

gm gram.

GM-CSF granulocyte–macrophage colony-stimulating factor.

GM_1 gangliosides see **ganglioside**.

GM_1 gangliosidosis see **gangliosidosis**.

GM_2 gangliosidosis see **gangliosidosis**.

GMA glycol methacrylate.

GMD glutamate dehydrogenase.

GME granulomatous meningoencephalitis.

Gmelin test, Gmelin–Rosenbach test [*ma'lin*] a test for the presence of bilirubin conjugates in feces and urine, based on the conversion of bilirubin to multicolored compounds by the addition of nitric acid.

GMP 1. guanosine monophosphate. 2. **Good Manufacturing Practice**.

Gnaphalium purpureum North American plant of the Asteraceae family; may cause nitrate–nitrite poisoning. Called also purple cudweed.

gnat [*nat*] see ***Simulium*, *Cnephia***.

gnathic [*nath'ik*] pertaining to the jaw or cheeks.

gnathitis [*nath-i'tis*] inflammation of the jaw.

gnath(o)- word element. [Gr.] *jaw*.

gnathocephalus [*nath"o-sef'ə-ləs*] a fetus with no head but with jaws.

gnathodynamometer [*nath"o-di"nə-mom'ə-tər*] an instrument for measuring the force exerted in closing the jaws.

gnathology [*nath-ol'ə-je*] the science dealing with the masticatory apparatus as a whole.

gnathoplasty [*nath'o-plas"te*] plastic repair of the jaw or cheek.

gnathoschisis [*nath-os'kĭ-sis*] congenital cleft of the upper jaw, as in cleft palate.

Gnathostoma [*nath-os'to-mə*] a genus of spiruroid nematodes of the family Gnathostomatidae.

G. doloresi found in domestic and wild pigs.

G. hispidum adults found in the stomach of pigs and cause gastritis. Larvae migrate through the liver causing hepatitis.

G. nipponicum causes granuloma in the esophagus of weasels.

G. spinigerum found in the stomach of cats, dogs, mink, polecat and wild Carnivora and erratically as a parasite under the skin of humans. Causes damage to liver and other organs while migrating, and establishes large cyst-like structures containing nematodes in the stomach wall.

gnathostomiasis [*nath"o-sto-mi'ə-sis*] infection with the nematodes *Gnathostoma* spp. contracted by eating the intermediate host, e.g. undercooked fish infected with the larvae of *G. spinigerum*. Includes gastritis and cysts in the stomach wall caused by the adults and hepatitis caused by the larvae.

Gnidia genus of African small, woody plants in the family Thymelaeaceae which contain irritant diterpenoids and cause cardiomyopathy, pulmonary emphysema, nephrosis and enteritis. Includes *G. anthylloides*, *G. burchellii*, *G. kraussiana*, *G. latifolia*, *G. polycephala*. Called also *Lasiosiphon* spp., *Arthrosolen* spp., harpuisbos, januariebos.

gnosia [*no'se-ə*] the faculty of perceiving and recognizing.

gnotobiote [*no"to-bi'ōt*] a specially reared animal whose microflora and microfauna are known in complete detail. *Gnoto* is a Greek word for known, and *biota* is lifeforms, in this case microorganisms. See also **gnotobiotic** animal.

gnotobiotic [*no"to-bi-ot'ik*] pertaining to a gnotobiote or to gnotobiotics.

g. animal one that has been born and reared germ free and then infected with known microorganisms. See also **axenic** and **specific pathogen free**.

gnotobiotics [*no"to-bi-ot'iks*] the science of rearing gnotobiotes. Also used in the more general sense of rearing specific pathogen free animals for use in a disease-free environment on commercial farms.

Gn-RH gonadotropin-releasing hormone.

GnRIF gonadotropin release inhibiting factor.

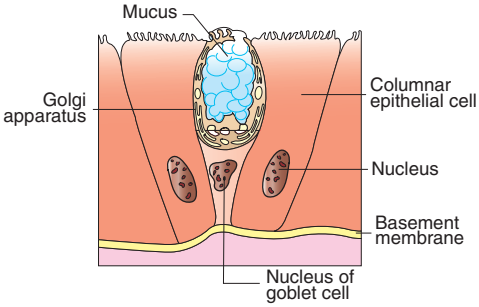
gnu see **wildebeest**.

goad see **prod**.

goanna carrion-eating, typically large and robust **monitor** lizard (*Varanus* spp.) found mainly in Australia; prominent in Aboriginal culture.

goat [*gōt*] member of the genus *Capra*, which includes the wild goats. The domestic goat (*C. aegagrus hircus*) is a subspecies with several hundred different breeds. It is a small, horned ruminant used for milk, meat, and angora and kashmir fibers. Common breeds of dairy goats are **Anglo-Nubian**, **British Alpine**, **Saanen**, **Toggenburg**. Common indigenous goats, e.g. **Boer**, are usually dual or even multipurpose. Male goats are called bucks or billies; females are does or nannies and the young are kids.

g. deodorizing performed on the bucks by removing an area of skin from medially and posteriorly to the horns. The scent is contained in sebaceous cells in areas of wrinkled, folded and hairless skin. There is another lesser smell in the urine of the buck.
dwarf g. a dwarf variety of any of the standard goat breeds; the best known is a dwarf of West African breed.
fainting g. see inherited congenital **myotonia.**
g. lamb name for a lamb with **border disease**; not commonly used.
g. plague peste des petits ruminants.
g. pox see **goatpox**.
Rocky Mountain g. (*Oreamnos americanus*) a large ungulate with a shaggy white coat and black horns; noted for their agility on steep mountain slopes. Called also mountain goat.
g. sheep hybrids matings between the species are often fertile to the extent that an embryo is conceived but it invariably dies by about 60 days of pregnancy.
goat-antelopes small, wild ruminants in the subfamily Caprinae; they include the **takins**, **serows**, **tahrs**, **gorals**, and **chamois**, **markhors**.
goatling [*gōt'ling*] young female goat between one and two years of age.
goatpox [*gōt'poks*] a disease caused by a poxvirus in the genus *Capripoxvirus* which includes the antigenically related sheeppox virus. Characterized by typical pox lesions on the hairless skin, especially the perineum. Kids may develop a severe systemic form with a high mortality rate. A disease notifiable to the OIE (see Table 22).
goatweed [*gōt'wēd*] ***Hypericum perforatum***.
gobbler male turkey. Called also tom.
goblet cell solitary mucus-secreting cell, especially of the intestinal and respiratory epithelium.
Goetze's suture pattern a special 6-bite suture pattern used in the one-stage repair of third-degree perineal laceration in the mare.
goggles see periocular **leukotrichia**.
going sour development of bad temperament manifested by biting other horses while racing, savaging of attendants; worst problems are in mares with ovarian tumors.
goiter, goitre [*goi'tər*] enlargement of the thyroid gland, causing a swelling in the front part of the neck.
adenomatous g. multilobular goiters cause thyroid enlargement in cats.
colloid g. is characterized by the presence of a large soft thyroid gland with its glandular space distended with colloid. Most cases occur in neonatal lambs, calves and kids which show a high rate of stillbirths and weakness and a high mortality rate. Enlarged thyroid glands and alopecia are good indicants of the existence of a nutritional deficiency of iodine, the usual cause of goiter in animals.
dyshormonogenetic g. an impairment in thyroglobulin synthesis is thought to be the cause of inherited, congenital goiter recorded in sheep, cattle and goats. The thyroid gland is enlarged, there is a high neonatal mortality, a silky wool in sheep and a rough, sparse haircoat in goats. Called also inherited goiter.
goitrogen-induced g. there are a number of goitrogens in the environment of grazing animals. Their effect is almost entirely on the newborn. Common agents are low level intakes of cyanogenetic glycosides, e.g. in white clover, the glucosinolates in *Brassica* spp. plants, and mimosine in *Leucaena leucocephala*.
hyperplastic g. diffuse hyperplasia is the standard response to dietary iodine deficiency and to poisoning by plant goitrogens. It may also be caused by persistent exposure of the fetus to a high iodine intake of the dam. See also iodide goiter (below). Neonates are the usual subjects and the disease is manifested by clinical goiter, often sufficient to cause dystocia, and weak neonates with a high rate of stillbirths and deaths soon after birth. Occurs in caged budgerigars fed iodine-deficient, seed-based diets.
inherited g. see dyshormonogenetic goiter (above).
iodide g. that occurring in reaction to iodides at high concentrations, due to inhibition of iodide organification.
nodular g. an endocrinologically inactive nodular enlargement of the thyroids in old dogs and horses. In old cats similar goiters sometimes develop functional adenomas.



G-16: Goblet cell. From Colville TP, Bassert JM, Clinical Anatomy and Physiology for Veterinary Technicians, 2nd Edition. Mosby, 2008.

goitrin [*goi'trin*] the goitrogen produced by ruminal degradation of the glucosinolates in *Brassica* spp. plants. It prevents the organification of iodine by the thyroid.
goitrogen [*goi'tro-jən*] a goiter-producing agent. See also goitrogen-induced **goiter**.
goitrogenesis [*goi-tro-jən'ə-sis*] the process of inducing goiter formation.
goitrogenic glucosinolates [*goi-tro-jen'ik*] thiones and thiocyanates produced by metabolism of glucosinolates; potent goitrogens; see **goitrin**.
goitrogenicity [*goi"tro-jə-nis'i-te*] the tendency to produce goiter.
gold (Au) [*gōld*] a chemical element, atomic number 79, atomic weight 196.967. See Table 4. Gold and many of its compounds are used in human medicine and occasionally in veterinary medicine. See also **chrysotherapy**.
g.-198 (^{198}Au) a radioisotope of gold having a half-life of 2.7 days and emitting gamma and beta radiation.
g. colloid scintiscan see **scintiscan**.
g. dust disease see **velvet** disease.
golden banner [*gōl'dən*] ***Thermopsis***.
golden billy buttons see ***Craspedia chrysantha***.
golden chain see ***Laburnum anagyroides***. Called also golden rain.
golden dewdrop ***Duranta repens***.
golden glow see ***Rudbeckia***.
golden period in trauma surgery the period after the wound is inflicted during which primary intention healing is probable after suturing because the body's defenses can take care of the infection that has been introduced; considered to be less than 6 hours.
golden rain see ***Laburnum anagyroides***.
Golden retriever [*gōl'dən*] a medium- to large-sized (55–75 lb) gun dog with a flat or wavy, medium length coat in shades of gold or cream. The breed is predisposed to cataracts, progressive retinal atrophy, hypothyroidism, a congenital myopathy and von Willebrand disease.
golden slipper the effect created by the convex yellow sole of the hoof of a stillborn or slink calf.
golden tip ***Goodia lotifolia***.
golden top see ***Psilocybe***.
golden weed see ***Oonopsis***.
goldenrod common name for plants in a number of genera, including ***Solidago***, ***Haplopappus***.
rust on g. *Coleosporium solidagensis*.
range g. *Solidago mollis*.
rayless g. *Haplopappus heterophyllus*.
western g. *Solidago spectabilis*.
goldfish the companion fish among the aquarium fishes. Gold dorsally shading to yellow on the belly. There are many fancy variants including the veiltail, the shubunkin and the lionhead. Called also *Carassius auratus*.
g. ulcer disease (GUD) ulcers scattered over the body caused by atypical *Aeromonas salmonicida*; encouraged by high water temperature and overcrowding.
Goldie–Coldman hypothesis a theory relating drug resistance to spontaneous cell mutations; it is used to justify the use of multiple agents in chemotherapy of tumors.
Goldman equation quantifies the voltage potential of resting membranes.
Goldman vaporizer a low resistance, low efficiency anesthetic vaporizer.
golf ball a potential source of lead from the compound in the center that can poison dogs that chew them.
Golgi complex (apparatus) [*gol'je*] an intracellular organelle consisting mainly of a number of flattened sacs (cisternae) and associated vesicles, which is involved in the synthesis, transport to the cell surface and sometimes export of glycoproteins,

lipoproteins, membrane-bound proteins; also involved in the synthesis of lysosomal enzymes and lysosomes.

Golgi neurons [gol'je] 1. *Type I:* pyramidal cells with long axons, which leave the gray matter of the central nervous system, traverse the white matter, and terminate in the periphery. 2. *Type II:* stellate neurons with short axons in the cerebral and cerebellar cortices and in the retina.

Golgi stack [gol'je] the Golgi apparatus as seen in thin section electron micrographs of a cell; the set of flattened, disk-shaped cisternae resembling a stack of plates. Called also dictyosome.

Golgi tendon organ [gol'je] any of the mechanoreceptors arranged in series with muscle in the tendons of mammalian muscles, being the receptors for stimuli responsible for the lengthening reaction.

Golgi's cells [gol'je] Golgi neurons.

GoLIGHTLY see **polyethylene** glycol electrolyte solution.

gomdagga ***Lantana camara***.

Gomen disease cerebellar ataxia and degeneration in horses in New Caledonia apparently caused by an environmental toxin.

gomitoli [go-mit'o-li] a network of capillaries in the upper infundibular stem (of the hypothalamus), which surrounds terminal arterioles of the superior hypophysial arteries and leads into the portal veins to the adenohypophysis.

gompertzian growth a pattern of cell growth in tumors in which there is increased doubling time and decreased growth fraction as a function of time.

Gomphocarpus a genus in the plant family Asclepiadaceae, closely related to *Asclepias*; contains cardiac glycosides. Includes *G. fruticosus*, *G. physocarpus*. Called also balloon cotton.

gomphosis [gom-fo'sis] a type of fibrous joint in which a conical process is inserted into a socket-like portion as the root of a tooth into its alveolus. The periodontal membrane of such fibrous joints allows a small amount of movement or 'give' that may protect brittle teeth from fracture. In ruminant lower incisor teeth the gomphoses allow substantial movement against the dental pad.

Gomphosphaeria genus of toxic cyanobacteria.

Gomphrena celosioides toxic plant of the Amaranthaceae family; contains an unidentified toxin which causes incoordination, frequent falling and dragging of the toes in horses. Recovery follows withdrawal of the plant from the diet. Called also soft khaki weed, gomphrena weed.

gomphrena weed see ***Gomphrena celosioides***.

gonad [go'nad] a sex gland; a gamete-producing gland; the **ovary** in the female and the **testis** in the male. The ovary produces the ovum and the testis produces the spermatozoon. In addition, the gonads secrete hormones that influence the development of the reproductive organs and the physical traits that differentiate males from females, such as a crest and body form and size (the secondary sex characters). The hormones produced by the ovary include **estrogen** and **progesterone**. The principal hormone produced by the testis is **testosterone**.

hermaphroditic g's these gonads vary widely between combinations of male and female tissues in an ovotestis, of which there may be one or two, to a testicle on one side and an ovary on the other.

indifferent g. the primordial stage of the embryonal gonad, before differentiation into a male or female organ.

gonadal [go-nad'əl] pertaining to or arising from a gonad. See also **testicular**, **ovarian**.

g. cords cords formed by epithelial cells which migrate from the mesonephric tubules in the embryo to the gonadal ridge and establish the indifferent stage of gonadogenesis.

g. ridge the structures in the embryo to which the primordial germ cells migrate, and from which the gonads develop.

g. steroids see **steroid**.

g. stromal tumor tumors of granulosa cells and thecal cells of the ovary; in the male, the analogous neoplasm is the Sertoli cell tumor.

gonadectomy [go"nə-dek'tə-me] removal of a gonad.

gonadoblastoma [go"nə-do-blas-to'mə] a rare, primary tumor of testicle or ovary containing, besides interstitial cells, germ cells, epithelial cells and granulosa cells.

gonadopathy [gon"ə-dop'ə-the] any disease of the gonads.

gonadorelin [gə-nad"-o-rel'in] gonadotropin-releasing hormone.

gonadotherapy [go"nə-do-ther'ə-pe] treatment with gonadal hormones.

gonadotrope, gonadotrop, gonadotroph [go-nad'o-trōp, go-nad'o-trōf] a basophilic cell of the anterior pituitary specialized to secrete follicle-stimulating hormone or luteinizing hormone.

gonadotrophic [go"nə-do-tro'fik] see **gonadotropic**.

gonadotrophin [go'nə-do-tro"fin] see **gonadotropin**.

gonadotropic [go"nə-do-tro'pik] stimulating the gonads; applied to hormones of the anterior **pituitary** gland which influence the gonads, including luteinizing and follicle-stimulating hormones, and human chorionic gonadotropin.

g. hormone one that has a stimulating influence on the gonads. Includes luteinizing and follicle-stimulating hormones from the pituitary gland and chorionic gonadotropin from pregnant mare's serum.

gonadotropin [go"nə-do-tro'pin] any hormone having a stimulating effect on the gonads. Two such hormones are secreted by the anterior pituitary: follicle-stimulating hormone and luteinizing hormone, both of which are active, but with differing effects, in the two sexes.

chorionic g. a gonad-stimulating hormone produced by cytotrophoblastic cells of the placenta; used in treatment of underdevelopment of the gonads and to induce ovulation. See also **pregnancy** tests, **eCG**, **chorionic** gonadotropin.

g. release inhibiting factor pituitary hormone which inhibits the release of luteinizing hormone or follicle-stimulating hormone.

gonadotropin-releasing hormone (Gn-RH) a hormone produced in the hypothalamus and passed to the adenohypophysis via the hypophysial portal vascular system, stimulating the release of the gonadotropins, especially luteinizing hormone.

gonaduct [gon'ə-dəkt] the duct of a gonad; an oviduct or seminal duct.

gonalgia [go-nal'jə] pain in the femorotibial joint.

gonangiectomy [gon"an-je-ek'tə-me] vasectomy.

gonarthritis [gon"ahr-thri'tis] inflammation of the femorotibial joint.

gonarthrotomy [gon"ahr-throt'ə-me] incision into the femorotibial joint.

Gonderi a genus of protozoa related to *Theileria*. See also ***Gonderia mutans***.

Gonderia mutans an alternative name for *Theileria mutans*.

gonecystitis inflammation of a seminal vesicle.

gonecystolith a concretion in a seminal vesicle.

gonecystopyosis suppuration of a seminal vesicle.

Gonglyonema a genus of (spiruroids) nematodes in the superfamily Spiruroidea.

G. crami, G. ingluvicola found in the crop of domestic fowls.

G. minimum found in the esophagus of primates; may cause anemia, vomiting, gastritis and enteritis.

G. monnigi found in the rumen of sheep and goats.

G. neoplasticum found in the tongue, esophagus and stomach of laboratory rats and mice but causes little epithelial reaction.

***G. pulchrum* (syn. *G. scutatum*)** occurs in the esophageal mucosa of ruminants and occasionally in humans.

G. sumani found in the crop of domestic fowl.

G. verrucosum found in the rumen of ruminants.

gonidium [go-nid'e-əm] pl. *gonidia* [Gr.] 1. the algal component of the thallus of a lichen. 2. a motile reproductive unit of certain nitrogen-fixing bacteria. 3. an asexual reproductive cell in some algae.

goni(o)- word element. [Gr.] *angle*, especially of the anterior chamber of the eye.

Goniocotes a genus of lice infesting the feathers of domestic fowl and guinea fowl. They belong to the superfamily Ischnocera.

***G. gallinae* (syn. *G. hologaster, Goniodes hologaster*)** found in the feathers of domestic fowl. Called also fluff lice.

G. hologaster see *G. gallinae* (above).

G. maculatus found in the feathers of guinea fowl.

Goniodes a genus of biting lice of the superfamily Ischnocera.

G. dissimilis on domestic fowl. Called also brown chicken louse.

***G. gigas* (syn. *Goniocotes gigas*)** called also large chicken louse.

G. hologaster* (syn. *Goniocotes gallinae*)** see ***Goniocotes gallinae.

G. meleagridis see ***Chelopistes***.

goniodysgenesis [go"ne-o-dis-jen'ə-sis] abnormal embryological development of the iridocorneal angle present at birth and often but not always associated with development of glaucoma later in life. A familial defect in many dog breeds. Called also pectinate ligament dysplasia.

gonioimplant [go"ne-o-im'plant] an device positioned in the anterior chamber to assist in drainage of aqueous humor to various other extraocular locations such as the subconjunctival space, frontal sinus, or vascular space. Used as a treatment for glaucoma.

goniolens [go"ne-o-lenz'] a lens placed onto the cornea to allow direct examination of the iridocorneal angle. See also **gonioscopy**.

goniometer [go"ne-om'ə-tər] an instrument for measuring angles; the instrument used in **goniometry**.

goniometry [go"ne-om'ə-tre] the measurement of range of motion in a joint. The technique may be used as a diagnostic or therapeutic measure to determine the functional status of a patient with a musculoskeletal or neurological disability. There is a variety of tools and techniques by which joint motion can be measured, but for most clinical purposes the simple universal goniometer is an adequate instrument. The system for recording measurements of range of motion may be somewhat complex or it may be based upon the simple technique of relating the degree of joint motion to a full circle (360 degrees).

gonion [go'ne-on] pl. *gonia* [Gr.] the most inferior, posterior and lateral point on the angle of the mandible.

goniopuncture [go"ne-o-punk'chər] insertion of a knife blade through the clear cornea, just within the limbus, across the anterior chamber of the eye and through the opposite corneoscleral wall, in treatment of glaucoma. Not done in veterinary glaucomas.

gonioscope [go'ne-o-skōp"] an optical instrument for examining the iridocorneal angle and for demonstrating ocular motility and rotation.

gonioscopy [go"ne-os'kə-pe] examination of the iridocorneal angle with a light source and goniolens (or gonioscope).

goniotomy [go"ne-ot'ə-me] an operation for glaucoma; it consists of opening Schlemm's canal under direct vision. Not done in veterinary glaucomas.

gonitis [go-ni'tis] inflammation of the stifle (femorotibial) joint.

gon(o)- word element. [Gr.] 1. seed, semen. 2. knee.

gonochorism [gon-ok'ə-riz-əm] in fetal development, differentiation of the gonads.

gonochorist [gon"-o-kor'-ist] fish species in which the embryonic gonad subsequently divides into ovaries or testes; may be a differentiated gonochorist, in which the differentiation is direct, or an undifferentiated gonochorists, in which there is an intermediate stage of an ovary-like gonad, a situation quite different from hermaphrodites.

gonocyte [gon'o-sīt] the primitive reproductive cell of the embryo. See also germ **cell**.

gonophore [gon'o-for] an accessory reproductive organ, such as the oviduct.

Gonyaulax [gon"e-aw'laks] a genus of poisonous dinoflagellates which render shellfish eating them poisonous to animals eating the shellfish.

gonycampsis [gon"ĭ-kamp'sis] abnormal curvature of the femorotibial joint.

gonyocele [gon'e-o-sēl"] synovitis of the femorotibial joint.

gonys profile of the midline curvature silhouette of the lower beak of birds.

Good Clinical Practice (GCP) an international ethical and scientific quality standard for the conduct of clinical trials involving human subjects.

Good Laboratory Practice (GLP) an internationally observed set of principles that provide a framework within which laboratory studies are conducted.

Good Manufacturing Practice (GMP) an internationally observed quality system for the manufacturing of drug products and medical devices.

good samaritan law a law that provides protection against claims of malpractice for medical practitioners who render emergency care at the scene of an accident except when gross negligence or willful misconduct can be proved. Most states in the USA have passed such laws; all the laws cover doctors, and about half the laws cover nurses. It would be beneficial if similar laws were enacted to protect veterinarians and their patients.

Goodia a plant genus of the legume family Fabaceae; may cause cyanide poisoning. Includes *G. lotifolia* (clover-leaf poison, clover tree), *G. medicagena* (small golden tip).

Goodpasture's syndrome [good'pas-chər] an autoimmune disease of humans in which glomerulonephritis and pulmonary hemorrhage are produced by complement-mediated tissue damage caused by antibodies directed against the glomerular and alveolar basement membranes. A proliferative glomerulonephritis associated with antiglomerular basement membrane antibodies, analogous to the renal component of Goodpasture's syndrome, occurs rarely in domestic animals; it has been reported in horses and is suspected to occur in dogs.

goose pl. *geese;* a web-footed, long-necked bird of the subfamily Anserinae. Domestic geese were derived from the wild goose, *Anser anser*. There are many other species in this genus and in the other *Branta* genus of geese, of which *Branta canadensis* is typical. Popular domestic breeds include **Emden**, **Toulouse**.

g. enteritis see goose hepatitis (below).

g. hepatitis occurs only in goslings less than 4 weeks old and caused by goose parvovirus. Affected birds have conjunctivitis, nasal discharge and polydipsia, huddle together and die. Postmortem findings include hepatitis and myocarditis. Called also gosling hepatitis, gosling plague, Derzsy's disease.

g. honk see goose honk **cough**.

g. influenza see **Riemerella** *anatipestifer*. Called also infectious serositis, new duck disease.

g. parvovirus infection see goose hepatitis (above).

g. plague see goose hepatitis (above).

g. septicemia a fatal septicemia caused by *Borrelia* (*Treponema*) *anserina* and transmitted by the tick *Argas persicus.*

slender g. louse ***Anaticola anseris***.

g. venereal disease an apparently infectious disease of ganders with an uncertain etiology, causing necrosis and scarring of the phallus, making reproduction impossible.

goose-rumped a defect in the conformation of the horse. The line from the top of the rump to the base of the tail is too steep and is insufficiently muscled. Called also drooping quarters.

goose-stepping an abnormality of gait manifested by balancing on one leg of a pair and swinging the opposite member through without flexing it. May be difficult to differentiate clinically from hypermetria because of the tendency in both abnormalities to overreach the target.

goosefoot several plants of the family Chenopodiaceae.

keeled g. ***Chenopodium*** *carinatum*.

oak-leaved g. ***Chenopodium*** *glaucum*.

purple-leafed g. ***Scleroblitum atriplicinum***.

white g. ***Chenopodium*** *album*.

goosegrass ***Eleusine*** *indica*.

goosiekte gousiekte.

gopher a small burrowing rodent of the family Geomyidae, although some burrowing squirrels may be called gophers. Called pocket gopher because of its habit of storing food in a cheek pouch.

goral (*Naemorhedus goral*) a medium-sized Himalayan goat-antelope; gray with a black dorsal stripe and a beard from chin to chest.

Gordon extender [gor'dən] an adjustable metal frame designed to be used as a means of applying traction to a limb, or keeping it extended.

Gordon setter a medium- to large-sized (55–80 lb), muscular gun dog with medium length hair that is longer under the neck and body, tail and behind the legs ('feathering'). The color is black with mahogany or chestnut brown markings. The breed is predisposed to progressive retinal atrophy.

gorilla the biggest and strongest of the anthropoid apes of the family Hominidae. Native to Africa, there are two species, the western or lowland gorilla (*Gorilla gorilla*) and eastern or mountain gorilla (*G. beringei*). They are mostly terrestrial, fruit-eating primates, with a ferocious appearance but gentle nature if unprovoked and a legendary involvement with human adventure.

Gorki sheep polled Russian meat and shortwool sheep; originated from local breeds plus Hampshire Down.

gorse see ***Ulex europaeus***. Called also furze.

goshawk the North American goshawk (*Accipiter gentilis*) is a slate-blue, expert hunting hawk, 2 ft long with a 4 ft wingspan. A quick flyer that catches most of its prey on the wing.

gosling a young goose.

g. hepatitis see **goose** hepatitis.

g. plague see **goose** hepatitis.

Gosset retractor a self-retaining retractor suitable for exposure of abdominal viscera. Two retractor blades are mounted on a bar and can be moved apart to open the incision. The blades are the standard P shape with a curved loop to provide retention.

VetBooks.ir

Gossypium [gŏ-sip'e-əm] Includes *G. hirsutum* (*Gossypium arboreum*, *G. barbadense*, *G. herbaceum*), the commercial cotton plant of the family Malvaceae. Cotton seeds are a residue of the cotton industry and, after extraction of the oil, the residual cottonseed cake is much valued as a protein supplement for livestock. The seeds contain gossypol, a toxic polyphenolic pigment, and unless the processing is appropriate the cake and meal can be very poisonous, causing severe myocardial necrosis and liver damage. Ruminants may be affected but the most severe disease occurs in pigs. Clinically there is congestive heart failure and severe dyspnea. The cake is also very low in vitamin A and nutritional deficiency may result.

gossypol [gos'ə-pol] toxic phenolic pigment in the glands of seeds of ***Gossypium*** spp.

gossypurpurin a minor pigment found with gossypol and gossyverdurin in cottonseed feed products.

gossyverdurin a phenolic pigment found in cottonseed products together with gossypol and gossypurpurin. It is the most toxic of the three.

GOT glutamic–oxaloacetic transaminase.

Gotland pony an athletic pony native to the Swedish island of Gotland, standing 11–13 hands high. The breed is affected with a congenital abiotrophy.

goubos ***Pachystigma*** *pygmaeum*.

gouge [gouj] a hollow chisel for cutting and removing bone. See also **Alexander gouge**.

gousiekte [goo-sēk'te] Afrikaans name (quick sickness) for the uniquely South African disease of sheep and cattle caused by poisoning by ***Pachystigma***, ***Pavetta*** and ***Fadogia homblei***. A syndrome of sudden death caused by cardiomyopathy. The causative toxin is the polyamine, pavetamine.

gousiekteboom [Af.] ***Pavetta*** *schumanniana*; called also gousiekte tree.

gousiektebossie [Af.] ***Pachystigma*** *pygmaeum*.

hairy g. *Pachystigma pygmaeum*.

Natal g. *Pachystigma thamnus*.

smooth g. *Pachystigma thamnus*.

Transvaal g. *Pachystigma pygmaeum*.

gout [gout] a disorder of uric acid metabolism in which there is hyperuricemia and deposition of urates in and around the joints. Occurs in humans and anthropoid apes. Most animals possess the enzyme uricase that converts uric acid to allantoin. Dalmatian dogs excrete large amounts of uric acid in their urine, but the breed is not affected by gout. A disease called gout occurs in commercial chickens due to feeding of excessive amounts of protein.

articular g. caused by gross excesses of protein in the diet. A chronic disease manifested by swelling of the joints which contain a thick white fluid consisting largely of uric acid crystals.

visceral g. birds become weak and listless and die. The viscera are covered with a frosting of urea crystals. There is a primary renal disease and a fatal uremia. The high-protein diet exacerbates that original disease.

calcium g. see **calcinosis** circumscripta.

Governing Vessel in acupuncture one of the two major extra meridian vessels. Called also *Du Mai*. See **Conception vessel**.

governmental veterinary services veterinary services provided by the public sector. In former communist and many Third World countries all veterinary as well as other professional services are provided by governments. In western countries it is usual to divide the services between government and the public sector. The dividing line is set at different levels in different countries and fluctuates depending on the socialist inclinations of the government of the day. At present there is a general move towards governments withdrawing from some of the field or towards setting up a government-owned 'consumer pays' service. In general governments accept responsibility for diseases and management systems that have implications for farmers over a wide area, or where losses are going to be more than an individual farmer can possibly bear, or when the country's or state's capacity to export animal products is threatened.

Gower's solution [gou'ərz] a diluting fluid for red cell counts; an isotonic solution containing sodium sulfate and glacial acetic acid.

gown [goun] protective garment, usually of fabric or paper; used in surgery as a barrier between the patient and the operating personnel.

GPT glutamic–pyruvic transaminase.

GPx see **glutathione** peroxidase.

GR glutathione reductase.

gr. grain; approximately 65 mg.

Graaff–Reinet disease see **maedi**.

graafian follicle [grah'fe-ən] a small sac, embedded in the **ovary**, that encloses an ovum. At sexual maturity each ovary has a large number of immature follicles, each of which contains an undeveloped egg cell. These structures are called primordial, or primitive, follicles. At varying intervals in the different animal species, one of these follicles develops to maturity, or ripens; as it does so the animal shows the signs of sexual receptivity known as **estrus**. As the follicle ripens, it increases in size. The ovum within becomes larger, the follicular wall becomes thicker, and fluid collects in the follicle and surrounds the egg. At this point, it is also known as a vesicular ovarian follicle. The follicle also secretes estradiol, the hormone that prepares the endometrium to receive a fertilized egg. As the follicle matures, it moves to the surface of the ovary and forms a projection. When fully mature, the graafian follicle breaks open and releases the ovum, which passes into the **uterine** tubes. This release of the ovum is called **ovulation**. The released ovum travels down the uterine tube to the uterus. Meanwhile, the empty graafian follicle in the ovary becomes transformed into the corpus luteum, or yellow body, by becoming filled with cells containing a yellow substance. The corpus luteum secretes progesterone, a hormone that causes further change in the endometrium, allowing it to provide a good milieu in which a fertilized ovum can grow through the stages of gestation to become a fetus.

atretic g. f. a follicle which enlarges and then regresses without proceeding to ovulation; occurs normally in animals as waves of follicles developing and regressing during estrous cycles and sometimes during pregnancy; occurs also in seasonally anestrous females. Follicular atresia can be a disease when it occurs at a time when the female should be coming into estrus but is on an inadequate diet, or suffering from a debilitating primary disease. The effect is a failure of the animal to come into estrus and to be fertile.

cystic g. f. see cystic **follicle**.

gracile [gras'il] slender; delicate.

gracilis muscle a muscle which occupies the medial surface of the thigh; arises from the pelvic symphysis and inserts via the crural fascia on the tibial crest. See Table 13.

g. muscle rupture a common injury in racing Greyhounds, causing lameness, inability to extend the stifle, and an obvious swelling in the medial thigh. Called also dropped muscle.

g. myopathy see gracilis-semitendinosus **myopathy**.

grade [grād] progeny of a mating between a purebred and a crossbred animal.

g. up when an animal of inferior breeding and quality is bred to one of much superior standing.

yield g. the amount of meat which will be harvested from a carcass; expressed in a code 1–5 with 1 being best. The assessment is based on weight of the carcass, the size of the longissimus dorsi muscle at the 12th rib, the thickness of fat at the same location and the percentage of kidney, heart and pelvic fat. See also carcass **cutability**.

USDA yield g. measurements of cattle and lamb carcass cutability categorized into numerical categories with 1 being the leanest and having the highest percentage of boneless, closely trimmed retail cuts.

gradient [gra'de-ənt] rate of increase or decrease of a variable value.

grading [gra'ding] setting a numerical value, e.g. body condition scoring.

clinical sign g. giving a value to a clinical sign so that its relative importance in the diagnosis of a particular disease is given its appropriate weighting, a matter of some significance in computer-assisted diagnosis. The numerical value for a particular clinical sign may well vary widely for different diseases.

graduate [graj'oo-ət] 1. person who has received a degree from a university or college. 2. a measuring vessel marked by a series of lines.

g. programs educational programs for persons who already have their basic degree that entitles them to practice. Includes programs provided for persons attempting postgraduate research degrees, vocational diplomas and coursework masterates, and for refresher and update courses for professional veterinarians under the general heading of professional continuing education.

graduated [*graj'oo-āt"əd*] marked by a succession of lines, steps or degrees.

graft [*graft*] 1. any tissue or organ for implantation or transplantation. 2. to implant or transplant such tissue. See also **flap** (1), **grafting, allograft, xenograft**.

autodermic g., autoepidermic g. a skin graft taken from the patient's own body.

autologous g., autoplastic g. a graft taken from another area of the patient's own body; an autograft.

avascular g. a graft of tissue in which not even transient vascularization is achieved.

g. bed site to which a graft is to be joined.

bone g. the use of cortical or cancellous bone, of autogenous, homologous or xenogenous origin to support bone healing.

cable g. a nerve graft made up of several sections of nerve in the manner of a cable.

chess-board g. see stamp graft (below).

cutis g. dermal graft.

dermal g., dermic g. skin from which epidermis and subcutaneous fat have been removed, used instead of fascia in various plastic procedures.

g. enhancement prior exposure of the recipient to the donor's tissues may prolong survival of a graft.

epidermal g. a piece of epidermis implanted on a raw surface.

fascia g. a graft of tissue taken from the external investing fascia of the leg (fascia lata).

fascicular g. a nerve graft in which bundles of nerve fibers are approximated and sutured separately.

free g. a graft of tissue completely freed from its bed, in contrast to a flap.

full-thickness g. a skin graft consisting of the full thickness of the skin, with little or none of the subcutaneous tissue.

heterologous g., heteroplastic g. a graft of tissue transplanted between animals of different species; a heterograft or xenograft.

homologous g. a graft of tissue obtained from the body of another animal of the same species but with a genotype differing from that of the recipient; a homograft or allograft.

isologous g., isoplastic g. a graft of tissue transplanted between genetically identical individuals; an isograft.

lamellar g. replacement of the superficial layers of an opaque cornea by a thin layer of clear cornea from a donor eye.

mesh g. skin grafts in which multiple small incisions have been made to permit lateral stretching of the graft and to increase flexibility to facilitate placement in tricky sites.

omental g's free or attached segments of omentum used to cover suture lines following gastrointestinal or colonic surgery.

patch g. used in the surgical repair of tissue defects of the esophagus and to enlarge the pulmonary outflow tract. *In-lay* patches replace missing tissue. *On-lay* patches reinforce existing tissue.

pedicle g. a portion of skin and subcutaneous tissue with a vascular attachment moved from one part of the body to another. Grafted to the new site, they not only can survive because of their own vascular supply, they can improve circulation in the site. Called also pedicle flap.

penetrating g. a full-thickness corneal transplant.

periosteal g. a piece of periosteum to cover a denuded bone.

pinch g. a piece of skin graft about 6 mm in diameter, obtained by elevating the skin with a needle and slicing it off with a knife.

punch g. grafts are obtained by using a skin biopsy punch on the animal or on a piece of separated skin.

g. rejection see **rejection**.

rotation flap g. see **pedicle graft** (above).

seed g. small pieces of skin are imbedded in granulation tissue on the same patient.

sieve g. a skin graft from which tiny circular islands of skin are removed so that a larger denuded area can be covered, the sievelike portion being placed over one area, and the individual islands over surrounding or other denuded areas.

skin g. a piece of skin implanted to replace a lost part of the integument. Many types of graft are used and are included in this list.

split-skin g. a skin graft consisting of only a portion of the skin thickness.

sponge g. a bit of sponge inserted into a wound to promote the formation of granulations.

stamp g. squares of split-thickness or full-thickness skin are placed on a bed of granulation tissue.

thick-split g. a skin graft cut in pieces, often including about two-thirds of the full thickness of the skin.

tubed g. see rope **flap**.

tunnel g. see rope **flap**.

vascular g. see vascular **conduit**.

graft-versus-host disease a condition that occurs when immunologically competent cells or their precursors are transplanted into an immunologically incompetent recipient (host) that is not histocompatible with the donor. Because the host is immunodeficient, the graft is not rejected. Immunocompetent T lymphocytes present in the donor tissue are activated and recognize the recipient's tissue as 'foreign' and react to them, producing clinical manifestations including edema, erythema, ulceration, loss of hair, and heart and joint lesions similar to those occurring in connective tissue disorders. Called also GVH disease or reaction, runting syndrome.

grafting [*graft'ing*] 1. the implanting or transplanting of skin or other tissue from another part of the body or from another animal to serve as replacement for damaged or missing tissue. The purpose may be to encourage healing, to improve function, to act as a safeguard against infection, to improve appearance, or to replace a diseased body organ. See also **transplantation**. 2. of orphan calves. See **fostering**.

Grahamella small intraerythrocytic rickettsiae parasitizing small mammals and turtles. They are transmitted by blood-sucking ectoparasites, especially fleas. Now reclassified as *Bartonella* spp.

Graham's law [*gra'əm*] the rate of diffusion of a gas through porous membranes varies inversely with the square root of its density.

grain [*grān*] 1. a seed, especially of a cereal plant; for best results in feeding the seed may be **rolled**, **cracked**, flaked (below). 2. the twentieth part of a scruple: 0.065 g; abbreviated gr. See also Table **2.2**. 3. the texture and patterned appearance of the outside of leather. 4. the size and nature of the crystals of the fluorescent salt used in intensifying screens and also the size and nature of silver halide crystals used in photographic emulsion.

g. engorgement see **carbohydrate engorgement**.

flaked g. grain that has been cooked and then rolled flat. The digestibility is greatly enhanced but the process is costly.

g. fumigants substances used to fumigate silos full of grain to kill insect pests. Use of these agents other than as recommended by the makers may lead to poisoning (e.g. aluminum phosphide, zinc phosphide). See also **methyl** bromide.

seed g. cereal grain intended to be used as seed for a crop.

high-moisture g. grain stored at about 30% moisture in airtight silos (normally grain is stored at 10–15% moisture). Care is needed to avoid errors in the ensiling process and the storage costs are much higher, but the grain is more digestible. To avoid the silo costs, the grain can be treated with propionic or acetic acid and stored in bins, but care needs to be given to the grain's vitamin E content, which may be diminished by this treatment.

micronized g. heated in a dry heat then rolled.

g. overload see **carbohydrate engorgement**.

popped g. grain passed across a heated plate and popped like popcorn.

g. rash grain itch mite **dermatitis**.

roasted g. roasted in dry heat but not popped.

g. screenings debris from a grain batch that is removed by passing it over a screen. Has some feeding value but this varies with the mix of contents.

g. sorghum *Sorghum bicolor* (*S. vulgare*).

spent g. grain used in brewing or liquor production that has been exhausted of its carbohydrate; includes brewer's grains, distiller's grains.

sprouted g. see **hydroponics**.

graininess a fault in X-ray films in which there is clumping together of the silver particles in the emulsion, causing the image to lose its homogeneous appearance and to give an impression of lumpiness.

grains [*grānz*] grainlike masses of inspissated necrotic material and debris found in swamp cancer lesions. See also **swamp cancer**, **brewer's grains**, **distiller's** grains.

gram (g, gm) [*gram*] 1. the basic unit of mass (weight) of the metric system, being the equivalent of 15.432 grains. See also Table 2.2 and **SI units**. 2. see **Gram's stain**. 3. chickpea.

g. atomic weight the same numerically as the atomic weight of an element but expressed in grams.

VetBooks.ir

g. molecular weight the same numerically as the molecular weight of the substance but expressed in grams.

-gram word element. [Gr.] *written, recorded.*

gram-molecule see **mole** (2).

gram-negative said of bacteria that resist decolorization by a mixture of alcohol and acetone in Gram's method of staining (see **Gram's stain**), and are thus stained only with the counter stain (usually red). Gram-negative bacteria have a much thinner layer of peptidoglycan in the cell wall than gram-positive bacteria.

gram-positive said of bacteria that resist decolorization by a mixture of alcohol and acetone in Gram's method of staining (see **Gram's stain**) and thus retain the crystal violet–iodine complex and appear purple; a characteristic of bacteria with a cell wall composed of a thick layer of peptidoglycan and teichoic acid. Some bacteria are taxonomically gram-positive but have lost the capacity to produce the peptidoglycan layer, e.g. *Clostridium piliforme*.

Gram's stain a staining procedure in which bacteria are stained with crystal violet, treated with strong iodine solution, decolorized with ethanol or ethanol–acetone and counterstained with a contrasting dye, usually safranin. The iodine forms a complex with the crystal violet that is more difficult to elute from the cells of gram-positive bacteria. Organisms that retain the crystal violet-iodine complex are deep purple in color and are classed as gram-positive and those losing the crystal violet stain are classified as gram-negative and are red in color.

gramicidin [*gram"ĭ-si'din*] a group of peptide antibiotics produced by the growth of *Bacillus brevis* and one of the two principal components of **tyrothricin**. Includes Gramicidin A, B, C, D, J, K, P, and S.

gramine [*gram'ēn*] a toxic alkaloid in *Phalaris arundinacea*.

graminivorous [*gram"ĭ-niv'ə-rəs*] feeding on grass and grass seeds and other grain.

Grammocephalus a genus of hookworms in the subfamily Bunostominae found in bile ducts; include *G. clathratus* (African elephant), *G. hybridatus* and *G. varedatus* (Indian elephant) and *G. intermedius* (rhinoceros).

grampus killer whale, *Orcinus orca*. The name is also used for Risso's dolphin, *Grampus griseus*.

Grand Basset Griffon Vendéen a hunting dog of medium height and with a rough, long coat of white with lemon, orange, tri-color or grizzle markings. Recognized as a breed in the UK, where it is called Basset Griffon Vendeen (Grand) and Europe. See also **Petit Basset Griffon Vendéen**.

Grand Bleu de Gascoigne a medium- to large-sized hunting dog with a long head, wrinkled face, pendulous lips and a dewlap. The smooth coat is a distinctive color of black mottling on a white base, which gives the blue appearance. There are two black marks on the head, each covering an ear and eye, and one on the skull; tan markings are found on the cheeks, lips, inside the ears, on the legs and under the tail.

grand mal [*grahn mahl*] [Fr.] a major seizure attended by loss of consciousness and convulsive movements, as distinguished from petit mal, a minor seizure. In domestic species a more appropriate term is generalized tonic-clonic seizures. See also **epilepsy**, **seizure**.

Grand Traverse disease a disease of the Great Lakes region of the USA and Canada. See **cobalt** nutritional deficiency.

granddam mother of an animal's sire or dam.

grandparent generation first generation of a three generation breeding program.

grandsire sire of an animal's dam or sire.

granisetron [*gră-nis'ə-tron*] a 5-HT_3-antagonist with potent antiemetic activity.

granivorous feeding on grain.

granny bonnets ***Aquilegia vulgaris***, ***Isotropis*** *cuneifolia*.

granny knot an insecure knot with the loose ends of the suture coming out from the loop one over and one under when they should be both under or both over. See also **knot**.

Grant's capsule a electronic device for measuring arterial blood pressure.

granula iridica [*gran'u-lə*] see **corpora** nigra.

granular [*gran'u-lər*] made up of or marked by the presence of granules or grains.

g. cell tumor a benign, circumscribed, tumor-like lesion of soft tissue, particularly of the lung of the horse, tongue of dogs, skin and muscle, composed of large cells with prominent granular cytoplasm; considered by some to arise from myoblasts (myoblastoma) and by others from neurogenic elements (granular cell schwannoma).

granulatio [*gran"u-la'she-o*] pl. *granulationes* [L.] a granule, or granular mass.

granulation [*gran"u-la'shən*] 1. the division of a hard substance into small particles. 2. the formation in wounds of small, rounded masses of tissue during healing; also the mass so formed.

arachnoid g's enlarged arachnoid villi projecting into the venous sinuses and creating slight depressions on the inner surface of the cranium.

exuberant g's excessive proliferation of granulation tissue in the healing of a wound.

g. tissue the new tissue formed in repair of wounds of soft tissue, consisting of connective tissue cells and ingrowing young vessels. It ultimately forms the cicatrix; excessive granulation is a common cause of chronic failure of wounds on the lower limbs of horses to heal.

toxic g. see toxic **granules**.

granule [*gran'ūl*] 1. a small particle or grain. 2. a small pill made of sucrose.

acidophil g's granules staining with acid dyes.

aleuronoid g's colorless myeloid colloidal bodies found in the base of pigment cells.

alpha g's 1. oval granules found in blood platelets; they are lysosomes containing acid phosphatase. 2. large granules in the alpha cells of the islets of Langerhans; they secrete glucagon. 3. acidophilic granules in the alpha cells of the adenohypophysis.

amphophil g's granules that stain with both acid and basic dyes.

azur g's, azurophil g's granules that stain easily with azure dyes; they are coarse, reddish granules and are seen in many lymphocytes. See primary granules (below).

basophil g's granules staining with basic dyes.

beta g's 1. granules in the beta cells of the islets of Langerhans that secrete insulin. 2. basophilic granules in the beta cells of the adenohypophysis.

g. cell the largest group of cells produced by the external germinal layer on the external surface of the embryonal cerebellum;

G-17: Exuberant granulation tissue on the metatarsus of a horse. From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

they form the thick granular layer of the cerebellum; called also granule neurons.
chromatic g's, chromophilic g's see **Nissl** bodies.
cone g's the nuclei of the visual cells in the outer nuclear layer of the retina which are connected with the cones.
eosinophil g's those staining with eosin. See also alpha granules (above).
epsilon g. see neutrophil granules (below).
Grawitz's g's minute granules seen in the erythrocytes in the basophilia of lead poisoning.
iodophil g's granules staining brown with iodine, seen in polymorphonuclear leukocytes in various acute infectious diseases.
irdal g. see **corpora** nigra.
keratohyalin g. keratin precursor; in the stratum granulosum of the epithelium.
metachromatic g's granules present in mast cells and many bacterial cells, having an avidity for basic dyes and causing irregular staining of the cell.
mitochondrial g's organelles in osteoblasts through which temporary calcium ion sequestration can be effected.
g. neurons see granule cell (above).
neutrophil g's neutrophilic granules from the protoplasm of polymorphonuclear leukocytes; called also epsilon granules.
Nissl's g's see **Nissl** bodies.
oxyphil g's acidophil granules.
pigment g's small masses of coloring matter in pigment cells.
primary g's the peroxidase-positive granules of neutrophils, most prominent in the progranulocyte and early myelocyte stages. Called also azurophilic granules.
rod g's the nuclei of the visual cells in the outer nuclear layer of the retina which are connected with the rods.
secondary g's the peroxidase-negative ('specific') granules seen in mature neutrophils.
seminal g's the small granular bodies in the semen.
specific g's. produced in the myelocyte as it differentiates into neutrophil, eosinophil or basophil. Called also secondary granules.
sulfur g's see **sulfur** granule.
toxic g's dark-staining granules in neutrophils that contain peroxidase and acid hydrolases. They occur in inflammatory reactions.
granuloadipose [*gran"u-lo-ad'ĭ-pōs*] showing fatty degeneration containing granules of fat.
granuloblast [*gran'u-lo-blast"*] myeloblast; an immature granulocyte.
granuloblastosis [*gran"u-lo-blas-to'sis*] a superseded name for **myeloblastosis**.
granulocyte [*gran'u-lo-sīt"*] any cell containing granules, especially a granular leukocyte, which includes neutrophils, eosinophils and basophils.
band-form g. a curved, elongated and unsegmented nucleus. See also band **neutrophil**.
g. colony-stimulating factor see **colony**-stimulating factors.
g.–macrophage colony-stimulating factor see **GM-CSF**, **colony**-stimulating factors.
granulocytic [*gran"u-lo-sit'ik*] pertaining to granulocytes.
g. leukemia see myelocytic **leukemia**.
g. sarcoma extramedullary growth of multiple, focal granulocytic neoplasm. They may be neutrophilic or eosinophilic. Lesions may be in any tissue but favor lung, gut and skin. They have a greenish color due to the exposure of myeloperoxidase to air. Called also chloroma.
granulocytopathy [*gran"u-lo-si-top'ə-the*] any disorder of the granulocytes.
bovine g. syndrome see bovine **leukocyte** adhesion deficiency.
canine g. syndrome see canine **leukocyte** adhesions deficiency.
granulocytopenia [*gran"u-lo-si"to-pe'ne-ə*] a reduced number of granulocytes in the blood; see **agranulocytosis**.
granulocytopenic pertaining to or emanating from granulocytopenia.
g. calf disease disease characterized by petechiae and necrotic lesions in the alimentary tract. The lesions in the mouth lead to hypersalivation, those in the nasal cavities to a nasal discharge. The depression of bone marrow is manifested by neutropenia and thrombocytopenia, leading to serious and often fatal secondary infections. The cause is unknown. See also **furazolidone**, **radiomimetic**, **ptaquiloside**, **radiation** injury.
granulocytopoiesis [*gran"u-lo-si"to-poi-e'sis*] granulopoiesis.
granulocytosis [*gran"u-lo-si-to'sis*] an excess of granulocytes in the blood.
masked g. an increase in the total number of granulocytes but not the leukocyte count, resulting from an increase in the marginal pool.
paraneoplastic g. seen in association with neoplasia; the cause is unknown.
granulokinetics [*gran"u-lo-kĭ-net'iks*] factors affecting cell production and migration of granulocytes.
granuloma [*gran'u-lo-mēr"*] histologically, a nodular focus of chronic inflammation consisting of variable numbers of mononuclear inflammatory cells, granulocytes, activated macrophages, fibroblasts and sometimes multinucleated giant cells. Seen classically in tuberculosis, but also in reaction to many chronic bacterial, fungal and parasitic infections and to foreign material in tissues.
acropruritic g. see **acral** lick dermatitis.
apical g. modified granulation tissue containing elements of chronic inflammation located adjacent to the root apex of a tooth with infected necrotic pulp.
canine eosinophilic g. see **eosinophilic** granuloma.
cholesterol g. see **cholesteatoma**.
coccidioidal g. the secondary, progressive, chronic (granulomatous) stage of coccidioidomycosis.
dental g. one usually surrounded by a fibrous sac continuous with the periodontal ligament and attached to the root apex of a tooth.
enzootic nasal g. see **enzootic** nasal granuloma.
eosinophilic linear g. well-delineated, elevated plaques with an eroded surface that occur in a linear pattern, usually on the caudal aspect of the hindleg(s) of cats. Pruritus is variable. Similar lesions may also occur in the oral cavity and on the lips. See also feline **eosinophilic** granuloma complex.
equine dermal g. see **swamp cancer**.
feline lick g. see feline **eosinophilic** granuloma complex.
g. fissuratum a firm, whitish, fissured, fibrotic granuloma of the gum and buccal mucosa, occurring on an edentulous alveolar ridge and between the ridge and the cheek.
foreign body g. a localized, chronic reaction to a foreign body in the tissue.
idiopathic sterile g's occur in dogs and cats; the lesions are painless and may become ulcerated and secondarily infected. An immune-mediated cause is suspected and the lesions often respond to treatment with corticosteroids or other immunomodulating drugs. Sometimes lesions regress spontaneously.
infectious g. infection by one of the systemic mycotic fungal agents which result in a granulomatous lesion in the skin.
intestinal eosinophilic g. see ***Angiostrongylus*** *costaricensis*.
lipoid g. a granuloma containing lipoid cells; xanthoma.
lipophagic g. a granuloma attended by the loss of subcutaneous fat.
mycotic g. see **swamp cancer**.
palisading g. one characterized by the arrangement of histiocytes surrounding a focus of fibrin, foreign material, degenerating collagen. Seen in large breed dogs as solitary nodules over pressure points or on the lips or tongue; probably caused by trauma.
paracoccidioidal g. paracoccidioidomycosis.
peripheral giant cell reparative g. a pedunculated or sessile lesion of the gingivae or alveolar ridge, apparently arising from the periodontium or mucoperiosteum, and usually due to trauma. It is uncommon in humans and animals. Called also reparative granuloma of the jaw.
pressure point g. see **pressure points**.

G-18: Granuloma caused by *Blastomyces*.
From Medleau L, Hnilica KA, Small Animal Dermatology, 2nd Edition. Saunders, 2006.

VetBooks.ir

pyogenic g. a benign, solitary, nodule resembling granulation tissue, found anywhere on the body, commonly intraorally, usually at the site of trauma as a response of the tissues to a nonspecific infection.
reparative g. of the jaw see peripheral giant cell reparative granuloma (above).
sperm g. granuloma of the epididymis caused by leakage of spermatozoa from the efferent tubules or the epididymis into surrounding tissue. May be due to trauma, infection or to congenital defects in the duct system.
staphylococcal g. a large mass containing small abscesses, found in the wall of the uterus of the sow. See also **botryomycosis**.
telangiectatic g. a form characterized by numerous dilated blood vessels.
tuberculous g. the lesion of tuberculosis and the prototype of granulomatous inflammation. It is composed of histiocytes and epithelioid cells surrounded by giant cells of the Langhans type, lymphocytes and fibroblasts. Bacteria are found in the cytoplasm of the epithelioid and giant cells.
ulcerative g. of swine see **ulcerative** granuloma of swine.
venereal g. see canine transmissible **venereal** tumor.

granulomatosis [*gran"u-lo"mə-to'sis*] the formation of multiple granulomas.
eosinophilic g. see pulmonary granulomatosis (below).
lymphomatoid g. a rare pulmonary neoplasm of dogs characterized by infiltration by atypical lymphoreticular cells.
pulmonary g. nodular inflammatory lesions with eosinophilic infiltrates, bronchial lymphadenopathy and sometimes pleural effusion; seen in dogs with heartworm disease.
visceral g. a disease of farmed and freeliving freshwater and marine fish caused by the fungus *Ichthyophonus* spp. There are granuloma-like lesions in all organs.
Wegener's g. a mononuclear granulomatous disease characterized by granulomatous inflammation and necrotizing vasculitis.

granulomatous [*gran"u-lom'ə-təs*] composed of granulomas.
g. colitis see histiocytic ulcerative **colitis**.
g. encephalitis see granulomatous **meningoencephalomyelitis**.
g. enteritis see granulomatous **enteritis**.
equine generalized g. disease a generalized disease affecting skin and all internal organs and of unknown origin; characterized by exfoliative dermatitis, wasting, and granulomatous lesions internally; skin lesions are dermal granulomatous nodules plus superficial exfoliation. Called also equine idiopathic granulomatous disease, equine histiocytic disease, equine histiocytic dermatitis.
equine idiopathic g. disease see equine generalized granulomatous disease (above).
g. meningoencephalomyelitis see granulomatous **meningoencephalomyelitis**.
g. perineuritis see **cauda equina neuritis**.
g. rhinitis see **enzootic** nasal granuloma.
g. skin disease see granular **dermatitis**.
g. synovitis/arthritis lesion characterized by granulomatous tissue on the synovial surface of the bones in the joint; may occur in systemic mycotic infections.
g. urethritis see granulomatous **urethritis**.

granulomere [*gran'u-lo-mēr"*] the center portion of a platelet in a dry, stained blood smear, apparently filled with fine, purplish red granules.
granulopenia [*gran"u-lo-pe'ne-ə*] granulocytopenia.
granuloplastic [*gran"u-lo-plas'tik*] forming granules.
granulopoiesis [*gran"u-lo-poi-e'sis*] the formation and development of granulocytes.
resurgence g. the cessation of granulopoiesis during systemic illness, followed by the release of immature granulocytes into the circulation. Seen in cats. Called also toxic bone marrow arrest.
granulopoietin [*gran"u-lo-poi'ə-tin*] an unidentified substance thought to regulate the rate of granulopoiesis.
granulosa cell tumor [*gran"u-lo'sə*] an ovarian gonadal stromal tumor originating in the solid mass of cells (granulosa cells) that surrounds the ovum in a developing graafian follicle. It may be associated with excessive production of estrogen, inducing endometrial hyperplasia and signs of hyperestrogenism. Most commonly observed in cows and mares, less commonly in the bitch, queen and ewe.
granulosis [*gran"u-lo'sis*] the formation of granules.

G-19: Granulosa cell tumor in a mare's ovary. From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

granulysin an antibacterial peptide released by CD8 cytotoxic T cells that kills bacteria and infected target cells.
granum [*gra'nəm*] [L.] *grain;* very small particles.
grape lesions [*grāp*] grapelike lesions on the pleura of cattle caused usually by tuberculosis.
grapes [*grāps*] commercial table and wine grapes, or dried raisins, sultanas, currants. See **raisin toxicity** in dogs.
g. engorgement see **carbohydrate engorgement**.
g. toxicity see **raisin toxicity** .

graph [*graf*] 1. a diagram or curve representing varying relationships between sets of data. Includes bar, pie, line, scatter diagrams, population pyramids, frequency polygons. 2. Often used as a word ending denoting a recording instrument.
time g. see time **chart**.

Graphidium a genus of nematodes in the family Trichostrongylidae.
G. strigosum found in the stomach and small intestines of rabbits and hares; may cause digestive upset and poor body condition.

-graphy word element. [Gr.] *writing or recording, a method of recording*.
GRAS Generally *R*ecognized *A*s *S*afe. A USDA classification for substances added to food, which are generally recognized among qualified experts as having been adequately shown to be safe under the conditions of their intended use.
grasping [*gras'ping*] a similar equine neurosis to windsucking; the horse grasps a fixed object with its teeth, but does not swallow air.

grass [*gras*] plant members of the family Poaceae (Gramineae). See also **star grass**.
g. disease see grass sickness (below).
eating g. is commonly seen in dogs and cats, sometimes associated with gastrointestinal disease, but more often an innocuous habit. May be a cause or a means of easy vomiting when the stomach is empty.
praire g. ***Paspalum*** *urvillei*.
purple plume g. ***Triraphis mollis***.
g. seed awns see **awn**.
g. sickness a dysautonomia of horses, zebras and hares; proposed to be a manifestation of toxicoinfectious botulism from *Clostridium botulinum* type C and characterized by drooling of saliva from the nostrils, alimentary tract stasis, small hard feces and severe mental depression. The outcome is always fatal. There is a diagnostic degenerative lesion in the sympathetic ganglia and polyneuronopathy affecting both central and peripheral nervous system. Called also mal seco.
g. staggers see **lactation tetany** (2).
summer g. ***Digitaria*** *sanguinalis*.
sweet g. ***Panicum*** *gilvum*.
sweet vernal g. ***Anthoxanthum odoratum***.
g. tetany see **lactation tetany** (2).

grass-fed animals that are full time at pasture and have no other significant food source.
g.-f. beef a developing niche market for beef in North America in response to the concern of the use of growth hormones and feed-grade antibiotics in traditional feedlot-raised cattle. Other than their mother's milk, grass-fed beef are allowed no food source other than grass or conserved forage through a 16–18 month growth period. Most producers will claim no use of feed level antibiotics, pesticides or hormones
g.-f. veal a response to the animal welfare concerns for traditionally raised veal. Calves are raised sucking their dams or milk replacer and then at 6–8 weeks are placed on pasture for a 5–6 month growing period. No grain or grain product can be fed. Most producers will claim no use of feed level antibiotics, pesticides or hormones.

grassland [*gras'land*] see **grazing** (2), **pasture**.
grasstree see ***Xanthorrhoea***.
northern forest g. *Xanthorrhoea johnsonii*.
swamp g. *Xanthorrhea fulva*.
grattage [*grah-tahzh'*] [Fr.] removal of granulations by scraping.
gratuitous inducers a molecule which induces transcription of a gene because it is structurally similar to another transcription inducer for the same gene. The gratuitous inducer is not metabolized by the gene product. For example, isopropylthiogalactoside (IPTG) induces transcription of lactose operon enzymes, but is not a substrate for β-galactosidase.
gravel [*grav'əl*] calculus occurring in small particles, as in feline lower urinary tract disease.
gravel sign [*grav'əl*] in radiology, small radiopaque particles of ingesta accumulated in a distended pylorus due to a gastric outflow problem.
gravid [*grav'id*] pregnant; containing developing young.
gravida [*grav'ĭ-də*] a pregnant female called gravida I (primigravida) during the first pregnancy, gravida II (secundigravida) during the second, and so on.
gravidic [*grə-vid'ik*] occurring in pregnancy.
gravidocardiac [*grav"ĭ-do-kahr'de-ak*] pertaining to heart disease during pregnancy.
gravimetric [*grav"ĭ-met'rik*] pertaining to measurement by weight; performed by weight, as the gravimetric method of drug assay.
gravity [*grav'ĭ-te*] weight; tendency toward the center of the earth.
g. rail system a rail system for moving carcasses of meat about in an abattoir. Carcasses move from station to station by gravity; suited only to slow kill rates.
gray[1] (Gy) [*gra*] the SI unit of absorbed radiation dose, defined as the transfer of 1 joule of energy per kilogram of absorbing material (1 J/kg); 1 Gy equals 100 rad.
gray[2] common coat color in most species; to be classed as a gray a horse should have gray points and have an even color over the body. With black points they are steel grays, with a red tinge they are rusty grays, with small spots of dark hair through the coat they are flea-bitten grays; silver grays have white mane and tail.
Gray Alpine cattle gray Italian multipurpose cattle.
gray birch ***Bridelia*** *exaltata*.
gray Collie syndrome see canine **cyclic** neutropenia.
gray crab disease infection of blue crabs by *Paramoeba perniciosa* causing gray translucency of ventral aspect of the body and limbs.
gray diarrhea disease of ranched mink clinically distinguished by a ravenous appetite and copious gray fetid diarrhea and death due to malnutrition; it has not been defined etiologically.
gray eye see **Marek's disease**.
gray fever Q fever.
gray ghost see **Weimaraner**.
gray matter gray areas of brain and spinal cord made up primarily of cell bodies and dendrites of nerve cells rather than myelinated axons. White matter or substance is the tissue composed primarily of myelinated, or medullated, fibers. The bodies of the nerve cells are centered in the gray matter. In the brain the gray matter may be external to white matter, e.g. cerebellum, or central to it, e.g. cerebrum. The cerebral cortex is composed of gray matter and there are some deep-seated nuclei too. In the spinal cord there is a central core of gray matter surrounded by white matter. On a cross-section of the spinal cord the gray matter follows the general pattern of the letter H.
gray patch disease a disease of farmed green sea turtles characterized by blisters and widespread gray plaques of epidermal necrosis; caused by chelonid herpesvirus 1.
gray pearl disease ***Neodiplostomum*** *perlatum*.
gray powder an oldfashioned purgative containing elemental mercury.
gray rule gray horses must have at least one parent with a gray coat color.
gray scale a scale of intensities of the color gray. Of value in assessing radiographic and ultrasonographic results. See also B-mode **ultrasonography**.
g. s. imaging see gray-scale **ultrasonography**.
gray Shirazi Iranian meat and carpetwool sheep, gray wool, similar to Karakul, polled or horned.
gray substance see **gray matter**.
grayanotoxin [*gra'ə-no-tok"sin*] the toxins found in members of the plant family Ericaceae, including azaleas and rhododendron. Ingestion by ruminants causes salivation, colic, vomiting, cardiac arrhythmia and death; contaminate honey made from nectar of these plants and this poisons humans. Called also andromedotoxin or acetylandromedol.
grazing [*gra'zing*] 1. actions of herbivorous animals eating growing pasture or cereal crop. 2. area of pasture or cereal crop to be used as standing feed. See also **pasture**.
g. behavior most grazing species prefer grazing in daylight hours and graze as a social or herd unit, all performing the same function at about the same time.
block g. see rotational grazing (below).
continuous g. the livestock are left in the field for long periods without rotation; a common practice in extensive farming systems where internal parasites are not a problem.
deferred g. a field is closed up and not used for grazing for the spring and summer but is then grazed as mature autumn feed. This may be a tactic to provide grazing at a time when pasture is usually in short supply, or it may be to allow a pasture to regenerate. Called also autumn saving.
extensive g. a system of grazing management based on a low carrying capacity on unimproved native pasture without irrigation and usually in area of medium to low rainfall.
g. fee see **agist**.
leader–follower g. the age group most susceptible to helminth infestation grazes the pasture first and are followed by the less susceptible older groups.
g. pattern the way in which each herbivorous species grazes a pasture, including closeness of cropping, preference for grass over clover over browse.
rented g. see **agist**.
rotational g. the herd or flock is moved frequently (days to weeks) from field to field in a management system aimed at reducing worm load and increasing production of dry matter. In many circumstances it does neither. Called also block grazing. See also **rotation** programs.
strip g. the field is grazed in strips which are changed every 1 to 3 days. This is done by careful placement of an electric fence so that the grazing strip is moved further and further away from the entrance to the field.
zero g. an animal husbandry strategy in which the plant material is harvested daily and fed to livestock in a dry lot. Avoids damage to pasture by cattle walking on it but requires much higher capital investment for harvesting machinery, construction and maintenance.
greasewood see ***Sarcobatus vermiculatus***.
greasy heel chronic, incapacitating dermatitis of the back of the pastern in horses. The cause is unknown but many cases occur in horses obliged to stand in unmucked out stables or in wet standing of any sort. There are horizontal fissures and a sebaceous exudate. The area is very painful to the touch.
greasy pig disease see **exudative** epidermitis.
Great Dane a very large (28–32 inches tall) dog with broad head, small ears carried erect but folded over unless cropped, a long neck and long, straight tail. Called also German mastiff. The breed is predisposed to cystinuria, spondylolisthesis, osteochondrosis, hypertrophic osteodystrophy and gastric dilatation.

G-20: Great Dane, harlequin.

VetBooks.ir

great-grandparent generation first generation of a four generation breeding program.

Great Pyrenees a very large (90–140 lb), powerfully built dog with a medium to long, thick coat in white, sometimes with patches of badger, gray or pale yellow. The ears are small and the tail long and plumed. Characteristically, there are double dewclaws on the hindfeet. The breed is predisposed to osteochondrosis. Outside North America, called Pyrenean Mountain dog.

greater ammi ***Ammi majus***.

Greater Swiss mountain dog a large, heavy boned dog, the largest of the four types of Swiss cattle dogs (**Sennehund**); similar in appearance to the Bernese mountain dog, but larger, weighing approximately 130 lb. The coat is the black, red and white tricolour, typical of this group.

greaves cracklings, an edible raw fat from the meat trade. The skimmings from the preparation of this fat are also called greaves. They represent a low grade of meat meal.

Greek Zackel sheep Greek milk, carpetwool or meat sheep, polled or horned, usually white with black or red spots on face and legs.

green [*grēn*] untrained.

green cereal crop [*grēn*] crop of young, green oats, wheat, barley, rye corn, used as grazing and to reduce an over-exuberant crop destined for grain production.

green feed fresh green grass or other material cut and brought to the animal.

green fluorescent protein (GFP) a small protein from the jellyfish *Aequorea victoria* that is used to produce recombinant fusion proteins; allows fluorescence microscopic study of subcellular localization and movement of the protein of interest.

green gizzard see green **gizzard**.

green muscle disease a disease of turkey breasts. See deep pectoral **myopathy**.

green slime disease **epizootic** catarrhal enteritis.

green struck see **heated beef**.

green water culture extensive culture of fish larvae in fertilized ponds carrying a phytoplankton bloom.

Greenetrack disease see idiopathic **cutaneous** and renal glomerular disease.

Greenland dog a large, powerfully built husky-type dog with a very thick coat, broad head, short ears and a large, bushy tail.

greenstick fracture see greenstick **fracture**.

gregarines low pathogenicity protozoans commonly infecting the intestines of shrimps and other invertebrates.

grenz rays very soft electromagnetic radiation of wavelengths about 2 Å.

Grevillea a large genus of Australian shrubs or small trees in the family Proteaceae; seeds and pods of a few species contain cyanogenetic glycosides but poisoning is not recorded; includes *G. banksii*, *G. helmsiae*, *G. robusta* (silky oak). Some species also have caustic resins on their seed pods, e.g. *G. dimidiata*, *G. mimosoides*, *G. pyramidalis*.

greyface a crossbred sheep of Border Leicester × Blackface breeding.

Greyhound a tall dog with very lean body, a distinctive deep chest and small abdomen, slender legs, small head and ears, long, arched neck and long, slender tail. The coat is very short and of any solid or spotted color. Although originally a sight hound for hunting or coursing, the breed is generally associated with racing.

Arabian G. see **Sloughi**.

G. cramp see Greyhound **cramp**.

G. exertional rhabdomyolysis see exertional **rhabdomyolysis**.

Persian G. see **Saluki**.

G. polyarthritis an erosive arthritis, particularly affecting joints of the distal limbs, occurs in young Greyhounds. The cause is unknown, but a *Mycoplasma* infections is suspected.

Greyia brandegei a selenium converter plant in the family Polygonaceae.

GRH growth hormone releasing hormone.

grid [*grid*] 1. a grating; in radiology, a device consisting essentially of a series of narrow lead strips closely spaced on their edges and separated by spacers of low density material; used to reduce the amount of scattered radiation reaching the X-ray film. 2. a chart with horizontal and perpendicular lines for plotting curves.

cross-hatch g. a grid used in radiography in which there are two sets of parallel strips at right angles to each other. Called also crossed grid.

crossed g. see cross-hatch grid (above).

g. cutoff excessive loss of radiation beam because of incorrect angulation between the tube and the lead strips.

g. factor because of the filtering out of rays by the lead strips there is a loss of penetrating effect of the beam so that exposure time must be increased.

focused g. the lead strips in the grid are sloped slightly inwards at the top so that the apertures more closely approximate the angle taken by the rays in a diverging beam.

linear g. a cassette grid in which the radiopaque strips are parallel to each other.

movable g. one that moves during the exposure of the film to the X-ray beam: a Potter–Bucky grid.

nonfocused g. see parallel grid (below).

parallel g. the lead strips in the grid are parallel to each other and vertical to the plane of the film. This has the disadvantage that more diverging rays are absorbed by the grid at the edges of the film than at the center with a lowering of exposure there.

Potter–Bucky g. a focused grid moved mechanically across the X-ray beam. Suited only to large installations. Called also Bucky and Potter–Bucky diaphragm.

pseudo-focused g. something of the same effect as a focused grid is obtained by gradually lowering the height of the strips in the grid as they approach the edge of the grid.

g. ratio the ratio between the height of the strips to the distance separating them. The greater the ratio the more rays will be filtered out.

reciprocating g. one that moves during the exposure of the subject to the beam of radiation.

rotating g. one that moves while X-rays are being generated.

stationary g. one that is stationary while the film is being exposed so that there is a pattern of grid lines on the radiograph.

g. tube a special tube designed to take cineradiographic X-rays.

griffon a term found in the names of several, particularly European, dog breeds and used generally for the type of dog with a wiry haircoat; includes Brussels griffon (Griffon Bruxellois), Brabancon (Brabancon griffon), Belgian griffon (Griffon Belge), German wirehaired pointer, Grand Basset Griffon Vendeen, Petit Basset Griffon Veneen, Spinone Italiano (Italian griffon), Wirehaired pointing griffon.

Griffon Bruxellois a Belgian breed of dogs with three varieties, differing in coat and color, and recognized as three breeds in many countries. The Griffon Bruxellois (Brussels griffon), Griffon Beige (Belgian griffon) and Petit Brabançon, differing in coat and color are recognized as one breed, the **Brussels griffon** in the USA.

grilse in the European terminology a salmon which has matured after only one winter in a salt water environment, whereas true salmon has passed two winters at sea. Many commercial farmed salmon are actually grilse.

Grindelia squarrosa North American selenium converter plant in the family Asteraceae. Other species in this genus may also have this characteristic. Called also gumweeds.

grinding of teeth [*grīnd'ing*] see **teeth** grinding.

grip [*grip*] a grasping or clasping.

devil's g. see **devil's** grip.

fingertip g. a method of holding a scalpel between the thumb and other fingers with the palm over the handle.

palm g. a method of holding a scalpel under the palm with the thumb pressing on the top of the blade and the fingers curled under and around the handle.

pencil g. a method of holding a scalpel as a pencil between the thumb and first finger with the handle over the top of the space between them.

griseofulvin [*gris"e-o-ful'vin*] a fungistatic antibiotic produced by *Penicillium griseofulvum* used orally for treatment of fungal infections of the skin. Toxic effects include teratogenicity and bone marrow suppression, which is most common in cats with FIV infection.

grit [*grit*] a necessary part of the diet of birds especially layers. Plays a part in the trituration that goes on in the gizzard. Usually supplied as shellgrit or crushed limestone to add calcium to the diet.

g. pad a laceration of the pad permits entry of pieces of grit causing lameness in dogs, especially racing Greyhounds. The grit works its way through the pad and may even invade the flexor tendon.

grits [*grits*] very fine pieces of corn grain produced by crushing or kibbling. The bran and germ have been removed by sieving.
grizzle a bluish-gray or iron-gray coat color in dogs, consisting of a mixture of black and white hairs. In canaries, it describes light, grayish markings on the head, body, wings or tail.
groats grain which has been dehulled and the hulls winnowed off.
grocer's itch see ***Glycyphagus domesticus***.
Groenendael see **Belgian** sheepdog.
groin [*groin*] the junctional region between the abdomen and thigh; the inguinal region.
Gromark an easy-care breed of meat sheep, produced in Australia by crossing Border Leicester and Corriedale sheep.
groodles a hybrid name used to describe dogs produced from crossing Golden retrievers and Poodles. Not a recognized breed.
grooming [*groom'ing*] brushing and combing of the hair. A passive exercise in dogs and horses resulting in the development of a minor occupation of groom, institution of grooming parlor, and equipment. Cats and some dogs actively groom themselves. Cattle make some attempts at it, especially cows of their calves.
g. disorders grooming-type behavior that is damaging to the cat or objectionable to the owner; includes excessive grooming as a displacement activity associated with stress.
grootlamsiekte Afrikaans name for 'big lamb disease', the prolonged gestation in ewes caused by ***Salsola tuberculatiformis***.
groove [*groov*] a narrow, linear hollow or depression. Called also sulcus.
abomasal g. the third part of the gastric groove. Runs along the inside of the lesser curvature of the abomasum.
alar g. the slot-like part of the nostril of the dog beneath the wing of the nose; the homologous part in other animals.
atrioventricular g. see coronary groove (below).
branchial g. an external furrow lined with ectoderm, occurring in the embryo between two branchial arches.
carpal g. the bony part of the carpal tunnel on the palmar surfaces of the carpal bones.
coronary g. indicates, on the external surface of the heart, the demarcation of the atria from the ventricles. Called also atrioventricular groove.
esophageal g. a superseded name for **reticular^2** groove.
gastric g. in the simple stomach a trough that runs along the lesser curvature of the internal surface from the cardia to the pylorus. In the ruminant it is divided into three parts, the reticular, omasal and abomasal grooves.
hoof g's coronet to sole grooves in ruminant hooves; demarcate horn of wall from horn of heel; the axial groove is a point of weakness and subject to injury.
humeral g. see intertubercular groove (below).
intermammary g. median groove which divides the mammary glands into left and right halves.
intertubercular g. separates the tubercles at the head of the humerus; called also humeral groove, *sulcus intertubercularis*. Formerly called bicipital groove.
interventricular g. there are two of these, right and left, which are external indicators of the separation between the two ventricles. The two grooves do not quite meet at the apex.
jugular g. the furrow in the ventral part of the neck which accommodates the jugular vein just below the skin.
lacrimal g. on the nasal surface of the maxillary bone; houses the nasolacrimal duct.
laryngotracheal g. in fetal development this groove appears in the ventral wall of the pharynx and deepens and separates to form the trachea and lower respiratory tract.
left descending interventricular groove see paraconal groove (below).
medullary g., neural g. that formed by the invagination of the neural plate of the embryo to form the neural tube.
omasal g. the middle segment of the gastric groove in the ruminant, between the reticulo-omasal and the omasoabomasal orifices.
optic g. on the internal surface of the presphenoid bone; occupied by the optic chiasma.
ossification g. see **ossification** groove.
paraconal g. the fat and vessel-filled furrow on the left side of the heart, marking the division between the two ventricles; named from its position beside the conus arteriosus; called also left descending interventricular grooves.
paracuneal g. deep V-shaped furrows which separate the frog of the equine hoof from the bars and the sole.
primitive g. longitudinal furrow in the primitive streak of the embryo.
rachitic g. a horizontal groove along the lower border of the thorax corresponding to the costal insertion of the diaphragm; seen in cases of advanced rickets.
g. of Ranvier see **ossification** groove.
reticular g. see **reticular^2** groove.
right descending interventricular groove see subsinuosal groove (below).
ruminoreticular g. the external demarcation of the division between the reticulum and the rumen.
subsinuosal g. fat and vessel-filled groove on the right side of the heart, marking the division between the two ventricles; named for its position beneath the sinus venosus; called also right descending interventricular groove.
grooved director a grooved metal probe used to direct another surgical instrument to a particular site which is out of view.
groover instrument for making grooves.
Hughes hoof g. like a bone curette except that instead of a spoon-shaped blade there is an open loop with one or both edges sharpened.
gross [*grōs*] coarse or large; visible to the naked eye.
Grosspiculagia see ***Ostertagia***.
ground bundle [*ground*] see fundamental **bundle**.
ground ivy see ***Glechoma hederacea***.
ground substance the amorphous, gel-like material in which connective tissue cells and fibers are embedded.
groundhog [*ground'hog*] (*Marmota monax*) the largest member of the squirrel family Sciuridae, they live in burrows, are diurnal, and have a well-known winter hibernation, and an even more notable spring awakening. Called also woodchuck. Because of their susceptibility to infection with woodchuck hepatitis virus, they have been used as an animal model in studies of hepatitis B in humans.
groundnut [*ground'nut*] see **peanut**.
g. meal the cake remaining after expression of the oil from groundnuts is a valuable protein supplement but has a toxicity hazard if it contains aflatoxin due to infection of the cake or the original nuts with *Aspergillus flavus* fungus.
g. poisoning see **aflatoxicosis**.
groundsel common name applied to plants in the genus ***Senecio***. Includes Riddell's groundsell (*S. riddellii*), threadleaf or woolly groundsel (*S. longilobus*), variable groundsel (*S. lautus*).
groundsel bush ***Baccharis halimifolia***.
group [*groop*] 1. an assemblage of objects or animals having certain things in common. 2. a number of atoms forming a recognizable and usually transferable portion of a molecule.
azo g. the bivalent radical, −N=N−.
blood g's categories into which blood can be classified on the basis of agglutinogens. See also **blood** group.
g. breeding scheme method of selecting breeding stock in which a group of breeders cooperate to run an open nucleus breeding scheme; in return they receive a regular supply of breeding stock, mostly males, for use in their own herds or flocks. Called also cooperative breeding scheme.
g. medication see **mass** medication.
prosthetic g. 1. an organic radical, nonprotein in nature, which together with a protein carrier forms an enzyme. 2. a cofactor tightly bound to an enzyme, i.e. it is an integral part of the enzyme and not readily dissociated from it.
g. specific antigen see group specific **antigen**.
group-transfer [*groop-trans'fər*] denoting a chemical reaction (excluding oxidation and reduction) in which molecules exchange functional groups, a process catalyzed by enzymes called transferases.
grouse a group of related species of game birds in the family Tetraonidae. They are the red grouse (*Lagopus scoticus*), wood grouse (*Tetrao urogallus*), black grouse (*Lyrurus tetrix*), ruffed grouse (*Bonasas umbellus*), sage grouse (*Centrocercus urophasianus*) and prairie chickens (*Tympanuchus* spp.).
g. disease see ***Trichostrongylus tenuis***.
grow out to increase in size without fattening.
growing-finishing pigs pigs in the 50–250 lb (25–100 kg) body weight class being grown and fattened for slaughter.

VetBooks.ir

growing fork see **replication** fork.

growth [*grōth*] 1. the progressive increase in size of a living thing, especially the process by which the body reaches its point of complete physical development. 2. an abnormal formation of tissue, such as a tumor.

g. arrest line a radiologically detectable line parallel to the growth plate in the metaphysis that indicates a temporary cessation of bone growth.

g. check an event or state, usually the result of inadequate nutrition, parasitism or other disease, which temporarily reduces or stops growth in a young animal. Often followed by a period of compensatory growth (below).

compensatory g. increased growth rate during a time period as a result of lower than normal growth rate during a previous period.

g. disorders are sometimes traceable to excess or shortage of pituitary secretions, and may arise from hereditary defects or from glandular abnormalities. Abnormally large secretions of growth hormone can produce **gigantism**. Failure of the pituitary gland to develop sufficiently or to secrete adequate amounts of growth hormone may result in **dwarfism**. In adulthood, overproduction of growth hormone may lead to **acromegaly**.

g. factor substances which act as local regulators of cell division and function; classified as autocrine (act on cells of the same class) or paracrine (act on cells of a different class).

hematopoietic g. factors see **colony**-stimulating factors.

recombinant g. factor recombinant growth hormone.

g. retardation stature smaller than normal; called also runt.

g. retardation lattice radiodense metaphyseal lines parallel to the epiphyseal plate developing in fetal bone.

growth hormone (GH) [*grōth*] a substance that stimulates growth, especially the polypeptide hormone secreted by the anterior lobe of the **pituitary** gland that directly influences protein, carbohydrate and lipid metabolism, and controls the rate of skeletal and visceral growth. The hormone acts on tissues via peripheral factors. Called also somatotropin, **somatomedin**. See also bovine **somatotropin**.

g. h. release inhibiting h. see **somatostatin**.

g. h. releasing h. (GH-RH) a hormone elaborated by the hypothalamus, which stimulates the release of growth hormone from the pituitary gland. Called also somatocrinin.

g. h.-responsive dermatosis an alternate name for **alopecia** X, based on the observation that hair re-growth occurs in some dogs following treatment with growth hormone.

g. h. stimulation test see **clonidine** stimulation test.

growthy said of an animal that is large for its age and appears to have potential for further rapid growth.

grub maggot-like or caterpillar-like insect larva; said of beetles and flies, most properly of beetles.

black g. metacercariae of digenetic flukes in the skin and/or musculature of finfish.

cattle g. see ***Hypoderma***. Called also warble fly.

head g. see ***Oestrus ovis***.

torsalo g. ***Dermatobia hominis***.

white g. metacercariae of digenetic flukes in the skin and/or musculature of finfish.

yellow g. metacercariae of digenetic flukes in skin and/or musculature of finfish.

grubby gullets see grubby **gullet**.

gruel a mixture made of ground feed mixed with water.

grumous lumpy or clotted.

grunt [*grunt*] quick, sharp sound created by a forced expiration against a closed glottis; elicited by sharp pain. See also **grunting**.

abdominal palpation g's, g. expiratory a grunt occurs with each expiration.

percussion g. grunt with each percussion over the sensitive area.

walking g. a grunt with each step while walking.

grunt test a clinical test in which a positive result is an audible grunt by the subject. In cows the test is for traumatic reticuloperitonitis and can be conducted in several ways. The cow may be pinched over the withers by forcibly picking up a fold of skin. This causes a sharp depression of the back and pain resulting in a grunt. A second method is to lift sharply on a beam of wood held under the sternum behind the elbows. A third method is to punch the cow in the same spot and auscultate over the trachea. In horses the test is for laryngeal hemiplegia. The subject is restrained against a wall so that it cannot jump away and a sharp, threatening gesture is made at the abdomen with a stick or crop.

grunting [*grunt'ing*] a forced expiration against a closed glottis. It is characteristic of painful and labored breathing and of expiratory effort due to any cause, e.g. emphysema.

gryposis [*grĭ-po'sis*] abnormal curvature, as of the joints.

gs antigen group specific antigen.

GSA general somatic afferent system of nerves.

GSE general somatic efferent system.

GSH reduced **glutathione**.

GSSG oxidized **glutathione** or glutathione disulfide.

GTF glucose tolerance factor.

GTP guanosine triphosphate.

GTP binding protein see **g protein**.

GTPase guanosine triphosphatase.

GU genitourinary.

guaiac test [*gwi'ăk*] a tree resin from *Guajaaem officinale*; used in a test for occult blood in the feces.

guaiacol an extract of tar used as an expectorant.

g. glyceryl ether see **guaifenesin**. Previously called glyceryl guaiacolate.

guaifenesin [*gwi-fen'ə-sin*] the glyceryl ester of guaiacol; used as an expectorant and as a muscle relaxant in anesthetic procedures. Also spelled guaiphenesin.

guaiphenesin guaifenesin.

guajillo see ***Acacia berlandieri***.

guanaco a wild South American camelid (*Lama guanicoe*) believed to be the ancestor of the domesticated **llama**.

guanethidine [*gwahn-eth'ĭ-dēn*] an adrenergic-blocking agent used in the treatment of hypertension.

guango see ***Samanea saman***.

guanidine [*gwah'nĭ-dēn*] a compound with the formula HNC $(NH_2)_2$. Formed in the oxidation of guanine and is a normal product of protein metabolism found in urine. The hydrochloride preparation is used to increase acetylcholine release in the treatment of myasthenia gravis and botulism.

guanidoacetic acid [*gwah"nĭ-do-ə-se'tik*] an intermediate product in the synthesis of creatine.

guanine (G) [*gwah'nēn*] a purine base, one of the fundamental components of nucleic acids (DNA and RNA).

guano compacted droppings of birds or bats used as fertilizer; a known carrier of disease, e.g. histoplasmosis.

guanosine [*gwah'no-sēn*] a nucleoside, guanine riboside, one of the major constituents of nucleic acids.

cyclic g. monophosphate (cyclic GMP, cGMP) a cyclic 3',5'-phosphate that acts as an intercellular second messenger mediating the activity of hormones and other substances; essential in vision where cGMP concentrations increase in the dark.

g. monophosphate (GMP) a nucleotide important in metabolism and nucleic acid synthesis.

g. pentophosphate involved with guanosine tetraphosphate in the so called stringent response of bacteria in which, because the cell does not have a sufficient pool of amino acids to maintain protein synthesis, tRNA and rRNA synthesis is reduced by about 20-fold, which suspends many of the cells' activities until conditions improve.

g. tetraphosphate see guanosine pentophosphate (above).

g. triphosphate (GTP) an energy-rich compound involved in several metabolic reactions.

guanylate cyclase [*gwah'nə-lāt*] enzyme catalyzing the synthesis of 3'5' cyclic-GMP, an intracellular signaling molecule from GTP. Acts to raise the concentration of cGMP in photoreceptor cells of the retina to reopen cGMP-gated channels after a neuronal signaling event.

guarana [*gwə-rah'nə*] an extract of the plant *Paullinia cupana* that contains a high concentration of caffeine. Used as a dietary supplement in weight loss preparations and in energy drinks. Accidental ingestion by dogs has resulted in toxicity.

guaranteed analysis see guaranteed **analysis**.

guard dog [*gahrd*] large, aggressive dog trained to attack intruders; usually German shepherd dogs, Doberman pinschers, Rottweilers, Bull terriers. See also **dog**.

Guarnieri bodies large intracytoplasmic inclusion bodies originating from Paschen bodies, caused by infection with vaccinia or variola virus.

guayiga ***Zamia pujilla***.

gubernaculum [*goo"bər-nak'u-ləm*] the embryonic structure that tows and guides the descending testis to its scrotal site.

GUD goldfish ulcer disease.
Gudden's atrophy [*good'enz*] degeneration of central nerve cells when the axon is damaged or infected by virus.
guenon (*Cercopithecus* spp.) a genus of Old World monkeys. Some species carry yellow fever and can be responsible for spreading the disease to humans.
guereza see colobus **monkey**.
Guernsey a yellow-brown and white, horned breed of dairy cattle. One of the Channel Islands breeds, originating from the island of Guernsey in the English Channel.
Guest cannula a hollow needle within a stainless steel blunt-pointed cannula. They are introduced into a vein together and the needle withdrawn when blood flows. The cannula is left in situ.
guildford grass ***Romulea*** *rosea* var. *australis*.
Guillain–Barré syndrome [*ge-yă' bə-ra'*] a relatively rare disease of humans affecting the peripheral nervous system, especially the spinal nerves, but also the cranial nerves. Often observed after parenteral administration of drugs and vaccines. Pathological changes include demyelination, inflammation, edema and nerve root decompression. Called also acute idiopathic polyneuritis, postinfectious polyneuritis and Landry's paralysis. The cause is unknown but is believed to be related to an autoimmune mechanism. Idiopathic polyradiculoneuritis (coonhound paralysis) in dogs and cauda equina neuritis in horses are similar.
guillotine [*ge'o-tēn*] a surgical instrument with a sliding blade for excising a tonsil or a toenail.
guinea fowl [*gin'e*] *Numida meleagris*, the domesticated guinea fowl; there are a number of wild species, all in the bird family Numidinae. Pearly green plumage, long, shapely neck, featherless head and neck except where the head has either a crest of feathers or a bony casque, and a characteristic raucous call.
guinea grass [*gin'e*] see ***Panicum*** *maximum*.
guinea pig [*gin'e pig*] the domestic guinea pig, popular as a pet, as an experimental laboratory animal and as a food source for some indigenous groups in South America. Distinctive because of its requirement for a source of dietary vitamin C, long gestation period of 63 days and very mature young at birth. Comes in a great variety of broken and whole colors and color combinations, the most common being Himalayan (white with black points), tortoiseshell (patches of dark and light brown), tortoise and white, Dutch (white with brown or tan pattern), brindle, silver agouti (silver and gray underside), golden agouti (dark hair tipped with yellow), and albino (pure white with pink eyes). There are several varieties differing mainly in haircoat, but the original and still most popular varieties are: American (or English) shorthaired—short, fine, glossy hair; Peruvian longhaired—very long, silky hair obscures the body structures; and Abyssinian roughhaired—short, wiry coat composed of swirls or rosettes. Called also *Cavia porcellus* and cavy.
guinea worm see ***Dracunculus*** *medinensis*.
gulah anatomical structure peculiar to the male dromedary; an inflated bladder, a diverticulum from the soft palate, which protrudes from the mouth of the sexually aroused male. Called also dulaa.
gular pertaining to the throat.
g. flutter in some birds, evaporative cooling from the respiratory tract is accomplished by by pulsations of the hyoid apparatus.

G-21: Guinea pigs. From Dyce KM, Sack W, Wensing CJG, Textbook of Veterinary Anatomy, 3rd Edition. Saunders, 2002.

g. sac, g. pouch a fold of skin that can be distended for courtship display (as in frigatebirds), to hold food (as in the pelican) or with air for vocalization, (as in some gibbons).
Gulf Coast coast of the Gulf of Mexico.
G. C. fungus see **swamp cancer**.
G. C. tick see ***Amblyomma*** *maculatum*.
gullet [*gul'ət*] see **esophagus**.
grubby g. gullets damaged by migrating *Hypoderma* spp.
g. worm see ***Capillaria***, ***Echinuria***, ***Gongylonema***.
gulping [*gulp'ing*] exaggerated, sometimes difficult, swallowing movements; seen in cats with laryngitis or esophagitis.
gulum see ***Capparis tomentosa***.
gum [*gum*] 1. a mucilaginous excretion of various plants. 2. gingiva. 3. general name for trees in the genus ***Eucalyptus***.
g. arabic (1) see **acacia** (2).
g. benzoin see **benzoin resin**.
guar g. (1) an extract from seeds of the plant *Cyamopsis psoraloides*; used as a thickening agent, pharmaceutically as a tablet binder, and as a soluble fiber in the dietary management of diabetes mellitus.
karaya g. (1) the dried gummy exudation from *Sterculia urens* or other species of *Sterculia*, which becomes gelatinous when moisture is added. It is available in rings that can be molded into any desired shape. Commonly used as an obstetrical lubricant. Called also sterculia gum.
g. line (2) **gingival** line (1).
manna g. ribbon g., white g. (3) *Eucalyptus viminalis*.
sterculia g. (1) from trees of the genus *Sterculia*; a dietary fiber supplement used as a bulk forming laxative. Called also karaya gum.
g. tragacanth (1) see **tragacanth**.
gum boil [*gum'boil*] see **dental** fistula.
gum-boots British for rubber over-boots. Called also wellingtons.
gum-chewer syndrome hyperplasia of sublingual or buccal mucosa due to chronic trauma from teeth. Seen predominantly in small breed dogs.
Gumboro disease infectious **bursal** disease of chickens.
gumma [*gum'ə*] a soft, gummy tumor.
gummy [*gum'ə*] an old sheep that has lost all of its incisor teeth.
gumweeds [*gum'wēds*] *Grindelia* spp. See ***Grindelia squarrosa***.
gun [*gun*] 1. weapon for firing a projectile. 2. of the top rank, e.g. gun shearer.
balling g. see **balling** gun.
dart g. see **blow dart**.
g. dog see gun **dog**.
drenching g. a handheld metal automatic syringe capable of delivering a preset dose of agent, most commonly an anthelmintic, and with a variable dose up to about 4 oz or about 120 mL, via the mouth.
Günther's disease [*gēn'ter*] congenital erythropoietic porphyria.
L-gluonolactone oxidase hepatic, microsomal enzyme necessary for the formation of vitamin C in the body; lacked by humans, some primates and guinea pigs, which therefore need a dietary source of the vitamin.
guppy a small aquarium fish up to 1.5 inches long in many color combinations. Called also *Poecilia reticulata*.
Gurltia a genus of worms in the family Angiostrongylidae found in the veins of the leptomeninges of Felidae.
G. paralysans found in the thigh veins of cats; may cause paralysis.
gustation [*gəs-ta'shən*] the act of tasting or the sense of taste.
gut [*gut*] 1. the bowel or intestine. 2. the primitive digestive tube, consisting of the fore-, mid- and hindgut. 3. catgut.
g.-associated lymphoid tissue (GALT) see gut-associated **lymphoid** tissue.
g. edema see **edema** disease.
g.-tie see pelvic **hernia**.
gutfill the amount of an animal's total body weight that is composed of food, digesta and feces. This is very variable and can greatly influence an animal's body weight. This is most important in ruminants and to a lesser extent in horses.
Gutierrezia [*goo"te-ə-re'ze-ə*] a North American plant genus of the family Asteraceae.
G. microcephala, G. sarothrae contains a toxic saponin which causes an acute illness with sudden death and lesions of gastroenteritis, hepatitis and nephritis. Chronic poisoning causes a syndrome of

VetBooks.ir

abortion, stillbirth and retained placenta. Converter plants for selenium. Called also *Xanthocephalum lucidum*, *X. sarothrae*, perennial broomweed, slinkweed, snakeweed, turpentine weed.

gutta [gut'ə] pl. *guttae* [L.] a drop.

gutta-percha [gut"ə-pur'chə] the coagulated latex of a number of tropical trees of the family Sapotaceae; used as a dental cement and in splints.

gutta-percha tree [gut"ə-pur'chə] ***Excoecaria*** *dallachyana*.

Guttat. [L.] *guttatim* (drop by drop).

guttate [gut'āt] resembling a drop.

guttatim [gə-ta'tim] [L.] *drop by drop*.

guttering the cutting of a gutter-like excision in bone.

guttery part of an abattoir used to empty gut of contents. Called also gut and tripe room.

guttural [gut'ər-əl] pertaining to the throat.

guttural pouch [gut'ər-əl] a large air-filled sac that develops as a ventral diverticulum of the auditory tube in the horse. Located dorsal to the pharynx the paired sacs cause swelling in the parotid region when distended. Several large vessels and nerves run over its surface and are vulnerable to pathology of the pouch. Recent studies suggest it may function as a brain-cooling device.

g. p. empyema causes local swelling visible in the throat region, dysphagia and a purulent nasal discharge. commonly caused by *Streptococcus equi* var *equi*.

g. p. mycosis associated most commonly with *Aspergillus* spp. and may result in erosion of the internal carotid artery and sudden, spontaneous nose-bleeding which may cause exsanguination. Dysphagia, abnormal respiratory sounds and Horner's syndrome also occur. See also **chondroids**.

g. p. tympany occurs mainly in foals during the first few days of life. Causes enormous swelling of the throat but little distress.

GVA general visceral afferent system of nerves.

GVE general visceral efferent system of nerves.

GVH graft-versus-host.

GVHD graft-versus-host-disease.

gwardar see brown **snake**.

Gy **gray**[1]; the SI unit for absorbed radiation dose.

Gyalocephalus a genus of nematodes in the subfamily Cyathostominae.

G. capitatus a rare finding in the large intestine of horses. May contribute to the clinical signs of **cyathostomiasis**.

Gymnocladus a North American genus of trees in the legume family Caesalpiniaceae; contains an unidentified toxin which causes intense gastrointestinal inflammation and effects on circulation and central nervous function. Includes *G. dioicus* (*G. canadensis*). Called also Kentucky coffee tree.

Gymnogyps californianus see **condor**.

gymnospore [jim'no-spor] a spore without a protective envelope.

gympie ***Dendrocnide*** *moroides*.

Gynandriris see ***Moraea***.

gynandrism [gi-, jə-nan'driz-əm] 1. hermaphroditism. 2. female pseudohermaphroditism.

gynandroblastoma [gi-, jə-nan"dro-blas-to'mə] an ovarian tumor containing elements of both arrhenoblastoma and granulosa cell tumor; it produces both androgenic and estrogenic effects.

gynandroid [gi-, jə-nan'droid] a hermaphrodite or a female pseudohermaphrodite.

gynandromorph [gi-, jə-nan'dro-morf] an organism exhibiting gynandromorphism.

G-22: Guttural pouch tympany.
From Knottenbelt DC, Pascoe RR, Diseases and Disorders of the Horse. Saunders, 2003.

G-23: Gynecomastia of a buck goat.
From Buergelt CD, Color Atlas of Reproductive Pathology of Domestic Animal. Mosby, 1996.

gynandromorphism [gi-, jə-nan"dro-mor'fiz-əm] the presence of chromosomes of both sexes in different tissues of the body, which produces a mosaic of male and female sex characteristics.

gynec(o)- word element. [Gr.] *woman*.

gynecomastia [gi"nə-, jin"ə-ko-mas'te-ə] abnormal enlargement of the mammary glands in the male, even to the point of secreting milk; usually the result of endocrine influences such as in the feminizing syndrome associated with functional Sertoli cell tumors of the testes.

gyn(o)- word element. [Gr.] *woman*.

gynogenesis [gi"no-, jin"o-jen'ə-sis] development of an egg that is stimulated by a sperm in the absence of any participation of the sperm nucleus.

gynoplastics [gi"no- jin"o-plas'tiks] plastic or reconstructive surgery of female reproductive organs.

Gyps fulvus see **vulture**.

gypsum [jip'səm] native calcium sulfate, which, when calcined, becomes plaster of Paris; used in making plaster casts for fractures.

gyrase one of the type II topoisomerases involved in the supercoiling of double-stranded circular DNA molecules.

gyrate [ji'rāt] convoluted; ring- or spiral-shaped.

g. atrophy atrophy of the choroid and retina; an inherited, progressive disease causing blindness in humans, caused by a deficiency of ornithine-δ-aminotransferase. Has been reported in a cat.

gyration [ji-ra'shən] revolution about a fixed center.

gyre gyrus.

gyrectomy [ji-rek'tə-me] excision or resection of a cerebral gyrus, or a portion of the cerebral cortex.

Gyrencephala [ji"rən-sef'ə-lə] a group of higher mammals, including humans, having a brain marked by convolutions.

gyrencephalic [ji"rən-sə-fal'ik] pertaining to the members of the family Gyrencephala; having a brain marked by convolutions.

gyrfalcon a large, white or gray, Arctic falcon (*Falco rusticolus*), much prized for falconry.

gyrodactylosis infestation by the trematode ***Gyrodactylus*** *salaris*. A disease notifiable to the OIE (see Table 22).

Gyrodactylus [ji"ro-dak'tĭ-lus] a monogenean trematode that infests the skin and fins of fish.

G. elegans a common monogenetic trematode parasite of fish and found attached to their skin.

G. salaris important freshwater trematode pathogen mainly of Atlantic salmon, occurring mainly on the fins, but also found on the body and less commonly on the gills. There is high mortality. Its distibution is restricted to Europe, mainly northern regions. The cause of gyrodactylosis, a disease notifiable to the OIE (see Table 22).

Gyropus ovalis [gi'ro-pəs] a louse parasite of guinea pigs and other rodents. A member of the superfamily Amblycera.

Gyrovirus a genus in the family *Circoviridae*.

gyrospasm [ji'ro-spaz"əm] rotatory spasm of the head.

Gyrostemon a genus of Australian plants in the family Gyrostemonaceae; contains an unidentified toxin which is reputed to cause pulmonary edema in horses and nervous signs in camels. Includes *G. australasicus*, *G. ramulosus*. Called also camel poison.

G. tepperi contains an unidentified toxin which causes incoordination and cystitis. Called also *Didymotheca cupressiformis*, double-seeded emu bush.

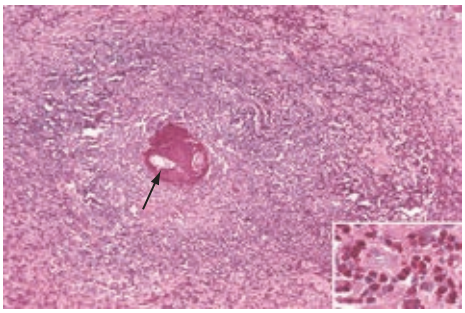
Gyrostigma a genus of stomach flukes.

G. conjugens found in the forestomachs of the black rhinoceros.
G. pavesii found in the forestomachs of the white rhinoceros.
Gyrotheca tinctoria see ***Lachnanthes tinctoria***.
gyrus pl. *gyri* [L.] one of the many convolutions of the surface of the brain caused by infolding of the cortex (gyri cerebri), separated by fissures or sulci. These are not defined here. The list usually includes: g. ambiens, gyri breves insulae, g. callosus, g. centrifugales, g. centripetales, gyri cerebri, g. fasciolaris, g. lunaris and the cingulate, coronal, dentate, ectomarginal, ectosylvian, genual, marginal, occipital, parahippocampal, postcruciate, postsplenial, precruciate, prorean, splenial, suprasplenial and sylvian gyri.
cerebral gyri, gyri cerebri the tortuous elevations (convolutions) on the surface of the cerebral hemisphere, caused by infolding of the cortex and separated by fissures or sulci.

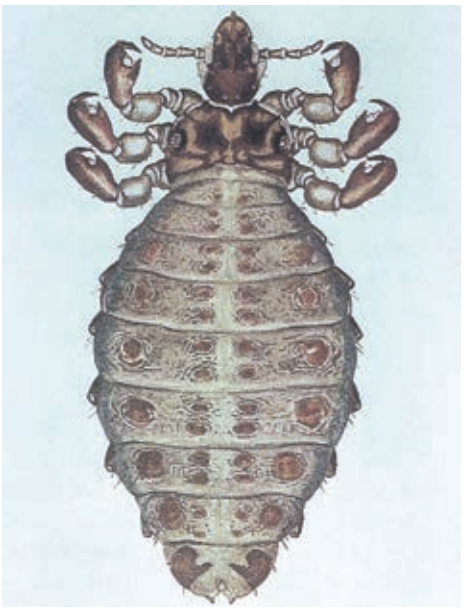
H

H chemical symbol, *hydrogen*;; Hounsfield unit.
H+ symbol, *hydrogen ion*.
H^+,K^+-ATPase an enzyme of the gastric parietal cell involved in the terminal step of gastric acid secretion in the stomach. Called also proton pump. See also **proton** pump inhibitors.
h symbol, *hecto-*; [L.] *hora* (hour).
H & E hematoxylin and eosin (stain).
H-2 complex the major **histocompatibility** complex in the mouse.
H antigen see H **antigen**.
H band a zone across the center of the sarcomeres of skeletal muscle cells.
H chain see heavy **chain**.
H-plasty placement of skin flaps in which two single pedicle advancement flaps, opposite each other, form an H pattern when closed. This may be more effective than a single, longer flap in closing a large area.
H_2-receptor see histamine **receptor**.
H-wave reflex in nerve conduction studies by electromyography, a pattern of recording which evaluates both afferent and efferent pathways.
H-Y factor a cell-surface component on intermediate mesodermal cells carrying a Y chromosome; the H-Y factor is an obligatory component in the transformation in the embryo of the indifferent gonad into a testis.
H_2O_2 hydrogen peroxide.
HA used for hemagglutinin, hemagglutination, and hemagglutination assay.
HA-MRSA healthcare-associated methicillin-resistant *Staphylococcus aureus*.
Ha chemical symbol, *hahnium*.
Haalstra's method a laboratory procedure for isolating *Dermatophilus congolensis* from infectious material, based on chemotaxis stimulated by carbon dioxide.
haarscheiben tactile elevations that project a little above or just below special guard hairs or tylotrichs in dogs and cats. Called also tylotrich pad. See also tylotrich **hairs**.
HABA 2-(4'-hydroxyazobenzene) benzoic acid.
habena [hə-be'nə] the peduncle of the pineal body.
habenula [hə-ben'u-lə] pl. *habenulae* [L.] 1. any frenulum, especially one of a series of structures in the cochlea. 2. a triangular area in the dorsomedial aspect of the thalamus rostral to the pineal gland.
habit [hab'it] 1. an action that has become automatic or characteristic by repetition. 2. predisposition; bodily temperament.
habitat [hab'ĭ-tat] the environment inhabited by a specific organism or animal.
habituation [hə-bich"u-a'shən] 1. the gradual adaptation to a stimulus or to the environment. 2. the extinction of a conditioned reflex by repetition of the conditioned stimulus; called also negative adaptation.
habitus [hab'ĭ-təs] [L.] *habit, body conformation*.
Habronema [hab"ro-ne'mə] a genus of nematodes in the order Spirurida.
H. incertum found in the proventriculus and gizzard of companion birds causing chronic digestive upset and diarrhea. Also causes sudden death. Called also *Spiroptera incerta*.
H. khalili found in the large intestine of elephant and rhinoceros.
H. majus **(syn.** *H. microstoma***),** *H. muscae* parasites in the stomach of horses.
H. megastoma ***Draschia*** *megastoma*.
H. microstoma see *H. majus* (above).
habronemiasis [hab"ro-ne-mi'ə-sis] a disease of horses caused by the nematodes *Habronema muscae*, *H. majus* (*H. microstoma*) and *Draschia megastoma*.
conjunctival h. granulomatous lesions caused by invasion by *Habronema* spp. larvae occurring on the third eyelid, or the eyelid proper, or on the conjunctiva of the medial canthus.
cutaneous h. is manifested by granulomatous lesions caused by the invasion of skin wounds or excoriations by the larvae of *Habronema* spp. and *Draschia megastoma*. See also **swamp cancer**. Called also summer sore, bursati, granular dermatitis and jack sores.
gastric h. large granulomatous masses in the gastric mucosa caused by invasion by *Draschia megastoma* larvae. They are usually clinically silent unless perforation of the gastric wall occurs. The larvae of *Habronema majus* and *H. muscae* cause mild gastritis but without the formation of tumors.
HACCP hazard analysis critical control points.
hachement [Fr.] a hacking or chopping movement in massage.
hack 1. a recognized style of horse and not a breed. Not to be confused with Hackney, the breed of harness horses. Mostly Thoroughbreds, sometimes with some Arab or Quarter horse blood. Any color, usually 14.2–15.2 hands high, may be lightweight or heavyweight. 2. to go for a ride.
hackamore a single-rein bitless bridle for a horse.
hackles the hairs over the neck and back that are elevated by arrector pili muscles in response to fright or anger. A mechanism to threaten opponents, perhaps by appearing larger.
h. feathers the feathers of the dorsal cervical tract of the domestic fowl that cover the dorsal and lateral parts of the neck. In the rooster they are often large and colorful and are erected as a sign of aggression. Used for making artificial flies for fishing.
Hackney 1. an English breed of light horses used for driving; bay, brown, black or chestnut, usually with white markings, 15–16 hands high. 2. an English breed of ponies, similar to the horse but 12.2–14.2 hands high.
H. pony small version of the Hackney.
Hadenvirus see bovine **parvovirus**.
haem [hēm] heme.
haem- for words beginning thus see also those beginning hem-.
Haemadipsa [he'mə-dip'sə] a genus of leeches in the class Hirudinea. Small (1–1.5 inches), but heavy infestations can cause anemia.
Haemanthus multiflorus African plant of family Liliaceae; may contain isoquinolone phenanthridine alkaloids and a cardiac glycoside which causes cardiac irregularity and sudden death. Called also *Scadoxus multiflorus*, blood lily.

VetBooks.ir



H-1: Sections of *Habronema* larvae (arrow) within nodule of granulomatous and eosinophilic dermatitis. From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.



H-2: *Haematopinus asini*. From Pascoe R, Knottenbelt DC, Manual of Equine Dermatology. Saunders, 1999.

VetBooks.ir

Haemaphysalis [he"mə-fis'ə-lis] a large genus of small ticks in the family Ixodidae.
H. bancrofti found on cattle and marsupials. Called also wallaby tick.
H. bispinosa found on cattle.
H. chordeilis **(syn.** *H. cinnabarina, H. punctata***)** found on birds.
H. cinnabarina punctata found on most mammals and on birds. Implicated in the transmission of *Babesia bigemina*, *B. motasi*, *Anaplasma centrale*, *A. marginale*.
H. humerosa transmits *Coxiella burnetti*, the cause of Q fever.
H. inermis a widespread tick.
H. leachi leachi occurs on domestic Carnivora and rodents. Called also yellow dog tick. Transmits canine piroplasmosis, *Rickettsia conori* and *Coxiella burnetii*.
H. leachi mushami occurs on small carnivores.
H. leporispalustris found on rabbits, other small mammals and birds. Transmits *Coxiella burnetii*, *Francisella tularensis* Called also rabbit tick.
H. longicornis a three-host tick found primarily on cattle, but also on many other mammals including humans. Transmits *Theileria* spp. and *Coxiella burnetii*.
H. otophila found on rodents. May transmit *Francisella tularensis*.
H. parmata found on carnivores and antelope.
H. punctata see *H. cinnabarina punctata* (above).
Haematobia [he"mə-to'be-ə] a genus of small, gray, blood-sucking flies. Called also *Lyperosia* spp., *Haematobosca* spp.
H. atripalpis a vector for *Parafilaria bovicola*.
H. exigua **(syn.** *Siphona* **spp.)** a parasite of buffalo and cattle. Transmits *Trypanosoma evansi* and *Habronema majus*. Called also buffalo fly.
H. irritans found on cattle, occasionally other mammals. Creates skin lesions around horns, and along neck and back, often invaded by screw-worms. Transmits *Stephanofilaria stilesi*. Called also horn fly.
H. minuta as for *H. exigua*.
H. stimulans a pest of cattle.
Haematobosca see ***Haematobia***.
Haematomyzus exotic, rare lice of aberrant constitution. The only genus in the family Rhynchophthirina.
H. elephantis found on elephants.
H. hopkinsi found on wart hogs.
Haematopinus [he"mə-to-pi'nəs] a genus of sucking lice in the order Phthiraptera.
H. asini found on horses.
H. bufali found on buffalo.
H. eurysternus found on cattle. Called also shortnosed cattle lice.
H. quadripertusus found on cattle.
H. suis the large pig louse.
H. trichechi found on walrus.
H. tuberculatus found on cattle, camel, yak and buffalo.
Haematopota [he"mə-top'ə-tə] large, blood-sucking flies predatory on vertebrates. A genus of the family Tabanidae. They are mechanical transmitters of anthrax, equine infectious anemia, anaplasmosis and *Trypanosoma evansi*. Cyclical transmitters of *Trypanosoma theileri*. Cause significant insect worry to horses. Includes *H. pluvialis*.
Haematosiphon [he"mə-to-si'fon] a genus of blood-sucking, true bugs of the family Cimicidae which includes, for example, the bed bug of humans.
H. indora a serious parasite of domestic poultry in Central America.
H. nodorus the most important species of bird bugs; infests poultry, turkeys and some wild birds.
Haematoxenus a genus of nonpathogenic protozoan parasites in the family Theileriidae.
H. separatus found in sheep. Transmitted by *Rhipicephalus evertsi*.
H. veliferus found in the bloodstream of cattle. Transmitted by *Amblyomma variegatum*.
haemo- word element. [Gr.] *blood*. See words beginning *hem-* and *hemato-*.
Haemobartonella [he"mo-bahr"to-nel'ə] a group of bacteria that parasitize erythrocytes and are now recognized to be within the genus *Mycoplasma*. See ***Mycoplasma*** *haemocanis,* ***M.*** *haemofelis,* ***M.*** *haemomuris,* ***M.*** *hematoparvum,* ***M.*** *haemominutum.*
Haemodipsus [he"mo-dip'səs] a genus of lice in the family Hoplopleuridae.
H. ventricosus found on field rabbits; uncommon in laboratory animals.
Haemogamasus a genus of mites in the family Gamasidae.
H. pontiger found in bedding and on rodents and insectivorous animals.
Haemogregarina [he"mo-greg"ə-ri'nə] a genus of hemoprotozoa, parasitic mainly in cold-blooded vertebrates, including reptiles and fish. Includes parasites that cause hepatic necrosis, castration and occlusion of the air bladder.
H. sachae participates in the production of a leech-vector-transmitted lymphoma in cultured turbot.
Haemolaelaps a genus of mites of the family Gamasidae.
H. casalis a mite infesting birds and their litter.
haemonchosis [hēm"ong-ko'sis] caused by *Haemonchus contortus* in sheep and goats and *H. placei* in cattle. Female worms produce large numbers of eggs, infective larvae develop rapidly in warm wet conditions and dangerous levels of pasture contamination can accumulate rapidly resulting in outbreaks. May also occur in sheep overwintered indoors if large numbers of hypobiotic larvae mature simultaneously. Infestation is in the abomasum and both fourth-stage larvae and adults are blood feeders.Manifest by sudden death from acute anemia or chronic wasting, anemia and anasarca. Called also barber's pole worm disease because of the barber's pole appearance of adult worms.
Haemonchus [he-mon'kəs] a genus of blood-feeding nematodes of the family Trichostrongylidae.
H. bedfordi found in African buffalo and some gazelles.
H. contortus found in the abomasum of most ruminants and the cause of serious losses in sheep from **haemonchosis**. There have been attempts to subdivide the species, e.g. *H. contortus cayugensis*, but the differences between the subspecies have not been substantiated.
H. dinniki found in gazelles.

H-3: *Haemonchus contortus* infestation in the abomasum of a sheep.

H. krugeri found in impala.
H. lawrenci found in duiker.
H. longistipes found in camel, dromedary.
H. mitchelli found in gazelle, eland, oryx.
H. placei the parasite of cattle which can cause haemonchosis in that species.
H. similis found in cattle and deer.
H. vegliai found in oryx, antelope.

haemophagous see **hemophagous**.

haemophilosis hemophilosis.

Haemophilus [*he-mof'i-ləs*] a genus of hemophilic gram-negative coccobacilli or rod-shaped bacteria.
H. agni (*H. somnus*); now called ***Histophilus*** *somni.*
H. avium now called ***Avibacterium*** *avium*.
H. bovis see ***Moraxella*** *bovis*.
H. equigenitalis see ***Taylorella*** *equigenitalis*.
H. felis isolated from the nasopharynx of healthy cats and possibly an opportunistic pathogen of the respiratory tract and conjunctiva of cats.
H. gallinarum now classified as ***Avibacterium*** *paragallinarum.*
H. haemoglobinophilus found on canine genitalia; sometimes linked to puppy mortality but not often a cause of disease.
H. influenzaemurium the cause of respiratory disease and conjunctivitis in mice.
H. ovis now called *Histophilus somni*.
H. paracuniculus may be associated with mucoid enteropathy in rabbits.
H. paragallinarum now called ***Avibacterium*** *paragallinarum.*
H. parasuis a common concurrent infection with swine influenza virus and causes **Glässer's disease** of swine.
H. piscium a cause of ulceration of the gills and mouth of trout. May be *Aeromonas salmonicida* subspecies *salmonicida*.
H. somnus now called *Histophilus somni.*
H. suis now classified as *H. parasuis* (above).

Haemoproteus [*he"mo-pro'te-əs*] a genus of protozoa that are parasitic in birds, reptiles and amphibians. Transmitted by insects, including mosquitoes and biting midges (*Culicoides*), when taking a blood meal. Infection is sometimes called pseudomalaria because of the parasite's similarities with *Plasmodium* species.
H. antigonis found in cranes.
H. canachites found in grouse; transmitted by *Culicoides* spp.
H. columbae found in pigeons, doves and some wild birds. Transmitted by hippoboscid flies. May cause anemia in squabs.
H. danilewski found in wild birds.
H. lophortyx found in quail. Transmitted by biting flies. May cause anemia.
H. meleagridis occurs in turkeys.
H. nettionis found in ducks, geese, swans.
H. sacharovi found in doves. *Culicoides* spp. possibly vectors.

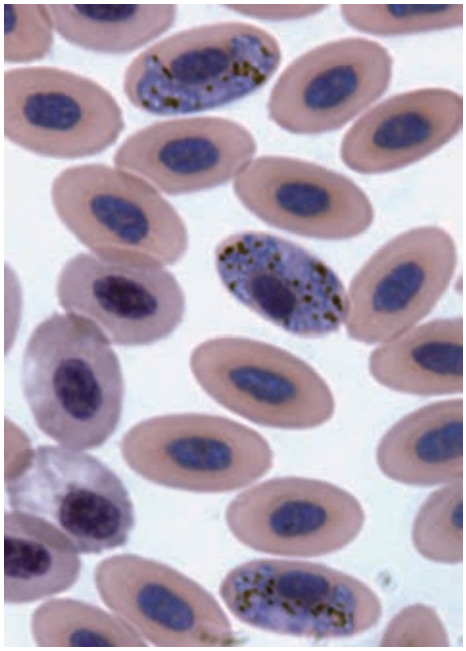
Haflinger horse chestnut, light mane and tail, riding and draft pony from Austria, Germany, Italy.

Hafnia [*haf'ne-ə*] a genus of gram-negative, rod-shaped bacteria, members of the family, *Enterobacteriaceae*; found in soil and feces.

hafnium (Hf) [*haf'ne-əm*] a chemical element, atomic number 72, atomic weight 178.49. See Table 4.

Hagedorn's needle [*hah'gə-dorn*] see Hagedorn's **needle**.

Hageman factor factor XII, one of the blood **clotting** factors. Deficiency occurs in humans and cats and is asymptomatic.
H. f. deficiency see **Hageman trait**.



H-4: *Haemoproteus* spp. in avian red blood cells. From Bowman, Dwight D. Georgis' Parasitology for Veterinarians, 9th Edition. Saunders, 2008.

Hageman trait an asymptomatic coagulation deficiency caused by the inherited deficiency of clotting factor XII (Hageman factor). Occurs in humans and cats.

hahnium (Ha) a chemical element, atomic number 105, atomic weight 260. See Table 4.

Haight baby rib spreader a self-retaining retractor, designed for surgery on human infants, but useful in small animals.

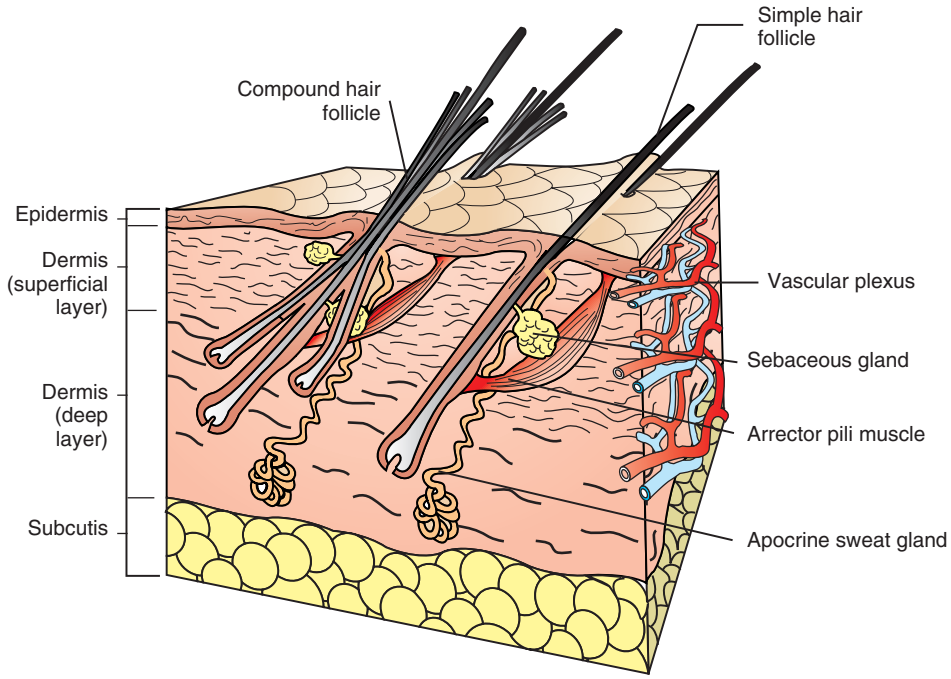
Hainan pig small to dwarf, Chinese pig, black with white head and back, smooth skin, long head, prick ears.

Hainsworth's energy groups animals divided into groups on the basis of their mean core body temperature range; used for scaling dose rates of drugs for animals on the basis of body weight.

hair [*hār*] 1. a threadlike keratinized epidermal structure developing from a follicle sunk in the dermis, produced only by and characteristic of mammals. Most hairs consist of a central medulla, a cortex and a thin cuticle of overlapping scales. Also, the aggregate of such hairs. 2. various other threadlike structures.
auditory h's hair-like attachments of the epithelial cells of the inner ear.
awn h. in cats, a short thick, bristly hair underneath the top coat.
h. beds coat hairs occur in groups of about three primary follicles and a variable number of secondary follicles.
burrowing h. one that grows horizontally in the skin.
h. cells sensory neuroepithelial cells which have hair-like processes; found in organ of Corti, ampullary crests and utricle and saccule of the inner ear.
club h. a hair whose root is surrounded by a bulbous enlargement composed of keratinized cells, preliminary to normal loss of the hair from the follicle. It is typically in the so-called telogen stage of development.
h. coat see **coat** (1).
cover h. see guard hair (below).
h. follicle one of the tubular invaginations of the epidermis enclosing the hair roots and from which the hairs grow.

H-5: Haflinger horse. From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir



H-6: Schematic diagram of the skin and simple and compound hair follicles.
From McGavin MD, Zachary J, Pathologic Basis of Veterinary Disease, 4th Edition. Mosby, 2006.

VetBooks.ir

h. follicle tumors benign neoplasms of germinal hair follicle cells. Includes **trichoepithelioma**, **pilomatrixoma**, **trichoblastoma**, **tricholemmoma**, **trichofolliculoma**, and dilated **pore** of Winer.
h. follicle unit see **apopilosebaceous complex**.
h. granuloma granuloma in the esophageal wall caused by swallowed hairs acting as foreign bodies.
h. growth cycle a period of growth, called anagen, is followed by a transitional stage, called catagen, and then a period of inactivity in the hair follicle, called telogen, lasting until the cycle starts again. The duration of each stage varies with the species, anatomical location, genetic influence, and a variety of environmental and physiological factors. See also **tricogram**.
guard h. the coarse, stiff and often longer and more prominent hairs in a haircoat with an undercoat. For example, the darkly colored, outer hairs of a German shepherd dog. Called also primary hair, master hair, cover hair, topcoat.
ingrown h. one that has curved and re-entered the skin.
lanugo h. the fine hair on the body of the fetus.
master h. see guard hair (above).
primary h. see guard hair (above).
ringed h. see **thrix** annulata.
secondary h. finer and growing from a more superficial follicle than a guard hair; forms the undercoat.
sensory h's hair-like projections on the surface of sensory epithelial cells.
sinus h. the vibrissae or whiskers located on the muzzle and face of many species has an endothelium-lined blood sinus between the inner and outer layers of the dermal portion of the follicle with a rich nerve supply. This structure serves to increase sensory perception. Called also tactile hairs or *pili tactiles*.
specialized h. includes auditory, guard, sensory, tactile, taste, tylotrich hairs (see this list).
h. streams the hairs in the coat of animals are inclined in one or other direction so that collectively they create streams that meet at convergent or divergent vortices or cowlicks.
tactile h's hairs particularly sensitive to touch.
taste h's short hair-like processes projecting freely into the lumen of the pit of a taste bud from the peripheral ends of the taste cells.
tipped h. one with a different, usually darker, color at the tip; seen in Chinchilla cats.
tylotrich h. special hairs that act as rapid-adapting mechanoreceptors; large, primary follicles with a ring of neurovascular tissue around them. Always associated with a tylotrich pad, a local area of epidermal thickening with a layer of highly vascular and well-innervated connective tissue below.

hairball [*hār'bawl*] see **trichobezoar**.
hairiness see **hirsutism**.
hairlessness see **alopecia**, **hypotrichosis**, **semihairlessness**.
hairpin a secondary structure that occurs in single-strand RNA in which complementary regions on the same molecule anneal, causing the strand to turn back on itself. The structure is the result of base pairing and hydrogen bond formation.
hairworms [*hār'wərm*] see ***Capillaria***.
hairy shakers [*hār'e*] see **border disease**.
Hairy moustached collie see **Bearded collie**.
Hajek rongeur a double action instrument used in neurosurgery.
Hakea genus of plants in family Proteaceae; some species contain cyanogenic glycosides. Includes *H. dactyloides* (finger hakea), *H. salicifolia* (*H. saligna*, willow-leaved hakea).
Halal slaughter see **Muslim slaughter**.
Halarachne a genus of mites in the family Halarachnidae found in the nostrils of sea lions and seals.
halcinonide [*hal-sin'ə-nīd*] a topical corticosteroid used in the treatment of skin diseases.
Haldane effect [*hawl'dān*] oxygen loss from hemoglobin makes the hemoglobin more basic and enhances the absorption of CO_2.
Halerpestis cymbalaria ***Ranunculus*** *cymbalaria*.
half-bred the progeny of the first cross between animals of two pure breeds, the F_1 generation. Often used locally without identifying the parentage, e.g. Cheviot ewe × Border Leicester ram.
half-hitch knot a style of surgical knot, consisting of one straight strand with the other thrown over, back over itself, under the original strand and back through the loop created by the earlier steps. It is the basis for square, granny and surgeon's knots, depending on how the hitches are thrown. See also **knot**.
half-life [*haf'lif*] the time in which the radioactivity usually associated with a particular isotope is reduced by half through radioactive decay.
half-pin splint see half-pin **splint**.
half-sib see half **sibling**.
half-value layer [*haf"val'u*] the thickness of a given substance which, when introduced in the path of a given beam of rays, will reduce its intensity by a half.
Hal gene determines the susceptibility of pigs to **porcine** stress syndrome and the risk for having pale exudative meat at slaughter.
Haliaeeatus leucocephala bald eagle.
Halicephalobus [*hal"e-sef"ə-lo'bus*] a free living rhabditid nematode; occasionally an accidental parrasite of horses and other animals. Enters the body via an existing lesion; infections in the brain are fatal.

H-7: Double half-hitch (clove hitch).
From Sheldon CC, et al, Animal Restraint for Veterinary Professionals. Mosby, 2006.

H-8: Halstead mosquito forceps.
From Sonsthagen TF, Veterinary Instruments and Equipment: A Pocket Guide, 2nd Edition. Mosby, 2010.

halide [*hal'īd*] a compound of a halogen with an element or radical.
Haliotis a marine gastropod mollusc; grown commercially in culture-based coastal fisheries. Called also abalone.
Haliotrema a genus of flukes (monogenetic trematodes) parasitic on fish.
halisteresis [*hə-lis"tə-re'sis*] deficiency of mineral salts (calcium) in a part, as in osteomalacia.
halitosis [*hal"ĭ-to'sis*] offensive odor of the breath.
halitus an expired breath.
hallucinogen [*hə-loo'sĭ-no-jen"*] an agent capable of producing hallucinations or false sensory perceptions.
haloalkylamine derivatives a group of synthetic α-blocking agents including phenoxybenzamine, dibenamine.
Halobacterium [*hal"o bak-tēr'e-əm*] obligate halophiles which spoil meat of high salt content.
haloduric organisms [*hal"o-du'rik*] bacteria which are tolerant to high concentrations of salt and can survive on and cause spoilage of salted meats.
halofuginone an alkaloid found in the herb *Dichroa febrifuga*. It is used as a coccidiostat and is also effective against cryptosporidiosis in cattle. Inhibits the development of Th17 cells and thus represents a lead for the treatment of autoimmune disease. Inhibits also critical steps in angiogenesis.
halogen [*hal'ə-jən, ha'lə-jən*] an element of group VII of the periodic table, the members of which form similar (salt-like) compounds in combination with sodium. The halogens are bromine, chlorine, fluorine, iodine and astatine.
halogenated pertaining to a substance to which a halogen is added.
h. salicylanilides. see **rafoxanide**, **clioxanide**.
halogenation [*hal"o-jə-na'shən*] the process of incorporating a halogen atom into an organic molecule. Halogenation of each double bond of an unsaturated fatty acid forms a basis for the measurement of a food's content of unsaturated fatty acids.
halogeton [*hal-ə-ge'tən*] *Halogeton glomeratus*.
Halogeton glomeratus toxic plant of the family Polygonaceae: contains soluble oxalates in sufficient quantities to cause acute poisoning. Called also halogeton.
haloperidol [*hal"o-per'ĭ-dol*] a dopamine antagonist in the brain, used as a neuroleptoanalgesic agent.
halophil, halophile [*hal'o-fil*] a halophilic microorganism.
halophilic [*hal"o-fil'ik*] pertaining to or characterized by an affinity for salt; requiring a high concentration of salt for optimal growth.
haloprogin [*hal"o-pro'jin*] a synthetic broad-spectrum topical antifungal.
Haloragis a genus of shrubs in the family Haloragidaceae.
H. heterophylla contains sufficient cyanogenetic glycoside to cause poisoning. Called also raspwort, raspweed.
H. odontocarpa an unidentified substance in the plant causes red coloration of the urine of sheep eating it. Called also mulga nettle.
halostachine an alkaloid found in *Lolium perenne* and thought at one time to be involved in causing ryegrass staggers.
halothane [*hal'o-thān*] a colorless, mobile, nonflammable, heavy liquid used by inhalation to produce general **anesthesia**.
h. test used to determine if pigs carry the **Hal gene** for porcine stress syndrome (PSS). The pig is anesthetized with halothane and if it develops rigidity of the hind limbs within 3 minutes, it is stress susceptible, but will survive if halothane is immediately withdrawn. If the pig shows no reaction after 5 minutes, it is considered Hal gene negative.
haloxon an organophosphorus anthelmintic once used against nematodes of the abomasum and small intestine in ruminants. Not recommended for use in pigs or horses, in which it has caused laryngeal paralysis, and is very toxic for geese.
halquinol a topical hydroxyquinoline antibiotic and amebicide, but also used orally in calves to treat coccidiosis and cryptosporidiosis.
Halsted [*hal'sted*] pertaining to William Halsted (1852–1922), an American surgeon.
H. mosquito forceps popular, fine-pointed, ratcheted hemostats used to crush very small vessels.
H. suture pattern an interrupted suture pattern most useful in the suturing of friable tissues. The needle is passed in and out of the skin on one side of the incision, then across the incision and the suture is repeated on the other side. A pass is made at right angles to the suture and then a repeat of the stitch made back acoss the incision and the two ends tied.
halter the simplest form of restraint for the head of farm animals. Comprises a poll strap, a nose band and a halter shank that brings the ends of the nose band together under the mandible. Made of leather or cotton or manila rope.
h. broken said of a young animal that has been taught to allow itself to be caught, haltered and led but not broken in to saddle or cart.
h. classes show classes in which entrant horses are required only to be halter broken.
haltere knob-like relics of the second pair of wings in the insect genus Diptera.
ham, hams [*ham*] the musculature of the upper thigh; common usage implies the cured upper thigh of a full-grown pig.
h. beetle the 0.5 inch long larvae of the beetle which infest hams. Called also *Dermestes lardarius*.
h. curing see **cured meat**.
h. fly the larvae or skippers, because of their habit of leaping long distances, of the fly *Piophila casei* which invade cured ham.
York h. a special curing method based on a pickle injection followed by a long storage in dry salt.
Hamadan ass a white, Iranian donkey.
hamamelis [*ham"ə-me'lis*] see **witch hazel**.
hamartia [*ham-ahr'shə*] a defect of tissue combination in development.
hamartoblastoma [*ham-ahr"to-blas-to'mə*] a tumor developing from a hamartoma.
hamartoma [*ham"ahr-to'mə*] a benign tumor-like nodule composed of an overgrowth of mature cells and tissues normally present in the affected part, but often with one element predominating.
gingival h. pink, lobulated, often pedunculated masses on the gums of newborn calves; soon become inflamed and ulcerated resembling chronic granulation tissue.
lymphangiomatous h. a lymphangioma occurring as a congenital malformation.
vascular h. tumor mass, usually dermal, consisting of primitive to well formed blood vessels.
hamartomatous [*ham"ahr-to'mə-təs*] pertaining to a developmental anomaly in which certain cells of a circumscribed area develop excessively, but fail to keep growing as would a benign or malignant neoplasm.

VetBooks.ir

hamate [*ham'āt*] 1. hooked. 2. the fourth carpal bone. Called also os hamatum, os carpale IV.
Hambletonian one of the very early and important sires in the Standardbred breed of racing horses.
hamburger beef see hamburger **beef**.
Hamburger shift see **chloride** shift.
hames linked metal, curved bars that fit around the horse collar and serve as the attachment for the trace chains and traces.
Hamilton hound [*ham'il-ton*] see **Hamiltonstovare**.
Hamiltonstovare a medium-sized, muscular Swedish hunting dog with black and tan short coat and white on the muzzle, neck and tail. It has a narrow head, folded ears and a long tail. Called also Hamilton hound, Swedish foxhound.
hammer [*ham'ər*] the malleus, the largest of the three bones of the middle ear.
hammer-milled feed processed through a hammer-mill, a piece of farming machinery which combines a cutting and crushing action aimed at improving the digestibility and conversion efficiency of the feed.
hammerhead RNA structure a folding arrangement of RNA found in the RNA genomes of some viruses.
Hammondia a genus of protozoa in the family Eimeriidae.
H. hammondi found in the intestine of cats; the oocysts, shed in feces, are identical to those of *Toxoplasma gondii*.
H. heydorni found in dogs; the oocysts, shed in feces, are identical to those of *Neospora caninum*.
Hampshire a black pig with a white belt, originating in the USA.
Hampshire Down an English short-woolled meat sheep, polled, black-brown face and legs. The wool is of a characteristic Downs type of 26–28 microns.
Hampton line in contrast radiography of gastric ulceration, a radiolucent line across the ulcer crater at the level of the original gastric lumen, caused by undermining of the surrounding mucosal edge.
hamster [*ham'stər*] small rodents in the subfamily Cricetinae; used as experimental laboratory animals but popular as pets. They are nocturnal, burrowing animals, noted for their brief gestation period (15–16 days) and capacious cheek pouches. Includes *Cricetus cricetus* (common or European hamster), *C. griseus* (Chinese hamster), *Phodopus sungorus* (Russian or short-tailed dwarf hamster) and *Mesocricetus auratus* (golden or Syrian hamster).
hamstring [*ham'string*] 1. the two tendons behind the knee or stifle and their associated muscles (biceps femoris, semitendinosus and semimembranosus). 2. the Achilles tendon. A hamstrung animal has this tendon ruptured.
hamulus [*ham'u-ləs*] any hook-shaped process.
cochlear h. the hooklike process at the end of the bony spiral lamina at the apex of the cochlea of the internal ear.
pterygoid h. the ventral extremity of the pterygoid bone around which the tendon of the tensor veli palatini is reflected.
Han sheep prolific Chinese meat and carpetwool sheep; fat-tailed variants.
hanahiri ***Leucothoe*** *grayana*.
hand [*hand*] 1. unit of measurement of height in a horse; hands high, abbreviated hh. 1 hand=4 inches=10.16 cm. 2. the terminal part of an upper extremity of a primate.
h. gallop a restrained gallop at less than top speed.
h. milking see **handmilking**.
hand-feeding [*hand- fēd'ing*] 1. feeding stored feeds to livestock, especially pastured animals in drought, flood or other stringent times. 2. newborn animals without a dam to suck being fed by dropper, bottle or spoon. Called also hand-rearing. See also artificial **rearing**.
hand-foot-and-mouth disease a mild, highly infectious virus disease of children, with vesicular lesions in the mouth and on the hands and feet. Not related to any disease of animals. Included here for comparative purposes only.
hand-rearing rearing a neonate with milk in a bottle or bucket; standard practice with orphans, early-weaned calves.
hand tie suture tie made manually rather than with instruments.
handle [*han'dəl*] the subjective sensation on palpating the fleece of sheep or alpacas; described by terms such as silky, soft, harsh, slippery.
handled said of a horse that has been caught, led, groomed. See also **gentle**.
handlers persons involved in the handling of, for example, circus animals. Includes grooms, milkers, herdsmen, strappers. Used mostly in referring to persons handling animals for show or auction.
handmilking [*hand milk'ing*] milking with the fingers; two basic techniques are used; the preferred technique is to occlude the top of the teat with thumb and forefinger and then progressively close the fingers down the teat, then release the fingers to allow the teat to refill with milk; the second method, referred to as stripping, consists of running the thumb and forefinger, or two fingers, down the length of the teat; contrast with machine milking.
handpiece [*hand'pēs*] sheep **shears**.
handslip a term describing a training method in which a racing Greyhound is urged to chase and then slipped out of its collar by hand. Used in training for moderately fast work short of full galloping and chasing a lure.
hanekam ***Amaranthus*** *deflexus*.
Hanger–Rose antigen a preparation of infective material, presumably including antigen derived from *Bartonella henselae*, obtained from patients with **cat-scratch disease**. Has been used as an intradermal test for the disease.
hangers used for hanging X-ray films to dry. There is a clip type, with a clip at each corner, and a channel type in which the film sits in channels in the sides of the frame.
hangnail [*hang'nāl*] excessive growth and cracking of the cuticle on the feet of elephants.
Hannemania chigger mites infesting amphibians, especially frogs. Cause red spots and vesicles.
Hanover a German light horse used mostly for riding, with an excellent record in equitation and dressage. Bay, brown, chestnut or black, 16.2–17 hands high. Called also, apparently incorrectly, Hanoverian.
Hanover technique a technique for correction of abomasal displacement by right flank laparotomy, replacement of abomasum and omentopexy by fixation in the flank.
Hanoverian see **Hanover**.
Hansen's bacillus *Mycobacterium leprae*, the causative agent of human leprosy. Does not infect animals, except the nine-banded armadillo under experimental conditions. Included here for reassurance.
Hansen's classification a classification scheme used to describe compression of the spinal cord as a result of **intervertebral** disk disease. Hansen Type I lesions are the result of interverteral disk extrusion, generally occur acutely and occur more commonly in chondrodystrophoid breeds. Hansen Type 2 lesions are the result of intervertebral disk protrusion, generally occur over longer periods of time and occur more commonly in non-chondrodystrophoid breeds.
Hantavirus [*han'tə-vi"rəs*] a genus in the family *Bunyaviridae*.
hao chen the characteristic fine-caliber acupuncture needle.
HAP hydroxyapatite.
haploid [*hap'loid*] having half the number of chromosomes characteristically found in the somatic (diploid) cells of an organism; typical of the gametes of a species whose union restores the diploid number.
h. karyotype see **haplotype**.
haploidentity [*hap"lo-ī-den'tī-te*] the condition of having the same antigenic phenotype at certain specified loci; said of donor–recipient combinations in transplantation studies.
haploidy [*hap'loi-de*] the state of being haploid.
haplomycosis [*hap"lo-mi-ko'sis*] a fungal disease caused by ***Emmonsia***.

H-9: Hampshire meat sheep.
From Sambraus HH, Livestock Breeds. Mosby, 1992.

VetBooks.ir

Haplopappus [hap-lo-pap'əs] a North American genus in the plant family Asteraceae (Compositae); plants contain a toxic alcohol, tremetol, and ingestion of the plant over a period causes a stiff gait, severe tremor and final collapse and death. Includes *H. fruticosus*, *H. hartwegii*, *H. heterophyllus, H. tenuisectus*. Called also *Isocoma wrightii*, *Bigelowia rusbeyi*, jimmy weed, rayless goldenrod, burrow weed. See also ***Eupatorium rugosum***.

Haplosporangium [hap"lo-spor-an'je-əm] see ***Emmonsia***.

haplosporidiosis protozoan infection of hemocytes and organs of oysters and clams in the USA. Includes *H. nelsoni*.

Haplosporidium genus of parasitic protozoa in the order Balanosporida found in segmented worms and leeches (annelids).

H. nelsoni cause of multinucleate sphere unknown (MSX) disease in the American oyster.

haplotype [hap'lo-tīp] the group of alleles of linked genes contributed by either parent; the haploid genetic constitution contributed by either parent.

hapten, haptene [hap'tən] a small-molecular-weight either inorganic or organic molecule that alone is not antigenic but which when linked to a carrier protein, e.g. albumin, is antigenic; the antibody so produced will react with the hapten alone.

haptic [hap'tik] tactile.

haptoglobin [hap"to-glo'bin] a group of serum alpha$_2$ globulin glycoproteins, produced by the liver, that bind free hemoglobin; important in acute phase reactions (response). The different types, genetically determined, are distinguished electrophoretically.

haptoglobulin [hap"to-glo'bin] **haptoglobin**.

haptor posterior disk of a monogenetic trematode.

Harbin white pig a white, meat pig produced in China from local pigs crossed with Large White imports.

hard heads see ***Rhaponticum repens***.

hard milker a cow hard to milk from all quarters because of the small caliber of the teat canals or stenosis of the sphincters.

hard palate that part of the roof of the mouth supported by the palatine processes of the incisive and maxillary bones and the horizontal plates of the palatine bones. See also **palate**.

hard udder see **caprine** arthritis–encephalitis.

hard x-rays X-rays of shorter wavelength.

hardener a substance used to harden the gelatin of the emulsion on an X-ray film.

Harderian gland [hahr'dər-e-ən gland] an accessory lacrimal gland deep in the medial orbit found n some terrestrial vertebrates; especially developed in rodents. The function is speculative but may include immunologic defense, photoprotection and pheromone production. Called also Harder's gland. See also nasal **dermatitis** in gerbils.

Harder's gland **Harderian gland**.

hardkeeper an animal that is difficult to fatten.

hardmouthed said of a horse that is hard to restrain with the average bit.

hardpad hyperkeratosis of the footpads and the planum nasale; often associated with distemper infection in dogs. See also nasodigital **hyperkeratosis**.

hardship lines horizontal lines in the horn of hoofs; farmer belief is that they are caused by serious illness or feed deprivation.

hardware metallic foreign bodies in the reticulum of ruminants, especially in dairy cattle, and the cause of traumatic reticulitis.

h. disease **traumatic** reticuloperitonitis.

Hardy–Weinberg law [hahr'de vīn'bərg] states that in an infinitely large, closed population, in which random mating occurs, both gene frequencies and genotype frequencies will remain constant.

hare [hār] (*Lepus* spp.) lagomorphs in the family Leporidae. They differ from rabbits that are in the same family, by the length of their ears, and because they do not burrow and they do not live in social groups as rabbits do. Includes snowshoe hare (*L. americanus*), Arctic hare (*L. arcticus*), black-tailed jackrabbit (*L. californicus*), European brown hare (*L. europaeus*), and mountain hare (*L. timidus*). The young are called leverets. Called also jackrabbit.

h. fibroma a poxvirus disease of hares, caused by a leporipoxvirus, characterized by the formation of fibromas.

harelip [hār'lip] congenitally **cleft** lip.

inherited h. can be an inherited defect in many species; in cattle it can be combined with cryptorchidism; in sheep it may be bilateral.

harendong see ***Clidemia hirta***.

Hariana Indian gray-white shorthorn-type draft cattle.

Harleco apparatus an instrument for assessing acid–base status of a patient by measuring the total CO_2 content of the blood.

harlequin [hahr'lə-kwin] 1. a coat color pattern that consists of irregular patches, usually gray, blue or black, on a white background. Common in Great Danes. 2. a breed of fancy rabbit with harlequin coat pattern in several colors.

harmal *Rhazya stricta*.

harmaline [hahr'mə-lēn] see **harmine**.

harmel ***Peganum harmala***.

harmine [hahr'mēn] one of the β-carboline alkaloids found in the plant family Zygophyllaceae, e.g. *Peganum* spp., *Tribulus* spp.; a central nervous system stimulant.

harmol one of the toxic β-carboline indoleamine alkaloids in the plants *Kallstroemia*, *Peganum, Tribulus* spp.

harmonic mean see harmonic **mean**.

harmonic ultrasound see harmonic **ultrasonography**.

harness [hahr'nis] a series of leather or webbing straps fitted together like the skeleton of a garment. Used to attach the draft animal to a wagon or a buggy, even to a saddle or a marking crayon or chin ball harness.

h. galls cutaneous plaques of fibrous tissue where harness rubs.

harpuisbos ***Gnidia burchellii***.

Harrier a medium-sized, muscular, shorthaired dog with straight legs, level back and square chest. It is a scent hound and is said to be a small replica of the English Foxhound, but larger than a Beagle.

harrier diurnal bird of prey (*Circus* spp.). The Northern harrier (*C. cyaneus*) has a widespread distribution; in the UK it is called hen harrier and has been subject to persecution because of suspected predation of grouse. Called also marsh hawk.

Harrington rod [har'ing-tən] a threaded metal rod used to connect distraction hooks in the stabilization of cervical vertebral instability.

Harrison's groove [har'ĭ-sən] a horizontal groove along the posterior border of the thorax corresponding to the costal insertion of the diaphragm; seen in rickets.

Harrison's test a test for the presence of bilirubin in feces; the addition of Fouchet's reagent to a 1:20 dilution of feces causes a blue color in a positive test.

hart male deer at 5 years. Called also stag.

hartebeest (*Alcelaphus buselaphus*) a large African antelope with long legs and lyre-shaped horns. A prized game animal, hunted for meat and as a trophy. Once widely distributed in large numbers, the populations have decreased markedly and some species are endangered.

Hartenstein's gland the popliteal lymph node, e.g. in the pig.

Hartertia a genus of nematodes of the family Spirocercidae.

H. gallinarum found in the intestine of fowls and wild bustards. Can cause emaciation, weakness and diarrhea. Transmits *Histomonas meleagridis*.

Hartmannella [hahrt"mən-el'ə] a protozoan parasite, free-living and thought not to be pathogenic, although they were at one time listed as being so.

Hartmann's solution [hahrt'mahn] an isotonic solution containing sodium chloride, sodium lactate, calcium chloride, and potassium chloride. Very similar to lactated Ringer's solution; used intravenously as a systemic alkalizer and as a fluid and electrolyte replenisher. Called also compound sodium lactate.

harvestmen predatory arachnids in the order Opiliones, characterized by very long legs and small round bodies, but not a true spider. Often confused with the cellar spider *Pholcus phalangioides*; both are commonly called daddy-long-legs.

Hashimoto's disease [hah"she-mo'to] a progressive autoimmune disease of the thyroid gland with degeneration of its epithelial elements and replacement by lymphoid and fibrous tissue; called also struma lymphomatosis, Hashimoto's thyroiditis. Similar to lymphocytic **thyroiditis** in dogs.

hashish [hă-shēsh'] dried flowering or fruiting tops of the plant *Cannabis sativa*. Animals that eat it show nervous signs of incoordination, and sleepiness, sometimes alternating with periods of excitement.

Hassall's corpuscles [has'əl] bodies of epithelial cells found in the medulla of the thymus.

hassium (Hs) a chemical element, atomic number 108, atomic weight 277. See Table 4.

H

Hasson technique a surgical technique for placement of endoscopic sheaths, particularly into the abdominal cavity with minimal likelihood of damage to the internal organs.

hatchability the percentage of eggs set to hatch that do in fact hatch. Governed by many factors especially nutritional adequacy.

hatchery a commercial establishment dedicated to the hatching of bird eggs to provide day old chicks and poults to the poultry industry.

h. liquid the contents of unfertilized eggs. Used in petfood manufacture.

hatching assisted [*hach'ing*] close surveillance of valuable eggs, e.g. ostrich in an incubator, to ensure that environmental conditions are as close as possible to those specified for the particular clutch.

hatchling a baby bird from hatching to the time the eyes open. See also **nestling**.

haujeri *Capparis tomentosa*.

haul-in facility large animal veterinary clinic that has unloading facilities, holding pens and races and restraint chutes, etc. for ruminants and/or horses, that an owner can transport animals to for vaccinations or treatments rather than having the veterinarian visit the farm. Reduces the treatment costs by eliminating the veterinarian's travel time charges and is a more effective use of a veterinarian's time and an effective way of examining and treating animals. The downside is the risk to herd biosecurity when an animal is returned to its farm. Larger livestock enterprises commonly have treatment facilities built into the farm facilities for this reason.

haulms dead, dry aerial parts of plants after their seed, e.g. beans, or tubers, e.g. potatoes, have been harvested.

haunch [*hawnch*] 1. in conformation terms, the region of the iliac crests. 2. in the meat trade, the leg and loin.

Hauptner mouth gag a speculum for opening the mouth of horses or cows. Consists of two dental plates into which the incisors fit (the dental pad in the upper jaw of the cow). The bottom plate is fixed, the top plate can be moved away from the bottom one, thus opening the mouth, by twisting a screw-threaded handle which passes through a metal arch that goes over the nose and is fixed to the bottom plate.

Haussman, Haussman–Dunn gag a speculum for examining the mouth cavity of cattle and sheep. Two horizontal plates accommodate the upper and lower dental arcades (upper dental pad in cattle). They are carried on ratcheted scissor-type mechanisms supported up each side of the face by a poll strap. When levered open the plates stay open until the ratchet is released. Gives excellent access to the mouth but excludes incisor teeth.

haustra [*haws'trə*] plural of *haustrum*.

haustration [*haws-tra'shən*] the formation of a haustrum.

haustrum [*haws'trəm*] pl. *haustra* [L.] one of the pouches of the large intestine of horses, pigs and humans produced by the puckering action of the tenia coli and responsible for circular muscle fibers at 0.5–1 inch distances, and responsible for the sacculated appearance of the large intestines of horses and pigs. During activity of the large intestine the haustra appear and disappear with accompanying peristalsis.

hauteur machine-estimated mean fiber length in a top of wool; the basis for the pricing of tops.

Havana a small rabbit with a short dense coat, typically in a dark chocolate color, but also black, blue or broken.

Havana brown a medium-sized, slender cat with rich, mahogany brown short hair, including their whiskers, green eyes and pink footpads.

Havanese a sturdy, small (10–15 lb), short-legged dog with a soft, very long coat which may be slightly wavy or curly. The plumed tail is carried over the back. The body is longer than the height at the shoulder. Called also the Havana silk dog or Spanish silk poodle. The national dog of Cuba.

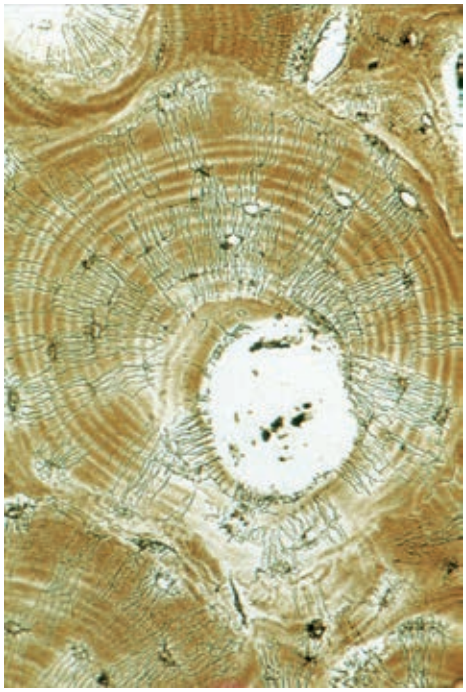
Haverhill fever [*ha'vər-il*] ***Streptobacillus*** *moniliformis*.

haversian [*ha-vur'zhən*] named after the English physician and anatomist Clopton Havers (1650–1702).

h. canal any of the anastomosing axial channels of the haversian system in compact bone, containing blood and lymph vessels, and nerves.

h. glands synovial villi.

h. system the basic unit of compact bone consisting of a haversian canal and its concentrically arranged cylindrical lamellae. Called also osteon.



H-10: Micrograph of a single haversian system in cortical (compact) bone.
From Young B, Wheater's Functional Histology: A Text and Colour Atlas, 5th Edition. Churchill Livingstone, 2006.

haw [*haw*] a lay term for the third eyelid.

h.-eyedness a lay term applied to various conditions where conjunctiva (of various origins) is more obvious, typically protrusion of the third eyelid, which may occur with dehydration, enophthalmos, retrobulbar mass, or as a bilateral idiopathic condition in cats (see haw's syndrome below). Can also be used to refer to lower eyelid ectropion with exposure of the palpebral conjunctiva or enlargement and prolapse of the gland of the third eyelid (see **cherry eye**).

h's syndrome idiopathic bilateral protrusion of the nictitating membranes in cats. Usually a benign and incidental finding, but can sometimes occur with diarrhea, perhaps due to enophthalmos secondary to marked dehydration.

hawk diurnal bird of prey in the subfamily Accipitrinae, which also includes goshawks, eagles, kites, buzzards and vultures. They have broad wings, hooked beaks and sharp talons. Some species are trained for use in falconry.

carrion h. see **caracara**.

marsh h. see **harrier**.

pigeon h. see **merlin**.

sea h. see **osprey**.

sparrow h. see **kestrel**.

hay dried green grass (meadow hay) or cereal crop (wheat, oats or barley hay) or legume crop (lucerne, alfalfa) used as feed for housed animals in the winter time and for supplementary feeding of pastured animals when there is need. For optimal quality grass hay should be harvested in the boot stage and alfalfa hay in the early flower stage. See also **bale**.

h. itch see ***Glycyphagus*** *destructor*.

h. net a wide-mesh string net to be filled, and hung in a loose box, to provide day-long nibbling for a confined horse.

h. sickness Icelandic term for chronic obstructive **pulmonary** disease of horses.

Hayem's solution [*ah-yahn'*] an isotonic fluid used for diluting blood samples in red blood cell counts. Contains mercuric chloride, sodium sulfate and sodium chloride.

hayflake a 1–2 inch thick flake of hay from a rectangular bale. Called also biscuit of hay.

Hayflick limit [*ha'flik*] see **cell** culture.

Hayflick's medium [*ha'flik*] a broth or agar medium for the cultivation of some mycoplasmas and ureaplasmas.

haylage a feed that is halfway between hay and silage. The feed is cut when green, chopped small (0.5–1 inch) wilted and then stored in a special airtight tower silo or as a round bale with a plastic covering.

VetBooks.ir

Hay's sulfur test, Haye's sulfur test a test for the presence of bile salts and pigments in liquid, usually urine.
hazard a risk.
h. analysis critical control points (HACCP) a systematic procedure used to identify specific hazards (e.g. in food production) and establish control systems that focus on preventive measures rather than rely on end-product testing.
chemical h. a chemical capable of causing poisoning is on the premises and represents a potential threat.
radiation h. radioactive material is on the premises and represents a potential threat to animals in that environment.
Hb hemoglobin.
Hb-meter hemoglobinometer.
HBC a definition for medical records to denote 'hit by car'.
HbCO carbon monoxide hemoglobin.
HbO_2 oxyhemoglobin.
HC hog cholera, but now called classical swine fever.
HCB hexachlorobenzene.
25-HCC 25-hydroxycholecalciferol.
HCDD hexachloro-dibenzo-*p*-dioxin, a once contaminant of 2,4,5-T, one of the plant hormone weedkillers; a teratogen.
HCG, hCG human chorionic gonadotropin. Used for induction of ovulation or treatment of cysts.
γ-HCH hexachlorocyclohexane; see **lindane**.
HCl hydrochloric acid.
HCN hydrocyanic acid.
HCO_3^- bicarbonate ion; main body buffer for acid–base balance.
Hct hematocrit.
HD hip dysplasia.
HDDT high-dose dexamethasone suppression test.
HDL high-density lipoprotein. Responsible for the transport of cholesterol from the tissues to the liver for excretion in reverse cholesterol transport. Sometimes called 'good cholesterol' since cholesterol in HDL is thought to be protective against cardiovascular disease as compared to cholesterol in low density lipoprotein.
He chemical symbol, *helium*.
he- for words beginning thus, see also those beginning *hae-*.
head [*hed*] 1. the anterior or superior part of a structure or organism, in vertebrates containing the brain and the organs of special sense. See also **skull**, **caput**. 2. one animal; used in reference to farm livestock, e.g. ten head of cattle.
articular h. an eminence on a bone by which it articulates with another bone.
h. bail see **headstock**.
h. bob the patient is unable to keep the head still while at rest, it makes an involuntary, usually at regular intervals, short, quick downward movement then recovers.
h. bot see ***Cephenemyia***.
h. cap of spermatozoon, formed by the collapse of the acrosomial vesicle over the nucleus.
h. carriage includes at attention, drooping, rotated, deviated.
h. catarrh **malignant catarrhal fever**.
h. clamp see **headstock**.
h. collar a leather halter-like piece of harness consisting of a poll strap, nose band and usually a rope shank.
h. deviation the head is turned laterally so that the animal walks in circles but there is no disturbance of balance. Occurs in lesions of the neck and of the prosencephalon.
fetal h. lateral deviation the fetal head is deviated laterally to lie against the shoulder of the fetus, the front feet and the lateral aspect of the neck being presented to the pelvic inlet; a dystocia which can only be relieved by repulsion of the fetus and the return of the head to between the front feet.
fetal h. ventral deviation the head of the fetus is flexed ventrally so that the fore feet and the dorsum of the neck are presented to the pelvic inlet; a dystocia which can only be relieved by repulsion of the fetus and lifting of the head into the pelvic canal.
h. grit jaundice, photosensitization and hepatic injury in lambs caused by *Narthecium ossifragum* poisoning.
h. injury traumatic injury to the head resulting from a fall or violent blow. Such an injury may be open or closed and may involve trauma to the brain; direct injuries, involving lacerations, shearing injuries and hemorrhage, and indirect injury, involving secondary biochemical events, and skull fractures.
h. lock see **stanchion** head lock.

H-11: Horse head pressing.
From Bassert JM, McCurnin DM, McCurnin's Clinical Textbook for Veterinary Technicians, 7th Edition. Saunders, 2010.

h. mange see **notoedric mange**.
nerve h. the optic disk.
h. nod see head bob (above).
h. picking a form of cannibalism in which birds pick at and injure each other's wattles, combs, eyes; beak trimming reduces the problem but does not prevent the vice.
h. posture see head carriage (above).
h. pressing persistent pushing with the head against a fixed object. A common sign associated with disease affecting the prosencephalon.
h. process the elongating cephalic tissues which represent the first step in the development of the fetal body.
h. rotation twisting of the head around the axis from the occiput to the nose. To be differentiated from deviation of the head (head turn). Caused usually by lesions of the vestibular apparatus on one side. The animal walks in circles and has problems maintaining its balance.
h. shaking common in dogs and cats with otitis externa or foreign bodies in the external ear canal. May be a cause of auricular hematoma. *Seasonal* head shaking is seen in horses mainly during spring, worsening in summer. A trigeminal neuritis caused by increased concentrations of melatonin is the suspected cause in some. Allergic rhinitis may also be an underlying cause.
h. shy said of a horse that tries to avoid having its head handled or its headstall put on.
h. stall see head collar (above).
h. tilt includes rotation and deviation. A common clinical feature of otitis media.
h. tremor tremors affecting the head only. A common feature of cerebellar lesions.
h. turn see head deviation (above).
h. twist injury injury to cervical vertebrae may occur in horses as a result of a fall with the head and neck under the body.
head and eye form BMC see **malignant catarrhal fever**.

H-12: Head tilt.
From Nelson RW, Couto CG, Small Animal Internal Medicine, 3rd Edition. Mosby, 2003.

VetBooks.ir

H-13: Calf restrained in a headstock.

head-down disease a poisoning of rabbits by *Asclepias eriocarpa* usually present in the hay being fed. Affected rabbits have paralysis of the neck and incoordination.

head–neck deviation lateral deviation of the head and neck.

headstock substantial wooden or metal fixed apparatus for restraining a cow by the neck in a crush, milking parlor or feed stalls. There is a bar or tongue which is swiveled at the bottom and can be opened at the top. When the animal puts its head into the open space the tongue is closed tight enough to prevent the beast getting its head out. The tongue has a quick release catch so that it can be opened quickly in an emergency. Called also head bail, neck yoke, head clamp.

healing [*hēl'ing*] the restoration of structure and function of injured or diseased tissues. The healing processes include blood clotting, tissue mending, scarring and bone healing.

wound h. the restoration of integrity to injured tissues by replacement of dead tissue with viable tissue. The process starts immediately after an injury and may continue for months or years, and is essentially the same for all types of wounds. Variations in wound healing are the result of differences in location, severity of the wound, and the extent of injury to the tissues. Other factors affecting wound healing are the age, nutritional status and general state of health of the animal and its body reserves and resources for the regeneration of tissue. In *healing by first intention* (primary union; per primam), restoration of tissue continuity occurs directly, without granulation; the union of accurately coapted edges; in *healing by second intention* (secondary union; per secundam), wound repair following tissue loss (as in ulceration or an open wound), is accomplished by closure of the wound with granulation tissue. This tissue is formed by proliferation of fibroblasts and extensive capillary budding at the outer edges and base of the wound cavity. *Healing by third intention* (delayed primary closure; per tertiam) occurs when a wound is initially too contaminated to close and is closed surgically 4 or 5 days after the injury. The insertion of drains can facilitate healing by providing an outlet for removing accumulations of serosanguineous fluid and purulent material, and obliterating dead space.

healing crisis [*hēl'ing*] a temporary worsening of symptoms after administration of homeopathic medication before the patient improves.

health [*helth*] a state of physical and psychological well-being and of productivity including reproduction.

h. care system an organized plan of health services by which health care is made available to the animal population and financed by government or private enterprise or both. A health care system embraces the following: (1) health care services available to individual animals and to groups through private practices and government veterinary officer services in veterinary clinics, laboratories and hospitals and the clients' own homes and on farms, in stables and other group animal facilities; (2) the veterinary preventive medical services needed to maintain a healthy environment; for example, control of medicine and food supplies, regulation of drugs, and control of the movement of animals intended to protect a given population; and (3) teaching and research activities related to the prevention and treatment of disease.

h. indices easily observed parameters that can be used as a guide to the animal's or group's state of health. Most obvious are food intake and fecal output. In agricultural animals there are additional monitoring guides such as body weight, milk yield, racing performance, egg yield, freedom of wool from breaks, feed conversion efficiency and so on.

h. management a system of preventive medicine that takes into account the whole animal, and the total influences including social, with respect to relationships with others in the herd or flock, psychological and environmental factors that affect health, including nutrition, exercise, housing, freedom from crowding and boredom and from physical or psychological harassment or cruelty.

primary h. care routine outpatient care.

repeated periodic h. care periodic examination of an individual or herd, exemplified in modern herd health programs.

secondary h. care the level of care in the **health care system** that consists of emergency treatment and critical care. Called also acute care.

tertiary h. care that provided by a veterinary school or equivalent institution, staffed by specialists and providing advanced diagnostic procedures.

veterinary public h. the field of veterinary medicine that is concerned with safeguarding and improving the health of the human community as a whole by controlling diseases of animals that are communicable to humans or which affect the human food chain to the detriment of the health of the consumers.

health/production programs coordinated health and production management programs for animal farming enterprises which utilize all disease control techniques which are relevant and cost-effective and integrate these with breeding, feeding and housing strategies. See also **herd** health program.

healthy [*hel'the*] 1. a state of being in good health. 2. pertaining to, characterized by, or promoting health.

hearing [*hēr'ing*] the sense by which sounds are perceived, by conversion of sound waves into nerves impulses, which are then interpreted by the brain. Also, the capacity to perceive sound. The organ of hearing is the **ear**, which is divided into three sections, the outer, middle and inner ear. Each plays a special role in hearing. Connecting the middle ear with the nasopharynx is the pharyngotympanic canal, through which air enters to equalize the pressure on both sides of the **tympanic** membrane (eardrum).

h. aid an instrument to amplify sounds for the hard of hearing. These have been fitted to dogs, but are not normally offered in veterinary practice.

h. tests are difficult to administer and interpret in any other than laboratory-trained animals or without specialized electronic equipment. See brainstem auditory evoked response.

h. dog a dog trained to respond to sounds such as a telephone ring or door bell; used to assist hearing impaired people.

hearing loss [*hēr'ing los'*] partial or complete loss of hearing; see also **deafness**.

heart [*hahrt*] the hollow muscular organ lying on the sternum that serves as a pump controlling the blood flow in two circuits, the pulmonary and the systemic. See also **circulatory** system.

artificial h. a mechanical device that replaces the heart by using pulsating air to pump blood to the body. Successfully placed in calves, sheep and dogs as experimental models for the subsequent use of such methods in humans.

h. attack see **myocardial** infarction.

h. bones ossicles in the fibrous skeletal ring which surrounds the aortic orifice of the heart in cattle and occasionally in other species; called also ossa cordis.

h. conducting system consists of the sinoatrial node, the atrioventricular node, the atrioventricular bundle and its two crura.

cyanotic h. malformations insufficient oxygenated hemoglobin is received in the peripheral capillary beds resulting in blue discoloration of tissues, and an incapacity of the body to maintain a life-sustaining level of activity.

h. disease an all-embracing term including those diseases in which there is intrinsic disease of the heart such as uremia, valvular disease, African horse sickness, vitamin E–selenium nutritional deficiency, inherited cardiomyopathies of dogs and cattle, altitude sickness, canine parvovirus infection, and in a number of plant and other poisonings. See also **mulberry heart disease**.

h. malformations includes ectopia cordis, patent foramen ovale, ventricular septal defects such as Fallot's tetralogy, Eisenmenger complex, patent ductus arteriosus, aortic coarctation, right aortic arch persistence, truncus arteriosus persistence, fibroelastosis,

VetBooks.ir

subvalvular aortic stenosis, anomalous origin of carotid arteries, transposition of great vessels, pulmonic stenosis, aortic stenosis.

h. massage see cardiac **massage**.

h. rate the number of contractions of the cardiac ventricles per unit of time. For normal rates see **pulse** rate.

h. score 1. a concept which sets out that performance in racing horses is related to heart size, now well-established as one determinant, and that heart size can be estimated in the living horse by the measurement of the QRS interval, which provides the basis for the score. 2. see vertebral heart score (below).

h. sounds see **heart sounds**, heart **murmur**.

h. strain is an unpopular concept in any medical science but overtrained horses which perform poorly do have a high incidence of abnormal T waves.

h. valve anomalies failure of complete development of atrioventricular or semilunar valves results in stenosis or incompetence of the valves and often congestive heart failure.

h. valve hematoma congenital, usually multiple lesions on the edges of atrioventricular valves, mostly in calves; disappear spontaneously with age.

h. valve thrombosis common lesion on the free edges of valves, often the source of widespread emboli; on healing leave scarred, insufficient valves.

h. valves flaps of endothelial connective tissue that guard the entrance into and exit from the ventricles and bring about unidirectional blood flow. Include the atrioventricular and semilunar valves, the proper closure of which is essential to maintain circulatory equilibrium, can be diseased and cause heart failure. See also heart **murmur**, **endocarditis**, chronic **valvular** heart disease.

vertebral h. scale (VHS) a system of assessing heart size, mainly in dogs and cats, in radiographs using the length of the thoracic vertebrae as a reference point.

heart-base tumor aortic body tumor. See also **chemodectoma**.

heart block [*hahrt blok*] impairment of conduction in heart excitation; often applied specifically to atrioventricular heart block. When isolated impulses from the atria fail to reach the ventricles, heartbeats are missed and the block is called incomplete. When no impulses reach the ventricles from the atria the heart block is complete, with the result that the atria and the ventricles beat at separate rates. In this case the beats remain regular but the rate of the ventricular beats is greatly slowed.

atrioventricular (A-V) h. b. a form in which the blocking is at the atrioventricular junction. It is *first degree* when A-V conduction time is prolonged; *second degree* (partial heart block) when some but not all atrial impulses reach the ventricle; *third degree* (complete heart block) when no atrial impulses at all reach the ventricle, and the atria and ventricles act independently of each other. Both first degree and second degree heart block are very common in Thoroughbreds and trained horses at rest and are considered the result of high vagal tone.

bundle-branch h. b. a form in which one ventricle is excited before the other because of absence of conduction in one of the branches of the bundle of His.

complete h. b. see atrioventricular heart block (above).

fascicular h. b. one originating on one of the two divisions of the left bundle branch. See also **hemiblock**.

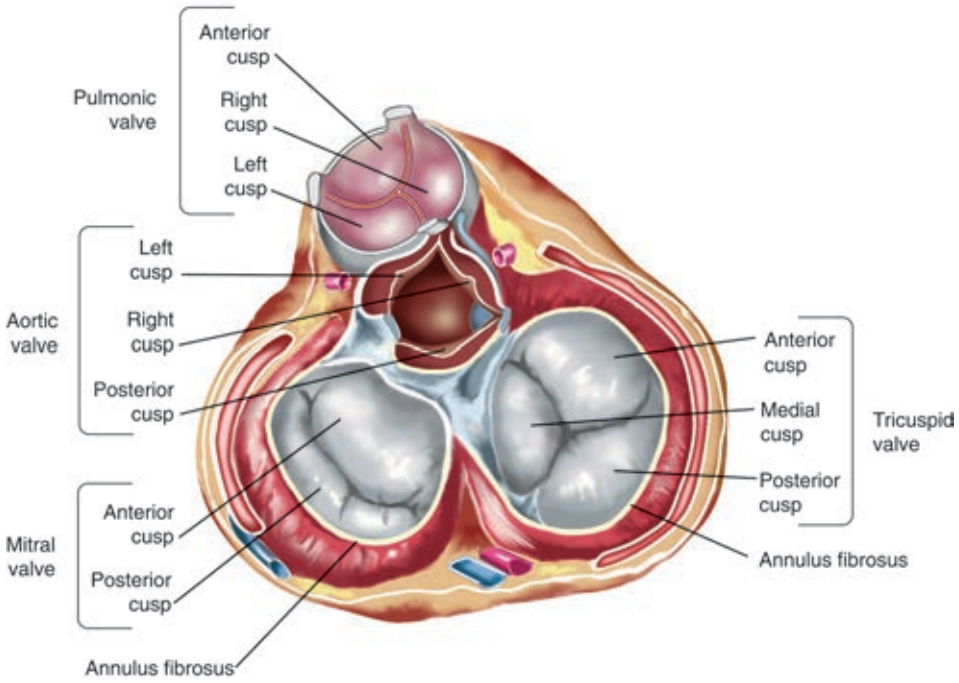
interventricular h. b. bundle-branch heart block.

Mobitz h. b's variations of second-degree heart blocks. With Mobitz type 1 the PR interval progressively increases until the block occurs. Mobitz II heart block is characterized by intermittently nonconducted P waves not preceded by PR prolongation. The common second degree heart block in Thoroughbreds fits neither of these categories and shows an increase in the PR interval but a pronounced decrease in the immediate pre-block PR interval. Mobitz type 1 is also called Wenckebach's phenomenon.

sinoatrial h. b. partial or complete impairment of conduction from the sinoatrial node to the atria, resulting in delay or absence of an atrial beat. Common in thoroughbred and trained horses at resting heart rates.

heart failure [*hahrt fāl'yər*] inability of the heart to maintain a circulation sufficient to meet the body's needs; most often applied to myocardial failure affecting the right or left ventricle. A semiquantitative functional classification scheme, proposed in the American College of Veterinary Internal Medicine Consensus Statement, includes *Class 1* (no clinical signs), *Class II* (clinical signs only during strenuous exercise), *Class III* (clinical signs during normal activities or mild exercise), and *Class IV* (severe clinical signs during rest). Further, four basic disease stages and clinical status were described to assist in clinical management of dogs with chronic heart disease: *Stage A* (high risk, but no identifiable cardiac structural disorder); *Stage B* (structural heart disease present, but without clinical signs). This stage is further divided into B1 (no radiographic or echocardiographic evidence of cardiac remodeling) and B2 (hemodynamically significant valve regurgitation). *Stage C* (clinical signs of heart failure); and *Stage D* (end stage disease, refractory to treatment).

acute h. f. sudden cardiac arrest such as occurs in anesthetic death and cardiac myopathy of various kinds. It causes death by acute anoxia of tissues especially brain. The clinical syndrome varies between a brief convulsion and the development of **pulmonary** edema.



H-14: Cardiac valves as viewed from the base of the heart.
From Koeppen, Bruce M. Berne & Levy Physiology, 6th Edition. Mosby, 2009.

backward h. f. a concept of heart failure emphasizing the contribution of passive engorgement of the systemic venous system as a cause. Called also 'wet' heart failure. See also congestive hear failure (below).

h. f. cells hemosiderin-laden macrophages present in the pulmonary alveoli in cases of congestive heart failure.

cold h.f. see forward heart failure (below).

congestive h. f. (CHF) that which occurs as a result of impaired pumping capability of the heart and is associated with abnormal retention of water and sodium. The condition ranges from mild congestion with few symptoms to life-threatening fluid overload and total heart failure. CHF results in an inadequate supply of blood and oxygen to the body's cells. The decreased cardiac output causes an increase in the blood volume within the vascular system. Congestion within the blood vessels interferes with the movement of body fluids in and out of the various fluid compartments, and they accumulate in the tissue spaces, causing edema. There are three general kinds of pathological conditions that can bring about CHF: (1) *ventricular failure*, in which the contractions of the ventricles become weak and ineffective, as in myocardial ischemia from coronary artery disease; (2) *mechanical failure* of the ventricles to fill with blood during the diastole phase of the cardiac cycle, which can occur when the mitral valve is narrowed or when there is an accumulation of fluid within the pericardial sac (cardiac tamponade) pressing against the ventricles, preventing them from accepting a full load of blood; and (3) an *overload* of blood in the ventricles during the systole phase of the cycle. High blood pressure, aortic stenosis and aortic valvular regurgitation are some of the conditions that can cause ventricular overload.

decompensated h. f. see congestive heart failure (above).

forward h. f. a concept of heart failure emphasizing the inadequacy of cardiac output as the primary cause and considering venous distention to be secondary. There is poor peripheral perfusion with weakness, exercise intolerance or collapse. Called also 'cold' heart failure.

high output h. f. that in which cardiac output remains high, associated with anemia, etc.

left-sided h. f., left ventricular h. f. failure of the left ventricle to maintain a normal output of blood. Since the left ventricle does not empty completely, it cannot accept blood returning from the lungs via the pulmonary veins. The pulmonary veins become engorged and fluid seeps out through the veins and collects in the pleural cavity. Pulmonary edema and pleural effusion result. In many cases heart failure begins on the left side and eventually involves both sides of the heart.

low-output h. f. that in which cardiac output is diminished, associated with cardiovascular diseases.

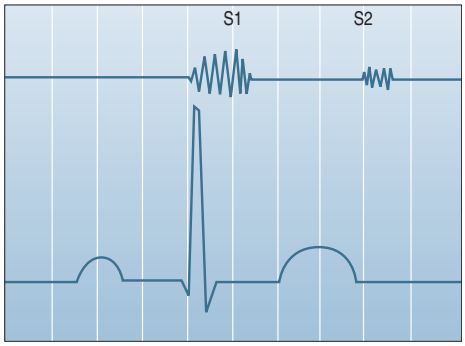
right-sided h. f., right ventricular h. f. failure of proper functioning of the right ventricle, with subsequent engorgement of the systemic veins, producing pitting edema, enlargement of the liver, and ascites.

wet h.f. backward heart failure.

heart-leaf poison ***Gastrolobium*** *bilobum* (in Western Australia), *G. grandiflorum* (in Queensland).

heart–lung unit see **extracorporeal** circulatory support unit.

heart sounds the sounds heard on the surface of the chest in the heart region. They are amplified by and heard more distinctly through a stethoscope. These sounds are caused by the vibrations of the normal cardiac cycle. They may be produced by muscular action, valvular actions, motion of the heart, and blood as it passes through the heart. The first heart sound (S_1) is heard as a firm but not sharp 'lubb' sound. It consists of four components: a low-frequency, indistinct vibration caused by ventricular contraction; a louder sound of higher frequency caused by closure of the mitral and tricuspid valves; a vibration caused by opening of the semilunar valves and early ejection of blood from the ventricles; and a low-pitched vibration produced by rapid ejection. The second heart sound (S_2) is shorter and higher pitched than the first, is heard as a 'dupp' and is produced by closure of the aortic and pulmonary valves. The third heart sound (S_3) is very faint and is caused by blood rushing into the ventricles. Commonly heard in horses at heart rates elevated slightly above normal. The fourth heart sound (S_4) is rarely audible in a normal heart in companion animals, but is audible in horses and cattle at resting heart rates and can be demonstrated on graphic records. It is short and of low frequency and intensity, and is caused by atrial contraction. The vibrations arise from atrial muscle and from blood flow into, and distention of, the ventricles.



H-15: Normal heart sounds.
From McCurnin D, Poffenbarger EM, Small Animal Physical Diagnosis and Clinical Procedures. Saunders, 1991.

muffled h. s. the heart sounds are normal in outline but muffled, due usually to the presence of fluid between the heart and the stethoscope.

heartbeat [*hahrt'bēt*] the cycle of contraction of the heart muscle, during which the chambers of the heart contract. The beat begins with a rhythmic impulse in the sinoatrial node, which serves as a pacemaker for the heart. See also **heart**.

heartwater [*hahrt'waw-tər*] a disease of cattle, sheep, goats and wild ungulates caused by *Ehrlichia ruminantium* (previously called *Cowdria ruminantium*), transmitted by the *Amblyomma* spp. ticks. In domestic animals it causes high fever and sudden death, or a less acute form manifested by incoordination, circling, blind charging, convulsions and death from encephalitis. A disease notifiable to the OIE (see Table 22).

heartworm [*hahrt'wərm*] the common name for ***Dirofilaria*** *immitis*.

h. dermatitis cutaneous dirofilariasis; a variety of skin lesions have been seen in dogs infested by *Dirofilaria immitis,* including hypersensitivity reactions, pyogranulomas and seborrheic dermatitis.

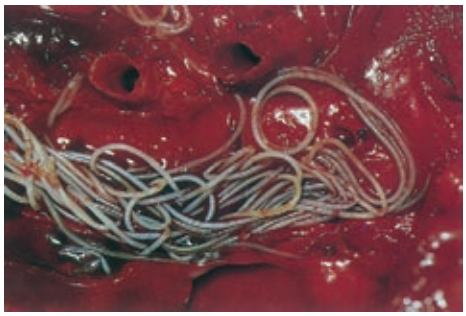
h. disease the syndrome of pulmonary artery disease with hypertension, heart failure (primarily cor pulmonale), and occasionally liver failure and interstitial, tubular and glomerular renal lesions caused by infestation by *Dirofilaria immitis*. Many species may be infected, but dogs are most commonly affected by chronic cough, weight loss and ultimately congestive heart failure. Infestation by the parasite, and the disease, can be prevented with appropriate prophylactic chemotherapy. Called also dirofilariasis. See also occult heartworm infection (below), **caval syndrome**.

occult h. infection infection by *Dirofilaria immitis* in which circulating microfilariae cannot be detected in the peripheral blood by the usual test methods.

heat[1] [*hēt*] energy that raises the temperature of a body or substance; also, the rise of the temperature itself. Heat is associated with molecular motion, and is generated in various ways, including combustion, friction, chemical action and radiation. The total absence of heat is absolute zero, at which all molecular activity ceases.

h. balance balance between heat loss and heat production; its maintenance is critical to the patient's survival.

h. bumps see **bumps**.



H-16: Heartworms (*Dirofilaria immitis*).
From Darke P, Bonagura JD, Kelly DF, Color Atlas of Veterinary Cardiology. Mosby, 1995.

h. exhaustion a disorder resulting from overexposure to heat or to the sun. Long exposure to extreme heat or too much activity under a hot sun causes excessive sweating which removes large quantities of salt and fluid from the body. When the amount of salt and fluid in the body falls too far below normal, heat exhaustion may result. The same disease in birds is called heat prostration (below). See also heat stroke (below).
h. increment see **specific** dynamic action.
latent h. the heat that a body may absorb without changing its temperature.
h. loss body heat can be lost by conduction, convection, evaporation and radiation; evaporation is the critical one during exercise and in hot environments.
h. prostration a condition caused by exposure to excessive heat, especially in birds with high humidity; exacerbated by their poor heat loss mechanisms. See also heat exhaustion (above).
h. regulation is one of the functions of the hypothalamus and consists of a balancing of the body's heat loss and heat gain by regulation of respiration, skin temperature, sweating and muscle tone.
h. shock proteins proteins expressed by heat shock (*hsp*) genes as a result of exposure to increased temperature or other stress and which act as chaperones to aid correct protein folding and intracellular protein trafficking. See also heat shock response (below).
h. shock response decreased transcription and translation activity caused by the synthesis of heat shock proteins by an organism as a result of exposure to increased temperatures or other stress, facilitating return to a normal physiological state.
specific h. the number of calories required to raise the temperature of 1 g of a particular substance one degree centigrade.
h. stress exposure of the animal to high ambient temperatures.
h. stroke elevation of body temperature above physiologically active levels due to the production of excessive heat, exposure to excessive ambient temperatures or failure to lose heat. Characterized by restlessness, followed by dullness, weakness and recumbency. There is severe hyperthermia, the animal seeks cool places, is dyspneic and lapses into a coma terminally.
h. tolerance in animals is their ability to function well under high environmental temperatures. This capacity varies widely between species and breeds. Much of the difference is due to variations in the capacity to increase heat loss under conditions of heat stress.
heat[2] [*hēt*] estrus in female animals.
concealed h. a lay term used to describe a silent estrus or one lacking overt signs recognized by an owner.
h. detection identifying cows in heat has become one of the most critical techniques in modern dairy farming. As well as acute observation by farmers a number of devices are used as aids, e.g. tail paint, several kinds of color-change patches that are glued onto the cow's tailhead, and devices worn by infertile males that mark the cows.
standing h. the point at which the female is receptive to the male mating behavior; used as an indication of ovulation and the time for mating to occur.
heat-labile toxin one of three plasmid-encoded enterotoxins produced by some strains of *Escherichia coli*.
heat-stable toxin two different plasmid-encoded enterotoxins produced by some strains of *Escherichia coli*.
heath 1. a large area of open scrubland. 2. a member of the plant family Ericaceae; see **heather**.
Heath sheep a European class of sheep, including many ethnic varieties; a black, horned carpetwool sheep.
heather a member of the plant family Ericaceae; called also heath. None of the native heathers of the UK, e.g. *Erica cinerea*, *E. (Calluna) vulgaris*, are poisonous but the exotic shrubs, *Andromeda* (see ***Pieris***) and ***Kalmia***, are.
heather blindness contagious **ophthalmia** of sheep.
heavenly bamboo see ***Nandina domestica***.
heaves see chronic obstructive **pulmonary** disease.
h. line the visible groove between the aponeurotic and muscular parts of the external oblique muscle caused by the persistent double expiratory effort, with maximum abdominal muscle input, imposed by the poor respiratory gas exchange in this disease.
heavy having great weight.
h. chain see heavy **chain**.
h. grain feeding feeding of cereal grain feeds at levels in excess of conventional practice is frequently followed by carbohydrate engorgement, rumenitis and hepatic abscessation. Persistent feeding at levels less than those conducive to lactic acidosis is thought to contribute to the development of left displacement of the abomasum in ruminants.
h. horse breeds includes **Clydesdale**, **Shire**, **Suffolk**, **Belgian**, **Percheron**.
